

Pilot Station sonar technician support

Abstract: This project is funded specifically to hire a local technician from the village of Pilot Station to assist the ADF&G in the Pilot Station Sonar operations. It not only involves the ADF&G, AVCP, the local tribal office and technician, but also the whole community of subsistence users. AVCP, in the first year of this project worked with the local tribal office and ADF&G to announce the job opening, to hire and then train the technician chosen. Donald Kelly, a local from Pilot Station, was hired and returned as the technician for the next two years of the project. This particular project continued to build strong, existing relationships between AVCP, ADF&G and the local tribal office, and the community for that matter.
