

United States Department of the Interior

PARTNERS IN CONSERVATION

AWARDS CEREMONY

WEDNESDAY, SEPTEMBER 21, 2011
SOUTH INTERIOR BUILDING AUDITORIUM

Message from the Secretary

Welcome to the Department of the Interior's Partners in Conservation Awards Ceremony. It is my great pleasure to recognize the achievements of more than 500 diverse organizations and individuals who partner with others to conserve and restore our land, help wildlife thrive, address water issues, and forge solutions to complex natural resource challenges.

These awards represent the dedicated and tireless efforts of people from all walks of life from across our Nation. They share a deep commitment to conservation and community.

Today, we celebrate their accomplishments and ask them to join us in a new era of conservation, an era that I hope will rival those of Theodore Roosevelt, Franklin Roosevelt, and John F. Kennedy. In coming years, we will have many days like today to celebrate successful partnerships rooted in a common purpose for conservation.

Please join me in congratulating our Partners in Conservation Award winners. Their achievements exemplify excellence in conservation through partnerships and cooperation with others. They are an inspiration to us all, and we are grateful for their efforts.

*KEN SALAZAR
Secretary of the Interior*

PRESENTATION OF THE HISTORIC PRESERVATION AWARDS

CLOSING REMARKS

Gabrielle Horner

Office of the Secretary

Department of the Interior

Partners in Conservation Award

The Partners in Conservation Award is a Department of the Interior Honor Award established to recognize conservation achievements that include collaborative activity among a diverse range of entities that may include Federal, state, local and tribal governments, private for-profit and nonprofit institutions, other nongovernmental entities, and individuals. This award enables the Secretary to acknowledge in one award the contributions of both Interior and non-Interior personnel. Overall, this award recognizes outstanding conservation results that have been produced primarily because of the engagement and contributions of many partners.

Award Recipients

Utah Reclamation Mitigation Conservation Commission

The Utah Reclamation Mitigation and Conservation Commission was established in 1994 as an Executive branch agency pursuant to the Central Utah Project Completion Act of 1992. The Commission, through multiple partnerships, is building a 21st Century conservation ethic. An exemplary model of transparent decision-making, the Commission has been extremely successful in establishing partnerships with federal and Utah state agencies, local governments, universities, non-profit organizations, and the Ute Tribe to implement a wide variety of ecosystem restoration and wildlife conservation projects. Since their enactment, the Commission has acquired and developed 21,300 acres of wetland and wildlife habitat. It has restored and provided access to 173 miles of rivers and streams. During 2010, the Commission acquired and preserved an additional 1,462 acres of wetlands and 11 miles of rivers and streams.

DOI Oceans, Coasts and Great Lakes Activities Team

Serving as a model for interagency collaboration, the DOI's Ocean Coastal and Great Lakes Activities Team, of the Office of Policy Analysis, is composed of more than 100 members throughout the Department. This includes the Offices of the Secretary and Assistant Secretary for Insular Affairs and Department Bureaus including the U.S. Fish and Wildlife Service, the U.S. Geological Survey, the Bureau of Ocean Energy Management, Regulation and Enforcement, the National Park Service, Bureau of Indian Affairs and the Bureau of Land Management. Through this collaborative effort, the Team has partnered with 27 federal agencies, 9 regional planning areas, Tribal, State and local governments to develop and implement our Nation's first National Ocean Policy.

Gila Watershed Partnership of Arizona

Since 1983, the Gila Watershed Partnership of Arizona has collaborated with a great diversity of stakeholders to restore the health of the upper Gila watershed, which includes 7,430 square miles in Arizona. The Partnership includes more than 30 Government entities, a multitude of organizations, ranchers, businesses, educational institutions, and private landowners. This diverse group of stakeholders collaborates in consensus-driven efforts to develop solutions to watershed-level challenges.

Permian Basin Memorandum of Agreement Program, New Mexico

This innovative collaborative partnership has used technology and partnerships to better protect cultural resources and support archaeological research while streamlining the permitting process for energy development in the Permian Basin of Southeastern New Mexico. Partners include BLM, the New Mexico State Historic Preservation Office, and the Advisory Council on Historic Preservation, the Mescalero Apache Tribe, and the New Mexico Archaeological Council. Thirty-five different industry partners have utilized this voluntary program, contributing more than \$3.3 million in pooled resources to fund key landscape archaeological research and help foster balance between resource protection and energy development on public lands. Further, the program's ethnographic inventory with the Mescalero Apache tribe has enabled Mescalero youth and elders to connect with areas of importance to the tribe in southeastern New Mexico and to participate in BLM's "Take it Outside" program.

Jefferson Conservation Corps Partnership, Oregon

This project is a blue print for engaging, educating and employing youth in conservation. The Jefferson Conservation Corps provides work and training for young adults from the economically-challenged, rural communities in southern Oregon to become stewards of America's Great Outdoors. This collaboration has created employment opportunities that produce tangible results for natural resource improvement and protection, including the removal of hundreds of acres of harmful weeds, maintenance of miles of trails, and fish habitat and stream restoration in support of endangered Coho salmon.

Project Archaeology

Since 1990 the Bureau of Land Management and Montana State University Project have delivered high-quality conservation and heritage stewardship education programming and materials to nearly 10,000 educators through a collaborative network of 29-state and regional programs. Over 210,000 students have received cultural resource stewardship education in classrooms, museums, visitor centers, and in America's Great Outdoors.

Archaeological Analysis of Submerged Sites on the Gulf of Mexico Outer Continental Shelf

From the shipwrecked 1554 Spanish fleet off South Padre Island in Texas to the German U-boats that patrolled the bluish-green waters during the Gulf of Mexico -- shipwrecks represent approximately 500 years of maritime exploration and exploitation in this region. Archaeological Analysis of Submerged Sites on the Gulf of Mexico Outer Continental Shelf is a unique collaboration between Federal, private sector and academic entities to research, document, and raise public awareness of historically significant shipwreck sites that lie on the seafloor of the Gulf of Mexico – to establish surveys and preservation protocols for historic sites and their stories, as we expand our nation’s energy portfolio.

Subsistence Sharing Network, Alaska

Exemplifying best practices for sustainable resource management within the Department of the Interior, the Subsistence Sharing Network is working to quantify the traditional values of cooperative and reciprocal relationships among Alaska Native people. Through their studies, the network is setting new professional standards for how social science projects could be conducted on the North Slope to achieve broad community support and participation, with responsible dissemination of research results.

San Joaquin River Restoration Program, California

The San Joaquin River Restoration Program is a collaborative and cooperative effort among individual land owners, nongovernmental environmental organizations, water users, and state and Federal agencies to restore the San Joaquin River below Friant Dam. Though the Program partners have diverse and competing interests, they are able to work collaboratively to ensure sustainable management of the Nation's water and natural resources through establishment of clear commitments, diverse technical working groups, and a comprehensive public involvement program.

Camp Lawton Partnership Team, Georgia

One hundred fifty years after the start of the Civil War, a new chapter of Civil War history is being written, thanks to Camp Lawton Partnership Team. The Project began as a collaborative effort between Georgia Department of Natural Resources and Georgia Southern University's (GSU) Department of Sociology and Anthropology, and later U.S. Fish and Wildlife Service (USFWS) in an attempt to determine the exact location of the Camp Lawton stockade at Magnolia Springs State Park.

The project team works closely with area schools, and regularly speaks to organizations focused on history, education and tourism, as well as at conferences throughout the region. Through their efforts, thousands of people have learned more about their history as citizens of the United States and the value of the cultural resources currently managed by USFWS and Georgia DNR.

Liberty Wildlife Rehabilitation Foundation

Through her work as Executive Director of the Liberty Rehabilitation Foundation, Megan Mosby is a model of dedication to wildlife conservation and Native American cultural and religious practices. Last July, the U.S. Fish and Wildlife Service's Southwest Regional Director Memorandum of Agreement (MOA) with Liberty Wildlife Rehabilitation Foundation established and operates a two-year pilot non-eagle feather repository program. The pilot was developed to provide feathers to federally-recognized tribal members for use in cultural, ceremonial and religious practices.

Nominated by the U.S. Fish and Wildlife Service

Megan Mosby

Wyoming Governor's Sage-Grouse Implementation Team

Composed of State and Federal agencies, natural resource development industries and non-governmental organizations, the Wyoming Governor's Sage-Grouse Implementation Team has developed a long term, science based strategy for conservation of greater sage-grouse in Wyoming. In addition to this conservation strategy, the Team is allowing for energy development in the State. Their work has resulted in conservation and resource development options that currently conserve 1 million acres of sagebrush habitats in Wyoming.

Pu’ukohola Heiau National Historic Site, Hawaii

After major earthquake damage in 2006, Pu’ukohola Heiau National Historic Site (constructed in 1810), one of Hawaii’s most significant Native Hawaiian sites and visitor attractions, volunteers came together over 4 years to restore the sacred temples known as Pu’ukohola Heiau and Mailekini Heiau. While this successful volunteer partnership resulted in a savings of over \$3 million and a complete restoration of the temples, one of the most meaningful achievements experienced was the hands-on engagement of 600 native Hawaiians and Hawaiians at heart from across the State of Hawai’i and the mainland. This project provides an international and innovative model for engagement of native peoples in the stewardship of their sacred sites.

Scanning the Conservation Horizon

A Guide to Climate Change Vulnerability

The National Wildlife Federation in conjunction with the U.S. Fish and Wildlife Service led the conservation community in the development of a guidebook called, “Scanning the Conservation Horizon, A Guide to Climate Change Vulnerability Assessment.” This guidebook is being used across Department of the Interior (DOI) bureaus and the Landscape Conservation Cooperatives to guide standardized vulnerability assessment of the resources it manages and will allow comparison of risk across DOI bureaus for a common understanding of the impacts of climate change.
