Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
J Moyer

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Diane Martin-Brodak

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kimberly Short

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ann Robertson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Monique Eigenbauer

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kris Ebbe

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Candace Allaman

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Denis Kliemek

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Howard Graham

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Carol Baier

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
lee LePore

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
John Sedleski

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lesle Helgason

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Storm Waters

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mark Warren

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end all new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields - if fully developed and without factoring in obsolete-by-a-century coal - would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals and life on Earth as a whole.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production - one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters. If we do not do end the use of non-existent fossil fuels first, who do we expect will?

Thank you for your consideration.

Sincerely,
Daniel Laemmerhirt Laemmerhirt

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Maro Aroutiunian

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Richard Behymer

Dear Secretary Deb Haaland,

Immense thanks for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to - and I know you will - undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals. I also think your plan could include the suggestion President Biden made yesterday: that at the same good wages, the people who drill for oil and gas could be transferred to a Corp for Well Capping. This means we will not be letting workers down.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution, fossil fuel related disease and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I am so glad it is your goal to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States has a first in a lifetime opportunity to demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
R Limoges

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Secretary Deb Haaland,

Congratulations on your appointment!

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Charles Hensel

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Bruce Olson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Julia Whitelegg

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Roger Packard

Dear Secretary Deb Haaland,

Our local heron colonies are hugely diminished along with other bird species. I see fewer bats, bees, and butterflies every year. I see fewer salmon running our creeks to spawn. I live with wildfire smoke every summer now. Climate and fossil fuel have a huge impact on our environment affecting everything by air / water quality, light / noise pollution throughout the food chain. My youngest family members and elders have increasing respiratory and allergy health issues.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Melanie Barberio

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
John Thompson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Maria Miller

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kathryn Kaffer

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Toby Van Es

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ryan Strempe-Durgin

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Karen Basso

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Frances Moyle

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Leland Degolier

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Heather Croucher

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Karen Spradlin

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lynda Hoogendoorn

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sally Robertson

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lindsey McNeny

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Reed

Dear Secretary Deb Haaland,

First, I would like to congratulate you, Ms. Haaland, on your confirmation as Secretary of the Interior. It is high time that a woman had a voice in the discussion of fossil fuel development and the blight of climate change. That you are also Native American is a dream-come-true for SO many of us!

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Also, a re-employment of those fossil fuel workers could be found in rehabilitation of abandoned wells - those that spew methane into our environment. We MUST stop the proliferation of methane, if we are to stop the temperature rise due to accelerants in our atmosphere!

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States MUST demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
John Back

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jane Jatinen

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Suba Gunawardana

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Michael Belcher

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mark Skevofilax

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jeffery Green

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Timothy Havel

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Nira Trock

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ann Reed

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Elena Saylor

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Michele LaPorte

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
John Lynn

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Noemi Catalina-Hernandez

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Nathaniel Hammerli

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
R Todd Stravitz

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Marcy Gordon

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
William Mulrennan

Dear Secretary Deb Haaland,

Firstly, I would like to express my gratitude and appreciation of your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programmes.

Secondly, I strongly urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. I am confident, it will show what scientists have said: There's no room for further fossil fuel development if we want an habitable world.

It's been shown countless times that pollution from existing, productive oil and gas fields — if fully developed and without factoring in coal — would push warming well beyond 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

By phasing out the federal fossil fuel programmes, public health will benefit, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

It is essential that you work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States has an extremely important opportunity to demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Janet Woodall

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kathleen Palimeri

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Allan Goldstein
