As you probably remember, I alerted you to the possibility that Navajo Nation President Ben Shirley would most likely be writing the Secretary to request a meeting regarding what is being called the Navajo Nation Energy Project which includes permitting associated with the Navajo Pinabete Coal Mine and lease approvals associated with continued operation of the Four Corners Power Plant that uses coal from the mine (and some other associated actions). This will be a non-delegated EIS since it will involve 3 or more likely 4 assistant secretaries. I don't know if the letter has been sent but attached are two documents provided by the project proponents that should help with any briefings that may occur. I believe you had forwarded my last note to Lori Faeth and Letty Belin. I will let you do the same with this information if you think it is appropriate.

Four Corners Navajo Energy Project Description

BHP Navajo Coal Company (“BNCC”) owns and operates the Navajo Mine located near Waterflow, New Mexico in the Navajo Nation. The surface mining operation supplies all the coal used at the nearby Four Corners Power Plant, which is operated by Arizona Public Service Company (“APS”). The Navajo Nation, APS, and BNCC are all working together to renew the power plant’s lease and expand mining operations so that electricity production can continue after 2016. This effort will require several complicated federal, tribal, and state regulatory approvals as well as detailed environmental and historic and cultural preservation studies. These approvals and studies are summarized below.

Four Corners Power Plant

As operator of the Four Corners Power Plant, APS recently executed a lease amendment (“Lease Amendment No. 3”) with the Navajo Nation to extend the term of the lease for the FCPP an additional 25 years to 2041. APS proposes the approval of the lease amendment and grants of right-of-way by the Bureau of Indian Affairs for the Plant site and ancillary facilities, the independent switch yard, and the transmission lines.

The desired future operation of the FCPP site involves removing Units 1, 2, and 3 from service on or before 2014, installing pollution control upgrades on Units 4 and 5, and continued operation of the independent switch yard and transmission lines. This scenario will substantially reduce coal consumption and emissions, and lower the power output of the plant to approximately 1,500 megawatts. The ash disposal area will expand in future years within the current lease boundary. There is no proposed change to the exterior boundary of the FCPP site, the switch yard, or any of the transmission lines and ancillary facilities as part of the proposed actions.

Navajo Mine

BNCC will apply for a permit from the federal Office of Surface Mining Reclamation and Enforcement (“OSM”) under the Surface Mining Control and Reclamation Act to produce about 6 million tons per year of low-sulfur coal from 3,000 acres of land currently leased to the company by the Navajo Nation. Because of the shutdown of three power plant units, this future production is about 3 million tons per year *less* than in the past. A portion of the Burnham Road—a public road administered by the BIA—will also need to be moved east and upgraded so that it will not obstruct future mining operations.

So that this tribally-owned coal resource is used wisely, the company will prepare a Resource Recovery and Protection Plan under the supervision of the

federal Bureau of Land Management. The U.S. Environmental Protection Agency will amend the company's Clean Water Act Section 402 discharge permit for the mine. And because the desert arroyos on the lease will be disturbed, the U.S. Army Corps of Engineers will need to issue an individual permit under Section 404 of the Clean Water Act for these proposed mining activities.

The Navajo Nation will also need to verify that these proposed mine activities will not adversely impact tribally-listed endangered or threatened species, coordinate historic preservation reviews as part of its role under Section 106 of the National Historic Preservation Act, and provide a water quality certification under the Clean Water Act. Of course, federal agencies will also consult with the Navajo Nation on a range of regulatory compliance matters.

Joint Approvals and Studies

The Nation, APS, and BNCC will cooperate with all these federal agencies—led by OSM—to prepare an environmental impact statement (“EIS”) under the National Environmental Policy Act. The EIS will assess the impacts of these federal approvals on the quality of the human environment, and will include an assessment of alternatives to the proposed federal actions. The EIS will cover the direct, indirect, and cumulative impacts of federal approvals at both the Four Corners Power Plant and the Navajo Mine.

OSM will also conduct formal consultation with the U.S. Fish and Wildlife Service under Section 7 of the Endangered Species Act to ensure that the federal approvals for both facilities address any and all impacts on threatened and endangered species and their critical habitat. Similarly, the federal agencies will conduct a consultation under Section 106 of the National Historic Preservation Act with the Navajo Nation and, as appropriate, the Advisory Council on Historic Preservation.

Timing of Permits, Reviews, and Consultations

To assure the continuous, uninterrupted operation of the Navajo Mine and the Four Corners Power Plant, all federal permits and environmental, wildlife, and cultural reviews and consultations will need to be completed by January 2015.

Four Corners Navajo Energy Project Fact Sheet

The Navajo Nation is working together with Arizona Public Service Company and BHP Navajo Coal Company to secure by January 2015 federal approvals to continue reducing dramatically air emissions from the Four Corners Power Plant, and ensure that the plant continues to be supplied safely and responsibly with Navajo-owned coal from the adjacent Navajo Mine.

This project is in alignment with four important federal policies:

- The federal trust obligations to support tribal self-sufficiency and self-determination;
- That natural resources be produced and used safely, responsibly, and in accordance with environmental values and laws;
- The creation and maintenance of high-skilled jobs and supporting the competitiveness of the U.S. economy; and
- Domestic energy independence and energy security.

The President's Council on Jobs and Competitiveness captured the essence of many of these policies in its January 2012 *Road Map to Renewal* report. With respect to energy projects, the Council wrote:

An all-in approach is imperative if we hope to reduce our reliance on foreign oil and create a more diverse electricity generation portfolio. America needs to optimize use of all of its natural resources while protecting public health and the environment. Now more than ever, the jobs and economic and energy security benefits of these energy projects require us to tackle the issues head-on and to expeditiously, though cautiously, move forward on projects that can support hundreds of thousands of jobs. Over the long term, we expect that innovation and technological advancements will greatly reduce America's reliance on fossil fuels. Until then, however, we need to be all in.

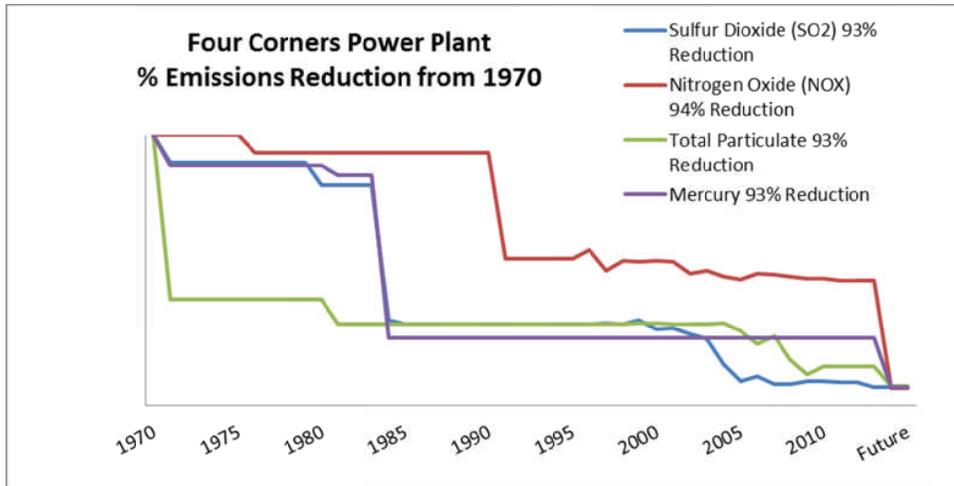

This project is in alignment with these tribal, environmental, economic, and energy policies.

1. This project promotes Navajo self-sufficiency and self-determination

- **Navajo jobs.** In an area with per capita income of only \$6,800, wages and benefits from jobs at the Four Corners Power Plant and the Navajo Mine—some 80% of which are held by members of the Navajo Nation—approach \$100,000 per job, with an overall annual payroll of over \$100 million.
- **Navajo resources.** This project continues the use of Navajo-owned natural resources, and contributes some 32% of the Navajo government's general fund revenue through the payment of some \$70 million annually in royalties, fees, and taxes. Past project closures at Black Mesa, McKinley Coal Mine, and in the Chuska Mountains have deeply and adversely impacted the Navajo's ability to control their resources for their own benefit.
- **Navajo culture.** In an area of 55% unemployment and with an even larger percentage of underemployment, the jobs created by the project will help to preserve Navajo culture by curbing the migration of working age Navajo from the Reservation as they seek employment opportunities. In addition, the income from jobs created by the project—and in particular the income from the many jobs held by Navajo women—will help to support extended families and sustain community service initiatives on the reservation.

2. This project provides dramatic environmental improvement in air quality and reduces CO₂ emissions

- **Advanced environmental controls.** Once fully implemented, the environmental improvement projects to be taken by Arizona Public Service Company will cause the Four Corners Power Plant to be among the best controlled coal-fired power plants in the United States by extending historic emissions reductions at the plant even further and by reducing CO₂ emissions by 30%.

- Environmental review.** The power plant will support a best-in-class, community-oriented, low-carbon energy portfolio that will reduce greenhouse gas emissions and other pollutants. The power plant will also support a best-in-class, community-oriented, low-carbon energy portfolio that will reduce greenhouse gas emissions and other pollutants.

3. Project Performance

- Direct, high-skilled jobs.** The project will create approximately 1,000 full-time employees—over two-thirds of whom are members of labor unions—annually for a total of approximately \$100 million.
- Indirect revenue.** The project will generate approximately \$137 million in indirect revenue through the purchase of goods and services from local businesses. The combined direct and indirect revenue will be approximately \$237 million, or approximately 1.0 percent of the state's total revenue.
- Construction jobs.** The project will create approximately 1,000 construction-related jobs through the construction of the power plant. These jobs will be provided by local companies, and will attract investment into the multi-year construction period.

- **Competitive energy prices.** Responsibly produced, reliable electricity from lower-priced coal in an all-in, diversified fuel mix will keep regional electricity rates lower, which will maintain the competitiveness of regional businesses.

4. **This project is in alignment with a practical and progressive national energy policy**

- **Practical.** Fossil-fuel based electric generation from this project will be an important part of a diverse and cost-effective generation portfolio for some time to come. The key to the continued use of coal — as in this project—is to minimize impacts from coal combustion and to improve air quality.
- **Reliable.** The project will responsibly and reliably generate electricity for more than 500,000 homes to meet continuous “baseload” energy demand.

March 20, 2012

Secretary Ken Salazar
Department of the Interior
1849 C Street, N.W.
Washington DC 20240

Dear Secretary Salazar,

The Navajo Nation has worked extensively with the Arizona Power Service (APS) and BHP Navajo Coal Company (BNCC) to maintain the operation of both the Four Corners Power Plant near Fuitland, New Mexico, and the Navajo Mine near Waterflow, New Mexico. The three parties have been working to renew the power plant's leases and expand the mine's operations so that power generation can continue after 2016. This effort will require the approval of several complicated federal, state, and tribal approvals as well as detailed environmental and historic and cultural preservation studies. It is the parties strong belief that the best path forward to expedite this approval process would be the creation of a task force within the Department of the Interior.

The continued operation of both facilities is essential to the Navajo Nation as they represent nearly 32 percent of the Navajo Nation's general fund and over a thousand well paying Navajo Jobs. In this era of decreasing federal budgets, the loss of such a large portion of the Navajo Nation's general fund cannot be replaced. Likewise with the Nation's unemployment rate hovering around 55 percent, the loss of these Navajo jobs would devastate our fragile economy. Timely progress towards completing the approval process will ensure the preservation of services to the Navajo People.

The parties need seven permits and approvals for the facilities to continue operation from the Bureau of Indian Affairs, the Office of Surface Mining, the Bureau of Land Management, the Environmental Protection Agency, the Army Corps of Engineers, the Fish and Wildlife Service. To assure the continuous, uninterrupted operation of the Navajo Mine and the Four Corners Power Plant, all federal permits and environmental, wildlife, and cultural reviews and consultations will need to be completed by January 2015.

I am available to meet at your convenience to discuss these matters and how we can best expedite these approvals.

Respectfully,

A handwritten signature in black ink that reads "Ben Shelly".

Ben Shelly, President
THE NAVAJO NATION

CC: David Hayes, Interior Department Deputy Secretary
U.S. Department of the Interior

THE SECRETARY OF THE INTERIOR
WASHINGTON

JUN 07 2012

The Honorable Ben Shelly
President, Navajo Nation
Window Rock, Arizona 86515

Dear President Shelly:

Thank you for your letter of March 20, 2012, regarding the renewal of the site lease for the Four Corners Power Plant and expansion of the Navajo Mine so that power generation can continue at the Four Corners Power Plant beyond 2016. We understand the economic importance of the continued operation of these facilities to the Navajo Nation.

As you know, the Office of Surface Mining Reclamation and Enforcement has received an application for the proposed Pinabete Permit Area of the Navajo Mine, which will supply coal to the Four Corners Power Plant beyond 2016. The Bureau of Indian Affairs (BIA) also has received Lease Amendment 3, which extends the Power Plant's site lease until 2041. Both of these actions require preparation of an Environmental Impact Statement. We are beginning that Environmental Impact Statement (EIS) process, and have decided to prepare one EIS for the two actions. The OSM will be the lead agency for preparation of the EIS. Cooperating agencies currently include the Navajo Nation, the BIA, the Bureau of Land Management, the U.S. Fish and Wildlife Service, the National Park Service, the U.S. Army Corps of Engineers, and the Environmental Protection Agency. We anticipate completing the EIS by the end of 2014.

We appreciate the fact that seven regulatory actions involving multiple agencies for the facilities will be required to ensure the uninterrupted operation of the Mine and Power Plant. As Deputy Secretary David J. Hayes emphasized during his meeting with you on April 27, the Department is committed to coordinating these actions in an efficient and timely manner. In response to your specific request that we form a task force to expedite the decision making process, I am proposing that we build on the Department's cooperating agency team structure currently in place in that region. The proposed task force will be composed of the OSM Regional Director, who would serve as the task force lead, the BIA Navajo Regional Director, the BLM State Director, the FWS Regional Director, possibly the National Park Service, and the DOI Office of Environmental Policy and Compliance Regional Environmental Officer in Albuquerque. We also will invite the USACE office in Albuquerque and the EPA lead for Indian lands from Region IX in San Francisco to participate on the task force. This structure will provide an eight person task force representing Department regional leadership and other involved Federal agencies to address project timelines and issues requiring resolution. As necessary, the Department's Regional Solicitor will assist the task force.

While the regional task force will have primary responsibility for coordinating among the various governmental entities involved, I will be looking to the Director of OSM to have overall responsibility for ensuring timely project completion, including monitoring the progress of the task force and providing Deputy Secretary Hayes and me with ongoing status reports regarding this important project.

I am confident that this structure will address your concerns regarding the need for timely decision making for the many actions in front of us. We agree that this project is a very important one, and we look forward to continuing to work with you and your team on a government-to-government basis as we move forward.

Sincerely,

A handwritten signature in blue ink that reads "Ken Salazar". The signature is written in a cursive, slightly slanted style.

Ken Salazar
