Hey Kirk,

Tell Doug to call me. He’s not making the connection to me at DOI, but I know Doug very well. He is a long time WRAC member. I can then put him directly in touch with Cindy’s team on the ground. All my contact info is below.

Kirk,

Here’s the link to the web-site which has links to various documents:

http://www.fws.gov/southeast/greatereverglades/

I think you should refer him to Shannon as our DOI lead in South Florida for Everglades issues generally.

For the FWS and specifics on this initiative he should contact Cindy Dohner or Mark Musaus who are the Regional Director and Deputy Regional Director, respectively, of the Southeast Region of the FWS. Cindy and Mark are often on the road but their phone number in the regional office is 404-679-4000.

Hope this helps.

Don
Do you have

Estenoz, Shannon A

Sent: Friday, January 14, 2011 7:55 AM

See the subject line. So we're hiring head waiters for the Everglades now I guess. :)

Do you want to be copied on notes like this or have USFWS add you???
Just let me know.
Also, left you a voice mail. You have an email from Ken with the synopsis. I land at 5 if you need anything.
Thanks

Hi Vivian!

Thanks for sending this to me. Can you also forward the list of Congressional folks who are attending?

Thanks so much,

Shannon

Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional staff handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations). Currently the federal government, working with the State of Florida, is undertaking the world's largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide key policymaking staff with an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve. Participants will focus on legislative proposals in 2011 that will address these issues.

Travel:
Participants fly to Miami International Airport the evening prior to the first day of briefings and site visits. Air & ground transport, overnight lodging (@ Key Largo Grande Hotel, Key Largo, FL) and meals provided by Everglades Foundation.

Wednesday, January 26, 2011:

3:10pm  Depart Washington, DC.
5:55pm  Arrive Miami International Airport, transportation will be provided
7:30pm  Dinner at Versailles Cuban Restaurant in Little Havana
9:00pm  Depart for Key Largo
10:30pm  Arrive at Key Largo Grande Hotel

Thursday, January 27, 2011:

8:15am  Breakfast Briefing, Ocean Reef Conference room
Welcome: Eric Buermann, Chairman, South Florida Water Management District
Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem
Sarah Barmeyer, National Parks Conservation Association
Dr. Steve Davis, Wetlands Ecologist, Everglades Foundation
Shannon Estenoz, Director of Everglades Restoration Initiatives, U.S. Department of Interior
Kirk Fordham, CEO, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Tom Van Lent, Senior Scientist, Everglades Foundation

Congressional staff will break up into two groups alternating between briefing and helicopter tours/project site visits

8:45am Board helicopter for Site Visits and aerial briefing:
Site visits led by:
Dr. Steve Davis, Wetlands Ecologist, Everglades Foundation
Kirk Fordham, CEO, Everglades Foundation
Dr. Tom Van Lent, Senior Scientist, Everglades Foundation
Garrett Wallace, Federal and Tribal Affairs Liaison, South Florida Water Management District

9:00am Flyover/Site Visits:
- Everglades National Park/Florida Bay
- C-111 Canal Project
- Tamiami Trail/Modified Waters Delivery Project
- Biscayne Bay Coastal Wetlands

12:00 noon Lunch Briefing: Modified Water Delivery Projects
Sarah Barmeyer, National Parks Conservation Association
Dr. Steve Davis, Wetlands Ecologist, Everglades Foundation
Dave Sikeema, Everglades National Park
Kirk Fordham, CEO, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Dawn Shirreffs, National Parks Conservation Association
Dr. Tom Van Lent, Senior Scientist, Everglades Foundation

1:30pm Depart Ocean Reef

2:00pm Arrive at Key Largo Ranger Station
Briefing and Site Visits: Critical Issues Affecting Florida Bay estuary, C-111 Canal Project, Water Resources Development Act

Site visits led by:
Sarah Barmeyer, National Parks Conservation Association
Dr. Steve Davis, Wetlands Ecologist, Everglades Foundation
Kirk Fordham, CEO, Everglades Foundation
Bonnie Foist, Everglades National Park
Dave Fowler, Everglades National Park
Julie Hill-Gabriel, Audubon of Florida
Alan Scott, Everglades National Park
Dawn Shirreffs, National Parks Conservation Association
Dr. Tom Van Lent, Senior Scientist, Everglades Foundation
Garrett Wallace, South Florida Water Management District

4:00pm Return to Key Largo Ranger Station
4:30pm Return to Hotel
6:15pm Depart Hotel for dinner briefing
6:30pm Dinner Briefing: Morada Bay, Islamorada

Ken Ammon, South Florida Water Management District
Sarah Barmeyer, National Parks Conservation Association
Christopher Buckley, Everglades Foundation Board Member
Julie Hill-Gabriel, Audubon of Florida
Dawn Shirreffs, National Parks Conservation Association

8:30pm Return to Hotel

Friday, January 28, 2011:

8:00am Depart from hotel in vans
9:00am Rest stop at Homestead Farmer’s Market
9:30am Depart for Tamiami Trail
10:30am Brief stop at construction site of Tamiami Trail Project:
Authorized by Modified Waters Delivery Act; Discussion of Tamiami Trail Next Steps 5.5 mile bridge
Dan Kimball, Superintendent, Everglades National Park
11:30am Vans arrive at Everglades Safari Park
Proceed to private picnic area

Lunch and Briefing: Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs
John Adornato, National Parks Conservation Association
Sarah Barmeyer, National Parks Conservation Association
Steve Davis, Wetlands Ecologist, Everglades Foundation
Kirk Fordham, CEO, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Dan Kimball, Superintendent, Everglades National Park
Dawn Shirreffs, National Parks Conservation Association
Dr. Tom Van Lent, Senior Scientist, Everglades Foundation

12:30pm Board airboats, depart for tour
- Briefing and site visits: Comprehensive Everglades Restoration Plan
- Travel through Shark River Slough. Science briefing on typical Everglades systems like ridge and slough, tree islands, wet prairies, etc.
• Discussion of Federal Water Quality Issues

1:30 pm  Depart for Shark Valley

2:00 pm  Arrive at Shark Valley, board NPS vehicles
         Tour of Shark Valley Slough
         Linda Friar, Everglades National Park
         Maria Thompson, Everglades National Park

3:30 pm  Depart for hotel

4:30 pm  Arrive at Biltmore hotel

8:00 pm  Dinner at Fontana Restaurant, Biltmore Hotel

Dinner Briefing: Building on 2010 Everglades Restoration Progress:
Water Resources Development Act Authorization and Future Goals
John Adornato, National Parks Conservation Association
Sarah Barmeyer, National Parks Conservation Association
Kirk Fordham, CEO, Everglades Foundation
Mr. and Mrs. Dan Kimball (Kit), Everglades National Park
David Lawrence, Everglades Foundation Board Member
Dawn Shirreffs, National Parks Conservation Association
Dr. Tom Van Lent, Everglades Foundation

Overnight at Biltmore Hotel

Saturday, January 29, 2011:

Breakfast in-room or in any of the hotel restaurants

Depart from Miami International Airport returning to Washington, DC.

Kirk Fordham: Preserving the Everglades as good for our economy as it is for our ecology

Preserving the Everglades as good for our economy as it is for our ecology
January 27, 2011|By Kirk Fordham

Having won a sweeping victory, Florida's incoming Republican leaders have the opportunity to remake our state into an economic powerhouse. For too long, our state has too often relied on an intoxicating combination of population growth and home construction to fuel its economic engine.

As a result, speculative overbuilding has left our cities and suburbs scarred with abandoned homes, unfinished developments and devalued properties. Decent jobs are scarce. Our water supply is stretched and our environment has been seriously harmed. Taxpayers are being forced to pay for the mistakes of policymakers who turned a blind eye while development built on a virtual house of cards collapsed, leaving our economy in a shambles.

This time around, we simply must rebuild our economy in a way that is both economically sustainable as well as protects the Everglades and the spectacular array of lakes, forests, wetlands, waterways, beaches and parks that make Florida a place worth living.

For too long, some lawmakers have argued that we must choose between economic growth and the conservation of natural resources. In fact, as Gov. Rick Scott surely knows, we can simultaneously create jobs while still preserving the environmental...
assets that enhance our quality of life and increase the value of our homes.

While new residents will continue to come to our low-tax, sun-drenched communities, our prosperity depends on a number of critical factors if Florida is to build a sustainable and resilient future:

**Economic Restructuring:** Florida sorely needs to expand industry sectors to create the jobs of the future. In emerging growth centers around our state, biotech, clean energy, life sciences, financial services and health care companies are creating high-wage jobs and attracting better-educated workers.

Gov. Scott should make it a priority to focus his economic development efforts on incentivizing these industries.

**Protect our Water Supply:** Nearly 80 percent of Floridians support restoring the Everglades. Why? Aside from the fact that this spectacular natural wonder is home to a wide range of rare and endangered wildlife like the Florida panther and the Southern bald eagle, our citizens have an acute understanding of the economic importance of the Everglades to our state.

Smart business leaders know it is an economic imperative that we protect our most valuable natural resource: water. One in three Floridians depend directly on the Everglades for their daily supply of fresh water (including virtually everyone in Broward, Palm Beach and Miami-Dade counties).

We are already forced to institute tough restrictions on irrigation and other water uses. How will we ever meet future demands? If our state intends to attract new business and provide water to our growing population, our only real choice is to complete the bipartisan Everglades restoration plan.

Yet, state appropriations for Everglades restoration have taken one of the biggest hits during the recession —slash 75 percent from $200 million in 2007 to $50 million this year. House Speaker Dean Cannon and Senate President Mike Haridopolos quickly need to restore Florida's investment in Everglades projects if we are to meet our water needs and save this fragile ecosystem.

The good news: We need not create even a single new government job to build these Everglades projects. All around our state, private sector contractors are putting people back to work in construction, engineering and other good-paying jobs building Everglades restoration projects from the Kissimmee River basin to Collier County. Even better news: Since the beginning of the economic downturn, contracts for these Everglades construction projects are being awarded by as much as 50 percent below their projected budgets.

A recent economic study conducted by Mather Economics (sponsored by the Everglades Foundation) indicated that, even under the most conservative estimates, we generate $4 in economic activity for every $1 invested in Everglades restoration. In a significant boost to our employment picture, 22,000 short- to mid-term jobs and more than 442,000 jobs will be created over the next several decades in the tourism, real estate, commercial and recreational fishing industries.

**Reform our Growth Management Laws:** The governor's transition team drafted an ambitious set of regulatory reform recommendations designed to spur economic activity. Now it will be up to the Legislature to reform our growth management laws responsibly to help reduce costs to business while still protecting our water supply and environment.

Taxpayers have made it clear they are fiercely opposed to footing the bill for "bad" development in places it doesn't belong. Simply rubber-stamping building permits in a more expedited fashion won't create a market for homes that currently doesn't exist.

Instead, developers should be incentivized to build affordable, walkable communities in urban and suburban infill areas and along existing road networks that tie into mass transportation systems that are better integrated to our population centers.

When new large-scale communities, or even more modest housing developments are proposed in far-flung areas disconnected from existing roads, schools and services, we should not be taxed to pay for this new infrastructure.

**Protect What's Left:** Florida enjoys world-renowned coral reefs, top-rated beaches and one-of-a-kind wildlife refuges. Everglades restoration will allow us to protect these environmental assets and the recreational opportunities they provide for the millions of Floridians (and visitors) who love to boat, fish, hunt, snorkel and hike their way through our parks and waterways.

But protecting the natural assets that make this a destination for both tourists and our next generation of residents means charting a new direction for our state.

Protecting our environment and making Florida more competitive economically do not have to be competing goals. Thoughtful leadership and modest investment can simultaneously accomplish both.

*Kirk Fordham*, formerly a chief of staff to three Republican Members of Congress, now serves as CEO of the Everglades Foundation. Learn more at [http://www.evergladesfoundation.org](http://www.evergladesfoundation.org).

Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional staff handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations). Currently the federal government, working with the State of Florida, is undertaking the world’s largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide key policymaking staff with an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve. Participants will focus on legislative proposals in 2011 that will address these issues.

Travel:
Participants fly to Miami International Airport the evening prior to the first day of briefings and site visits. Air & ground transport, overnight lodging (@ Key Largo Grande Hotel, Key Largo, FL) and meals provided by Everglades Foundation.

February 23, 2011:
Depart Washington, DC late afternoon/evening. Arrive Miami International Airport, transportation to hotel.

February 24, 2011:
7:45am Depart hotel, boxed breakfast on the way to briefing
8:15am Breakfast Briefing
Welcome: (TBC) Eric Buermann, Chairman, South Florida Water Management District
Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem
(TBC) Shannon Estenoz, Director of Everglades Restoration Initiatives, U.S. Department of Interior
Kirk Fordham, CEO, Everglades Foundation
Tom Van Lent, Senior Scientist, Everglades Foundation
(TBC) Conservation partners

Congressional staff will break up into two groups alternating between briefing and helicopter tours/project site visits

9:45am  Board helicopter for Site Visits and aerial briefing:
         Site visits led by:
         
         Dr. Tom Van Lent, Senior Scientist, Everglades Foundation
         Kirk Fordham, CEO, Everglades Foundation
         Garrett Wallace, Federal and Tribal Affairs Liaison, South Florida Water Management District

10:00am Flyover/Site Visits:
         Everglades National Park/Florida Bay
         C-111 Canal Project
         Tamiami Trail/Modified Waters Delivery Project
         Biscayne Bay Coastal Wetlands

12:00 noon Lunch Briefing on Modified Water Delivery Projects
         National Park Service, Department of Interior, Everglades Foundation

1:00pm Depart Ocean Reef for National Park Service Interagency Science Center

1:30pm Briefing and Site Visits: Critical Issues Affecting Florida Bay estuary,
      C-111 Canal Project, Water Resources Development Act

      Site visits led by:
      National Park Service Staff Scientists/Rangers
      Dr. Tom Van Lent, Senior Scientist, Everglades Foundation
      Dr. Steve Davis, Wetlands Ecologist, Everglades Foundation
      Kirk Fordham, CEO, Everglades Foundation
      Garrett Wallace, South Florida Water Management District

      (TBC) Conservation partners

4:00pm Return to National Park Service Interagency Science Center

4:15pm Depart for Hotel
4:30pm   Return to Hotel
6:30pm   Dinner Briefing: Dan Kimball, Superintendent, Everglades National Park
(TBC) Conservation partners

February 25, 2011:

8:00am   Depart hotel, boxed breakfast on the way to Shark Valley
9:00am   Rest stop at Homestead Farmer's Market Restaurant
9:45am   Stop at construction site of Tamiami Trail Project:
Authorised by Modified Waters Delivery Act; Discussion of authorization of
Tamiami Trail Next Steps 5.5 mile bridge
10:15am  Arrive at Everglades National Park, board Park Service vehicles
10:30am  Tour of Shark Valley Slough, Discussion of 2011 Everglades
Appropriations Requests
12:30pm  Depart for lunch
1:00pm   Big Cypress National Preserve Lunch Briefing:
Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land
and Water Conservation Programs
Steve Davis, Wetlands Ecologist, Everglades Foundation
Pedro Ramos, Superintendent, Big Cypress National Preserve
Garrett Wallace, South Florida Water Management District
(TBC) Conservation Group Representatives
2:00pm   Boats depart Frog City (or 40 Mile Bend) for briefing and site visits of
Comprehensive Everglades Restoration Plan
Travel through Shark River Slough. Science briefing on typical
Everglades systems like ridge and slough, tree islands, wet prairies, etc.
Discussion of Federal Water Quality Issues
Representatives from Everglades Foundation, Audubon, National Park
Service & Environmental Protection Agency
3:30pm   Return to Boat dock and depart for hotel
4:00 pm  Return to hotel

Overnight at Hotel

February 26, 2011:

Depart to Miami International Airport for AM flights

Shannon, we are preparing to host another round of congressional staffers in a couple weeks. The draft itinerary is attached, it is similar to what we planned for January.

Please let me know if you can join us on Thursday at Ocean Reef for the breakfast and lunch briefings.

Many thanks,

Vivian Miller

Kirk,

For convenience I am sharing my talking points with you. Please don’t circulate them, I’m just sharing them for your convenience. When you guys have put together your statement, have Richard send it to me along with that information we were talking about this morning.

By the way, just got off a press call with the Secretary on the budget and all anyone wanted to talk about was Ocean energy budget.

Everglades Restoration – FY 2012 President’s Budget

➢ The FY 2012 President’s Budget maintains the Obama Administration’s strong commitment to Everglades restoration.

➢ The FY 2012 President’s Budget funds continued work at key projects throughout South Florida, providing both environmental benefits for the Everglades and jobs for the South Florida economy.

➢ Overall, for Everglades restoration, the FY 2012 President’s Budget request for the Army Corps and Interior is $267 million, which is an increase of $15 million, or 6%, over last year.

➢ For Interior, the budget includes $8 million toward the completion of the one-mile bridge on the Tamiami Trail, which is a critical first step to restore more natural water flow to Everglades National Park and Florida Bay.

➢ The Interior budget also includes an increase of $30 million to complete land acquisition in the East Everglades Addition to Everglades National Park ($25 million) and to reimburse the State of Florida for the lands it has conveyed to the National Park Service within the Big Cypress Addition ($5.6 million) pursuant to current law. The Interior budget supports the continued work of the Fish and Wildlife Service in endangered species management with an increase of $1.8 million.

➢ The Army Corps’ budget includes $163 million for work under the Comprehensive Everglades Restoration Plan and for other key South Florida ecosystem restoration activities.

➢ Key construction elements of the Corps’ budget include:
  o $23 million for C-51 culvert repairs
  o $13.6 million for continuing construction at Picayune Strand
  o $21 million for continuing construction at IRL-South
  o $5 million for Site-1 construction oversight and design for Phase 2
  o $45.6 million for Kissimmee River spillway additional and Reach 3 Backfill
  o $13.3 million for C-111 continue design and construction
  o $1 million for Seminole Big Cypress basin 2 and 3
Hey there!

Can I show up at around 12:30 instead of 12? I have a conference call at 11. I need to do the first half of it in front of my computer.

March 10, 2011

The Honorable Lisa Jackson
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, DC 20460

Dear Administrator Jackson,

Thank you for meeting with me yesterday to discuss the Environmental Protection Agency’s (EPA) rule to establish limits on nitrogen and phosphorous for Florida lakes, flowing waters, and clear springs.

There are few people as adamant about protecting Florida’s environment as I am. Common sense tells us that a clean environment - in this instance, clean water - is good for our citizens and Florida’s tourism-driven economy.

Understandably, there are steep costs associated with algae blooms, fish kills and closed beaches. But there remains intense debate over the cost of complying with this the rule for cities, communities and businesses. EPA estimates range from $135 and $206 million. The Florida Department of Agriculture and Consumer Services found agriculture alone would face up to $1.6 billion annually.

Without more precise figures of the actual costs to Floridians, municipalities and the state’s economy, the EPA should not spend money to enforce the rule. In the meantime, I’m asking that you expeditiously commission an independent third-party review of the total costs of compliance, perhaps under the auspices of the National Academies of Science or the state university system.

Critics charge the EPA’s cost estimates are flawed. For example, they say, the EPA assumes most agricultural activities won’t be directly regulated and that utilities won’t need to invest in the most expensive types of new wastewater treatment. An independent review will shed light on whether these assumptions are correct.

Several cities and businesses have asked for EPA’s guidance regarding alternatives to meeting the rule’s standards. EPA must be responsive to these requests and continue to provide assistance. And I urge you to do so.

In a nutshell, I ask for the EPA to suspend application and enforcement of the rule, while providing for an independent analysis of the costs of compliance and continuing to help cities and counties prepare for its eventuality. I look forward to your response and thank you in advance for your efforts to ensure an accurate, unbiased assessment of the aforementioned costs.

Sincerely,

Bill Nelson
HB991

Gentlemen,

I just read Craig Pittman's piece last week about HB 991. Are any of you familiar enough with this bill to talk to me about its prospects for passage and any potential ramifications it might have in the areas north of Lake O. where Interior/USDA etc. are working to establish new conservation lands?

Hi Nancy. My schedule the next couple of weeks is a little uncertain because I may have to travel at the last minute. We could certainly schedule a call (the afternoon of the 5th works) and cancel if I have to. Having said that, I know for sure that I am not traveling on Monday the 4th. Are they by chance available late Monday afternoon? (i.e. 3 pm or later)

Palm Beach Post
John Kennedy

Lake Worth Drainage District representatives are trying to get Gov. Rick Scott to embrace legislation aimed at helping direct water from remote northwest Palm Beach County to the crowded cities that line its eastern shoreline.

First-year Rep. Lori Berman, D-Delray Beach, drew a warning this week from Scott's office that the Republican governor was inclined to veto her bill for the special district (HB 741) if it continued on the path to approval.

On Tuesday, the House Finance and Tax Committee unanimously approved the measure — its third straight OK without opposition — leaving it tantalizingly close to full House action.

But district attorney Terry Lewis said he's also stepped in, huddling with representatives of Scott's office to ease concerns the legislation could add tax liability to taxpayers within the district's 200 miles of Palm Beach County.

"It won't," said Lewis, although he acknowledged the measure will give the district authority to issue bonds to develop new water supply sources. "We're talking. I think the governor's office has a better understanding."

Scott spokesman Brian Hughes said discussions are continuing over the bill.

The district is looking to build a reservoir, improve canals and other work to direct water from wetlands northwest of the C-51 canal toward southeastern Palm Beach County — where the people are.

The district also is seeking the Legislature's go-ahead to become a water supplier to county and municipal utilities, once the work is completed.

Lewis said enhancing the supply will make water costs cheaper for county taxpayers. Also, the work planned by the district will create jobs — all part of his sales pitch to Scott.

Tom,

The note I sent to the crew Friday is below and the MOU is attached. Let's talk again today or tomorrow. Thanks so much for your help on this.

Subject: Draft letter to GB

Friends,

I spoke to Tom Olliff, Ken Ammon and Dean Powell this afternoon about the problematic phrase in the MOU referencing water above and beyond that necessary to deliver benefits "pursuant to CERP". The bottom line is that while they are sympathetic to our concern, Lake Worth and the Ft. Lauderdale commission have already approved the language and the District does not believe the concern to be great enough to warrant the delay and inconvenience of making the change. So, I know we are up against a shut down, but in the event that this is worth the effort and that we are back at work before next Thursday, I quickly drafted the letter below that would go to Joe Collins asking them to address this problem despite the inconvenience and delay.

I need feedback on two major things:

1. Is this hay worth making? Based on what you know about the LIKELY sources of water the utilities would go after, is it important for us to throw down this marker (even if they don't change the language), OR is it simply not likely that this reservoir will go after water than would otherwise come to the natural system.

2. The contents of the letter (caveat: it must stay under one page if at all possible).
If you want to look at the whole MOU, go to this link and click on the agenda for the April 14th meeting. Choose "detailed" agenda and then scroll down to the MOU which is back up for item 40.

http://my.sfwmd.gov/portal/page/portal/xweb%20about%20us/gb%20application

Dear Chairman Collins,

On behalf of the US Department of the Interior, I am writing to express a specific concern about Item number 40 on the April 14, 2011 Governing Board Agenda. The Governing Board is being asked to enter into a Memorandum of Understanding with several local government entities on a planning effort for the proposed C-51 Reservoir in western Palm Beach County. In Paragraph II entitled “Project Defined” the MOU defines possible sources of water that might be intercepted and distributed through this reservoir as consisting of water from “the C-51 east basin, the C-51 west basin and other potential sources of water above and beyond the surface and groundwater required to achieve restoration benefits pursuant to the Comprehensive Everglades Restoration Plan (“CERP”)” (emphasis added).

While Interior appreciates and applauds efforts to protect future CERP water from being diverted to other uses, the Department notes that CERP did not provide adequate dry season and drought restoration benefits to the Everglades, particularly to Everglades National Park, a fact about which there is broad scientific agreement. CERP and its authorizing legislation explicitly provided for continued refinement of restoration plans and benefits, and as a result our understanding of the natural system’s needs is far more advanced in 2011 than it was in 1999 when CERP was first developed as a framework for restoration.

It is imperative that planning efforts for the C-51 reservoir incorporate the best available restoration science, and the Department believes that this principle should be made explicit in the document, particularly in the section that actually defines the project (Section II). The Department understands that at least two parties to the MOU have already executed the document and that any language change may delay the planning process and cause some inconvenience. We believe, however, that the C-51 project may one day be an integral part of the regional water management system and that the point we are raising here goes to the heart of ensuring that the needs of the natural system are adequately considered in the analysis and design of this project.

The Department of the Interior has on several occasions publicly expressed its keen interest in the development of the C-51 Reservoir. As the planning effort moves forward, I hope that the Department can be engaged on a continuous basis so that in the future our ideas and concerns might be addressed in ways that do not cause delay or inconvenience. Thank you very much for your consideration.

Sincerely,

Shannon Estenoz

shannon_estenoz@ios.doi.gov
MEMORANDUM OF UNDERSTANDING BETWEEN THE SOUTH FLORIDA WATER MANAGEMENT DISTRICT, PALM BEACH COUNTY, LAKE WORTH DRAINAGE DISTRICT, AND CITY OF FORT LAUDERDALE, REGARDING C-51 WATER SUPPLY & WATER QUALITY RESERVOIR PLANNING AND DEVELOPMENT

THIS MEMORANDUM OF UNDERSTANDING ("MOU") is made and entered into by and between the SOUTH FLORIDA WATER MANAGEMENT DISTRICT ("DISTRICT"), PALM BEACH COUNTY ("PALM BEACH COUNTY"), LAKE WORTH DRAINAGE DISTRICT ("LWDD"), and the CITY OF FORT LAUDERDALE ("FORT LAUDERDALE"), collectively referred to as the "PARTIES," when including all entities signing this Agreement; "UTILITY PARTIES," when referring to all of the local governments which provide water, wastewater, and/or reclaimed water services to their citizens and customers and not the DISTRICT or LWDD; and, "UTILITY PARTY," when referring to one of the parties that is not DISTRICT or LWDD.

WITNESSETH:

WHEREAS, the DISTRICT is a public corporation of the State of Florida existing by virtue of Chapter 25270, Laws of Florida, 1949, and operating pursuant to Chapter 373, Florida Statutes, and Chapter 40E, Florida Administrative Code, as a multipurpose water management district, and whose mailing address is PO Box 24680, West Palm Beach, Florida 33416-4680.

WHEREAS, PALM BEACH COUNTY is a political subdivision of the State of Florida that owns and operates water, wastewater, and reclaimed water systems within incorporated and unincorporated areas of Palm Beach County; and whose mailing address for the purpose of this MOU is P.O. Box 24740, West Palm Beach, FL 33416;

WHEREAS, LWDD is a special district existing by virtue of Chapter 09-1063, Laws of Florida, and operating pursuant to Chapter 298, Florida Statutes, as a water control district, and whose mailing address is 13081 Military Trail, Delray Beach, Florida 33484;

WHEREAS, FORT LAUDERDALE is a municipality located in eastern Broward County, Florida that owns and operates a water and wastewater system within its jurisdictional boundary and unincorporated areas of Broward County and whose mailing address for the purpose of this MOU is Public Works Department, 100 N. Andrews, 4th Floor, Fort Lauderdale, FL 33301;

WHEREAS, the DISTRICT’s 2000 Lower East Coast Regional Water Supply Plan ("LEC RWSP") and the 2005-2006 Update to the LEC RWSP concluded that traditional fresh groundwater and surface water were becoming increasingly limited to satisfy the region’s water demands, resulting in the need to develop alternative water sources;

WHEREAS, Section 373.707, Fla. Stat., provides that it is in the public interest that county, municipal, industrial, agricultural, and other public and private water users, the Department of Environmental Protection, and the water management districts cooperate and work together in the development of alternative water supplies;
WHEREAS, each UTILITY PARTY and LWDD is a provider of water pursuant to water use permits issued pursuant to Chapter 373, Florida Statutes;

WHEREAS, the UTILITY PARTIES have been working individually to develop alternative water supply projects authorized by water use permits issued by the DISTRICT;

WHEREAS, Section 373.703, Florida Statutes, authorizes the DISTRICT to assist counties, municipalities, special districts, publicly and privately owned water utilities, multi-jurisdictional water supply entities, or regional water supply authorities in meeting water supply needs in such a manner as will give priority to encouraging conservation and reducing adverse environmental effects of improper excessive withdrawals of water from concentrated areas;

WHEREAS, Section 373.703, Florida Statutes, further provides that the DISTRICT may join with one or more other water management districts, counties, municipalities, special districts, publicly and privately owned water utilities, multi-jurisdictional water supply entities, or regional water supply authorities for the purpose of carrying out its powers, and may contract with such other entities to finance acquisitions, construction, operation, and maintenance, and may enter into contracts providing contributions to be made by each party thereto, for the division and apportionment of the expenses of acquisitions, construction, operation, and maintenance, and for the division and apportionment of the benefits, services, and products therefrom;

WHEREAS, the LWDD and UTILITY PARTIES are equipped to construct and operate alternative water supply projects in the South Florida region;

WHEREAS, it is the policy of the State of Florida to promote the availability of sufficient water for all existing and future reasonable-beneficial uses and the natural systems;

WHEREAS, it is in the public interest to promote a cooperative relationship between the PARTIES and other consumptive water users for the purpose of exploring opportunities to jointly develop alternative water supplies and/or water resource development projects in South Florida;

WHEREAS, the DISTRICT has multiple ongoing initiatives in South Florida, including, but not limited to, providing flood protection, Everglades restoration projects, meeting water quality targets, and ensuring a sufficient supply of water for all existing and future reasonable-beneficial water uses;

WHEREAS, the Lake Worth Lagoon ("Lagoon") has experienced low salinity levels at various times. The central zone of the Lagoon occupies the area between the two inlets and is characterized by intermittent but fairly frequent low salinity events occurring for time periods ranging from days to weeks. Salinity levels during these events, corresponding to major discharge operations from the C-51 Canal through the S-155 structure, drop to values of 5 to 15 practical salinity units ("psu"), with post discharge recovery to levels between 15 and 25 psu typically observed. Salinity variation of all zones of the Lagoon occur over a period of a few days to approximately one month, and
prolonged periods of low salinity can occur, especially during periods of prolonged discharge. Minimizing perturbation from large-scale C-51 Canal discharges and releasing freshwater to the estuary in a manner that more closely approaches natural volume and timing in relation to rainfall, may help stabilize salinity regimes to be better aligned with those that are more supportive of healthier, more productive estuarine flora and fauna;

WHEREAS, LWDD and the UTILITY PARTIES desire to explore opportunities to jointly develop a regional reservoir that will meet the water supply objectives of the LWDD, UTILITY PARTIES, and other potential water users; and,

WHEREAS, the DISTRICT desires to explore opportunities to jointly develop a reservoir that will meet the environmental and water supply objectives of the DISTRICT;

WHEREAS, the PARTIES encourage and desire other potentially affected utilities and stakeholders to participate in this MOU; and,

WHEREAS, the PARTIES agree that nothing in this MOU shall affect the UTILITY PARTIES' or LWDD's service areas, rights to provide service within those areas or any right obligation pursuant to their enabling laws, or the DISTRICT's consumptive use permitting authority;

NOW THEREFORE, in consideration of the foregoing premises, and the mutual covenants, terms, and conditions contained herein, the PARTIES agree to the following:

I. RECITALS AND AUTHORITY: The recitals set forth in the WHEREAS clauses above are incorporated herein. This MOU is entered into by the DISTRICT, the LWDD, and the UTILITY PARTIES.

A. The DISTRICT enters into this MOU under the authority of Section 373.083, Florida Statutes, which authorizes each water management district governing board to enter into agreements with other public agencies and private corporations to accomplish the directives and goals of Chapter 373, Florida Statutes.

B. PALM BEACH COUNTY enters into this MOU under the authority of Sections 125.01 and 153.03, Florida Statutes, which authorizes counties to enter into agreements with other public agencies and private corporations to accomplish goals for providing water to their customers.

C. FORT LAUDERDALE enters into this MOU under the authority of Section 166.021, Florida Statutes, which, as provided by s. 2(b), Art. VIII of the Florida Constitution, grants municipal corporations the governmental, corporate, and proprietary powers necessary to enable it to conduct municipal government, perform municipal functions, and render municipal services.

D. LWDD enters into this MOU under the authority of Chapter 298, Fla. Stat.
E. Other parties may participate in this MOU pursuant to their legal authority. Such participation shall occur by execution of a Joinder Agreement in substantially the same form attached hereto as Exhibit A.

II. PROJECT DEFINED: The PROJECT is the construction of a reservoir on property located in the Water Conservation Area No. 1/C-51 Water Use Basin and conveyance improvements. The PROJECT will be supplied with available surface water from the C-51 east basin, C-51 west basin, and other potential sources of water above and beyond the surface and groundwater required to achieve restoration benefits pursuant to the Comprehensive Everglades Restoration Plan ("CERP"). The PROJECT will have environmental and water supply components.

III. PUBLIC INPUT: The PARTIES shall jointly undertake outreach to the public and local governments to engage the public, stakeholders, and other interested groups in the planning, development, design, engineering, and implementation of the PROJECT.

IV. PLANNING:

A. Water Availability: As part of the DISTRICT’s ongoing efforts, the DISTRICT shall identify the sustainable surface water yield from the C-51 east and west basins. In determining the sustainable yield, the DISTRICT will: 1) perform regional water resource and hydrologic modeling; 2) assess the potential of the proposed Lake Point project in Martin County to contribute to project objective; and, 3) identify other potential sources of surface water that may contribute to the project consistent with the DISTRICT’s regulatory programs; restoration programs, in particular the CERP Assurances of Project Benefits Agreement dated January 9, 2000, and DISTRICT objectives. The DISTRICT shall use reasonable efforts to complete this study by June 30, 2011.

B. Potential Users:

i. The PARTIES shall determine the aerial extent of potential water supply users of water from the PROJECT.

ii. For each public water supply entity determined to be a potential user of water from the PROJECT, the UTILITY PARTIES shall identify the quantity and timing, including average day and peak month, water needed in 10-year increments up to the year 2060 to: 1) meet each public water supply entity’s total raw water demands; 2) be supplied from the PROJECT; and, 3) be met from water sources other than the PROJECT.

iii. The PARTIES may identify other potential water users, including industrial, agricultural, landscape irrigation, and water control districts established under Chapter 298, Florida Statutes. For each other
potential water user, the PARTIES shall identify the quantity of water needed from the PROJECT and the timing of the potential user's water needs.

iv. The PARTIES shall use reasonable efforts to complete the actions identified in Paragraph IV.B by June 30, 2011.

C. Natural System Needs:

i. The DISTRICT shall identify the quantity and timing of water needed from the Project in 10-year increments up to the year 2060 for the Lake Worth Lagoon, Water Conservation Area #1, and other natural systems.

ii. When identifying the amount of water needed for the natural system, the DISTRICT shall consider water quality treatment requirements that may be imposed, including the Southeast Florida Total Maximum Daily Loads, Federal Everglades settlement; water quantity commitments pursuant to CERP, and any other state or federal law, rule, regulation, agreement or order related to water quantity or water quality for natural systems.

iii. When identifying the amount of water needed for the natural system, the DISTRICT may take into account the anticipated impacts of climate change and sea level rise.

iv. The DISTRICT shall use reasonable efforts to complete this quantification by June 30, 2011.

D. Initial Feasibility Determination: Upon completion of items set forth in Paragraphs IV.A – IV.C, the PARTIES shall assess the PROJECT's feasibility in meeting the PARTIES' objectives.

E. Preliminary Project Design and Cost Estimate:

i. If the PARTIES determine that the PROJECT continues to be a viable mechanism to meet the PARTIES' objectives based on the Initial Feasibility Determination, the PARTIES may enter into an agreement to undertake the actions set forth in this section. The PARTIES anticipate the agreement would be completed by July 30, 2011.

ii. Upon execution of an agreement, the PARTIES shall work together, using the information gathered pursuant to this Section IV and any other relevant documents and reports agreed to by the PARTIES, to design the PROJECT, identify any infrastructure and operational changes that may be necessary for the success of the PROJECT, and estimate the cost of the PROJECT.
iii. Conveyance Route:

1. The LWDD and UTILITY PARTIES shall identify routes through the aerial extent identified in Paragraph IV.B.i, which may include LWDD, Broward County, and Miami-Dade County, to convey water from the PROJECT to the potential users of water identified in Subparagraphs IV.B.ii and IV.B.iii. The LWDD and UTILITY PARTIES shall identify any necessary and recommended infrastructure improvements to convey water through the routes, cost of said infrastructure improvements, and the quantity of water capable of being conveyed for each conveyance route identified.

2. The DISTRICT shall identify routes to convey water to meet the environmental and water supply objectives of the DISTRICT and shall include an analysis of the risks associated with each identified route. The DISTRICT shall also identify any necessary and recommended infrastructure improvements necessary to convey water, cost of said infrastructure improvements, and the quantity of water capable of being conveyed.

3. A report detailing the results of Paragraphs IV.E.iii.1 and 2 shall be compiled and provided to the PARTIES. The PARTIES anticipate the report will be completed by September 30, 2011. The PARTIES shall have the opportunity to review and provide comment on the report. The report shall be revised, if necessary, based on comments received from the PARTIES, any interested stakeholders, and the public.

4. The PARTIES shall choose the preferred conveyance route within 90 days of issuance of a report which all PARTIES deem acceptable.

iv. Storage and Treatment:

1. The PARTIES shall determine the size of the PROJECT and identify any storage sites and investigate the availability and water capacity of the preferred sites.

2. The DISTRICT shall identify the water quality necessary to meet state and federal water quality standards.

v. Preliminary Design and Cost Estimate Report

1. Upon completion of the tasks identified in Subparagraphs IV.E.iii and IV.E.iv, the PARTIES shall prepare a Preliminary Design
and Cost Estimate Report ("PDCR") based on the results of said tasks.

2. The PARTIES shall have the opportunity to review and comment on the PDCR prior to its finalization.

V. SECOND FEASIBILITY EVALUATION: After completion of the planning tasks identified in Section IV and consideration of the PDCR, the PARTIES shall reassess the PROJECT's feasibility in meeting the PARTIES' objectives.

VI. DESIGN, CONSTRUCTION, AND OPERATION: If the PARTIES determine that the PROJECT is appropriate and feasible to meet the PARTIES' objectives, the DISTRICT, LWDD, UTILITY PARTIES, and/or any other interested party shall execute a separate agreement which shall address funding, site acquisition, any additional design and engineering, construction, operation, permitting and regulatory considerations, and governance of the PROJECT.

VII. TERM: The term of this MOU shall commence upon its complete execution by all PARTIES and shall remain in effect until March 30, 2012, or until execution of the separate agreement contemplated by Section VI, whichever occurs first.

VIII. ENTIRE AGREEMENT: This MOU constitutes the entire agreement between the PARTIES and may not be amended or modified unless agreed to and approved in writing by all PARTIES.

IX. ASSIGNMENT: No assignment, delegation, transfer, or novation of this AGREEMENT, or any part hereof, shall be made unless approved in writing by all PARTIES.

X. DISCLAIMER OF THIRD PARTY BENEFICIARIES: This MOU is solely for the benefit of the PARTIES and no right or cause of action shall accrue to the benefit of any third party.

XI. MISCELLANEOUS PROVISIONS:

A. Nothing in this MOU is intended to constitute a binding agreement to plan, design, finance, construct, and operate the PROJECT.

B. A consultant may be retained by the PARTIES, an individual party, or several parties, to perform any portion of the party's/parties' tasks or obligations under this MOU.

C. Additional parties wishing to participate in these objectives and activities outlined in this MOU shall sign the Joinder to the MOU which is attached hereto as Exhibit A. Upon execution, the Joinder shall bind the additional party to the terms of this MOU but said execution does not relieve the PARTIES identified in Paragraph I of such obligations. The joining entity shall provide each party with a copy of the executed Joinder.
D. This MOU and the rights and obligation of the PARTIES are to be governed by, construed, and interpreted in accordance with the laws of the State of Florida.

E. In the event of any legal proceedings arising from this MOU, venue for such proceedings shall be in the Fifteenth Judicial Circuit of Florida if filed in state court and the Southern District of Florida – West Palm Beach if filed in federal court.

F. In such legal proceedings, the PARTIES hereby consent to trial by the court and waive the right to seek a jury trial as to any issues so triable.

G. Each PARTY shall be responsible for its own attorney’s fees and other court costs related to enforcement of the terms of this MOU.

H. The parties acknowledge that this MOU is a negotiated agreement, and that in no event shall the terms be construed against any party on the basis that such party, or their counsel, drafted this MOU.

I. Notice of any determination or termination under this MOU shall be made to the PARTIES at the addresses listed above for each PARTY.

J. Nothing in this MOU is intended to constitute issuance of a consumptive use permit.

XII. EXECUTION IN COUNTERPARTS: This MOU may be simultaneously executed in several counterparts, each of which shall be an original and all of which shall constitute the same instrument.

XIII. FILING: This MOU shall be filed pursuant to Section 163.01(11), Florida statutes.

I notice several things about this.

1) It's very clearly an agreement between the SFWMD and the utilities on development of alternative water supply.

2) The 'Natural System' does include WCA1 and Lake Worth, and this can be considered, but it doesn't seem like much of a focus.

3) I'm not sure the 'above and beyond ...water required to achieve restoration benefits pursuant to CERP' really means in reality. If I recall, that C51 water was the water that was routed southward in the 'extra 245,000 acre-ft' to ENP, which is not technically part of CERP.

4) The June 30, 2011 to work out all details of water needs, conveyance routes, water quality standards, etc seems astounding. There is no way to have the public input defined in (III), complete all the requisite engineering analyses and do this in 50 working days.

5) The whole 'who gets the water' issue is left completely out. My cursory reading would be that the utilities are expecting this to be real water supply. Interior's simulations on benefits of the reservoir pretty much assume all the water goes to the environment. There's a huge mismatch of expectations, and this has to be resolved in 50 working days of engineering study with no policy guidelines or agreements up front? Recall that CERP had to come up with the 80/20 split first as policy goal. This is doomed to failure without clear direction.

I've got even more problems with getting to WPB on Thursday, as I have to redo a talk for Thursday afternoon for our Board.

Everglades Foundation
Educational Briefings and Site Visits for
Congressman Ander Crenshaw
April 27-30, 2011

Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key
Congressional members handling environmental legislation affecting this region
(Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act,
Endangered Species Act, Interior/Energy & Water Appropriations). Currently the federal
government, working with the State of Florida, is undertaking the world’s largest
ecosystem restoration project. A wide range of federal agencies have jurisdiction over
various components of this initiative, including: the Department of Interior, the U.S.
Army Corps of Engineers, the Environmental Protection Agency and the Fish and
Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide an
overview of the progress made and the challenges still confronting key federal holdings
like Everglades National Park and the Big Cypress National Preserve.

Travel:
Arrive at Miami International Airport the evening prior to the first day of briefings and site
visits. Air & ground transport, overnight lodging (in Key Largo, Florida) and meals
provided by Everglades Foundation.

Wednesday, April 27, 2011:

2:50 pm Depart JAX
Delta Flight 6616

4:20 pm Arrive MIA

Transportation to restaurant before proceeding to hotel in Key Largo.

Thursday, April 28, 2011:

8:30am Breakfast Briefing: Everglades Restoration 101: The Economics of
Everglades Restoration and An Introduction to Current Federal Issues
Affecting the Greater Everglades Ecosystem.
9:30am    Board helicopter for Site Visits and aerial briefing:

Site visits led by: SFWMD

10:00am    Flyover/Site Visits:

- Everglades National Park/Florida Bay
- C-111 Canal Project
- Tamiami Trail/Modified Waters Delivery Project
- Biscayne Bay Coastal Wetlands

12:00 noon Lunch Briefing: *Modified Water Delivery Projects*

1:00pm    Depart for National Park Service Interagency Science Center

1:30pm    Arrive and board National Park Service boats

2:00pm    Briefing and Site Visits: *Critical Issues Affecting Florida Bay estuary, C-111 Canal Project, Water Resources Development Act*

Site visits led by: Everglades Foundation, US Park Service, Conservation Group partners

4:00pm    Return to National Park Service Interagency Science Center

4:30pm    Depart for Hotel

6:30pm    Depart Hotel for dinner briefing

7:00pm    Dinner Briefing with Everglades Foundation, US Park Service, Conservation Group partners

**Friday, April 29, 2011:**

8:00am    Depart hotel, boxed breakfast on the way to Shark Valley
10:00am  Arrive at Everglades National Park, board Park Service vehicles

10:30am  Tour of Shark Valley Slough, Discussion: 2011 Everglades Appropriations Requests

12:00pm  Depart for lunch

12:30pm  Big Cypress National Preserve Lunch Briefing: Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs

1:30pm  Depart on airboats for briefing and site visits: Comprehensive Everglades Restoration Plan (CERP)

            Travel on airboats through Shark River Slough. Science briefing on typical Everglades systems like ridge and slough, tree islands, wet prairies, etc.

            Discussion of Federal Water Quality Issues

3:30pm  Return to dock and depart for hotel

4:30 pm  Arrive at Hotel

8:00 pm  Dinner Briefing: Building on 2010 Everglades Restoration Progress: Water Resources Development Act Authorization and Future Goals

Overnight at Hotel

**Saturday, April 30, 2011:**

11:30 am  Depart MIA
            Delta Flight 6579

1:00 pm  Arrive JAX
To SFWMD Board Chairman Collins, and Fellow SFWMD Board Members:

Unfortunately, because of a conflict with meetings of the Everglades Foundation Board of Directors, I will be unable to attend the SFWMD Governing Board Business Meeting on Thursday. However, I do wish to raise some concerns related to Item #40, the Memorandum of Understanding (MOU) between the SFWMD and utilities.

My first concern is that the technical investigations proposed in this MOU must have clearly established policy guidelines, and the Board should have a discussion of policy boundaries prior to moving forward. As it stands now, there are profoundly disparate expectations for the reservoir. In analyses done as part of reviewing the reservoir's potential benefits for water quality in Loxahatchee NWR, modelers assumed all of the available water would be going to the natural system. Some agricultural interests in the EAA support that use, but justify the utilities footing the bill by recommending that SFWMD review the Regional Water Availability Rule to allow increased pumping from existing infrastructure. Water utilities, understandably, are expecting that they will get priority and the actual water during droughts. Of course, all these expectations are mutually exclusive, and cannot be reconciled by a technical investigation. As a participant in many such investigations, I can tell you that without clear direction on the critical policy issues, the investigations will likely be unsuccessful or reopen 'settled' policy issues for debate. The Board should give clear direction on who gets the water and which policies are up for review and then include that in the MOU.

My second concern is that, while Section III allows for public involvement, the actual schedule does not. In Phase I, which establishes water availability and water needs, there has been no public involvement to date and will be concluded by June 30, a mere 50 working days away. The policy and technical issues are complex and far-reaching, and without a common understanding of facts, consensus will be much more difficult.

The C-51 project and this MOU brings up a myriad of issues and topics, including application of the Regional Water Availability Rule, alternative water supplies, water availability for CERP and non-CERP projects, rock mining in the EAA, and water quality suits in front of Judges Moreno and Gold. It seems prudent have a common and public understanding of this project's implications prior to approval of the MOU. I urge you to (a) defer this MOU until the Board is able to discuss the profound policy implications in more detail, and (b) direct your staff to open up the technical discussions to interested parties.

Sincerely,

Thomas Van Lent, Ph.D.
Senior Scientist
Everglades Foundation
Thoughts?

What names are you hearing?

We should be all over this!

Kirk,

Bill Malone, would be an excellent executive director of the SFWMD.
He worked there for many years as a top exec. I always considered him the most honest and capable — best in the business of water management. He could bring respect back to the District.

Hey there. Let's regroup on this next week and strategize about how we can help this process open up the way it needs to. The Governing Board was very receptive to Interior and the public being involved and in fact gave staff direction to that effect. However, there was a mini-drama that unfolded behind the scenes afterward that convinces me that we are going to have fight for inclusion once the new board is seated. That's ok, I like a good fight.

Have a good board meeting...

Subject: Congressman Crenshaw Tour, April 28 & 29

Shannon, we are arranging a visit for Congressman Ander Crenshaw and his wife, Kitty.

We will be hosting him in Islamorada and Florida Bay on April 28, and at various sites along Tamiami Trail on April 29.

A draft itinerary is attached, can you participate?

Thank you,
Vivian Miller
Director of Education and Outreach

https://webmail.eis.doi.gov/owa/?ae=Item&a=Open&t=IPM.Note&id=RgAAAAAs3OB4a...
Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional members handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations). Currently the federal government, working with the State of Florida, is undertaking the world's largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve.

Travel:
Arrive at Miami International Airport the evening prior to the first day of briefings and site visits. Air & ground transport, overnight lodging (in Key Largo, Florida) and meals provided by Everglades Foundation.

Wednesday, April 27, 2011:

2:50 pm   Depart JAX  
Delta Flight 6616

4:20 pm   Arrive MIA

Transportation to restaurant before proceeding to hotel in Key Largo.

Thursday, April 28, 2011:

8:30am   Breakfast Briefing: Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem.
Everglades Foundation, South Florida Water Management District, Dept of Interior, Conservation Group partners

9:30am Board helicopter for Site Visits and aerial briefing:

Site visits led by: SFWMD

10:00am Flyover/Site Visits:

- Everglades National Park/Florida Bay
- C-111 Canal Project
- Tamiami Trail/Modified Waters Delivery Project
- Biscayne Bay Coastal Wetlands

12:00 noon Lunch Briefing: Modified Water Delivery Projects

Everglades Foundation, South Florida Water Management District, US Park Service, Conservation Group partners

1:00pm Depart for National Park Service Interagency Science Center

1:30pm Arrive and board National Park Service boats

2:00pm Briefing and Site Visits: Critical Issues Affecting Florida Bay estuary, C-111 Canal Project, Water Resources Development Act

Site visits led by: Everglades Foundation, US Park Service, Conservation Group partners

4:00pm Return to National Park Service Interagency Science Center

Depart for Hotel

4:30pm Arrive at Hotel

6:30pm Depart Hotel for dinner briefing

7:00pm Dinner Briefing with Everglades Foundation, US Park Service, Conservation Group partners

Friday, April 29, 2011:

8:00am Depart hotel, boxed breakfast on the way to Shark Valley
10:00am  Arrive at Everglades National Park, board Park Service vehicles

10:30am  Tour of Shark Valley Slough, Discussion: *2011 Everglades Appropriations Requests*

12:00pm  Depart for lunch

12:30pm  Big Cypress National Preserve Lunch Briefing: *Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs*

1:30pm  Depart on airboats for briefing and site visits: *Comprehensive Everglades Restoration Plan (CERP)*

Travel on airboats through Shark River Slough. Science briefing on typical Everglades systems like ridge and slough, tree islands, wet prairies, etc.

*Discussion of Federal Water Quality Issues*

3:30pm  Return to dock and depart for hotel

4:30 pm  Arrive at Hotel

8:00 pm  Dinner Briefing: *Building on 2010 Everglades Restoration Progress: Water Resources Development Act Authorization and Future Goals*

Overnight at Hotel

**Saturday, April 30, 2011:**

11:30 am  Depart MIA
Delta Flight 6579

1:00 pm  Arrive JAX

Shannon, we have modified the itinerary and will be at BICY in the morning, and Shark Valley in the afternoon. Are you still able to join us?

An updated itinerary is below, I have tentatively included you for the afternoon. Please confirm, thanks!

Friday, April 29, 2011:

8:30am  Depart hotel in minivan

10:00am  Arrive at Oasis Visitor Center, Big Cypress National Preserve

Discussion: Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs

Bob DeGross, Public Affairs, Big Cypress National Preserve

Kirk Fordham, Everglades Foundation

Dan Kimball, Superintendent, Everglades National Park

Pedro Ramos, Superintendent, Big Cypress National Preserve

Tom Van Lent, Everglades Foundation

Garrett Wallace, SFWMD

11:00am  Depart for walking tour of Big Cypress National Preserve

Briefing and site visits: Comprehensive Everglades Restoration Plan (CERP)

Discussion of Federal Water Quality Issues: EPA Numeric Nutrient Standards Rule

12:00pm  Return to Oasis Visitor Center

Lunch Briefing: Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs

Bob DeGross, Public Affairs, Big Cypress National Preserve

Shannon Estenoz, Director, Everglades Restoration Initiatives, USDOI
Meet you

See article and editorial below for signals about possible state direction. Forward as appropriate. - Shannon
"The governor and Legislature are withdrawing their support for the restoration of these waterbodies and allowing for further degradation of our precious water resources."

Of particular concern is how the reduction will affect Everglades restoration.

"We are worried that the district's ability to do water-storage and treatment projects is really going to be compromised," said Brad Cornell, a spokesman for Audubon of Florida. "Our other concern is that the precedent of the Legislature's taking that kind of control over the budgets of the water management districts has a very real threat of jeopardizing all ad valorum (property) taxing ability."

Southwest Florida's big Everglades project is the C-43 reservoir in Hendry County. The $338 million reservoir, which would be built on a 10,500-acre parcel south of the Caloosahatchee River, would store 55.4 billion gallons of water from the river basin and from Lake Okeechobee releases.

Storing water in the reservoir would keep too much nutrient-rich fresh water from flowing into the river and its estuary. Excess nutrients can trigger harmful algal blooms, and excess fresh water can upset the estuary's salinity.

A reservoir also allows for freshwater releases into the estuary during the dry season. High salinities can kill tape grass, an important component of the upper river's ecology.

"In Lee County, we have concerns environmentally and economically for the quality of water coming down the Caloosahatchee," said Charles Dauray, former member of the water district's governing board. "We need some kind of reservoir. If we delay on C-43, then we're in trouble. I don't see any way out of it."

Dan DeLisi, who has replaced Dauray as Southwest Florida's representative on the district's governing board, said the district will need to set priorities on its spending.

"The first thing that needs to be done is decide what are the luxury things," he said. "In what areas are we spending money that we don't need to spend money in?"

One area where the district might not need to spend money is reservoirs, DeLisi said.
Instead, the district should look closely at giving property owners incentives to store water on their land.

"We have difficult decisions ahead of us as far as Everglades restoration," DeLisi said. "If we change our approach, get away from the idea of grandiose reservoirs, pare it down to smaller approaches, things will go a lot farther."
"If you give landowners incentives to do something, they'll get it done. They won't waste 10 years thinking about how to do it."

Given all the turmoil at the agency that controls South Florida's most important resource, Melissa Meeker may be the best person to take over the agency. The South Florida Water Management District went leaderless a month ago when Executive Director Carol Wehle resigned. The Post reported in March that the district had hired Ms. Wehle's boyfriend as an auditor whose job mostly was to audit Ms. Wehle's work.

Meanwhile, the district was under siege in Tallahassee. Gov. Scott demanded a big cut in the property tax rate, to keep a tax-cut campaign pledge. And for the first time, the Legislature wants to control the budgets of the state's five water management districts, so water policy could drown in politics.

Last week, Gov. Scott finally appointed four of the nine governing board members, who hire the executive director. Two days later, at the new board's first meeting, Ms. Meeker was introduced as the governor's preferred choice. Just a month ago, she had been introduced as deputy secretary of the Department of Environmental Protection, a new position supervising all water management districts.

In an interview Friday, Ms. Meeker said she had been "putting out some budget ideas." When DEP Secretary Herschel Vinyard and South Florida Water Management District Chairman Joe Collins met in Tallahassee, and were discussing the need to replace Ms. Wehle quickly, Ms. Meeker came up as a candidate with the necessary "skill sets."

Indeed, Ms. Meeker is a former board member and a contractor with the agency. As a board member, she voted to buy U.S. Sugar land for Everglades restoration, and believes that the work can continue even with what may be as much as one-third less money.

"The governor's priority is to take more control," Ms. Meeker said, "and I understand that." But she sees cost-cutting possibilities at the 1,900-employee district, and intends to begin with herself. Ms. Wehle made $202,000. "My salary," Ms. Meeker said, "will be lower." She intends to reduce salaries for other high-ranking administrators, and seek to consolidate within the district's many departments, looking first at bureaucracy and last at "the guy on the pipe."
By saving the Everglades, the district also saves this region's backup water supply. All the new people messing with the district may not get that. Ms. Meeker's job will be to remind them.

Oh, sorry about that! See article below.

South Florida Water Management District projects at risk
05/16/2011
News-Press
Lollar, Kevin

The South Florida Water Management District is looking at coming up $126 million short in its 2011-12 budget.

Earlier this year, Gov. Rick Scott said he wanted the state's five water management districts to cut their property tax revenues by 25 percent; last week, the House and Senate agreed to cut the districts' property tax funding by $210.5 million.

More than half of that will be from the South Florida Water Management District, the largest district in the state: Typically, the district collects $411 million in property taxes, but the Legislature has set a limit of $285 million.

The water district will begin budget discussions for fiscal year 2011-12 in June and approve a budget in September.

Last year local property owners paid 62.4 center per $1,000 of taxable value.

Some people are wondering how a shortfall will affect the district's environmental projects.

"It's most unfortunate that the environment is in the crosshairs of the Legislature and the governor," Lee County Commissioner Ray Judah said. "This is a draconian reduction of the water district's budget at a time when more than half of our waterways — rivers, streams and lakes — are impaired.

"The governor and Legislature are withdrawing their support for the restoration of these waterbodies and allowing for further degradation of our precious water resources."

Of particular concern is how the reduction will affect Everglades restoration.

"We are worried that the district's ability to do water-storage and treatment projects is really going to be compromised," said Brad Cornell, a spokesman for Audubon of
Florida. “Our other concern is that the precedent of the Legislature’s taking that kind of control over the budgets of the water management districts has a very real threat of jeopardizing all ad valorem (property) taxing ability.”

Southwest Florida's big Everglades project is the C-43 reservoir in Hendry County. The $338 million reservoir, which would be built on a 10,500-acre parcel south of the Caloosahatchee River, would store 55.4 billion gallons of water from the river basin and from Lake Okeechobee releases.

Storing water in the reservoir would keep too much nutrient-rich fresh water from flowing into the river and its estuary. Excess nutrients can trigger harmful algal blooms, and excess fresh water can upset the estuary’s salinity.

A reservoir also allows for freshwater releases into the estuary during the dry season. High salinities can kill tape grass, an important component of the upper river's ecology.

“In Lee County, we have concerns environmentally and economically for the quality of water coming down the Caloosahatchee,” said Charles Dauray, former member of the water district's governing board. “We need some kind of reservoir. If we delay on C-43, then we're in trouble. I don't see any way out of it.”

Dan DeLisi, who has replaced Dauray as Southwest Florida's representative on the district's governing board, said the district will need to set priorities on its spending.

“The first thing that needs to be done is decide what are the luxury things,” he said. “In what areas are we spending money that we don't need to spend money in?”

One area where the district might not need to spend money is reservoirs, DeLisi said.
Instead, the district should look closely at giving property owners incentives to store water on their land.

“We have difficult decisions ahead of us as far as Everglades restoration,” DeLisi said. “If we change our approach, get away from the idea of grandiose reservoirs, pare it down to smaller approaches, things will go a lot farther.

“If you give landowners incentives to do something, they'll get it done. They won't waste 10 years thinking about how to do it.”
Given all the turmoil at the agency that controls South Florida's most important resource, Melissa Meeker may be the best person to take over the agency.

The South Florida Water Management District went leaderless a month ago when Executive Director Carol Wehle resigned. The Post reported in March that the district had hired Ms. Wehle's boyfriend as an auditor whose job mostly was to audit Ms. Wehle's work.

Meanwhile, the district was under siege in Tallahassee. Gov. Scott demanded a big cut in the property tax rate, to keep a tax-cut campaign pledge. And for the first time, the Legislature wants to control the budgets of the state's five water management districts, so water policy could drown in politics.

Last week, Gov. Scott finally appointed four of the nine governing board members, who hire the executive director. Two days later, at the new board's first meeting, Ms. Meeker was introduced as the governor's preferred choice. Just a month ago, she had been introduced as deputy secretary of the Department of Environmental Protection, a new position supervising all water management districts.

In an interview Friday, Ms. Meeker said she had been "putting out some budget ideas." When DEP Secretary Herschel Vinyard and South Florida Water Management District Chairman Joe Collins met in Tallahassee, and were discussing the need to replace Ms. Wehle quickly, Ms. Meeker came up as a candidate with the necessary "skill sets."

Indeed, Ms. Meeker is a former board member and a contractor with the agency. As a board member, she voted to buy U.S. Sugar land for Everglades restoration, and believes that the work can continue even with what may be as much as one-third less money.

"The governor's priority is to take more control," Ms. Meeker said, "and I understand that." But she sees cost-cutting possibilities at the 1,900-employee district, and intends to begin with herself. Ms. Wehle made $202,000. "My salary," Ms. Meeker said, "will be lower." She intends to reduce salaries for other high-ranking administrators, and seek to consolidate within the district's many departments, looking first at bureaucracy and last at "the guy on the pipe."

By saving the Everglades, the district also saves this region's backup water supply. All the new people messing with the district may not get that. Ms. Meeker's job will be to remind them.

Subject: Announcement from the Executive Director

All Staff:

It is my privilege and honor to begin working today as your Executive Director. While this is a time of new beginnings, there is no doubt that we have a tough road ahead, which will require tough decisions and a necessary change in the way we do business.

In line with Governor Rick Scott’s priorities for lowering taxes and growing the economy - and with policy direction from the Governing Board - we will develop our most austere budget in over a decade. We owe it to the taxpayers to limit spending, eliminate unneeded bureaucracy and refocus the agency on its core mission.

We will no longer take on responsibilities outside of our purview or operate with inflated budgets and salaries. Instead we will reorganize the agency around its statutory responsibilities, flatten the management structure to be more in line with the rest of the state and get on with the business of water management.

These changes will begin at the top with the District Leadership Team. As attached, I am restructuring the executive management of the agency to ensure we place the greatest emphasis on mission-critical functions with fewer layers and lower salaries. I have asked the following to serve on my leadership team:

* Bob Brown will serve as my Assistant Executive Director overseeing regulation, water resources and administrative services. His nearly three decades of experience will help me guide the agency in a new, fiscally-conservative direction.

* Tommy Strowd will serve as Director of Operations, Maintenance and Construction, overseeing flood control operations, land management and capital construction projects.
* Terrie Bates will serve as Director of Water Resources, overseeing our water supply, science and modeling functions.

* Sharon Trost will assume the role of Director of Regulation

* Doug Bergstrom will serve as the Director of Administrative Services overseeing our budget, business and mission support functions.

* Ernie Barnett will take on the newly-created role of Everglades Policy Director to refocus and reshape our role in ecosystem restoration.

* Deena Reppen will serve as my Chief of Staff and oversee our external affairs.

In the days ahead, the new leadership will be meeting with you to discuss these organizational changes. We will then start the difficult work of reshaping this agency to both reflect our new financial framework and to deliver the core services this organization was created to provide. We are embarking on a new course, but it is a course that will rebuild our reputation and lead to our long-term success.

Melissa Meeker

Attachments: Executive Management Organizational Chart

Leadership Team Bios

Classification: UNCLASSIFIED
Caveats: NONE
Ernie Barnett has 27 years of water resources management experience and public service, during which he contributed to several landmark environmental laws. He had a lead role in the successful passage by the Florida Legislature of the Lake Okeechobee Protection Act and the Everglades Restoration Investment Act, which has provided more than $1 billion dollars for Everglades restoration. He also helped secure approval of the Water Resource Development Act of 2000, in which Congress authorized the Comprehensive Everglades Restoration Plan.

During a 22-year tenure with Florida’s Department of Environmental Protection, Ernie worked as a shellfish biologist, aquatic preserve manager, environmental administrator, Water Policy Director and Ecosystem Projects Director. In recognition of his work, Ernie was the recipient of the 2001 National Wetlands Award for Outstanding Wetlands Program Development from the Environmental Law Institute.

Ernie has a Bachelor of Science degree in Environmental Resource Management and Planning and a Master of Science in Biology, both from the University of West Florida.

Terrie Bates joined the District in 1985 and has gained wide-ranging experience in environmental regulation, water supply, water quality, wetland mitigation, ecosystem restoration, applied science and watershed management issues. She directed a streamlining effort in environmental permitting to combine the state’s surface water management, dredge & fill and sovereign submerged lands programs and to create the mitigation banking program.

Because of her water resource expertise, Terrie has held executive management responsibilities for overseeing the District’s water shortage and drought response in 2006-2007 and again in 2011.

Born and raised in (b) (6), Terrie received a Bachelor of Science degree in Forest Resources & Conservation from the University of Florida and a Master’s Degree in Public Administration from Florida Atlantic University.

Doug Bergstrom has 25 years of experience in public financial management and budgeting, working for government at both the federal and local levels. Early in his career he spent two years serving in the budget offices of the US Customs Service and the US Department of Agriculture in Washington, DC.
Doug came to the District in 1988, working his way from entry level analyst to budget supervisor before becoming the District’s Budget Director in 2004. Since 2009, he has been responsible for running the day-to-day business of the Operations & Maintenance resource area.

Doug received his Bachelor’s Degree from Penn State University and a Master’s Degree in Public Administration from George Mason University.

Bob Brown joined the District in 1987 after serving three years with the former Florida Department of Environmental Regulation (now part of FDEP). His first assignment was to gain support and approval for District water resource projects from external state and federal agencies, including regulatory approvals. He has served as a project manager on numerous water resource-related construction projects and directed the District’s Environmental Resource Compliance Division.

Bob gained field experience as director of the Okeechobee Service Center and, after returning to West Palm Beach, became director of the Water Resource Regulation Department, providing oversight of the Environmental Resource, Consumptive Use and Everglades Works of the District permitting programs.

Bob has a Bachelor of Science degree in Environmental Resource Management and Planning and a Master of Science in Biology, both from the University of West Florida.

Deena Reppen served with Florida's Department of Environmental Protection (FDEP) prior to joining the District in 2007, where she has directed the agency’s governmental programs and public affairs. During her eight-year tenure with FDEP she served as Chief of Staff, Director of Communications, Press Secretary, Ecosystem Projects Director and as the Northeast Regulatory District’s Community Affairs Coordinator.

Deena's communications and citizen services experience also includes serving as Press Secretary to former Florida Governor Jeb Bush and as the Director of Operations for the Reef Environmental Education Foundation—a marine conservation organization based in Key Largo, Florida.

Born and raised in Deena received a Bachelor of Science degree in Zoology from Kings College, University of London and a Master's Degree in Public Administration from the University of North Florida.
**Tommy Strowd, P.E.,** has more than 30 years experience in environmental and water resource engineering, gained in both the public and private sectors. Since joining the District in 1992, he has served as Operations Director, helped accelerate the design and construction of projects in the Comprehensive Everglades Restoration Plan and contributed significantly to regional water resource planning and engineering. Most recently, he led the agency as Interim Executive Director.

Tommy's government experience also includes stints with other state and federal environmental agencies. He has spent a significant portion of his career in the private sector, serving in engineering, project management and senior management positions with several consulting engineering firms.

Tommy is a graduate of the Florida Institute of Technology and has been a professional engineer registered in the state of Florida since 1983.

**Sharon Trost, P.G., AICP,** has been with the District for more than 30 years. First hired as a hydrogeologist, Sharon has managed divisions and departments throughout the agency, bringing her technical, organizational and leadership skills to the following areas: data collection, regulation, planning, research, ecosystem restoration, Everglades stormwater, operations and information technology.

Sharon has a Bachelor of Science degree in Geological Sciences from Lehigh University and a Master of Science degree in Engineering Management from the University of South Florida. She is a licensed professional geologist and a certified land use and environmental planner.

Shannon,

Do you and Nick have some time this week to talk about C-51 Reservoir? We have some questions about how Interior sees C51 being used, especially in the short-term (less than 10 years).

We're available Tuesday all day, Thursday all day and Friday morning. Do any of these times work for you?

How about Thursday June 16 at 9:00 am?

We can use this call in number:

Dial (b) (4)
Access Code: (b) (4)

I certainly would like if Bill Walker was there, but I also understand that he charges by the hour, and I'd understand if Interior had other priorities for him higher than answering our questions. It would also be good if a FWS person, like Todd H, with a good understanding of the directions for ERTP and 3A/ENP issues joined, but again, I understand if people have other things to do.

Subject: Everglades - technical paper
Attached is a technical paper and 3 graphics summarizing the modeling work of Drs. Robert Johnson and Bill Walker showing the relationship between water quality improvement and hydrologic restoration projects in a phased approach.

The key finding is that it may be possible to secure approximately 150,000 acre-feet of new water for the Everglades (from Lake Okeechobee) without purchasing any additional lands for storage in the EAA while also meeting the EPA WQBEL identified in the Amended Determination.

Look forward to discussing Thursday at the meeting Bob is convening. Please forward this email to anyone else who should receive it.

(b) (6) (cell)
202-208-4684 (fax)
A federal family technical team was tasked with performing a screening-level analysis on how water quality and hydrologic restoration efforts in the Everglades might be synergistically and efficiently coordinated to make simultaneous progress on both hydrologic and water quality restoration. For the purposes of discussion, the following summarizes the results of the technical analysis and outlines a range of potential implementation scenarios.

**BASIC PRINCIPLES AND ASSUMPTIONS**

1. Proposals for the near and intermediate terms make use of lands currently in public ownership.
2. “New water” delivered to the Everglades must meet the WQBEL identified by EPA.
3. The resulting analysis is a screening-level exercise, not a detailed technical analysis.
4. A more detailed planning process for the Central and Southern Everglades would identify increments of storage, treatment, decompartmentalization and seepage management designed to provide incremental environmental benefits (hydrologic restoration and improved water quality) in the Central and Southern Everglades.

**KEY FINDING IDENTIFIED DURING THE EXERCISE**

In the near and intermediate terms, we can deliver water from Lake Okeechobee to the Everglades above and beyond what is being delivered today (i.e., “new water”) if we construct increments of treatment, decompartmentalization and seepage management. New deep storage reservoirs are not necessary in the near or intermediate term. This finding is critically important because it means that hydrologic restoration in the form of new water of appropriate quality can move forward for the next decade using lands already in public ownership.

**SUMMARY OF ANALYSIS AND IMPLEMENTATION SCENARIOS**

Terms Used:

- “Additional land required”: Acreage above and beyond what is currently (2011) publicly owned.
- “Total New water delivered to the Everglades”: Additional flows above and beyond a base condition.
- “Amount of wet season relief to coastal resources”: The volume of water flowing out of Lake Okeechobee south and therefore not being released to the Caloosahatchee and St. Lucie estuaries. The volume required to provide relief from 95% of the damaging discharges is 700,000 acre-ft. Water that is diverted from the C-51 canal rather than flowing harmfully into the Lake Worth Lagoon also falls into this category.
- “Downstream decomp and seepage management requirements”: Features that must be constructed downstream from the EAA in order to accommodate increased flows. For the purposes of this paper, “decompartmentalization” includes modifications to Tamiami Trail.
NEAR-TERM PHASE: (Construction by 2015)

Vital Statistics:

- Amount of additional land required: 0 acres
- Total new water delivered to Everglades: Approx. 80,000 acre-ft.
- Amount of wet season relief to coastal resources: Approx. 60,000 acre-ft.
- Downstream Decomp Required: Increased conveyance to NESRS
- Downstream Seepage Mgmt Required: S-356 must be operating

CONSTRUCTION COMPONENTS

Components That Require Planning and Authorization (CERP: Central & Southern Everglades Regional PIR)

- A-1 STA (15,000 acres)
- A-2 STA (2,500 acres)
- A-2 FEB (Approx. 10,000 acres)
- STA 3/4 - WCA3A Hydropattern Feature Part 1 (CERP Decomp Phase 1)¹

Components Already Underway

- Decomp Physical Model (CERP Design Agreement Authority)
- C-111 North and South Detention Areas (C&SF/C-51 Authorization)
- Western C-111 Spreader Canal (CERP: WRDA 2000)
- Talisman Compartment C (Under construction by State of Florida)
- Talisman Compartment B (Under construction by State of Florida)
- 8.5 Square Mile Area (Near complete by Corps under Interior Mod Waters Authority)
- Tamiami Trail 1-Mile Bridge (Under construction by Corps under Interior Mod Waters Authority)
- Tamiami Trail Roadbed raised to 10.7 feet (Under construction by Corps under Interior Mod Waters Authority)

¹ This project is currently part of the CERP Decomp Phase 1 PIR. However it would have to be scaled up under this scenario. Decomp Phase 1 could proceed on its own or be folded into the Central &Southern PIR planning process.
INTERMEDIATE PHASE: (Construction by 2020)

Vital Statistics:
- Amount of additional land required: 0 acres
- Total new water delivered to Everglades: Approx. 150,000 acre-ft.
- Amount of wet season relief to coastal estuaries: Approx. 150,000 acre-ft.
- Downstream Decomp Required: Central Flow-way; CERP Decompartmentalization Phase 1; and 2.6 miles of Tamiami Trail Next Steps
- Downstream Seepage Mgmt Required: S356 must be operating, shallow seepage adjacent to Everglades National Park.

CONSTRUCTION COMPONENTS

- All of Phase 1

Components That Require Planning and Authorization (CERP: Central & Southern Everglades Regional PIR)
- A-2 STA (1,500 acres)
- EAA conveyance improvements
- C-139 FEB (12,000 acres at 8 ft.)
- Central Flow-way from WCA 3A to ENP
- L-4/5/6 levees hydropattern feature (CERP Decomp Phase 1)
- L-28 hydropattern feature (CERP Decomp Phase 1)
- Backfill Miami Canal (CERP Decomp Phase 1)
- Degrade L28 Extension (CERP Decomp Phase 3)

Components Already Underway
- Broward WPA (CERP PIR nearly complete and authorization anticipated for next WRDA)

Components to be Implemented by Non-Corps Authorities
- STA 1-W Expansion (To be constructed by State of Florida under Consent Decree)
- C-51 Storage (To be constructed by urban utilities under State authorities)
- 2.6 Miles of Tamiami Trail Next Steps (To be authorized under Non-Corps authorities)
- Everglades National Park Seepage Management (seepage wall) (To be constructed by rock miners under state authorities)

---

2 The scale of this feature will depend upon alternatives requiring interbasin transfers within the EAA.
3 This capacity is essential if the problems associated with moving water into WCA 3B cannot be resolved in the intermediate term.
4 Decomp Phase 1 could proceed on its own or be folded into the Central & Southern PIR planning process.
LONG TERM PHASE SCENARIO 1: (Construction by 2030)

Vital Statistics:

- Amount of additional land required = Approx. 24,000 acres in the EAA
- Total new water delivered to Everglades = Approx. 550,000 acre-ft.
- Amount of wet season relief to coastal resources = Approx. 500,000 acre-ft
- Downstream Decomp Required = Full Decomp
- Downstream Seepage Mgmt Required = 3A/3B Seepage Mgmt

CONSTRUCTION COMPONENTS

- All of Phases 1 and 2

Components That Require Planning and Authorization (CERP: Central & Southern Everglades Regional PIR)

- Convert A-2 to STA in the EAA
- Additional 40,000-acre storage reservoir in the EAA
- Remove and Backfill L-28 Canal (CERP Decomp Phase 3)
- WCA 3A and 3B Seepage Management (CERP)
- L-29 Removal (CERP Decomp Phase 3)
- 3A-3B Decomp (CERP Decomp Phases 2 and 3)

Components to be Implemented by Non-Corps Authorities

- 2.9 Miles of Tamiami Trail Next Steps

---

5 CERP contemplated a total of 360,000 acre-ft of storage in the EAA plus approximate 1.5 million acre-ft of ASR storage to capture Lake Water. This feature is a different approach than contemplated by CERP; however, it is capturing and storing the same water that CERP proposed to capture and store.
LONGTERM PHASE SCENARIO 2: (Construction by 2030)

**Vital Statistics:**
- Amount of additional land required = Approx. 70,000 acres
- Total new water delivered to Everglades = Approx. 700,000 acre-ft.
- Amount of wet season relief to coastal estuaries = Approx. 700,000 acre-ft.
- Downstream Decomp Required = Full Decomp
- Downstream Seepage Mgmt Required = 3A/3B Seepage Mgmt

**CONSTRUCTION COMPONENTS**
- All of Phases 1 and 2

**Components to be Planning and Authorized Under CERP Authority (Central & Southern Regional PIR)**
- Additional 60,000-acre storage reservoir in the EAA
- Additional 10,000-acre STA in the EAA

**Components Covered by Existing Corps Authorities**
- L-29 Removal (Decomp Phase 2)
- L-67 Culverts (Decomp Phase 2)
- Remove and Backfill L-28 Canal (Decomp Phase 3)
- Additional Road Mods on Western Tamiami Trail (Decomp Phase 3)
- WCA 3A and 3B Seepage Management

**Components to be Implemented by Non-Corps Authorities**
- 2.9 Miles of Tamiami Trail Next Steps
Near-Term Phase
80,000 ac-ft (new)
Long-Term Phase
Scenario 1
550,000 ac-ft (new)

Friends,

As all of you know, South Florida Ecosystem Restoration Task Force (SFERTF) Executive Director Greg May retired last month. As our team moves through this transition period, we thought we would take the time to seek feedback from a cross section of our restoration partners regarding the SFERTF and its functions, teams, and products.

The Task Force was established by Congress in order to perform 4 basic functions:

- Coordinate restoration of the South Florida Ecosystem
- Exchange information among Task Force members
- Facilitate conflict resolution among Task Force members
- Coordinate restoration science and research

Allyn Childress of our staff will be contacting you to ask if you are willing to provide us with your thoughts on the Task Force, its core functions and its value to your organization. Participation consists of a short telephone interview with Allyn that we anticipate will take no more than 30 minutes.

Thank you in advance for your assistance. If you have any questions, or require additional information please do not hesitate to contact me.

With warm regards,

Shannon

Are you all free at 2pm tomorrow, Wednesday, June 29th, to do a very brief call with Shannon? We'd like discuss a few concerns we have on the budget process, most notably the $25 million in land acquisition for Mod Waters.

Let me know if you can make this time work.

Folks,

I am wondering if we can move this call to 2:30? If not, that's ok, but I have a meeting that ends at 2 and may go over a few minutes. Sorry Kirk, that's what I get for talking while driving - I can't check my calendar.

Just as I was about to go to bed, I made the mistake of checking the Palm Beach Post's website and stumbled across this revolting letter from Mike Collins. No longer able to sleep, I tossed and turned until I finally got up and hammered out a response. The letter I wrote is far too critical for my signature. Below is Collins' letter and my draft response. Who could we get to sign it?

Letters: With Scott, Everglades restoration back on track

By LETTERS TO THE EDITOR FOR SATURDAY, JULY 16

In response to the op-ed commentary "Would you trade water for a pizza? Our governor did," Florida needs to support a well-planned, scientifically sound Everglades restoration blueprint, like the Comprehensive Everglades Restoration Plan (CERP), which was developed and approved by all stakeholders.

But the environmental community, backed by The Palm Beach Post, supported the previous governor's vision for the Everglades, which is what veered the district wildly off course from CERP. The so-called "River of Grass" project, proposed by Gov. Charlie Crist and hailed by environmentalists, brought CERP to a standstill. In addition to wasting $200 million on land that was not needed, it squandered two years that could have been spent advancing CERP projects and continuing the positive path restoration was on under Gov. Jeb Bush. That is why these new efforts to vilify Gov. Rick Scott, whose goal is to prevent further derailment, ring more than hollow.

It is unfortunate that the environmental community and The Palm Beach Post continue to ignore the progress and investments made by Florida and Florida's agricultural producers and instead praise the federal government, which has virtually defaulted on its 50 percent restoration cost share. The feds seem to be happy to dictate terms that hinder, rather than help restore the Everglades and its waters.

Rick Scott is putting politics aside and using his office to streamline Everglades restoration. The state and the South Florida Water Management District need to spend our precious tax dollars efficiently, on a logical, scientifically sound plan. One can only imagine what a reader with limited knowledge of Everglades restoration would think after reading the revisionist history in "Would you trade water for pizza? Our governor did."

MICHAEL COLLINS
Islamorada

Editor's note: Michael Collins was chairman of the South Florida Water Management District Governing Board when the state and federal governments approved Everglades restoration.

To the Editor:

It should surprise no one to see former South Florida Water Management District governing board member, Mike Collins, rush to the defense of Big Sugar and other polluters.
He now works for them.

Mr. Collins oddly asserts that former Governor Charlie Crist's policies somehow brought the Comprehensive Everglades Restoration Plan (CERP) "to a standstill."

In fact, the opposite is true. Over the last three years, as a result of Crist's leadership and bi-partisan support in Washington, there has been a surge in the construction of CERP projects that will protect the Everglades and our water supply.

Even more bizarre is Collins' defense of Governor Rick Scott's alarming environmental policies. Before he could even move his furniture into the Capitol, the new Governor sued the Environmental Protection Agency to allow polluters more latitude to dump sewage, animal waste and fertilizer into our lakes, rivers and streams. Only weeks later, Scott gutted state laws designed to shield taxpayers from having to foot the bill for unchecked development and sprawl. In a move that was nothing short of insulting to our state's fishermen, hotel owners and and other small businesses who suffered deep financial losses as a result of the gulf oil spill, the Governor recently scuttled a state lawsuit that would have recovered from BP hundreds of millions--perhaps billions--of dollars owed to Florida taxpayers.

Topping it all off, Governor Scott's budget proposed cuts so deep in Everglades Restoration funding, even the conservative Republican leadership of our state legislature felt compelled to restore a portion of the much-needed money to keep water supply and Everglades projects moving forward.

While it is public record that Mr. Collins has applied for re-appointment by Governor Scott to a position at the water management district, his shameless pandering and transparent defense of the Governor's policies is a glaring reminder why he should never again be trusted to oversee the protection of Florida's natural resources or our water supply.

Sincerely,

xxx

Hey. Richard gave me your contact information.

First I need to congratulate you belatedly for your new (not so new) job with DOI. Big WOW!

Second, I guess you know I took a job with the Everglades Foundation as Director of Grants and External Affairs.

Third, I'm located in TLH but will be traveling to Miami and environs occasionally. I'll be there next week and I know it's sort of short notice, but might you have some time to meet maybe afternoon Tuesday or morning Wednesday? It's a thought. Richard might have told you I'm meeting with him Wed afternoon to talk issues too.

Let me know if a meeting might work. If not, next time. There is a chance that Kirk may want to join me. He seemed very interested.

Hope your are doing well. My 3! It sort of blows my mind. Cheers, Yvonne3

Hi Yvonne!

Great to hear from you and I am very happy to hear that you have joined the Everglades Foundation! I just received an appointment from Kirk for Tuesday morning down at his office. I hope will be joining us for that. I can't believe that in two weeks, so I am feeling it too! Both are doing very well. I look foward to catching up - bring pics of the girls if you can.

Don and Kirk,

Would Tuesday 23rd work for both of you and TVL to have a meeting in Washington with Nathaniel? Time is flexible, but for ease of travel, I am thinking sometime between 10 and 3 - perhaps 90 minutes? I spoke to Nat and this works for him.

I understand that in some email, the text below the maps was cut-off. I'm sending the call-in information again, repeating that information.

The call will begin at 4 pm today, August 10. We would like to set up the call to allow us to jointly look at the maps, so we have set up a call-in number and a video connection. You can still call in even if you don't have the video, but it might help keep us on the same page, so to speak.

1. For video: point your browser to:
   https://www1.gotomeeting.com/join/504269385

2. For audio, call in using your telephone:
   Dial (b) (4)
   Access Code: (b) (4)
   Audio PIN: Shown after joining the meeting
   Meeting ID: 504-269-385

https://webmail.eis.doi.gov/owa/?ae=Item&a=Open&t=IPM.Note&id=RgAAAAAs3OB4a...
NEW YORK (Standard & Poor's) Aug. 10, 2011--Standard & Poor's Rating Services has lowered its issuer credit rating on South Florida Water Management District (SFWMĐ) to 'AA+' from 'AAA'. At the same time, Standard & Poor's lowered its rating on the series SFWMĐ's certificates of participation (COPs) series 2006 to 'AA' from 'AA+'. The outlook is stable.

"The downgrade reflects recent legislative changes that we believe have significantly reduced the district's financial flexibility," said Standard & Poor's credit analyst John Sugden-Castillo.

The state's 2011 legislature passed and Gov. Rick Scott signed into law Senate Bill 2142, which greatly diminishes SFWMĐ's financial flexibility by capping the amount of revenues it can raise through ad valorem taxation in fiscal 2012 and requiring legislative approval of future budget and millage rates.

The 'AA+' rating reflects our view of strong executive and legislative oversight of the budget requiring the governor's and legislature's approval, strong management practices and policies; strong reserves, and low direct debt levels.

The 'AA' rating on the COPs reflects our assessment of the district's general creditworthiness as lessee, a master lease structure under which the failure to appropriate for one series of lease payments causes the termination of all leases covered by the master agreement, which provides added incentive to appropriate, an absolute and unconditional obligation to make lease payments once funds have been appropriated, and the high essentiality of projects being financed.

SFWMĐ is an agency of the State of Florida and one of five water management districts created pursuant to the Florida Water Resources Act of 1972. It is responsible for regional flood control, water supply and water quality protection and ecosystem restoration management, including implementation of the Comprehensive Everglade Restoration Project. The district is a special taxing district with ad valorem taxing authority and encompasses all or parts of 16 counties in central and southern Florida. Its tax base is very broad, covering 18,000 square miles and including all or parts of 16 counties stretching from Orlando to the Florida Keys.

The stable outlook reflects our expectation that debt service will remain a manageable portion of SFWMĐ's budget. While revenue flexibility has been greatly diminished, the district's low leverage makes this portion of the budget affordable. Should SFWMĐ issue additional debt, absent a significant increase in revenues authorized by the governor and Florida's legislature, we could lower the ratings further.

Shannon and Kirk,

Nat Reed is asking for the name of the Assistant Secretary of Interior for Fish, Wildlife and Parks, who you met when you were in DC last week. He mentioned that she dropped by the meeting because she wanted to meet Nat.

Can you please identify her so I can forward her name to him? Thanks very much.

Subject: Garrett Wallace - Updated Contact Information

Hello,
Today marks the start of my final week at the South Florida Water Management District. It has been a great nine years here and five years at the St. Johns River Water Management District.

On September 16, 2011, I begin my new opportunity at Alico Incorporated as the Director of Governmental and Regulatory Affairs. My focus will be enhancing Alico’s relationships in Washington and some assisting in Tallahassee. We will be also working to enhance our relationships at USDA and working to place more land into perpetual conservation easement programs such as the Wetlands Reserve Program.

I have attached my new business card to hopefully make it easy for you to update my contact information.

As you may already know, your contact at SFWMD is Ernie Barnett and he can be reached at eBarnett@sfwmd.gov or 1-561-951-2840.

Look forward to seeing you soon,
Garrett

Theresa,

The effort there was to focus attention on a small number of higher profile and early projects rather than overwhelm a more casual visitor with the details of the 68 or whatever the current number of projects is in CERP.

The maps listing all of the projects is (a) not really helpful, and (b) distracts from conveying the central strategy for Everglades restoration: take water from Lake O, store it, clean it, and flow it through the Everglades.

Hello Shannon,

Kirk has indicated that you will be attending our Board Meeting in Naples on November 17th. I wanted to provide you with information and details for the meeting and also to invite you and Richard to join us for the Board Dinner the prior evening, November 16th. I would be happy to assist you with arrangements. Please note that the two events will be held at different locations. A block of hotel rooms has been set aside at each location, or you may make alternative arrangements if you prefer.

EVERGLADES FOUNDATION BOARD DINNER
Wednesday, November 16th, 6:00pm Cocktail Reception, 7:00pm Seated Dinner and Presentation
The Naples Beach Hotel & Golf Club
851 Gulf Shore Blvd North, Naples, FL 34102

A block of rooms has been reserved at the Naples Beach Hotel & Golf Club for Wednesday, November 16 at a rate of $200 + tax for a Resort view room or $240 + tax for a Gulf view room. Reservations: (800) 455-1546 and mention the Everglades Foundation.

The BOARD OF DIRECTORS MEETING will be held the following day.
Thursday, November 17th, 8:00am Breakfast followed by the Board meeting at 9:00am.
The Ritz Carlton Beach Resort,
280 Vanderbilt Beach Rd., Naples, Florida 34108

There are rooms blocked there also for the night of November 16th, Coastal View @ $259/night + tax. Reservations must be received before October 16th, 2011 to be guaranteed the group rate. Reservations: 888.856.4380 and mention the Everglades Foundation.

I would appreciate your confirming with me when arrangements have been made. Please feel free to contact me if you have any questions or if I may assist further. Thank you.

Shannon, we are preparing to host another group of staffers for an Everglades tour. On November 7, we will be doing the "Keys" leg of the trip at Ocean Reef. I am attaching a draft itinerary - can you join us?

FYI we have confirmed:
Geoff Bowman, Subcomm. on Water Resources/Enviro
Patrick Dietz from Rep. Rich Nugent's office
Sara Decker from Sen. Marco Rubio's office

Please let me know, thank you!

Everglades Foundation
Congressional Educational Briefings and Site Visits
November 6-9, 2011

Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional staff handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations). Currently the federal government, working with the State of Florida, is undertaking the world’s largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide key policymaking staff with an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve. Participants will focus on legislative proposals in 2011 that will address these issues.

Travel:
Participants fly to Miami International Airport the evening prior to the first day of briefings and site visits. Air & ground transport, overnight lodging (@ Key Largo Grande Hotel, Key Largo, FL) and meals provided by Everglades Foundation.

Sunday, November 6, 2011:
Depart Washington, DC in the afternoon. Arrive Miami International Airport. Ground transportation to hotel in Key Largo.

7:00pm Dinner Briefing
Everglades Foundation, Conservation Partners, National Park Service
Monday, November 7, 2011:

7:45am  Depart hotel, boxed breakfast on the way to briefing

8:30am  Depart hotel, boxed breakfast on the way to briefing

Breakfast Briefing: *Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem*  
*Everglades Foundation, Conservation Partners*

9:30am  Depart for Site Visits and Aerial Briefing

10:00am Flyover/Site Visits:
  - Everglades National Park/Florida Bay
  - C-111 Canal Project
  - Tamiami Trail/Modified Waters Delivery Project
  - Biscayne Bay Coastal Wetlands Project

12:00 noon Lunch Briefing: *Modified Water Deliveries: Tamiami Trail Bridge Project*  
*Everglades Foundation, Conservation Partners, National Park Service*

1:00pm  Depart for Florida Bay site visits and briefing

1:30pm  Arrive at marina and board boats (The Nature Conservancy)

2:00pm  Briefing and Site Visits: *Critical Issues Affecting Florida Bay estuary, C-111 Canal Project, Water Resources Development Act Reauthorization*  
Site visits led by: *Everglades Foundation, Conservation Partners, National Park Service*

4:00pm  Return to marina

4:15pm  Depart for Miami

8:00pm  Dinner Briefing: *Building on 2011 Everglades Restoration Progress: Water Resources Development Act Authorization and Future Goals*  
*Everglades Foundation, Conservation Partners, National Park Service*
**Tuesday, November 8, 2011:**

8:00am  Depart hotel, boxed breakfast on the way to Everglades National Park

10:00am  Arrive at Everglades National Park, board Park Service vehicles

10:30am  Tour of Shark Valley Slough  
Discussion: *2012 Everglades Appropriations Requests*

_Everglades Foundation, Conservation Partners, National Park Service_

12:00pm  Depart for lunch

12:30pm  Big Cypress National Preserve Lunch Briefing:  
*Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs*

_Everglades Foundation, Conservation Partners, National Park Service, USDA_

1:30pm  Depart on airboats for briefing and site visits: *Comprehensive Everglades Restoration Plan (CERP) and Farm Bill Reauthorization: US Sugar Policy*

Travel on airboats through Shark River Slough. Science briefing on typical Everglades systems like ridge and slough, tree islands, wet prairies, etc.  
_Everglades Foundation, Conservation Partners, National Park Service_

3:30pm  Return to dock and depart for hotel

4:30 pm  Arrive at Hotel

8:00 pm  Dinner Briefing  
_Everglades Foundation, Conservation Partners, National Park Service, South Florida Water Management District_

Overnight at Hotel

**Wednesday, November 9, 2011:**

Depart to Miami International Airport for flights to DC

Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional staff handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations). Currently the federal government, working with the State of Florida, is undertaking the world's largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide key policymaking staff with an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve. Participants will focus on legislative proposals in 2011 that will address these issues.

Travel:
Participants fly to Miami International Airport the evening prior to the first day of briefings and site visits. Air & ground transport, overnight lodging (© Key Largo Grande Hotel, Key Largo, FL) and meals provided by Everglades Foundation.

Sunday, November 6, 2011:
Depart Washington, DC in the afternoon. Arrive Miami International Airport. Ground transportation to hotel in Key Largo.

7:00pm Dinner Briefing
Everglades Foundation, Conservation Partners, National Park Service
Monday, November 7, 2011:

7:45am  Depart hotel, boxed breakfast on the way to briefing

8:30am  Breakfast Briefing: *Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem*
*Everglades Foundation, Conservation Partners*

9:30am  Depart for Site Visits and Aerial Briefing

10:00am  Flyover/Site Visits:
- Everglades National Park/Florida Bay
- C-111 Canal Project
- Tamiami Trail/Modified Waters Delivery Project
- Biscayne Bay Coastal Wetlands Project

12:00 noon  Lunch Briefing: *Modified Water Deliveries: Tamiami Trail Bridge Project*
*Everglades Foundation, Conservation Partners, National Park Service*

1:00pm  Depart for Florida Bay site visits and briefing

1:30pm  Arrive at marina and board boats (The Nature Conservancy)

2:00pm  Briefing and Site Visits: *Critical Issues Affecting Florida Bay estuary, C-111 Canal Project, Water Resources Development Act Reauthorization*

Site visits led by: *Everglades Foundation, Conservation Partners, National Park Service*

4:00pm  Return to marina

4:15pm  Depart for Miami

8:00pm  Dinner Briefing: *Building on 2011 Everglades Restoration Progress: Water Resources Development Act Authorization and Future Goals*
*Everglades Foundation, Conservation Partners, National Park Service*
Tuesday, November 8, 2011:

8:00am  Depart hotel, boxed breakfast on the way to Everglades National Park

10:00am  Arrive at Everglades National Park, board Park Service vehicles

10:30am  Tour of Shark Valley Slough
Discussion: 2012 Everglades Appropriations Requests
Everglades Foundation, Conservation Partners, National Park Service

12:00pm  Depart for lunch

12:30pm  Big Cypress National Preserve Lunch Briefing:
Expansion/Creation of National Wildlife Refuges & Utilizing USDA Land and Water Conservation Programs
Everglades Foundation, Conservation Partners, National Park Service, USDA

1:30pm  Depart on airboats for briefing and site visits: Comprehensive Everglades Restoration Plan (CERP) and Farm Bill Reauthorization: US Sugar Policy
Travel on airboats through Shark River Slough. Science briefing on typical Everglades systems like ridge and slough, tree islands, wet prairies, etc.
Everglades Foundation, Conservation Partners, National Park Service

3:30pm  Return to dock and depart for hotel

4:30 pm  Arrive at Hotel

8:00 pm  Dinner Briefing
Everglades Foundation, Conservation Partners, National Park Service, South Florida Water Management District

Overnight at Hotel

Wednesday, November 9, 2011:

Depart to Miami International Airport for flights to DC
Kirk,

Are you on the same panel at SEJ Saturday morning that I am on? If so, what are you planning to do and say? I don’t need a powerpoint presentation do I?

Is this the one with Pepe Fanjul?

If so, is he even confirmed?

I don't think we need a power point presentation.

However should we bring general maps to reference and/or project?

Melissa and Sec. Vinyard are going to brief the board in the morning, at breakfast. I'd like you to brief them shortly thereafter on the agenda. What are your time constraints/preferences?

The focus should be on:

- current status of water quality negotiations (whatever you are permitted to share at that point)
- guidance on strategic directions (what are the desired outcomes? on what should the Foundation be focusing? how should we be exerting our influence? etc.)
- what are the biggest challenges facing the Central Everglades planning process? how should the Foundation engage to keep it on track and on schedule?
- where should the Foundation be exerting their political influence?

I would briefly reflect on current progress on CERP (with projects under construction) to demonstrate forward movement. Then, we focus on next big opportunities with water quality and Central Ev Planning process.

To make it interesting to those board members who aren't technocrats, throw in a few interesting anecdotes (how was Scott in meeting? was he well prepared? how did Obama folks react to him? dynamics of the meetings, politics, etc.)

Subject: Transport plan

Shannon/Don:

Ok so here is my tentative transport plan for Thursday 10/20/2011:

Part 1:
Jose Cabaleiro will pick up the foursome including Don at the Intercontinental hotel at 7:30 AM sharp on Thursday morning in our Chevy Uplander and he will have directions to the site and a tour itinerary. At the conclusion of the tour, Jose will then drive Shannon and everyone minus Don back to the InterContinental.

Part 2:
I will meet up with you at the site at 1000 AM in our Ford Explorer and be the one responsible to get Don to the airport on time for his 1230 PM flight. To insure Don makes his flight, we will need to leave the site no later than 1100 AM. Don will be responsible to pay all tickets I incur in expediting his transport to MIA!

Let me know if this plan is acceptable for both of you.

**Subject:** Speaker Invite: Everglades Panel for Society of Environmental Journalists Conference

Mr. Lehtinen,

Greetings! I am contacting you on behalf of Jeff Burnside from NBC Miami and chairman of SEJ. The Society of Environmental Journalists will have their 21st annual conference here in Miami next week (Oct. 19-23). It is going to be one of the biggest environmental conferences held with many important government and nonprofit institutions, as well as advocates for environmental protection such as the
Cousteau clan who will be premiering an upcoming movie at the conference. It would be an honor to have you, whom lead the battle for the restoration of the Everglades, speak at the SEJ conference on the Everglades panel. I have pasted the details of that specific panel below on this email, you can also visit www.sej.org for more details on the conference. The Everglades panel is Saturday Oct. 22nd, 9am - 10:30am at the Intercontinental in Miami. Please, let us know if you are available. We hope to have you there!

Best Regards,

Melissa Pelaez

Saturday 9am-10:30am Oct. 22 InterContinental

**The World's Most Aggressive Restoration Project: The Everglades**

The late journalist Marjory Stoneman Douglas said "The Everglades is a test. If we pass it, we may get to keep the planet." It's a truly incredible place. Restoring what remains of the Everglades is in progress, while costing well over $10 billion and rising. But the coalition of interest groups that launched the grandest environmental restoration project demonstrated the economic as well as environmental benefits. New budget fights — tinged with political viewpoints — are threatening continued funding at the state and federal level.

President candidate Michele Bachmann proposed drilling for oil in the Everglades. This fiery panel will dissect the latest twists and turns on this planetary test.

Moderator: **Michael Putney**, Journalist, WPLG ABC Miami; and Columnist, *Miami Herald*

Speakers:
- **Shannon Estenoz**, Director, Everglades Restoration Initiatives, U.S. Department of the Interior  
- **Kirk Fordham**, Chief Executive Officer, Everglades Foundation  
- **Charlie Crist**, former Florida Governor (invited)  
- **Pepe Fanjul**, Florida Crystals (invited)  
- **Dexter Lehtinen**, former U.S. Attorney and former Miccosukee Indian tribe counsel (invited)

Room: Escorial
Hi Shannon,

I wanted to be sure you got this agenda with the call-in #.

It was a pleasure having meeting you in person last night at the SEJ dinner. So much nicer when you can put a face with a name!

Thanks,
Nancy

The call time for this conference called has been rescheduled to start at 9:00 AM. Any other Agenda topics will be conveyed as they become available.

October 21, 2011

BARLEY GROUP CALL

9:00 a.m. Teleconference

NEW CALL IN NUMBER

Call In Number: (b) (4) Passcode: (b) (4)

AGENDA

**At 9:00am we will have a special guest join us for the Barley call to discuss the proposed state Everglades water quality plan***

https://webmail.eis.doi.gov/owa/?ae=Item&a=Open&t=IPM.Note&id=RgAAAAAs3OB4a... 1/25/2012
I want to thank you for your kind introduction, beyond the call!

I want to congratulate you on managing the South Florida Ecosystem Restoration Task Force meeting with a firm hand and consummate skill.

It was an outstanding effort and hopefully the Corps can manage itself to reach the time lines that were proposed. The Jacksonville District office has some ‘superstars’ and some undertrained staff unfamiliar with the bold actions that are needed south of the lake to accelerate restoration goals.

Colonel Pantano is the key man. He is a ‘driving force’ and a determined man who will make every effort to keep the effort on target.

With Interior’s support, we should expect renewed activity after a period where the restoration effort seemed to ‘languish’.

Working with Shannon, who knows the ‘players’, you should be able to keep the Secretary and the leadership of the Environmental Protection Agency, the Justice Department, CEQ, and the Department of Agriculture together as a team.

I have no way of knowing what problems will jump up unrepentantly to face the effort, but I am confident that you are totally committed and well up to date with the opportunities that exist despite a non-functioning Congress.

With special best wishes, Nathaniel

I thought the task force meeting was fascinating and well managed by all concerned. You are an impressive leader with an extensive background on the issues that are critical to flood control, irrigation and clean water needed in the everglades ecosystem.

The rumor mill has produced a scenario that you have visited the Department of Interior in an effort to avoid the proposed new Biological Opinion on the status of the highly endangered everglades kite so that the district can gain approval of additional pumps placed on the levee.

Everyone associated with the former Biological Opinion knows that the opinion was ‘flawed’ due to the use of long-term weather records that do not mimic current weather conditions.

It is past time that a new Biological Opinion be prepared and that water level management is critical not only to the highly endangered everglades kite, but to a range of issues impacting Lake Okeechobee.

I am deeply concerned that the issuance of a permit to allow over the dike pumping for the EAA plantation owners is resulting in the repetition of who has primacy over the lake’s water. I would prefer severe reductions in water releases starting now and a major effort to control usage to a late spring announcement that severe drought has ‘forced the district’ to seek permits to add additional pumps which invariably will lower the lake and benefit a small group of users.

I urge careful consideration of a request for permits regardless of the threat of significant drought.

With every best wish, Nathaniel

Shannon, my only sadness at the WRAC meeting was a brief conversation with Chris McVey. I just cannot believe the NPS or one of the universities in south Florida have not jumped at the opportunity to engage Chris, as he is one of the truly great repositories of everglades information alive.

Rumor has it that he may be able to join Dan and Bob or even you. I just want to put a plug in for Chris who I have known and admired for years.

He has trampled on some important feet within the District by telling the truth, something that several directors and senior staff members have not wanted to hear.

Chris is simply too valuable to lose.

Special best wishes, Nathaniel

Honorable Jo-Ellen Darcy
Assistant Secretary of the Army (Civil Works)
108 Army Pentagon
Washington, DC 20310-0108

Dear Secretary Darcy,

I am so very pleased to have shared a moment with you at the District taskforce meeting. Your presence was really important, far more important than you might believe. It was evidence to the ‘doubters’ that the Obama Administration means to accelerate the process and prepare for the next steps in the restoration of the everglades ecosystem.

The schedule is very tight and has the all-important feature of benchmarks along the way to give you and senior staff the key information on progress or problems that need acute attention.

Colonel Pantano is a superb “driver” and I have every reason to believe that the new format will move the process forward with a new sense of urgency.

I can only hope that the Congress will be supportive.

Again, thank you for making the effort to join us and bringing us a solid commitment that the bureaucratic maze that has hampered restoration is going to be modified, significantly modified to accelerate the planning process.

Please give my special best wishes to Rock!

Sincerely,

Nathaniel Reed
Hi Shannon,

Kirk has asked me to set up a meeting at our office with you and Christopher Buckley from our Board of Directors, and possibly Mary Barley as well. Would you be available sometime after 11am on Tuesday, November 15th? That day works best for Mr. Buckley, but Wednesday, November 30th is also an option, though I expect the preference is earlier rather than later.

Could you please let me know what may work for you and I will schedule and confirm with the others?

Thank you,
Nancy

Manley and Kirk: Sara Gonzales-Rothi of Nelson's office does not think Leadership plans to move the bill. There seems to be some push-back from the Senate Commerce Committee that wants to assert jurisdiction.

Sara said there is a meeting today of staff of the Co-sponsors of the bill (all Gulf State Senators, except Cornyn of Texas, to explore ideas on how to move the bill.

Sara will keep me posted with any ideas of how we might be helpful. fowler

Jay and i have been working on behalf of this legislation with National Wildlife Federation etc. We recently met with Pete Michell and the legislation is slogging along slowly in the Senate. Kirk and Fowler i suspect you are tracking this. Recognizing a lot of the revenue from this legislation would go to northern Gulf region most directly impacted by the spill, do you all see that we could get assistance from this source to benefit Everglades restoration for those areas draining into the Gulf of Mexico and the Florida Keys? If you all see potential benefits from this legislation lets team up on this. Manley

Mr. Greg Knecht  
Director, Office of Ecosystem Projects  
Florida Department of Environmental Protection  
3900 Commonwealth Boulevard  
Tallahassee, Florida 32399

Dear Mr. Knecht:

The United States Environmental Protection Agency is appreciative of the new proposal by the South Florida Water Management District (District) for additional water quality treatment projects to meet the phosphorus water quality criterion throughout the Everglades. As you know, in our Amended Determination, the EPA provided the State the opportunity to submit to the EPA an alternative set of projects for meeting the water quality-based effluent limit (WQBEL). Having received that proposal, the EPA, in consultation with experts at the Department of Interior, is currently reviewing the proposal to determine if the proposed set of projects will reasonably assure attainment of the WQBEL for discharges from all Stormwater Treatment Areas (STAs) to the Everglades. The technical review of the proposal is a top priority, and we are making every effort to complete our review in the shortest time possible using the best available scientific information.

The projects proposed by the State for implementation are significantly different from those in the EPA’s Amended Determination. As we understand the proposal, for the Eastern Flow Path, the State is proposing 4,700 acres of STA combined with a water storage reservoir (45,000 acre-feet) rather than 15,000 acres of STA proposed by the EPA. The EPA’s modeling also indicated that a 1,700-acre water storage reservoir would require 8,000 acres of STA. In the Central Flow Path, the State is proposing a 15,000-acre shallow water storage reservoir (54,000 acre-feet) called a flow equalization basin (FEB) rather than the 15,600-acre STA proposed by the EPA. For the Western Flow Path, the State is proposing 1,900 acres of STA rather than a 7,000-acre FEB proposed by the EPA. Many of these differences are related to key modeling assumptions that are different from the assumptions made by the EPA in the modeling to support the Amended Determination. Given these significant differences between the two sets of proposals, the EPA must carefully evaluate the technical basis for the State’s projects to understand the differences and to determine whether the State’s projects will meet the WQBEL.

The State’s continued help in understanding the technical approach and the differences in the assumptions is key to the EPA’s understanding of the effectiveness of project design in meeting the WQBEL. Our recent teleconferences have been productive, and the EPA is committed to continuing this
open dialogue with the State as we make progress in our review of the State's proposal. The District has recently been very helpful in providing data and information to the EPA for our analysis, and we look forward to the continued exchange of information between our technical staffs.

In order to complete our review, the EPA has requested that the District provide additional data and information listed below to assure the modeling output is predicting the STA outflow concentrations with as much accuracy as possible based on the most current information. The current model used by the EPA for the Amended Determination and by the District in designing the current proposed projects includes STA performance data through 2005. There are critical information and data through 2011 (flow, concentrations, depths, vegetation) on STA performance that are still needed for the EPA to complete our review. These data are primarily related to the submerged aquatic vegetation (SAV) cells that provide the final water quality polishing to meet the low limits of the WQBEL. Much of the SAV cell data were collected after 2005 and are not currently incorporated into the model. This data request was provided in an email dated October 18, 2011, from Dan Scheidt (EPA) to Jeremy McBryan (South Florida Waste Management District (SFWMD)) and discussed on our recent technical calls on November 7 and 8, 2011. We need this data as soon as possible to expedite our review.

1.) Daily data for each STA cell: The District produces weekly performance reports for all STAs and distributes them to stakeholders. These are generated from unpublished District databases containing daily values for flow, TP concentration, and water depths for the inflows and outflows from each treatment cell. These daily values are needed for the period of record through 2011 for each STA. The dataset should include the most recent data available, including provisional data marked as such.

2.) Other data: a.) STA topography (bottom elevation and area vs. elevation curve); b.) target vs actual vegetation; c.) management activities including the operating rules for water level; d.) the DBKEYS for retrieving flow and water quality data; e.) operational history milestones (construction, startup, optimization, off-line for repairs, etc...); and f.) the period of record water and phosphorus balances for each STA as a whole, including the effective treatment area during each water year (an update of the file provided by SFWMD to the EPA and used in calibration of the WQBEL: file STA-PORQY2010-SFWMD.xls to include data through WY 2011).

In addition, as soon as the information on the location of the STA-1W expansion and the S5A/C51 storage reservoir is available, we are requesting the District to provide maps and schematics of these features. Until this time, the EPA will work with Florida Department of Environmental Protection and the District to make appropriate assumptions in our modeling which may require refinements when more specifics on these features are determined.
We appreciate the cooperation of the State in our review of your Everglades proposal. We look forward to receiving the data and information. If you have questions, please call me at 404-562-9345 or Gail Mitchell, Water Protection Division Deputy Director at 404-562-9234.

Sincerely,

[Signature]

Correctly, U.S. Interior Department Secretary Ken Salazar wants to make nice with Gov. Scott on the Everglades - but not too nice.

There has been an adversarial relationship between Florida governors and interior secretaries over the Everglades since October 1988. That was when Dexter Lehtinen, the U.S. attorney for the Southern District of Florida, sued the state for failing to clean water flowing onto federal land - namely, Everglades National Park. The Interior Department supervises federal lands. Mr. Lehtinen's...

Hi Kirk –

Hope you're doing well! Finally getting back into the swing of things back here in DC...

Anyways, wanted to give you a quick heads up on the attached amendment the Senator just filed to the energy and water approps bill as I believe it may potentially capture some Everglades projects. If you have any feedback, it would be very welcome.

Thanks and I look forward to hearing from you.

S.

Sara E. Decker
Legislative Assistant

https://webmail.eis.doi.gov/owa/?ae=Item&a=Open&t=IPM.Note&id=RgAAAAAs3OB4a... 1/25/2012
AMENDMENT NO. _______ Calendar No. _______

Purpose: To authorize the Corps of Engineers to carry out any project that meets certain criteria.

H. R. 2354

Making appropriations for energy and water development and related agencies for the fiscal year ending September 30, 2012, and for other purposes.

Referred to the Committee on ________________ and ordered to be printed

Ordered to lie on the table and to be printed

AMENDMENT intended to be proposed by ________________

Viz:

1 At the end of title I of division A, add the following:

2 Sec. 1 . The Corps of Engineers is authorized
to carry out any project for which—

3 (1) there is a signed report of the Chief of En-
gineers by the end of fiscal year 2012; and

4 (2) prior to authorization, the Chief of Engi-
neers certifies that 100 percent of the cost of car-
rying out the project is contributed by a non-Federal
tility or a group of non-Federal entities.
This was my sense as well.

Since I will be in board meetings most of tomorrow and Thursday, after gathering information, perhaps one person could reach out to Sara with some feedback and possibly, some suggested edits.

On Tue, Nov 15, 2011 at 11:33 PM, Hill-Gabriel, Julie <jhill-gabriel@audubon.org> wrote:

Thanks Kirk. I agree that it would be difficult to use this for any of our CERP projects since WRDA 2000 called for the 50/50 cost share unless it could be changed to say that projects CURRENTLY contributed by a non-federal sponsor...but leave open to future crediting from the fed govt under the share agreement.

She is probably thinking this could apply to projects like the C-111 and BBCW but unless the state was willing to give up its credits for this advanced construction or the language was altered that probably wouldn't fly- and asking the state to give up credits could be very dangerous in our big picture.

I would love to talk more about this tomorrow if folks are available.

Do you all know of examples of non-feds paying the full cost for the Corps to do construction where this would apply? Maybe some public/private partnerships?

Dear Friend,

The Children's Movement of Florida invites you to enter for a chance to win big for children. It’s simple. Click here to view prizes or enter.

You could be the lucky winner of:
-- A Royal Caribbean luxury cruise for two.
-- American Airlines round-trip business class tickets to Rio de Janeiro, Brazil.
-- A 2012 Honda Civic 3-year car lease.
-- A year's worth of groceries from Publix ($6,000).
-- A Romero Britto limited-edition serigraph.
-- Marlins tickets and signed memorabilia.
-- Dolphins club-level tickets.
-- Family adventure – Manatee encounter and Zoo Miami behind the scenes tour and annual pass.

A contribution of $25 automatically enters you for a chance to win - and makes you a member of The Movement. Proceeds from the "Dream Prizes" promotion will go towards advocating for measurable goals outlined in our 2012 legislative agenda. To learn more, please visit The Children's Movement of Florida website.

David Lawrence, one of our state's finest leading citizens, is chairing this effort to improve the quality of education and health care for Florida's children. Join me in helping give our state's kids a better future.

Good luck!

Kirk Fordham

Disclaimer

NO PURCHASE OR CONTRIBUTION NECESSARY. Open only to legal residents of Florida, 18 or older. Sweepstakes ends 12/31/11. See full rules at childrensmovementflorida.org for complete details including how to enter without making a contribution.

Supporting Information

ABSTRACT: Direct determination of mercury (Hg) speciation in sulfide-containing environments is confounded by low mercury concentrations and poor analytical sensitivity. Here we report the results of experiments designed to assess mercury speciation at environmentally relevant ratios of mercury to dissolved organic matter (DOM) (i.e., <4 nmol Hg (mg DOM)^{-1}) by combining solid phase extraction using C_{18} resin with extended X-ray absorption fine structure (EXAFS) spectroscopy. Aqueous Hg(II) and a DOM isolate were equilibrated in the presence and absence of 100 μM total sulfide. In the absence of sulfide, mercury adsorption to the resin increased as the Hg:DOM ratio decreased and as the strength of Hg-DOM binding increased. EXAFS analysis indicated that in the absence of sulfide, mercury bonds with an average of 2.4 ± 0.2 sulfur atoms with a bond length typical of mercury-organic thiol ligands (2.35 Å). In the presence of sulfide, mercury showed greater affinity for the C_{18} resin, and its chromatographic behavior was independent of Hg:DOM ratio. EXAFS analysis showed mercury—sulfur bonds with a longer interatomic distance (2.51-2.53 Å) similar to the mercury—sulfur bond distance in metacinnabar (2.53 Å) regardless of the Hg:DOM ratio. For all samples containing sulfide, the sulfur coordination number was below the ideal four-coordinate structure of metacinnabar. At a low Hg:DOM ratio where strong binding DOM sites may control mercury speciation (1.9 nmol mg^{-1}) mercury was coordinated by 2.3 ± 0.2 sulfur atoms, and the coordination number rose with increasing Hg:DOM ratio. The less-than-ideal coordination numbers indicate metacinnabar-like species on the nanometer scale, and the positive correlation between Hg:DOM ratio and sulfur coordination number suggests progressively increasing particle size or crystalline order with increasing abundance of mercury with respect to DOM. In DOM-containing sulfidic systems nanocolloidal metacinnabar-like species may form, and these species need to be considered when addressing mercury biogeochemistry.

INTRODUCTION

Predicting the fate and transport of soft, chalcophilic metals in the environment depends in part on metal speciation in the presence of sulfide and dissolved organic matter (DOM). The speciation of mercury (Hg) is of particular concern because of the potential formation of methylmercury (especially in sulfate-reducing systems) and bioaccumulation in aquatic food chains. Studies of other metals have identified nanocolloidal metal-sulfide minerals in sulfide-containing systems, including ZnS(s) in biofilms and at microbial interfaces, and CuS(s) in experimentally flooded wetlands and experimental systems containing DOM. Colloidal mercury-sulfide minerals, particularly metacinnabar (β-HgS(s)), the low-temperature polymorph of HgS(s), have been observed in experimental systems and at mining and contaminated field sites but not in natural sulfate-reducing environments with relatively low mercury concentrations and no point-source contamination.

Efforts to thermodynamically model the speciation of Hg(II) primarily focus on Hg-DOM complexes in the absence of sulfide and Hg-sulfide complexes in the absence of DOM. Provided the mercury concentration is sufficiently low, DOM exhibits a high affinity for Hg(II), dominating mercury speciation in typical oxic surface waters. The high strength of Hg-DOM interactions at low Hg:DOM ratios, coupled with directly observed mercury-soil organic matter binding sites, suggests DOM binding sites are thiol-like in nature, although the mercury coordination environment has never been directly observed in aquatic DOM as it has been in soil organic matter. Studies of mercury speciation with sulfide in the absence of DOM show rapid precipitation of metacinnabar and a number of dissolved mercury-sulfide complexes (e.g., HgH_{2}S_{2}^{2-}, Hg(HS)_{2}^{0}, HgS_{2}^{2-}, HgS^{0}), of which neutrally charged complexes have been hypothesized to be the most important for methylation.
Thermodynamic models that suggest mercury-sulfide complexes do not dominate mercury speciation at low mercury concentrations do not compare well with empirical observations of colloidal HgS(s) stabilized by DOM in experimental systems. In sulfide- and DOM-containing systems with a mercury concentration of 50 µM, metacinnabar particles were observed as particles or aggregates of less than 100 nm in diameter. At 50 nM Hg, the particles or aggregates, if present, were too small to remove via conventional centrifugation. Similar work using ultracentrifugation has demonstrated removal of mercury particles from solutions with concentrations as low as 1 nM Hg, although the removed mercury was only definitely characterized as metacinnabar-like at 10 µM Hg. The metacinnabar particles formed in the presence of DOM, sulfide, and relatively high concentrations of total mercury (i.e., >10 µM) become coated with DOM, which increases electrostatic repulsion and prevents aggregation and bulk precipitation of metacinnabar. The direct observation of DOM-stabilized metacinnabar particles is limited to studies conducted at mercury concentrations far in excess of most natural systems, where only the weakest DOM binding sites are relevant for mercury speciation. Speciation calculations, however, suggest that DOM-stabilized HgS(s) may also be present at common environmental levels of mercury, DOM, and sulfide.

The goal of this study was to empirically determine mercury speciation in DOM-containing solutions with and without free aqueous sulfide at Hg:DOM ratios and total mercury concentrations that are lower than previously studied and span a range of Hg:DOM binding strengths. We adopted a solid phase extraction (SPE) method previously used to determine Hg-DOM binding constants to concentrate hydrophobic mercury species and applied this method over a wide range of Hg:DOM ratios. The speciation of mercury concentrated by SPE was subsequently examined with extended X-ray absorption fine structure (EXAFS) spectroscopy for samples of selected Hg:DOM ratios. The results presented in this paper provide direct insight into the nature of the Hg-DOM bond and on the role of DOM in mercury speciation in sulfidic environments.

**Methods**

**DOM Isolation.** Whole water was collected from the FI site (26°21′35″N, 80°22′14″W) in the Florida Everglades, filtered through a 0.3 µm glass fiber filter, acidified to pH 2 with HCl, and passed through a column of Amberlite XAD-8 resin according to the method of Aiken et al. The hydrophobic acid fraction (HPoA; comprised of humic and fulvic acids) was retained on the XAD-8 resin and eluted with 0.1 N NaOH. The eluate was hydrogen-saturated, desalted, freeze-dried, and stored for later use. This DOM isolate has been used in several studies of mercury-organic matter interactions.

**Experimental Solutions.** Two identical sets of experimental solutions were prepared — a set for experiments only involving SPE and a set for SPE followed by EXAFS analysis of mercury on the resin. Experimental solutions for both sets were prepared in deionized water (≥18.0 MΩ cm resistivity) and contained 0.01 M NaH₂PO₄ enough NaClO₃ to bring the ionic strength to 0.1 M (as calculated by Visual MINTEQ) and an appropriate amount of 0.1 M NaOH to bring the pH to 6.5 ± 0.1. DOM stock solution was prepared daily, filtered (0.45 µm Supor membranes), and added to the experimental solutions to yield a DOM concentration of approximately 10 mg L⁻¹ for all SPE and most SPE-EXAFS experiments (measured range 8.6–11.3 mg DOM L⁻¹). Some of the SPE-EXAFS experiments were conducted at approximately 50 mg DOM L⁻¹. Appropriate volumes of Hg(II) solution (Hg(NO₃)₂ in 10% HNO₃) were spiked into the experimental solutions to achieve mercury concentrations ranging from 0.35 nM to 1.4 µM. The range of mercury and DOM concentrations allowed some experiments to be conducted at a Hg:DOM ratio at or below 4 nmol Hg (mg DOM)⁻¹, the ratio at which all strong binding DOM sites become saturated and weak-binding sites begin to also bind mercury. Sulfide-containing solutions were prepared in an oxygen-free glovebox. Sodium sulfide (Na₂S·9H₂O; washed before use) stock solution was prepared daily and added to experimental solutions to bring the total sulfide concentration to 100 µM. Solution bottles were wrapped with aluminum foil to prevent photoreactions and allowed to mix at room temperature on a shaker table rotating at 150 rpm. Solutions were equilibrated for 20–24 h, which has been shown elsewhere to give sufficient time for Hg-DOM equilibration and Hg-DOM-sulfide equilibration. Containers for solution/stock preparation and sampling were glass with Teflon-lined caps cleaned in a solution of 10% HNO₃ and 10% HCl (trace metal-grade) for at least 24 h and baked at 400°C for 4 h.

**Solid Phase Extraction.** The SPE portion of the experiments was carried out on glass columns (10 cm length, 0.9 cm diameter; Spectrum Chromatography) packed with 0.500 g of C₁₈ resin (Supelclean ENVI-18, Spectrapor). The column fittings and lines were Teflon, except for the pump tubing, which was polyvinyl chloride. Resin-free columns and tubing were cleaned with a mixture of 10% HNO₃ and 10% HCl and rinsed repeatedly with deionized water. Clean resin was prepared in the column by suspending resin in methanol and rinsing (20 min per rinse at 4 mL min⁻¹) with deionized water followed by 5 mM HCl, repeating once, and concluding with deionized water. The loss of mercury to a resin-free column (<5%) and contamination from a resin-filled column (<0.03 nM) were sufficiently small to be ignored in the subsequent SPE experiments, but there was some DOC contamination from resin-filled columns (<5 mg C L⁻¹; presumably methanol).

Cleaned and resin-filled columns were loaded with approximately 1 L of experimental solution for SPE experiments and 2 L of solution for SPE-EXAFS experiments. Experimental solutions were pumped through the cleaned resin-filled columns at a flow rate of 4.0 ± 0.2 mL min⁻¹. After expunging the first 2 mL of solution out of each column, the remaining loaded volume was collected as effluent fractions for chemical analyses. Resin was harvested from the column following solution loading and was stored under an oxygen-free atmosphere for sulfide-containing experiments until EXAFS analysis. Mercury recovery from the SPE experiments, including mercury in effluent fractions and mercury adsorbed to the resin, was greater than 90% of the total mercury loaded. Error in the SPE of mercury was related to errors in mercury measurements (described in next section) and depended on the amount of mercury passing through the resin. At high retentions (>90%) the error was less than 1% retained mercury, and at lower retentions (~60%) the error was approximately 4% retained mercury.

**Sample Analysis.** Dissolved organic carbon (DOC) concentrations were determined using a total organic carbon analyzer (O1 Analytical Model 700). DOM concentrations were calculated based on DOC measurements and the carbon content of
the Everglades F1 HPOA isolate (52.2% C by mass). Measurements of ultraviolet and visible light absorbance at wavelengths ranging from 254 to 412 nm were made using a UV–visible spectrophotometer (Agilent model 8453) with a 1 or 5 cm path length quartz cuvette.

Total aqueous mercury concentrations in initial and effluent samples from the SPE were determined by cold vapor atomic fluorescence spectroscopy using a Millennium Merlin mercury analyzer according to EPA Method 245.7. Analytical mercury stocks were prepared from National Institute of Standards and Technology (NIST) standard reference material 3133. Mercury standards and most samples were oxidized with 1% (v/v) KBr/KBrO₃ solution. High DOM and sulfide-containing samples were oxidized with 2% (v/v) KBr/KBrO₃ solution to ensure sufficient residual oxidant to preserve mercury after oxidation of organic matter and sulfide species. Acceptable recovery of standards was 80–120% with less than 20% relative difference in duplicate measurements. Typical recovery was 90–110% with less than 10% relative difference. The detection limit for any given run was always below 0.013 nM Hg based on three standard deviations of seven replicates of a sample with a concentration one-half of the lowest standard.

Extended X-ray Absorption Fine Structure Spectroscopy. Resin samples were prepared for EXAFS by loading 2 L of the experimental solutions outlined in SI Table 1 onto C₁₈ resin. Two liters of solution were necessary to maximize the amount of mercury loaded onto the resin due to the relatively high concentration threshold (approximately 40 ppm Hg) needed to collect viable EXAFS spectra. The top third of the resin in the column was removed from the column and used for EXAFS analysis because solid phase mercury analysis indicated it was more concentrated than the resin in the bottom two-thirds of the column.

EXAFS data were collected on wiggler beamline 11–2 at the Stanford Synchrotron Radiation Lightsource using a Si(220) monochromator crystal in the φ = 90° crystal orientation. Mercury L₃-edge EXAFS spectra were collected using an aluminum coldfinger liquid nitrogen cryostat (77 K) to minimize thermal vibration and improve the quality of the spectra from low mercury concentration samples. The resin samples were loaded into aluminum holders in an oxygen-free environment, enclosed in Kapton tape, and quickly transferred to the liquid nitrogen cryostat to minimize exposure to oxygen. Spectra were collected on a 32-element high-throughput germanium detector in fluorescence-yield mode. Gasson filters were used to minimize interference from inelastic scattering. HgCl₃ was used as an internal standard for energy calibration of each spectrum collected.

Multiple scans (13–22) were collected for each sample, energy-corrected using the calibration standard, deadtime-corrected for potential loss of signal due to finite photon detection times, and averaged together. After background subtraction, the data were converted to k-space with a k²-weighting and Fourier-transformed. The EXAFS spectra were fit over a k-range of 2.0–9.5 Å⁻¹ using phase and amplitude functions from model single-shell scattering paths generated in SIXPack using Fététő. Hg–C, Hg–O, and Hg–S models (the only realistic first shell interactions in Hg-DOM-sulfide systems) were created and constrained based on the results of the first shell fitting of the resin samples. Mixed interactions were attempted (i.e., Hg–O and Hg–S), but single atom interactions consistently proved to be better fits. Given the limited energy range over which spectra were resolvable, only first shell fitting was successfully completed for each resin sample. The scale factor (S₀) was fixed at 0.9 for all samples, and the Debye–Waller factor (σ²), which serves as a measure of thermal vibration and static disorder around mercury in the sample, was first allowed to float for all fits; the average Debye–Waller factor for all samples (0.007 Å²) was selected and final fits fixed at this value in order to directly compare fitting results between samples.

RESULTS

DOM Solid Phase Extraction. The absorption of ultraviolet and visible (UV–vis) light was used to track DOM adsorption to the C₁₈ resin because small amounts of methanol contamination in effluent fractions led to erratic DOC measurements. DOM retention by the resin was consistent regardless of mercury concentration (0.35 nM–1.4 µM) or the presence or absence of sulfide (Figure 1a). DOM retention decreased as the volume of loaded solution increased (SI Figure 1). The fraction of UV–vis-absorbing components retained by the resin increased with increasing wavelength but was generally low — less than 35%. The UV–vis absorbance of DOM at 254 nm correlates well with the aromaticity of the organic matter, although more conjugated molecules are expected to absorb at 412 nm. These data indicate that the more conjugated organic molecules are also somewhat more hydrophobic and preferentially adsorb to the resin.

Mercury Solid Phase Extraction. Retention of mercury by C₁₈ resin was a function of mercury concentration and the presence or absence of sulfide (Figure 1b), unlike the retention of DOM. Mercury adsorption to the column did not change substantially through the course of loading up to 1 L of sulfide-free solution (SI Figure 2). The overall efficiency of mercury adsorption from sulfide-free solutions was dependent on the mercury concentration in the loading solution (Figure 1b). At 5.6 nM Hg and below, the retention of mercury was 85–91%. At 39 nM Hg and above, retention dropped to 48–61%.

Retention curves for mercury in systems containing 100 µM total sulfide were distinctly different from those without sulfide (SI Figure 2). The retention of mercury from a sulfide-containing solution with 0.45 nM Hg increased as the total volume loaded increased. In contrast, at mercury concentrations from 1.5 to 490 nM, the mercury adsorption was consistently high (Figure 1b, SI Figure 2). Based on these chromatography results, the mercury species formed in the presence of sulfide at higher mercury concentrations are slightly more hydrophobic (>99% retention at 490 nM) than those formed at lower mercury concentrations (95% retention at 1.5 nM) and substantially more hydrophobic than those formed in the absence of sulfide. For all cases, greater than 60% of the mercury retained by the resin was present in the top one-third of the column based on solid phase analysis.

The 0.45 nM Hg and sulfide solution resulted in uncommon chromatographic behavior — the retention of mercury increased as the volume of solution loaded onto the resin increased. Such behavior indicates that the sorbent phase becomes more favorable for the sorption of the compound in solution as the amount
of the sorbed compound increases. In the mercury-DOM-sulfide systems in this study, two components are accumulating on the resin—mercury and DOM—and either could be responsible for the increased retention of mercury with loaded volume. Either the adsorption of mercury from solution could promote the sorption of more mercury, which could potentially lead to the formation of mercury species on the resin which are not present in solution, or the adsorption of DOM from solution could promote the adsorption of more DOM along with the bound mercury species.

To determine which mechanism was responsible for the increasing mercury retention with increased loading, we compared the retention of mercury from the 0.45 nM Hg, 100 µM sulfide, 10.6 mg DOM L⁻¹ solution with the retention of mercury after the resin was preloaded with DOM (Figure 2). A mercury-free preloading solution (9.8 mg DOM L⁻¹, 100 µM sulfide, 428 mL) was loaded onto C₁₈ resin and followed with an identical solution that also contained 0.40 nM Hg. The DOM retention was identical in both systems as indicated by the retention of UV₂₅₄ absorbing components (Figure 2). After preloading the resin with DOM, mercury retention was initially very high (>97%), and the retention did not increase with increased loading volume as observed in the system without preloading. We interpret the difference in mercury retention to mean that mercury—mercury interactions were not driving mercury retention because the DOM-preloaded system showed high mercury retention at the beginning of mercury loading. Had mercury retention increased with volume after DOM preloading, there would have been evidence for mercury—mercury interactions, which would have brought into question whether the mercury species on the resin are present in solution. Instead, we surmise that DOM served as a bridge between the mercury species in solution and the resin, and an abundance of DOM on the resin increased mercury affinity for the sorbent phase.

Extended X-ray Absorption Fine Structure Spectroscopy. Experimental and fitted mercury K-edge EXAFS spectra and the Fourier transforms corresponding to the conditions outlined in SI Table 1 are shown in Figure 3. The EXAFS spectra of the three sulfide-containing systems (Figure 3b, 3c, and 3d) are in phase with one another and out of phase with the sulfide-free sample (Figure 3a). This corresponds with the alignment of the primary Fourier transform features of the sulfide-containing samples (indicated in Figure 3 by a vertical line) and the misalignment of the sulfide-containing samples with the sulfide-free sample. The spectra for samples with added sulfide (3b, 3c, and 3d) were best modeled by a mercury—sulfur bond in the first shell with a Hg—S interatomic distance of 2.51 ± 0.02 Å, depending on the sample; Figure 3). The mean sulfur coordination number for the sulfide-containing samples increased with increasing Hg:DOM ratio from 2.3 ± 0.2 sulfur atoms at 1.6 nmoHg (mg DOM)⁻¹ to 3.3 ± 0.2 sulfur atoms at 34 nmoHg (mg DOM)⁻¹. The spectra for the sample without added sulfide (3a) was also best modeled by mercury—sulfur bonds in the first shell, despite the absence of added sulfide in the sulfide-free system. The Hg-DOM interaction was fit with a significantly shorter Hg—S distance of 2.35 ± 0.01 Å and a coordination number of 2.4 ± 0.2 sulfur atoms.
Mercury concentrations below 5.6 ppm correspond to a transition between 0.67 and 4.6 nmol Hg per mg DOM. Below the 4 nmol Hg per mg DOM strong binding capacity of the DOM, the Hg-DOM complexes are significantly more hydrophobic with respect to the C18 resin than they are above the strong binding capacity. The transition from more to less hydrophobic complexes as the Hg:DOM ratio increases past 4 nmol Hg per mg DOM corresponds to the transition from thiol-like Hg-DOM binding strengths to carboxyl-like Hg-DOM binding strengths. Both types of complexes are significantly more hydrophobic than the mercury-free DOM, which is only retained at about 20% as measured by the retention of UV254 absorbing components (Figure 1a). The sulfur dominated binding environment observed with EXAFS at 4 nmol Hg per mg DOM is likely only present in a small subset of DOM molecules and that subset is more hydrophobic than other portions of the DOM pool. The chromatography data shown in Figure 1b, coupled with our understanding of DOM binding strengths, suggests that the small number of DOM molecules involved in the directly observed sulfur dominated mercury binding at 4 nmol (mg DOM)$^{-1}$ persist at lower, more environmentally significant Hg:DOM ratios where EXAFS was not possible.

Mercury-Dissolved Organic Matter-Sulfide Interactions. The EXAFS spectra from all three sulfide-containing samples were best fit with a Hg-S scattering interaction at an interatomic distance of 2.51–2.53 Å (Figure 3). The Hg-S interatomic distance from all three samples agrees, within uncertainty, with the 2.53 Å Hg–S distance in crystalline metacinnabar. The observed EXAFS spectra are not consistent with cinnabar (which has six coordinating sulfur atoms at three distinct distances), polymeric HgS species that exhibit two sulfur atoms at a shorter distance of 2.30 Å, or the Hg-S interaction described previously. In addition, simultaneous fits of a Hg–S scattering path at 2.53 Å with a strong binding capacity at 4 nmol (mg DOM)$^{-1}$ are significantly worse than fits with a Hg–S scattering interaction at 2.30 Å and a strong binding capacity at 4 nmol (mg DOM)$^{-1}$.

When normalized to the DOM content of each system (all had approximately 10 mg DOM L$^{-1}$), the transition observed between 5.6 and 39 nM Hg corresponds to a transition between 0.67 and 4.6 nmol Hg per mg DOM. Below the 4 nmol Hg per mg DOM strong binding capacity of the DOM, the Hg-DOM complexes are significantly more hydrophobic with respect to the C18 resin than they are above the strong binding capacity. The transition from more to less hydrophobic complexes as the Hg:DOM ratio increases past 4 nmol Hg per mg DOM corresponds to the transition from thiol-like Hg-DOM binding strengths to carboxyl-like Hg-DOM binding strengths. Both types of complexes are significantly more hydrophobic than the mercury-free DOM, which is only retained at about 20% as measured by the retention of UV254 absorbing components (Figure 1a). The sulfur dominated binding environment observed with EXAFS at 4 nmol Hg per mg DOM is likely only present in a small subset of DOM molecules and that subset is more hydrophobic than other portions of the DOM pool. The chromatography data shown in Figure 1b, coupled with our understanding of DOM binding strengths, suggests that the small number of DOM molecules involved in the directly observed sulfur dominated mercury binding at 4 nmol (mg DOM)$^{-1}$ persist at lower, more environmentally significant Hg:DOM ratios where EXAFS was not possible.

Mercury-Dissolved Organic Matter-Sulfide Interactions. The EXAFS spectra from all three sulfide-containing samples were best fit with a Hg–S scattering interaction at an interatomic distance of 2.51–2.53 Å (Figure 3). The Hg–S interatomic distance from all three samples agrees, within uncertainty, with the 2.53 Å Hg–S distance in crystalline metacinnabar. The observed EXAFS spectra are not consistent with cinnabar (which has six coordinating sulfur atoms at three distinct distances), polymeric HgS species that exhibit two sulfur atoms at a shorter distance of 2.30 Å, or the Hg–S interaction described previously. In addition, simultaneous fits of a Hg–S scattering path at 2.53 Å are significantly worse than fits with a Hg–S scattering interaction at 2.30 Å and a strong binding capacity at 4 nmol (mg DOM)$^{-1}$.

When normalized to the DOM content of each system (all had approximately 10 mg DOM L$^{-1}$), the transition observed between 5.6 and 39 nM Hg corresponds to a transition between 0.67 and 4.6 nmol Hg per mg DOM. Below the 4 nmol Hg per mg DOM strong binding capacity of the DOM, the Hg-DOM complexes are significantly more hydrophobic with respect to the C18 resin than they are above the strong binding capacity. The transition from more to less hydrophobic complexes as the Hg:DOM ratio increases past 4 nmol Hg per mg DOM corresponds to the transition from thiol-like Hg-DOM binding strengths to carboxyl-like Hg-DOM binding strengths. Both types of complexes are significantly more hydrophobic than the mercury-free DOM, which is only retained at about 20% as measured by the retention of UV254 absorbing components (Figure 1a). indicative of Hg-DOM complexes showed no significant DOM binding in systems that contained sulfide.

The Hg–S bond distance is independent of Hg-DOM ratio for the three sulfide-containing samples and matches well with metacinnabar, but the sulfur coordination numbers are all lower than the four-coordinate structure of crystalline metacinnabar. The modeled coordination numbers may be explained by imperfectly ordered crystal structures or nanosized HgS(s) particles where under-coordinated mercury atoms on the particle surface comprise a large percentage of all mercury atoms in the phase. The disorder in the particles may even be greater than the coordination number implies because the Debye–Waller factor was fixed in the EXAFS modeling, which implicitly assumes that changes in the spectra were related to changes in coordination number and not the degree of disorder. The modeled coordination number increases with increasing Hg-DOM ratio (Figure 3, samples b, c, and d), which suggests that the Hg-DOM ratio is an important factor in dictating the size or crystalline order of the metacinnabar-like species. Metacinnabar-like species formed at the lowest Hg-DOM ratio resemble the initial phases of metacinnabar crystallization characterized by under-coordinated mercury atoms, whereas the metacinnabar-like species formed at the highest Hg-DOM ratio resembles a structure approaching that of bulk crystalline metacinnabar. The interaction of DOM with particle surfaces and subsequent control of particle aggregation has been documented for HgS(s)7–9 and other metal sulfides and metal oxides (e.g., refs 6 and 42), although the formation of HgS(s) has never been directly observed at the mercury concentrations and Hg-DOM ratios at which mercury is interacting with the strongest DOM binding sites. The strong DOM binding sites are not strong enough to prevent the formation of metacinnabar, but the metacinnabar that forms when mercury speciation is dominated by thiol sites is smaller or less ordered than metacinnabar formed at higher Hg-DOM ratios. Our results show that the portion of DOM interacting with the surface of HgS(s) and preventing growth is more hydrophobic with respect to fractionation on C18 resin than the DOM that remains in solution. The majority of the DOM in our SPE experiments passed through the column, although the portions of the DOM that absorb light at higher wavelengths, which presumably represents greater conjugation, are retained on the resin to a greater degree than the bulk DOM (Figure 1). Additionally, the hydrophobic fraction retained by the resin favors adsorption of metacinnabar-like mercury species (Figure 2). These results are supported by previously observed preferential adsorption of aromatic DOM molecules to colloidal metacinnabar particles.7

EXAFS-derived coordination numbers can be used to estimate particle sizes when they are significantly lower than the coordination number of the bulk phase and the particles are well ordered.43,44 The less-than-ideal sulfur coordination numbers for the three metacinnabar-like samples observed in this study indicate the particles are on the nanometer scale. Referred to as the termination effect, this phenomenon arises when under-coordinated atoms on a particle surface make up a significant fraction of the atoms in the particle. The abundance of under-coordinated atoms drives down the average coordination number for particles in the diameter range of tens of nanometers or less. If we assume that the HgS(s) is perfectly crystalline, the less-than-ideal coordination numbers of the mercury–sulfur bonding observed in this study point to particles that are less than 20 nm in diameter, with the smallest (and most under-coordinated) particles as small as just a few nanometers in diameter. In a previous study designed to assess the importance of DOM in inhibiting the precipitation of metacinnabar, metacinnabar colloids decreased in size with decreasing mercury concentration. The minimum mercury concentration for direct characterization, 50 µM, led to metacinnabar particles or aggregates less than 100 nm as determined by centrifugation. We have now identified evidence for smaller metacinnabar-like nanoparticles at 50 nM Hg. Our results are also consistent with observations at 10 µM Hg of poorly crystalline and under-coordinated HgS(s) particles that are on the nanometer scale.8

The results presented here contrast with the conclusions of octanol–water partitioning studies which suggest neutrally charged species (e.g., HgS and Hg(SH)2) dominate mercury speciation in the presence of sulfide in natural environments.23 DOM significantly alters the octanol partitioning of Hg–S species when mercury concentrations are as low as 0.1 nM, and the partitioning of amorphous metacinnabar-like nanoparticles to octanol has been demonstrated at a mercury concentration of 3 µM.9 Our study bridges the concentration divide by empirically observing a metacinnabar-like species at an intermediate mercury concentration, which chromatography suggests is present at even lower mercury concentrations than could be directly observed with EXAFS. Mercury-sulfide speciation modeling predicts metacinnabar will form at the intermediate and high mercury concentrations used in this study. However, the speciation modeling is ambiguous at the low concentrations in this study below about 4 nM Hg because on the uncertainty in thermodynamic constants (constants for the modeling reproduced in SI Table 2). If metacinnabar is not formed below 4 nM, then speciation modeling predicts hydrophilic complexes (primarily HgHS2−) will dominate in these systems (quantitative speciation presented in SI Figure 3). Hydrophilic complexes will not be retained by the C18 resin. Our data show the mercury species in sulfidic systems are consistently retained at high levels by the resin, which indicates that the HgS(s) observed at higher mercury concentrations also dominates at lower, more environmentally relevant concentrations. Modeling efforts elsewhere have shown that uncertainty in thermodynamic constants, particularly the metacinnabar solubility product, makes mercury speciation difficult to predict at environmentally relevant concentrations.9 Our results provide empirical evidence that a discrete inorganic metacinnabar-like phase is stabilized by dissolved organic matter at mercury concentrations and Hg-DOM ratios that are more representative of natural systems.

Environmental Implications. Conventional filtration methods are insufficient to diagnose the presence or absence of nanosized particles in the environment; however, the potential exists to use a chromatographic approach to detect the presence of mercury-containing nanoparticles. Hsu-Kim and Sedlak45 noted the adsorption of mercury species to C18 resin when a wastewater effluent sample was exposed to sulfide. As that study and another5 have noted, some of those mercury species are not labile to a strong competing ligand, such as glutathione, whereas dissolved complexes with organic matter are labile. Now that direct observation of mercury speciation has identified metacinnabar (or at least, a metacinnabar-like phase) as a potential source of that nonlabile portion at lower mercury concentrations approaching environmentally relevant concentrations, the potential exists to identify similar species in natural anoxic waters with a chromatographic approach.
mercury into methylmercury. While this study does not attempt to
determine the role of speciation in methylation, it provides
evidence that sulfate-reducing microbes, which typically reside in
sulfide- and organic matter-rich environments, are likely to be
exposed to disordered, nanoparticulate metacinnabar stabilized
by dissolved organic matter. Our results are consistent with the
observation of poorly crystalline, nanometer-scale HgS(s) parti­cles
in a mercury contaminated site and illuminate the role of
DOM in HgS(s) formation and stabilization. The mechanism of
that stabilization, the rate of nanoparticle growth and aggrega­
tion, and the role DOM-coated nanoparticulate metacinnabar plays
in methylation are critical areas for further research. In
addition, the thermodynamics of a nanoparticulate phase are not
necessarily well represented by thermodynamic constants of the
bulk phase and thus mercury speciation models may need to
account for disordered nanoparticulate HgS(s).

Kirk,

I don't know how she did it, but I am assuming it was Debbie Weatherly who worked miracles to get us 25 million for real estate interests so we can flow water under the TT bridge AND the authority to build the next 5.5 miles of bridging!!! I cannot express how relieved and excited I am about this. What a wonderful Christmas present!!!!

Shannon

Everglades, Kissimmee River restoration projects get boost from federal spending bill

By Craig Pittman, Times Staff Writer
Posted: Dec 21, 2011 04:33 PM

Amid bitter partisan disputes over payroll tax cuts and other budgetary wrangling, the spending bill that Congress passed and President Barack Obama signed contains $142 million for restoring the Everglades and the Kissimmee River.

In a news conference Wednesday U.S. Sen. Bill Nelson, D-Fla., credited a rare bipartisan effort to get the funding pushed through, and praised the work of U.S. Rep. C.W. Bill Young, R-Indian Shores, in keeping the Everglades funding intact in the House.

Meanwhile Kirk Fordham, CEO of the Everglades Foundation, noted the role played by the ongoing presidential race.

"It doesn't hurt that Florida tends to be a swing state in presidential elections," he said.

He said Florida's congressional delegation has done a good job of convincing their colleagues that restoring the Everglades is crucial for the Florida economy. Without it, South Florida will struggle to find enough water, he pointed out.

Nelson and Fordham also singled out a change in attitude by Republican Gov. Rick Scott, who in his first year in office proposed spending only $17 million for the Everglades. The Legislature raised that to nearly $30 million.

Now Scott has requested $40 million for next year, a move that helped persuade Congress that

Well, he is a serious reporter who writes for the biggest paper in the state, so even if he doesn't include the info in his story, I hate to not be able to answer fairly basic questions.

It's more about ongoing credibility!

But the bottom line is that it's a good story. Merry Christmas.

South Florida's rocky reservoir history doesn't stop new water storage proposal

By Andy Reid, Sun Sentinel
6:34 p.m. EST, December 26, 2011

One unfinished South Florida reservoir collected more taxpayer money — nearly $280 million — than water.

Another $217 million reservoir has plenty of water, but not the pumps needed to make use of it.

Despite those reservoirs already costing South Florida taxpayers nearly half a billion dollars combined. the push is on to build a third reservoir, expected to cost more than $300 million.

Backers of the new reservoir proposal in Palm Beach County contend it offers a unique opportunity to boost regional water supplies. It would provide an alternative water supply needed for new growth, said project consultant John "Woody" Woodraska.

"It helps the environment. It gives ... flexibility from a water supply standpoint," said Woodraska, former head of the South Florida Water Management District.

That's similar to the pitch used for the other two reservoirs, also in Palm Beach County, that ended up sidetracked by changing political winds and funding problems. South Florida keeps sinking too much money into reservoirs when it should be restoring wetlands and requiring more conservation, said Drew Martin, of the Sierra Club.

"You are basically buying a very expensive solution," Martin said. "The cheaper solution is called conservation."

Palm Beach County Commissioner Karen Marcus questions the potential cost of building another reservoir. She said better use should be made of the existing reservoir.

"I have serious reservations about it," Marcus said. "You already have a pit out there that doesn't seem to be working. There are other options out there that I think ought to be considered."

South Florida averages more annual rainfall than Seattle, but much of that water gets drained out to sea to avoid swamping farms and towns built on what used to be the Everglades or other wetlands.

An Everglades restoration plan approved in 2000 includes building a series of reservoirs that would hold onto more water for both the environment and growing communities.

"Storage is the key to an awful lot of our problems," said Pete Quasius of the Collier County Audubon Society, on Florida's west coast. "We need to look at storage, storage, storage."

Creating that water storage remains a key shortcoming of Everglades restoration efforts.

South Florida reservoir projects include:

The Everglades Agricultural Area Reservoir in southwestern Palm Beach County was intended to become a 18,700 acre, 82 billion gallon water storage facility to supplement water supplies. The South Florida Water Management District in 2008 opted to stop construction and shelve the project after taxpayers had already invested nearly $280 million.

The district initially blamed the decision to stop mid-construction on a longstanding lawsuit from environmental groups over how to divvy up the water.

But just a few weeks later, the district and Gov. Charlie Crist announced a bid to buy U.S. Sugar Corp. land for Everglades restoration. That ended up changing the timetable and locations of water storage efforts, which have yet to be resolved.

The L-8 Reservoir built from old rock mines at Palm Beach Aggregates, west of Royal Palm Beach, was intended to store water to replenish the Loxahatchee River and supplement community drinking water supplies.

The district's 15 billion gallon, $217 million reservoir was completed in 2008, but it still doesn't include $60 million pumps needed to deliver the water as planned. The district blames water quality problems in the reservoir on a lack of pumps to help circulate the water.

The new reservoir could be built alongside the L-8 Reservoir at Palm Beach Aggregates, collecting stormwater that now drains out to sea through the C-51 canal.

The canal that stretches through West Palm Beach dumps about 217 million gallons of water a day into the Lake Worth Lagoon, washing pollutants in to the lagoon and wasting water that could supplement community supplies.

A new reservoir could reduce the dumping into the lagoon and during droughts provide about 185 million gallons of water a day to restock drinking water well fields in Palm, Broward and eventually Miami-Dade counties, according to district estimates.

The water could be moved south through canals operated by the Lake Worth Drainage District and the cost could end up getting tacked onto South Florida water bills.

An updated cost estimate for the new reservoir is expected soon. Deciding whether to move forward requires determining how to pay for it and how to divvy up the water.

"We will just need to have those debates," said Melissa Meeker, district executive director.

and every other scumball involved. The taxpayers need to demand a REFUND. Quite frankly Dade and
Broward need to stop overbuilding and realize where water comes from. Bergeron and Rinker have
100's of acres of rock mining pits so why isn't that not being utilized as water storage?

cgridley01 at 6:10 PM December 26, 2011
S. Fla could have built a plant to change saltwater to fresh with all the money spent over the last 30
years, I remember my water bill was 150 bucks a month when I lived in 07, my daughters runs 200 in
Boca now, she pays more for water than gas every month, and if half of you knew what was in your
water you wouldn't touch it, let alone bathe in it, even the people who make don't know what's in it!!!

eililily at 9:42 AM December 26, 2011
It would be nice for Lake Worth (the body of water, not the pissant city) if the sediment-laden discharges
of the Palm Beach Canal ended, but we really need to get some of these other projects done and
operational before we start on another. The Ten Mile Creek WPA in Ft Pierce was another project that
was "completed", at a cost of over $20 million, and then couldn't be used. There seems to be a string of
these failed water storage attempts in South Florida and we really need to know why it keeps happening
before we spend any more money.
Attached is a formal letter for your chief of staff and scheduler.

Hope he can make it!

December 28, 2011

Ken Salazar, Secretary  
U.S. Department of the Interior  
1849 C Street, N.W.  
Washington DC 20240

Dear Secretary Salazar,

On January 17, 2012, the Everglades Foundation will be hosting the Everglades Water Supply Summit in Tallahassee, Florida. The event is aimed at fostering a dialogue emphasizing the importance of a clean and abundant supply of water to both the future of the Everglades and Florida's economy -- and we hope that your voice will be part of that dialogue.

We would be honored to have you participate at the Summit which runs from 2:00 PM to 4:00 PM at the Florida State University Turnbull Conference Center (555 West Pensacola Street, Tallahassee, Florida 32306-1640). We invite you to be on a panel that will address the next steps in Everglades restoration.

Other confirmed speakers for the Summit include Governor Rick Scott, Senate President Mike Haridopolos, Agriculture Commissioner Adam Putnam, and Paul Tudor Jones, Chair of the Everglades Foundation. Chuck Todd, NBC White House Correspondent will moderate the panel. Your perspectives and your leadership will help educate the next generation of legislators, business people, and environmental advocates on the importance of a healthy Everglades to the natural system and Florida's economy.

I hope that your schedule will allow you to speak on this panel. To RSVP or if you have any other questions please do not hesitate to contact me at kfordham@evergladesfoundation.org. For more information, including lodging and other logistics, please contact my assistant, Nancy Hill at nhill@evergladesfoundation.org.

Sincerely,

Kirk Fordham  
CEO

We hope to see you in Tallahassee next month!
good morning

Happy 2012! Strap on your seat belt, the next few months are going to be a wild ride!

I want to confirm you received this letter last week.

Since everyone is just digging out on their first day back after the holiday, if you could let me know what we might want to do to help lock down Salazar's participation at the Summit.

Thanks!

Hi Shannon, hope your 2012 is off to a good start.

I am attaching the itinerary for a 2-day trip we are hosting for a group of Congressional Chiefs of Staff, can you join us for a portion of this trip? The following have confirmed their attendance:

1. Arthur Estopinan, Chief of Staff, Representative Ileana Ros-Lehtinen
2. Cesar Gonzalez, Chief of Staff, Representative Mario Diaz-Balart
3. Peter Mitchell, Chief of Staff, Senator Bill Nelson
4. Austin Durrer, Chief of Staff, Representative Jim Moran
5. Jonathan Blyth, Chief of Staff, Representative Allen West
6. Josh Rogin, Chief of Staff, Representative Ted Deutch
7. Justin Grabelle, Chief of Staff, Representative Richard Nugent
8. Lale Mamaux, Chief of Staff, Representative Alcee L. Hastings
9. Tom McDaniels, Chief of Staff, Representative Frederica Wilson

Hope you can join us, thanks!

If you are not the intended recipient(s), you are hereby notified that the dissemination, distribution, or copying of this message/data is strictly prohibited. If you received this message in error, or are not the intended recipient(s), please notify the sender at either their address or telephone number indicated above. In addition, please delete the erroneously received message from any device/media where the message is stored.
Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional staff handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations, 2012 Farm Bill). Currently the federal government, working with the State of Florida, is undertaking the world’s largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide key policymaking staff with an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve. Participants will focus on legislative proposals in 2012 that will address these issues.

Travel:
Participants fly to Miami International Airport for briefings and site visits. Air & ground transport, overnight lodging and meals provided by Everglades Foundation.
Thursday, January 19, 2012:

7:20 am  Depart Washington, DC
          American Airlines Flight 1269

10:05 am  Arrive Miami International Airport
          Ground transportation provided to on-site briefings

11:45 am  Arrive at Tamiami Trail, board airboats
          Travel through Water Conservation Areas and Big Cypress National
          Preserve.

          Briefing: Comprehensive Everglades Restoration Plan (CERP)
          Kirk Fordham, CEO, Everglades Foundation
          Steve Davis, Ph.D., Wetland Ecologist, Everglades Foundation
          Julie Hill-Gabriel, Everglades Policy Director, Audubon of Florida
          Carlos Suarez, State Conservationist, USDA Natural Resources
          Conservation Service

12:30 pm  Lunch Briefing: Expansion/Creation of National Wildlife Refuges & Utilizing
          USDA Land and Water Conservation Programs
          Kirk Fordham, Everglades Foundation
          Steve Davis, Ph.D., Everglades Foundation
          Julie Hill-Gabriel, Audubon of Florida
          Carlos Suarez, USDA Natural Resources Conservation Service

1:30 pm   Return to dock, depart for Everglades National Park

2:00 pm   Arrive at Shark Valley
          Discussion of Modified Water Deliveries: Tamiami Trail Bridge Project
          Kirk Fordham, Everglades Foundation
          Steve Davis, Ph.D., Everglades Foundation
          Julie Hill-Gabriel, Audubon of Florida
          Carlos Suarez, USDA Natural Resources Conservation Service
          Dan Kimball, Superintendent, Everglades and Dry Tortugas National
          Parks
          Bob Johnson, Director, South Florida Natural Resources Center (SFNRC),
          Everglades National Park

4:30 pm   Depart for hotel in Miami
5:30 pm  Arrive at hotel in Miami

8:00 pm  Dinner Briefing: *Building on 2011 Everglades Restoration Progress: Water Resources Development Act Authorization and Future Goals*
Kirk Fordham, Everglades Foundation
Steve Davis, Ph.D., Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida

**Friday, January 20, 2012:**

8:00 am  Breakfast briefing at hotel: *Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem*
Kirk Fordham, Everglades Foundation
Steve Davis, Ph.D., Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Dawn Shireffs, Everglades Restoration Program Manager, National Parks Conservation Association (NPCA)

9:30am  Depart for Helicopter Flyover/Site Visits of key CERP projects:
**Site visits led by: Kirk Fordham and Steve Davis**
- Everglades National Park/Florida Bay
- C-111 Canal Project
- Tamiami Trail/Modified Waters Delivery Project
- Biscayne Bay Coastal Wetlands Project

11:30am  Arrive in Islamorada

12:00 pm  Lunch and Discussion: *2012 Everglades Appropriations Requests*
Kirk Fordham, Everglades Foundation
Steve Davis, Ph.D., Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Dawn Shireffs, NPCA
Dan Kimball, Everglades and Dry Tortugas National Parks
Bob Johnson, SFRNC, Everglades National Park
2:00pm  Depart on boats for briefing and site visits: *Critical Issues Affecting Florida Bay estuary, C-111 Canal Project, Water Resources Development Act Reauthorization*

Kirk Fordham, Everglades Foundation  
Steve Davis, Ph.D., Everglades Foundation  
Julie Hill-Gabriel, Audubon of Florida  
Dawn Shireffs, NPCA  
Dan Kimball, Everglades and Dry Tortugas National Parks  
Bob Johnson, SFNRC, Everglades National Park

4:00pm  Return to marina, depart for hotel

8:00 pm  Dinner Briefing  
Kirk Fordham, Everglades Foundation  
Steve Davis, Ph.D., Everglades Foundation  
Julie Hill-Gabriel, Audubon of Florida  
Dawn Shireffs, NPCA

Overnight at Hotel

**Saturday, January 21, 2012:**

Depart for Washington, DC.

Friends of the Everglades critical of EPA stance on Everglades restoration

By Virginia Chamlee | 01.06.12 | 10:54 am

EPA Administrator Lisa Jackson (Pic by USACEpublicaffairs, via Flickr)

The environmental group Friends of the Everglades is responding to EPA Administrator Lisa Jackson’s decision to address the Everglades Coalition later today by saying in a press release that Jackson’s “rosy outlook on the Everglades” is “long on promises but short on progress.”

Jackson, along with other government officials, will be discussing plans for continuing historic progress in Everglades restoration. They will be joined by area business leaders, elected officials and environmentalists.

Friends of the Everglades is currently a lead plaintiff in federal litigation over water quality proceedings in the Miami courtroom of federal judge Alan Gold, who ruled in April that the state of Florida has failed to protect the threatened Everglades and that the EPA must step in to enforce anti-pollution rules. Gold was harshly critical of environmental action (or inaction, as the case may be) taken by Gov. Rick Scott. “Simply stated, the entire situation is rapidly sliding backwards,” Gold wrote in his order. Still, says Friends of the Everglades, the EPA is proceeding with an excess of caution under severe pressure by industry and the state. “If environmentalists had a nickel for every politician who claimed to be in favor of saving the Everglades, we’d all be flying in private jets like the sugar barons,” said Friends president Alan Farago in a press release.

From the Friends press release:

Corporate polluters continue to exert undue influence and pressure on the outcome of taxpayer initiatives to restore the Everglades Judge Gold has already insisted that the EPA provide enforceable remedies for ongoing violation of federal pollution standards in the Everglades. Any agreement between the EPA and State of Florida must include the enforceable remedies required by Judge Gold. To date, the state has declined to negotiate a lasting settlement and is adopting, instead, a piece-meal position.

On Thurs., Jan. 12, both the EPA and the state will participate in a conference with Judge Gold, to discuss the status of the litigation.

A public hearing sponsored by EPA according to federal permitting requirements will be held on March 13
We are so happy!

Shannon,

I heard today that one of:

...or what is happening, but I hope it isn't serious.

No need to reply.

Just know that I'm thinking of you and praying all is going well.

Kirk

Attachments: AGENDA January 2012 Congress~1.doc (51 KB) [Open as Web Page]; ATT00001.htm (211 B)

Please see attached an updated itinerary for this Thursday and Friday's trip. Note that we will transport the group from Miami Int'l Airport directly to Tamiami Trail - please let me know if you will meet us at the airport or at Tigertail's dock.

On Thursday, we will depart the Biltmore Hotel via shuttle bus and depart from MIA for the helicopter tour. We will land in Islamorada and spend the night in Key Largo, so you may prefer to meet us at the Biltmore and leave your car until the following day.

Shannon - please let me know if you will need a hotel room in Miami and/or Key Largo.

Many thanks,

Vivian Miller

Everglades Foundation  
Congressional Educational Briefings and Site Visits  
January 19-21, 2012

Overview:
This is an intensive two-day trip to the greater Everglades ecosystem for key Congressional staff handling environmental legislation affecting this region (Comprehensive Everglades Restoration Plan, Modified Waters Delivery Act, Endangered Species Act, Interior/Energy & Water Appropriations, 2012 Farm Bill). Currently the federal government, working with the State of Florida, is undertaking the world’s largest ecosystem restoration project. A wide range of federal agencies have jurisdiction over various components of this initiative, including: the Department of Interior, the U.S. Army Corps of Engineers, the Environmental Protection Agency and the Fish and Wildlife Service.

The purpose of these briefings and the accompanying site visits is to provide key policymaking staff with an overview of the progress made and the challenges still confronting key federal holdings like Everglades National Park and the Big Cypress National Preserve. Participants will focus on legislative proposals in 2012 that will address these issues.

Travel:
Participants fly to Miami International Airport for briefings and site visits. Air & ground transport, overnight lodging and meals provided by Everglades Foundation.
Thursday, January 19, 2012:

7:20 am     Depart Washington, DC
            American Airlines Flight 1269

10:05 am    Arrive Miami International Airport
            Ground transportation provided to on-site briefings

11:45 am    Arrive at Tamiami Trail, Tigertail Airboat Tours
            Board airboats and travel through Water Conservation Areas and Big
            Cypress National Preserve.

Briefing: Comprehensive Everglades Restoration Plan (CERP)
Steve Davis, Ph.D., Wetland Ecologist, Everglades Foundation
Shannon Estenoz, Director, Everglades Restoration Initiatives,
    US Dept. of Interior
Kirk Fordham, CEO, Everglades Foundation
Julie Hill-Gabriel, Everglades Policy Director, Audubon of Florida
Carlos Suarez, State Conservationist, USDA Natural Resources
    Conservation Service

12:30 pm    Arrive at tree island

Lunch Briefing: Expansion/Creation of National Wildlife Refuges & Utilizing
    USDA Land and Water Conservation Programs
Steve Davis, Ph.D., Everglades Foundation
Shannon Estenoz, US Dept. of Interior
Kirk Fordham, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Carlos Suarez, USDA Natural Resources Conservation Service

1:30 pm      Return to dock, depart for Everglades National Park

2:00 pm     Arrive at Shark Valley
Discussion of Modified Water Deliveries: Tamiami Trail Bridge Project

Steve Davis, Ph.D., Everglades Foundation
Shannon Estenoz, US Dept. of Interior
Kirk Fordham, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Bob Johnson, Director, South Florida Natural Resources Center (SFNRC), Everglades National Park
Dan Kimball, Superintendent, Everglades and Dry Tortugas National Parks
Carlos Suarez, USDA Natural Resources Conservation Service

4:30 pm  Depart for hotel in Miami
5:30 pm  Arrive at hotel in Miami
8:00 pm  Fontana Restaurant, Biltmore Hotel

Steve Davis, Ph.D., Everglades Foundation
Kirk Fordham, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Mr. and Mrs. Robert Parks (Lynn), Board member, Everglades Foundation
Carlos Suarez, USDA Natural Resources Conservation Service

Friday, January 20, 2012:

8:00 am  Brickell Room, Conference Center of the Americas

Breakfast briefing: Everglades Restoration 101: The Economics of Everglades Restoration and An Introduction to Current Federal Issues Affecting the Greater Everglades Ecosystem
Steve Davis, Ph.D., Everglades Foundation
Kirk Fordham, Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida
Dawn Shireffs, Everglades Restoration Program Manager, National Parks Conservation Association (NPCA)

11:00 am  Depart hotel
11:30 am  Arrive at Landmark Aviation, 5700 NW 36th Street, Miami FL 33122
Depart for Helicopter Flyover/Site Visits of key CERP projects:
Site visits led by: Kirk Fordham and Steve Davis

- Everglades National Park/Florida Bay
- C-111 Canal Project
- Tamiami Trail/Modified Waters Delivery Project
- Biscayne Bay Coastal Wetlands Project

12:30 pm  Arrive in Islamorada, Cheeca Lodge

Lunch and Discussion: *Everglades National Park Restoration Efforts*

Kirk Fordham, Everglades Foundation
Steve Davis, Ph.D., Everglades Foundation
Julie Hill-Gabriel, Audubon of Florida

Vivian,

I am thinking of joining you guys on Thursday for the airboat ride, lunch and Shark Valley. Is there someone from FWS joining lunch on Thursday too to talk about Headwaters?

S

**Subject:** time to talk sometime?

Can we schedule some time to talk about credits (or I guess DEP refers to it as the ledger)? My board is interested and while I know it, I need to understand lots more and particularly some of the details. 
thanks!
