Pollinator Seed Balls

**Ingredients**

- 5 parts clay soil
- 1 part flower seeds
- 1 part compost
- A small amount of water to hold the balls together

**Instructions**

Mix clay, compost and flower seeds together in a large container. Add a small amount of water—just enough to hold the balls together. The balls should not be sticky; the consistency should be similar to cookie dough. Using your hands, make 1-2 inch balls and let them dry.
