Yukon Area Fall Salmon Closure and Non-Salmon Schedule in District 6 (Tanana River Drainage)

TEMPORARY SPECIAL ACTION

Under Authority of: 36 CFR 242.10 and .19
43 CFR 51.10 and .19

Temporary Special Action No: 03-FC-06-26

Issued at: Fairbanks, Alaska, August 11, 2026

Effective Date: Saturday, August 15, 2026, 12:01 a.m. fall salmon closure and 4-inch set gillnet schedule for Subdistrict 6-A

Saturday, August 15, 2026, 12:01 a.m. fall salmon closure for Upper Tanana drainage

Saturday, August 15, 2026, 12:01 a.m. 6-inch set gillnets for list of non-salmon harvest areas in District 6

Expiration Date: Thursday, December 31, 2026, 8:00 a.m. unless superseded by subsequent special action

EXPLANATION:

This Temporary Special Action closes the harvest of fall chum and coho salmon for all users in Federal public waters of the Tanana River drainage in Yukon fishing District 6.

In the mainstem and all areas where salmon are migrating, gillnets are restricted to 4-inch or smaller mesh, limited to 60 feet in length, and must be operated as a set net. These non-salmon gillnets are being placed on a schedule to reduce incidental harvest of salmon in areas with significant salmon presence.

Selective gear such as manned fish wheels, dip nets, beach seines, and hook and line gear may be used for non-salmon species 24 hours per day, 7 days per week. Fish-friendly fish wheel construction is required. Please practice respectful and safe fish handling techniques and ensure any Chinook salmon, chum salmon, or coho salmon caught in selective gear types are released alive so they may continue upriver to their spawning grounds. If you are catching species closed to fishing in a 4-inch gillnet, please move it to avoid catching these species closed for harvest.

In order to provide more efficient harvest opportunity for non-salmon in areas without migrating salmon, this special action also allows the use of 6-inch (or smaller) mesh set gillnets to target non-salmon in limited areas identified in the map on page 4. Fishermen should not be catching any salmon in these limited areas. These 6-inch opportunities for non-salmon harvest are not allowed in the mainstem rivers or streams, or any main channels where salmon are present.

REGULATION:

36 CFR 242.27(e)(3) and 43 CFR 51.27(e)(3) Subsistence taking of fish—Yukon-Northern Area is amended to read:

Pursuant to the special actions in effect, [03-KS-08-26](#) and [03-KS-18-26](#), salmon fishing remains closed to all users in the Upper Tanana drainage. Subsistence summer chum salmon fishing with selective

gear closes at 11:59 p.m. Friday, August 14 in Subdistrict 6-A. Gillnets of 4-inch and smaller may be used to target non-salmon species 24 hours per day, 7 days per week.

§ __.27(e)(3)(ii) ***In Federal public waters of the following Yukon River Drainage areas:***

Subdistrict 6-A (including waters in Denali National Park):

Effective 12:01 a.m. on Saturday, August 15, subsistence fishing for chum and coho salmon closes for all users. Chinook, chum, and coho salmon must be released alive immediately from selective gear types.

Effective 12:01 a.m. on Saturday, August 15, non-salmon subsistence fishing with 4-inch or smaller mesh gillnets is only allowed on a weekly schedule from noon Thursdays until noon Sundays.

Upper Tanana drainage (including waters in Tetlin National Wildlife Refuge and Wrangell-St. Elias National Park and Preserve):

Effective 12:01 a.m. on Saturday, August 15, subsistence fishing for chum and coho salmon closes for all users. Chinook, chum, and coho salmon must be released alive immediately from selective gear types.

District 6:

Effective 12:01 a.m. on Saturday, August 15, non-salmon subsistence fishing with 6-inch or smaller mesh gillnets, limited to 60 feet in length, operated as a set net near shore is allowed, 24 hours a day, 7 days per week in all lakes without a closed drainage flowing into them, plus the rivers and sloughs listed below and named on the map.

The following drainages are open with 6-inch set gillnets for whitefish and other non-salmon from **500-feet upstream of a closed area**. Coordinates mark the downstream end of the open area:

<i>Whitefish/Non-salmon Area</i>	<i>Latitude</i>	<i>Longitude</i>
Birch Creek (near Tanana)	65° 05.564' N	151° 50.082' W
Chitanana River	64° 55.423' N	151° 31.968' W
Dugan Creek	64° 55.727' N	150° 20.249' W
Fish Creek (near Tanana)	65° 04.719' N	151° 37.335' W
Green Slough	65° 05.290' N	151° 48.200' W
Hay Slough	65° 09.782' N	151° 56.821' W
Hot Springs Slough (near Manley Hot Springs)	64° 58.775' N	150° 48.647' W
Patterson Creek	65° 00.521' N	151° 31.118' W
Tatlanika Creek	64° 35.005' N	148° 40.576' W
Tolovana River drainage*	64° 51.144' N	149° 50.011' W
Totatlanika River	64° 33.684' N	148° 45.852' W
Totchaket Slough	64° 47.076' N	149° 11.787' W
Williams Slough	64° 58.298' N	151° 30.201' W
Zitziana River	64° 58.107' N	150° 30.424' W

*Note the Tolovana River drainage includes Swanneck Slough, and Chatanika and Tatalina rivers

Fishing for non-salmon species with selective gears, including manned fish wheels, hook and line with a rod or pole, hand line, longline, fyke net, dip net, and beach seine, is open 24 hours a day, 7 days per week. Only non-salmon species may be retained. Chinook, chum, and coho salmon must be released alive immediately from selective gear types. If closed salmon species are caught

Federal Subsistence Board

1011 East Tudor Road, MS 121
Anchorage, AK 99503-6199

while fishing for non-salmon with gillnets, they should be released alive when possible but may be legally retained if dead. Gillnets cannot block more than ½ width of any waterway.

While a fish wheel is operating, it must be manned at all times. Fish wheel basket sides and bottoms must be made of soft mesh material such as seine twine. Fish wheels must also have an adjustable or fixed slide or chute with a smooth bottom and closed cell foam lined sides that return closed salmon species immediately back to the water.

JUSTIFICATION:

The drainage-wide Chinook salmon run is stronger than previous years, however in-season projections indicate escapement goals are unlikely to be met. Chinook salmon closures will be required for the duration of their migration. The preseason forecasts for fall chum and coho salmon indicate escapement goals are unlikely to be met. Therefore, retention of salmon in Federal public waters of the Tanana River District 6 is closed by this Temporary Special Action (03-FC-06-26).

To further protect fall salmon populations, subsistence non-salmon fishing with 4-inch and smaller mesh gillnets is now placed on a schedule to reduce incidental harvest of Chinook, chum, and coho salmon in areas with high salmon passage. Since there is no conservation concern for non-salmon species, fishing is not limited to federally qualified subsistence users in Federal public waters.

Specific harvest areas for targeting whitefish and other non-salmon species with 6-inch set gillnets have been carefully selected based on databases and Indigenous and local knowledge to avoid salmon spawning or migration zones. Closure buffers, 500 feet upstream from closed stream mouths, have been established to protect migrating salmon.

CONSULTATION AND OUTREACH:

The Yukon River salmon outlooks and management strategies were discussed at a Federal public hearing; the Eastern Interior, Western Interior, and Yukon Kuskokwim Delta Regional Advisory Council meetings; the Yukon River Drainage Fisheries Association preseason meeting; at the Yukon River Panel and at the Yukon River Inter-Tribal Fish Commission annual meeting. The Federal manager offered formal Government-to-Government Tribal Consultation meetings with Yukon River drainage Tribal Governments upon request. The Federal fishery outlook and management strategy was sent to all Yukon Tribal and City governments on April 7. Approximately 3,500 copies of the Preseason Outlook flier were mailed to Yukon River fishing households in May.

This action was taken in coordination with the Alaska Department of Fish and Game (ADF&G). The fishing schedules announced here match those issued concurrently by the ADF&G in State waters (**Fall Fishery Advisory Announcement #9**). The Federal Subsistence Regional Advisory Council Chairs for the Yukon-Kuskokwim Delta, Eastern Interior, Western Interior, and Seward Peninsula Regional Advisory Councils were notified as was the Chair and Executive Director of the Yukon River Inter-Tribal Fish Commission. Review was provided by the Office of Subsistence Management.

Yukon River Inseason Fisheries Manager
Northern Alaska Fish and Wildlife Field Office

Map showing open and closed areas for Fall whitefish harvest with 6-inch set gillnets for the lower section of District 6. All labeled non-mainstem waterways and all lakes without a closed drainage flowing into them are open to 6-inch set gillnets for non-salmon (dark gray). **The Tanana River mainstem remains closed to 6-inch gillnets.** Rivers and sloughs that are open to 6-inch non-salmon fishing have a closure buffer from the mouth to 500 feet upstream of closed areas. Areas that remain closed to 6-inch set gillnets are shown in light gray.
