Mr. Chairman and Members of the Subcommittee, thank you for the opportunity to appear here today to discuss the Fiscal Year (FY) 2008 President’s Budget Request for the Bureau of Land Management (BLM), and to present a summary of the direction that the BLM is going on a number of key issues.

Background
The Bureau of Land Management is dedicated to ensuring that the American people – regardless of where they live – benefit from the agency’s multiple-use mandate. As stewards of 258 million acres, the BLM manages these public lands in accordance with the 1976 Federal Land Policy and Management Act. These public lands contain a myriad of resources and provide for a variety of our Nation’s needs, including outdoor recreation, domestic energy, wildlife habitat, livestock grazing, timber, and other natural, cultural, and historical resources. With the rapid population growth in the west – from nearly 20 million people in 1950 to more than 60 million today – the pressures to meet complex, and sometimes competing, demands for public land resources also has grown exponentially.

In ever increasing numbers, the American public has turned to BLM-managed public lands for recreation. We also have important responsibilities in managing for critical wildlife habitat, cultural resources, our National Monuments, and wilderness values, to name a few. In providing an appropriate mix of both renewable and conventional energy supplies from the public lands, the BLM contributes to a more secure and reliable energy future for our country.

As one of the Nation’s oldest land management agencies, the BLM also delivers value on a daily basis to the American public. Each dollar spent by the taxpayer on BLM activities is an investment, not only in the land, but also in an ongoing revenue stream. The BLM is an important source of revenue to the Treasury. Royalties collected from energy leasing, and fees collected from a variety of public land uses, all serve to benefit the taxpayer. In 2008, public lands will generate an estimated $4.6 billion in revenues and collections, mostly from energy development. The Minerals Management Service will collect an estimated $4.1 billion of the $4.6 billion. Approximately 44 percent of these receipts are provided directly to States and counties to support roads, schools, and other community needs.

The President’s FY 2008 budget proposal will enable the BLM to fulfill its multiple-use mission in the most effective and efficient way possible. A key component of our budget is the Healthy
Lands Initiative, which will be discussed in greater detail. In particular, the President’s budget advances the agency’s top priorities in the upcoming fiscal year, which are to:

- Maintain or restore the health of the land and enhance vital habitat;
- Provide the Nation with dependable, affordable energy developed in an environmentally-sound manner;
- Engage children in the Take it Outside initiative; and
- Improve the efficiency of the BLM’s operational and administrative functions.

**Budget Overview**
The BLM now has a full year FY 2007 appropriation of $1.019 billion, not including the Wildland Fire Management appropriation. Based on direction in the Joint Resolution, we are preparing a detailed operating plan for FY 2007. We are not at liberty to disclose the details of the operating plans until they are submitted to Congress on March 17. At that time, we will be able to provide comparisons at the program level with the 2008 budget request.

Our FY 2008 budget numbers at the account level are compared against the 2007 third continuing resolution numbers. The third continuing resolution was in effect through February 15th. Individual subactivity figures are compared against the FY 2007 President’s budget.

The BLM’s FY 2008 Budget request is $1.010 billion for the BLM’s major appropriations, including the Management of Lands and Resources, Oregon and California Grant Lands (O&C), Construction, Land Acquisition, and Miscellaneous Trust Funds. This represents an increase of $25.2 million above the 2007 continuing resolution level. The request for the Department of the Interior’s Wildland Fire Management Appropriation is $801.8 million. When permanent accounts are included, the BLM’s total budget request is about $2.012 billion. The BLM’s FY 2008 budget request supports a total of 10,506 FTEs.

The Wildland Fire Management program is proposed at $801,849,000, an increase of $32.6 over the 2007 continuing resolution level. The major focus areas include realigning base preparedness resources to focus on initial attack and increasing suppression operations to fund the 10-year average. The Department will be testifying before this Subcommittee on its 2008 budget request for Wildland Fire Management on March 29th.

The 2008 budget fully funds fixed costs, including $30.0 million for BLM’s main operating accounts and $14.0 million for the Wildland Fire Management account. These increases are critical to maintaining core capabilities across the bureau’s’ programs.

In addition to land management activities funded with appropriations, BLM conducts activities using certain receipts received from the sale, lease, or use of public lands or resources. These receipts, from such sources as the Recreation Fee Program, the Forest Ecosystem Health and Recovery Fund, and Southern Nevada Land Sales are estimated to total $145 million in 2008.

**Healthy Lands Initiative**
The President’s FY 2008 budget proposal includes an increase of $15 million over FY 2007 in support of the Healthy Lands Initiative (Initiative). The Initiative represents a new concept for meeting emerging challenges in managing natural resources with flexible, landscape-level
approaches for continued multiple-use. Landscapes are land areas composed of diverse habitat types that include winter range and migration corridors.

Land health is being affected by pressures such as community expansion, wildfires, unprecedented demands for energy resources, ever-expanding recreation uses, and weed invasion. These pressures often interact among themselves to affect large landscapes and ecosystems, particularly those in the growing wildlife-energy interface.

A different management approach is urgently needed to meet these challenges. Taking aggressive steps now will help avoid the need for future restrictions on uses of public land that would directly affect the Nation’s economy and quality of life.

The goals of the Initiative are to:

- Continue to provide access to energy resources, thereby enhancing energy security;
- Manage landscapes to ensure sustainable habitat for wide-ranging species, such as the sage grouse, and prevent future ESA listings; and
- Sustain public lands and wildlife habitat, and traditional activities on public lands.

The BLM will begin aggressive, landscape-scale habitat enhancement projects in six geographic areas: southwest Wyoming; northwest and southeast New Mexico; south-central Idaho; southwestern Colorado; Utah; and the three-corner area of Idaho, Oregon, and Nevada.

The Bureau will concentrate a large number of treatments in each emphasis area, resulting in significant improvements to habitat in an entire watershed or landscape-wide area within one to three years. The BLM will also utilize $8 million in other BLM funds, as well as leverage funding with other Federal agencies and our partners at the state and local levels.

The Green River Basin in Wyoming

One of the six priority areas of the Healthy Lands Initiative is the Green River Basin in Wyoming. BLM proposes to target $4.5 million of the $15.0 million increase to this focus area in 2008. It is representative of areas in the West where landscapes and habitats are undergoing changes in response to pressure from multiple-use. Southwest Wyoming possesses some of the most diverse wildlife habitats in the Intermountain West, which attracts hunters, fishermen, and other outdoor enthusiasts each year. While these interests represent important sources of income for surrounding rural communities, this region, principally the Green River Basin (Basin), is also under pressure from natural gas development. The 15 million-acre Basin, characterized by sagebrush (sage grouse habitat), mountain shrub, aspen, and riparian communities, also has an estimated 83 trillion cubic feet of recoverable natural gas.

The BLM, together with the Fish and Wildlife Service and U.S. Geological Survey, are teaming up to protect these important habitats while natural gas production takes place in the Basin through the Wyoming Landscape Conservation Initiative (WLCI). The 2008 President’s Budget request for the Healthy Lands Initiative includes increases of $5.0 million and $2.0 million for the USGS and FWS, respectively, to participate in the Green River Basin effort. Rather than conducting separate and uncoordinated impact studies and mitigation efforts, these partners will:

- Conduct efficient, science-based species monitoring and habitat enhancement;
• Facilitate best reclamation and mitigation practices for areas affected by current natural gas development;
• Integrate existing data with new knowledge and technologies to forecast future development of energy resources and assist in habitat conservation planning; and
• Conduct habitat enhancement in all habitat types with a special focus on sagebrush, mountain shrub, aspen, and riparian communities.

The partnership, which also includes efforts underway by the National Park Service, Bureau of Reclamation, Forest Service, and Wyoming Game and Fish, will also provide a broader understanding of the valuable Green River Basin ecosystem.

By using this landscape-level approach and using the WLCI partnership, the Bureau expects to be able to leverage funding for key projects that will mitigate the pressures these habitats face from a combination of energy, industrial, and residential development in both the short- and long-terms. In Wyoming, partners have already identified funding priorities including vegetation treatments (sagebrush, aspen trees), water projects such as building or restoring water sources for wildlife, and improving riparian areas. Funding for the WLCI will be long-term and include leveraging funding with other Federal agencies and our partners at the state and local levels.

**Energy Initiatives**

BLM’s FY 2008 Budget continues to support environmentally-sound energy development on public lands. The budget builds upon the significant prior year funding increases to the Energy and Minerals program budget, including those proposed in the FY 2007 President’s Budget. These increases will enable the BLM to continue implementing the Energy Policy Act of 2005 and to support the goals of the National Energy Policy for increasing America’s domestic energy supplies. To further improve BLM’s capability to process applications for permits to drill (APDs) in a timely fashion, in 2008 BLM plans to implement cost recovery fees for APDs. This will enable BLM to respond more quickly to fluctuations in industry demand for APDs. The fees will fully replace the rental revenue provided for processing oil and gas use authorizations in the Energy Policy Act. The Administration will be submitting legislation to amend Section 365 of the Energy Policy Act to make these changes.

The FY 2008 President’s Budget request includes an increase of $3.1 million for oil and gas inspections and monitoring to better ensure that oil and gas operations are conducted in an environmentally-sensitive manner and that leasing and permit terms are enforced. This increase is necessary so that the BLM’s oversight capabilities can match the pace of industry’s operations.

Additionally, the BLM is implementing several innovations to both improve the efficiency of inspection and enforcement functions and to ensure that energy development is environmentally-sensitive.

The Remote Data Acquisition for Well Production (RDAWP) Project will provide the BLM up-to-date wellhead production data by way of direct downloads from wellhead flow meters to a secure web-based server. The objective of this project is to provide the BLM with the ability to perform production verification accounting tasks more efficiently, and to reduce the production verification workload. Currently, production verification is time consuming because it is
performed using hard copies of production reports. RDAWP will allow “real-time” access to production data collected at specific points within a producing oil and gas lease. In addition, the BLM will have a rapid means of cross-checking production data that has been rectified and provided by the Minerals Management Service (MMS) with the known equipment located at the lease. The initial benefits of RDAWP should be an incremental increase in processed production verification capabilities, and increased accuracy of royalties recovered.

Another innovative inspection tool for BLM will be the addition of handheld data capture units to provide field inspectors access to inspection information and associated agency computing capabilities while in the field, improving inspection efficiency, and productivity.

The BLM’s land use planning process seeks to ensure that domestic oil and gas development on public lands is done in a way that protects the environment. For example, the BLM recently issued an innovative Resource Management Plan (RMP) for limited, environmentally-sensitive oil and gas development on public lands in Otero and Sierra Counties in New Mexico. It is one of the most restrictive plans ever developed for oil and gas leasing on Federal lands.

The plan will allow strictly regulated and carefully monitored activity, leading to a maximum surface disturbance of only 1,589 acres from well pads, roads and pipelines – less than one-tenth of one percent of the total surface area of 2 million acres. At most, there will be 141 exploratory wells drilled, resulting in up to 84 producing wells. Almost 36,000 acres of grasslands with the highest potential as habitat for the endangered Aplomado falcon will be closed to leasing and permanently protected. In addition to these measures and overall limits on development, leasing will not be allowed in six existing and eight proposed Areas of Critical Environmental Concern and four Wilderness Study Areas—bringing the total number of protected acres to 124,000. This new plan amends a 1986 RMP that would have allowed leasing with few restrictions on oil and gas activities, would have used standard lease terms and conditions for leasing, and would not have provided the protections for grasslands and other sensitive areas developed in the BLM’s current plan amendment.

**Recreation**
Along with the Healthy Lands Initiative, the BLM is participating in the new “Take it Outside” campaign to reconnect America’s families to the great outdoors. BLM lands offer extensive opportunities to promote outdoor activities and increase an appreciation for the wonderful world of nature and address problems of physical and mental health brought on by inactivity.

Opportunities for physical and educational experiences and activities abound through the discovery and exploration of public land adventures. By engaging children through their schools, youth groups, and families, we hope to increase outdoor activities for all families and children, including the growing numbers who call the public lands their backyards. In our strategy, which is in the process of being finalized, our hope is to:

- Connect children to nature through schools and an educational program using the BLM’s existing Environmental and Heritage Education programs;
- Create and promote outdoor activities which encourage family-friendly recreation; and,
Engage children in nature through volunteer and public service opportunities on public lands.

**Efficiency Improvements**

The BLM is aggressively focusing on the effective management of our funding, employees, and assets to ensure that they are used wisely and responsibly. The Bureau is undertaking a series of actions to promote a more effective and efficient organization, including:

- Establishing a set of broad-ranging management concepts to maintain the agency’s core mission;
- Creating consistently structured state organizations made up of a state office, district offices, and field offices;
- Establishing a National Operations Center in Denver to consolidate the existing business functions already located there and provide greater support to field offices, most of which are located in the West; and
- Taking advantage of technological improvements to more efficiently manage business processes by centralizing functions in information technology and human resources.

The BLM will be providing the Subcommittee with information as these plans are completed.

**Additional Budget Increases**

In addition to the proposed increases for the Healthy Lands Initiative and energy, BLM is proposing the following increases:

- $2.0 million in the Mining Law Program in order to process more plans of operations and mining notices and conduct surface inspections. This increase is expected to be fully offset by additional collections.
- $2.53 million for the implementation of the Financial Business Management System. BLM is anticipating full deployment of this more efficient and effective system in October 2009.

**Budget Decreases**

BLM’s FY 2008 budget also proposes several program decreases. These reflect a need to fund higher priorities, including those discussed above. They also reflect savings made available from implementation of program efficiencies, or are due to the accomplishment of program goals. These decreases include:

- $4.7 million in the Wild Horse and Burro Management program through reducing gathers. The BLM will explore innovative methods to reduce long-term holding costs, increase awareness in the program, and promote adoptions.
- $4.3 million in the Deferred Maintenance program due to anticipated cost savings from the implementation of the Capital Asset Management Plan.
- $5.0 million in the O&C Grant Lands Appropriation due to completion of land use plans and decreases in other program areas.
• $3.2 million in the Resource Management Planning and Recreation programs from more effective management of on-going plans.
• $1.0 million in Lands and realty program to be offset with fees from more effective implementation of cost recovery rules for processing right-of-ways.
• $9.7 million achieved by consolidating and streamlining BLM’s information technology functions, implementing changes in BLM’s management structure to improve efficiency, and reducing travel costs.
• $3.0 million for the Cultural Resources Management program.
• $1.8 million for Alaska Conveyance.
• $3.2 million for Cadastral Survey.

Mr. Chairman, thank you for the opportunity to testify on the BLM’s FY 2008 Budget Request. I will be pleased to answer any questions you may have.
