1 2	P R O C E E D I N G S
3	(Utqiagvik, Alaska - 10/14/2022)
4 5	(On record)
6 7	CHAIRMAN BROWER: We'll do a roll call
8	and get started.
9 10	Leigh.
11 12	MS. HONIG: Thank you, Mr. Chair.
13	
14 15	Gordon Brower.
16	CHAIRMAN BROWER: Here.
17 18	MS. HONIG: Wanda Kippi.
19 20	(No comments)
21	
22 23	MS. HONIG: Steve Oomittuk.
24 25	(No comments)
26	MS. HONIG: Billy Patkotak.
27 28	(No comments)
29	
30 31	MS. HONIG: Eddie Rexford.
32 33	MR. REXFORD: Good morning. I'm here.
34	MS. HONIG: Morning. Martha Itta.
35 36	(No comments)
37 38	MS. HONIG: Esther Hugo.
39	
40 41	MS. HUGO: Here.
42	MS. HONIG: Brower Frantz.
43 44	(No comments)
45 46	MS. HONIG: And Peter Williams.
47	
48 49	MR. WILLIAMS. Here. Good morning.
50	

0161 1 MS. HONIG: Good morning. 2 3 MS. HONIG: Okay. So that's four out 4 of the nine seated Council members so no quorum yet. 5 6 CHAIRMAN BROWER: Thank you, Madame 7 Coordinator. We'll acknowledge the Council members as they come in. Brower Frantz is out and about. He was 8 here yesterday so we expect him to help establish a 9 10 quorum later today. Steve did indicate he'd call if he 11 can. Yesterday he was online for a while and I'm not sure if Mar -- Martha was here yesterday in person and 12 13 I'm not sure exactly her situation this morning so 14 we'll acknowledge them as they -- as they join. And 15 perhaps Wanda would join us today if -- you know, I 16 don't have her phone number. 17 18 With that I'm going to ask Eddie to do 19 a Kaktovik report real quick. We went through the 20 Council member reports yesterday and I'm going to give 21 you the opportunity to provide a report for Kaktovik. 22 23 Eddie, you have the floor this morning. 24 25 MR. REXFORD: Thank you, Mr. Chairman. 26 And I apologize for not calling in yesterday, I forgot 27 there was a meeting scheduled for yesterday and I look 28 at my calendar. 29 30 But anyways folks have been successful 31 in harvesting caribous and they're still harvesting 32 caribous at this time. And we've successfully landed three whales for the fall season. And hopefully we're 33 34 supposed to have a moose quota soon. Haven't heard 35 from the Refuge Manager lately on that topic. Other 36 than that we've been successful in the community harvesting subsistence resources that the community 37 38 needs for the year. And that's kind of short and sweet 39 on the report from our end. 40 41 And a little update on the cooperating 42 agency for the EIS. NVK and KIC is going to be meeting 43 this coming Tuesday to look at the MOU with Fish and 44 Wildlife and we'll -- hopefully we'll be joining again 45 this year to represent our community and the Borough. 46 47 So that's all I have for now. Thank 48 you, Mr. Chair. 49 50

0162 1 CHAIRMAN BROWER: (In Native), 2 Kaktovik. It's always good to hear from you, Eddie. 3 4 Any questions for Eddie Rexford and for 5 Kaktovik area. 6 7 (No comments) 8 9 CHAIRMAN BROWER: Hearing none, (in 10 Native). And for those that are online it would be 11 good when you're not speaking to go on mute as it gets 12 pretty noisy very quickly for background. 13 14 And thank you, Eddie, for that brief, 15 short and sweet report from Kaktovik. 16 17 And once we get Wanda online and we'll 18 ask Atqasuk to do their report or Blair, Billy Patkotak 19 gets on we'll ask Wainwright to do their report as 20 well. 21 22 With that I'm going to ask the 23 Fisheries Resource Monitoring Program folks to continue the dialogue on the PINs and later on this will be a 24 25 action item. I don't think we have a quorum right now 26 so we can't act on anything that we need to act on, but 27 we can certainly discuss items listed and as soon as we 28 get a quorum we'll go to some of the action items to 29 get past some of those that -- like our annual report 30 and our winter confirmation dates and fall, 2023 31 confirmation dates. Seems like our quorum keeps being 32 fragile and once we get one we want to get these out of 33 the way. 34 35 With that I'm going to hand the mic 36 over to Hannah and to Karen on the Fisheries Resource 37 Monitoring Program. You have the floor. 38 39 MS. HYER: Good morning, Mr. Chairman and Council members. For the record I'm Karen Hyer, 40 41 I'm a Fish Biologist with OSM. And I'll let Hannah introduce herself. 42 43 44 MS. VOORHEES: Good morning. Hannah 45 Voorhees, Anthropologist with OSM. 46 47 MS. HYER: Mr. Chairman and Council 48 members, I thought we had some really good discussion 49 yesterday and from our discussion we have the PINs that 50

1 were listed here in the book and then I added a couple more. So I think what I'd like to do is just work down 2 the list starting with book page 104 and then adding 3 4 what I heard us talk about yesterday. So we're going to -- because I talked to Martha yesterday and she 5 wanted to go back to her community and get some 6 7 specifics so I have general PINs and we can go back to the office and work with them and get some -- have some 8 communication so we can get them exactly as we want 9 10 them before they're put out with the notice of funding. 11 But right now I'd just like to get the general ideas 12 down because that's what we can go ahead and make a 13 motion on. 14 15 So if you start on page 104 what we have listed for this region you can find under North 16 17 Slope. And I'll go ahead and just read them to you and 18 we can just kind of work down the list together. 19 20 traditional So usinq ecological 21 knowledge and harvest monitoring document new fish 22 species and changes in abundance, size, timing and 23 distribution of existing fish species as well as 24 impacts as new or expanding species on other fish that 25 are important to the subsistence in the North Slope 26 region. 27 28 So that's the first one. Is there any 29 input on that? 30 31 CHAIRMAN BROWER: I'm trying to find 32 the page. 33 34 MS. HYER: It's 104, right under North 35 Slope. 36 37 CHAIRMAN BROWER: Yeah, any questions on that, on new fish species and changes in abundance, 38 39 size, timing and distribution of existing fish species 40 as well as impacts of new expanding species on other 41 fish that are important to subsistence on the North 42 Slope region. 43 44 (No comments) 45 46 CHAIRMAN BROWER: I haven't really seen 47 something drastic changing in terms of invasive species 48 or anything like that. You know, back in the '70s we 49 had all of these -- you know, we used to call them 50

1 humpies, you know, they get these -- their salmon about this big with a big back on them. 2 I know there's 3 another word for them, I just..... 4 5 MS. HYER: Is that the pink salmon? 6 7 CHAIRMAN BROWER: Yeah, I think they're 8 And we get lots of those. And some pink salmon. people feel like it's something different, but when I 9 10 was a kid in June those kind of fish would go up 11 Ikpikpuk all the time. And so it's not a big -- maybe it's people that are not used to seeing some salmon in 12 13 our rivers. I've seen those -- you know, you'll see 14 them from the airplane toowhen they're moving in the --15 in the Ikpikpuk River. So to me it's not -- I don't see a really big difference in say the addition of 16 17 invasive species impacting local fish. Maybe some 18 other parts, I don't know. I'll just leave it at that. 19 20 If any of the Council members want to 21 say anything about that. But these are candidates for 22 PINs, right, these are candidates for study. And, you 23 know, it's very hard to get the resources and money. 24 So if we do get something qualified to get funding we 25 should really look at what we need because it's hard to 26 get that money funneled up this way. 27 28 MS. HUGO: Mr. Chair. 29 30 CHAIRMAN BROWER: Yeah, go ahead, 31 Esther, from Anaktuvuk. 32 33 MS. HUGO: Yesterday we discussed about 34 the PINs and it's about the fish, the grayling, so 35 maybe we can go back and listen what's going on in 36 Chandler with the graylings or within our area. 37 38 With grayling in your area? MS. HYER: 39 40 MS. HUGO: Uh-huh. 41 42 MS. HYER: Okay. All right. I will --43 I will add that to the list. 44 45 MS. HUGO: Well, due to the discussions 46 that we -- the information we got yesterday on the 47 grayling. I'm pretty interested to see if there is 48 contaminants or no. 49 50

0165 1 MS. HYER: Yeah. Absolutely Council 2 member.... 3 4 MS. HUGO: Well, from the liver, 5 I'm.... 6 7 MS. HYER: .....are we talking about 8 grayling or lake trout or both? 9 10 MS. HUGO: Both. 11 12 MS. HYER: Okay. Okay. 13 14 MS. HUGO: Lake trout because we eat a 15 lot of that and when they go ice fishing in April, March I do get a lot of lake trouts. 16 Most of the 17 salmon the family eat and a lot of times I'll get a 18 whole bunch of these huge lake trouts and I try to save 19 and eat them and share them. So I'm just interested. 20 21 Thank you. 22 23 CHAIRMAN BROWER: Thank you, Esther. I 24 think that's a good observation. We had that presentation from those other lakes and being that 25 26 trout is a predatory fish and seems to me that there 27 were some issues with that species in other parts --28 other partsof Alaska. It would beprudent I think to --29 yeah, get that as a priority information need. 30 31 MS. HYER: So.... 32 33 CHAIRMAN BROWER: I would support that. 34 35 MS. HYER: Okay. So, Mr. Chairman and 36 Council members, I do have a priority information need 37 listed and I -- I'm just going to throw it out because I might have to wordsmith it later, but I do have 38 39 document population, structure and health of lake trout 40 in Peters and Schrader Lakes. Do you want to add 41 Chandler to that? 42 43 CHAIRMAN BROWER: Yes. 44 45 MS. HYER: Okay. And then -- then 46 you're interested also in grayling health an abundance 47 and populations in Anaktuvuk Pass area? 48 49 CHAIRMAN BROWER: Yes. 50

0166 1 MS. HYER: Okav. Okay. I have that 2 one also. So if there's nothing else I'll go on to the 3 second -- which would now be the third PIN. 4 5 CHAIRMAN BROWER: We're just going to 6 hear what you -- as you down the bullets and..... 7 8 Yeah. I just want to make MS. HYER: 9 sure that I communicate everything I have on my list in 10 case there's some gap. Like I didn't have -- just for 11 example I didn't have grayling on my list, I just had the two pop -- the two lakes, Peters and Schrader and 12 so I just added Chandler and I just added grayling 13 14 because I didn't have that. So that's the value of 15 this is you can see what I have, if you don't want it 16 you can say get rid of that and if you want to add 17 things because I don't have them so that was very 18 helpful. 19 20 CHAIRMAN BROWER: Yeah. Thank you, 21 Karen. And for benefit for Kaktovik as you're joining on 22 the second day we did have a pretty robust 23 yesterday around fisheries discussion resources 24 monitoring, we had a video which was pretty startling, 25 kind of -- could be scary to folks that may not know 26 what happens on the Slope from time to time around 27 freeze up and especially around warm spring areas and 28 things like that which we know to exist, those kind of things. And to develop a -- continuing to develop a 29 30 priority information list to try to secure funding for 31 Fisheries Resource Monitoring on the North Slope within 32 region 10. So that's what we're doing this morning 33 again, Eddie, and if there are any concerns about your 34 fish and areas that you want to be included in a PINs, 35 that's the acronym for the priority information needs 36 and things like that. So and if you want to chime in, 37 Eddie, I know that they've had studies down your way 38 from time to time on arctic char and things like that. 39 40 MS. HYER: Mr. Chair and Council 41 members.... 42 43 MR. REXFORD: Thank you, Mr. Chair. 44 Yeah, there was mention of Peters and Schrader Yeah. Lake and for your information I do own a -- my mother's 45 46 Native allotment on Schrader Lake and we do quite a bit 47 of ice fishing during the fall and winter and spring. And I've been noticing in the body cavity that there's 48 49 white lumps and little pockets and which could be I 50

0167 1 quess tapeworms. I don't know if there's more fish like that, I don't know if it's because of the water 2 3 warming up or what, but some of the fish we -- I 4 harvested had some of that white pockets in the body 5 cavity and folks were reluctant to eat fish. So that's just a personal observation on lake trout that I have 6 7 for -- from Schrader Lake and I thought I'd throw that 8 in. 9 10 Thank you. 11 12 CHAIRMAN BROWER: Thank you, Mr. 13 Rexford. And yesterday's video and presentation around 14 various lakes from different parts of Alaska was --15 they had some very important information that would I think lead us to support some of these kind of studies 16 17 they did in other parts of the State on lake trout and 18 that we should follow suit with those types of studies 19 on the North Slope especially, you know, because we 20 consume those trouts as well. 21 22 So with that, Karen, I'm going to hand 23 the mic over back to you. I just wanted to make sure 24 Eddie was more in the loop about what we were 25 discussing yesterday about Fisheries Resource 26 Monitoring Program. 27 28 MS. HYER: Absolutely. Thank you, Mr. 29 Chairman. Okay. So the second which is now the third 30 one I have is document and investigate the possible 31 causes of mold, disease and discoloration on broad 32 whitefish in the Colville River in the vicinity of Nuiqsut, compare 33 environmental conditions in the 34 Colville River including temperature with those in the 35 Ikpikpuk River where whitefish are healthy and mold has not been observed to date. 36 Investigators are 37 encouraged to draw on both stock status and trends and 38 ecological knowledge research. 39 40 CHAIRMAN BROWER: I know that's --41 we've added to that to try to see how maybe even 42 because of the broad whitefish having fish mold seems 43 to be not palatable for the Technical Review Team 44 maybe, I don't know, to formulate a funding mechanism to -- if there are ways to assist maybe it's a 45 46 wordsmthing, how we say and make it a little bit more 47 broader might be beneficial to actually seeing why our 48 fish are encountering those kinds of ailments I guess. 49 And so -- and maybe it's a broad white study in itself 50

and their distribution patterns. I think the Sag 1 River, the Sagavanirktok River, is one of those that is 2 a rearing ground as well. It's known to have whitefish 3 4 in that area too. So I think it's still ongoing and we 5 heard it from Nuiqsut yesterday about that particular, you know, concern. And there's this sentiment that's 6 7 kind of developed over time that, you know, we talk about it and we talk about it, but nothing actually 8 And maybe it's time to develop -- I like 9 comes of it. 10 to say wordsmith, that you say things the right way 11 that would bepalatable for a Technical ReviewTeam to --12 I think there's -- it's just the way it is expressed. 13 It may be the abundance and health and distribution 14 patterns related to these fish. I don't know. So I 15 can't emphasize enough that concern to Nuigsut. 16

17 MS. HYER: Mr. Chairman and Council 18 I think one of the things that North Slope members. 19 has struggled with is actually not the challenge of the 20 TRC, but the challenge of getting investigators to come 21 and do proposals because when we get proposals from the North Slope they're usually very successful through the 22 23 process. It's just -- it's just a huge area and we 24 don't have an over abundance of investigators that work 25 up here so it's finding the right person to come do 26 this and working on the outreach of, you know, getting 27 the information out that we're looking for studies in 28 this area.

30 I do have one thing I would like to 31 follow-up with your comment because from yesterday's 32 discussion I also make a note about broad whitefish in 33 the Sag and looking at distribution, abundance and 34 And that would be different than this PIN health. 35 right here. And I was going to present that also as 36 something to add to the list and so I just want to make 37 sure that is something that you'd like on the PIN list. 38

39 CHAIRMAN BROWER: I think it's -- this I think it's important, it's a 40 is Gordon Brower. 41 subsistence resource and should -- these resources 42 struggles elsewhere, we should know whether or not, you 43 know, the Sag River, Sagavanirktok, is altogether a 44 different stock than those on the Ikpikpuk because from what I've heard over time the Ikpikpuk is a ideal 45 46 location from the Teshekpuk Lake, from various other 47 little lakes, they all come out at the same time from 48 these lakes and converge on the Ikpikpuk to spawn. And 49 I've heard that from elders. And it seems to me that 50

0168

1 the Sag would probably represent that type of distribution pattern unless they're connected together 2 3 in some way. But most fish in my view they go back to 4 where they spawned, even the young ones, something to do with the scent of that river or something, they'll 5 go back to that and Ikpikpuk is -- it's a very big 6 7 concentration area of the broad whitefish. And I got pictures right in my phone from last year's fishing 8 where that concentration has never let up. It's always 9 10 -- it's always there. And it would be important to 11 should something happen to Ikpikpuk and we need to 12 reconnect with the Sag and with the same types of fish 13 would be important PINs in my view. 14

15 MS. HYER: Okay. Great. Thank you for 16 So I'm kind of going back and forth your input. 17 because you bring up things that I had written in my 18 notes. And so I -- I'm taking the opportunity to add 19 those into this list. So but I'm on the third bullet 20 now on page 104 and it says document the effects of 21 climate change including lake freeze up on subsistence 22 fishing access, harvest and preservation methods and 23 the impact of these changes on community wide harvest 24 levels and food security on the North Slope. Research 25 could investigate adaptations for continuing community 26 wide harvest levels where traditional preservation 27 methodsare impacted. Studies include Ikpikpuk River -excuse me. Studies including Ikpikpuk River are of 28 29 particular interest.

30

31 CHAIRMAN BROWER: Okay. You know, when 32 we talk about that and I'm not one of those big climate 33 change proponent people that say we are doing it, you 34 know, with fossil fuel. And I go way off on a tangent 35 when I start to think about why people think that way 36 because, you know, I've been involved with science 37 studies here since the 1990s and just right up here 38 there are trees that come out of the permafrost 39 routinely, fully intact, frozen solid and you can still burn them. And in 1997 I was helping these scientists 40 41 to do a tree study and got some elders involved and on 42 the Ikpikpuk it was easy to find white spruce on the 43 high water mark, pick it right up, you can chop it up 44 and burn it. Well, these guys took it to a lab to get 45 it radiocarbon dated and on the high water mark you 46 pick it right up, 36,000 years old white spruce. And 47 they're trying to figure out how did that get there and 48 there's lots of them. And I don't think Noah's flood 49 put it there because you'd have to have Noah's flood to 50

0170 1 be able to distribute high water mark that far up. This is a local river spring thaw and break up all the 2 3 time. But anyway needless to say they felt that the 4 Arctic was heavily treed just 36,000 years ago. So 5 it's important to look at the climate related things that we have to endure to be up here. And by the way 6 7 right in the Colville River they're picking up dinosaurs, you know, a t-rex has been found right 8 9 there. And it's important to recognize these things. 10 11 But I'm looking at these things we're 12 struggling. Maybe out of the last 10 years maybe six 13 of my catches of fish -- and when I fish and I could 14 show you my photographs, I fish for community wide, for 15 our community. Not very many people do it that much anymore, but a few of us that grew up with old people 16 17 and say don't forget how to fish, don't forget the 18 right time. And this -- the right time is still right, 19 the fish are not going to change their spawning, but 20 the ability for nature to be our natural freezer, it's 21 struggling. I -- it'll freeze up and I'll put fish in 22 sacks and put them in a warehouse, but it'll warm up 23 and they will thaw out in the sacks in the warehouse 24 and then freeze and then they thaw out again. And then 25 by that time the eggs have gone rancid. And don't get 26 me wrong, we even like rancid food, you know, elders 27 like to make what we call (in Native), you know, the 28 stinkfish. Not everybody likes it, my mom loved it. 29 My mom loved (in Native), especially when you could 30 make it absolutely green. And you would pass out, you 31 know, I would think. 32 33 (Laughter) 34 35 CHAIRMAN BROWER: But they're -- those 36 are good things. But the price was the fresh eggs, the 37 (in Native) was a price. You can dip that frozen in 38 seal oil. By the way we invented the first dips on 39 earth, you know, the seal oil dipping is so fantastic. 40 And it's awesome when you can do these things, but 41 we're struggling to do that when half of my catch 42 spoils. I didn't fish that much last year, but I 43 managed to get about 25 sacks. That's maybe -- you know, that's maybe about 5,000 pounds. 44 And I immediately, you know, make a way for it to go to 45 46 Anaktuvuk, to Point Lay, to Atqasuk, to distribute 47 them. And then the half of them distribute them to the 48 church for Thanksgiving. It's important that we find 49 a way to still get those fish at the right time, but I 50

0171 don't want to fish and let them spoil. 1 I'm going to hesitate to make that much (in Native). And there's a 2 place to make stinkfish, but not all the time and not 3 4 that much. It's better the fresh fish. 5 6 So there needs to be a mechanism for 7 subsistence because it is a traditional economy, it is a traditional food and we need to find a way to help 8 9 that. You don't need to study it, we already know it's 10 happening. It might need -- I don't have the resources 11 to put a propeller, all these -- maybe solar power and 12 make a little freezer, a common use freezer. And like 13 Alaska Eskimo Whaling Commission has walk-in freezers 14 for -- to store the bowhead whale so it won't get -- we 15 can preserve them because a lot of our cellars even are struggling. So anyway I get to go on a tangent like 16 17 that because even though it sounds like it's a PINs, 18 it's a study on why the ice is not stopping and forming 19 on the river. And back in the '70s and '80s we had 20 nets under the ice on September 15, the river's still 21 flowing and it's October what. And those are major 22 concerns. You cannot put a net with a slush. Believe 23 it or not it snows inside the river. When it's snowing 24 heavy out and it's cold it's (in Native) inside this 25 river. And it catches the net into a big snowball. So 26 those are important things. 27 28 Carmen, I know you've had your hand up 29 for quite some time now and I'll stop there. 30 31 MS. DAGGETT: For the record my name's 32 Carmen Daggett with Fish and Game. So a couple weeks 33 ago I was listening to the North Slope Fish and Game 34 Management/Fish and Wildlife Management Committee 35 meeting and they had a wonderful presentation from 36 ICAS. And during that presentation they were 37 discussing grants that they had received for putting 38 thermosiphons in sealocks and also pursuing some of 39 these issues with food security and food storage. And 40 it seems like they're being pretty proactive and 41 progressive about trying to address some of those 42 issues. So I wonder if it can't be addressed through 43 this avenue, perhaps teaming up with ICAS and bringing 44 those issues to them might get you some grant money to take care of some of those issues and help get some 45 46 ideas for the actual dealing with the situation of 47 being remote, trying to find a freezer system that 48 works for that area, how to power it all and everything 49 and then maybe get you some money to do that sort of 50

1 thing. I know you've been talking about the issue for a while, expressing that concern for a while and I 2 3 think ICAS really seems to have solved for -- been 4 working on solving some of those issues and it's 5 probably a good avenue for perhaps thinking about 6 trying to deal with that issue. 7 8 Also on the mic, you're talking about 9 different partners and having a hard time finding 10 partners. Brendan and I were talking about a couple 11 different partners that I'm not sure who all gets 12 approached, but I know that there's a couple of 13 connections that Fish and Game has with UAF students 14 and trying to pursue those as potential researchers. 15 I'm not sure if that's in your list of people. I know at least in our division and I'm not sure if he covers 16 17 fish or not, but Shawn Crimmins is our Cooperative 18 Extension Partner through Fish and Game and he works 19 for UAF as well and matches our research projects with 20 students. So that's part of his job. And so that's 21 someone that should be -- people like that should be 22 approached. 23 24 Just a few ideas to add to the mix. 25 Thank you. 26 27 MS. HYER: Carmen, maybe I'll follow-up 28 with you later on some partnerships that -- yeah, thank 29 you. I appreciate any information about that. 30 31 CHAIRMAN BROWER: Yeah, appreciate that 32 feedback. And it's important. I think ICC is working on food security network issues as well and but we 33 34 should never let up expressing our -- these types of 35 I always like to remind myself of my mom concerns. when she was alive. She said don't forget how to do 36 37 these things. We grew up in the '60s fishing with them and then we joined them in the '70s, we learned how to 38 39 do it just like they did. Then we went through the '90s. Late '90s things started to be more 40 '80s, 41 difficult I think, I mean, somewhere about 1999, 2000 42 we started to -- it was still good, but today, you 43 know, I hesitate to go because when we fish we don't 44 fish for ourselves, we fish for our families, we fish for our whaling crew members to feed them on the --45 46 when we're whaling and then the community is blessed 47 with a lot of fish. It's a trade practice. I remember 48 my dad trading five sacks of fish to get two (in 49 Native) skins so that we can outfit our boat. And they 50

1 trade, it's a traditional trade tool and stuff that nobody -- we should not forget these things and 2 3 continue to make a way for that, it is part of the 4 traditional economy, traditional culture to do these 5 things. And one day my mom always say, they went through hunger, you know, she's born in the 1920s and 6 7 they've heard about going through hunger and you fish and hunt because all the animals have a time, they will 8 9 be here in their prime for a period of time. And some 10 of them leave altogether for the winter. 11 12 So anyway I'll leave it at that. 13 14 Mr. Chairman and MS. HYER: Okay. 15 Council members, the last PIN on page 104 is baseline fish habitat and water quality monitoring, especially 16 17 temperature, dissolved oxygen and silt on the rivers 18 important to subsistence fishing and tributaries 19 communities in the North Slope region. Investigators 20 are encouraged to include overwintering areas. 21 22 CHAIRMAN BROWER: Yeah, I think that's 23 an important one. We saw that in a video yesterday. 24 That's an important -- but looking at that I think it's 25 a great study, we should study that. I think that's an 26 important one. But don't be startled because we've 27 seen those things that will happen from time to time. They will -- some fish will spawn in an area and then 28 29 it will -- it will get low water or the snow will blow 30 off in a big storm and expose the ice and then the ice 31 gets really thick at 40 below, the snow is an insulating quality. And just for an example we --North Slope Borough Land Management Policy says to 32 33 34 avoid overwintering habitat for industrial activities. 35 We had in I think 1998 a tractor, D7, make a shortcut 36 across a overwintering habitat where the river bank has 37 snow all the way to the sandbar and it look ideal to go 38 through. And halfway going through there the tractor 39 fell through the overwintering habitat because of its 40 sheer weight. The ice was only that thick and it was February. And but it had six feet of snow on top as 41 42 insulation. 43 44 So those are -- they're important 45 things and it may help devise better regulations and 46 protection mechanisms for overwintering habitat. Т 47 think it's very important. 48 49 MS. HYER: Okay. Mr. Chairman and 50

1 Council members. I do have one more that I was talking to Martha about yesterday and like I had said earlier 2 3 this is just a general PIN because she had wanted to go 4 back and talk to some specific subsistence fishers and 5 then she was going to get back to me. But I have seasonal movement in overwintering of habitats 6 \_\_\_ 7 overwintering habitat, excuse me. Seasonal movement, overwintering habitats of the lakes on the Colville 8 delta. And she's going to -- and I asked her about 9 10 specific fish and she's said she needed to do a little 11 bit of talking with her community and she'd get back to 12 me because we have a bit of time, these have to be 13 absolutely finalized when we make the announcement. 14

15 So anyway that is the last PIN I had 16 and so I'll take any comments on that or any additions 17 that people feel like need to be added to what I 18 presented. 19

20 CHAIRMAN BROWER: Yeah, it's important 21 to say our piece and I say more than my share seems 22 like. You know, when we're looking at lakes, you know, 23 we've expressed from Utqiagvik region, the (in Native) 24 Lake, the (in Native) Lake and some of those that the 25 hunters for maybe a 10 year period saying the abundance 26 of whitefish in these lakes, we're not catching what 27 we're used to catching. And then about two years ago 28 we start to see it change again. And so I think it's 29 important because lake whitefish is very different in 30 taste than those that are riverbound and that are 31 anadromous and move in and out of the coast and go into 32 the rivers. Their taste, like the ones at (in Native), 33 those to me are like butter. And it might be what they 34 eat. And when you look at them they eat snails in that 35 So and it might be important to study if their lake. 36 foods are struggling as well in those lakes.

38 So I'm with Nuigsut on studying the 39 abundance of fish for subsistence in the lakes surrounding communities because those ones are a 40 41 constant. The ones in the river are a -- like if 42 you're going to go for the spawning ones you got about 43 four weeks and you're going to miss the whole thing and I have my nets under the ice from --44 it's over. typically should be mid September to about mid October. 45 46 After October 10 you're going to get three. October 9, 47 the day before, you're going to get 200. They 48 disappear that fast in the river. But in the lake you 49 can fish until it's -- the ice too thick and then you 50

## 0174

0175 1 can't do it anymore. And it's -- they're qood subsistence resources. 2 3 4 And there should also be some ways to 5 look at lakes that might not have fish, but look at them to put fish in those. And the reindeer herders 6 7 used to talk about that all the time, they used to move fish around and stock lakes after they checked the 8 9 depth. At least from the guys that I talked to, 10 they're not here today, but they had a practice of 11 checking water depth, if it was deep enough and not 12 freeze all the way to the bottom it was a candidate for 13 them to play around and move fish and check it a few 14 years later and do things that way. But that's 1930s, 15 that's 1940s. And when the Navy at that time was a big problem for them, the Navy was dynamiting lakes and the 16 17 (in Native) is one of those that has been completed 18 dynamited in one year to do seismic back in the '40s 19 and '50s they would use dynamite and there'd be a big 20 die-off and fish all around the edge of the lakes 21 because they were dynamited. So but some of those fish 22 obviously survived, you know, and then there's still 23 more fish in them. Anyway..... 24 25 MS. HYER: Mr. Chairman and Council 26 members, that's all I have. We don't have a quorum 27 yet, do we. This is an action item so we need to vote 28 on it when we do get a quorum, but that is the list 29 that I have. 30 31 CHAIRMAN BROWER: Any other Council 32 members have feedback on any of these, I know I've been 33 providing a lot of feedback and, you know, on fish 34 studies you might have something in your area that 35 might not be on this list, but you added the Schrader 36 Lake or Chandler. 37 38 MS. HUGO: Chandler. 39 40 CHAIRMAN BROWER: Yeah, Chandler Lake. 41 And I think it's very important to let them do that 42 kind of study. (In Native) you have to think about the 43 health of these fish, especially those that were being 44 studied in other parts of the State at these -- some of 45 these bigger lakes on trout. And because we consume 46 them and they're good eating. We want to make sure 47 we're not going to glow. 48 49 So the mic's open for any feedback on 50

0176 1 any PINs or any other that you might want to add, that 2 you might think about. 3 4 MS. HUGO: Mr. Chair. 5 6 BROWER: Esther CHAIRMAN from 7 Anaktuvuk. 8 MS. HUGO: 9 Yes. Karen, I'm curious 10 does it have to be the Chandler because we do ice fish 11 at Schrader Lake. It's just northeast of us and that's where they catch a lot of lakers and -- especially 12 13 lakers, lake trout. 14 15 MS. HYER: So when you say Schrader 16 Lake, is that the same lake that Brendan was talking 17 about.... 18 19 MS. HUGO: No. 20 21 MS. HYER: ....yesterday? There's 22 another Schrader lake? 23 24 MS. HUGO: In our area. 25 26 MS. HYER: Okay. 27 MS. HUGO: Not Schrader, Shaynin Lake. 28 29 I'm sorry. Willow Lake. 30 31 MS. HYER: Willow. 32 33 MS. HUGO: Some people call it Willow 34 at home and then it's Shaynin Lake. I'm sorry. 35 36 MR. WILLIAMS: Yeah, you got me lost. 37 38 MS.HUGO: Yeah, it's in -- near Barter. 39 40 MS. HYER: So and that is a different 41 -- that's -- you have Chandler Lake, right? 42 43 MS. HUGO: Chandler Lake is west of us. 44 MS. HYER: And that's a big place that 45 46 you get lake trout and then this Shaynin..... 47 48 MS. HUGO: Shaynin. 49 50

0177 1 MS. HYER: .....Shaynin Lake..... 2 3 MS. HUGO: Shaynin Lake. 4 5 .....Willow Lake. So..... MS. HYER: 6 7 MS. HUGO: Willow Lake slash. 8 9 MS. HYER: ....that's another place 10 that Anaktuvuk harvest a lot of..... 11 12 MS. HUGO: Yeah. 13 14 So would you like to add MS. HYER: 15 that to the list also? 16 17 MS. HUGO: Yeah. 18 19 MS. HYER: Okay. Absolutely. 20 21 CHAIRMAN BROWER: Let me check online 22 if Steve Oomittuk, did you happen to join us this 23 morning yet? 24 25 (No comments) 26 27 CHAIRMAN BROWER: All right. So once we get I think one more, if Mr. Frantz would join us 28 29 this morning sometime or we should be able to get a 30 quorum and formally act on some of these things. 31 32 Did you have something, Carmen. 33 34 MS. DAGGETT: For the record this is 35 Carmen Daggett with Fish and Game. I just wanted to throw this out just for discussion purposes more than 36 37 anything and you guys can think about it or not, but it seems like I've been reading a lot about water -- about 38 39 lakes draining more and more and hearing about -- I 40 know there was one that drained over by Nuiqsut this 41 year. And there was another one that drained by 42 Kotzebue this year. And so I'm wondering how that 43 might tie into maybe some of these other research projects and if it's an element that you guys might 44 want to consider adding to one of these projects, 45 46 especially perhaps exploration of where fish are 47 currently or might be in the future or whatever. 48 49 Just something to think about, but I 50

0178 1 thought I would add that piece just because I've seen a lot of people talking about it on social media and on 2 3 the LEO network. 4 5 CHAIRMAN BROWER: Thank you, Carmen. 6 And that's been around for sometime unfortunately, I've 7 seen a whole lake full of pike that breakthrough on Ikpikpuk. I remember being a kid and my brother came 8 9 running saying I got an alligator. And it was a little 10 pike and we tied it on the hook and threw it back in, 11 not even 10 seconds he had a big pike on there. They 12 were hanging out on the edge trying not to be eaten by And that lake went and so we know these 13 biq pike. 14 lakes around highly eroding rivers especially during 15 spring breakup are very susceptible to (in Native), you know, they will -- you know, they're not -- yeah, 16 17 they're -- I don't even know how you would try to save something like that. I -- it's what happened to Point 18 19 Lay, all their entire water supply drained away a few 20 years ago. And so that is a common problem and that 21 was -- but it would be a good study to look at what 22 lakes that might have fish are at risk from these types 23 of local events. 24 25 All right. Well, we made some 26 discussions. Maybe we can take a look at any other 27 items that are not action items and go through the So Fisheries Resource Monitoring, we 28 agenda there. 29 went through the PINs. 30 31 MS. HUGO: We have a quorum now, Mr. 32 Chair. 33 34 CHAIRMAN BROWER: All right. Just in 35 time. 36 37 MR. REXFORD: Mr. Chairman, this is 38 Eddie. 39 40 CHAIRMAN BROWER: Yeah, go ahead, 41 Eddie. And just for the record we'll recognize Brower 42 Frantz as here this morning and we now have a quorum 43 and able to act on action items this morning. 44 45 So go ahead, Mr. Rexford, out of 46 Kaktovik. 47 48 MR. REXFORD: Yeah. Just a little 49 informational. We do have broad whitefish right next 50

1 to the Canning River on the coast which my father identified in the past and he applied for a Native 2 3 allotment in that area. It's like I believe 20 to 25 4 miles away from Kaktovik, but hardly anybody go over 5 there to try to harvest some of those broad whitefish. And it's on a lake right next to the coast on the 6 7 Canning River just for informational purposes if some of the folks don't know about that stock. It could be 8 used for comparison purposes probably in not -- some 9 10 study. But just a little information on that. 11 12 Thank you. 13 14 CHAIRMAN BROWER: Yeah, thank you, 15 That's good information. Let me know, maybe Eddie. 16 I'll follow you and we could go check the depth and put 17 a (in Native) in there and them lake fish are 18 fantastic, I'll tell you that much. 19 20 There's another one that came up one 21 time and we met up with some elders like Paul Kenneak, 22 Sr., Warren Mutamap, Arnold Brower, Sr., and the 23 industry wanted to put a runway, an ice runway to serve 24 as a field depo for seismic operations. And we were 25 tasked to talk about what issues might come up. And 26 those guys talked about the lakes between the Chip 27 River delta area and the Alaktak River delta area, 28 there's these lakes in there and they have very small 29 creeks, like some of them are only four feet wide, but 30 they're like eight feet deep, the little creeks in 31 And he mentioned that they had a fish those areas. 32 called (in Native). And he said well, they wanted to identify exactly -- so these elders went on their own 33 34 mission and retired guys and they went to go put a net 35 up there by themselves. And a couple of weeks later they called us, why don't you guys come over and visit 36 37 us here, we show you what it is. And sure enough they 38 were lakes just abundant with small lake trout, rainbow trout, they were rainbow trout. 39 And those guys call 40 them (in Native). And they were green, orange, 41 different colors on them, very pretty fish. And it 42 seemed to be a very localized area where those could be 43 found on those -- I think it's three particular lakes 44 in that area. 45 46 So lake fish are important resources so 47 I'll just run with that. 48 49 All right. With that, Madame 50

0180 1 Coordinator, I believe we have a quorum now. 2 3 MS. HONIG: That is correct, Mr. Chair. 4 5 CHAIRMAN BROWER: And earlier we discussed since we're having difficulty maintaining a 6 7 quorum that there are a couple action items that are very quick, that we get them out of our way real quick 8 9 in case, you know, we can't maintain a quorum. 10 11 MS. HYER: So, Mr. Chairman, we've just 12 been over the PINs. Now if you'd like to make a motion 13 we could vote on that right now and then we'd be 14 completely done with this. 15 16 CHAIRMAN BROWER: Thank you, Karen. 17 And I'm going to start off with maybe seeing the 18 appetite of the Commission here to do the very, very 19 easiest ones. I think the PINs we might have a little 20 discussion as we try to think about which ones should be our priority list versus I think we can get future 21 22 meeting dates done in three minutes. 23 24 MS. HYER: As you wish, Mr. Chair and 25 Council members. We'll come back when you're done with 26 all that. 27 28 CHAIRMAN BROWER: Okay. Well, what's the wish of the Council about -- item 13 is an actual 29 30 action item. And I know we lost Steve yesterday and we lost Martha today and we're very grateful that Brower's 31 32 about to -- Mr. Frantz able to be with us this morning. 33 I think selecting future meeting dates takes a few 34 minutes. If we can do that it's an actual action item 35 and that'll go a long ways to getting the agenda for 36 the next meetings. And we can go to page 116 real 37 quick. 38 39 MS. HONIG: Yes, Mr. Chair, if I may. 40 41 CHAIRMAN BROWER: Leigh. 42 43 MS. HONIG: There was a new edition of 44 the calendar of some of the other meeting dates that have been decided upon by the other Councils. I can 45 46 run and grab that so everybody has the most current 47 version.... 48 49 CHAIRMAN BROWER: Uh-huh. 50

1 MS. HONIG: .....version in front of them. Hold on one second. 2 3 4 CHAIRMAN BROWER: And the other action 5 item that we have is to adopt our annual report. Т 6 think we have to go by a motion on that. 7 8 MS. HONIG: So, Mr. Chair, if I may. 9 If you'd like to start with the winter, 2023, if you'd 10 like to confirm the meeting dates for the North Slope 11 RAC will be February 23rd through the 24th in Kaktovik. 12 I will point out if you're interested in changing that 13 meeting date that the Southcentral Regional Advisory 14 Council has moved their meeting just by one day from 15 March 15th to March 16th in Anchorage. 16 17 CHAIRMAN BROWER: So our winter meeting 18 dates of February 23 to 24, we can just reconfirm that 19 to be in Kaktovik? 20 21 That is correct, but here MS. HONIG: 22 is Katya. 23 24 CHAIRMAN BROWER: Okay. Katya. 25 26 MS. WESSELS: Good morning, Mr. Chair, 27 members of the Council. For the record my name is Katya Wessels. And I just would like the Council to 28 29 consider to move this date maybe to 22nd through 23rd. 30 So we -- like Friday I think, you know, we run into 31 situations where we end up flying on the weekend or 32 airplanes maybe not flying and it would be difficult 33 for the Council members to return back to their 34 communities especially if we will hold the meeting in 35 So if we have meeting on Wednesday and Kaktovik. Thursday and then we have Friday to make it home 36 37 instead of like running into the weekend if the Council 38 consider this switch that would be is able to 39 preferable. 40 41 Thank you. 42 43 CHAIRMAN BROWER: Very good. What's the wish of the Council. There's a recommendation to 44 move it to Wednesday, February 22 and February 23 45 46 instead of February 23, Thursday, and February 24, 47 Friday, to give an opportunity for meeting goers to 48 have a good chance of getting home too. So..... 49 50

0182 1 MR. FRANTZ: Just I guess one note to throw in. How many of our folks are possibly on the --2 3 any of the North Slope Borough's meetings that are on 4 the last Thursday of the month. 5 6 CHAIRMAN BROWER: Yeah, if you're a 7 Planning Commissioner that might be a Planning Commission day. That's the last Thursday of the month. 8 9 But you can always, you know, have an alternate. 10 There's always alternates too on the Planning 11 Commission. I think right on the -- on this date we tried to accommodate some of the issues described -- is 12 13 it Katya? Yeah, Katya just mentioned. 14 15 So what's the wish of the Council or do 16 we need to act by motion to confirm those dates? 17 18 MS. HUGO: Mr. Chair. 19 20 CHAIRMAN BROWER: Esther. 21 22 MS. HUGO: I don't have any problem on 23 the Thursday and Friday, it's just that if we're done with the meeting on a Friday Everts don't fly weekends 24 25 and I know Wright's fly up there. Otherwise we'll have 26 to spend the weekend on Barter Island. 27 28 MR. WILLIAMS: Yeah. 29 30 (Laughter) 31 32 CHAIRMAN BROWER: Well, there's a recommendation to change the date by one day to 33 34 February 22 and February 23 instead of 23, 24. 35 36 MR. FRANTZ: Mr. Chair. 37 38 CHAIRMAN BROWER: Brower. 39 40 MR. FRANTZ: I'd like to move to accept 41 the change and move the date from the 23rd to the 22nd, 42 making February 22nd and 23rd the meeting dates and try 43 to make it home before the weekend so we don't have any 44 hang ups. 45 46 CHAIRMAN BROWER: There's a motion on 47 the floor for the winter meeting to be in Kaktovik and 48 changing the date to February 22 and February 23. 49 There's a motion on the floor. 50

0183 1 MR. WILLIAMS: Second. 2 3 MR. REXFORD: I'll second..... 4 5 It's CHAIRMAN BROWER: been 6 seconded.... 7 8 MR. REXFORD: .....the motion from 9 Kaktovik. 10 11 CHAIRMAN BROWER: .....by Kaktovik. 12 Any discussion. 13 14 (No comments) 15 16 MR. REXFORD: Call for the question. 17 18 CHAIRMAN BROWER: The question's been 19 called for to -- all those in favor of moving the 20 winter meeting, 2023 to -- in Kaktovik on February 22 21 and 23, signify by saying aye. 22 23 IN UNISON: Aye. 24 25 CHAIRMAN BROWER: All those opposed say 26 nay. 27 28 (No opposing votes) 29 30 CHAIRMAN BROWER: Hearing none, we have 31 a winter date set and we will visit Eddie Rexford's 32 territory. 33 34 All right. We have the fall calendar, 35 fall, 2023, Regional Advisory Council meeting calendar 36 last updated 10/6/2022. So our window is between 37 August 14 and that window closes November 3. 38 39 MS. HONIG: Mr. Chair, if I may. 40 41 CHAIRMAN BROWER: Go ahead, Leigh. 42 43 MS. HONIG: The Southcentral Regional 44 Advisory Committee, they just wrapped up their meeting and they -- for their meeting dates they chose October 45 46 2nd and 3rd in Kenai. Just to put that on the calendar for you. 47 48 49 CHAIRMAN BROWER: Well, there's a big 50

1 window of opportunity for the fall meeting. I know August is always a heavy subsistence -- actually peak 2 3 subsistence is August and September, we start to wind 4 down a little bit I would say October 24 or October 25 5 might be good. What's the wish of the Council. 6 7 MR. FRANTZ: So do we have -- do you 8 know if we have a set location for this that we have in 9 mind? 10 11 CHAIRMAN BROWER: Well, we can do it 12 for Utgiagvik for now and then in our winter meeting we 13 can reconfirm. 14 15 MR. FRANTZ: Okay. I was just wondering because normally around the 21st, 22nd --16 17 well, at least for this year and previous years AFN is 18 around that time. So just not sure -- well, I guess 19 that's after those dates. I'm not sure what it is for 20 next year, but the dates sound good to me. And I'll --21 I don't have anything around then. So.... 22 23 CHAIRMAN BROWER: Yeah, considering that, I mean, you know, maybe even October 17 or 24 October 18. I know you're right, AFN might be around 25 26 those dates as well. It's usually around the end of 27 October or somewhere around there. 28 29 So the mic's open for any suggested 30 dates. 31 32 MS. HONIG: Mr. Chair, if I may. 33 34 CHAIRMAN BROWER: Go ahead, Madame 35 Coordinator. 36 37 MS. HONIG: I just received word that 38 AFN is going to be the 20th and 22nd of this -- in 39 October. 40 41 CHAIRMAN BROWER: For this year? 42 43 MS. HONIG: Correct. For 2023, next 44 October. 45 46 CHAIRMAN BROWER: I say for now 47 November 1 and November 2. Of course I'm just saying 48 that. 49 50

0185 1 MS. HUGO: Mr. Chair. 2 3 CHAIRMAN BROWER: Esther. 4 5 MS. HUGO: I don't have any problem 6 with the dates, just end of the month. November 1 and 7 2 sounds okay. 8 9 CHAIRMAN BROWER: Is that a motion. 10 11 MS. HUGO: I make a motion. 12 13 CHAIRMAN BROWER: Motion on the floor 14 for fall, 2023 meeting to be November 1 and November 2 15 in Utqiaqvik. 16 17 MR. FRANTZ: Seconded. 18 19 CHAIRMAN BROWER: It's been seconded. 20 Any discussion. 21 22 (No comments) 23 24 MR. WILLIAMS: Question. 25 26 CHAIRMAN BROWER: The question's been 27 called for. All those in favor for the fall, 2023 28 meeting to be November 1 and November 2 in Utqiagvik 29 signify by saying aye. 30 31 IN UNISON: Aye. 32 33 CHAIRMAN BROWER: All those opposed 34 same sign. 35 36 (No opposing votes) 37 38 CHAIRMAN BROWER: All right. Hearing 39 none, ayes have it. We'll have our fall, 2023 meeting dated for November 1 and November 2 in Utgiagvik. And 40 41 we probably will reconfirm that in our winter meeting. 42 43 All right. Thank you on that. So, 44 Madame Coordinator, if you can help us with our next 45 action item which is our annual report. 46 47 MS. HONIG: Yes, Mr. Chair. Okay. So 48 it -- Leigh Honig for the record. It is time for the 49 Council to decide what issues to include in its annual 50

1 report. For your information guidelines for annual 2 reports can be found on page 107 of your meeting books. 3 And this is an action item.

5 So ANILCA established the annual report 6 as a way to inform the Federal Subsistence Board of 7 regional subsistence uses and needs and to provide for regional fish 8 recommendations and wildlife management strategies, policies, standards, guidelines 9 10 and proposed regulations. Section 805(a)(3)(d) of 11 ANILCA stipulates that your annual report should 12 contain one, an identification of current and 13 anticipated subsistence uses for fish and wildlife 14 populations within the region; two, an evaluation of 15 current and anticipated subsistence needs for fish and wildlife populations within the region; three, a 16 17 recommendation for the management of fish and wildlife 18 populations within the region to accommodate such 19 subsistence uses and needs; and, finally four, 20 policies, recommendations concerning standards, 21 guidelines and regulations to implement the strategy. 22

23 I would like to emphasize that your 24 annual report ensures the Board has the most up to date 25 awareness of issues, concerns and current events that 26 impact your subsistence way of life. With your report 27 and recommendations the Board can make informed 28 decisions on regulatory and policy actions. So this is 29 the time for the Council members to share items or 30 information that you would like to see raised to the 31 Board's attention in your fiscal year 2022 annual 32 report and have a discussion on what you would like OSM to include under the topics. And I'll make note of 33 34 these items at this time and after the meeting is over 35 I'll draft the topics for your annual report based on the information you gave in this discussion. And then 36 37 at the winter, 2023 meeting we can review that draft 38 report and the Council will have opportunity to provide at it any additional information. And if you cannot 39 40 think of any topics at this time to report on now 41 remember them later through the duration of this 42 meeting and you can share them at a later time with 43 permission of your chair.

44 45

46

## Thank you.

47 CHAIRMAN BROWER: Thank you, Madame 48 Coordinator. And I know we've talked about a 49 considerable amount of issues since yesterday. I think 50

0186

0187 some of those topics are very ripe to be on the report. 1 And I would advocate that we look at some of those. 2 3 Some of the other things that I think are important are 4 food security issues regarding traditional preservation 5 methodologies and looking at ways how OSM and -- could 6 collaborate with local entities or tribes on -- in this 7 I mean, being able to subsist and then area. preserving that food in the traditional way is -- we're 8 9 struggling with that. And I don't really like to go to 10 my cabin to do the big, large scale fishing because 11 when half my catch is going to spoil. And that is a 12 detriment to the community in my view. And those are 13 alarming to me. And there should be some ways -- that 14 is part of subsistence is to preserve that food and I 15 would hope that are in our annual report that these types of issues that are plaguing the community. It's 16 17 not just preserving fish and I -- we heard a little bit 18 from Carmen earlier about some grants being funneled to 19 try to maybe work on ice cellars that are faltering 20 with being able to even store whale is starting to get challenging. And the best flavor there is is the 21 22 cellar whale. And believe it or not if you put it in 23 the earth to age is very different than just putting it 24 out in the weather to age. 25 26 that too, And but you know, is 27 struggling a little bit. We've had to pull out whale 28 from our cellars and -- after they age. Thank god they 29 age good, but when they start thawing out and making 30 big pools of blood at the bottom of the cellar and not 31 for -- keeping frozen, you got to pull them out, you 32 know, you might make poison at that point because if 33 you don't take care of your food. 34 35 That's one issue. I'm going to yield 36 to the Council to see if there's anything else that the 37 annual report should discuss. 38 MS. HUGO: Mr. Chair. 39 40 41 CHAIRMAN BROWER: Esther. 42 43 MS. HUGO: Yes. Leigh, I don't know if 44 this is the right place, but we really need support and we need that proposal that we had proposed a couple 45 46 times that was rejected by the Board of Game. And if 47 we can look into that because I know we can do the 48 proposal before the 2023 I believe. And we really need 49 that support coming from our community. And maybe in 50

1 the future we really -- North Slope Borough Biologists do a great job, but we need our own in our area 2 3 regardless because we've got a two story Gates of the 4 Arctic, maybe they can join together and maybe they can 5 help each other and start monitoring and start getting those concerns about our tutu. We've been waiting too 6 7 long, we've been having meetings and it's just ongoing. And the most important is the food security and what we 8 9 put on our table for the community.

10 11 12

## Thank you.

13 CHAIRMAN BROWER: Thank you, Esther. 14 You know, sometimes I think about what we do with 15 bowhead whale locally and through the Federal Because the 16 government. quota system and the protections for bowhead whale, we can actually do time, 17 area closures for industrial activities. And tell the 18 19 industry to quiet down, quit using barges during this 20 period of time until the quota is met. It seems to me 21 during peak subsistence activities, you know, there 22 should be a time, area closure maybe in the village 23 area of influence or the lands immediately outside of 24 the village district boundaries that are used for 25 traditional and subsistence activities. Maybe a 26 proposal to the Board of Game from this Council 27 requesting either a tier two hunt and define a boundary 28 for a time, area closure and then once that period is 29 over it goes back to normal -- normalcy. Because I 30 certainly believe that you can deplete the resource 31 from an area by deflection even if the abundance of 32 caribou is in the liberal management scheme. Even 33 though there's so much caribou there's enough to go 34 around for everybody, but if you put hunters in the 35 wake of its migration and potential needs -- the needs for the community are -- it's like putting a line of 36 37 hunters in front of the community to give them first 38 chance and then they turn. They go through maybe a 39 different pass or something. It seems to me we haven't 40 used all of the resources that we could use or try to 41 implement to do some of these things because I 42 certainly believe that it becomes practically a tier 43 two event when the deflection is occurring. 44 45 And anyway, thank you, Esther for that

And anyway, thank you, Esther for that
or Brower.
MS. VOORHEES: Mr. Chair.
50

0189 1 CHAIRMAN BROWER: Hannah. 2 3 MS. VOORHEES: Thank you. Yeah, Hannah 4 Voorhees for the record. Esther, I was just wondering if you could just so we have it on the record just 5 restate which proposal you were referring to with tutu 6 7 in your area. Just I know we've discussed, but just specifically what you were hoping to have in such a 8 9 proposal so that we can make sure we write up the correspondence to reflect your concerns. 10 11 12 MS. HUGO: Thank you. I'll have Gordon 13 -- I mean, Brower, answer that. 14 15 MR. FRANTZ: So I believe the proposal 16 she's referring to is one that the Fish and Game 17 Management Committee had submitted and I think that was 18 it. And that was through Brian Person. 19 20 MR. WILLIAMS: Who paid for that? 21 22 MR. FRANTZ: Huh. 23 24 MR. WILLIAMS: Who paid for that? 25 26 MR. FRANTZ: Fish and Game -- North 27 Slope Borough Fish and Game, FNGMC, the Fish and Game 28 Management Committee. And that was submitted while I 29 was Executive Chair for the -- or the Executive Manager 30 for the Wildlife at the time. So I was involved with 31 that. So I won't -- you know, I don't work for them 32 anymore, so I won't speak anymore to that, but I just 33 wanted to point out that that's where that came from, 34 was that proposal that was submitted through the North 35 Slope Borough Fish and Game Management Committee. 36 37 CHAIRMAN BROWER: Thank you, Brower. 38 And maybe you had some others that -- on your own 39 there. Go ahead. 40 41 MR. FRANTZ: So I did have a couple 42 other comments on this though. I think you're right, 43 we're not using all the -- all the tools that we have 44 in front of us. And a couple other things that I think we should be looking at is the population, we can 45 46 definitely use that I guess to try and help that area 47 out. So the -- it looks like there has been some 48 decline and we can definitely try to use that to try to 49 do some sort of management effort in that area so if 50

the population does hit a certain threshold which it 1 looks like they're borderline we can definitely discuss 2 trying to throw some recommendations out to regulate 3 4 sport harvest in the area. I think that's one opportunity there that I see with the trend in the 5 6 population that we can try and -- try and push for 7 something like that in the area. So try to dampen the 8 sport hunt in the area.

10 The other I think is still a good idea 11 is the one I was talking about yesterday with talking 12 with the State because it -- the problem area there is within the State's boundaries and jurisdiction. So the 13 14 State openly gives permits and we know exact locations 15 for all of their fly-in hunters and once again they 16 have almost no enforcement there whether it be State 17 troopers. I know I see some occasional fly-in, but 18 there's really almost no enforcement other than what 19 they have to submit to the State and Borough. So that 20 section of it I think coupled along with the State's 21 and also the Borough's radio collars, you can get the 22 dates of whenand where the guys werehunting that are --23 you know, they're allowed there by the State. So we 24 know the dates, we know the GPS locations and then we 25 can also couple that with the migration pattern and the 26 dates off of the collars and see if there is deflection 27 there. And at least that would either confirm or rule out the sport hunters that are in the area. 28 So there 29 is documentation there and it should be, you know, 30 heavily documented. It's just a matter of extracting 31 that for this purpose. So I think that's a good idea. 32

34 And yeah, it does seem that we have 35 kind of an issue there to where more hunters are let in 36 and approved for hunting during this specific period of 37 time, you know, once -- if you've never been on the 38 Haul Road during the falltime I highly suggest you go 39 there between August and September and see how many people are on the sides of the roads, walking the 40 41 tundra, flying in with multiple charter flights. And it's not just there either, it's -- we after they 42 43 closed 23, this is kind of a sidebar to that, we did 44 see a big influx of hunters around the Point Hope area 45 being flown in after 23 was closed. So they're going 46 more north into the Borough and landing there and we 47 have issues there as well. 48

But so I just in short -- I'll cut it

0190

9

33

49

1 short here, I do think looking down that avenue of, you know, at least requesting or proposing something 2 through the State, Carmen did mention there was an open 3 4 period so maybe we can submit through the RAC something of that nature, I wouldn't know exactly how to word it. 5 You know, with the Borough Fish and Game Management 6 7 Committee we had the Biologist go through and submit so, you know, maybe a motion of some sort to submit 8 9 something through the State's proposal system I think would be the proper path. 10 Also Brian could do 11 something with the population and, you know, do some 12 kind of management change there. 13 14 Thank you. 15 16 CHAIRMAN BROWER: Thank you, Mr. 17 I think these are all important. And I'm Frantz. 18 going to go ahead and yield to Carmen from ADF&G. 19 20 MS. DAGGETT: Mr. Chair, thank you. То 21 member Frantz. I think if you wanted to do something 22 formal that's not quite the same process that's like 23 the Fisheries Program has as far as a formal process for wildlife research projects. 24 However I do think 25 perhaps if you wanted to do something formal a letter 26 would probably be the best and citing the things that 27 you are most interested in and then, you know, submitting that. You can submit it to me and I can 28 29 give it up the, you know, the chain to my superiors and 30 have them look at it and hopefully get it prioritized 31 for funding and considerations. Because I've had some 32 discussions about looking at fall migration before and 33 drivers in fall migration before, but there's a lot of 34 projects that are up for consideration and so they are 35 internally competitive with each other. And so having something directly from you guys like a letter might 36 37 push that issue a little bit more and show the level of 38 priority it is for you guys. So that would be my 39 recommendation. And if you wanted to submit it directly to someone above me instead, Ryan Scott is 40 41 probably the right person and then go from there. And 42 if you want his contact information I can get that for 43 you. 44 45 MR. FRANTZ: Thank you, Carmen.

47 CHAIRMAN BROWER: Thank you, Carmen. 48 And I think those are important discussions. Any other 49 items that we may want to have drafted for our annual 50

0191

0192 1 report. 2 3 MR. WILLIAMS: Mr. Chairman. 4 5 CHAIRMAN BROWER: Peter. 6 7 MR. WILLIAMS: Yeah, Chairman. Anyway 8 I like what Esther spoke about fish. Back in '90s I 9 recall and remember one time a person caught a fish, 10 but in the stomach it's just like milk. And, you know, 11 that we never seen no biologist people in plus 12 Anaktuvuk, just a few times like sheep. The only sheep 13 study I seen a few people that sheep study that one 14 time, that's about it. And it brought up a lot of 15 tension about all these pipelines and all these corroded equipments on there, you know, in them sloughs 16 17 and, you know, they're buried in the ground and you 18 don't see it, but that's something that, you know, 19 that's lit and that -- and that iron, you know. And 20 but what I'm saying is that we need to stand up to, you 21 know, someone that study, that we studied on our 22 fishery mostly because in summertime that's all mostly 23 that's what we eat is fish. I know that because where I come from, you know. And I want to clarify to you 24 25 all that I'm from -- actually from Fort Yukon. They'd 26 give me this funny look every time I'd speak up about 27 Interior they look at me like huh. 28 29 For instance like Gordon brought up 30 this attention about cellars. In hometown when we go 31 fishing for salmon we always dig out a hole about six 32 feet by eight feet deep and we put willows in there and 33 grass and around the edge we put rocks, greenwood, 34 because greenwood don't smell, it just -- anyway we 35 don't cut our fish open, we throw them inside that cellar to be cold. But if you cut that fish open it'll 36 37 dry up. You see what I'm saying, that fish will dry up. But if you leave it closed, cover -- I mean, you 38 39 don't have to leave it in there all summer, I mean, all winter, I mean, you know, they just leave it there so 40 41 they can cut it out, cut it open. As long as you got 42 it inside the ground that stomach wouldn't spoil. And 43 same way with other animals, you know, you don't treat 44 it right it'll get bum on you. And old people used to 45 tell us that fish are the easiest thing to get spoiled, 46 you can leave it there for half a day and it just get 47 mushy. 48 49 So that's something we need to study on 50

0193 1 and I like what Esther said about, you know, bringing up this attention. 2 3 4 Thank you. 5 6 CHAIRMAN BROWER: Thank you, Peter. 7 Any other discussion items that we may want to add to 8 our annual report. 9 10 (No comments) 11 12 CHAIRMAN BROWER: And I think they're 13 all -- you know, these are all important issues and we 14 want to make sure we're -- our report. And then some 15 of the feedback that we get back, it would be important so they get the type of feedback from the report 16 17 itself. Sometimes I feel like there's a response that 18 really doesn't want to deal with the issue or puts it 19 a different category where -- that can't be in 20 addressed. If it can't be addressed by the Subsistence 21 Board, is it the Federal Subsistence Board? 22 23 MS. HONIG: Correct. 24 25 CHAIRMAN BROWER: It shouldn't stop 26 there. And because they're issues that we're going to 27 repeat and we're going to continue to deal with those And I've read one response to we're 28 issues. 29 practically saying it was a matter that couldn't be 30 addressed by the Federal Subsistence Board. And things 31 like village area of influence by local ordinance 32 adopted by the Assembly to provide for this traditional 33 and subsistence use patterns for a village. If that's 34 mandatory by State statutes that we develop these 35 things and mandatory for us to implement by municipal 36 code of the Borough and adopted by ordinance which 37 makes it into the law, it seems to me that the State 38 and the Federal agencies need to think about how to --39 how to work within those confines to balance, balance that approach. Would you want to put guides in front 40 41 of a village area of influence where the expected use 42 of the village to provide food on the table is directly 43 competing with sport hunters and personal use. Maybe 44 that should be changed to -- maybe that's a category to 45 be changed into a tier two for time, area closure. 46 Only look at an area in that area of influence that --47 well, from July 31 to October 10 it should be a tier 48 two hunt in that area meaning it might need to be local 49 residents that have immediate accessibility where you 50

1 can't fly-in, you can't -- you know, personal use is different in these areas. And those categories are 2 seldom ever used because it's always a management 3 4 scheme that is always either liberal and allows for the by all residents unless the resource is in 5 use preservative, declining, depleted and there's only four 6 7 left, you know, just like what's happening with the sheep. And then now nobody can use it because it's so 8 declined in 24 and 26B that we all advocated for sheep 9 10 to be closed in that area because the management scheme 11 was so liberal and we were so hard nosed about who 12 should be hunting there that we allowed the resource to 13 get completely depleted. 14 15 Now there should be a lesson in that in 16 some fashion to where even in liberal management these 17 resources can be depleted in an area where they're most 18 needed by local users. And should be, you know, tier 19 two or restrictor for a period of time to prevent the

20 depletion of those resources where they're normally 21 found and they're expected to grace the community at 22 some time. 23

24 Anyway that's -- the other part is 25 maybe this body needs to pick up a rezoning application 26 of the Borough and rezone State and Federal land to 27 identify these lands as what they've been identified in 28 comprehensive plans as area of influence and category 29 -- categorize them and rezone them just like we do for 30 oil and gas. We rezone lands from conservation to 31 allow for large scale development proposals to go 32 through and put in pipelines and all of this kind of 33 stuff and only the Assembly, even you go through the 34 EIS process or the public process to do that and 35 finally the rezone to reclassify those lands, maybe 36 it's time to classify some into subsistence or area of 37 influence. And sponsor an application because we might 38 be talking into deaf ears, you know, in hard times. 39 Anyway I get going on a roll sometimes, it's heartbreaking to my ownself. 40

42 Anyway I'm hoping that there's multiple 43 issues here for -- to craft a good annual report and if there aren't any answers that the Subsistence Board 44 can't, they really need to reach out beyond, maybe the 45 46 Secretary of Interior at that point that appoints these folks to gain that attention. Just like what Ahtna did 47 48 a few years ago. They now have some local control, the 49 Ahtna model, to have their own quota for moose and to 50

0194

1 manage it themselves and take away from the management scheme of the Department of Interior to grant I think 2 it was the Ahtna that did that. And there should be a 3 4 presentation on that. There should be a presentation 5 how the Ahtna is doing with their co-management. Ι want to hear that presentation, that they were given by 6 7 the Department of Interior Secretary the ability to manage their resources in their Ahtna land. And it's 8 important, maybe it's time for ICS to do the same 9 10 thing. And it's an important thing so I think part of 11 that report should include some feedback and presentation about what happened to Ahtna, are they 12 13 being successful in managing those resources for their 14 people. 15 16 I'll stop there. 17 18 MR. FRANTZ: Mr. Chair. 19 20 CHAIRMAN BROWER: Brower. 21 22 MR. FRANTZ: Yeah, I guess that kind of 23 triggers a few thoughts of, you know, your discussion 24 there of who's in charge of what. You know, I think 25 we've got a good grasp of how things work up here, 26 who's -- you know, who's the enforcement, who's in 27 charge of keeping tabs of the numbers and there's --28 you know, there's definitely the Borough, the State and 29 Federal side of things too. But, you know, you have 30 all these things in place, but also I think back of how 31 we know certain areas are capable of keeping track and 32 how they manage their section. Kind of like a C-plan, 33 you know, for oil field, similar to that. How -- so if 34 they let a thousand sport hunters in how are they going 35 to manage their span of control, who's in charge of 36 So let's say the State of Alaska allows a that. 37 thousand sport hunter to come in, what is their span of 38 control, how are they going to manage those people. 39 Same with theFederal side, but the Federalside, it's --40 you know, it seems to be not as many, but I think we 41 have an issue there to where we don't know how many, 42 you know, people are coming in. I don't think they 43 know. So I think having something like that in place, 44 how are they going to manage all the people that they're expecting. And, you know, have the Borough in 45 that discussion too because the Borough is definitely, 46 47 you know, here, it is -- it's kind of a weird mix 48 situation between, you know, enforcement versus 49 landowners. 50

1 And, you know, we do have things documented such as the ASRC issue to where, you know, 2 we -- the quy was hundreds of miles away from his State 3 4 location that was permitted to him and caught red-5 handed flying, you know, people in and it made national 6 television, his hunt, and that's how they got -- you 7 know, that's how they got caught really was the background that they showed gave away their entire 8 position and they ended up getting a fine through the 9 10 State, you know, the troopers stepped in. Things like 11 that. So it's -- I don't even think they -- you know, 12 it was the landowner that called it in too so, you 13 know, obviously people aren't submitting what they're 14 supposed to, to who they're supposed and just doing 15 whatever they want up there. So, you know, that might be something to think about is, you know, put them on 16 17 notice and say hey, how are you going to control this, 18 this is -- you know, you are approving all of this to 19 come in and, you know, what can you do it. So I think 20 that might help too. 21 Thank you. 22 23 24 CHAIRMAN BROWER: Thank you, Mr. 25 Frantz. So maybe at this point I'm going to yield over to Madame Coordinator, what do we need to do to close 26 27 discussion and give you some direction on the annual 28 report, maybe give us some feedback on that. 29 30 MS. HONIG: Yeah, thank you, Mr. Chair. 31 So I can go through briefly the topics that were 32 mentioned and then you guys can vote to approve that I 33 move forward and write this up for the annual report to 34 the Board. And so just to quickly clarify and of 35 course I'll go into much more detail in the annual 36 report and do research on my own to make sure that it's 37 a sufficient letter to the Board so you guys can get 38 the feedback that you are looking for. But, you know, 39 topics of concern are food security and preservation 40 methods, caribou issues for the Anaktuvuk Pass area 41 including sport hunters and researching how the sport 42 harvest is influencing the migration patterns to get 43 the caribou to your area. 44 45 Let's see here. And, Mr. Williams, you 46 had brought up, you know, studying fish in the 47 Anaktuvuk Pass area and also food security and 48 preservation methods there. 49 50

0197 1 And then I can submit in the annual report to the Board and then in addition I can draft a 2 3 letter too that we can present to Fish and Game if you 4 would like to see like a collaborative research on tracking caribou and the influence that sport hunters 5 6 might have on those migration patterns. 7 8 So that is what I have succiently. 9 Please let me know if I missed anything. And if not 10 then the Board can or the Council can move to adopt 11 those topics. 12 13 Thank you. 14 15 CHAIRMAN BROWER: What's the wish of 16 the Council. I think there's a laundry list that she's 17 developed, there's also some stuff that are -- have 18 been discussed yesterday, that you can weed some of 19 that out too to include. 20 21 MS. HONIG: Yes, Mr. Chair. 22 23 CHAIRMAN BROWER: And it'll be a draft 24 report until we say it's good. And it'll be subject to 25 probably approve maybe in our winter meeting? 26 27 MS. HONIG: That is correct, Mr. Chair. 28 29 CHAIRMAN BROWER: So we have now to get 30 her going with this stuff and I'm pretty sure we're going to give more feedback and I'm thinking somewhere 31 32 around December you might have a draft letter and say hey, how does this look. And then we could add or 33 34 delete a draft. 35 36 MS. HONIG: Right. And this will be up 37 for discussion at the winter meeting too where we can 38 provide additional edits or comments and work to 39 finalize it then. 40 CHAIRMAN BROWER: 41 That's right. Т 42 normally get to see a draft somewhere around December 43 in the times past and..... 44 45 MS. HONIG: Okay. 46 47 CHAIRMAN BROWER: .....to see if you're 48 on the mark or something like that so that by the time it's in our winter meeting it's more substantially in 49 50

0198 1 line with our thoughts. 2 3 MS. HONIG: Yes, Mr. Chair. I'11 4 definitely be working through you and the Council 5 members to make sure that I have fully incorporated all 6 of the viewpoints that need to be in that letter prior 7 to the winter meeting. 8 9 CHAIRMAN BROWER: All right. What's 10 the wish of the Council. She's got a laundry list that 11 she read us and some of the material that we went 12 through yesterday to be included into the annual 13 report. What say ye. We need a motion. 14 15 MR. WILLIAMS: I so move on annual 16 report. 17 18 CHAIRMAN BROWER: There's a motion on 19 the floor for the list that we've been talking about to 20 develop the annual report. And there's a motion on the floor to get it going from Peter Williams. 21 22 23 MR. FRANTZ: Second. 24 CHAIRMAN BROWER: It's been seconded by 25 26 Mr. Frantz from Utgiagvik. Any discussions. 27 28 (No comments) 29 30 MS. HUGO: Question. 31 32 CHAIRMAN BROWER: The question's been called for. All those.... 33 34 35 MR. REXFORD: Call for the question. 36 37 CHAIRMAN BROWER: .....in favor of having the Coordinator embark on developing the annual 38 39 report with the list provided and the materials that 40 we've been discussing the past couple of days signify 41 by saying aye. 42 43 IN UNISON: Aye. 44 45 CHAIRMAN BROWER: All those opposed say 46 nay. 47 48 (No opposing votes) 49 50

1 CHAIRMAN BROWER: Hearing none, the ayes have it. You have your marching orders, Leigh. 2 3 4 And now if there's no wish to go on a 5 break or anything like that we'll go to the Fisheries Resource Monitoring, the PINs, and get back to that and 6 7 give that group some direction on their -- on prioritizing the list of Fisheries Resource Monitoring 8 9 Program. See if we can't get some money floating 10 around. 11 12 MS. HYER: Mr. Chair and Council I'm looking for a little bit of guidance 13 members. 14 here, how you want me to proceed. Would you like me 15 just to read the PINs as I have them from our discussion, then you can add, subtract, make a motion, 16 17 does that sound good? 18 19 CHAIRMAN BROWER: I think that sounds 20 Yeah, we went through a pretty good just fine. discussion and seems like, you know, and, Brower, 21 earlier this morning we went through more discussions 22 23 on Fisheries Resource Monitoring, we went through that 24 video a little bit yesterday, I think that's ripe for a study too I think about off ice and springs and how 25 26 fish get entrapped and maybe concerns to their 27 abundance. Seems to me if that happened on the whole river and you could wipe out an entire species in that 28 29 area right there. But those are things that we know 30 that happened. 31 32 So with that go ahead, let's go with 33 your current list and the things that we've discussed 34 and we'll go from there. 35 36 MS. HYER: Mr. Chairman and Council 37 members, I'm going to just read..... 38 39 CHAIRMAN BROWER: Just for really quick, can we get some coffee real quick like three 40 41 minutes? 42 43 MS. HYER: Two. 44 45 CHAIRMAN BROWER: Okay. We get two 46 minutes. Two minute coffee break. 47 48 (Off record) 49 50

0200 1 (On record) 2 3 CHAIRMAN BROWER: We're about ready to 4 begin. We'll come to order and we've got all our 5 coffee in order now. I was just jealous of Esther and Earl, they got fresh coffee. So I said, man, I need 6 7 some coffee. 8 9 All right. Karen and Hannah, you have 10 the floor. We're going to go to the PINs. 11 12 MS. HYER: All right. Mr. Chairman and 13 Council members. I'm going to just read this into the 14 record and then after I'm done we discuss, make a 15 motion, subtract, add, whatever the Council wishes. 16 Okay. So I have on my list -- let me 17 get to my list, can't use the one in the book. Using 18 traditional ecological knowledge and harvest monitoring 19 document new fish species and changes in abundance, 20 size, timing and distribution of existing fish species 21 as well as impacts of new and expanding species on 22 other fish that are important to subsistence in the 23 North Slope region. 24 25 Document and investigate the possible 26 causes of mold, disease and discoloration on broad 27 whitefish in the Colville River in the vicinity of in the environmental conditions 28 Nuiqsut, compare 29 Colville River including temperature with those in the 30 Ikpikpuk River where whitefish are healthy and mold has 31 observed to date. Investigators are not been 32 encouraged to draw on both stock status and trends and 33 traditional ecological knowledge research methods. 34 35 Document the effects of climate change 36 including lake freeze up on subsistence fish access, 37 harvest and preservation and the impact of these 38 changes on community wide harvest levels and food 39 North Slope. security on the Research could investigate adaptations for continuing community wide 40 41 harvest levels where traditional preservation methods 42 are impacted. Studies should include Ikpikpuk River 43 and other -- boy, I messed that one up. Studies 44 include Ikpikpuk River are of particular interest. 45 46 Baseline fish habitat and water quality 47 monitoring, especially temperature, dissolved oxygen 48 and silt on the rivers and tributaries important to 49 subsistence fishing for communities of the North Slope 50

0201 1 region. Investigators are encouraged to include 2 overwintering areas. 3 4 Distribution, abundance and health of 5 stocks of broad whitefish on the Sag River. Seasonal movement, overwintering, habitat on the -- in the lakes 6 7 of the Colville River delta. Document population, structure and health of lake trout in Peters, Schrader, 8 Chandler and Shaynin/Willow Lake which actually I'm 9 10 going to get on a map and make sure I know what you're 11 talking about, Anaktuvuk Pass grayling health and 12 abundance. 13 14 So that's the list I have. 15 16 CHAIRMAN BROWER: What's the wish of 17 the Council. That's -- those are some of the priority 18 information needs that we've talked over quite a bit 19 and I'm sure there's more on the outer fringes of 20 concerns about fish. I know Point Hope wasn't highly 21 represented today and Steve had to go, he normally has 22 fish issues out of Point Hope too about invasive 23 species and things like that. And but there is some 24 part -- I think one of those PINs is derived out of 25 Steve's concerns out of Point Hope if I could recall. 26 27 So what's the wish of the Council. We 28 had Karen and Hannah go through the PINs. We could 29 make -- suggest modifications, we could say these are 30 the PINs that we're interested in submitting and -- as 31 our priority list and formally adopt those by motion or 32 if there's a need to add more or discuss further some 33 of the other PINs and make changes to them, it's an 34 opportunity now to do that. But we will need to take 35 formal action on these now. 36 37 (No comments) 38 39 CHAIRMAN BROWER: Well, the -- these 40 are including (in Native). So that's what it is, they 41 would -- they are looking to see our concerns and to 42 study the issues related to our fisheries. And 43 hopefully we'll get some money coming down the North 44 Slope. I know we always have this concern about who's going to do it, you know, is it so challenging in the 45 46 Arctic that you don't get a willing participant to do 47 these things because some of them might -- if you're 48 going to study overwintering habitat guess what, you're 49 going to be up there in February in the coldest part of 50

1 the month and very, very remote area and say well, I got to check the baby fish, see if they're alive, you 2 know, that -- that's what you're going to do. And I 3 4 would love to help you do that, I think that would be a fantastic study for me to say hey, I'll do it. I know 5 how to do it, I'll study the fish. I might eat them, 6 7 but, you know, but I'll study them first. 8 9 (Laughter) 10 11 CHAIRMAN BROWER: (In Native) we think 12 they got it, we could just say, yeah, that's the list. 13 Let's go with it and just try to encourage a motion. 14 15 MR. FRANTZ: So can you read back 16 anything you might have for Nuiqsut again, just 17 the.... 18 19 MS. HYER: Yes. So for Nuigsut we have 20 the second bullet in your book. Document and 21 investigate the possible cause of mold, disease and 22 discoloration on broad whitefish in the Colville River 23 in the vicinity of Nuigsut. And we also have the lakes 24 that Martha talked about yesterday. And I am going to 25 get with her later because she was going to go back and 26 check with the fishers, but I have the seasonal 27 movement in overwintering habitat on the Colville. And for that -- that's for the fish species of interest and 28 29 she was going to check on that and get back to me on 30 that. 31 32 So is there anything else, Hannah? 33 34 MS. VOORHEES: Those are the two. 35 36 MS. HYER: Okay. 37 38 MR. FRANTZ: Okay. No, she's just not here so I just wanted to double check, make sure that 39 40 was on there. 41 42 MS. HYER: Uh-huh. 43 44 MR. FRANTZ: I would -- I quess I'd 45 make a motion to go forward with the PINs. 46 47 CHAIRMAN BROWER: There's a motion on 48 the floor for the PINs that have been discussed this morning and identified by Karen and Hannah. 49 50

0203 1 MR. WILLIAMS: Peter. Second. 2 3 CHAIRMAN BROWER: Seconded by 4 Anaktuvuk. Discussion. 5 6 (No comments) 7 8 CHAIRMAN BROWER: Just one under -- for under discussion. Another one for Nuigsut was the 9 10 lakes. 11 12 MS. HYER: Yes. And that's the one I 13 was trying to describe second there. And I just wanted 14 to make the comment that we had talked about it 15 yesterday, she's not here today, but she said she was 16 going to check with some subsistence users and get back 17 to me. So we're going to finalize that, but the idea 18 is on the list and it's part of the motion. 19 20 CHAIRMAN BROWER: Very good. It's been 21 seconded. Any further discussion. 22 23 MS. HUGO: Mr. Chair. 24 25 CHAIRMAN BROWER: Esther. 26 27 MS. HUGO: Karen, maybe in the future 28 we got what, various places that we do our fishing in 29 the summertime because our creeks are so small, you 30 know, there's a couple of places that we do a lot of 31 that during the summer, July, August. 32 33 Thank you. 34 35 CHAIRMAN BROWER: Thank you, Esther. 36 Any further discussion on the motion. 37 38 (No comments) 39 40 MR. WILLIAMS: Question. 41 42 CHAIRMAN BROWER: The question's been 43 All those in favor of adopting the called for. priority information needs, the PINs, that have been 44 45 discussed this morning, and the process we went 46 through, signify by saying aye. 47 48 IN UNISON: Aye. 49 50

0204 1 CHAIRMAN BROWER: All those opposed say 2 nay. 3 4 (No opposing votes) 5 6 CHAIRMAN BROWER: Hearing none, the 7 ayes have it. We have our priority information needs 8 identified. 9 10 Thank you, Karen, and thank you, 11 Hannah. 12 13 MS. HYER: Thank you. 14 15 CHAIRMAN BROWER: Madame Coordinator, 16 it looks like it's about 11:20. How much more of an 17 agenda and where we're at. I'm going to yield to you 18 to reorient where we are. 19 20 MS. HONIG: Thanks, Mr. Chair. If you 21 would like to keep on with the action items, we just have a couple more left. The first one would be the 22 23 joint meeting for the North American Caribou Workshop 24 and Arctic Ungulate Conference in May. And then right 25 underneath that is the harvest and wildlife for sport 26 purposes in National Preserves from the National Park 27 Service. And that will be the end of the action items. 28 29 CHAIRMAN BROWER: Thank you. So we'll 30 go to 11G, joint meeting -- is that the joint meeting 31 for North American Caribou Workshop and Arctic Ungulate 32 Conference in May, OSM? 33 34 MS. HONIG: Yes. So that will be 35 Kendra. So I think she just stepped out for a second. So but while I have the mic I will clarify the harvest 36 37 of wildlife for sport purposes in National Preserves is 38 no longer an action item because I guess it has not 39 been published in the Federal Register. 40 CHAIRMAN BROWER: Is that H? 41 42 43 MS. HONIG: Yes, that is correct. 44 45 CHAIRMAN BROWER: So we'll delete H 46 from this list. 47 48 MS. HONIG: Correct. And then Kendra 49 is -- we -- is available to do the North American 50

0205 1 Caribou Workshop if you're ready for that, Mr. Chair. 2 3 CHAIRMAN BROWER: All right. Kendra, 4 you're up. 5 6 MS. HOLMAN: Good morning, Mr. Chair, 7 members of the Council. My name is Kendra Holman and I'm a Wildlife Biologist with the Office of Subsistence 8 9 Management. I'm presenting an announcement about a 10 caribou and ungulate conference next year that will 11 hopefully be of interest to the Council members. I'll 12 also be seeking your input on a couple of matters 13 relating to the conference. An additional flyer for 14 this conference can be found in your meeting book on 15 page 109. 16 17 A joint meeting of the North American 18 Caribou Workshop an the Arctic Ungulate Conference will 19 be held in Anchorage on May 8th through the 12th, 2023. 20 The meeting will bring together an international group 21 of managers, researchers and indigenous and local knowledge holders who want to share the knowledge --22 23 their knowledge of caribou, muskoxen, dall sheep, moose 24 The theme for this meeting is crossing and reindeer. 25 boundaries. Arctic ungulates regularly cross landscape 26 boundaries connecting ecological processes between 27 different systems. This necessitates collaboration across geographical boundaries and also calls for 28 29 crossing boundaries between western science and local 30 and indigenous knowledge. 31 32 The conference will include sessions on 33 the status of caribou co-management, globally, 34 integrating western science and indigenous knowledge 35 and the affects of climate change on caribou. Field 36 trips. workshops, research talks and a poster session 37 will also be held as part of the conference. 38 39 The conference web address is included 40 on the flyer of your meeting books. 41 42 Before I move on do you have any other 43 questions? 44 45 CHAIRMAN BROWER: Any questions from 46 the Council. 47 48 MR. WILLIAMS: Is the villages are 49 invited? 50

0206 1 CHAIRMAN BROWER: Kendra. 2 3 MS. VOORHEES: Through the Chair. This 4 is Hannah with OSM. This conference is open to anyone who would like to attend. And we at OSM, Kendra will 5 get to this in more detail, but OSM is able to support 6 7 travel and attendance for one Council member from this Council. And but there is -- unfortunately there is a 8 9 registration fee for anyone who'd want to attend, but 10 if tribal members or if a tribal representative is able 11 to come and attend that would be very, very welcome. 12 13 CHAIRMAN BROWER: Thank you. I think 14 that's important to know. So you're advocating that 15 maybe we decide somebody from this Council should attend and their airfare and lodging will be provided. 16 17 18 MS. HOLMAN: Yes, Mr. Chair. And I 19 will cover that here in just a minute. 20 21 CHAIRMAN BROWER: Sure. 22 23 MS. HOLMAN: So now I'd like to ask for 24 your input as a Council. One of the events that will 25 take place during the conference is a facilitated 26 discussion on Alaska State and Federal ungulate 27 management. This session is intended to be a neutral 28 forum of -- from -- for Council members such as yourself, State Fish and Game Advisory Councils, 29 30 Federal and State Staff agencies and other interested 31 parties to discuss ungulate management in Alaska specifically regarding harvest regulations. 32 So my question for the Council at this time is what topics 33 34 and issues would you like to have discussed during this 35 session. It could be anything of concern related to 36 harvest regulations and ungulate management. 37 38 Mr. Chair, I now turn the discussion 39 over to you for this topic. Your suggestions will be very important and is setting the discussion agenda. 40 41 42 CHAIRMAN BROWER: Thank you, Kendra. 43 Council, this is a important -- I think All right. 44 this is an important conference. And the -- there's a question on what is our top priority for this -- from 45 46 this Regional Advisory Council we should want them to 47 discuss. I certainly think maybe distribution pattern 48 of the caribou on the Slope coupled with village 49 harvest needs. And I think that's -- if you start from 50

0207 1 that it's not -- it's putting the needs of villages and to express those and highlight those. I mean, we can 2 3 talk quite a bit about tier two, we can talk about 4 liberal management, we can talk about ANS, harvestable 5 surplus and issues like that until we're blue in the face, but when we are struggling to put food on the 6 7 table and the needs that need to be addressed, whether it might be new tools or develop new compassion to 8 9 address the needs of villages. And certainly right now 10 the management scheme on State land is -- it's kind of 11 like the needs of the cities because it's all personal 12 consumption. All those that are rich with aircrafts 13 for personal use have their way up there, the guides 14 sometimes they go -- they get out of their own 15 concession area and do their own thing and they've been -- they've been discovered, fined, in some cases have 16 17 lost their licenses and in some cases lost their 18 permits. And we continue to see these kind of things 19 while the communities suffer. And I think it's 20 important to put communities in and look at that. 21 Maybe it's a village quota that needs to be established 22 like a bowhead whale, you can't allow for the peak 23 subsistence period to occur to have a quota in this 24 area and make it a tier two so that even personal use 25 aircraft from Fairbanks or other places are not 26 qualifying for a period of time to be in these areas 27 except for those that live immediately adjacent to 28 these lands that are expected to harvest these 29 resources. 30 31 That's a super long-winded way of 32 trying to see what discussions should be had and that's 33 my only suggestion. I'm going to yield to the Council 34 and see, you know, what this Council should recommend 35 be discussed over there. 36 37 MR. WILLIAMS: Chair. 38 39 CHAIRMAN BROWER: Go ahead, Peter. 40 41 MR. WILLIAMS: That's the reason why I 42 brought this to the attention of this Council. We deal 43 with caribou up here and mostly the North Slope 44 residents live on migratory herd. And they know what year, what time and what date they'll be coming through 45 46 and when the -- when they get the right caribous and 47 how to treat it, you know, you just don't just cut it 48 out and say hey, that's it. But I just want to say I 49 fully support this and just hoping that Anaktuvuk will

0208 1 be there because, you know, it's our livelihood there and better understandings that we need more people in 2 3 this to continue supporting one another on this because 4 it's an important matter. 5 6 Thank you very much. 7 8 CHAIRMAN BROWER: Thank you, Peter. 9 You know, he brings out really good points and the peak 10 periods and the use pattern is so much more important 11 today when we have inflation that is so rampant and the cost of living and the cost of goods are so outrageous 12 13 and it's important to look at these things. It's 14 almost putting the communities in the most 15 disadvantaged arena of the economic spectrum. We don't have the Walmarts to go to like the guys with the 16 17 airplanes in Fairbanks and Anchorage. The land is our 18 Walmart. We'll go pick berries and we will try to get 19 our food, we'll get some wolves and wolverine to make 20 our clothing. Believe it or not we still do a lot of 21 that and depend on that. It's important. 22 23 Like I said the -- we're almost 24 disenfranchised now, we're -- you see the cost of fuel Last year -- well, 2022, the North Slope 25 going up. 26 Borough resorted to rolligoning fuel because the 27 community was fuel rationing. There was not enough 28 fuel and they had to use it so wisely to keep the power 29 on and for the community to not freeze up. We had 30 extensive 40 below plus weather where the normal fly-in 31 fuel for Fairbanks couldn't do it. We had covid where 32 the pilots are so specialized, these are World War II 33 era airplanes, DC3s and those kind of things, they're 34 very specialized pilots to fly these things and when 35 you don't have a pilot in abundance and they got covid coupled with weather that can't bring in the fuel on 36 37 top of now the price of fuel, going to be a huge plank. 38 Borough Mayor And the North Slope resorted to 39 rolligoning 29,000 gallons of home heating fuel into 40 Anaktuvuk, first time probably since the Hickel Highway 41 was done back in the '60s I think, the Borough had to 42 rolligon in fuel. And these are important time to 43 prioritize correctly, a very important time. So thank 44 you, Earl, for reminding me of that. I mean, just that little bit of talk about our back yard. Before we 45 46 start saying -- I might be saying to Earl, Earl, am I 47 stealing from my back yard, are we that regulated that 48 it feels that way. You know, that's -- those are some 49 of the, you know, biggest concerns. 50

0209 1 Thank you. Any other discussion items 2 that we want to project on over to this ungulate 3 workshop. 4 5 MS. HUGO: Mr. Chair. 6 7 CHAIRMAN BROWER: Esther. 8 9 MS. HUGO: Yes, thank you. I hope that AKP or Anaktuvuk will be able to participate in 10 11 this conference. It's been repeated so long it sounds 12 like a broken record every time and still we discuss in 13 our meetings because I got on 2009 and here I'm still 14 discussing about our caribou issue, our livelihood, our 15 food to the table. I just wanted to mention that the first week, the 4th of September that we had asked the 16 17 aerial map and they were passing Umiat on the 4th on the map, they were like 25 miles, 50 miles south of 18 19 Umiat. We knew they were heading our way, but within a 20 few days, week, like maybe three days we requested for 21 a map. Before the 14th of September, about a week or 22 10 days later all these caribou that were heading our 23 way, the migration trail, they all headed -- they were 24 like beyond Umiat up north and then more east to 25 Nuiqsut. And that's when we decided we needed to come 26 together and have our hunters go to our neighbors, to 27 Nuigsut, and hunt, at least get a bite before they rut 28 knowing that these were very fat caribou, the bull 29 caribou that we catch every migration time. But to 30 find out that there is a sport hunter right there, 31 right in Umiat. 32 33 A couple years ago we had stopped the 34 Piper Cubs from coming and landing every August, 35 September. Now they're going to Coldfoot and Bettles. 36 And they know what we've been going through all these 37 years. But sometimes like in July, August we'd be, you 38 know, at home and then all of a sudden one day I saw 39 six Piper Cubs. It reminded me of those -- the old war where they were tailing each other. 40 And we -- I said wow, look at that, there's six of them all in line. 41 42 And I know they were going up north, probably sport 43 hunters looking for the antlers. That's been a problem 44 so I just wanted to mention how they keep telling us it's not the sport hunters, but, you know, we believe 45 46 that because they're catching what we've been waiting 47 for time after time. We even -- we even used to keep 48 our dogs quiet, all our dogs. We used to have growing 49 up dog sleds, all our dogs would never bark, they 50

1 didn't make a sound. That's how it was when we were growing up. So there's a lot of disturbance and we 2 3 always believe they're catching what we wait for 4 patiently. They're going right to them. Us, we were 5 taught they're coming, just -- and they'd always come. Due to the tragic changes of this wide NPR-A, there's 6 7 no monitoring. We've got troopers at Coldfoot and Bettles which is south of us in this vast, you know, 8 the NPR-A, right, north of the mountains. Nobody knows 9 10 that a Piper Cub just landed near Gunsight or near one 11 of the banks there, the river banks. We don't know 12 that because nobody monitors. Even if we call, you know, there's Piper Cubs or there's a plane heading 13 14 north, a lot of times it's pretty hard to get the tail 15 numbers. So I just wanted to mention that. 16 17 Thank you. 18 19 CHAIRMAN BROWER: Thank you, Esther. 20 So, Kendra, we'll go back to you and Hannah. 21 22 MS. VOORHEES: Through the Chair. 23 I just wanted to thank you for all that Thank you. 24 feedback. I think this will be a really unique chance 25 to bring together those who depend on caribou, your 26 representatives of your communities with State and 27 Federal Managers in a neutral, productive, hopefully 28 context. And I've heard you identify a few issues here 29 including community centric approaches to harvest 30 management that put your needs first, challenges to 31 food security that have made reliance on ungulates even

51 rood security that have made reliance on ungulates even 32 more important and the issues surrounding sport hunters 33 and enforcement and how caribou migrations have not 34 aligned with needs. 35

36 And I did want to mention also that 37 there will be a separate panel at this conference on co-management which 38 caribou will bring together 39 representatives of entities such as the Western Arctic Caribou Herd Working Group as well as representatives 40 41 of caribou co-management organizations in Canada. And 42 that may be of interest. And, Mr. Chair, you had 43 mentioned interest in Ahtna community harvest system. 44 And Ahtna has been invited to that as well and may be able to kind of explain their community harvest system 45 46 and how it's working for them in that setting may be of 47 interest. 48

49 Thank you. 50

0211 1 CHAIRMAN BROWER: Thank you, Hannah. 2 And, Kendra, what are looking for and this is -- is 3 this an action item? 4 5 Yeah, Mr. Chair. MS. HOLMAN: I'11 6 address the action item here next. So I would like to thank all of you for your discussion, that's absolutely 7 great and thank Hannah for helping me take notes here 8 9 as I'm unable to do that right now. 10 11 So a critical component of this 12 conference is making sure that local knowledge holders are able to attend and participate. 13 The Office of 14 Subsistence Management is able to provide financial support to send one member of each Subsistence Regional 15 Advisory Council to attend the conference. 16 We are 17 asking that as a Council you nominate two people --18 members to attend and participate. One would be the 19 primary and a second as an alternate in case the 20 primary is unable to attend. Again the conference will be held May 8th through the 12th of next year in 21 22 Anchorage and OSM will cover all expenses such as 23 travel and conference registration. One expectation of 24 the nominated Council member is that they will be an active participant in the State and Federal ungulate 25 26 management symposium which you will just provide input. 27 28 Now I'd like to turn the discussion 29 back over to the Chair and the Council and ask you to 30 nominate a Council member to attend as well as an 31 alternate for whom you feel represent local knowledge 32 and the concerns of your region related to ungulates. 33 34 CHAIRMAN BROWER: Thank you, Kendra. 35 We have a task here. I think it would behoove us to 36 think other than maybe a representative from Anaktuvuk 37 should attend and one other to -- as a primary from 38 Anaktuvuk and one other as a secondary in case..... 39 40 MS. HOLMAN: Yes, Mr. Chair. That's 41 what we like to see, one..... 42 43 MR. REXFORD: Mr. Chair. 44 45 MS. HOLMAN: .....person nominated to 46 go and a second person as a backup in case that primary 47 person is unable to attend. 48 49 CHAIRMAN BROWER: All right. Thank 50

0212 1 you. Kaktovik, I heard you, Eddie. Go ahead. 2 3 MR. REXFORD: Yes, thank you for that 4 information, Hannah. And you mentioned that our Canadian neighbors would be also doing a presentation 5 I'm guessing on the Porcupine Herd and management 6 7 scheme that's in place. I know Kaktovik's on the International Porcupine Board. I'm hoping maybe that 8 somebody from our community could attend also to 9 10 represent Kaktovik if the Canadian representatives are 11 going to be doing the conference also. Just a thought. 12 13 Thank you. 14 15 CHAIRMAN BROWER: Thank you, Eddie, you 16 make some good points. So I think right now we should 17 try to think about a representative that could speak on 18 behalf of the communities that would be impacted and 19 bring in a lot of traditional knowledge into that 20 conference. 21 22 So I'm inclined to nominate maybe 23 either Esther if -- to be represented as our primary 24 then put Eddie Rexford as a secondary from and Kaktovik. Both those two have a vested interest in 25 26 caribou uses since the Canadian co-management scheme 27 will be discussed during this conference as well which 28 Kaktovik is part of that. And if there could be --29 find a way to send both of them would be important. 30 31 I'm going to yield over to Carmen real 32 quick. 33 34 MS. DAGGETT: Pardon me. I just --35 this topic is very important to members of this -- of 36 all of the communities on the North Slope and I was 37 wondering if it's worth talking to the Wildlife Department to see if they could maybe help find some 38 39 additional funding to send another member or multiple members to participate in these discussions. 40 And 41 perhaps they might want to send some people from their 42 Advisory Committee as well. So that's a discussion 43 that might be worth having with the Wildlife Department 44 to see if they can provide some additional funding in 45 addition to what OSM is offering. 46 47 CHAIRMAN BROWER: Thank you, Carmen. I 48 think we can't underestimate, you know, here, you know, 49 today we're dealing so much with economic issues and 50

0213 1 hardships, if the rest of the United States is having a problem we should be in a crisis up here because, you 2 3 know, we have to ship just to be warm unless we go back 4 to our little hovels in a sod house and use some other means of heating and providing food which we don't have 5 6 alternatives. We just can't go to the Walmart. 7 8 So I think those are good points, 9 Carmen, that these invitations should be extended to 10 the North Slope Borough through the Mayor's office 11 probably and look for additional attendance pressure on 12 this kind of stuff. And..... 13 14 MR. JOLLY: Mr. Chair. 15 16 CHAIRMAN BROWER: Yeah, go ahead. 17 18 MR. JOLLY: Oh, thank you, Mr. Chair. 19 For the record this is Kyle Jolly with the National I'm not sure you'll need an organizer 20 Park Service. 21 for the conference. The conference hasn't been held in Alaska for almost 20 years and it might not be held in 22 for another 20 years. 23 It's the largest Alaska 24 caribou stakeholders, gathering of biologists, 25 managers, researchers, so I'm really excited that the 26 Council is interested in it. I'm going to work my best 27 to find additional funding to bring people to the 28 conference. So I'll -- it's worth an idea for you to think about which is maybe to develop a priority list 29 30 of participants that you would like to send, that OSM 31 will obviously send the top person on that list, but I 32 can work with other channels to try and get other 33 members to the conference if you provide that list. 34 35 CHAIRMAN BROWER: Yeah, I think that 36 sounds fantastic to do that. 37 38 MR. FRANTZ: Mr. Chair. 39 40 CHAIRMAN BROWER: Brower Frantz. 41 42 MR. FRANTZ: Sure. Thank you, Mr. 43 So with that being said if it will be open to Chair. pursuing other means of additional folks I would like 44 to propose Esther as the primary, Peter as a secondary 45 46 with the addition of Eddie being sent from Kaktovik. 47 48 CHAIRMAN BROWER: All right. I think 49 that's -- I think that's very palatable, I think it's 50

0214 1 very good. And if I can go I'd go myself too because I help support Esther and others and their 2 would 3 communities and try to articulate with them what these 4 needs represent to the North Slope region as a whole. 5 6 So I think is that in the form of a 7 motion there, Brower. 8 9 MR. FRANTZ: Yes. A motion. 10 11 CHAIRMAN BROWER: Motion on the floor 12 to have Esther primary, secondary Earl and additional 13 funding be granted to have Eddie Rexford be part of 14 that group from Kaktovik. Motion on the floor. 15 16 MR. WILLIAMS: Second, Chair. 17 18 CHAIRMAN BROWER: It's been seconded. 19 Any further discussion. 20 21 MR. JOLLY: Chair, this is Kyle Mr. 22 again. 23 24 CHAIRMAN BROWER: Yeah, go ahead. 25 26 MR. JOLLY: I thought I heard you say 27 that you would go if you could. Can I have somebody 28 think about adding you to that list? 29 30 CHAIRMAN BROWER: All right. There's a 31 request for an amendment to add the Chair to the list 32 as probably the fourth wheel. That's a request form --33 is that Kyle Jolly? 34 35 MS. HONIG: Yes. 36 37 MR. FRANTZ: Move to accept the change 38 to add the Chair or well, we didn't get through with 39 the question yes on the first vote. 40 41 MS. WESSELS: If you want to amend the 42 motion you just make a motion to amend to add the 43 Chair, and then you'll vote on that motion and then 44 you'll vote on the original motion as amended. 45 46 MR. FRANTZ: All right. 47 MS. WESSELS: You have to have two 48 49 votes. 50

0215 1 MR. FRANTZ: So we have to move to 2 amend the motion to add the Chair to the original 3 request. 4 5 CHAIRMAN BROWER: There's a motion on 6 the floor to amend the original motion to add the 7 Chair. 8 9 MS. HUGO: Second. 10 11 CHAIRMAN BROWER: It's been seconded. 12 Any further discussion on the amending motion. 13 14 (No comments) 15 16 MR. WILLIAMS: Question. 17 18 CHAIRMAN BROWER: The question's been 19 called for. All those in favor of adding the Chair to 20 the main motion signify by saying aye. 21 22 IN UNISON: Aye. 23 24 CHAIRMAN BROWER: All those opposed say 25 nay. 26 27 (No opposing votes) 28 29 CHAIRMAN BROWER: Hearing none, the 30 motion's been amended. We're back to the main motion. 31 Do we hear a second. 32 33 MS. WESSELS: You already have the 34 second. 35 36 CHAIRMAN BROWER: All right. Any 37 further discussion on the main motion, the revised main 38 motion. 39 40 (No comments) 41 42 MS. HUGO: Question. 43 44 CHAIRMAN BROWER: The question's been 45 All those in favor of recommending Esther called for. 46 Hugo as the primary, Peter Williams, secondary, Eddie 47 Rexford from Kaktovik and the Regional Advisory Council 48 Chair for Region 10 to be added signify by saying aye. 49 50

0216 1 IN UNISON: Ave. 2 3 CHAIRMAN BROWER: All those opposed say 4 nay. 5 6 (No opposing votes) 7 8 CHAIRMAN BROWER: The ayes have it. We 9 have a recommendation. 10 11 MS. HOLMAN: For the record this is 12 Kendra Holman again. Thank you, Mr. Chair, members of 13 the Council. I appreciate all of your discussion and 14 input. Your nomination -- again this conference is 15 open to anybody who's available to come. So 16 registration -- the closing date for the registration 17 should be on the website so you can take a look at that 18 for anybody else who is interested in coming or trying 19 to find funding from other sources. 20 21 Thank you. 22 23 CHAIRMAN BROWER: Okay. So Esther 24 would have to register on her own or can those be 25 registered by Leigh or ..... 26 27 MS. VOORHEES: Mr. Chair, this is 28 Hannah with OSM. I can work with Esther and get you 29 registered and go through that process. 30 31 Thank you. 32 33 CHAIRMAN BROWER: Yeah, I think any 34 assistance would be most helpful. Sometimes internet is not always that good in our communities as well 35 And again this will be open and I'm pretty 36 anyway. 37 sure the organization of this conference is still in 38 the works and that formal invitations may be 39 forthcoming to other participants, maybe tribes and maybe to the Borough, who knows. 40 41 42 MS. HOLMAN: Yes, Mr. Chair, 43 information should be coming out to everyone that we 44 know of and can reach out to that the conference is 45 happening and that people are welcome to come. We'd 46 love to have more people out there. 47 48 Thank you. 49 50

0217 1 MS. VOORHEES: Thank you. 2 3 CHAIRMAN BROWER: All right. So we're 4 knocking that off the list. And it is lunchtime and I 5 would like to suggest that we take a hour recess for 6 lunch. 7 8 MS. HONIG: Mr. Chair, if I may. 9 10 CHAIRMAN BROWER: Go ahead, Leigh. 11 12 MS. HONIG: So we are kind of up 13 against a time crunch. We've moved through the agenda 14 pretty quickly so I would estimate though that we have 15 a couple hours of agency reports to do..... 16 17 CHAIRMAN BROWER: Uh-huh. 18 19 MS. HONIG: ....and so if possible we 20 need to wrap up by 3:30 at the latest. So I did want to mention that we do have soup available here. Maybe 21 22 if the -- if you would approve we could take kind of an 23 abbreviated lunch, step down for a moment and come back 24 maybe in a half hour if the Chair so sees it. 25 26 CHAIRMAN BROWER: What's the wish of 27 the Council. They would like us to wrap up maybe by 28 4:00 o'clock or 3:30 or something like that. Do you guys want to take a 30 minute lunch or eat here or talk 29 30 really fast later and still take an hour. 31 32 MR. FRANTZ: I think a 30 minute lunch 33 sounds okay, 12:30ish. Does that sound good to you 34 guys? 35 36 CHAIRMAN BROWER: Okay. Thirty minute 37 (In Native). Okay. We're going to take a 30 break. 38 minute break and be here about 12:35 or something. 39 40 MS. HONIG: Okay. Sounds good. 41 42 CHAIRMAN BROWER: Okay. 43 44 (Off record) 45 46 (On record) 47 48 CHAIRMAN BROWER: Good afternoon and 49 we're a few minutes late here. And we took a 35 minute 50

0218 1 lunch break and we'll call the recess back to order. So let's get back to where we were. 2 We're on new 3 business, item F. Is it? 4 5 MS. HONIG: Yes. No, I'm sorry. Ι 6 missed -- Karen is going to give a call for Partners 7 too. 8 9 CHAIRMAN BROWER: Okay. All right. 10 We'll go to item F which is fall, 2022 Council 11 application nominations, opening season. 12 13 Madame Coordinator, I'll give you the 14 floor on that. 15 16 MS. HONIG: All right. Thank you, Mr. Chair. So Leigh Honig for the record. I would like to 17 18 thank all Council members for your volunteer service on 19 the Council on behalf of the Federally-qualified 20 subsistence users in your region. Your knowledge and experience is of great value to the Federal Subsistence 21 22 Management Program and to the Board. And the program 23 constantly continues to work on having robust Councils 24 with full membership. And at the request of the Board 25 we are going to engage the help of the Native Liaisons 26 of Federal Agencies in helping us to solicit more 27 applications during this appointment cycle. And we are 28 also requesting you Council members to help because you 29 are our connection to the communities and the region 30 that you represent. 31 32 The 2023 Council application period opened on September 13th. We are encouraging you to 33 34 help us spread the word about it in your region and 35 recruit new applicants. You know the people in your region and you can also share the firsthand experience 36 37 of what it means to serve on the Council, what is 38 involved and how much time it takes. You can also 39 nominate the candidates of someone who is interested in applying, but is having a hard time filling out the 40 41 application. The application packets are available on 42 our website at www.doi.gov/subsistence/region. We also 43 have a number of application packets here at the meeting that I'll give out to each Council member so 44 you can take them back to your community. Additionally 45 46 we are mailing out about a thousand copies of the 47 application packet to various addressees across the 48 State. If someone needs a copy to be faxed to them we 49 can do that as well, just let me know. 50

0219 1 2 We are hoping to have a good number of 3 qualified applicants this year so we are able to fill 4 all vacant seats and have alternates available for 5 situations when Council members resign or move out of the region or pass away. And I would really appreciate 6 7 your help with recruitment this year. And the application period is open until February 21, 2023. 8 I'm also encouraging all of the incumbents on your 9 10 Council to reapply and to do it before we depart this 11 meeting. This way you'll not need to mail your 12 incumbent application, you just hand it to me. All 13 incumbents whose seats expire on December 2nd, 2023 14 will need to reapply during this cycle and I will hand 15 out the incumbent applications to you. The North Slope Council will have five seats that will become open for 16 17 appointment or reappointment on December 2nd, 2023. 18 19 All right. Thank you, Mr. Chair. 20 Thank you, Leigh. 21 CHAIRMAN BROWER: And in terms of -- I see number 2, vacant. Did that --22 23 do you recall who was in that post before, was it a 24 Utqiagvik representative or a Point Lay representative 25 or.... 26 27 MS. HONIG: Mr. Chair, I do not know 28 that information. I can look into that and get back to 29 you. 30 31 CHAIRMAN BROWER: Yeah. We've always 32 tried to strive to get a representative from every 33 community and I think we should continue to do that. 34 35 Go ahead there, Carmen. 36 37 MS. DAGGETT: Mr. Chair, if my memory 38 serves me right I think William Hopson used to be on 39 this, didn't he, and I wonder if that was his seat. Also I think it's prudent to recognize his passing as 40 41 well. He was a very valuable member of this community 42 and of this Committee. He will be missed. 43 44 CHAIRMAN BROWER: Yeah. Thank you, 45 And I think you're right, maybe that was a Carmen. 46 seat that was held by William Hopson at one point. And 47 he did pass away just recently I believe, yeah. 48 So I've been trying to reach out to 49 others, I think I talked to Konik about trying to get 50

1 on the Council. He's a very notable hunter, fisherman and I think it's very important too for those types to 2 start to take up the slack as some of us get old enough 3 4 retire and want to do our own thing and let somebody 5 else make the rules, you know. And I happen to believe in this organization wholeheartedly because this is the 6 7 Councilthat provides a rural subsistence priority to -a deference to our communities. 8 9 10 So go ahead. 11 12 MS. WESSELS: Thank you, Mr. Chair. 13 Katya Wessels. I just checked the records and the seat 14 number 2 actually has been vacant since 2019. And 15 Robert Shears of Utgiagvik, he was in that seat when it 16 was last filled in 2018. 17 18 CHAIRMAN BROWER: Thank you very much. 19 And I do remember Bob, Bob Shears. Yep. So either way 20 it's a seat, he did represent Wainwright from time to 21 time including Barrow when he moved over to Barrow from 22 Wainwright. And very good. So I encourage all of us 23 here, you know, encourage others and talk about this Regional Advisory Council, it's a Federal Council, 24 25 appointment by appointment from the Secretary of 26 Interior should you pass muster and I do know rules 27 have been strengthened to give more deference to this 28 Council by -- for the Federal Subsistence Board to, you 29 know, what the Council had to say was very important. 30 31 With that we'll -- Leigh, what's the 32 action item on this one here. Is it -- or was it just 33 informational or.... 34 35 MS. HONIG: Yes, just informational, no 36 action item. 37 38 CHAIRMAN BROWER: Okay. So my term 39 expires in 2023, is that December, 2023? 40 41 MS. HONIG: That is correct. 42 43 CHAIRMAN BROWER: All right. Very 44 good. And I'm -- I've been heavily thinking about, you know, just doing my own thing and as much as I love to 45 46 work with the -- all the folks in all the communities 47 and the -- you know, I've been think about just doing 48 my own thing. And it doesn't mean I stop hunting or 49 anything like that, it's just I find it important to 50

1 be, you know, doing various different things. So I'm contemplating that I would not re-up myself and -- or, 2 3 you know, seek the seat after my term expires. And 4 that's, you know, looking at the year I started was 1998 so that's, you know, 20 some years ago. 5 And happened to believe in the program when I was first 6 7 introduced I think. I remember Harry talking to me about how important it was and the State's impasse, I 8 think it was -- was it 1992 or somewhere around there. 9 10 And then Federal management on Federal lands had to 11 take place because State management didn't coincide 12 with Federal regulation in providing for a rural 13 subsistence priority. And that's what this Council 14 does is gives and has a lot of deference to it. 15 16 Anyway I encourage our Council to 17 advocate to make sure our vacant seats are filled and I 18 think our younger folks should be highly encouraged in 19 -- to continue this process. 20 21 With that, any comments from the 22 Council on the -- on the application and nomination 23 open season. And if you have anything to add, I just 24 think it's important. 25 26 MS. HUGO: Mr. Chair. 27 28 CHAIRMAN BROWER: Yeah, go ahead, 29 Esther. 30 31 MS. HUGO: Just listening to you, so 32 your term is up in 2023 and you're Chair. Are you going to be willing -- are you going to be attending 33 34 the conference that Karen and Hannah just mentioned? 35 36 CHAIRMAN BROWER: My term will end in 37 December, 2023 so.... 38 39 MS. HUGO: Oh. Okay. Okay. 40 41 CHAIRMAN BROWER: ....in December, 42 2023. 43 44 MS. HUGO: December. (In Native). 45 46 CHAIRMAN BROWER: Yeah. So I don't 47 know if I'll attend, it's just that I think they're going to seek alternative funding to add more 48 49 participants. And if that happens I will be excited 50

0222 1 and elated to go. And very good. And I'm always animated when I go anyway, I'm always talking about 2 3 community. Community is where it's at. 4 5 MR. FRANTZ: Mr. Chair. 6 7 CHAIRMAN BROWER: Mr. Frantz. 8 9 MR. FRANTZ: Yeah, so just in relation 10 to this. The application process I guess is pretty 11 lengthy, but just in my own experience with it, you 12 know, I was -- must have been four or five years ago 13 now, I actually filled out the application with your 14 encouragement there. Never did submit it because I 15 didn't feel like I was completely ready or associated with certain areas, then I moved to Wildlife, got to 16 17 the Fish and Game Management Committee, dealt with, you know, multiple agencies at that point that pertained to 18 19 this subject, you know, gained a little more knowledge. 20 So it took a few years. So I think the proper -- you 21 know, I did have it in the back of my mind, I still 22 have that first application, but having I guess the 23 knowledge base and the people there to support you, you 24 know, I'd highly encourage that from every village that 25 might have anybody that you think should be on this 26 Council. 27 28 You know, that's exactly what happened 29 to me is that it was more than one person driving. You 30 know, I -- it was never in my mind to become a part of 31 this until somebody said hey, you should put your name 32 in for this. And it took multiple folks that actually 33 handed me the same application from different places. 34 You know, after the second time it was like all right, 35 I'll submit it this time. So I think having the right 36 support is there, so I would encourage all of our 37 members to do that, to push it towards somebody that 38 you think has the knowledge base, even if it's not all 39 complete yet to go for it. So that's my recommendation 40 is just please, you know, try to push the next 41 generation of folks into this kind of like I did. Ι 42 think it was great. It was all I think because of 43 Gordon and Konik's support that, you know, they both 44 kind of stressed me to put my name in the hat and that's how I got here. So I like to push that story 45 46 forward and, you know, please try to do the same for 47 anybody else in your community. 48 49 Thanks. 50

0223 1 CHAIRMAN BROWER: (In Native), Mr. 2 Frantz. And I keep wanting to -- I -- and my hearing is kind of funny sometimes, is it Kassel? 3 4 5 MS. WESSELS: It's -- no, it's Katya. 6 7 CHAIRMAN BROWER: Katya. 8 9 MS. WESSELS: Katya, K-A-T-Y-A. 10 11 CHAIRMAN BROWER: Okay. Katya. 12 13 MS. WESSELS: Yes. 14 15 CHAIRMAN BROWER: Katya Wessels. 16 17 MR. WILLIAMS: Katya. 18 19 MS. WESSELS: You know, I was actually 20 going to ask you to teach us how to pronounce Utgiagvik 21 correctly, you know, because the way you were saying it not how we're saying it, but I'm sure your is 22 23 pronunciation is right, but that's not why I'm, here. 24 25 So I was -- thank you very much, member 26 Frantz, for your feedback. That's very important to 27 us. And I also would like to ask the Council if you 28 have any ideas for our program, for Federal Subsistence 29 Management Program, to whom else should we reach out in 30 the region to get more applications because we want at 31 a minimum to be able to fill the seats and also have 32 alternates if possible because your charter now allows 33 for alternates in case a Council member resigns in the 34 middle of their term. So if you have any ideas which 35 organizations or tribes or how we should spread the 36 word, you know, because we try to do our best, we using 37 the media, we sending applications out, but how do we 38 follow-up this effort, whom -- with whom should we 39 talk. That would be great if you can provide us some 40 ideas for us. 41 42 Thank you. 43 44 CHAIRMAN BROWER: That's good. And 45 Utqiagvik, you know, you got to put that behind your 46 tongue. Utgiagvik. 47 48 MS. WESSELS: Utgiagvik. 49 50

0224 1 CHAIRMAN BROWER: Utgiagvik. It's 2 almost like -- it's almost like maybe you're speaking 3 Spanish or something, you know. 4 5 MS. WESSELS: You're saying Utgiagvik. 6 7 CHAIRMAN BROWER: Utgiagvik. 8 9 MS. WESSELS: Utgiagvik. 10 11 CHAIRMAN BROWER: Yes. 12 13 MS. WESSELS: Utgiagvik. 14 15 CHAIRMAN BROWER: But there's different 16 ways too, you can say Utqiagvik with a P. Utqiagvik. 17 18 MS. WESSELS: Utgiagvik. 19 20 CHAIRMAN BROWER: You know what that 21 means, a place where you hunt snowy owls. That's the That's 22 name of our village corporation. Utgiagvik. 23 this place too, it's original name is Utqiagvik. That's riddled in our village corporation. Utgiagvik. 24 There's two terms for that. One place to get clay and 25 26 the other is where you return. Utgiagvik. 27 28 MS. WESSELS: We will return. 29 30 (Laughter) 31 32 CHAIRMAN BROWER: Anyway Utqiagvik. Very good. And I would suggest it's important to 33 34 always reach out to village leadership in each 35 community. You know, when I was in Permitting for many, many years and I was a manager and we had permits 36 37 that would affect communities. I'd tell my Staff call 38 the president of the village corporation of that 39 community if that project is in their village area of Village area of influence. 40 influence. Area of 41 influence. Same thing about what it means to 42 communities. It can mean that a public hearing will 43 occur in your area if that project is in that village 44 area of influence. And the Borough uses that area of influence because it's the law. 45 And I encourage 46 Federal Managers, I encourage those State Managers, 47 Land Managers, be wise about that. But village 48 corporation president, tribal president, city mayors, 49 reach out to those because they know too who is a 50

1 community harvester. They -- a lot of times they coordinate with communities all the time and would 2 3 know, you know, if you were in a community looking for 4 representation that's where I would look to if I didn't 5 know areas where -- who to nominate I would look at those. I mean, it wouldn't -- you could also look at 6 7 who's on the planning commission, who is on the city councils, those kind of things. I think those are 8 important areas as good leads and you'll get good 9 10 results. 11 12 And then existing Council, I think we 13 know a lot of people. Like sometimes I think of young 14 men out there that are ambitious and are -- they hunt 15 for the community. And they don't -- they don't really hunt for themselves. They will -- they go out of their 16 way to hunt for the community. Like I remember my dad 17 18 lecturing. I said, dad, I think we should stop 19 shooting. He said no, there's more bullets, keep 20 shooting, you don't know what you're talking about, 21 keep killing them, you know. We would keep us going. 22 And then one day we sat down and talked about it, he 23 said he hunts for the community, he hunts for his 24 whaling crew, he hunts for the (in Native) feast so 25 there's abundance of food for everybody. 26 27 So those are important things and when I try to see who's going to be beneficial. I think a 28 29 lot of people will be beneficial, but you look at these 30 kind of things as like it's a marker and these guys use 31 the land, they go out there and uphold tradition. 32 Because this also is a C&T representative, customary 33 and traditional use determinations and C&T's very 34 important because we have a customary and traditional 35 connection to the resources and to the land. 36 37 MS. HONIG: (In Native). 38 39 CHAIRMAN BROWER: (In Native). 40 41 (Laughter) 42 43 CHAIRMAN BROWER: You know what my dad 44 used to say, he said the Inupiag language had shifted a little bit. It's used today as just communication. In 45 46 his time it was a very intimate language. It was very, 47 very social language, always -- he said there's some 48 changes, it's almost utility use, just for 49 communication (in Native)more social, you know, those --50

0226 1 that's what I learned a little bit. 2 3 Anyway thank you for you Inupiaq, that 4 was fantastic. 5 6 MR. WILLIAMS: This is classroom. 7 8 (Laughter) 9 10 CHAIRMAN BROWER: All right. I think 11 we're done with the application, nomination, open 12 season is out there. And let's encourage others to 13 fortify this Council now that it sounds like, you know, 14 we can continue to advocate for it and try to get even 15 alternates nominated and things like that. 16 17 So with that we'll go to -- what's the 18 next item, Leigh. 19 20 MS. HONIG: Thank you, Mr. Chair. 21 We've been jumping all around this agenda so Ι 22 apologize for that. If possible can we go to item 23 D, the call for Partners for Fisheries number 24 Monitoring Program proposals that Karen Hyer will be 25 presenting. 26 27 CHAIRMAN BROWER: Thank you, Leigh. I think that's an important one. I think, Karen, you had 28 mentioned that was a difficult task to try to call for 29 30 Partners and I think you mentioned maybe with tribes 31 and things like that might be important. 32 33 So we'll give Karen the floor and the 34 call for Partners. 35 36 MS. HYER: Mr. Chairman and Council 37 members, I'm going to ask you to turn to page 106 of your books. It's got the pretty sunset on it, that's 38 39 McLees River on Unalaska. 40 41 So this -- yesterday afternoon and this 42 morning we've been talking about funding fish research 43 projects and OSM provides the money and that's a 44 competitive grant to get money to do that research. Well, OSM also supports a different program which is 45 46 called the Partners for Fisheries Monitoring Program 47 and it is also a competitive grant. And through this 48 grant rural nonprofit and Alaska nonprofit and Alaska 49 Native organizations can apply for funding, they can 50

0227 1 write a proposal and apply for funding to have either a biologist, an anthropologist or what we call kind of an 2 3 educator slash outreach person to actually work in 4 their organization. So currently we have a position in 5 the Native Village of Eyak in Cordova; we have one in the Native Village of Paimiut on the Kuskokwim and the 6 7 Paimiut; we have one in Bethel at ONC; we have one with Tanana Chiefs Conference up in Fairbanks; we have one 8 down in Southeast with Yakutat Tlingit tribe. And so 9 10 these organizations have been competitively -- they 11 have -- they competed and received money for a four 12 year grant and that grant has allowed them to hire 13 professionals within the organization. 14 15 CHAIRMAN BROWER: (Indiscernible - away 16 from microphone).... 17 18 MS. HYER: Oh, that would be great. I 19 think Leigh has it. 20 21 CHAIRMAN BROWER: ..... (indiscernible -22 away from microphone). 23 24 MS. HYER: And so this -- they use this 25 money to hire a professional that then works in their 26 organization and helps the organization engage in 27 Federal subsistence management. And they can engage in 28 many ways just depending on what is needed within the 29 communities they work in. Some of them run Fisheries 30 Resource Monitoring projects, they write proposals, 31 they get funding and they run -- like one of them's a 32 mark recapture on the Copper River where they count 33 chinook salmon escapement. Other ones run smaller 34 projects and they engage the youth in them and they 35 work really closely with Alaska Native Science and Engineering Program hoping to 36 recruit the next professional biologist. And they put a lot of time and 37 38 effort into youth and run summer camps and then they 39 also work with the Regional Advisory Councils to ensure 40 that the word gets out. So it's really dependent on 41 what the organization needs. 42 43 But the call for that proposal is about 44 to come out. It's right now sitting with our financial aid people and so I expect it to come out in the next 45 46 week or two and then it will be posted on our website 47 and we'll send out an announcement of it. But I just 48 want to make you aware because if you're -- you know 49 any like we talked about the tribe of Barrow, any 50

1 Alaska Native or rural organizations that might be interested in the position my contact information is 2 right here on this page. And probably the best thing 3 to do is give them that information and they can talk 4 5 directly to me. It will be posted like I said on our 6 website and we'll do a news release, but I certainly 7 can point them in the right direction and I can tell 8 them more about our program. 9 10 So now you not only have to recruit for 11 our Council, but you have to advertise for our Partners 12 Program also. And it's a four year grant. So and it 13 allows an organization to develop some expertise within 14 the organization. 15 16 So that's all I had there. Are there 17 any questions? 18 19 CHAIRMAN BROWER: Yeah, it seems to me 20 that, you know, I hear from Esther and Peter about 21 wanting a biologist or some help in the community of 22 Anaktuvuk. 23 24 MS. HYER: Uh-huh. 25 26 CHAIRMAN BROWER: This would be 27 something that the tribe (in Native) tribal 28 organization can apply for? 29 30 MS. HYER: Yes, it is. 31 32 CHAIRMAN BROWER: And then secure their 33 own biologist in the community? 34 35 MS. HYER: Yes, so we provide the 36 funding and then the organization hires the 37 professional biologist oranthropologist depending on --38 or outreach person depending on what they want. 39 40 CHAIRMAN BROWER: Uh-huh. 41 42 MS. HYER: So they'd write a proposal 43 telling us what they're going to do with the funding 44 and then it's competitive. So it's like the FRMP, we 45 review proposals and then we'll select probably six 46 organizations and then they'll have four years worth of 47 funding to hire the professional. 48 49 CHAIRMAN BROWER: Right. Looks like 50

1 provide something for a biologist, a social scientist, educator position in Alaska Native and rural nonprofit 2 3 organizations with the intent of increasing the 4 organization's ability to participate in Federal In addition the program 5 subsistence management. supports a variety of opportunities for rural students 6 7 to learn about subsistence resource monitoring and management through science camps and paid internships. 8 When you think about that these culture camps, it seems 9 10 to me that it's talking a little about maybe let's just 11 say one of the tribes in our communities want young 12 people to be more in tune with their culture..... 13 14 MS. HYER: Uh-huh. 15 16 CHAIRMAN BROWER: ....and often these 17 camps are made.... 18 19 MS. HYER: Uh-huh. 20 21 CHAIRMAN BROWER: .....to learn how to 22 work on traditional resources, how to skin good, how to 23 cut caribou properly, the traditional way, the style of 24 that community, how to make dried fish, even how to set 25 traps, a variety of educational, traditional culture 26 wise. This grant can do that..... 27 28 MS. HYER: Uh-huh. 29 30 CHAIRMAN BROWER: .....to supplement 31 traditional education in my view. Not just to get a 32 biologist, you could steer it to these other types of 33 programs and write a proposal that would do that. 34 35 Yes. So the grant is from MS. HYER: 36 -- the bottom is I think \$20,000 and the cap is 37 \$167,000. And so it is true that you could write a 38 proposal and -- for culture camp. We haven't had that 39 happen, but this program does allow it. Usually people write a proposal for the biologist and they include the 40 41 culture camp in with that. So if they get the 42 biologist then the biologist helps run the science and 43 And so but it is not -- that doesn't culture camp. have to be that way. If you just had the culture camp 44 you were interested in having and you tie it to Federal 45 46 subsistence management you could just get a smaller 47 amount of funding for the culture camp. We just 48 haven't had that happen before. 49

50

0230 1 CHAIRMAN BROWER: Yeah. Verv interesting. And I think, you know, things like that 2 3 should have a little bit more detail because, you know, 4 if I was advocating for that and I would explore what 5 all can be done..... 6 7 MS. HYER: Uh-huh. 8 9 CHAIRMAN BROWER: .....traditionally 10 with these types of resources and have examples to talk 11 about. But I understand it enough to where you could--12 I see these things and you could develop programs for 13 communities should we develop the proposal to do that. 14 15 MS. HYER: Correct. And once this 16 grant is posted there will also be dates on our website 17 and we're going to have informational needs where 18 people can call in and they can talk about those kinds 19 of ideas and we can help them develop their ideas and 20 go over the application process so people understand it. 21 So we're available to help. But anybody that 22 calls me at anytime can also get that help, they don't 23 have to come during the scheduled times. And so if you 24 know anybody that you think might be interested please 25 give them my contact information because I'm working 26 with a social scientist from my office and we're going 27 to be available to answer questions, help with idea generation, if they need help structuring the proposals 28 29 we're available. So just have them make contact with 30 me because sometimes when you go to our website and you 31 see -- especially you haven't filled out a proposal for 32 us before and you see the document, it can be a little 33 bit overwhelming and so we want to make sure that we 34 help people step through it and they understand what 35 they need to be successful. 36 37 CHAIRMAN BROWER: Thank you, Karen. Ι 38 yield to Mr. Frantz, Utgiagvik. 39 MR. FRANTZ: Yeah. I think this is great, great opportunities out there, but I think we 40 41 should push this over to somewhere that would be able 42 to make more use of this other than this Council. Τ 43 think something like the Fish and Game Management 44 Committee who are in touch with the research, their 45 biologists and have outreach programs. You know, here I think the information is great, but whether or not 46 47 we're going to be able to do anything with this is I 48 think kind of negligible. It looks like something like 49 the Borough or UIC Science or, you know, maybe some --50

0231 1 this might be able to go to liaisons, but as far as us it's great information, but I think we should probably 2 push this to like the liaisons or a different committee 3 4 that actually has connection with who might be able to 5 utilize this. 6 7 CHAIRMAN BROWER: Yeah. Thank you, 8 Brower, And I think that's what Karen is advocating 9 for us to help do that. Like I would think I would go 10 see the tribal president and say hey, this program 11 exists. And because there's not a real torchbearer 12 that's going to go see and talk to an organization, 13 it's like we becoming the torchbearer for this to help 14 Karen get in some good proposals. I don't think as a 15 group we're going to do it, but we know that it exists and the money is from OSM looks like which is an 16 17 organization that we -- we're -- that's our Staff. OSM 18 is Staff to us, they're telling us they got this money 19 to do this and I say, Esther, let's let the -- your 20 tribe put in a proposal for this, for your biologist. 21 So (in Native). That's what they know (in Native). 22 It's important, it's kind of the stuff you've been 23 harping about a little bit..... 24 25 MS. HUGO: Okay. 26 CHAIRMAN BROWER: .....we want our own 27 28 biologist. (In Native) biologist, social scientist (in 29 Native) to learn more about our culture, about proper 30 cutting, you know, (in Native), you know, the (in 31 Native) and things like that, how we make (in Native), 32 that could be a (in Native) class funded right here in 33 my view, use of these resources. And I completely agree with Brower Frantz that we could 34 be the 35 torchbearer to help like hey, Wildlife Department, this 36 grant is there, you can do more with this, you know, 37 and to fund a biologist somewhere. 38 39 Very good. It's call for Partners, it's not an action item it's informational? 40 41 42 MS. HYER: No, it's just informational 43 and I just want to reiterate that the call has not been 44 posted yet, but it should be posted within the next two 45 weeks. But if you know anybody that's interested at 46 all you've got my contact information so have them give 47 me a call and I can.... 48 49 CHAIRMAN BROWER: All right. 50

0232 1 MS. HYER: .....certainly let them know when it's posted and help provide more information and 2 3 quidance as well. 4 5 CHAIRMAN BROWER: here's a basic 6 Some of our tribes and communities that question. 7 might benefit from this may not have all the resources 8 and the know how to put in a proper formatted proposal. 9 10 MS. HYER: Uh-huh. 11 12 CHAIRMAN BROWER: Is that something 13 that you can help with? 14 15 MS. HYER: Yes. Yeah, so it's very 16 hard I feel like to put something in the proper format 17 for the Federal government regardless of what it is. 18 So yes, very much so. That's why I prefer if people 19 contact me because then I can help them. And that's 20 also why we're going to have -- we're going to have scheduled meetings so the public can call in and get 21 help so there's no confusion about what we're asking 22 23 for. Because we have a certain way of -- like our own Federal government language which I think is -- nobody 24 25 else can quite understand what sometimes we're asking 26 Like we call it a NOFO and everyone's like a for. 27 NOFO. So it's that kind of thing and I can help guide 28 people through the process, yes. So that's why it's 29 important to get them in contact with me. 30 31 CHAIRMAN BROWER: Very good. You hear 32 it, folks, they will help you put in a good proposal, 33 even help you write it almost. You just got to put the 34 dot over the I. 35 36 MS. HYER: The key is you've got to 37 call me so I can help because you'd be surprised how 38 many times I did say give a call and let me help and 39 how few people actually do. 40 41 CHAIRMAN BROWER: Thank you very much, 42 I think that's a -- that's a fantastic thing, Karen. 43 call for Partners, Fisheries Monitoring Program notice 44 of funding opportunity. Very good. 45 46 MR. WILLIAMS: Chair. 47 48 CHAIRMAN BROWER: Yeah, go ahead there, 49 Peter. 50

0233 1 MR. WILLIAMS: Thank you. I'd like to add onto Brower. Anyway when we were growing up back 2 in '69, '68, we used to be excused from school for 3 4 hunting purpose like, you know, 10 days. They don't do 5 that anymore. I don't know what happened, but, you 6 know, in the -- kind of when I was young -- young and I 7 actually want to go hunting too, you know, I want to follow the -- they give you -- give you 10 days on --8 10 days on geese, duck hunting and 10 days on moose 9 10 hunting. And what those old people did is they 11 encouraged young kids and that's probably the reason 12 why so they could eat ducks. But that's just a 13 tradition, you know, what they want their kids to get 14 involved with to see what that real life is out there 15 when you're hunting. And like what Brower said, you know, that, you know, we work as a group, you know, you 16 just can't work alone. If you work as a group, you 17 18 know, you accomplish something. That's why I like what 19 he said about this. 20 21 Thank you. 22 23 CHAIRMAN BROWER: (In Native). Very 24 I'm going to just check in with Kaktovik. good. 25 Eddie, are you on and seems like this call for Partners 26 is a funding mechanism that could benefit even your 27 very lake that you were talking about that might have whitefish. It seems like that might be a good way to 28 29 bring in funding to do more with that lake over that 30 way. 31 32 MR. REXFORD: Yeah. Thank you, Mr. 33 That sounds like a good grant opportunity Chairman. 34 for our tribal communities to apply for grants like 35 that to research some of the fish and animals that we do harvest and I'll be -- our tribe will be waiting and 36 37 looking forward to communicating and maybe apply for a 38 grant like that. 39 40 Thank you. 41 42 CHAIRMAN BROWER: (In Native), very 43 thanks again, Karen, for good. And this good 44 information. 45 46 So, Leigh, where are we now. 47 48 MS. HONIG: Well, getting back on track 49 with the agenda. So I think we're at item H, harvest 50

0234 1 of wildlife for sport purposes in National Preserves presented by National Park Service. 2 3 4 CHAIRMAN BROWER: Okay. Who's the 5 presenter, National Park Service. 6 7 MS. PATTON: Yes. Good afternoon, Mr. 8 Chair and members of the Council. 9 10 CHAIRMAN BROWER: Ooh. 11 MS. PATTON: This is Eva Patton with 12 13 the National Park Service Regional Office. And I am 14 the Subsistence Program Manager at the Regional Office 15 here in Anchorage and we also have other Staff online with us as well. We have our Regional Wildlife 16 17 Biologist, Dave Payer on the phone who may be able to 18 address questions on availability. We also have our 19 Gates of the Arctic National Park 20 Superintendent and Staff on as well. 21 22 Just wanted to thank you for giving us 23 some time on your busy agenda to speak with you today 24 about an important issue that will affect how we manage 25 sport hunting in the National Preserve lands here in 26 Alaska. And this was initially on the agenda as an 27 action item we were anticipating that there would be an actual proposal to present to you today. And that's 28 not the case, but we want to make sure that all the 29 30 Regional Advisory Councils with the National Park 31 Service lands nexus have the information, know that 32 this is likely coming and that we'll keep you posted on that and that there will be formal government to 33 34 government consultation on this issue as well. 35 36 So last winter the National Park 37 Service was directed by the Department of the Interior to initiate a new rule-making to reconsider some of the 38 39 factual, legal and policy conclusions that were in a 2020 hunting rule affecting National Park Service 40 41 lands, National Preserve lands. And that 2020 rule 42 allowed for the baiting of bears by sport hunters in 43 National Preserves as well as other previously banned 44 activities by sport hunters such as harvest of wolves 45 and coyotes during the denning season, taking black 46 bear cubs and sows and harvest a swimming caribou among 47 other practices. 48 49 And so right now there's two points 50

1 that the National Park Service is specifically looking at in reconsideration of that 2020 rule. 2 And they're mostly examining risk associated with bear baiting on 3 4 Preserve lands especially in those Preserve lands where there's a lot of public engagement, members of the 5 public come from all over to participate and enjoy the 6 7 lands there and also specifically several practices authorized in 2020 that may be appropriate for Federal 8 9 subsistence users, but the National Park Service is 10 reconsidering whether those opportunities should be 11 authorized for sport hunters as well. 12 13 And so that's a really key component of 14 what the National Park Service is looking at now is 15 that none of the current Federal subsistence regulations, Federal subsistence practices, means and 16 17 methods would be affected by what is being reconsidered 18 The Park Service is just looked at nonright now. 19 Federally-qualified subsistence users or what they 20 refer to in the rule as sport hunters for re-enacting 21 some of those restrictions that had been previously in 22 place prior to 2020. 23 24 And so the Park Service did engage in 25 informal communication with affected tribes and Native 26 corporations and one of the primary concerns with that 27 2020 rule is that it increases competition with non-28 local hunters in some areas. And as it currently 29 stands the 2020 rule allows for sport hunters to 30 compete with Federal subsistence users for the same 31 resources on Preserve lands. And there is some 32 variability. This is being -- if a new wildlife rule were to be enacted it would be enacted across all 33 34 National Preserve lands in Alaska and there are some 35 differences from region to region, but wanted to make 36 sure that all the Regional Advisory Councils had an 37 opportunity to provide input on the process. And hope 38 that the process will ensure the prospectus of those 39 who live in the affected area as the priority users 40 under ANILCA are considered. 41 42 And again once a proposed rule does 43 publish in the Federal Register then each of the 44 National Preserve Superintendents will be reaching out directly to invite government to government tribal 45 46 consultation with all affected tribes and communities 47 in and around the National Preserve lands. 48 49 And I get the understanding that the 50

0236 1 new rule would not make any changes to current Federal subsistence activities, it would only address sport 2 3 hunting and trapping on National Preserves. 4 5 And we don't have more details than 6 that to provide until the Federal Register notice does 7 post, but we will be keeping everyone apprised when that does happen and again that will also trigger 8 direct tribal consultation outreach and invitation to 9 10 tribal leaders for consultation on the proposed rule to 11 connect more directly with those communities affected 12 with National Preserve lands in their area. 13 14 So we would like to hear your thoughts 15 and ideas or if there's any questions at this point. 16 17 Thank you, Mr. Chair and members of the 18 Council. 19 20 CHAIRMAN BROWER: Thank you, Eva. It's 21 good to hear you and what you're doing sounds pretty 22 controversial to me and bear baiting and that kind of 23 And when do you feel that this will post stuff. anyway, I mean, are we going to be dealing with this in 24 25 the winter meeting? 26 27 MS. PATTON: Thank you, Mr. Chair, members of the Council. At this time the proposed rule 28 29 is with the Secretary's office in Washington, D.C. 30 There's not a timeline that we have at this point about 31 when it may be finalized or posted to the Federal 32 Register. When it does there will be a minimum of a 60 33 day comment period in order to allow time to get the 34 information out to all the rural communities and the 35 public and allow an opportunity to comment at that 36 time. Regardless of when it does post it would be a 37 minimum of a 60 day comment period. 38 39 CHAIRMAN BROWER: Thank you. Anv 40 concerns or questions or comments from the Council on 41 this. 42 43 MR. WILLIAMS: Chair. 44 45 CHAIRMAN BROWER: Earl. 46 MR. WILLIAMS: Hi, Eva. I just want to 47 48 say hello, how you doing. 49 50

0237 1 (Laughter) 2 3 MS. PATTON: Hello, Earl. It's been so 4 wonderful to hear all of your voices and just really 5 wonderful discussions so it's like being there in the 6 room with you. Hello, Earl. Hello, Esther. 7 8 MR. WILLIAMS: Enjoy our working. 9 10 CHAIRMAN BROWER: Thank you, Earl. 11 12 MR. FRANTZ: Mr. Chair. 13 14 CHAIRMAN BROWER: Brower Frantz. 15 16 So on my comments for MR. FRANTZ: 17 baiting. I think throughout our region if there -- if 18 there was an expedited way to get rid of some of the 19 bears and, you know, looking at the population I -- it 20 might benefit to some of the caribou population. So in 21 my eyes this may not pose too much of an issue, it 22 might actually benefit at least for one aspect of it. 23 I'm not sure what your thoughts are, I would probably 24 lean more towards Kaktovik and Anaktuvuk Pass as the 25 ones who would be affected by this type of change. 26 27 CHAIRMAN BROWER: Thank you, Mr. 28 Frantz. And these are National Preserve and Park 29 Service lands that's being -- sounds like the sport 30 hunting lobby is hard at work and it's important that we stay interesting -- interested and engaged to see 31 32 how those potential impacts would be on subsistence or 33 if it would compete with our areas, you know, in terms 34 of other resources that could be deflected from their 35 activities or things like that. It's just one concern 36 that might come up to mind. But, yeah, bears are --37 man, there's -- I remember our cabin that a sow and two 38 cubs came in and slept on the bed, it stayed in 39 there.... 40 41 (Laughter) 42 43 CHAIRMAN BROWER: ....and then they 44 locked the door so nobody can come in, but they didn't know how to open it so they made a hole through the 45 46 wall to get out. So -- and so it's -- bears are bears, 47 you know, especially the brown ones are crazy. 48 49 MS. PATTON: Thank you, Mr. Chair, and 50

thank you, Mr. Frantz. As Gordon noted just to clarify 1 that this proposal would only affect National Preserve 2 lands. So none of the other Federal lands, NPR-A or 3 4 Arctic National Wildlife Refuge are affected by this proposed rule. It would just be the Preserve lands for 5 the North Slope region, the Preserve lands associated 6 7 with Gates of the Arctic National Preserve and then in unit 23 because there is some overlap with North Slope 8 communities in unit 23, the Noatak National Preserve. 9 10 So it is just the National Preserve lands that would be 11 affected by any changes to the current regulations for 12 sport hunting on Preserves. 13 14 Thank you, Mr. Chair. 15 16 CHAIRMAN BROWER: Yeah. Thank you for 17 clarifying that, Eva, and that does help. And very 18 good. I suspect we're going to talk more about it when 19 it posts and the outreach starts happening. Anyway I 20 think we had a few initial thoughts already. 21 22 MS. HUGO: Mr. Chair. 23 24 CHAIRMAN BROWER: Go ahead, Esther. 25 26 MS. HUGO: I just want to throw in that 27 back in the late 1990s or early 2000, you know, we have our lookouts within the foothills and we had our 28 29 migration coming just into the mountains and all of a 30 sudden they turned around because there was some 31 grizzly bears there. And, you know, they are a 32 problem. They're hungry too. So they were the ones 33 that made them divert that one year. They were so 34 close, we were so excited and next day they were --35 they went back north. So the predators are hungry too, 36 they know caribou eat. Yeah. 37 38 Thank you. Hi, Eva. 39 MS. PATTON: Hi, Esther. Great to hear 40 41 your voice. Thank you so much. 42 43 CHAIRMAN BROWER: (In Native), very Thank you, Esther, for those observations and 44 qood. good information. Should have had those scouts come 45 46 over and take care of them bears. 47 48 All right. I'm going to reorient and 49 see where we are with our Madame Coordinator and what 50

0239 1 -- what's up next. 2 3 MS. HONIG: Next item on the agenda and 4 this will be our last item under new business and it's 5 the telephonic and internet expenses related to the 6 Council teleconference meetings and I'll be providing 7 that quick report. 8 9 CHAIRMAN BROWER: All right. Leigh, 10 Madame Coordinator, you have the floor. 11 12 MS. HONIG: Thank you, Mr. Chair. For 13 the record, Lee Honiq. So members for the Council..... 14 15 (Teleconference interference 16 participants not muted). 17 18 MS. HONIG: .....for -- oh, I'm sorry. 19 I'm going to present you with information on how you 20 can get reimbursed if you had any telephonic or 21 internet expenses associated with your participation in 22 the Council meetings over the last two and a half 23 And the material for this agenda item is in vears. 24 your packet, it's supplemental materials as tab one. 25 26 So the issue was brought to the Board's 27 attention by the Yukon-Kuskokwim Delta Council during their winter, 2022 meeting. And OSM reviewed the 28 29 policies regarding reimbursement and I'll just provide 30 you with information on the types of expenses that may 31 be reimbursed and the documentation necessary to 32 receive reimbursement. So for the time period when the 33 Council meetings were held via teleconference you can 34 be reimbursed for internet and phone charges that are 35 in excess of their normal bill. Council members who have internet or cellular plans that charge a flat 36 37 monthly fee that they pay regardless of Council 38 meetings cannot be reimbursed their normal charges. So 39 order for Council members to receive this in reimbursement for excess charges they'll need to submit 40 41 a copy of their bill that covers the time period during 42 which the virtual Council meetings took place and 43 indicate the excess charges for attending the virtual Council members can submit this information 44 meeting. to myself or you can mail the bills to our office which 45 46 will be the Office of Subsistence Management at 1011 47 East Tudor Road, Mail Stop 121, Anchorage, Alaska 48 99503. 49

0240 1 And I'll be happy to answer any 2 questions and this concludes my presentation. 3 4 Thank you. 5 6 CHAIRMAN BROWER: Thank you, Madame 7 Coordinator. Any questions for Leigh on the telephonic/internet expenses related to 8 Council 9 teleconference meetings. 10 11 (No comments) 12 13 CHAIRMAN BROWER: If you develop 14 expenses that are above your normal bill make sure and 15 contact Leigh and she'll give you some money back. 16 Sounds like it. 17 18 All right. That completes item 11 of 19 old business or new business? 20 21 MS. HONIG: New business. 22 23 CHAIRMAN BROWER: New business. And 24 let's go down to it item 12, agency reports. Time 25 limit of 15 minutes unless approved in advance. I 26 haven't had any approval in advance to go past 15 27 minutes. So talk fast. 28 29 We'll go down the list. Any tribal 30 governments agency report. 31 32 (No comments) 33 34 CHAIRMAN BROWER: Madame Coordinator, 35 did we get any request for appearance? 36 37 MS. HONIG: No, I did not receive anything. There is a report moving down the list for 38 39 U.S. Fish and Wildlife Service would be the next one that I am aware of, but if you want to give the 40 41 opportunity for Native organization. 42 43 CHAIRMAN BROWER: All right. We'll do 44 so. Native organizations agency reports. 45 46 (No comments) 47 48 CHAIRMAN BROWER: And we'll keep the 49 floor open for that. And we'll go down to U.S. Fish 50

0241 1 and Wildlife Service. 2 3 MR. HAWKALUK: Thank you. Mr. Chair, 4 members of the Council, for the record my name is 5 Nathan Hawkaluk, I'm the Acting Refuge Manager for the Arctic National Wildlife Refuge. And yeah, I'll 6 7 definitely keep it short and keep it to that 15 minute goal. Our meeting materials for the Arctic Refuge, the 8 summary of activities didn't make it into your first 9 packet of information, but I had yesterday passed out a 10 11 hard copy to those present from the Council. And, Councilman Rexford, joining us remotely, I did email you one this morning. I apologize I didn't get that to 12 13 14 you sooner, but certainly available to you and we can 15 get it out to you if you're not seeing it later as 16 well. 17 18 And it -- the summary of activities has 19 quite a bit of information in it, I'll just highlight a 20 few things that might be important to this Council. 21 The Arctic National Wildlife Refuge covers a couple of 22 different RACs including Eastern Interior on the south 23 side of the Refuge so I'll try to focus some of the 24 reports on the north side. 25 26 First of all I'll address something 27 that was mentioned during the beginning of today's meeting and that is the moose permits for the community 28 29 of Kaktovik. That's Federal moose permit number 2606 30 which the Refuge Manager has delegated authority to 31 issue those permits each year. It's currently a 32 computation of 10 permits which are provided to the 33 community for distribution among the community members 34 with a harvest quota of three bull moose starting this 35 fall, October 16th, running I believe through the end of March. I might have that end date a little wrong, 36 37 but it's the pretty much the entire winter. I did email that announcement out on September 28th to OSM 38 39 Staff as well as Councilman Rexford and Chair, Mr. 40 Brower. And we did put those hard copy permits, those 41 10 permits in the mail September 29th and they were --42 we had a confirmation of the delivery October 4th at 43 3:00 p.m. So if those in fact have not arrived in the 44 community I'd ask Councilman Rexford to let me know 45 ASAP and we'll try to get those back out again as that 46 season starts in a couple days. 47 48 CHAIRMAN BROWER: Ι do a quick 49 question. 50

0242 1 MR. HAWKALUK: Yeah. 2 3 CHAIRMAN BROWER: And just an 4 observation. And, you know, for many, many, many, many 5 years we argue and I think it's important what the National Wildlife Refuge is doing when the authority is 6 7 given to them to manage those resources. And we would argue over transient population of the moose, they come 8 9 in and out for many, many, years. Some biologists 10 conflict each other even at times. I just want to 11 applaud how this is going. To have 10 permits is a 12 godsend, it's important for those resources to be had 13 by the community. I could remember us arguing over one 14 permit and fighting for those rights for the community. 15 And we would argue about well, you know, these animals, 16 you might take them all in one season and another batch 17 will come in, they move around. And they're transient. 18 And we get the biologist to talk about it and say yeah, 19 they move around. It doesn't mean that's the stable 20 population in ANWR, it fluctuates. And because there other areas real close to that where those 21 are 22 populations are coming from that come in and out. So 23 I'm just very happy to hear this development for 24 Kaktovik. 25 26 Thank you. And that's all I wanted to 27 say. 28 29 MR. HAWKALUK: Thank you for that, 30 Chairman Brower. And well, actually there's a very 31 short summary about a moose collaring project that's 32 going to help inform some of those very things you're 33 talking about deeper into the summary. So I'll just --34 again I'm just going to move into the summary now and 35 highlight a few things that might be of interest to the 36 Council here. 37 38 You know, what occupies a lot of the 39 Arctic Refuge's time at this moment is the Oil and Gas Program and the Supplemental EIS that's going on. I'm 40 41 encouraged to hear Councilman Rexford's note this 42 morning about the potential for NVK and KIC to join on 43 as cooperating agencies. U.S. Fish and Wildlife 44 Service is currently a co-lead with the BLM on that Supplemental EIS and it's certainly moving through the 45 46 process with the other cooperating agencies and both of 47 us as co-leads. And hopefully there will be a draft 48 SEIS out soon for public review and I think they're 49 still on a target of having a Record of Decision --50

final SEIS and a Record of Decision in August of 2023.
I haven't heard an updated timeline on that so that's still the goal at this time.

5 Something else I was going to just 6 address, I believe it was Councilman Frantz that 7 mentioned it during your report out about the lack of shorebirds present this summer, at least what you 8 recognized during your time out in the field. And our 9 10 field crew, we have a field crew that goes out to the 11 Canning River delta focused on bird species, but other 12 -- there's other research that occurs out there this 13 year. And highlighted -- I just want to highlight in 14 our summary that there was a note that said overall it 15 was a late spring at the Canning River delta, they got out there June 6th and there was still plenty of snow 16 17 cover and quite cold temperatures. And preliminary 18 data suggests that tundra nesting bird abundance was 19 lower this year than on average. So what you observed 20 over here was something similar observed by our Staff 21 east over in the Canning River delta part of the world. 22 So and early speculation is that perhaps that late 23 spring maybe caused them to go somewhere else, but that 24 is just speculation. 25

26 So something I want to note from what 27 you said earlier. A lot of the, you know, reports are about some of the bird work that's being done out on 28 29 the Canning River delta and across the Coastal Plain. 30 A lot of it -- and there's some small mammal work to be 31 done too. And a lot of it is set up to kind of 32 understand the system a little bit more and maybe help 33 mitigate or try to minimize some of the potential 34 impacts of any possible oil and gas activities that may 35 occur out there. 36

37 Something that gets a lot of our 38 attention working collaboratively with Alaska 39 Department of Fish and Game as well as the Yukon government colleagues and the USGS colleagues is 40 41 monitoring the Porcupine Caribou Herd. There's some --42 currently a five year study going on to understand how 43 climate mediated changes in some of the forage conditions and some of the insect abatement areas 44 affect distribution and behavior of the Porcupine 45 46 So during a specific time of the year, Caribou Herd. 47 you know, just seeing, you know, how they -- how they 48 use some of the landscape and what potential changes 49 might be predicted, you know, it's climate mediated 50

0243

2 3 There's also a research publication 4 that comes out that kind of models that in a sense and 5 kind of shows where a predicted distribution might change into the future. Again this is a model, it's 6 7 not a 100 percent accurate predictor, but it's just -it is the best available information that's out there 8 9 that can predict where those -- where the caribou might 10 end up in a way a Manager like me can understand it, 11 it's basically they kind of shift their distribution 12 west into the Arctic Refuge a little more frequently 13 into the future for calving and then also post calving 14 as well. So that's on page -- oh, we don't have page 15 numbers here. It's figure 21 and 22 in your handout 16 there, kind of shows some of that modeling trends using 17 some of the best available information. 18

19 Touch on it briefly, there's a moose 20 research project that our Refuge Biologist is working 21 on again in cooperation with the National Park Service 22 and the BLM as well as the University of Alaska. This 23 is figures 24 and 25 and then kind of the synopsis is 24 on the previous page under moose research project. 25 Again it's part of a larger effort to understand some 26 of the moose population dynamics, movement, habitat 27 selection, all that kind of stuff, kind of the eastern boundary of the State up against Canada. 28 You'll see 29 figure 25 shows where on some of the Park Service and 30 BLM lands previous captures and collaring efforts have 31 gone on and most recently you'll see up on the North 32 Slope of the Arctic National Wildlife Refuge where 12 33 cow moose were collared in the Kongakut River draining 34 and 12 in the Canning River -- upper Canning River 35 drainage. And that was this past spring and, you know, 36 this is just a snapshot in time, but those -- that map 37 kind of shows where some of those moose, those cow 38 moose are distributing across the area.

40 And, you know, it's still very 41 preliminary so I don't want to make -- you know, it's 42 tough to infer exactly what goes on with this limited 43 data set, but, you know, one of the assumptions was 44 that some of those moose winter in the Kongakut, then they go back to the Old Crow Flats in Canada for the 45 46 summer season. And that certainly is -- it's shown 47 there pretty -- for several of them that have made that 48 movement to the south and east in the Old Crow Flats. 49 But again I wouldn't look too much into this at this 50

0244 1

39

impacts.

0245 1 time. This is the, you know, short term data set right here and I'm certainly -- our Biologist will be 2 3 tracking this -- these moose for more time, more seasons and see how -- what we can learn from that 4 5 effort. 6 7 So as you said earlier, Councilman 8 Brower -- Chairman Brower, that, you know, that there's 9 a lot that -- it's a pretty dynamic system out there 10 with the moose on the North Slope. Sometimes they're 11 there, sometimes they're not and they're in differing 12 abundances over several years. So hopefully the 13 current system of permits for subsistence works for the 14 community. 15 16 A couple final management kind of 17 issues I'll touch on real quick. Some have direct 18 subsistence impact, others less so. But one is a 19 process the Refuge is going through to evaluate and 20 permit -- allow or restrict or some form of managed ORB 21 access for subsistence purposes. This is a use allowed 22 for under ANILCA section 811(b). And I won't go into 23 it much more than that because it gets pretty complex 24 and my simple mind can't really speak to the legal 25 nature of it, but, you know, we contracted with a third 26 party last year to do a historical access study with 27 the six communities around Arctic Refuge and we've 28 since produced a report or they produced a report and 29 we've shared that with the communities and we're taking 30 our next step to produce a determination based on that 31 and other information. And it's -- that's all I have 32 to report on right now, that's still a work in 33 progress, but soon we'll be engaging again with all the 34 communities affected by that. And I'd like to, you 35 know, hope that by the time we have the winter meeting with this Council we'll have more to report out on and 36 37 hopefully be able to share that draft determination. 38 So that's certainly something that will affect both --39 potentially affect this Council at least in terms of 40 informing this group about that. 41 42 And then it's something that we do 43 every 10 years, it takes considerable effort is guide 44 use selections so -- quide use area selections. So the Arctic Refuge is divided up into 16 different quide use 45 46 areas and this last year eight of those areas were open 47 for competitive application. And it's a pretty lengthy process, but it really does help us select the best 48 49 available, you know, sport hunting guides for each of 50

0246 1 those areas. And we're about ready to wrap that up, we've made our -- we're getting ready to send out our 2 notification of selections on those eight areas. 3 You 4 know, some of them are on the north side, the Kongakut 5 River drainage, the upper Hulu Hulu, the Echooka, 6 Ribdon and Ivishak were open this go round. 7 8 So yeah, I think that's it, that's all 9 I have to report on. Certainly happy to answer any 10 questions that the Council might have. 11 12 CHAIRMAN BROWER: Thank you. Nathan, 13 right? 14 15 MR. HAWKALUK: Yes, sir. 16 17 CHAIRMAN BROWER: And what was your 18 last name again? 19 20 MR. HAWKALUK: Hawkaluk. 21 22 CHAIRMAN BROWER: Hawkaluk. Yeah. And 23 very good, it was good to hear about the permits. I'm particularly interested to learn about the concession 24 25 areas that you're talking about. And it's important to 26 make sure these outfits also seek local authorizations 27 as well from the North Slope Borough. And all the 28 guides are required to do that and we've had incidences 29 where guides are reported to us and they don't have 30 North Slope Borough permits. They're issued violation 31 notices, those notices also go to the Big Game Services 32 Board, to the State and they don't like that because it 33 affects their licensing. And it's important to remind 34 your concession goers hey, don't forget to seek all the 35 regulatory compliance matters around your activities on 36 the Slope whether it's on Refuge lands or not. And 37 those are important details because they can -- they 38 can lose their licenses by not following local laws and 39 ordinances too. And.... 40 41 MR. HAWKALUK: Thank you for the 42 comment, Chairman Brower. You did raise that during 43 our -- the previous meeting in the winter with the air 44 taxi operators and I -- it caused me to go back into 45 our permit process to see how we did inform our 46 commercial service providers on the North Slope that 47 information. At the time I stated I believed it was a 48 condition of our permits, and I believe I followed up 49 with an email to you on this, but I might as well 50

0247 mention it to the entire Council. It's not a permit 1 condition, it's -- we add it into our cover letter to 2 3 all our commercial operators on the North Slope, air 4 taxi, guides, et cetera, that we flag it as something that they need to be aware of. So it is in the cover 5 letter to our commercial operators on the North Slope. 6 7 So.... 8 9 CHAIRMAN BROWER: Any questions to the 10 Acting Refuge Manager, Nathan Hawkaluk on his report 11 from the Council. 12 13 MR. REXFORD: Mr. Chairman, this is 14 Eddie. 15 16 CHAIRMAN BROWER: Go ahead, Kaktovik. 17 You have the floor, Eddie. 18 19 MR. REXFORD: Yes. Thank you. Thank 20 you for that report, Nathan. And is there any report 21 for dall sheep in 26C. I notice there's a closure in 22 24A and 26B and I'm assuming that those sport hunters 23 would come through our 26C hunting area and depleting 24 some of our sheep resources. I know it's hard to keep on track of all the air taxi services that provide air 25 26 service for the sport hunters and I believe some don't 27 even report to the Refuge of where they're going. Can 28 you provide an update on that? 29 30 MR. HAWKALUK: Councilman Rexford, 31 thank you for the question. Yeah, we -- I hate to 32 admit, but we have not been able to do a dall sheep 33 survey on Arctic Refuge for a couple years now for a 34 multitude of reasons. We did help the Park Service 35 with some of their surveys on the western side of the Refuge or -- well, on Park Service land. But our --36 37 mostly due to a lack of aircraft and pilots at the time we weren't able to get that done. But in general I 38 think, you know, there's some -- there's -- lacking 39 40 of that specific information, population some 41 information, I think there is an acknowledgement that 42 sheep populations range wide are down in places 43 including, you know, the area you're talking about, 44 26C. 45 46 To answer a part of your question, you 47 know, the closure of 24A I believe it was and 26 -- a 48 part of 26B if that displaced hunters. That was a 49 question -- a concern expressed with that closure. We 50

1 haven't detected that necessarily, we're still getting client use reports from the air taxi operators that do 2 3 operate on the Refuge and again we haven't detected 4 that specifically, but it's something we are paying attention to because again it was brought up, you know, 5 during the closure proceedings that that might be in 6 7 fact what happened, you know. Just speaking from my knowledge of the situation, you know, the area that was 8 9 closed, 24A and 26B is primarily accessed from the road 10 system or oftentimes -- most of the time has been 11 accessed from the road system, the Dalton Highway Road 12 And it really is an affordable option for system. 13 those that choose the sheep hunt. And of course it 14 could have displaced people to other parts, but -- of 15 the range, but there's a substantial cost difference between, you know, hunting from the Dalton Highway and 16 17 chartering in with a aircraft which is certainly more 18 expensive and quite limited these days too just because 19 those commercial services book up pretty fast. 20

21 But again I'm getting ahead of myself a 22 little bit, we still are waiting to get the rest of the 23 client use reports in from those operators that do 24 report. And of course those are the commercially permitted operators on Arctic Refuge. 25 Of course 26 there's the private pilot that can fly-in at anytime 27 that they choose and we have no way of really tracking 28 that.

30 MR. REXFORD: Yeah. Thanks for that. 31 I know that's kind of a hard job to monitor all the air 32 taxi services that provide services for the sport Just thought I'd bring that out. 33 hunters. And when 34 the -- you guys do provide concession areas for sport 35 quides, what's the season dates, is it for a whole year 36 or is it conditioned for certain months? 37

38 MR. HAWKALUK: Yeah, it is specific to 39 certain times of the year. And there's going to be minor differences, you know, based on every guide's 40 41 operation's plan, but in general it's going to be start 42 of sheep season, you know, August 10th. They usually 43 get in the field a little before that and get a run 44 through. You know, some areas they'll be done by the early September time frame. Others on the Refuge that 45 46 operate on the south side where there's more of the 47 moose hunting, caribou hunting clients. That goes 48 through probably the end of September. A few of the 49 quides do hunt spring bear which would be in May, you 50

## 0248

1 know, for the most part, but again that's pretty limited, it -- not only in the time frame that they use 2 3 it, but just the amount of clients that they take out, it's not a great deal of use that time of year. It is 4 5 not year long, it is pretty limited just by the nature 6 of hunting seasons for the sport hunting community. 7 8 MR. REXFORD: And one other concern I have is when sheep hunters harvest their sheep and they 9 10 don't take all the meat that's edible, I know in other 11 places they come to the community and donate that meat 12 for elders and stuff. Is that something that could be 13 done in the Refuge for our community or just a thought. 14 15 MR. HAWKALUK: Yeah, Councilman 16 Rexford. I'm not aware of any developed meat donation 17 You know, most of the meat -- our sheep program. 18 hunting traffic basically bypasses the communities, you 19 know, in my experience. I don't know of any air 20 charters that operate out of the community of Kaktovik 21 and Arctic Village. On the south side usually gets --22 they bypass with the, you know, the bush planes going 23 in there. So I -- I'm not aware of that opportunity. It might be more so with maybe moose or caribou, but 24 it's certainly something that we can keep track of and 25 26 I can call upon my experience from a previous position 27 with Yukon Flats where we kind of tried to develop a 28 program to address that at Yukon Flat communities where 29 it was -- it was a cooperatively hired position that 30 would greet and, you know, kind of have conversations 31 inbound hunters and with incoming, solicit meat 32 donations. Ultimately nothing I don't think ever came 33 of it in terms of meat donation. You know, with -- if 34 we're talking about guides I think there's a way to 35 work with them directly, but I think there might be an 36 opportunity to work with community members as well. 37 That -- and that might be a conversation for another 38 time that we might be able to work with the communities 39 and the Refuge together on that. 40 41 MR. REXFORD: Thank you for that 42 information, Nathan. 43 44 CHAIRMAN BROWER: All right. Any other 45 questions or comments to the report from Nathan on 46 National Wildlife Refuge. 47 48 (No comments) 49 50

0250 1 CHAIRMAN BROWER: Very important and 2 very thoughtful. 3 4 MR. HAWKALUK: Thank you, Mr. Chair, 5 members of the Council, appreciate it. 6 7 CHAIRMAN BROWER: All right. So we're 8 down to National Park Service and the first one is dall 9 sheep surveys, William Deacy. 10 11 MS. OKADA: Good afternoon.... 12 13 MR. DOWDLE: Good afternoon, Mr..... 14 15 MS. OKADA: .... Mr. Chair and Council members. Our dall sheep survey update is going to be 16 17 given underneath our Gates of the Arctic National Park 18 and Preserve update. My name is Marcy Okada, I'm the 19 Subsistence Coordinator for Gates of the Arctic 20 National Park and Preserve and I'd like to refer you to 21 your supplemental packet, tab two, for a written 22 update. We have a new superintendent for Gates of the 23 Arctic. His name is Mark Dowdle and Mark is online for 24 this meeting. We'll have Mark go ahead and introduce 25 himself. 26 27 MR. DOWDLE: Thank you, Marcy, Mr. 28 Chair and members of the Council. My name is Mark 29 Dowdle, I'm the superintendent of Gates of the Arctic 30 National Park and Preserve. And I'm fairly new to this 31 position, I started back in April of this year so this 32 is my first meeting with you all and it's an honor to 33 be with you this afternoon. We do have several updates 34 for you including the dall sheep survey and we're happy 35 to answer any questions you have for us. 36 37 I'm going to go ahead and turn it over 38 to William Deacy, our Biologist. 39 40 Thank you. 41 42 MS. OKADA: Oh, this is Marcy Okada 43 again. I'll just give a quick subsistence update and then I'll hand it over to Kyle Jolly for the Western 44 Arctic Caribou Herd and moose survey update and then 45 46 we'll move on to dall sheep. 47 48 The Gates of the Arctic National Park 49 Subsistence Resource Commission had a meeting last 50

1 April via teleconference and the SRC received an update on the Ambler access road project and we had much 2 3 discussion on the Western Arctic Caribou Herd and moose 4 survey preliminary results. We talked about dall 5 sheep surveys and we also talked about law enforcement along the eastern boundary of the park. 6 Our next 7 meeting is scheduled for November 9th to 10th in Fairbanks and there'll be continued discussion on the 8 9 Western Arctic Caribou Herd, the 2022 dall sheep survey 10 results and we're also going to talk a little bit more 11 about law enforcement and climate change and human 12 impacts on low wildlife populations. 13 14 So now I'm going to pass it on to Kyle 15 Jolly for the Western Arctic Caribou Herd and moose 16 survey update. 17 18 MR. JOLLY: Hello, Mr. Chairman. My 19 name is Kyle Jolly, I'm a Wildlife Biologist for Gates 20 of the Arctic National Park and Preserve. I'm also the 21 lead Caribou Biologist and I mostly work with the Western Arctic Herd. I work a lot with Alex Hanson who 22 23 you heard from yesterday so I won't go over what he talked about, but we were helping him put out those GPS 24 25 collars. We put out 36 GPS collars out of the Dahl 26 Creek area, we were mostly south and west of Ambler 27 when we did that this spring in April. We've got about 28 85 active collars. Like Alex said most of the collars 29 are out on the North Slope. We did have a push go 30 through Onion Portage across the Kobuk River just a 31 couple days ago, but it does look like a lot of the 32 animals will stay up on the North Slope this winter. 33 34 Touching on a couple points that were 35 made yesterday, I heard people talking about herd interchange and migration and the impacts of sport 36 37 hunting on migration. I just want to let the Council 38 know that the Park Service in conjunction with Fish and 39 Game and other collaborators, we've published a number 40 of studies on all those topics and we're happy to pass 41 those along and answer any questions about those once 42 you've received them and have any questions. But we do 43 have quite a bit of information on all those topics. We've also put together little short movies on the 44 distribution patterns of the Western Arctic Herd so 45 46 just watching the GPS movements flow across the maps so 47 you get a feeling of where they're migrating and when 48 they're migrating. 49 50

1 And the last point on Western Arctic Caribou that I'd like to make is also echoing Alex. 2 3 And I think the key thing that we need to be considering right now is cow survival, 4 adult cow 5 The herd's been going down for about 18 survival. years now, it's under 200,000. And so I think this 6 7 Council and other Regional Advisory Councils need to start thinking about how to make -- how to protect the 8 9 cows more and that might be talking about proposals to 10 limit cow harvest in the future. So I just want to 11 kind of plant that seed for you. 12 13 And that's all I had for caribou. I'll 14 be happy to take any questions before I move on to 15 moose. 16 17 CHAIRMAN BROWER: Thank you, Kyle. Any 18 questions for Kyle Jolly on his talk with caribou. 19 20 (No comments) 21 22 CHAIRMAN BROWER: In terms of the 23 publishings that you've created in terms of caribou 24 distribution, interference and other things like that, 25 I'd like to see a formal presentation in -- provided 26 including some of the animation that comes with caribou 27 tags and collaring them and maybe in our winter meeting 28 to talk, not just providing the publications, but to do 29 a presentation of those types of concerns that we've 30 harped upon for a long time, it's easy to write about 31 it and then put it on the shelf and let it collect 32 dust. And I'd like the dust to be removed from it and 33 do a formal presentation to the Council. 34 35 MR. JOLLY: Yes. Thank you, Mr. 36 Chairman. I totally agree, you know doing the research 37 is not enough, it needs to get out, it needs to be 38 talked about, it needs to be discussed, it needs to be 39 improved for the next time. And so, you know, if the 40 Council wants us to give a presentation we're more than 41 happy to do that and just let us know when, where and 42 what are the hottest topics you want us to report on. 43 We'd be more than happy to show up and give you that 44 kind of formal presentation. 45 46 CHAIRMAN BROWER: And I see Carmen's 47 raised her hand and so we'll give her the hot seat for 48 a minute. 49 50

0253 1 MS. DAGGETT: Thank you, Mr. Chair. I do have a couple animation things that I had prepared 2 before for the Planning Commission meeting. 3 And so I 4 do plan to show them as part of my report today. 5 They're not this year's data, but because we can't -it takes a while to process all this stuff. 6 But they 7 are from a couple of different years and we can share that information with the group. And even if we go 8 over on time today I think this room is still available 9 10 so I think I can utilize the room and show you a couple 11 of videos. So can give you that today. 12 13 CHAIRMAN BROWER: Thank you, Carmen, 14 very thoughtful. Yeah, in terms of, Kyle, you know, 15 the publications that you just mentioned to make available and yeah, I would just like to see a 16 presentation on those, you know, in terms of what they 17 18 represent, including the information around the caribou 19 movements and the 75 collars that you've mentioned. I 20 think it would be important maybe for our winter 21 meeting to work with OSM to get on the agenda to 22 provide that kind of presentation to the Council. 23 24 Go ahead and continue, Kyle. 25 26 MR. JOLLY: Thank you, Mr. Chairman. 27 Yeah, that sounds good. Generally my schedule is more open at this time of year so I don't know if you want 28 In the spring I'm often 29 to wait a full year for that. 30 out doing capture work and do often miss this meeting. 31 So it's up to you, I will try and make it work when 32 it's best for you, but I'm more than happy to give a 33 formal presentation. Again just let me know when and 34 where and how long you want me to blather on because I 35 can talk caribou all day with you guys. 36 37 So I'll move on to moose. So we did a 38 moose survey in the Gates of the Arctic National Park 39 It was on the southeast portion of the and Preserve. Park and so that's south of the Brooks Range, it's in 40 41 the Koyukuk, John, Alatna Wild River drainages. The 42 last time we did a survey out there was 2015, we found 43 This time around which was this about 880 moose. spring we found about 1,300 moose. 44 So there was a slight increase in population size, but again this is 45 46 kind of on the south side of the Brooks Range, it's not 47 up on the North Slope. 48 49 And that's all I had for moose. So 50

0254 1 I'll answer any questions that people have on that. 2 3 CHAIRMAN BROWER: Any further questions 4 for Kyle on moose. 5 6 (No comments) 7 8 CHAIRMAN BROWER: Thank you, Kyle 9 Jolly, and we'll look forward to hearing from you in 10 the near future on presentations and stuff. 11 12 With that we'll -- is it going back to 13 Marcy or.... 14 15 MS. OKADA: Thank you, Mr. Chair. 16 We'll have an update.... 17 18 Mr. Chair, this is Will MR. DEACY: 19 Deacy. 20 21 MS. OKADA: Oh, go ahead. 22 23 MR. DEACY: Sorry about that, Marcy. 24 Mr. Chair, this is Will Deacy with National Park 25 Service. I'll just give a quick update about dall 26 sheep. 27 28 CHAIRMAN BROWER: You have the floor. 29 30 MR. DEACY: Yeah, thank you. This will 31 be a quick update because we're still processing data 32 so I don't have any results for you. This past July my 33 crew surveyed dall sheep in Gates of the Arctic Park 34 and also we collaborated with the BLM to survey BLM 35 lands along the Dalton Highway. We were fortunate that 36 we had the help of three biologists with the Fish and 37 Wildlife Service which really helped our efforts. We 38 completed surveys in the Itkillik Preserve, the 39 southeast portion of the Gates of the Arctic and on the We only were able to complete about half 40 BLM lands. the transects, about half the area around the Anaktuvuk 41 42 Pass area because some of the (indiscernible 43 distortion) to the Pass will remember around survey time there was about six inches of snow and that cut 44 45 our survey short there. 46 47 As I mentioned we're still processing 48 the survey data and so we won't be able to present that 49 until your winter meeting. But we should have all the 50

0255 1 results ready by then. 2 3 Happy to answer any questions if 4 anybody has any questions. 5 6 CHAIRMAN BROWER: Thank you, Will. Any 7 questions for the sheep surveys, seems like it's 8 incomplete and we'll hear more on the winter meeting. 9 10 (No comments) 11 12 CHAIRMAN BROWER: Hearing none, let's 13 move on. Are we up to personnel update probably. 14 15 MS. OKADA: Thank you, Mr. Chair and 16 Council meetings. This is Marcy Okada. And the final 17 update for Gates of the Arctic National Park and 18 Preserve is we have a new joint project with the U.S. 19 Geological Survey, it aims to measure the effects of 20 iron mobilization on stream water quality and food web 21 which includes resident fish communities. Arctic soils 22 store large amounts of iron and mercury which can be 23 released at permafrost soils thaw. So this project --24 this project preliminary observations suggest that 25 orange stream reaches have higher iron concentrations, 26 less dissolved oxygen and more acidic water than normal 27 So further the conversion of streams from streams. clear to orange water appears to reflect a considerable 28 29 deterioration of habitat for insects and fish. They're 30 continuing to work on this project to better categorize 31 the effects of iron and to also map these occurrences 32 across the Brooks Range. 33 34 And so the point of contact for this 35 project is Jon Odonnell and his email address is 36 located in your update. 37 38 And that's the -- that's our update for 39 Gates of the Arctic if there's any questions. 40 41 CHAIRMAN BROWER: Any further questions 42 for Gates of the Arctic and sounds interesting that --43 with your collaboration there. 44 45 (No comments) 46 47 CHAIRMAN BROWER: Hearing none we'll 48 move on to the next. Are we going to talk about BLM at 49 this point or -- so BLM, you're on the hot seat. 50

1 MS. MIKOW: Good afternoon, Mr. Chair, members of the Council. For the record my name is Beth 2 Mikow, I'm the Anthropologist for the Arctic District 3 4 Office. And on the line we also have our Fish 5 Biologist, Katie Drew. So we have the full written 6 report, it's your supplemental tab three. It's a 7 little bit long to cover completely so I figured I'd 8 just point out a few things of interest. 9 10 wanted to give you a quick update on Ι 11 the Willow Supplemental EIS process and the next steps 12 going forward. The public comment period for the draft 13 Supplemental EIS ended on August 29th and we are in the 14 process of writing comment responses and updating the 15 final Supplemental EIS. We anticipate publishing that final EIS in the fourth quarter. And once the final 16 Supplemental EIS is published there'll be a minimum 30 17 18 day period between the publication of the EIS and the 19 issuing of the record of decision. 20 21 And those -- that information can be found on page 7 and 8 and there is contact information 22 23 for the project lead, Stephanie Rice. 24 25 I was going to talk a little bit about 26 the Coastal Plain, however Nathan pretty much covered 27 all the information that we have for that. So again 28 we're joint co-leads with U.S. Fish and Wildlife 29 Service for that. 30 31 On page 31 and 32 is an update on our 32 legacy well program. So for the 2022/2023 winter season we have a contract to complete plugging and 33 34 abandonment activities at the Iko Bay legacy well. The 35 contractor would mobilize to the well via winter snow 36 trail and complete those activities. Attempts to plug 37 and abandon the Iko Bay legacy well in 2016 an 2017 38 were unsuccessful due to downhole conditions. So we'll 39 be attempting to get that done this season. 40 41 The BLM contractor did complete 42 plugging and abandonment of the Omualik test well 1, 43 Omualik core 2, Omualik core 11, Omualik core 12 and the east Omualik legacy wells over this last season, 44 2021 and 2022. There was contaminated soil encountered 45 46 which remains onsite and additional work is needed to 47 remove it. So we're working on a removal action plan. 48 49 For fisheries research during the 50

0257 1 discussion yesterday one of the projects I was going to bring up, the contaminant study that 2 Katie Drew 3 discussed, she discussed in pretty good detail 4 yesterday, but if anybody has any questions she is on 5 the line for that. 6 7 I also wanted to point to some HAFN 8 document -- documentation of harvest of Arctic fishes 9 Nuiqsut. We're currently contracting with ADF&G to do 10 community harvest surveys to get annual estimates of 11 fish harvest. They're additional collecting 12 information about patterns of use, abundance, health of 13 fish stocks and social factors that have affected 14 fishing practices over time. Additionally they're 15 going to collect data to conduct a social network 16 analysis of sharing and distribution of fish resources 17 within Nuigsut and between Nuigsut households. 18 19 So they completed their first round of 20 field work this last winter and spring. I don't want to get too much into it though because I believe that 21 22 the principal investigator, Helen Cold, with ADF&G will 23 be presenting more on that during this her report. 24 25 And then the last thing I kind of 26 wanted to talk about, it's funny it's come up already 27 during the meeting. Carmen had mentioned that lake 28 near Nuiqsut. So the arctic -- so our Fish Biologist, Katie Drew, was working with UAF Hydrologist, Chris 29 30 Arp, and they have 32 river and stream gauging sites to 31 monitor water levels, discharge and temperature and 32 collect long-term data for that. And during those 33 routine visits they observed a large lake which has 34 been named Harry Potter or Lake M0007, that had been 35 monitored since 2018, was very close to draining into the nearby meandering stream within the proposed Willow 36 37 So surface water was noticeably development area. 38 flowing over a lakeshore stream divide in early June 39 with active headwater erosion of ice rich permafrost 40 soil apparent by late June. 41 42 Nearby communities, Permatise and 43 operators in the area were notified of the imminent 44 lake drainage even at this time and in July, 2022 this 45 point breached, draining almost the entire lake within 46 Water level and turbidity sensors and just 12 hours. 47 time-lapse cameras captured this rapid lake drainage 48

event at high resolution. So this fortunate and detailed observation of this event adds to a growing

49

0258 1 body of research on the impacts of lake drainage on Arctic hydrology and hazard forecasting in the region. 2 3 So there's good pictures of that lake draining on page 4 13 of our report. 5 6 So that's really all I have unless 7 anybody on the Council has any questions. 8 9 CHAIRMAN BROWER: All right. Questions 10 for Beth. 11 12 MR. FRANTZ: Mr. Chair. 13 14 CHAIRMAN BROWER: Brower. 15 16 MR. FRANTZ: Yeah. So I do see some 17 extensive plug and abandonment there, the Oumalik --18 all of the Oumalik wells. I see one way south, the 19 Tulageak, has that been completed and do you think any 20 other work will be going down that direction? 21 22 MS. MIKOW: So as far as I know that's 23 actually in our upcoming work and I don't know quite 24 off the top of my head the schedule for that to be completed. I know that that bullet point list is 25 26 basically what they have planned for the next 10 years 27 for plugging and abandonment. But if you have any other questions I can also get in touch with our legacy 28 29 well contact, her name is Melody Debenham and her 30 contact information's at the back of the report and I 31 also can get more information for the Council as well. 32 MR. FRANTZ: Okay. 33 And also the -- so 34 the Oumalik, it's -- looks like they've been done 35 already.... 36 37 MS. MIKOW: Uh-huh. 38 39 MR. FRANTZ: .....and, you know, that crosses some of our main traditional -- well, our 40 41 hunting routes. So you'll be -- when are they -- is 42 that this year that they're going to be trying to 43 extract the contaminated soil or is that somewhere 44 further down the line? 45 46 MS. MIKOW: Let me double check here. 47 We're working on a removal action plan. I don't have 48 the details on that yet, but that is something that I 49 can get for the Council. 50

0259 1 MR. FRANTZ: Okay. I'm really 2 interested in that because..... 3 4 MS. MIKOW: Yeah. Absolutely. 5 6 MR. FRANTZ: ....down next to 7 Tulageak, within a few miles of that, is where I catch all my moose and have for the last 15 years or so. 8 So 9 it's definitely in -- you know, in an area that I cross 10 paths with all the time. So, yeah. No, I would like 11 more information on this and I'm sure I can get more offline with you as well. 12 13 14 MS. MIKOW: For sure. I know -- I'll 15 actually see if that person is available after we're 16 done with the presentation and if I get that 17 information I'll get it to you today. 18 19 MR. FRANTZ: Thank you. 20 21 MS. MIKOW: Uh-huh. 22 23 CHAIRMAN BROWER: And on the Iko Bay 24 wells that were not successful, what's the timeline on 25 that, is that this coming winter season? 26 MS. MIKOW: Yes, there's a contract out 27 28 for this coming winter season to get those taken care 29 of. Yeah, they had problems in 2016 and 2017. 30 31 CHAIRMAN BROWER: And is that related 32 to the Whistling well issue? 33 34 MS. MIKOW: You know, I -- honestly I'm 35 that was a little before my time, but I not certain, 36 can find that out from the same person I'll be talking 37 to to get information for Mr. Frantz. 38 39 CHAIRMAN BROWER: Yeah, because a lot of people have known that well, that was seeping for 40 41 many years and it's always condensating. But I think 42 there was efforts to take care of that a couple years 43 ago and it sounds like they need to go back and take 44 care of that. 45 46 Any further questions on -- for BLM. 47 48 (No comments) 49 50

0260 1 CHAIRMAN BROWER: I know if Martha was here she would probably say a little bit more about 2 permitting and why permits are being issued and things 3 4 like that. And, you know, being that she's not here I just put in two cents worth of that, you know, the --5 Nuigsut being probably in the heart of many of the 6 7 developed areas there, has a lot of concerns related to displacement and continuing cultural and traditional 8 9 uses of the land surrounded by industrial development. 10 And that -- that's where it's at. 11 12 And thank you, Beth. 13 14 MS. MIKOW: Thank you. 15 16 Well, I'll go down CHAIRMAN BROWER: 17 the line. ADF&G. 18 19 MS. COLD: Hello there, Mr. Chair, 20 This is Helen Cold with the members of the Council. Division of Subsistence in Fairbanks. 21 22 23 CHAIRMAN BROWER: Go ahead. Go ahead, 24 Helen. 25 26 MS. COLD: Okay. Thank you. Well, 27 today I just wanted to provide you with some updates on some of the current and proposed research projects that 28 29 we have going on with North Slope communities. And I 30 have a series of slides, these materials begin on page 31 110 of the meeting book. 32 33 So the first project I wanted to touch 34 on is one that Beth just mentioned in her update, so 35 the Nuiqsut Subsistence Fishery Project. This is being 36 funded by BLM and the purpose of this project as Beth 37 mentioned is to document, describe and quantify the 38 Nuigsut subsistence fishery. So the way that we're 39 doing this is we're working with households in Nuiqsut 40 to do household harvest surveys and we're also doing a 41 series of ethnographic interviews and some mapping 42 associated with those fish harvest and use areas. And 43 also participant observations trips where we learn a 44 little bit more about specific fishing activities going 45 on at different times of year. 46 47 So this project started in 2020 and 48 it's slated to end in 2023. That's actually an error that I printed, in the materials you have it says 2024, 49 50

1 but that's wrapping up next year. And it involved two years of surveys so in spring of 2022 which we already 2 conducted and then 2023 so hopefully next January or 3 4 February. And these focus on nonsalmon subsistence 5 fish harvest, but we do also ask about salmon fish 6 harvest as well. 7 8 So as I mentioned these are household 9 surveys with the mapping component and these 10 ethnographic interviews as well as the surveys took place in April of 2022 and I was also able to go out in 11 12 July, 2022 for a participant observation trip with some 13 grayling fishing and also there were some folks setting 14 nets for whitefish. But I hope to in early November 15 head back out to Nuigsut to learn a little bit more about the cisco fishery happening. And then we'll be 16 17 doing year two surveys with the communities as well as 18 those interviews in early next year so January or 19 February. 20 21 And then we have another project going 22 on with Nuigsut that's being funded by Oil Search 23 So the purpose of that project is to try to Alaska. investigate the effects of oil development activities 24 25 and the associated labor structure on Nuiqsut 26 subsistence hunters. So this project does not involve 27 a survey component, it's strictly ethnographic and participant observation. And this project was designed 28 in coordination with the Nuiqsut Subsistence Fisheries 29 30 Project to try to reduce community research fatigue. 31 So we're trying to be as efficient as possible when 32 we're working with folks out there. 33 34 This project began a little bit later, 35 started in 2021 and it's slated to end in 2025. And we're doing between 15 and 20 semi-structured key 36 37 respondent interviews and this also has a mapping 38 And we were able when we were out in component. 39 Nuiqsut in April to conduct seven interviews and then I 40 talked to another individual when I was there in July. 41 And I hope to talk to more people when I visit in 42 November and then also next spring when we are out 43 there doing surveys for the fish project. 44

All right. The next project, the Wainwright Comprehensive Survey. So this project is actually -- it's a redesign of a project that was originally funded by UAF that began in 2021, but the community recommended that we work with them to 50

0262 1 reschedule the survey work for 2023 or later. So this is being funded by the Bureau of Land Management, but 2 augmented with some State of Alaska funds. And it's a 3 4 partnership between the community of Wainwright and 5 Fish and Game Subsistence, but we would also be in 6 communication and consult with the North Slope Borough 7 Wildlife Department. 8 9 So for this project we would be 10 conducting a subsistence harvest update for the major 11 resource categories to try to assess the changes that 12 have happened in the last 10 years or so. There was a 13 comprehensive survey that was conducted with this 14 community about a decade ago so the idea here is to try 15 and understand what has changed in the last 10 years. And methods for this would be conducting household 16 17 surveys, also doing ethnographic interviews with 18 mapping and participant observation. 19 20 And this project that (indiscernible -21 distortion) started in 2022 and (indiscernible 22 distortion) go through 2025, but that's to be 23 determined. And it will involve one year of surveys 24 focusing on the harvest of major resources, subsistence 25 resource for the community. And we're currently in 26 consultation with the community to try to restructure 27 and reschedule this survey effort and to interview and 28 participant observation. 29 30 And the last project I wanted to let 31 you all know about is a proposed project considering 32 Kaktovik Beluga Traditional and Ecological Knowledge. 33 So this is being funded by the Bureau of Ocean Energy 34 Management and the purpose here is to try to document 35 subsistence harvest practices for beluga and learn more 36 about the traditional ecological knowledge of the 37 Beaufort Sea beluga stock and the folks living in that 38 community, their knowledge on the stock. 39 40 So here there's no surveys involved, 41 this is ethnographic interviews we would be conducting 42 and we would be working with folks to map beluga 43 habitats, migration patterns and traditional hunting 44 And we would work both with individuals and areas. 45 within a focus group potentially to help gather some of there would be also 46 this information and be a 47 participant observation component. 48 49 So the project timeline here. We're 50

1 still in consultation with the community and if this project is approved by community partners the research 2 plan would then be developed in collaboration with 3 And then we 4 Kaktovik this fall or early next spring. 5 would actually begin field work in fall or winter of 6 2023 and fall of 2024. 7 8 So those -- that's all I have, but I'd 9 be welcome to take any questions or comments anyone had 10 at this point. 11 12 CHAIRMAN BROWER: Thank you, Helen. 13 Any questions for ADF&G. We have Hannah raising her 14 hand over there to -- we'll yield to Hannah. 15 16 MS. VOORHEES: Thank you, Mr. Chair and 17 you, Helen for your presentation. I was thank 18 wondering if you could for the Nuiqsut Subsistence 19 Fishery study, if you could speak to the way in which 20 methods might capture concerns and observations about 21 mold on broad whitefish? 22 23 MS. COLD: Yes. So yeah, as we've 24 heard many folks mention there's significant interest 25 in the mold issue and the health of fish. And so in --26 built in to the subsistence harvest survey we have, we 27 are asking folks if their -- how many fish of which species they're encountering when they're harvesting 28 29 for subsistence and how many their having to remove 30 from their catch based on them being sick or diseased. 31 So sometimes that's mold, sometimes that's other 32 issues, but we're asking both for numbers of that and 33 then also a little bit more information in the mapping 34 component of where folks are trying to -- where folks 35 are seeing sick fish, if there's any kind of spatial 36 information that would be helpful in trying to 37 understand that issue. And then again with the 38 ethnographic interviews there have been many different 39 people that have talked about that mold issue. 40 41 So we're trying to cover that issue in 42 a multitude of different ways with this project. And 43 hopefully compare that with information that might be 44 gathered through more biological studies of that. 45 CHAIRMAN BROWER: Thank you, Helen. 46 Ι 47 hope that was helpful for you there, Hannah. And 48 that's a very interesting -- you know, we talked about 49 our PINs and prioritizing our Fisheries Resource 50

Monitoring Program and for work that's underway like 1 yours, it's important to see that the -- that this 2 3 Monitoring Program that you're working with is very 4 much talked about through OSM and trying to make more funding available to look into those kind of things. 5 And it might be important to start to schedule and 6 7 think about village presentations. We study them and study them and study them, but we lack the physical 8 presence in the community when it's time for them to 9 10 learn a little bit more of our findings and to bring 11 that to our -- those communities so as not to continue 12 And information is power and it's -it to fester. 13 sometimes it -- well, it can calm the community. So I 14 encourage that. 15 16 All right. Thank you. Is that Helen? 17 18 MS. COLD: Yes, thank you, Mr. Chair. 19 20 CHAIRMAN BROWER: Carmen. 21 22 MS. DAGGETT: Good afternoon, Chairman 23 and Council. Carmen Daggett again for the record. The 24 information that I'm going to provide today is on tab 25 number 5 of your meeting packets if you wish to take a 26 moment to orient yourself to that reference. So just 27 to start out with, I'm going to start with the Teshekpuk Caribou Herd update information. 28 All this 29 information I'm presenting is made possible my multi 30 agency cooperation, including the North Slope Borough, 31 the State of Alaska and funding from BLM. The central 32 goal is to ensure caribou for future generations to 33 come and each of these surveys that we're utilizing are indicators of whether the population is growing or 34 35 declining or total population numbers. 36 37 So the first survey that I'm going to 38 talk about is the photocensus. This summer we were 39 able to photograph the Teshekpuk Caribou Herd, actually this week and last week we've been very diligently 40 41 counting all of those photos. We are very close to 42 being done with that count, there's just a few more 43 groups that need to be counted and I was sort of hoping 44 that we might be able to have those numbers for you at this meeting, but we didn't quite make it despite my 45 46 best efforts. So hopefully the winter meeting we will 47 have those numbers for you and I'll also make them 48 available through our Facebook -- Region 5 Facebook 49 page so that people can get those numbers sooner than 50

0265 1 later. I know how important that information is for the public to have so I'm happy to share that 2 3 information from 2022 as soon as I have it. 4 5 There's also a video that was created 6 by Fish and Game about the photocensus process, it's 7 about 11 minutes long, it's on YouTube. And I actually wanted to make it available today after this meeting if 8 9 people wanted to stay and watch a video on how we 10 actually do that process so that you can understand 11 where these numbers actually come from. It's a very 12 good video, they did a nice job on it and I think it's So I actually have it queued up for 13 worth sharing. 14 after this meeting. I know we're kind of time crunched 15 so I didn't want to play it now. 16 17 Last year's estimate was around 56,000 or not last year's, 2017 estimate was around 56,000 18 19 animals. So when you get the new number for 2022 20 you'll have something to compare it against for the 21 next most recent estimate. 22 23 Are there any questions on the 24 photocensus information besides how we do it because I 25 think if you really want to know the details you should 26 watch that video, it's way better than me trying to 27 explain it. 28 29 CHAIRMAN BROWER: Any questions for 30 Carmen on the photocensus. 31 32 (No comments) 33 34 CHAIRMAN BROWER: I'm just wondering, 35 you know, the timing of that. Was that during all of the peak migrations up to the Arctic with other herds 36 37 this during a stand-alone period for the or was 38 Teshekpuk Herd on the Slope? 39 40 MS. DAGGETT: Great question, Mr. 41 Chair. So July 10th was the day that we shot the 42 photocensus for both the Western Arctic Herd and the 43 And so the animals would have not Teshekpuk Herd. 44 necessarily been migrating that time period, they would be in their insect tight aggregation during that time 45 46 period, that's the time period that we aim to get those 47 photographs when it's basically the hottest and 48 buggiest time of the year here is when we really try to 49 target taking those photographs so that the caribou are 50

0266 1 in the tightest aggregations that we can get. 2 3 CHAIRMAN BROWER: So their distribution 4 was very noticeable at that point. Yeah. 5 6 MS. DAGGETT: It would have been 7 primarily coastal or in very windswept areas, but most of the animals were at the end of their extent, at 8 least for the Teshekpuk Herd they were at the edges of 9 10 Admiralty Bay and the edges of everywhere trying to --11 some of them probably standing in the ocean and in lakes trying to escape the insects this last summer. 12 13 You can see a lot of them are next to water, almost all 14 of the pictures are caribou next to water. So..... 15 16 CHAIRMAN BROWER: Yeah, I was just 17 alluding to they were very noticeable because their 18 distinct locations where they go..... 19 20 MS. DAGGETT: Uh-huh. 21 22 CHAIRMAN BROWER: ....like (in Native) 23 versus Admiralty Bay for the central -- either side of 24 the pipeline on the Sag area going that way. Seems 25 like they're very distinct at that period of time for 26 their insect relief. 27 28 MS. DAGGETT: That is true. They 29 definitely have areas that they target. Probably 30 slightly different each year, but -- and in different 31 intensities, but anyway. Okay. 32 33 So with no further questions about 34 photocensus stuff I'm going to move on to talk about 35 the spring short yearling surveys that we do in April. 36 Again this is an indicator survey, it allows us to take 37 a look at how many calves made it through the winter 38 and how they fared through our winters here. 39 40 So during the April, 2022 survey I 41 surveyed 2,633 caribou and about 5.8 percent of these 42 were yearlings which is actually quite low. I will say 43 this, it seemed like there was a pretty big difference 44 between the groups of caribou that were in the Brooks 45 Range versus the caribou that were up on the North 46 Slope. The caribou in the Brooks Range seemed to have a slightly higher percentage of yearlings with them 47 48 whereas the ones on the North Slope were a bit lower 49 despite the larger number of bulls that were in the 50

0267 1 Brooks Range this last winter. 2 3 So that being said we usually try to 4 count a higher number of caribou during this survey. Ι 5 was somewhat limited by weather and funds this spring and pilot availability honestly. So but I think that's 6 7 something we should definitely -- I'm going to keep a closer eye on or continue to keep a close eye on is 8 9 those short yearling numbers. 10 11 Are there any questions about how we do the short yearling surveys or any particulars about 12 13 that for the Teshekpuk Herd? 14 15 (No comments) 16 17 CHAIRMAN BROWER: Hearing none, I'd ask 18 you to go ahead and continue. 19 20 MS. DAGGETT: Roger that. So I'm going 21 to move on to the summer calving surveys. We do those 22 at the beginning of June. And this year there were 23 about 45 percent of the females were pregnant and we were looking at primarily females that were over the age of three. There -- we did look at a few that were 24 25 26 in the two year range and there were a couple that were 27 actually showing some signs of being pregnant, but most 28 of the time females over the -- three years and older 29 are the females that are going to be pregnant as I'm 30 sure you are all aware. The long term average for 31 pregnancy rates for the Teshekpuk Herd is about 68 32 percent so obviously that's pretty low. And we're going to continue to keep our eyes on that, but kind of 33 34 a bit of a rough year for pregnancy. The winter before 35 and the summer before being major drivers into those 36 pregnancy rates. 37 38 Is there any questions about that 39 survey or the results of that? 40 41 CHAIRMAN BROWER: any additional 42 questions for the -- for Carmen. 43 44 (No comments) 45 46 CHAIRMAN BROWER: Hearing none, 47 continue. 48 49 MS. DAGGETT: Okay. Thank you, Mr. 50

1 Chairman. So in addition to the information that we collected during these surveys we also keep track of 2 3 adult female mortality. As Alex Hanson mentioned for 4 the Western Arctic Herd, we do the same thing for the 5 Teshekpuk Herd. We keep track of the collar data and how many animals die throughout the year and we also 6 7 keep track of that information when we find mortalities during our survey work. So this last year the adult 8 female mortality was 5.6 percent which is largely 9 10 average for the Teshekpuk Herd. So not anything too 11 alarming there as far as adult female mortality which 12 is a good sign. 13 14 Okay. Any questions about adult female 15 mortality before I move on? 16 17 (No comments) 18 19 CHAIRMAN BROWER: Hearing none, qo 20 ahead and continue. 21 22 MS. DAGGETT: Okay. Alex talked some 23 about the Western Arctic Caribou Herd harvest. It's --24 we use the same reporting tools, the RC907 caribou 25 registration permits and the RC or DC general season 26 harvest tickets for caribou harvest. So the 27 information that I compiled on here is a combination for both Western Arctic and Teshekpuk. 28 And I would 29 more than anything like to encourage people to utilize 30 these permit systems and similarly really encourage 31 people to utilize the permits for moose and muskox as 32 There's a continual education component to well. 33 trying to get the public to utilize those and the fact 34 that we had 688 reports through the RC907 compared to 35 how much we really know caribou get utilized on the 36 North Slope is an indication to us that a lot more work 37 needs to be done there. So we're going to try to 38 continue to get that information out to the public 39 about utilizing those permits, the harvest tickets and then also the RC907 permits which are the permits that 40 41 North Slope residents should be utilizing if they're 42 planning on going hunting caribou. 43 44 Are there any questions about the 45 harvest reporting information? 46 47 CHAIRMAN BROWER: Any questions 48 regarding that? 49 50

0269 1 (No comments) 2 3 CHAIRMAN BROWER: Is there a fee 4 associated with any of that harvest reporting mechanism 5 for the general public on the Slope? 6 7 MS. DAGGETT: The only fee that hunters 8 may have to contend with is getting a hunting license, 9 all the permits are free. You do not have to pay for 10 any of the moose tags or the caribou registration 11 permits, those are all free to hunters and are either available online or you can get them from the office 12 13 here in Barrow or any other Fish and Game office. 14 15 CHAIRMAN BROWER: Yeah, seems to me 16 there should probably be a set incentive program 17 somehow or more outreach related to this area so you 18 can start to draw in those better harvest reporting and 19 things like that. Just my own observation. 20 21 MS. DAGGETT: What would you recommend? 22 23 CHAIRMAN BROWER: Well, there's a fee 24 associated with licensing..... 25 26 MS. DAGGETT: Uh-huh. 27 28 CHAIRMAN BROWER: ....and it's 29 probably 25 buck, who knows. 30 31 MS. DAGGETT: Forty-five. 32 33 CHAIRMAN BROWER: Okay. And sometimes 34 it's hard to come by for young people. And versus 35 getting some shells, you know, a box of shells would be 36 70 bucks nowadays and to do some of this stuff and, you 37 know, getting gasoline and making sure your equipment's 38 running good. More focus on readiness and so I'm just 39 -- I'm just trying to think how we could encourage that aspect of it. I mean, I think people really don't like 40 41 to be regulated, you know, that might be one of the 42 aspects about it, but when you have good harvest data 43 it's very important for management and just -- I don't 44 It's just -- you know how to overcome that myself. know, just -- maybe there's an incentive way to do 45 46 those things, you know, like you might be entered into 47 a free drawing for a net or something, a fish net or --48 I don't know. 49 50

0270 1 MS. DAGGETT: Thank you for those 2 suggestions. So if you would turn that summary over, 3 I'm just going to continue on. Hopefully we can get 4 through this fairly quickly here. 5 6 We're -- I'm currently working with 7 Teshekpuk Researcher and others on a new study, a new caribou health study on the Teshekpuk Herd. We're 8 9 looking more closely at caribou health on the Teshekpuk 10 Herd, measurements of body condition, internal and 11 external parasites, trace minerals, stress related 12 hormones and a wide range of possible diseases. So we 13 began that study last summer and we'll continue to do 14 that for the next two years. 15 16 If there are any questions regarding 17 that particular studies I'm happy to entertain those. 18 We're kind of -- I haven't gotten the results -- all 19 the results back from the labs yet, so I can't really 20 elucidate or expand on any of the information I've got 21 from this last summer yet because I haven't gotten it 22 myself. Perhaps I can give you more information on 23 that at the winter meeting. 24 25 CHAIRMAN BROWER: Sounds like a good 26 plan. Any further questions to Carmen. 27 28 MS. HUGO: Mr. Chair. 29 30 CHAIRMAN BROWER: Yeah. Go ahead 31 there, Esther. 32 33 MS. HUGO: I just got a question on the 34 harvest or the permits. Do you do it individually for 35 villages because our numbers would be way low the past 36 so many years. And I guess I'm trying to mention this 37 because we tried to get a declaration of emergency 38 through our -- for food security, that also was denied. So your surveys or your harvest would tell us that AKP 39 40 didn't -- we can har -- we haven't had that -- the 41 migration. Numbers need to be shown for each 42 particular our -- our village and the numbers would 43 show the rest of the agencies what we're trying to say 44 or, you know. 45 46 Through the Chair to MS. DAGGETT: 47 member Hugo. So a few things. I hear what you're 48 saying that you would only see changes in harvest if 49 those animals are there and available or that's not 50

1 quite right. You wouldn't see a decline in harvest if or you would see a decline in harvest if the caribou 2 3 weren't there because there would be no harvest because 4 there aren't animals for you to catch. I understand And the tricky part is that I think the 5 that. distribution of a lot of these permits and registration 6 7 permits in particular on the North Slope are very dependent on whether someone actually goes out and 8 offers them to people. I know that pre-covid I spent a 9 10 fair amount of time in villages talking with people in 11 all of the villages on the North Slope about the RC907 12 permit and talking with individuals about it. During 13 covid times I'm sure all of you are well aware that 14 travel on the North Slope was very much discouraged. 15 So I didn't spend any time in any of the villages during covid to get these permits out because they --16 17 people were not welcome. And that's fair, I understand You've had a long history of disease transfer 18 that. 19 and bad things happen with that and I can appreciate 20 and understand that history and wanting to protect 21 yourselves. That makes perfect sense, however that's 22 going to impact how many of those permits went out too. 23 And without those permits in people's hands we're 24 really not going to see any harvest data because we 25 don't have any other way to get it other than household 26 survey information that perhaps the Borough is collecting, but we don't necessarily always get that 27 28 information. So some of the information that's in here 29 for this harvest data has to be taken with a huge grain 30 of salt because no one was out doing outreach during 31 covid, the height of covid. And that just is what it 32 is. 33

34 MS. HUGO: Well, technology's here, we 35 could have done it through VIA Zoom or -- I mean, it's already done, I mean, it's the past. I mean, we got 36 37 technology nowadays, it's just -- it's not just the 38 phone, we do have that. I mean, we don't have to have 39 -- I know covid yes, very important to our health, so 40 is the migration which we've been saying for years. 41 And I see that in your permit that for the nonresidents 42 you reach 400 and -- or 500 of them and most of them 43 got what they wanted, but where's -- sometimes we don't 44 see the meat when thesport hunters are hauling their -all we see is the rack, the big horns wrapped in duct 45 46 Where's the meat, probably buried somewhere tape. 47 where they're hunting, where we won't even know. You 48 guys fail to do that, especially to that guide hunter 49 that ASC bought off just 35 miles down north of us. 50

0272 1 Where's the meat. I mean, where -- all they do is come 2 up with the racks, the horns. 3 4 MS. DAGGETT: Thank you for your 5 comments, member Hugo. If you see no meat and you see 6 racks that information needs to be immediately reported 7 to the.... 8 9 MS. HUGO: We have been doing that for 10 years, Carmen, years. Years. Forty plus years. I was 11 just maybe 21 and we've been hollering, we've been 12 doing this for SO long, sometimes it's SO 13 disappointing, it's no way, no sense of coming, but we 14 care for our home, our subsistence. And sometimes a 15 lot of us we said we weren't part of the Borough, but we're here. And those sport hunters are just stomping 16 17 all over us and we know it's them because they're the first people to catch what's coming, what we've been 18 19 waiting for. And we heard a lot of testimonies from 20 our neighbors, Nuiqsut. I think it's about time we get 21 to the Dalton Highway falltime and then instead of 22 hearing it we probably see it and it's all true for the 23 past 40 years. 24 25 Thank you. 26 27 CHAIRMAN BROWER: Thank you, Esther. 28 With that does that conclude your presentation there. 29 30 MR. WILLIAMS: Chair. 31 32 CHAIRMAN BROWER: Go ahead, Earl. 33 34 MR. WILLIAMS: I'd like to elaborate on 35 Esther's comment on caribou. I know I saw when I came back -- no, when I was going to Anchorage for a 36 37 meeting, I was going through Fairbanks right there and back of the building there was this pad of caribou 38 39 Three charters came in on that plane, that's horns. from 30 miles -- 35 miles from our area. Because you 40 41 see that Wright's airplane fly over, the Caravans, all 42 the time flying over. We don't let them on our airport 43 anymore, we brought that attention to them because we're having problems with hunters. 44 Anyway when we were in Fairbanks I was going through Wright's Air, I 45 46 seen a lot of hunters, just full of -- caribou hunters. 47 Anyway there were a lot of caribou antlers there. And 48 a little kid said, dad, I wonder where's the meat. 49 Even little kids know that. See that, they live on 50

0273 1 that, they survive on that and they know it. 2 3 You know, back in '89 when we fought 4 against Richard, he was a guide hunter out of 5 Anaktuvuk, he stopped in Anaktuvuk, he's bringing the meat, but, you know, he's getting the money, but he's 6 7 bringing the meat over for us because we complain to him about that. We told him, you know, what are you 8 9 landing here for if you're not bringing meat. He's 10 sending his guide hunters to -- on a plane to, you 11 know, transfer to town to -- from Wright's Air or 12 Frontier somedays. But that happened for a long time and we finally got -- got what we -- you know, the 13 14 Mount Air, it's about 40 miles from us that guide 15 hunters said that -- one of my friends there he said that, you know, I never see that moose -- I mean, 16 17 caribou meat or moose meat. I said how -- well how 18 come. He never -- they never said anything about it. 19 Even when you see it on the Outdoors channel, you just 20 see the horns, you don't see no meat. What do they do 21 with it, you know. I know they can't eat that fast 22 either because it lasts us over a month, you know, to 23 eat something like this. 24 25 So you know that concerns something 26 about looking into this more than just elaborating on, 27 you know, what's being killed or what's being shot 28 because we all know what's going on, you know. And I'd 29 like to address this on Esther's behalf and I'd like 30 this to be, you know, be recorded like because we don't 31 hear no information from the State, ever since they got 32 pulled out you don't hear nothing from BLM that -- what 33 goes on behind the curtain there. Because the way I 34 heard it's about \$5,000 per hunter so, you know, that's 35 multiply. 36 37 Thank you. 38 39 CHAIRMAN BROWER: Peter. Thank you, 40 Carmen, you going to continue. 41 42 MS. DAGGETT: Thank you for your 43 comments, Peter and Esther too. 44 45 So just to wrap up here a few more 46 things. Western 26A muskox. This last spring, late 47 winter, early spring there was a minimum count and a composition survey done. There were 421 muskox observed in western 26A and the bull/cow ratio was 70 48 There were 421 muskox 49 50

1 bulls per 100 cows which is a very good ratio and 61 yearlings per 100 cows. So we used a different 2 technique or new technique to use aerial photographs to 3 4 age and sex the different animals in this population as 5 a way to get more information for what we put into it. 6 7 8 So that being said as I mentioned before there's a tier two hunt that can be applied for 9 10 this fall and the hunt will begin in the fall of 2023. 11 So those hunters who are interested in applying for 12 that hunt can do so either online or in person at my 13 office or I'm going to make rounds out to the villages 14 to be available to help people fill out applications 15 too. So keep your eyes open for flyers if you would like to apply for that in person or you can give me a 16 17 phone call too and I'm happy to help you do that. 18 19 Last but not least, the Colville moose 20 population. We did a trend count survey this last area's pretty 21 spring and the trend count much 22 Anaktuvuk, the Chandler and a section of the Colville 23 River between Ocean Point and Itkillik. We do that 24 survey annually and then we do a full survey of the 25 river and a larger part of the tributaries once every 26 three years. So this last spring we counted 227 moose 27 in that trend count survey, 19 percent yearlings which 28 is a really high percentage of yearlings for the area 29 so a really good sign. We also saw seven sets of twins 30 which is really different than what I originally saw 31 when I first started surveying this population, when I 32 first started in this position which is really good to 33 The 2021 total population number was 427 moose see. 34 and 20 percent of those were yearlings and we had 18 35 sets of twins during that survey. So the Colville 36 moose population seems to be growing at a fairly steady 37 rate and hopefully that trend continues. 38 39 In the meantime again I would like to 40 really encourage people to get moose harvest tickets. 41 I did a quick search the other day and there was one 42 permit that had been issued for this last year and I 43 know of at least three moose that are dead. So please, 44 please use those permits. It's a way that you can show 45 that you need that resource, a physical representation 46 of that and those numbers matter. So if you could 47 really help spread the word about that, that would be

48 49 50 really helpful.

1 And that's all I have, Mr. Chair, other than that I wanted to also say that I've been working 2 3 with Ilisaqvik College to promote fire arm safety in 4 the region too and working on building those programs that are available for communities. 5 It has been indicated that the communities really want to see more 6 7 firearm safety education out there and availability and so I've been working with them to try to make that 8 9 service available to the communities if they want it. 10 11 And I don't know if you would like to 12 see the illustrations, the migration patterns now or if you want to wait until after we're done with the 13 14 meeting and see those at the same time as the 15 photocensus movie. It is your choice. 16 17 CHAIRMAN BROWER: What's the wish of 18 the Council, would you guys like to take a -- this 19 thing is -- you said it was 11 minutes? 20 21 MS. DAGGETT: The photocensus video is 11 minutes. I would wait to the end to watch that one. 22 23 However the migration videos are much shorter and I can 24 play those now or wait until those -- to the end too. 25 They're kind of different things. 26 27 CHAIRMAN BROWER: Okay. Yeah, Ι appreciate you offering those videos and, you know, 28 29 they're a source of -- to me they're good information 30 to learn about their movements and to be able to know 31 which herds you're hunting off of. I mean, they're 32 very -- to me they're pretty distinct, you know, you 33 can't mix the two up sometimes. 34 35 So what's the wish of the Council, 36 would you guys like to take a video break and watch one 37 of the videos. 38 39 So you don't miss your MR. WILLIAMS: 40 flight. 41 42 MS. DAGGETT: Yeah, that's why I'm 43 offering. 44 45 CHAIRMAN BROWER: Okay. They're 46 worried about catching flights and timing of those. 47 And it's very important to get our folks off and going 48 as well. So.... 49 50

0276 1 MR. WILLIAMS: Oh, sometimes we don't make it to village because of bad weather and..... 2 3 4 CHAIRMAN BROWER: All right. Thank 5 We will go down the line, I think we're you, Carmen. 6 up to Office of Subsistence Management on agency 7 report, OSM. 8 9 MS. HONIG: Mr. Chair, if I may. 10 11 CHAIRMAN BROWER: Go ahead, Leigh. 12 13 MS. HONIG: There was a unit 26B and C 14 update by Jason Caikoski, I don't know if he's on the 15 line. 16 17 CHAIRMAN BROWER: Jason, we're almost 18 missing you. Are you on. 19 20 (No comments) 21 22 MS. HONIG: So we also received word 23 that he may not be available. And I was requested to 24 pass along the information that his report and map for 25 the tier two muskox permit area and drawing hunt area 26 are available under supplemental materials packet under 27 tab six and seven if you guys are interested in reading 28 that report. 29 30 Thank you. 31 32 Thank you, Madame CHAIRMAN BROWER: 33 Coordinator. Hearing that, we do have that information 34 that Jason would have presented, it's it tab six and 35 seven. And so with that we'll move over to OSM. 36 37 MR. VICKERS: Thank you, Mr. Chair, 38 members of the Council. I'll give the OSM report 39 first. 40 41 Dr. Hannah Voorhees would like a quick 42 update on some designated hunter information that was 43 brought up earlier. 44 45 MS. VOORHEES: Thank you, Brent. So I 46 just wanted to get this on the record quickly to have a 47 correct response for you. As the regs are written 48 there is automatic option for a designated hunter 49 permit for moose, caribou and deer, but that does not 50

1 apply to muskox. This is a new Federal hunt for muskoxen in unit 26A and the Council may wish to submit 2 3 a proposal to create a designated hunter system for 4 muskoxen 26A. I was hoping the news would be simpler, 5 but that's the situation. As this is a drawing hunt there may be some issues with having a designated 6 7 hunter on those, but those would be discussed and worked out during the regulatory process and I plan to 8 remind you of this at the next meeting so that if you 9 10 wish to submit a proposal you can and that would be the 11 correct time. 12 13 Thanks. 14 15 CHAIRMAN BROWER: Thank you for the update on that. We'll go ahead and go to Brent, OSM. 16 17 18 MR. VICKERS: Thank you. And thank 19 you, Hannah, that's actually -- that's a great update 20 so I appreciate it. 21 On behalf of OSM I want to thank all 22 23 Council members for your exceptional work on behalf of 24 your communities, user groups, during these trying 25 times. We greatly value your expertise, the 26 contribution of your knowledge and experience in the 27 regulatoryprocess. I know Anthropology Division for --28 which I'm -- and Hannah are members of, we really just appreciate everything you all say because we rely 29 30 heavily on looking through the transcripts to help 31 shape our analyses and take directly from your quotes 32 to help with our analogy so thank you for all the 33 information you guys provide during these meetings. We 34 really appreciate it. 35 36 We're holding all 10 fall, 2022 37 Regional Advisory Council meetings in person. OSM 38 Staff are very happy that we can finally see you all 39 face to face. We thank you again for bearing with us over the past two and a half years during the pandemic 40 41 and teleconference meetings. The Federal Subsistence 42 Management Program recognizes that in person Council 43 meetings are preferable. Council meetings must follow 44 Federal government guidelines and will continue to do so with future meetings. We hope that covid-19 levels 45 46 are low enough in each of the communities where Council 47 meetings are planned at the time of the meetings so 48 that we will be able to meet Federal government 49 requirements. We will continue to work with each of 50

0278 1 the Councils on the specific requirements for their regions to conduct the in person meetings safely. 2 3 4 OSM is please to welcome two new hired 5 Subsistence Council Coordinators, Lisa Hutchinson-6 Scarbrough and Jessica Gill. Both have a wealth of 7 knowledge and experience in working with the rural users in the communities as well as Alaska subsistence 8 9 issues. 10 11 Eva Patton transferred to the NPS as 12 you know, we're very sad that she's not with us on our 13 behalf with this meeting, but it was great to hear her 14 on the phone and we look forward to seeing her again. 15 16 Carry Crow returned to OSM as Budget 17 Analyst. Bernard Shavings joined us as an 18 Administrative Support Assistant. Michelle Andrews 19 joined us as Executive Secretary. The OSM team 20 continues to work on rebuilding our capacity. 21 22 Over the past two and a half years we 23 have been reminding Council meetings about the changing 24 requirements for IDs at the airport. Beginning May 25 3rd, 2023, this coming spring, every air traveler will 26 need to present Real ID compliant driver's license or 27 other acceptable form of identification such as a 28 passport to fly within the United States. This is applicable even when you are on -- fly on small bush 29 30 carriers. Please note that all Council members will 31 need to make sure that they have the required Real ID 32 for travel to the fall, 2023 Council meetings. 33 34 I'll be happy to answer any questions. 35 Thank you, Mr. Chair, Council members and everyone 36 else. 37 38 CHAIRMAN BROWER: All right. Thanks, 39 And a Real ID, is that just like a regular Brent. driver's license or is Real ID -- a Real ID a new 40 41 trend? 42 43 MR. VICKERS: I can't speak officially, 44 but it is an updated form as far as I know of the ID. All IDs that have been issued in recent years are Real 45 46 ID compliant so you -- so you all should check, 47 particularly if you received your driver's license 48 years ago to make sure that they're Real ID or if you 49 have a passport that'll suffice. But the Real ID isn't 50

0279 just like a Real ID, it's an actual upgrade from years 1 past where they -- it's another level of security to 2 3 make sure that they -- you are who you are. 4 5 CHAIRMAN BROWER: Very good. I'm sure 6 it's important because it should be for elections too, 7 you know. So.... 8 9 MR. FRANTZ: Mr. Chair. 10 11 CHAIRMAN BROWER: Brower Frantz. 12 13 MR. FRANTZ: Yeah, it's a driver's 14 license too, you can -- that's an option for it, yeah. 15 16 CHAIRMAN BROWER: Very good. Any 17 further questions for Dr. Brent Vickers. 18 19 MR. WILLIAMS: Yeah, tribal ID would be 20 good too because a lot of us use that from the 21 villages. 22 23 MR. VICKERS: That sounds like a great 24 idea. I recommend you speaking with your tribes about 25 it. I don't -- I don't speak on behalf of the tribes. 26 I'm sorry, I wouldn't know. 27 28 MR. WILLIAMS: Yeah, we have our own 29 tribal ID that they gave us from our tribe, yeah. We 30 use it most places around the city, yeah. 31 32 Thank you. 33 34 Yeah, I'm going to CHAIRMAN BROWER: 35 draw a card and draw my picture on it and see if it 36 works. 37 38 (Laughter) 39 40 MR. VICKERS: Sounds fun, but I 41 wouldn't recommend only arriving at the airport with 42 that. 43 44 Thank you. 45 46 CHAIRMAN BROWER: Very good. Thanks 47 again. So with that said, thank you for your update, 48 Brent. 49 50

0280 1 We that we finished item 13 already. I'll move into closing comments and we'll start off 2 3 with Esther. 4 5 Thank you, Mr. Chair. MS. HUGO: I'm 6 just happy that I was able to make it regardless of 7 struggles at home and waiting for our caribou. But I'm glad I made it and it's always interesting and I learn 8 9 more every time I attend meetings. I'm just happy that 10 we're here, I finally got somebody from home to come 11 with me and that's good, Earl. (In Native). 12 13 CHAIRMAN BROWER: Very good. Thank 14 you. We'll move to Kaktovik. Eddie, closing comments. 15 16 MR. REXFORD: Yes. Thank you, Mr. 17 And it's been a very informative meeting Chairman. 18 today and I apologize for missing yesterday's meeting. 19 So thanks everybody for calling in and having a quorum 20 today. 21 22 Bye. 23 24 CHAIRMAN BROWER: Thank you, Kaktovik. 25 We will move over to Brower Frantz. 26 27 MR. FRANTZ: All right. Yeah, I want 28 to thank everybody for coming to my hometown for this 29 meeting. Born and raised, my name's Brower, I live in 30 Browerville. 31 32 (Laughter) 33 34 MR. FRANTZ: No, this is really good, 35 my first in person meeting, second total for the Regional Advisory Council here. 36 So it's very 37 informational, I love all the information that comes in 38 from multiple entities that are involved here. 39 Everything has something to do with what we eat so it's a very different world than the world of regulation 40 41 here. But I enjoy it, the discussions are good for our 42 communities and I'm glad we're discussing what we are 43 and, you know, with the people we are. 44 45 So thank you very much. I missed my 46 moose hunting season this year so that's something I 47 try to look forward to and work with Carmen on. I do 48 do that, at least I do do the tags for moose. So thank 49 you and I look forward to the next meeting and a lot of 50

0281 1 information that's available such as the GPS stuff, I'm definitely interested in to see trends. 2 3 4 Thank you. 5 6 CHAIRMAN BROWER: Thank you, Brower. 7 And we'll go to Earl/Peter. 8 9 MR. WILLIAMS: Thank you, Chair. Yes, 10 I want to say that we brought up a lot of tension here, 11 I know it's pretty hard to hide it, but sooner or later 12 it's going to pop up. And we're the people are 13 supposed to speak for it, that's why our people put us 14 up here to speak for them. It's not for ourselves, 15 it's for our people and our family to survive. And that's what it's all about. 16 17 18 (Teleconference interference 19 participants not muted). 20 21 MR. WILLIAMS: It said that in ANILCA 22 and ANCSA. It said that government, congress, supposed 23 to be our guardians. Any kind of help we need we need 24 to go to the -- our BIA Affairs, ask them for our needs 25 it saidon that paper, that book, Iread it, it stated --26 stated the case of that. So that's something we got 27 to understand that, you know, the congress made a deal 28 that they're going to guard our health to pay us back 29 for what they did to the lands. It's written right in 30 the book. So we've got to understand one another and 31 we got to work with one another, we just can't work 32 this way and that way because there's a lot of us that 33 want this and that, we can't get it, we've got to work 34 for it. If we're going to to survive this world we've 35 got to stand up together. 36 37 I know how it is, you know, I know how 38 it feels. I see my grandkids and then they said I love 39 Native food. They love that muktuk and stuff when it come in from the coast. And now we're down to -- now 40 41 we're fighting for fish. We were fighting for caribous 42 for years, I see it. But, you know, grandpa said, you 43 know, there's lines in every village that there's a boundary, you don't -- you just don't cross your 44 45 people's country, you know, there's like a no man's 46 land too around between Indian and Eskimo too so, you 47 know, that's old, but it's still there, you know, 48 people still use that tradition, they don't bother each 49 other, they don't go across each other's land. It's 50

1 like, you know, just so far they go, there's nowhere to go. And I heard an old background about the government 2 3 was trying to make reservations up here with Natives, 4 but the Interior Indians they said no. This land is 5 made for us, our people, to survive. And he said that they don't want no reservation, they don't want to be 6 7 tied down like down states people, they want to travel. A long time ago they said -- some of my people said 8 they would travel all the way to Point Hope, you know, 9 10 that's a long ways to go, you know, because they had 11 friends there. I know a couple people, people from 12 Point Hope, told me a story about there's about three 13 Indians buried up there in the mountains in TDF. And, 14 you know, these kind of stories you got to know about, 15 you know. That's our history.

16

17 So I just wanted to share that caribou is very important to us and one more thing I want to 18 19 address is that, man, I wish they could have a 20 conference up here just for our caribou to be heard, 21 Plus we're the only ones that fighting in you know. 22 Alaska for our caribou. A lot of other villages are 23 looking for fish. And our coastal is, you know, 24 mammals. But I just wanted to say that I sure wouldn't 25 mind having our -- all our people together for once 26 like AFN, but I used to see a lot of conference where 27 people gather together, you don't see that anymore, people just push each other out of the way, you know. 28 29 They want part -- they don't want part of the portion, 30 they want the whole portion. It don't work that way, 31 but we got to learn how to work together and sit here. 32 I'm glad we don't have no conflict with things that 33 goes on, really appreciate this and I'm really thankful 34 to be living with these people because they have a lot 35 of respect and I have respect for them. 36

Thank you very much.

39 CHAIRMAN BROWER: (In Native), Earl. I 40 know Martha would have some closing comments as well. 41 I'm not sure if she's on or if Wanda Kippi. And Wanda 42 serves her community very well and she's due for an 43 award, her five year service. We going to wish her the 44 best and hopefully maybe a little letter along with her 45 award would be good. And get it sent to her. And for 46 Steve, I know Steve would have good closing comments as 47 well, Oomittuk, and he always has good words to say. 48 49

50

37

38

With that, safe travels home and I

0283 1 really advocate for the Regional Advisory Council and bring the nomination papers home, try to get those that 2 would make the Council and strengthen it more. 3 It would be important to try to, you know, find more people that would take up these roles. I think it 4 5 6 happens to be very important. 7 8 With that, god bless everybody, have a 9 safe trip back to where you came from and thank you 10 very much. 11 With that I will entertain item 14. 12 13 14 MS. HUGO: I make a motion to adjourn. 15 16 CHAIRMAN BROWER: Oh, item 15. Item 17 15. We just did 14. 18 19 MS. HUGO: I make a motion to adjourn. 20 21 CHAIRMAN BROWER: Motion on the floor 22 for -- to adjourn. 23 24 MR. WILLIAMS: Second. 25 26 CHAIRMAN BROWER: It's been seconded. 27 Any discussion. 28 29 (No comments) 30 31 MR. FRANTZ: Question. 32 33 CHAIRMAN BROWER: The question's been 34 called for. All those in favor of adjourning signify 35 by saying aye. 36 37 IN UNISON: Aye. 38 39 CHAIRMAN BROWER: All those opposed say 40 nay. 41 42 (No opposing votes) 43 44 CHAIRMAN BROWER: Hearing none, the 45 ayes have it. We're formally adjourned. Thank you, 46 everybody. 47 48 (Off record) 49 50
