WELCOME TO ENERGY.DATAGOV

where data and insight are combined to facilitate public discussion and awareness of our Nation's energy activities. Whether you are interested in alternative fuels, managing buildings to be more energy efficient, or trying to manage energy in your own home, we have something for you. Look at the data, use the apps, join the conversation.

The Energy and Minerals Mission Area conducts research and assessments on the location, quantity, and quality of mineral and energy resources, including the economic and environmental effects of resource extraction and use.

Help shape the future of USGS science by weighing in on our [Science Strategy planning process](#).

Energy and Minerals Programs

Energy Resources

The mission of the USGS Energy Resources Program is to understand the processes critical to the formation, accumulation, occurrence, and alteration of geologically based energy resources; to conduct scientifically robust assessments of those resources; and to study the impact of energy resource occurrence and/or production and use on both environmental and human health.

USGS Science and Decisions Center

The Science and Decisions Center is a multidisciplinary and open architecture focal point for advancing science-based resource management decisions through the use of USGS scientific information and tools such as ecosystem services, adaptive management, and resilience.

Mineral Resources

The USGS Mineral Resources Program (MRP) provides scientific information for objective resource assessments and unbiased research results on mineral potential, production, consumption, and environmental effects. The MRP is the sole Federal source for this information.

National Laboratories

The USGS maintains a variety of high quality, state-of-the-art scientific facilities that provide analytical capabilities, scientific support functions, experimental and modeling expertise, and field capabilities. Two of these facilities along with scientific staff are housed in Denver, Colorado at the Federal Center and at Stanford University near the Menlo Park USGS campus. Detailed information on these facilities is available at:

Questions about Minerals

Mineral Resources Program

Sedimentary rocks are examined by USGS scientist in southwestern Alaska as part of a regional mineral resource assessment.

The USGS **Mineral Resources Program** (MRP) provides scientific information for objective resource consumption, and environmental effects. The MRP is the sole Federal source for this information.

The MRP funds research to address two major program functions:

Research and assessment—Provides information for land planners and decision makers about environmental consequences of the presence of those commodities. MRP supports an on-going geophysical, and mineral resource databases and the migration of existing databases to standard

Data collection, analysis, and dissemination—Describes current production and consumption approximately 180 countries.

The unique expertise developed by MRP over many decades in response to mineral-resource-related remediation of natural hazards.

The BLM manages nearly 700 million acres of mineral estate. This acreage includes areas where either the BLM or other federal agencies manage the surface, as well as areas where the surface is privately owned. For the purposes of the information on this page, these lands are referred to as "Federal lands."

The BLM compiles a large amount of statistical information relating to oil and gas leasing on Federal lands. Below are links to tables and spreadsheets with data that include the numbers of BLM-administered oil and gas leases, applications for permit to drill, and oil and gas wells. Most of the statistics on this page cover Fiscal Years 1988-2012. The data begin in 1988 because that was the first year the BLM began to issue leases under the Federal Onshore Oil and Gas Leasing Reform Act. Tables 12 and 13 cover different timeframes.

The definitions on this page apply to the BLM onshore leasing program only.

The Department of the Interior's Office of Natural Resources Revenue (ONRR) maintains statistical data for Federal onshore sales volumes and reported royalty revenues. To visit the ONRR statistics website [click here](#).

Oil and Gas Statistics by Year for Fiscal Years 1988 - 2012			
Table Titles and Descriptions	PDF	Excel	Chart
Table 1. Summary of Onshore Oil and Gas Statistics This table contains the national totals for Fiscal Years 1988-2012 for each of the following tables. The following tables contain state-by-state breakdowns of these figures for the same time period.			
Table 2. Total Number of Leases in Effect This table contains the total number of leases, by state, considered "in effect" by the BLM at the end of each fiscal year.			
Table 3. Total Number of Acres Under Lease as of the Last Day of the Fiscal Year This table contains the total number of acres, by state, contained in leases considered "in effect" by the BLM at the end of each fiscal year.			
Table 4. Number of New Leases Issued During the Fiscal Year This table contains the total number of new leases, by state, issued by the BLM during each fiscal year. Leases issued over the course of a fiscal year may or may not be leases sold during that same year. For example, a lease might have been sold but not issued pending protest resolution. Following successful resolution, that lease would have been issued, but this process may not have concluded in the same fiscal year. This figure includes parcels sold at a competitive lease sale, as well as leases issued non-competitively.			
Table 5. Number of Acres Leased During the Fiscal Year This table contains the total number of acres, by state, contained in new leases issued by the BLM during each fiscal year.			
Table 6. Number of Producing Leases on Federal Lands This table contains the total number of producing leases by state as of the last day of the fiscal year.

BLM: Coal Lease Statistics

U.S. DEPARTMENT OF THE INTERIOR BUREAU OF LAND MANAGEMENT

[Print Page](#)

Total Federal Coal Leases in Effect, Total Acres Under Lease, and Lease Sales by Fiscal Year Since 1990

The BLM has responsibility for coal leasing on approximately 570 million acres where the coal mineral estate is owned by the Federal Government. Surface ownership of these lands belongs to either the BLM, the United States Forest Service, private land owners, state land owners, or other Federal agencies.

Revenues from coal leasing and production are shared by the Federal Government and the state where the coal is leased. The Department of the Interior's Office of Natural Resources Revenue (ONRR) maintains statistical data for Federal coal sales volumes, sales values, and revenue. To visit the ONRR statistics website [click here](#).

This table provides information about the number of total leases in effect, total acres under lease, and the number of lease sales at the end of each fiscal year since 1990. Acreage totals may vary slightly because rounding is used. You can also click on each state to view additional data.

Successful Competitive Lease Sales Since 1990, Wyoming

BLM Wyoming maintains records of coal lease sales during the year. This table provides information about lease sales based on the Lease by Application (LBA) serial number, which is used to identify and track applications. Sometimes, the applicant is not the same as the final lessee because during the bidding process, someone may submit a larger bid than the applicant.

Data in this table may not add up to the state-specific totals listed on the BLM's [national coal page](#) because the national table includes information, such as lease modifications and relinquishments not included here.

Statistics and Facts

The Bureau of Ocean Energy Management is committed to clear, transparent communication of our actions and policies. BOEM collects data on all facets of our offshore Oil and Gas Energy Programs and makes that information available in various formats. Our regional offices also provide information specific to their operations. If the information you seek is not available, please contact the public affairs office for the area or topic you are interested in learning more about.

Renewable Energy Programs

the Start: BOEM is making progress from the Start' initiative to deliver Outer Continental Shelf. Several were reached recently by working with governments and stakeholders. Plans are being set for the Pacific Region.

North Atlantic Coastal Risks: BOEM has been invited by the U.S. Army Corps of Engineers to work with Federal partners, State non-governmental organizations (NGOs) to develop risk reduction strategies to protect the nation's vulnerable coast. A report will be submitted to Congress within 24 months.

Office of Natural Resources Revenue Statistical Information

[Home](#) [Common Data Summaries](#) [Query Options](#) [Additional Information](#)

Welcome to the ONRR Statistical Information Site

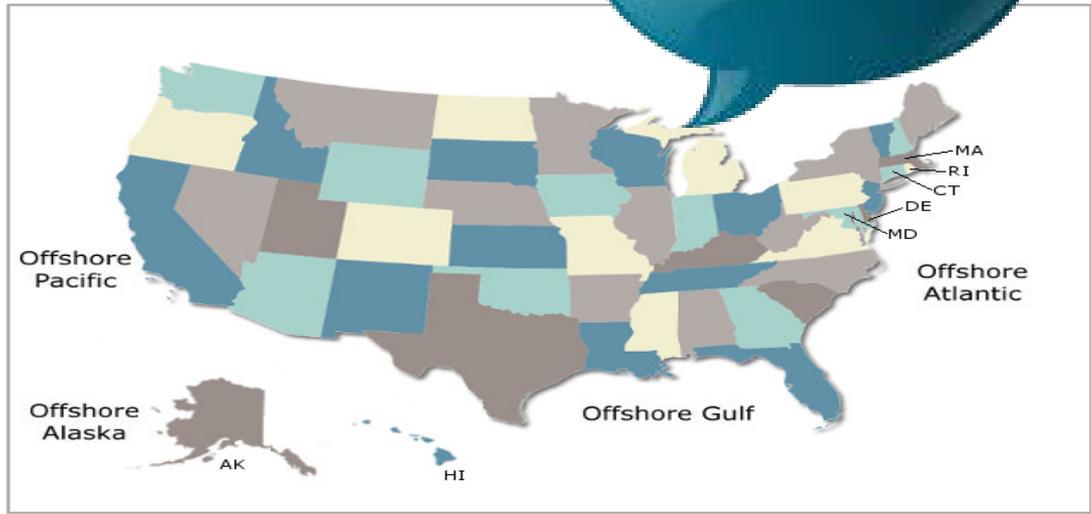

The data displayed on this website represent key components used in ONRR's mission, to ensure the full and fair return to the American people of Federal and Indian royalties and other monies owed for the utilization of public resources in the production of conventional and renewable energy and mineral resources.

Disbursement Data – Represent payments that ONRR makes to American Indian Tribes and Allottees; States and their Counties, Parishes, and Boroughs; Federal agencies; various special purpose funds; and the U.S. Treasury. Disbursements come from collected revenues.

Reported Revenue Data – Represent royalties, rents, bonuses, and other revenues that mineral royalty payors report to ONRR. The royalty transactions include sales volumes, sales values, and royalties. Reported revenue data can be summarized by Accounting Date or Sales Date; please see the [FAQ](#) for an explanation of these data sets and their intended uses.

The Additional Information page contains material related to ONRR revenues and disbursements including the Year in Review, Frequently Asked Questions, and several energy related links.

We update our web site with Disbursement and Reported Royalty data by Accounting Year in November, and add Reported Royalty data by Sales Year in the following February. It is important to note that our Accounting Year data represent all transactions accepted into our Financial System during a given fiscal year including adjustments and corrections for sales that took place in previous fiscal years. Accounting Year data is most useful, when analyzing the dollars ONRR collects and disburses in a given fiscal year. Because they include adjusted and corrected transactions for previous sales periods, **Accounting Year data should not be used for trending purposes or for analyzing sales volumes.**
