Interior Department Announces Broader Plan to Review Management of Lands in Northwestern New Mexico

Unique intra-agency effort will include a comprehensive analysis of oil & gas leasing and management on public and tribal lands in sensitive areas adjacent to Chaco Canyon

WASHINGTON -- To address concerns regarding mineral leasing and development activity adjacent to Chaco Culture National Historic Park, Deputy Secretary of the Interior Michael L. Connor today announced the U.S. Department of the Interior will expand the resource management planning effort underway in the Farmington, New Mexico area.

For the first time, the Bureau of Land Management's (BLM) Farmington Field Office and the Bureau of Indian Affairs' (BIA) Navajo Regional Office will jointly conduct an expanded analysis of management in the area that covers both public and tribal lands.

"Today's announcement is an important step forward toward addressing the longstanding concerns surrounding oil and gas development around Chaco Canyon," said Deputy Secretary Connor. "I heard these concerns firsthand when I visited Chaco last summer to participate in a public listening session with Senator Udall. BIA's decision to join BLM's planning effort as a co-lead reflects the complex land tenure around the park and demonstrates the Department's commitment to ensuring that the region's rich cultural and archaeological resources are protected."

The BLM initiated a process to update its Resource Management Plan for the area – which guides development activities on public lands there – in 2014. In support of expanding the planning effort to include tribal lands in the area, the BLM and the BIA are seeking public comments to identify issues and concerns related to including BIA-managed mineral leasing and associated activities in the Environmental Impact Statement (EIS) which is being prepared as part of the Resource Management Plan Amendment (RMP) Amendment. This expanded effort will look at the whole planning area, and will include mineral leasing and development activity around Chaco Culture

National Historic Park.

The joint effort also reflects the Department of the Interior's emphasis on working with Native American leaders to provide expanded opportunities for integrating traditional knowledge and expertise in the management of public lands that have a special historical, cultural or geographic connection with indigenous communities.

In June of 2015, Deputy Secretary Connor and Senator Tom Udall toured the Chaco Canyon area to see the sensitive archeological site and view the area beyond the park where drilling is proposed. After the visit to Chaco, Connor and Udall held meetings with interested stakeholders.

A Notice of Intent to prepare the RMP Amendment and conduct an EIS will be published in the Federal Register on October 21, 2016, which will formally open a 60-day public scoping period ending on December 20, 2016. The information gathered during this new scoping process will be added to the information already gathered as part of the BLM's prior scoping process for the EIS.

As part of the scoping process, the BLM and the BIA will be hosting public scoping meetings at the following locations, dates, and times:

Location	Date	Time
Shiprock Chapter House Hwy 64, Mile Post 23, Building 5548 Shiprock, NM 87420 (Tentative)	November 10 (Tentative)	9:00am- 1:00pm (Tentative)
Huerfano Chapter House P.O. Box 968 Bloomfield, NM 87413	November 10	3:00pm-7:00pm
Counselor Chapter House P.O. Box 209 Counselor, NM 87018	November 12	9:00am-1:00pm
Nageezi Chapter House P.O. Box 100 Nageezi, NM 87037	November 12	3:00pm-7:00pm
Ojo Encino Chapter House 13 Miles Southwest of Hwy 197 Ojo Encino, Cuba, NM 87913	November 14	9:00am-1:00pm
Whitehorse Lake Chapter House HCR-79, Box 1500 Cuba, NM 87013	November 15	9:00am-1:00pm
Navajo Technical University Lowerpoint Road State Hwy 371 Crownpoint, NM 87313	November 17	3:00pm-7:00pm
Navajo Nation Museum Highway 264 and Loop Road Window Rock, AZ 86515	December 2	10:00am-2:00pm

(Tentative)		

The BLM and BIA are asking that input be received within the 60-day scoping period, ending December 20, 2016, or 15 days after the last meeting, whichever is later.

- Input may be submitted by mail to BLM Farmington Field Office, Attention: Mark Ames, Project Manager, 6251 North College Blvd., Suite A, Farmington, New Mexico 87402; by email to BLM_NM_FFO_Comments@blm.gov, or by fax to 505-564-7608.
- For the BIA, please contact Harrilene Yazzie, BIA Regional National Environmental Policy Act Coordinator at 505-863-8287, P.O. Box 1060, Gallup, New Mexico 87301, or harrilene.yazzie@bia.gov.

I heard that BLM gave a heads up awhile ago, though no timing. We appreciate the mention of Senator Udall. I don't want to make a big deal about it, but this is a very good thing, and we appreciate you being so respectful of the work Senator Udall did, so it would have been better to get a little more heads up that this is going out. (Given that the release is pretty much in the can, you had to know it was coming for more than a couple hours…) A gentle reminder though that real heads up's – not just pro forma emails right before a release goes out - are appreciated and kind of expected. I think our folks are also going to do a statement.

Udall: Interior Department to Review Management of Lands in Northwestern NM

Joint BLM-BIA review will examine land-use issues, including oil & gas leasing near Chaco Culture National Historical Park

ALBUQUERQUE, NM — Today, **U.S. Senator Tom Udall** welcomed an announcement that the Department of the Interior will conduct a joint review of the resource management of public and Tribal lands in Northwestern New Mexico, including the impact of potential oil and gas leasing near the Chaco Culture National Historical Park. The analysis will be the first-ever joint review by the Bureau of Land Management's (BLM) Farmington Field Office and the Bureau of Indian Affairs' (BIA) Navajo Regional Office.

Udall has urged Interior Department officials to ensure that oil and gas leasing near this iconic site is handled with the utmost consideration for Chaco Canyon's archaeological value as the Department completes its new Resource Management Plan (RMP) for the San Juan Basin.

"I appreciate the Interior Department's commitment to address concerns about the impact that oil and gas leasing could have on Chaco's irreplaceable archeological sites and its spiritual importance to Native American culture and history," Udall said. "Chaco Canyon is an incredibly rich cultural destination that is important to the heritage of many New Mexicans, including many Tribes and all Americans who wish to learn about ancient Native American culture. It's also important to the economy and the future of the region and the state. It is significant that this review will be done cooperatively between the BLM and BIA; this is an important step that I hope will result in a

balanced approach as the agency writes its resource management plan for the area."

The announcement was made by Deputy Interior Secretary Mike Connor, and it comes a year after Udall hosted Connor at Chaco for a listening session about concerns surrounding oil and gas leasing near the park. A center of Native American history and culture, Chaco includes sensitive archeological sites, is a UNESCO World Heritage site, and is one of the world's four Dark Sky Parks. During their visit last summer, Udall and Connor toured the Chaco Canyon area to see the sensitive archeological remains and view the area beyond the park where drilling is proposed.

Click HERE and HERE for photos and information about Udall and Connor's visit to Chaco. Click HERE for video of Udall pressing Interior Department officials to visit Chaco and listen to New Mexicans.

"It's important to note that Deputy Secretary Connor took this step after hearing from New Mexicans. The BLM and BIA plan future opportunities to hear from the public in New Mexico, including near Chaco and within the Navajo Nation, and I encourage all New Mexicans and Tribal members with strong feelings about the future of Chaco and resource development in Northwestern New Mexico to get out and make their voices heard," Udall said.

A Notice of Intent to prepare the RMP Amendment and conduct an Environmental Impact Statement (EIS) will be published in the Federal Register on Oct. 21, 2016, which will formally open a 60-day public scoping period ending on Dec. 20, 2016. The information gathered during this new scoping process will be added to the information already gathered as part of the BLM's prior scoping process for the EIS. Information about the locations, dates and times of the public scoping meetings is available HERE.

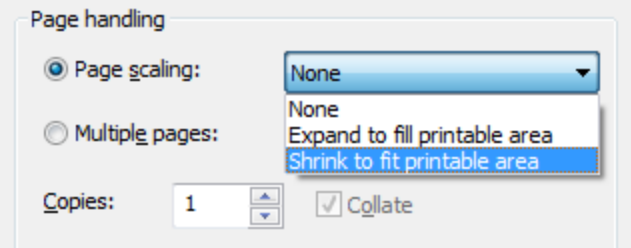
---

We are looking forward to seeing y'all tomorrow at 1:30 PM.

As promised, attached are two documents we view as initial responses to your comments. The first is the document Trent circulated with the Committee's comments to each point. The page numbers in the comments reflect where you can find the changes we have proposed in the second document, which is comprised of proposed edits/changes to the Good Sam title.

Word of advice (because I have had to reprint these documents a couple of times), make sure when printing the PDF document you select "Shrink to fit printable area" under page scaling as shown below:



Thanks, and let Josh or me know if you have any questions!

Technical Assistance on Draft House Bill for Coal Communities Abandon Mine Lands

Adding a new Good Samaritan permit program to CERCLA, which is not a permit program, makes establishing an effective Good Samaritan program more complex. Many provisions of the proposed program in the draft bill are overly broad, undefined, or would be difficult to implement. Overall, the EPA strongly believes that there is no need for this draft bill to create a Good Samaritan program. The EPA has already developed administrative tools to address potential CERCLA and Clean Water Act liability concerns associated with potential Good Samaritan cleanup projects. These tools include the 2007 CERCLA guidance and a 2012 Clarification Memo that supplemented the initial Agency guidance. The current draft bill also raises significant legal and policy issues.

Specific problematic provisions and issues:

- Good Samaritan Definition: The House bill defines a Good Sam in a manner that is inconsistent with, and undermines, the CERCLA section 107 liability provisions (e.g., permittee subject to gross negligence or intentional misconduct standard, not strict/joint and several liability). This approach, taken together with other provisions (e.g., liability definition, permitting provisions), could result in shielding a CERCLA PRP (e.g., current owner) from liability and cleanup responsibilities, and/or shifting the cost/responsibility for cleanup to EPA where, for example, the Good Sam does not properly address the contamination problems at a site. A prospective Good Samaritan should not be eligible if they are an owner/operator of the site if they are a potentially liable party under any federal, state, tribal or local law. The House draft bill fails this principle since it allows a current site owner or operators to qualify as Good Samaritans, as long as they did not participate in the creation of, or cause, historic mine residue at the site. This definition is completely antithetical to all previous Good Samaritan definitions and all previous legislative efforts.

- Other Definitions: The Historic Mine Residue definition uses the terms pollute the environment and polluted, both of which are too vague and need greater specificity (such as a reference to CERCLA pollutants/contaminants/hazardous substances or CWA equivalent). This also causes uncertainty when identifying baseline conditions for eligible projects under §322(b)(1)(ii), in the permit application, and in the monitoring section of a permit.

- Cleanup Standards: A cleanup done pursuant to a permit is based on appropriate water quality or other environmental benchmarks and does not require attainment of water quality standards, which is less protective of human health and the environment than CERCLA s ARAR provisions. There is a conflicting provision that states the permit must require that the remediation project attain applicable water quality standards to the extent reasonable and practicable. This term is undefined and could lead to very different results, depending on the variability among state or tribal permit programs.

Commented [AV1]: Page 17. The Committee's goal is to not shield a CERCLA PRP or enable potentially liable/liable persons an opportunity to escape responsibility. We seek further input and clarity from the Administration.

Commented [AV2]: Page 18. We now cite specific definitions within CERCLA for "environment", "release", and "hazardous substances."

Commented [AV3]: Pages 16 and 20, with further clarification added to pages 23, 24, and 32. Added new definitions of "baseline conditions" and "pre-mining conditions" to provide greater definition and actual benchmarks.

- Permitting: The primary goal for a project is to "improve the environment." However, this is not defined and there is no other specification. The proposed permit application is woefully inadequate in many areas, including: the ability to determine an applicant's eligibility; identification of all potentially liable parties; confusing language about persons with "contractual ties," and "legal relationships" who would also be eligible; and language to determine baseline conditions. There is also an unrealistic requirement for EPA to approve a State/Tribal application to undertake a Good Sam permit program within 120 days.

  The permitting process in the bill represents a completely different approach to cleanup compared to the CERCLA response selection process. It is very problematic to allow permits at sites where the agency plans to take an action, or where an enforcement or response action is underway. At best, this would likely lead to inconsistent results and unprotective cleanups at an NPL site, given that discretion could be left to a state or tribal permitting authority.[1] Agency consultation provisions apply only to a federal land management agency (not EPA) and do not require concurrence by the federal agency on the permitting decision. This could lead to confusion where EPA is the lead decision maker at NPL sites, if a state or tribal permitting agency determines a Good Samaritan project did not interfere with, or was not inconsistent with, other remediation projects, but the EPA does not concur. It is also not clear how a newly-issued permit would co-exist with an existing CERCLA consent decree at a site in terms of cleanup requirements, as well as any Clean Water Act permitting in and around the site.

- Investigative Sampling: There is no provision requiring the Good Sam to address any problems caused by, or waste generated during, investigative sampling, including if the Good Sam decides not to proceed with their application and/or project.

- State or Tribal Programs: In order to be approved, a state or tribal program does not need to demonstrate how its laws ensure protection of human health and the environment. There is no provision for withdrawing an approved program if later it is found that the state/tribal laws do not ensure protection of human health and the environment for carrying out a Good Samaritan permit program. Also, there is no provision for "overfiling" if the EPA determines there is a need for federal response action at a site being addressed inappropriately by a Good Sam. Draft consultation language suggests that if the permitting authority is a state or a tribe, and not the Administrator, then EPA would not necessarily be involved in this consultation.

- Financial Assurance: The draft bill does not have any financial responsibility provisions to ensure that a Good Sam would have adequate resources available to complete the project or pay for an improperly conducted project (i.e., if the Good Sam makes the contamination problems worse through incomplete or careless work, or by accident). If there is no financial assurance required, the burden of responding and providing clean up falls on the respective state and the federal government, essentially on the backs of taxpayers.

[1] Draft bill language allows a permit at these sites if the permitting authority determines that the Good Samaritan project would not interfere with, or be inconsistent with, other remediation projects at the site As written, it is not clear whether this includes a site proposed for the NPL

Commented [AV4]: In general, we seek greater input/clarification from the Administration on improving this section.

Commented [AV5]: Pages 21 - 22. Struck the exception that would authorize a permitting agency the ability to override federal designations.

Commented [AV6]: Page 28. Added clarification that any such investigative sampling must be "minimally invasive."

Commented [AV7]: Page 38. Added a clause requiring the "laws of the State or Indian tribe" to "ensure the protection of human health and environment." Seek input from the Administration on revocation of a program.

Commented [AV8]: Open to further input from the Administration – perhaps requiring applicants to hold funds in an escrow account subject to forfeit for violations.

- Liability: The draft bill would provide the Good Samaritan permit holder liability protection from, and deem them to be in compliance with, environmental laws associated with project activities. A permit holder would not be considered in compliance, nor protected from liability, if site pollution is exacerbated (not defined) as a result of gross negligence or intentional misconduct, or if the permit application is determined to have contained dishonest, fraudulent, or materially misleading statements or omissions. However, if the permit holder causes an accidental release or fails to improve environmental conditions at the site, they apparently still enjoy liability protection. The EPA finds this extremely problematic. It is all the more troubling because of the lack of a financial assurance requirement for Good Samaritan permit applicants, as noted above.

- Enforcement: The bill lacks necessary elements creating and describing any judicial or administrative penalty enforcement process i.e., if administrative, notice and opportunity for a hearing, appeal rights, etc. As written, enforcement provisions are too vague for a number of important points that are routinely described in federal environmental legislation, including the scope of any administrative enforcement authority (e.g., authority to require cleanup, as opposed to complying with the violated permit provision which may not be fully developed), which court (federal or state) has jurisdiction to enforce the terms of a permit (or order, if one can be issued), the judicial standard of review to be used. In addition, the provisions would limit potential relief (repair to the extent practicable damage caused by a permit violation) and are generally weaker than CERCLA enforcement and abatement authorities (e.g., amount of civil penalties available). The civil penalties are inconsistent with current CERCLA and CWA NPDES penalty provisions.

- Tribal authority: Inclusion of Alaska Native Corporations (ANCs) within the definition of Indian Tribe is problematic. Under the terms of the Bill, Indian Tribes, like States, may seek approval from EPA to administer a Good Samaritan permitting program, which appears to include an exercise of governmental jurisdiction (including potential enforcement authorities). ANCs, however, are typically not governmental entities, and any that are governments would already be included in Section 321(9)(A) as federally recognized tribes. ANCs are, in fact, corporate entities generally chartered under State law. It would be highly anomalous to authorize ANCs to submit and administer Good Samaritan programs. It is unclear how such entities would demonstrate the requisite legal authorities to carry out the program. Importantly, the lands that ANCs hold are generally not Indian country. Thus, there is an internal incongruity in the bill with regard to any approval of an ANCs Good Samaritan program.

- Public Participation: The bill does not provide any legal mechanism (e.g., citizen suit provision) to challenge the issuance of the permit. Citizen suit provisions are a hallmark of all of our environmental statutes.

- Re-mining: There are no provisions that prohibit re-mining at the site. This is a protection that is included in the EPA Administrative Tools. There should not be the opportunity for a mining company to come on to a site under the guise of being a Good

Commented [AV9]: Page 34. Replaced "gross negligence" with "negligence" and removed the confusing clause concerning when a permit holder "may be liable."

Commented [AV10]: Page 42. Struck Section 326, NEPA waiver, but in general, we seek greater input/clarification from the Administration on improving this section.

Commented [AV11]: Page 37. Struck ANCs from inclusion.

Commented [AV12]: The Committee views citizen suits as adverse to Good Samaritan work.

Commented [AV13]: The Committee does not seek to authorize "re-mining," but does recognize the reality of tailings and what such material may be used for.

Samaritan and taking any remaining tailings or other potential ore deposits and profiting from them without meeting all applicable environmental requirements.

TITLE III—LOCATABLE MINERALS CLAIM LOCATION AND MAINTENANCE FEES

Subtitle A—Mining Claim Location and Maintenance Fees

SEC. 301. DEFINITIONS.

In this subtitle:

(1) CLAIM.—The term ''claim'' means an unpatented lode mining claim, placer claim, mill site, or tunnel site located under the general mining laws.

(2) CLAIM HOLDER AND CLAIMANT.—The terms ''claim holder'' and ''claimant'' mean the owner or holder of a claim.

(3) CERTIFIED MINERAL EXAMINER.—The term ''Certified Mineral Examiner'' means an employee of the Federal Government who—

(A) possesses sufficient college education to qualify as a geologist, mining engineer, or metallurgical engineer; and

(B) has completed training specified by the Chief Mineral Examiner of the Bureau of Land Management, Department of the Interior.

(4) CERTIFIED REVIEW MINERAL EXAMINER.—The term ''Certified Review Mineral Examiner'' means a Certified Mineral Examiner who is deter-

Notes

mined by the Bureau of Land Management Mineral Examiner Certification Panel to possess an additional breadth of training and experience that is sufficient to review mineral potential reports and mining claim validity exam reports.

(5) FEDERAL LANDS.—The term ''Federal lands'' means lands and interests in lands owned by the United States that are open to mineral entry and location, or that were open to mineral entry and location at the time of entry or location.

(6) GENERAL MINING LAWS.—The term ''general mining laws'' means those Acts that generally comprise chapters 2, 11, 12, 12A, 15, and 16, and sections 161 and 162, of title 30, United States Code, all Acts that are amendatory of or supplementary to any of the foregoing Acts, and the judicial and administrative decisions interpreting such Acts.

(7) LOCATABLE MINERALS.—The term ''locatable minerals'' means those minerals held by the United States and not subject to disposition under—

(A) the Mineral Leasing Act (30 U.S.C. 181 et seq.);

Notes

(B) the Geothermal Steam Act of 1970 (30 U.S.C. 1001 et seq.);

(C) the Materials Act of 1947 (30 U.S.C. 601 et seq.); or

(D) the Mineral Leasing Act for Acquired Lands (30 U.S.C. 351 et seq.).

(8) MINERAL ACTIVITIES.—The term ''mineral activities'' means any activity on Federal lands under a claim with or without a discovery, or off of claims, for mineral prospecting, exploration, development, mining, extraction, milling, beneficiation, processing, storage of mined or processed materials, or reclamation activities for any locatable mineral and uses that are reasonably incident thereto, including the construction and use of roads, transmission lines, water wells, pipelines, utility corridors, and other means of access across Federal lands for ancillary facilities used in conjunction with such activity.

(9) MINERAL POTENTIAL REPORT.—The term ''mineral potential report'' means a report described in section 204(c)(2)(12) of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714(c)(2)(12)).

(10) MINING CLAIM VALIDITY EXAM.—The term ''mining claim validity exam'' means an exam-

Notes

ination of a mining claim to determine if it establishes a valid existing right in a valuable mineral deposit (as that term is used in section 2319 of the Revised Statutes (30 U.S.C. 22)).

(11) PERSON.—The term ''person'' means an individual, partnership, association, society, joint venture, joint stock company, firm, company, limited liability company, corporation, cooperative, or other organization, and any instrumentality of State or local government, including any publicly owned utility or publicly owned corporation of State or local government.

(12) SECRETARY.—The term ''Secretary'' means the Secretary of the Interior, unless otherwise specified.

(13) UNITED STATES MINERAL DEPOSIT DATABASE PROJECT.—The term ''United States Mineral Deposit Database Project'' means the interactive database of mines and mineral deposits in the United States administered by the United States Geological Survey Mineral Resources Program.

SEC. 302. CLAIM LOCATION AND MAINTENANCE FEES.

(a) LOCATION FEE.—For each claim located after the date of enactment of this title, a claimant shall pay the Secretary a location fee of $37 not later than 90 days

Notes

after the date of location, at the time the location notice is recorded with the Bureau of Land Management.

(b) ANNUAL CLAIM MAINTENANCE FEE.—Commencing the first calendar year after the date of enactment of this title, a claimant shall pay the Secretary on or before September 1 of each year, a claim maintenance fee of $155 per 20.66-acre claim or fraction thereof to maintain the claim for the following assessment year beginning at noon on September 1. Payment of such claim maintenance fee shall be in lieu of the assessment work requirement contained in the general mining laws and the related filing requirements contained in subsections (a) and (c) of section 314 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1744).

(c) WAIVER FOR HOLDERS OF 10 OR FEWER CLAIMS.—

(1) IN GENERAL.—The claim maintenance fee required under this section shall be waived for a claimant who certifies in writing to the Secretary that on the date the payment was due—

(A) the claimant was—

(i) the holder of not more than 10 lode claims on Federal lands; or

(ii) an association that held less than or equal to 320 acres; and

Notes

(B) the claimant has performed assessment work sufficient to maintain the claims held by the claimant for the assessment year ending on noon of September 1 of the calendar year in which the claim maintenance fee payment was due.

(2) HOLDER.—As used in paragraph (1), the term ''holder'' includes—

(A) the claimant;

(B) the spouse and dependent children (as defined in section 152 of the Internal Revenue Code of 1986) of the claimant; and

(C) a person affiliated with the claimant, including—

(i) a person controlled by, controlling, or under common control with the claimant; and

(ii) a subsidiary or parent company or corporation of the claimant.

(3) CERTIFICATION PROCESSING FEE.—The Secretary shall charge a certification processing fee of $30 for the filing of a certification under this subsection.

(d) SUSPENSION OF CLAIM MAINTENANCE AND WAIVER OF COST RECOVERY FEES.—

Notes

(1) CLAIM MAINTENANCE FEE.—The claim maintenance fees required under this section shall be suspended for any claims of a claimant for an area that was open to mineral entry and location at the time of entry or location that has subsequently been segregated or withdrawn from mineral entry and location by order of the Secretary or a law enacted after the date of the enactment of this title until such time as the area is reopened to mineral entry, or the claimant has submitted a notice or permit to explore or develop his or her claims or is actively mining.

(2) COST RECOVERY FEES.—The fees required by part 3000 of title 43, Code of Federal Regulations, as in effect on the date of enactment of this title, and any substantially similar fee charged for a mining claim validity exam, shall be waived for any claimant with claims in an area that was open to mineral entry and location at the time of claim location that has subsequently been segregated or withdrawn from mineral entry and location by order of the Secretary or a law enacted after the date of the enactment of this title.

(e) EFFECTS OF PAYMENT.—

Notes

(1) IN GENERAL.—Timely payment of the location and claim maintenance fees under this section secures the rights of the holder of a mining claim against the Federal Government after discovery of valuable mineral deposits, to use and occupy Federal lands under the provisions of the general mining laws for all mineral activities. This section shall not be construed to amend section 910 of the Revised Statutes (30 U.S.C. 53) or in any way affect the law of possession or the doctrine of pedis possessio.

(2) WAIVER OF CLAIM MAINTENANCE FEE.—In the case of a claim holder who qualifies for a waiver of payment of the claim maintenance fee under subsection (c), timely payment of the location fee and compliance with the assessment work required under the general mining laws (30 U.S.C. 28–28e) secures the rights of the holder of a claim, both prior to and after discovery of valuable mineral deposits, to use and occupy Federal lands under the provisions of the general mining laws for all mineral activities.

(f) FORFEITURE OF UNPATENTED CLAIM FOR FAILURE TO PAY MAINTENANCE FEE.—

(1) FAILURE TO PAY.—Failure to pay a claim maintenance fee or a location fee under this section for an unpatented mining claim shall subject the

Notes

claim to forfeiture by the claim holder as provided in this subsection.

(2) NOTICE.—The Secretary of the Interior shall provide the claim holder—

(A) notice of the failure; and

(B) the opportunity to correct the failure within 45 days after the claim holder's receipt of the notice.

(3) AMOUNT.—To correct the failure the claim holder must, within such 45-day period, pay twice the amount of claim maintenance fee that would otherwise have been required to be timely paid. The Secretary shall specify the amount that must be paid in the notice under paragraph (2).

(4) FORFEITURE.—Failure by the claim holder to make a timely and proper payment in the amount specified in the notice, within 45 days after the claim holder's receipt of the notice, shall constitute a forfeiture of the mining claim by the claim holder by operation of law.

(g) EFFECTIVE PERIOD OF FEES.—The fees imposed under this section shall apply during the period beginning September 1, 2016, and ending August 31, 2022.

Notes

SEC. 303. MINING CLAIM VALIDITY EXAMS AND MINERAL REPORTS FOR AREAS SEGREGATED OR WITHDRAWN FROM MINERAL ENTRY.

All mining claim validity exams shall be completed by Certified Mineral Examiners and reviewed by Certified Review Mineral Examiners.

SEC. 304. AUTHORIZATION OF APPROPRIATIONS.

There is authorized to be appropriated to the Secretary of the Interior to carry out mining law administration program operations $40,000,000 for each of fiscal years 2016 through 2022.

SEC. 305. MINERAL POTENTIAL REPORTS AND MINING CLAIM VALIDITY EXAMS.

Mineral potential reports for areas withdrawn from mineral entry, and any mining claim validity exam on claims located within those areas, must be completed or prepared by a Certified Mineral Examiner and reviewed by Certified Review Mineral Examiner.

SEC. 306. UNITED STATES MINERAL DEPOSIT DATABASE.

(a) IN GENERAL.—Not later than 120 days after the date of the enactment of this title, the Director of the United States Geological Survey shall enter into separate memoranda of understanding to share data for the purpose of expanding and maintaining the United States Mineral Deposit Database, with each of—

Notes

(1) the Director of the Bureau of Land Management;

(2) the Director of the Office of Surface Mining Reclamation and Enforcement; and

(3) the Chief Forester of the Forest Service.

(b) FUNDING.—From amounts available for each of fiscal years 2016 through 2022 for operations to administer the mining laws, the Secretary may use not more than $1,000,000 to support the United States Mineral Deposit Database of which not more than 5 percent may be used for overhead expenses.

Subtitle B—Department of the Interior Inactive and Abandoned Noncoal Mine Lands Program

SEC. 311. DEFINITIONS.

In this subtitle:

(1) ENVIRONMENTAL HAZARD.—The term ''environmental hazard'' means degradation of air, soil, or water resources resulting from the effects of past mining practices.

(2) HISTORIC MINE RESIDUE.—The term ''historic mine residue'' means mine residue, or conditions related to an inactive or abandoned mine site that pollute the environment, resulting from prior mining activities, including—

Notes

(A) tailings or mine waste piles;

(B) abandoned equipment (or materials in such equipment); and

(C) acidic or otherwise polluted flows in surface or ground water.

(3) INACTIVE AND ABANDONED NONCOAL MINE LANDS.—The term ''inactive and abandoned noncoal mine lands'' means any location of a noncoal mine, including mill sites and processing sites, that was inactive or abandoned before January 1, 1981, and that—

(A) contains historic mine residue;

(B) is not owned by any person who caused or contributed to the historic mine residue;

(C) was used for the production of a noncoal mineral; and

(D) is no longer in operation and is not subject to a temporary shutdown, as determined by the Secretary.

(4) PHYSICAL SAFETY HAZARD.—The term ''physical safety hazard'' means any dangerous condition or effect resulting from past mining practices, that poses a risk of death or serious injury to the public, livestock, or wildlife.

Notes

(5) SECRETARY.—The term ''Secretary'' means the Secretary of the Interior.

(6) WATER RESOURCES.—The term ''water resources'' means any watershed, ground water, water course, or lake.

SEC. 312. ESTABLISHMENT OF INACTIVE AND ABANDONED NONCOAL MINE LANDS PROGRAM.

(a) ESTABLISHMENT.—There is established in the Department of the Interior a program to be known as the Abandoned Noncoal Mine Lands Program (referred to in this section as the ''Program''). The Program shall be administered by the Secretary of the Interior acting through the Director of the Bureau of Land Management.

(b) DESCRIPTION OF PROGRAM.—Under the Program, the Secretary shall—

(1) identify, secure, and remediate physical safety hazards and environmental hazards associated with inactive and abandoned noncoal mine lands that are located on, or affecting, Federal public lands, including such hazards on other lands that are adjacent to such Federal lands;

(2) maintain an inventory of the sites of such inactive and abandoned noncoal mines, affected Federal public lands, and other lands that are adjacent to such Federal public lands, including such sites

Notes

that have been remediated in whole or in part, and associated water resources; and

(3) identify the persons, if any, who are responsible for paying the costs to remediate such hazards.

(c) PRIORITIES.—In securing and remediating hazards under this subtitle, the Secretary shall give priority (in the following order of priority) to—

(1) the protection of public health, safety, and general welfare from the adverse effects of inactive and abandoned noncoal mine lands; and

(2) the reclamation of land and water resources degraded by the adverse effects of such mine lands.

SEC. 313. INACTIVE AND ABANDONED MINE LAND PROGRAM PARTNERS.

The Secretary, where appropriate, shall seek out Federal agencies or departments, State agencies, Indian tribes, nonprofit organizations, individuals, and corporations to participate as partners, including partners that are Good Samaritans (as that term is defined in subtitle C), to facilitate remediation and securing of physical safety or environmental hazards under this subtitle.

SEC. 314. PRIORITY SITES FOR GOOD SAMARITAN PROJECTS ON FEDERAL LANDS.

(a) IDENTIFICATION REQUIRED.—Not later than 120 days after the date of the enactment of this title, the Sec-

Notes

retary of the Interior, acting through the Director of the Bureau of Land Management, and the Secretary of Agriculture, acting through the Chief of the Forest Service, in consultation with other Federal land management agencies, shall identify a minimum of 20 priority sites on Federal land containing inactive or abandoned mine sites suitable for Good Samaritan projects under subtitle C.

(b) NOMINATIONS.—In identifying priority sites under subsection (a), the Secretaries shall accept nominations from the public.

(c) ANNUAL REVIEW.—The Secretaries shall annually review the sites identified under subsection (a) and identify additional priority sites as appropriate.

SEC. 315. AUTHORIZATION OF APPROPRIATIONS.

There is authorized to be appropriated to carry out this subtitle $17,000,000 for each of fiscal years 2016 through 2020.

Subtitle C—Good Samaritan Remediation of Abandoned Mine Lands

SEC. 321. DEFINITIONS.

In this subtitle:

(1) ADMINISTRATOR.—The term ''Administrator'' means the Administrator of the Environmental Protection Agency.

Notes

(2) COOPERATING PERSON.—The term ''cooperating person'' means any person (other than a Federal agency) that—

(A) is a Good Samaritan;

(B) assists another Good Samaritan in a remediation project; and

(C) is identified as a cooperating person in a permit issued under this subtitle.

(3) ENVIRONMENTAL LAWS.—The term ''environmental laws'' means—

(A) the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.) and any State law implementing a permit program under section 402(b) or 404(g) of such Act; and

(B) the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. 9601 et seq.).

(4) FEDERAL LAND MANAGEMENT AGENCY.—The term ''Federal land management agency'' means any agency of the Federal Government authorized by statute to exercise jurisdiction, custody, or control over lands of the United States.

(5) GOOD SAMARITAN.—The term ''Good Samaritan'' means any person that did not participate in any way in the creation of, or activities that

(7) INACTIVE OR ABANDONED MINE SITE.—The term ''inactive or abandoned mine site'' means any mine site, including any mill or processing site, that—

(A) contains historic mine residue;

(B) is not owned by any person who caused or contributed to the historic mine residue;

(C) was used for the production of a mineral-bearing ore or coal; and

(D) is no longer in operation and is not subject to a temporary shutdown, as determined by the permitting authority.

Notes

(8) INDIAN COUNTRY.—The term ''Indian country'' has the meaning given the term in section 1151 of title 18, United States Code.

(9) INDIAN TRIBE.—The term ''Indian tribe'' means an Indian tribe that—

~~(A)~~ is federally recognized~~; or~~

~~(B) is an Alaska Native Corporation as defined under section 1602 of title 43, United States Code.~~

(10) LEAD AGENCY.—The term ''lead agency'' means a State or tribal agency designated under section 323(c)(1) as the lead agency responsible for carrying out permitting responsibilities of the State or Indian tribe under this subtitle.

(11) OFFSITE MITIGATION REQUIREMENT.—The term ''offsite mitigation requirement'' means a requirement imposed under another Federal law to improve, enhance, restore, or create a wetland, stream, or habitat conservation area to offset or compensate for adverse impacts to similar ecosystems resulting from the development of a natural resource or other commercial activity.

(12) PERMITTING AUTHORITY.—The term ''permitting authority'' means the Administrator or, in the case of a State or tribal program authorized by

Notes

the Administrator under section 323, the lead agency.

(~~13~~) REMEDIATION.—The term ''remediation'' means activities to clean up or otherwise mitigate the impacts of historic mine residue.

(14) STATE.—The term ''State'' means any of the 50 States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the United States Virgin Islands, the Commonwealth of the Northern Marianas, and any other territory or possession over which the United States has jurisdiction.

SEC. 322. PERMITS FOR REMEDIATION OF INACTIVE OR ABANDONED MINE LANDS BY GOOD SAMARITANS.

(a) IN GENERAL.—A permitting authority may issue a permit to a Good Samaritan to carry out a project in accordance with this section.

(b) ELIGIBLE PROJECTS.—

(1) PURPOSE OF PROJECT.—

(A) IN GENERAL.—A permitting authority may issue a permit under this section for a project to improve the environment (including water quality) by carrying out remediation at or related to an inactive or abandoned mine site.

(B) WATER QUALITY.—A permitting authority shall ensure that remediation carried out pursuant to a permit issued under this section—

(i) assists in the attainment of applicable water quality standards to the extent reasonable and practicable under the circumstances; and

(ii) does not result in water quality that is worse than the baseline water condition.

(2) LIMITATION ON ELIGIBILITY.—A permitting authority may not issue a permit under this section for a project at or related to a mine site included on the National Priorities List developed by the President in accordance with section 105(a)(8)(B) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. 9605(a)(8)(B)) or a mine site at which the Administrator of the Environmental Protection Agency or another Federal, State, or tribal agency is taking an environmental enforcement or response action~~, unless the permitting authority determines, after consultation with any other interested agency, that—~~

Notes

~~(A) the proposed project is not inconsistent, and will not interfere, with any other planned remediation at the mine site that is reasonably likely to occur; and~~

~~(B) the proposed project will accelerate environmental improvements~~.

(c) PERMIT APPLICATIONS.—

(1) CONTENTS.—A permitting authority shall require an application for a permit under this section to include—

(A) a description of the project site (including the boundaries of the project site and any degraded waters related to the project site);

(B) an identification of—

(i) any current owner of the property on which the project is proposed to be carried out;

(ii) any person with a legal right to exclude other persons from the project site or affect activities on the project site, with a description of those legal rights;

(iii) for project sites on Federal lands, the Federal land management agency; and

Notes

(iv) based on the conduct of an inquiry that is reasonable under the circumstances—

(I) all persons that may be legally responsible for remediation of the project site; and

(II) any relationship between those persons and the applicant;

(C) a description of any contractual ties or other legal relationship between the applicant and all persons with responsibility for compliance with environmental laws at the project site;

(D) a general description of the known and identifiable baseline ~~conditions, including conditions existing prior to the commencement of mining activities, as of the date of submission of the application, of the environment affected by the historic mine residue to be remediated, including, if available, any sampling data or information regarding the nature and extent of the effects on the water quality of any body of water caused by the drainage of historic mine residue or other discharges from the inactive or abandoned mine site~~;

Notes

(E) a description of—

(i) the historic mine residue proposed to be remediated;

(ii) the nature and scope of the proposed remediation, including—

(I) any proposed recycling or reprocessing of the historic mine residue, how the recycling or reprocessing relates to the remediation, and where the recycling or reprocessing will occur; and

(II) the manner in which the proposed remediation will mitigate the drainage from the inactive or abandoned mine site to ~~improve water quality, if applicable~~;

(iii) the remediation alternatives, if any, considered in developing the proposed remediation plan for the project site;

(iv) engineering plans for the project, bearing the seal of a Professional Engineer;

(v) in the case of a remediation activity that requires plugging, opening, or otherwise altering the portal or adit of an in-

1 avecera 10□25□2016 12:04:29

Notes

active or abandoned mine, an evaluation of inactive or abandoned mine site conditions, including an assessment of any pooled water or hydraulic pressure in the inactive or abandoned mine;

(vi) how any material related to the inactive or abandoned mine site that is identified or listed as hazardous waste under the Solid Waste Disposal Act (42 U.S.C. 6901 et seq.) will be disposed of;

(vii) a monitoring program proposed to be carried out following completion of the remediation, if applicable, that will be implemented to evaluate the effects of the remediation on the environment; and

(viii) the capacity (including technical and administrative) of the applicant to carry out the proposed activities and any terms of the permit for which the application is being submitted;

(F) a plan for any operation and maintenance related to the proposed remediation;

(G) a proposed schedule for activities to be carried out under the project, including an expected completion date for the remediation;

Notes

(H) a budget for the project;

(I) evidence satisfactory to the permitting authority that the applicant has sufficient financial resources to ensure that the activities proposed to be carried out by the applicant, including any operation and maintenance activities related to the remediation, will be carried out under the permit;

(J) an identification of any cooperating persons and a description of activities proposed to be carried out by such persons;

(K) a description of—

(i) any recognition for excellence in environmental compliance, reclamation, or remediation received by the applicant or any cooperating person identified under subparagraph (J); and

(ii) the history of any noncompliance with environmental laws by the applicant or any cooperating person identified under subparagraph (J) during the 5-year period preceding submission of the application;

(L) if the applicant intends to use the project to comply with an offsite mitigation re-

Notes

quirement, a reference to the offsite mitigation requirement and any related permit; and

(M) a specific contingency plan that—

(i) includes provisions on emergency actions, response, and notification; and

(ii) is designed to be used in response to unplanned adverse events, including the sudden release of historic mine residue.

(2) NOTICE REQUIREMENTS.—

(A) STATE, LOCAL, AND TRIBAL COMMUNITIES.—As soon as practicable after receiving an application under this section, a permitting authority shall provide notice of the application, including a copy of the application, to—

(i) each local government located within a radius of 20 miles of the project site;

(ii) each Federal, State, and tribal agency that the permitting authority determines may have an interest in the application; and

(iii) if the project site lies in the headwater area of a major drainage basin, local governments located outside of the 20-mile radius of the project site that are down-

stream of the project site and may be affected by a discharge resulting from activities carried out pursuant to the project.

(B) PUBLIC NOTICE.—Not later than 30 days after receiving an application under this section, a permitting authority shall provide to the public notice of the application.

(3) INVESTIGATIVE SAMPLING.—

(A) IN GENERAL.—A permitting authority may, upon request, authorize a person to carry out ~~investigative sampling~~ 1 as determined appropriate by the permitting authority, prior to submitting an application for a permit under this section.

(B) EFFECT OF AUTHORIZATION.—An authorization to carry out investigative sampling under this section shall, with respect to the authorized activities, have the same effect as a permit for the purposes of subsection (g).

(d) PUBLIC PARTICIPATION.—

(1) HEARING.—Prior to issuing a permit under this section, a permitting authority shall conduct a public hearing in the vicinity of the proposed project site, and shall give public notice of the hearing not later than 30 days before the date of the hearing.

Notes

(2) DRAFT PERMIT.—The permitting authority shall include a draft permit in the notice of a hearing to be conducted under this section.

(3) COMMENTS.—The permitting authority shall provide the applicant and the public with the opportunity to—

(A) comment on the draft permit at the public hearing; and

(B) submit written comments to the permitting authority during the 30-day period following the hearing.

(e) PERMIT ISSUANCE.—

(1) DEADLINE.—A permitting authority shall issue a permit or deny a permit application under this section not later than—

(A) the date that is 180 days after the date on which the permitting authority receives a complete application for the permit, as determined by the permitting authority; or

(B) such later date as may be determined by the permitting authority, with the agreement of the applicant.

(2) CONSTRUCTIVE DENIAL.—If the permitting authority does not issue a permit or deny the permit application by the applicable date described in para-

Notes

graph (1), the application shall be considered to be denied by the permitting authority.

(3) AGENCY CONSULTATION.—

(A) CONSULTATION.—In considering whether to issue a permit for a project to be carried out on Federal lands, a permitting authority shall consult with any applicable Federal land management agency.

(B) OBJECTION.—A permitting authority may not issue a permit under this section if—

(i) the proposed project site is not a priority site designated under section 314; and

(ii) the permitting authority receives an objection to the proposed permit from a Federal land management agency with jurisdiction over the project site.

(f) PERMIT CONTENTS.—

(1) IN GENERAL.—A permitting authority shall include in a permit issued under this section—

(A) a description of the activities authorized by the permit, including a description of any activities to be carried out by a cooperating person in accordance with paragraph (5);

Notes

(B) a schedule for the activities to be carried out under the project, in accordance with paragraph (3), including an end date by which the permittee shall complete the permitted activities;

(C) conditions requiring the permittee to—

(i) secure, for all activities authorized under the permit, all authorizations, licenses, and permits required under law;

(ii) establish and maintain records, conduct monitoring (as described in paragraph (4)), and provide such other information as may be reasonably necessary to ensure the project will result in improvement to the environment; and

(iii) minimize any short-term adverse environmental impacts from the remediation, to the extent practicable;

(D) a right of entry to the project site for the permitting authority to inspect and collect such information as is reasonably necessary to carry out this subtitle;

(E) if the project to be carried out under the permit will be used by the permittee to comply with an offsite mitigation requirement, a

Notes

reference to the offsite mitigation requirement and any related permit; and

(F) any other terms and conditions determined appropriate by the permitting authority.

(2) BENCHMARKS.—A permitting authority shall ensure that a permit issued under this section is site- and situation-specific, relying on pre-mining ~~conditions and conditions existing as of the date of issuance of the permit to determine appropriate water quality or other environmental benchmarks to achieve in~~ carrying out remediation under the permit.

(3) TIMING.—A permitting authority shall require activities authorized by a permit issued under this section to—

(A) commence not later than the date that is 1 year after the date on which the permit is issued; and

(B) continue until completed, with temporary suspensions permitted during adverse weather or other circumstances, as approved by the permitting authority.

(4) MONITORING.—

(A) IN GENERAL.—A permitting authority shall require a permittee to take such actions as

1 avecera 10□25□2016 12:14:00
a□d basel□□e co□d□to□s

2 avecera 10□25□2016 12:20:22
□he□

Notes

the permitting authority determines are necessary to ensure, where appropriate, baseline, remedial alternative, and postremediation monitoring of the environment.

(B) ADMINISTRATION.—In selecting the type and frequency of monitoring requirements to be included in a permit under this paragraph, the permitting authority shall—

(i) balance the utility of information obtained through monitoring against the cost of the monitoring, based on the circumstances relating to the project; and

(ii) take into account the scope of the project.

(5) COOPERATIVE ACTIVITIES.—A permitting authority may approve in a permit the conduct of project activities by cooperating persons if, as determined by the permitting authority, the cooperative arrangement will effectively accomplish the purposes of this subtitle.

(g) EFFECT OF PERMIT.—

(1) IN GENERAL.—A person authorized by a permit issued under this section to carry out activities—

Notes

(A) shall be deemed to be in compliance with environmental laws with respect to such activities; and

(B) shall not be liable under environmental laws with respect to such activities, including for any costs or damages deriving from the prior, present, or future activities of others at the project site.

(2) LIMITATION.—Paragraph (1) shall not apply if—

(A) the person impedes or fails to facilitate a response action, remediation, or other natural resource restoration activity at the project site;

(B) the person exacerbates the pollution from historic mine residue as a result of negligence or intentional misconduct~~, in which case the person may be liable under environmental laws for costs or damages resulting from such gross negligence or intentional misconduct~~;

(C) information supplied to the permitting authority in the permit application is subsequently determined to contain a dishonest, fraudulent, or materially misleading statement or omission, in which case the permit shall be deemed to have been invalid beginning on the

Notes

date the permit was issued, and shall have no force or effect; or

(D) the person intentionally violates the express [~~contents/~~terms~~?~~] of the permit.

(h) ADMINISTRATION OF PERMITS.—

(1) MODIFICATION OR TERMINATION OF PERMITS.—

(A) AUTHORITY.—A permitting authority may—

(i) extend the period during which a permit is valid under procedures established for such purpose by the permitting authority;

(ii) modify or terminate a permit for cause, including misrepresentation or a violation of a permit; and

(iii) upon the request of the Good Samaritan, and subject to a 30 day public notice and comment period, modify a Good Samaritan permit to take into account any event or condition that—

(I) significantly reduces the feasibility or significantly increases the cost of completing the remediation work at the inactive or abandoned

Notes

mine site that is the subject of the Good Samaritan permit;

(II) was not—

(aa) contemplated by the Good Samaritan; or

(bb) taken into account in the remediation plan of the Good Samaritan; and

(III) is beyond the control of the Good Samaritan, as determined by the permitting authority.

(B) TERMINATION.—Unless the permitting authority has extended the period during which a permit is valid, the authority to carry out activities under a permit issued under this section shall terminate—

(i) if the activities do not commence by the date that is 1 year after the date on which the permit is issued;

(ii) if the activities are discontinued or not completed by the end date specified in the permit; or

(iii) on any other grounds determined appropriate by the permitting authority.

Notes

(2) TRANSFER OF PERMITS.—A permit may be transferred to another person only if—

(A) the appropriate permitting authority determines that the transferee will satisfy all of the requirements of the permit;

(B) the transferee is a Good Samaritan;

(C) the transferee accepts all of the requirements of the permit;

(D) the permitting authority includes in the transferred permit any additional or modified conditions determined to be appropriate by the permitting authority; and

(E) any Federal, State, or tribal land management agency with jurisdiction over the project site is notified of the proposed transfer and does not object to the permitting authority before the date that is 30 days before the proposed transfer is to take effect.

(3) MAINTENANCE OF RECORDS.—A permitting authority shall maintain all records relating to permits and the permit process under this section.

(i) OTHER ACTIVITIES.—A permit issued under this section may not authorize any new mining activities other than those activities directly related to carrying out reme-

Notes

diation at or related to the inactive or abandoned mine site.

SEC. 323. STATE OR TRIBAL PROGRAMS.

(a) IN GENERAL.—A State or Indian tribe may issue a permit under this subtitle if the State or Indian tribe has in effect a Good Samaritan permit program approved by the Administrator under this section.

(b) APPLICATION.—

(1) SUBMISSION.—The Governor of any State or the head of an Indian tribe's governing body may submit to the Administrator an application to carry out a Good Samaritan permit program within its jurisdiction at any time.

(2) CONTENTS.—An application under this section shall include—

(A) a full and complete description of the Good Samaritan permit program it proposes to administer under State or tribal law; and

(B) a statement from the State Attorney General, or, for an Indian tribe, the equivalent official authorized to represent the tribe in court pertaining to the application, that the laws of the State or Indian tribe provide sufficient legal authority to carry out the described ~~program.~~ 1

1 | avecera 10|25|2016 11:57:22
□ro□ram a□d □ll e□s□re the □rotect□o□ of h□ma□ health a□d the e□v□ro□me□t.

Notes

(3) APPROVAL.—Not later than 120 days after receiving an application submitted under this subsection, the Administrator shall approve the Good Samaritan permit program unless the Administrator determines that the requirements of this section are not met.

(c) REQUIREMENTS.—To meet the requirements of this section, a State or Indian tribe shall—

(1) designate a lead agency that is responsible for carrying out permitting responsibilities under this section; and

(2) have in effect laws providing sufficient legal authority to carry out a Good Samaritan permit program in accordance with this subtitle.

(d) DELEGATION OF AUTHORITY.—Upon approval of a State or tribal Good Samaritan permit program under this section, the Administrator shall transfer all authority to issue permits under this subtitle for the State or relevant area of Indian country to the lead agency designated under subsection (c)(1).

(e) ADMINISTRATION.—A State or tribal Good Samaritan permit program approved under this section shall be administered in accordance with this subtitle, except that nothing in this subtitle precludes a State or Indian

Notes

tribe from imposing more stringent requirements on permit applicants or permittees.

SEC. 324. ENFORCEMENT.

(a) IN GENERAL.—A permitting authority may enforce any violation of this subtitle, with respect to which the permitting authority has jurisdiction, by—

(1) issuing an order to comply with the violated provision; or

(2) commencing a civil action for appropriate relief, including a permanent or temporary injunction.

(b) MINIMUM REQUIREMENT.—In the event of a permit violation, and absent extraordinary circumstances, the court shall, at a minimum, require the person to repair, to the extent practicable, the damage to any part of the environment caused by an action of the person in violation of the permit.

(c) CIVIL PENALTY.—Any person who violates this subtitle shall be subject to a civil penalty of up to $5,000 for each day of the violation (except in cases of knowing conduct, in which case the civil penalty shall be $32,500 for each day of the violation).

SEC. 325. GRANTS ELIGIBILITY.

A project authorized by a permit issued under this subtitle is eligible for funding pursuant to section 319 of

Notes

the Federal Water Pollution Control Act (33 U.S.C. 1329).

~~**SEC. 326. CONSTRUCTION OF THE NATIONAL ENVIRONMENTAL POLICY ACT OF 1969.**~~

~~No action of the Administrator taken pursuant to this subtitle shall be required to comply with section 102 of the National Environmental Policy Act of 1969 (42 U.S.C. 4332).~~

SEC. 327. USE OF PROJECTS TO MEET OFFSITE MITIGATION REQUIREMENTS.

A project authorized by a permit issued under this subtitle shall be considered to satisfy all or part of any offsite mitigation requirement of the permittee, upon approval by the authority imposing the offsite mitigation requirement.

SEC. 328. STATE AND TRIBAL RECLAMATION PLANS UNDER THE SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977.

No State or Indian tribe conducting remediation of an inactive or abandoned mine site pursuant to an approved State or tribal abandoned mine reclamation plan approved under title IV of the Surface Mining Control and Reclamation Act of 1977 (30 U.S.C. 1231 et seq.) shall, with respect to the remediation activities, be required to

Notes

obtain a permit under the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.).

SEC. 329. SAVINGS PROVISIONS.

(a) EMERGENCY AUTHORITY.—Nothing in this subtitle affects the authority of a Federal, State, tribal, or local agency to carry out any emergency authority, including an emergency authority under environmental laws.

(b) LIABILITY UNDER OTHER LAWS.—Except as provided in section 322(g), nothing in this subtitle or a permit issued under this subtitle limits the liability of any person under any other provision of law.

SEC. 330. SUNSET.

(a) IN GENERAL.—No permitting authority may issue a permit under this subtitle after the date that is 7 years after the date of enactment of this subtitle.

(b) STUDY; REPORT.—

(1) STUDY.—Not earlier than 5 years after the date of enactment of this subtitle, the Administrator, the Secretary of the Interior, and the Secretary of Agriculture, in consultation with the Interstate Mining Compact Commission, shall enter into an arrangement with the National Academy of Sciences, for execution by the Board on Earth Sciences and Resources, to conduct a detailed, com-

Notes

prehensive study of the effectiveness of the permitting activities carried out under this subtitle.

(2) REPORT.—Not later than 7 years after the date of enactment of this subtitle, the Board on Earth Sciences and Resources shall submit to Congress, the appropriate Federal agencies, and the Governors of each of the States represented by the Interstate Mining Compact Commission a report containing—

(A) the results of the study conducted under paragraph (1); and

(B) any recommendations regarding whether the permitting activities carried out under this subtitle should be reauthorized and, if so, any changes that should be made to improve the effectiveness of the activities.

(3) FUNDING.—From the funds collected as claim location fees and maintenance fees under section 302, the Secretary of the Interior shall provide to the National Academy of Sciences such funds as it requests, not to exceed $2,000,000, for the purpose of conducting the study required under this section.

Date:	Friday, November 04, 2016 3:26:39 PM
Attachments:	QFRs for Mr. Lyons from the 6-28-16 ENR Cmte PLFM Subcmte Hrg.docx

Good afternoon, Felipe and Chris!! I hope you are having a good recess!! We are in the process of finalizing the June 28, 2016 hearing transcript, and I do not show a record of receiving Mr. Lyon's responses to QFRs. If you have previously sent them to me, can you please possibly resend them? If not, can you please be so kind as to provide me with a date we can expect to receive them?

Many thanks and have a terrific weekend!!

Sincerely,
Darla Ripchensky

U.S. Senate Committee on Energ□ and Natural Resources
Subcommittee on Public Lands□Forests and Mining
Hearing on □une □□□016□Oversight on the Status of the Bureau of Land Management and Forest Service□s Efforts to Implement Amendments to Land Use Plans and Specific Management Plans regarding Sage Grouse Conservation□ and those Agencies□Coordination Activities □ith Affected States
□uestions for the Record Submitted to Mr. □im L□ons

□uestions from Senator Lisa Mur□o□s□i

□uestion 1□ I understand this 10-million-acre withdrawal would be the largest in FLPMA history. The Department has justified this figure by saying there does not appear to be significant mineral development potential.

- What science or geological data informed that statement, and is there a complete geological and mineral inventory of the 10 million acres?

- Which agency conducted that mineral inventory?

□uestion □□ How does the BLM intend to complete the nearly 6000 mineral examinations triggered by this withdrawal in the face of such a significant backlog?

□uestion 3□ What are the agencies doing to engage stakeholders and state representatives prior to finalization of any guidance documents?

□uestion 4□ Mitigation is a significant part of both the BLM and Forest Service□s plans. How does the BLM intend to measure the concept of □net conservation gain□in mitigation? Are there specific benchmarks and if so, who developed those benchmarks?

□uestion 5□ In your testimony, you highlighted the years of work the Administration has undertaken on the issue of sage grouse conservation. I think your point is that the Resource Management Plans and Land Use Plan Amendments announced last fall were a culmination of years of work.

- If that is true, why then have we waited nearly another whole year for agency guidance if you□ve been working on this issue for more than a decade?

□uestion 6□ One of the focal points of the conversation surrounding the sage grouse conservation plans is the 10-million-acre mineral withdrawal. Under FLPMA, such a withdrawal, or any action that precludes a specific land use, requires proper Congressional notification of both the Senate and House of Representatives. Has such a notice been issued?

□uestion □□ What was the process for review and consideration of the state plan consistency reviews of BLM□s plans?

□uestion □□ By state, what percentage would you estimate recommendations of each of the consistency reviews are reflected in the management plans and amendments?

U.S. Senate Committee on Energ and Natural Resources
Subcommittee on Public Lands Forests and Mining
Hearing on une 016 Oversight on the Status of the Bureau of Land Management and Forest Service s Efforts to Implement Amendments to Land Use Plans and Specific Management Plans regarding Sage Grouse Conservation and those Agencies Coordination Activities ith Affected States
uestions for the Record Submitted to Mr. im L ons

uestion In your testimony you state that the BLM plans are the product of extensive coordination and engagement among federal agencies, sates, and other partners and stakeholder Do you believe that means the state s views are reflected in the plans? If so how?

uestion 10 Why did you completely reject five 50 percent -- of the 10 state plan consistency reviews? Please be specific in explaining your rejection of each state s comment. Also, does the agency believe coordination and engagement mean communication with stakeholders but not necessarily agreement or consensus?

uestion 11 Given the years of successful state and federal collaboration outlined in your testimony, and the fact that data shows the population of sage grouse has been stable for the last decade -- in fact, there has been an increase in leks in recent years -- what specifically led to the agency s decision to modify the land management plans to include mandatory regulatory mechanisms ?

uestion 1 In your testimony you indicate the plans will require mitigation that provides a net conservation gain to the species. You also indicate that the plans call for monitoring and evaluation of various criteria so voluntary and required conservation actions can be assessed. How is net conservation gain going to be measured? What are the benchmarks, and are they in place now? And, are the processes for assessment of conservation actions in place?

uestion 13 The Administration has touted predictability as a benefit of its recent policy on mitigation pursuant to the Presidential Memorandum: Mitigating Impacts on Natural Resources from Development and Encouraging Related Private Investment. How do you reconcile the predictability as argued by the Administration, and your written statement on page 6, in which you argue that pre-determined benchmarks will be developed to ensure the agency s ability to immediately respond to and correct identified declines in population? How will the ability to change course translate to predictability for industry and project proponents?

uestion 14 In your oral testimony, you told Senator Daines that the agency objective is to ensure the sage grouse populations do not warrant (Endangered Species) listing in the future, and that effective management means sustaining habitat and population of sage grouse. If sustainment rather than growth of habitat and population is effective, why is it necessary to seek a net conservation gain? Under what legal authority is the Bureau of Land Management permitted to seek a net conservation gain? And, how do you define net conservation gain as you discuss on page 6 of your written statement?

U.S. Senate Committee on Energ□ and Natural Resources
Subcommittee on Public Lands□Forests and Mining
Hearing on □une □□□016□Oversight on the Status of the Bureau of Land Management and Forest Service□s Efforts to Implement Amendments to Land Use Plans and Specific Management Plans regarding Sage Grouse Conservation□ and those Agencies□Coordination Activities □ith Affected States
□uestions for the Record Submitted to Mr. □im L□ons

□uestions from Senator □ohn Barrasso

□uestion 1□ Given that mitigation is a significant part of the restoration activities proposed in the federal plans, how does the BLM intend to measure the concept of □net conservation gain□as a result of mitigation? Are there specific quality or quantity benchmarks that will be required, and if so, who developed those benchmarks?

□uestion □□What specific components of the BLM Resource Management Plans will be enacted to reduce cheatgrass prevalence to decrease fire threat and address other ecosystem imbalance issues?

□uestion 3□ Mr. Lyons, given that the 10-million-acre withdrawal is currently only segregated, and not actually withdrawn from production/use potential, how is the agency able to preclude or stall permitting activities on lands that may or may not ultimately be included in a mining-use withdrawal?

□uestion 4□ When does the agency intend to notice the mining withdrawal?

□uestion 5□During the hearing it became apparent that many stakeholder groups feel they have been left out of the process during the development of instructional memoranda and agency guidance documents. Why do you feel stakeholder input is inappropriate during this stage of the process and what, if anything, does the BLM plan to do to engage stakeholders prior to the finalization of field guides or instructional memoranda?

□uestion 6□From the Department□s perspective, what is the status of the Greater Sage Grouse population (e.g., location, population size, density) across the West at this time?

□uestion □□Please provide for the record a copy of any instructional memoranda, field guide, guidance document, or any other media currently under development that will affect implementation of the Department of Interior□s sage grouse conservation efforts.

□uestions from Senator Ron W□den

□uestion 1: Over the last four months, the Bureau of Land Management has held a series of public outreach meetings on implementation of the sage grouse conservation plans. What has been the response at these meetings from stakeholders to the plans?

U.S. Senate Committee on Energ□ and Natural Resources
Subcommittee on Public Lands□Forests and Mining
Hearing on □une □□□016□Oversight on the Status of the Bureau of Land Management and Forest Service□s Efforts to Implement Amendments to Land Use Plans and Specific Management Plans regarding Sage Grouse Conservation□ and those Agencies□Coordination Activities □ith Affected States
□uestions for the Record Submitted to Mr. □im L□ons

□uestions from Senator □ames E. Risch

□uestion 1□ I haven□t seen the Grazing Instruction Memorandum, yet there was a Greenwire story from April 20, 2016 that mentions a leaked grazing memo. Can you send the Grazing Instruction Memorandum to my office?

□uestion □□ Will there be a seven inch stubble requirement in every lek buffer zone?

□uestion 3: Will there be a 3.1 mile buffer zone around every lek?

□uestion 4□ At the time of the announcement of the 10 million acre mineral withdrawal in conjunction with the sage grouse land use plans, DOI officials went on record saying that the □withdrawn areas do not appear to be highly prospective for miners. On what specific information were such statements based as there is abundant USGS and state data indicating otherwise? Does DOI still believe that statement is correct? Who is conducting the mineral potential report required under FLPMA to determine mineral potential?□

□uestions from Senator □ohn Hoeven

□uestion 1□In the hearing, I referenced North Dakota□s specific concerns with the federal land use plan for sage grouse conservation in the state. You pledged to provide a more specific response to the state□s issues, discuss with Montana/Dakotas Director Jamie Connell about how the response was prepared, and explain why □despite □extensive state-federal collaboration□□North Dakota□s concerns were discounted or dismissed by BLM.

- Please provide a response detailing the process, decision justifications, and future opportunities for the state to provide meaningful input during the next stages of implementation.

□uestion □□One concern for North Dakota centers on the federal land use plan□s refusal to allow an □adaptive management strategy□, which would provide flexibility to future oil and gas development and operations.

North Dakota has over 61,000 acres of BLM-managed land in its core sage grouse area that are already leased for oil and gas development. That is the highest percentage of acreage of any other state in the West. Under the federal plan, all of these acres would be subject to new leasing and development restrictions.

Yet, unlike other states, the federal land use plan for North Dakota does not allow for that broader □adaptive management strategy□. This denies the state flexibility for future oil and gas development and operations based upon changed circumstances.

- Why does the federal rule treat North Dakota differently and not allow the state to have adaptive monitoring and response for the sage grouse?

- Under the current plan, what specific ways can the state provide flexibility without an allowable □adaptive management strategy□?

□uestion 3: Another concern for North Dakota involves the federal land use plan□s effect on unleased federal lands. The rule stipulates □No Surface Occupancy□within the core sage grouse region.

North Dakota has close to 10,000 acres that are not currently leased for oil and gas development. Those are acres that could be leased in the future. The federal rule□s □No Surface Occupancy□requirement could unilaterally modify a mineral owner□s existing contract rights by requiring no new surface impacts.

North Dakota has argued that this stipulation may actually be detrimental to sage grouse habitat. By contrast, North Dakota□s current state plan allows for a □case-by-case□ analysis and adapts accordingly □an outcome the federal rule does not allow.

In fact, BLM□s official response to the state dismissed such concerns stating that, □case-by-case□flexibility is inconsistent with the purposes, policies, and programs of federal laws.□

- How do you justify BLM□s □No Surface Occupancy□stipulation with the BLM□s statutory principles of multiple use and sustained yield for public lands?

- Will the cumulative effects of this federal rule make further energy development on federal lands uneconomic and infeasible? To what extent? If not, why do many states and industry organizations disagree?

- Conversely, did BLM evaluate any negative effects on private oil and gas development in areas intermixed with large amounts of federal lands? If so, what are those effects and to what extent?

U.S. Senate Committee on Energ□ and Natural Resources
Subcommittee on Public Lands□Forests and Mining
Hearing on □une □□□016□Oversight on the Status of the Bureau of Land Management and Forest Service□s Efforts to Implement Amendments to Land Use Plans and Specific Management Plans regarding Sage Grouse Conservation□ and those Agencies□Coordination Activities □ith Affected States
□uestions for the Record Submitted to Mr. □im L□ons

□uestion 4: The federal plan also requires that sage grouse mitigation produce a □net conservation gain□ This means that land users □like holders of federal oil and natural gas leases □are required to offset impacts and express a □net conservation gain□

- Does the federal plan require landowners to pay any type of compensation to fulfil the mitigation requirements of the conservation area □including in states that currently do not have this requirement in their sage grouse plans?

- Please provide examples of compensatory mitigation options likely to occur under this provision.

- Please outline how the agency will determine the value and cost-effectiveness of those mitigation options.

- Please detail the process landowners and developers would be required to document, submit, and receive agency approval for those mitigation options.

□uestion 5: I am also concerned about the effect the federal plan might have on livestock grazing on public lands.

Over 22,000 ranchers graze cattle and sheep on federal lands. In North Dakota, our grazing associations work closely with federal agencies to allow their livestock to graze on public lands in a manner that both benefits the health and vitality of the grasslands and ranchers. For instance, well-managed grazing can increase wildlife diversity and populations, control invasive weeds, and reduce the risk of wildfire.

Several hearing witnesses mentioned that some of the most significant threats to the greater sage grouse are wildfire and invasive plants.

- Do the federal land use plan amendments curtail grazing in the Rocky Mountain Region? If so, to what estimated extent?

- Does the Interior Department agree grazing can help mitigate threats of wildfire and invasive plants?

□uestions from Senator Eli□abeth Warren

Deputy Assistant Secretary Lyons, you stated in your testimony that development of the BLM Greater Sage-Grouse plan decisions reflected an effort to work at a landscape-level,

to incorporate new science and information in the planning process, and to emphasize close coordination and collaboration with other federal agencies and with the states. This increased coordination and planning created a new paradigm in the way lands and resources can be managed.

Most people think of the Endangered Species Act (ESA) as a listing for species that are identified as endangered or threatened with extinction, but a critical component of the ESA its ability to take a comprehensive approach to protecting the ecosystems that provide sustainable habitats for these vulnerable species.

You further stated in your testimony that a comprehensive approach to species conservation is reflective of the goals of the ESA and that a stated purpose of the ESA is □to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved.□

□uestion 1□ The federal government employed a comprehensive habitat strategy to conserve greater sage-grouse habitat across the West on public lands, which resulted in avoiding the necessity of placing the species on the ESA listing. Do you believe that this habitat model can be duplicated in other regions across our country and how important was the ESA in driving this plan?

□uestion □□ While preserving the sage-grouse was the primary goal, the habitat protection and restoration components of the BLM□s plan have provided additional benefits for other species. Do you believe that Congressional efforts to eliminate federal plans would not only imperil the primary species targeted for protection, but also potentially jeopardize the long term sustainability of other species in the ecosystem?

For eight years, President Obama levied a smothering regulatory attack on the one sector that's kept the American economy afloat: energy. American families took a back seat to Putin and OPEC as the administration erected barrier after barrier to responsible domestic energy and natural resource development. On Tuesday, voters overwhelmingly rejected four more years of oppressive regulations that have exacerbated the country's economic decline. Instead, they chose "America First."

Here's a look at what a Trump administration could mean for important issues within the

Committee's jurisdiction.

OIL & GAS

Fortune: *"Trump […] wants to remove regulations that have previously blocked opening up federal lands and offshore areas for oil and gas exploration and production…"*

Forbes: *"We will see an abrupt end to the Bureau of Land Management's efforts to grab authority to regulate hydraulic fracturing on federal lands...A Trump victory is bad news for OPEC. More American oil will compete head-to-head with the cartel."*

COAL

The Hill: "Trump has pledged to bring the coal industry back from the brink and save coal miners' jobs, after years of decline due to competition from cheap natural gas and President Obama's policies."

Bloomberg: *"Trump, meanwhile, has released numerous economic and energy-related plans touting an end to the coal-related federal lands leasing moratorium."*

TRIBAL ENERGY

The Washington Times: *"The Trump administration will ease restrictions on American energy reserves worth trillions of dollars...and will block the bureaucrats holding Native American businesses back and bring new jobs into our communities."*

DROUGHT & WILDFIRE

USA Today: *"Trump said state officials were simply denying water to Central Valley farmers to prioritize the Delta smelt, a native California fish nearing extinction — or as Trump called it, "a certain kind of three-inch fish."*

"We're going to solve your water problem. You have a water problem that is so insane. It is so ridiculous where they're taking the water and shoving it out to sea," Trump said.

Bloomberg: *"After several years of stalled action on wildfires and forests...Trump's election victory changed the prospects for legislative action in 2017."*

ENERGY INFRASTRUCTURE

The Hill: *"Keystone was central to the national debate over energy and environmental policy. [...]*

Congressional Republicans tried numerous times to force approval of the project, but Obama always blocked their attempts."

E&E News: *"With a President Trump in the White House, the nation's fossil fuel debate will likely shift from "keep it in the ground" to putting pipelines in the ground..."*

Natural Gas Intelligence: *"Congressional critics of the Obama administration's final guidance to federal agencies for quantifying greenhouse gas emissions accused the White House in a*

hearing Wednesday of giving environmental groups ammunition to bring lawsuits against energy projects.

"The November presidential election could decide whether the GHG rule prevails, with Republican Donald Trump likely to potentially eliminate it."

Subject: EMBARGOED 12pm: Interior Dept Announces Final Rule to Reduce Methane Emissions & Wasted Gas on Public, Tribal Lands

Good morning,

U.S. Secretary of the Interior Sally Jewell will today announce the Methane and Waste Prevention Rule – a final rule that will reduce the wasteful release of natural gas into the atmosphere from oil and gas operations on public and Indian lands. The rule updates 30-year old regulations governing venting, flaring, and leaks of natural gas, and will help curb waste of public resources, reduce harmful methane emissions, and provide a fair return on public resources for federal taxpayers, tribes and states.

A press release and fact sheet are attached. This announcement is embargoed until 12pm EST today.

Thank you,

Chelsea Welch
Special Assistant

Office of Congressional and Legislative Affairs
Department of the Interior
chelsea_welch@ios.doi.gov
(202) 208-5348

FACT SHEET ON METHANE AND WASTE PREVENTION RULE

OVERVIEW The Bureau of Land Management (BLM) has updated its regulations to reduce the waste of natural gas from flaring, venting, and leaks from oil and gas production operations on public and Indian lands. The final requirements, which will be phased in, will help curb waste of our nation's natural gas supplies; reduce harmful air pollution, including greenhouse gases; and provide a fair return on public resources for federal taxpayers, Tribes, and States.

The BLM's final rule requires oil and gas producers to take commonsense and cost-effective measures to reduce this waste of gas, modernizing the existing, more than 30-year-old oil and gas production rules and bringing them in line with technological advances in the industry. In addition, the rule modifies the existing royalty rate provisions to better align with the BLM's authority and enhance flexibility, but the rule would not raise royalty rates.

FACT The BLM's onshore oil and gas management program is a ma or contributor to our nation's oil and gas production. Domestic production from almost 100,000 federal onshore oil and gas wells accounts for five percent of the nation's oil supply and eleven percent of its natural gas. In Fiscal Year 2015, the production value of this oil and gas was worth almost $21 billion and generated over $2 billion in royalties.

FACT Large uantities of natural gas are asted during oil and gas production. Between 2009 and 2015, oil and gas producers on public and Indian lands vented, flared and leaked about 462 billion cubic feet (Bcf) of natural gas. That's enough gas to supply about 6.2 million households for a year. These losses create a myriad of problems, including: releasing harmful emissions, including methane, into the atmosphere; safety issues, if not properly handled; and waste of a valuable domestic energy resource.

FACT Ta pa ers are losing out. States, Tribes and federal taxpayers also lose royalty revenues when natural gas is wasted as much as $23 million annually in royalty revenue for the Federal Government and the States that share it, according to a 2010 Government Accountability Office (GAO) report.

FACT The rule minimi es aste of natural gas. The final rule will save and put to productive use up to 41 Bcf of gas a year enough to supply up to about 740,000 households each year. Overall, the rule will reduce flaring by an estimated 49 percent and venting and leaks by roughly 35 percent (compared to 2014 rates).

FACT Inaction is not an option. Methane, a powerful greenhouse gas about 25 times more potent than carbon dioxide, accounts for nine percent of all U.S. greenhouse gas emissions, and almost one-third of that is estimated to come from oil and gas operations. U.S. methane emissions are projected to rise substantially without additional steps to lower them. Several states, including North Dakota, Colorado, Wyoming, Utah and most recently Pennsylvania, as well as the U.S. Environmental Protection Agency (EPA), have also taken steps to limit venting, flaring and/or leaks.

FACT: The rule will reduce emissions that worsen climate change. BLM estimates that this rule could avoid an estimated 175,000-180,000 tons of methane emissions per year, roughly equivalent to 4.4-4.5 million metric tons of carbon dioxide emissions. This is also roughly equivalent to eliminating the greenhouse gas emissions from 924,000 to 950,000 vehicles.

FACT: The rule's benefits are projected to outweigh its costs. Using conservative assumptions, the BLM estimates that the rule's net benefits could range from $46 to $204 million per year. Benefits include revenues for operators from sale of recovered natural gas and environmental benefits of reducing methane emissions and other air pollutants.

FACT: Impacts to operators are expected to be minimal. Many oil and gas operators are voluntarily taking steps required in the rule to reduce wasted gas and improve operations. The BLM estimates that the annual cost to industry of implementing the rule will be $110-279 million. Individual, small business operators may see profit margins reduced by less than two-tenths of one percent, on average. About 40 percent of natural gas now vented or flared from onshore Federal leases could be economically captured with currently available technologies, according to the 2010 GAO report.

FACT: The rule reflects stakeholder outreach through public meetings and tribal consultations. The BLM conducted public and tribal meetings in 2014 and again in 2015 during the public comment period. The BLM received over 300,000 comments on the proposed rule. The BLM has also coordinated with individual states, as well as the Environmental Protection Agency, to avoid inconsistency or redundancy in regulations.

PROPOSED RULE OVERVIEW

The Mineral Leasing Act requires the BLM to ensure that operators "use all reasonable precautions to prevent waste of oil or gas." Important elements of the proposed rule include:

LIMITING ROUTINE GAS FLARING

- Currently, there is no upper limit on how much an operator can flare. The proposal would phase in, over several years, a flaring limit per development oil well, averaged across all of the producing wells on a lease.
    - Year one limit: 7,200 thousand cubic feet (Mcf)/month/well;
    - Year two limit: 3,600 thousand cubic feet (Mcf)/month/well; and
    - Year three limit (and thereafter): 1,800 thousand cubic feet (Mcf)/month/well.
- Estimated to affect about 16% of existing wells, which account for about 87% of gas flared.
- Applies only to flared associated gas from production wells, not flaring from exploration or wildcat wells or during emergencies.
- Provides an exemption if meeting the limit would cause an operator to cease production and abandon significant recoverable oil reserves under a lease.
- Operators could comply with the proposed flaring limits by: expanding gas-capture infrastructure (e.g. installing compressors to increase pipeline capacity, or connecting wells to existing infrastructure through gathering lines); adopting alternative on-site capture technologies (e.g. compressing the natural gas or stripping out natural gas liquids and trucking the product to a gas processing plant); or temporarily slowing production at a well to minimize losses until capture infrastructure is installed.
- Also improves disclosure of flared volumes by requiring metering when flared volumes reach 50 Mcf/day.

PRE-DRILLING PLANNING FOR GAS CAPTURE

- Currently, there is no mechanism to better align timing of well development and pipeline installation.
- Before drilling a development oil well, operators would need to evaluate opportunities for gas capture and prepare a waste minimization plan, which must be submitted with an Application for Permit to Drill.
- The plan must meet various requirements, and must be shared with midstream gas capture companies to facilitate timely pipeline development, but plan details would not be enforceable elements of the permit to drill.

DETECTING LEAKS

- The proposed rule will require operators to use an instrument-based leak detection program to find and repair leaks. Operators could use infrared cameras or other methods approved by the BLM; smaller operators (fewer than 500 wells) could alternatively use portable analyzers assisted by audio, visual and olfactory inspection.
- Operators would begin by inspecting twice a year. If they consistently find few leaks, they would be allowed to inspect annually, while if they consistently find more leaks, they would be required to inspect quarterly.

- The proposal is similar to EPA's recent proposed rule requiring leak detection and repair for new wells and facilities, as well as leak detection and repair requirements in Colorado and Wyoming.

REDUCING VENTING

- Except in narrowly specified circumstances, operators would be prohibited from venting natural gas. Exceptions include emergencies and venting from certain equipment subject to proposed limits.
- Operators would have to replace all "high bleed" pneumatic controllers with "low bleed" controllers within one year in most instances, tracking requirements in Colorado and Wyoming.
- Operators would generally have to replace certain pneumatic pumps with solar pumps, if adequate for the function, or route the pumps to a flare (if one is available on-site), similar to Wyoming and proposed EPA requirements for new and/or existing pumps.
- Within six months of rule's effective date, operators would have to capture or flare gas from storage tanks that vent more than six tons of volatile organic compounds (Volatile Organic Compounds)/year. This is expected to affect fewer than 300 tanks and is similar to EPA requirements for new tanks and Colorado and Wyoming requirements for new and existing tanks.
- Operators of new wells (drilled after rule's effective date) would generally not be allowed to purge those wells into the atmosphere; and operators unloading liquids from existing wells would be required to use best management practices.
- Operators would be required to capture, flare, use, or re-inject gas released during well completions. This would affect only conventional well completions, assuming that EPA finalizes its proposed rule for all hydraulically fractured well completions and recompletions.

CLARIFYING AND REVISING ROYALTY RATES

- The proposal revises existing royalty provisions for onshore oil and gas leases to specify a royalty rate at or above 12.5 percent for new competitive leases, consistent with the statutory authority in the Mineral Leasing Act.
- This modifies the existing regulation, which sets the rate at 12.5 percent and leaves the BLM no discretion to raise the rate as conditions change.
- The proposal responds to findings and recommendations in audits from the Government Accountability Office and Department of Interior Office of Inspector General.
- The BLM does not currently propose to raise royalty rates for new competitive leases.
- The proposed rule also clarifies that royalties would apply only to gas flared from wells already connected to gas capture infrastructure. This reduces burden on operators to submit applications for approval to flare royalty-free.

Tony,

We are cancelling the 15 leases held by Devon Energy. These are the leases that had the potential to be developed for oil and gas. We are still trying to determine how we will proceed with the 2 remaining leases.

Thanks,
Felipe

Can you let me know the latest on badger two medicine?

I had thought that only the one lease was still canceled but that the department was figuring out how to do all of them.

Any ideas on what might be coming out in the next couple months or around the event next week.

Thanks,
Tony

Hey Kimo,

Hope of Murkowski as scia chair is dead. ..

Barrasso was able to get epw chair because of vitter runoff in LA so leaves enr to Murkowski (Barrasso will not challenge her) and opens up scia for hoeven. Very tough line up for NH issues...

Subject: Pro Report: House Republicans unify behind Ryan — Barrasso to become chairman of EPW — Tom Price for HHS?

By Maggie Chan | 11/15/2016 05:57 PM EDT

With help from John Lauinger

Good afternoon and welcome to Pro Report, your daily rundown of the day's top policy news. I'm your host, Maggie Chan. Send feedback and song recs to mchan@politico.com and follow me @_maggiechan on Twitter. Don't forget to follow @POLITICOPro. "Better staple it together." Let's get started.

IT'S UNANIMOUS: RYAN REMAINS SPEAKER: House Republicans sent a strong sign of unity today by unanimously nominating Paul Ryan for a second term as speaker. Ryan said during a closed-door meeting with the conference that Vice President-elect Mike Pence told him that President-elect Donald Trump supports him and the current leadership regime. Ryan still must win a floor vote in January — he needs the support of 218 Republicans, giving him little wiggle room with his conference — to officially retain his gavel.

BARRASSO TO CHAIR SENATE EPW: Sen. John Barrasso told Pro Energy's Anthony Adragna today that he will chair the Environment and Public Works Committee in the next Congress, and one of his first priorities will be confirming a new EPA administrator. Barrasso said he knows who the ranking member will be but wouldn't name names. Sen. Tom Carper has right of first refusal for that role." Current Chairman Jim Inhofe is term-limited, and current ranking member Barbara Boxer is retiring.

TRUMP CONSIDERING TOM PRICE FOR HHS: House Budget Chairman Tom Price, who has been one of the top voices in the GOP calling for Obamacare repeal and was an early supporter of Donald Trump, is in contention for HHS secretary, sources say. Price, an orthopedic surgeon, "was one of the first Republicans to introduce an alternative to

Obamacare when Democrats were debating health care reform in 2009 and 2010," Jennifer Haberkorn and Rachael Bade write for Pro Health Care. Former Louisiana Gov. Bobby Jindal is another name being floated, while Ben Carson, who has frequently been mentioned as a possible HHS or Education secretary, has taken himself out of the running for any Cabinet post or any position in a Trump administration.

On the national security front, Trump's transition team has "contacted several hawkish Iran experts to explore options for imposing new sanctions on the Islamic Republic," a sign Trump will back up his campaign pledge to crack down on Iran, reports Pro's Andrew Hanna. And House Homeland Security Chairman Mike McCaul told POLITICO he's expressed interest in becoming the head of the Homeland Security Department. And ICYMI Monday night, Sen. Jeff Sessions is Trump's leading choice for Defense secretary. For all things about the next administration, head to Pro's Transition page and sign up for the newsletter.

TIMING IS EVERYTHING FOR METHANE RULE: Any regulations released in the waning days of the Obama administration face potentially short lives — and that could be the case with Interior's final Methane Waste Prevention rule, out today. If Trump makes good on his campaign pledge to scrap the Obama administration's energy policies — and "unleash an energy revolution" that would expand oil and gas production, he's said — the rule could be a goner, Pro Energy's Alex Guillén reports . It's designed to reduce emissions of methane that is vented or flared from oil and gas drilling wells on federal lands. The Bureau of Land Management says it will bring climate benefits and boost federal royalty revenue by hundreds of millions of dollars. But, Alex notes, "industry quickly piled on criticisms, blunting Interior's argument that the rule will benefit industry," and its eleventh-hour status makes it "vulnerable to a Congressional Review Act challenge early next year."

That didn't take long: Shortly after the rule was released, two industry groups filed suit in federal court, arguing that air quality is supposed to be regulated via the Clean Air Act by EPA and states, not BLM.

Q&A WITH SEC CHAIR MARY JO WHITE: Days before White announced Monday she would step down as head of the SEC, she sat down for an interview with Pro Financial Services' Patrick Temple-West to discuss her remaining priorities and political pressure, among other topics. Her priorities include adoption of the market surveillance tool known as the "consolidated audit trail," and work on Title VII of the Dodd-Frank Act (derivatives rules). Read it here.

SEC APPROVES CAT: Speaking of that surveillance tool ... the SEC today approved a plan to build the so-called consolidated audit trail, which Democratic Commissioner Kara Stein said would be "the Hubble telescope" for securities markets. The commission "first envisioned it in 2010 as one of its responses to the 'flash crash' in the stock market that year," but businesses argue CAT could leave investors' private financial information vulnerable to hackers, Patrick reports. "Now, stock exchanges must hire a company to build and operate the CAT. They can either go to the Financial Industry Regulatory Authority, or to one of two technology companies, SunGard or Thesys."

BRADY: DEFICIT-NEUTRAL TAX REFORM IS COMING: "Tax reform is going to happen in 2017," House Ways and Means Chairman Kevin Brady confidently predicted today, though he did not lay out a timeline for action, saying that's still being worked out. He said of his plan: "We're designing this to break even. We're already in the ballpark [of neutrality] with the blueprint — I feel comfortable where we're at." As for the possibility of using the revenue

raised by tax reform to finance infrastructure, he said: "I have not seen the details of the package being developed by the Trump administration — I think it's under construction as we speak right now and so we'll have that discussion." But Brady noted that diverting revenue to pay for highways would leave less for reducing tax rates, saying, "In our blueprint, we applied those revenues to more growth and more competitive rates."

Over in the Senate, Finance Chairman Orrin Hatch is nearly finished with his long-awaited "corporate integration" tax reform plan. A top Hatch aide said today the plan will be deficit-neutral, using conventional budgeting techniques, and will keep the same income distribution as under current law. The aide said the draft would include legislative language, as well as a dynamic and conventional budget score.

WATCHDOG: FAA'S NEXTGEN FALLING SHORT: A report from DOT's inspector general says "the bulk of the FAA's 'transformational' NextGen programs haven't been very effective at transforming air traffic management so far," reports Pro Transportation's Jennifer Scholtes. "The IG's follow-up report explained that the agency has made changes to cost and schedules for NextGen programs since the agency was dinged in a 2012 assessment . But the six most pivotal NextGen programs still don't have final price tags or ultimate deadlines and have yet to live up to their lofty goals, the IG reported in this newest take. ... The FAA now has initial baseline costs for each NextGen program and has approved nearly $2 billion — for example — for the first segment of the DataComm initiative to enable air traffic controllers to send digital messages to pilots. However, each program's total cost, timeline and ultimate benefits remain unclear, the IG explained."

MORE GOOD NEWS FOR FHA'S MORTGAGE INSURANCE PROGRAM: For the fourth year, the Federal Housing Administration's Mutual Mortgage Insurance Fund showed improved health, which could increase calls to lower the premium again, after President Barack Obama did so last year. "Clearly these very strong results do indicate there is room to return to pricing that reflects risk in the program," said Ed Golding, who leads the fund. Pro Financial Services' Lorraine Woellert reports that there were fewer defaults and a surge of new borrowers, leading the "capital cushion" to grew to 2.32 percent in fiscal 2016, up from 2.07 percent. "It was only the second year since 2008 that the capital ratio, a proxy for the fund's health, exceeded the 2 percent minimum required by law," Lorraine writes. "The net worth of the fund, which stands behind the $1 trillion in U.S. home loans and serves as a sort of savings account to pay lender claims if borrowers default, grew by $3.8 billion, to $27.6 billion."

KING TO COLLEGES: 'RESPOND AGGRESSIVELY' TO RACIAL HARASSMENT: "After a week of heightened tension on college campuses, Education Secretary John B. King Jr. [today] urged public university leaders to 'respond aggressively' to any cases of racial harassment," reports Pro Education's Benjamin Wermund. "In his first comments since Donald Trump was elected president, the Education secretary called on university leaders to take it upon themselves to protect students — many of whom, he said, feel unsafe following the election. 'We've got to make sure all of our students feel like our campuses are a place they belong and will feel supported all the way through to graduation. We've got to respond aggressively to incidents where that safety is violated and we have to set a tone on all of our campuses that we see diversity as an asset.' The racially charged incidents in the past week included a cyberbullying attack that targeted a group of black freshman students at the University of Pennsylvania, and a profanity-laced flier that appeared at Utah Valley University. The flier warned 'liberals' to 'shut the f--- up' about Muslim rights and gay rights."

CALENDAR FOR WEDNESDAY

— Senate Democrats hold leadership elections.

— U.S. Trade Representative Michael Froman attends the Asia-Pacific Economic Cooperation meetings in Lima, Peru. Nov. 16-20.

— 8 a.m.: POLITICO event: Tax Reform in the New Washington: Participants including House Ways and Means Oversight Subcommittee Chairman Peter Roskam and Stephen Moore, the economic adviser to Donald Trump, will discuss whether there's common ground on tax reform. The W Hotel, Washington, D.C. RSVP here. Livestream here.

— 12:30 p.m.: Commerce Secretary Penny Pritzker delivers remarks on online privacy focusing on the United States, the U.S.-European Union relationship and big data. Council on Foreign Relations.

— 2:30 p.m.: NHTSA Administrator Mark Rosekind testifies at a Senate Appropriations THUD Subcommittee hearing on "The Automated and Self-Driving Vehicle Revolution: What Is the Role of Government?" 192 Dirksen.

— 4 p.m.: Treasury Secretary Jack Lew presides over a meeting of the Financial Stability Oversight Council. Treasury Department.

That's all for today.

Stories from POLITICO Pro

House GOP unanimously nominates Paul Ryan for Speaker Back

By Rachael Bade and Kyle Cheney | 11/15/2016 03:25 PM EDT

House Republicans on Tuesday afternoon unanimously nominated Paul Ryan for a second term as Speaker. The GOP conference gave the Wisconsin Republican voice-vote approval, forgoing a secret ballot tally that would have shown how many Republicans oppose Ryan leading the chamber.

The vote sends a strong signal of GOP unity under President-Elect Donald Trump and puts to rest speculation that Ryan's speakership is in jeopardy. Ryan told the conference during a closed-door meeting Tuesday that he and the current leadership regime have the support of Trump and Vice President-elect Mike Pence, according to a source in the room.

Ryan still must win a floor vote in January to officially retain his gavel. That will require him to garner the support of a majority of the House, typically 218 Republicans — giving him little wiggle room with his conference.

Ryan ran unopposed for the post.

Although some conservatives have said they don't like the way Ryan has run the House, or are

unhappy with him for distancing himself from Trump during the election season, none of them ended up opposing his bid.

"I've got mixed emotions," said Rep. Louie Gohmert (R-Texas) of voting for Ryan after emerging from a meeting of the Republican conference earlier Tuesday. Toward the end of the closed-door conference, Gohmert used an open mic to accuse Ryan of being soft on border security after Trump won and "insulting" the President-elect by suggesting in press conferences and on TV that Trump "heard a voice" no other politicians had.

Despite any lingering doubts, the GOP conference is moving on. House Republicans — known for devolving into feuding factions in recent years — have indicated they would like to put those fractures behind them.

And that means Ryan is in the clear. He's benefited from Trump's apparent desire to keep him on, despite their previous chilly relationship. Ryan said he's been speaking daily with Trump since Election Day, and Republicans said their seemingly renewed relationship had strengthened Ryan's reelection bid.

Ryan also told the conference that Vice President-elect Mike Pence told him that Trump supports the entire House leadership team — a major boon for Ryan that should help tamp down any lingering opposition.

"I think that if the speaker's good enough for Donald Trump, I think he ought to be good enough for the conference," said Rep. Trent Franks (R-Ariz.), a member of the Freedom Caucus who has previously expressed support for Ryan.

Rep. Scott DesJarlais (R-Tenn.), a member of the Freedom Caucus, said Trump's backing of Ryan's speakership clearly helped stave off division among Republican lawmakers. He credited Trump for opting against holding a grudge. But he called the truce "tenuous."

"A month and a half is an eternity in politics," he said, referring to the start of the next Congress.

In a show of unity, GOP Conference Chairwoman Cathy McMorris Rodgers (R-Wash.) put red and white "Make America Great" hats on every chair during a conference meeting Tuesday morning ahead of the vote — a nod to the President-elect. Coming out of the meeting Tuesday morning, Rep. Peter King (R-N.Y.) said they were shipped in overnight.

Officials from the incoming Trump administration, meanwhile, have been reaching out to Capitol Hill to get acquainted and gauge potential allies. Even Steve Bannon, the former Breitbart boss who reportedly was pushing for retribution against Ryan for the speaker's criticisms of Trump, has been telling senior Republicans that he wants to work with them, POLITICO's Playbook reported Tuesday morning. The controversial Trump adviser has reportedly been saying he's no longer planning to be a thorn in the side of Hill Republicans, who he often criticized as soft or weak, and instead wants to work with them.

Trump's economic adviser Stephen Moore, who authored Trump's tax plan, also met with a group of Republican whips early Tuesday morning on Capitol Hill. The room was packed, sources said, as he discussed with them a potential tax reform and infrastructure package.

During the Tuesday morning conference, Ryan also announce a newly created position —

congressional liaison to the Trump transition team. He chose Rep. Chris Collins (R-N.Y.) for the post, an early Trump supporter who is also close with Ryan. Collins, Ryan announced, would now serve as the clearing house for legislative and staffing requests to Trump's team from the Hill. Collins, for his part, sought to bolster Ryan by conveying Trump's support.

"Paul Ryan's future is as bright as ever. He has no opposition today. I'm seconding Paul Ryan's nomination today as a sign of Trump's support of Mr. Ryan," he said. "This is a team effort."

Back

Barrasso to chair Senate environment panel next Congress Back

By Anthony Adragna | 11/15/2016 02:10 PM EDT

Sen. John Barrasso will become the next chairman of the Environment and Public Works Committee in January, he told POLITICO today.

Barrasso said he knows who his ranking member will be, but declined to name them. Sen. Tom Carper has right of first refusal for that role.

Among his first priorities will be confirming a new EPA administrator, he said. Barrasso replaces the term-limited Sen. Jim Inhofe atop the panel, while current ranking member Sen. Barbara Boxer is retiring.

Back

Tom Price being considered for HHS secretary Back

By Jennifer Haberkorn and Rachael Bade | 11/15/2016 01:45 PM EDT

Rep. Tom Price is being considered for Donald Trump's secretary of Health and Human Services, two sources tell POLITICO.

"Tom Price has been loyal to Donald Trump from the outset and his knowledge of health care is second to none," said a Republican source on the Hill close to the Trump campaign. "Him being in contention for HHS secretary makes perfect sense."

The Georgia Republican, who chairs the House Budget Committee, was an early Trump supporter. He and several other House committee chairmen endorsed Trump in May. Price also campaigned with Trump at an Obamacare repeal rally a week before the election.

Price, an orthopedic surgeon, has been one of the GOP's top voices on Obamacare repeal and other health care issues. He was one of the first Republicans to introduce an alternative to Obamacare when Democrats were debating health care reform in 2009 and 2010.

Former Louisiana Gov. Bobby Jindal is among other possible candidates for HHS secretary.

A Price spokesman did not return a request for comment.

Back

Aide: Carson won't serve in Trump administration Back

By Paul Demko | 11/15/2016 11:42 AM EDT

Ben Carson will not serve in the Trump administration, according to a longtime confidant of the retired neurosurgeon.

"He has no interest in a Cabinet position, or any position in the administration," Carson adviser Armstrong Williams told POLITICO.

Carson has been frequently mentioned as a possible HHS or Education secretary. But Williams said Carson believes he can better serve President-elect Donald Trump as an outside adviser, given Carson's lack of governing experience.

"It's not an issue of him turning down anything," Williams said. "It was clear that he had his pick of what he wanted to do."

Carson ran for the 2016 Republican nomination after becoming a conservative icon for his harsh criticism of Obamacare. After dropping out of the race, Carson became an enthusiastic supporter of Trump.

Back

Trump transition reaches out to hawks on Iran Back

By Andrew Hanna | 11/15/2016 02:06 PM EDT

In an early sign that Donald Trump intends to follow through on his campaign pledge to crack down on Iran, his transition team has contacted several hawkish Iran experts to explore options for imposing new sanctions on the Islamic Republic.

"The Iran deal can now be legally and effectively be reversed," said Mark Dubowitz, executive director of the Foundation for Defense of Democracies, which was behind the failed effort to kill the nuclear deal last year and is now in contact with the Trump transition team.

Opposition to Mr. Trump's candidacy among Republican national security figures has given way to those who now see an opportunity to push a hardline approach toward Iran.

The Joint Comprehensive Plan of Action brought together the five permanent members of the United Nations Security Council plus Germany last year to halt Iran's nuclear weapons program.

The deal was the hallmark of President Barack Obama's Middle East foreign policy, showcasing his preference for diplomacy over military action. But now, his legacy is jeopardized by a successor who has blasted the accord as "the stupidest deal of all time" and threatened to dismantle it once in office.

As president, Trump has a wide range of options available to ramp up the pressure on Iran. He could limit Iran's access to dollars, redesignate Iranians removed from the Treasury Department's sanctions list and pressure international companies to cease business with

Iranian banks.

"A Trump administration could reinstate some sanctions that were terminated and could also look at designating new entities, like going beyond the designation of the Qods Force to include the full IRGC," said Matthew Levitt, a counterterrorism expert at the Washington Institute for Near East Policy. The Iranian Revolutionary Guard Corp has ties to major sectors of the Iranian economy.

The new Trump administration could also threaten "secondary sanctions" on European allies that are determined to do business with the Islamic Republic.

"The secondary sanctions essentially force every other country in the world and every other business in the world to choose between doing business with Iran and doing business with the United States." said Georgetown University professor Matthew Kroenig, who has been in discussions with the Trump transition team. "That's not really much of a choice."

Continued Republican control of Congress may offer Mr. Trump even wider latitude for punitive action against Iran.

"Iran continues to test the limits of the nuclear deal to see what it can get away with because they've been emboldened by President Obama's concessions and weakness," said Sen. Tom Cotton (R-Ark.). "In January, a President Trump and a Republican Congress will begin a new policy of resolve toward Iran's ayatollahs."

Bipartisan support exists for even harsher sanctions. Sens. Bob Menendez (D-N.J.) and Joe Manchin (D-W.Va.) are cosponsors of a bill introduced by Senate Foreign Relations Chairman Sen. Bob Corker (R-Tenn.) that would step up sanctions related to Iran's ballistic missile program and cyber espionage.

"The prospects for a bipartisan approach to Iran's illicit behavior in a number of the non-nuclear areas is good," said John Hannah, a senior counselor at the Foundation for Defense of Democracies.

Efforts to open up Iran to world markets are likely to be on hold while the new administration determines the path forward on sanctions. And international businesses will be wary of starting any new ventures in Iran under a Trump presidency.

"The mere election of Donald Trump is a powerful deterrent and sanction in its own right," Dubowitz said.

Back

McCaul: 'I've expressed my interest' in DHS chief Back

By Cory Bennett and Martin Matishak | 11/15/2016 10:25 AM EDT

House Homeland Security Chairman Mike McCaul is pushing to become head of the federal agency he oversees in Congress.

"I've expressed my interest, and I think the process is taking place," McCaul told POLITICO this morning outside a House Republican Conference meeting, when asked whether he was

open to becoming Homeland Security secretary.

"I think I have both a good skill set, and I know the department very well, know what needs to be done," added the Texas Republican, who has chaired the Homeland Security Committee for four years.

During the 2016 campaign, McCaul advised Trump and his team on national security issues.

McCaul made headlines when he mentioned that Trump had dismissed his efforts to convince the candidate that Russia was responsible for the spate of election-season hacks that roiled the Democratic Party. But McCaul has continued to advise the president-elect's transition team.

"I've demonstrated my loyalty to the campaign," he said.

His remarks would seem to shut the door on the possibility that McCaul might challenge fellow Texas Republican, Sen. Ted Cruz in 2018. Reportedly, former Texas Gov. Rick Perry had been encouraging him to run.

In Congress, McCaul has been out front on a variety of cybersecurity issues, most notably shepherding through last year's landmark cybersecurity information-sharing law. He's also the co-sponsor of a compromise bill on encryption that would create an independent commission to study how law enforcement can access secure communications without endangering Americans' digital safety and right to privacy.

Back

Sessions leading choice for Defense secretary Back

By Jeremy Herb and Connor O'Brien | 11/14/2016 06:58 PM EDT

Sen. Jeff Sessions of Alabama is the leading contender for Donald Trump's secretary of Defense, sources close to the transition say — a choice that would reward the president-elect's most outspoken congressional loyalist but offer few olive branches to a Trump-wary Republican national security establishment.

The two men haven't seen eye to eye on everything: Sessions is a budget hawk who favors caps on defense spending, while Trump has called for an arms and troops buildup that could cost $55 billion or more per year. But sources say the three-term Alabama Republican senator has still emerged as the top candidate for Pentagon leader, perhaps the most important post in the upcoming Trump Cabinet.

Sessions hasn't said publicly whether he wants the job, but sources say they expect him to have his pick of Cabinet posts — which also could include attorney general or Homeland Security secretary — and that he's leaning toward running the Defense Department.

Establishment Republican defense officials may still try to push back against a Sessions nomination as Pentagon chief, sources close to the transition say. The main alternative is Stephen Hadley, one of George W. Bush's former national security advisers, who unlike many other Bush alums shrewdly refrained from criticizing Trump during the campaign. Other possibilities include Bill Clinton's hawkish CIA director, Jim Woolsey, who endorsed Trump in September, as well as former Sen. Jim Talent of Missouri and outgoing Sen. Kelly Ayotte

of New Hampshire.

Some Republican national security figures were quick to express misgivings about Sessions, after days of media speculation that Trump would pick Hadley in an attempt to build relations with mainstream defense Republicans.

"Sessions can't attract anybody, especially never-Trumpers, to come off the fence," said one Republican defense official, who like several others requested anonymity to offer their candid assessment of Trump's team. "He's going to need at least a fraction of them."

Said another GOP defense official: "Everyone I am talking to is saying they will consider [joining the administration] but only if it's a serious SecDef. ... We need to work for someone we trust and would be proud of."

Sessions said in a brief interview at the Capitol on Monday that he would be "pleased to consider" a Cabinet post. But when asked about any particular positions, Sessions demurred: "I'm just not talking about that."

Later Monday evening, Sessions was spotted at Trump Tower in New York. "I'm looking forward to going upstairs and chatting with folks and sharing some information. It's an exciting time," Sessions said, according to the pool report.

The Trump transition office did not respond to a request for comment.

Trump's ultimate choice "has implications for who would take the second, third levels of jobs," said Richard Fontaine, a former aide to Sen. John McCain and president of the Center for a new American Security. He said that Hadley, unlike Sessions, "has a whole pantheon of people who worked for him on the National Security Council staff and previously at the Pentagon."

Many consider the Defense secretary post the most crucial job Trump will fill as he picks his Cabinet, and not just because it will affect who else decides to join his national security brain trust. The Pentagon is still running a war in Afghanistan and stepping up its military campaign against ISIL. The U.S. military is also confronting a far more belligerent Russia and a Chinese military buildup.

The Defense secretary is the only person aside from the president with the legal authority to order the military into action, and is the official who must confirm any decision by the commander-in-chief to launch nuclear weapons.

"This choice is crucial," said Jim Jeffrey, a member of the Pentagon's Defense Policy Board who served as deputy national security adviser under Bush. "The secretary of Defense is in the chain of command, which the chairman of the Joint Chiefs is not."

"You have to have somebody who knows the military, who knows hardware, and could make good judgments," added Jeffrey, a former ambassador to Iraq and Turkey. "And in terms of foreign policy, frankly a lot of the substance is hard power. The secretary of Defense has a huge say in how we organize ourselves and in strengthening allies."

Sessions chairs the subcommittee on the Armed Services Committee overseeing nuclear weapons policy — experience that would come in handy as the Defense chief. He's also much closer to Trump than any of the other options, and the president-elect may be wary about

inserting someone into the key Cabinet post whom he's not comfortable with.

Last week, Trump named Sessions a vice-chair of his transition's executive committee. Sessions' chief of staff, Rick Dearborn, joined the transition team as executive director, while former Sessions aide Stephen Miller served on Trump's campaign and is now national policy director for the transition.

Sessions, a former prosecutor, is best known in the Senate for his work on the Judiciary Committee and his tough stance on illegal immigration — a key Trump campaign plank. He's also a budget hawk more than a defense hawk**,** and has praised spending limits that that Trump wants to bust through to finance a major military buildup.

Sessions "is opposed to the president elect's own plan for defense," said the first GOP official. "He's a Judiciary guy, that's where his heart is. That's his baby, not defense. If he goes to Defense, it's a disaster."

The debate between defense hawks and budget hawks has been a major dividing line in the Republican Party in recent years, and Trump has fallen solidly on the defense-hawk side. He has called for adding more than 50,000 new soldiers to the Army and 20,000 more Marines, boosting the Navy to 350 ships up from about 280, and adding more fighter jets to the Air Force's arsenal.

Defense budget analysts have predicted his plans would conservatively add $55 billion or more annually to the Pentagon's budget. While Trump has vowed to find offsets through cutting waste — a notion that Sessions would support — the analysts say that's an unlikely if not impossible prospect at such a high price tag.

In the lead-up to the election, Sessions said in an interview with Defense News that he would — reluctantly — support an increase in defense spending to put Trump's plans in place.

"Well it would be a need for a spending increase, there is just no doubt about it. And it is painful for me as a budget person to acknowledge that we can't stay at a sequester-like level," Sessions said. He added that the defense increase would not come with an equal increase for domestic spending, as the Obama White House has demanded.

Hadley made his own evident calculations during the campaign, refusing to join numerous other former Bush national security officials who criticized Trump or even endorsed Clinton. Hadley is now chairman of the board for the U.S. Institute of Peace and run a consulting firm with former Bush Cabinet officials Condoleezza Rice and Robert Gates.

"I don't think he was having it both ways," said Peter Feaver, another National Security Council official in the Bush administration who is close to Hadley. "It was a principled decision, and in hindsight it was very wise."

Feaver was among multiple GOP national security officials who publicly opposed Trump. "I signed those letters. It is like swallowing a position pill," Feaver said. "It is like splashing poison pill juice on your face. You take yourself out of being able to help the administration if they win. But if they win, you and everyone else in America want them to have the best team possible."

Asked at a POLITICO Playbook breakfast in August whom he was endorsing, Hadley

declined to take a position one way or another. Though he said endorsing Clinton was a "legitimate approach" for national security Republicans, he said it also has drawbacks.

"The problem with that approach is that Republicans will then say, 'Well, you know, you really weren't a Republican anyway' and shelve them," he said. "And you then deal yourself out of the debate within the Republican Party about what should the Republican Party stand for."

Trump's decision Sunday to insert Republican National Committee Chairman Reince Priebus as White House chief of staff could be a boost to Hadley, according to one source close to the transition team. "I think Priebus increases Hadley's chances a great deal," the source said.

Still, Hadley and Trump would have some awkwardness when it comes to the 2003 invasion of Iraq, which Trump has repeatedly called a disaster but which Hadley played a key role in while in the White House. In a 2013 op-ed, Hadley wrote that "ultimately, the United States achieved its national security objectives" in the Iraq War — an assertion that's at odds with Trump's assessment.

Hadley, who declined to comment for this story, is also highly regarded by members of both parties. "If the country is deeply divided, you want someone who is respected on both sides of that divide," Feaver said.

Another candidate who fits that category is Talent, who also did not criticize Trump. Talent is arguably the option closest to the Republican defense establishment, and was a leading contender for the secretary's job for 2012 Republican presidential nominee Mitt Romney.

But that could also work against him. The week before the election, Talent penned an op-ed explaining why he was voting for Trump. It was hardly a ringing endorsement. "I have a conviction that it's the right thing to do — not an easy thing, but the right thing," he wrote.

But he did praise Trump's defense plans. "Trump has announced a plan for rebuilding America's armed forces that on its face, sounds excellent," Talent wrote. "There is good reason to believe he will carry it out."

Since leaving government, Talent has been active in the policy ranks. He's a senior fellow at the American Enterprise Institute and served on the 2014 National Defense Panel, a bipartisan advisory group that Trump has cited that called for increased defense spending**,** as well as a 2010 Quadrennial Defense Review that examined the Pentagon's overall strategy.

Also in the mix is Woolsey, who endorsed Trump and advised the campaign.

Woolsey is more of a wild card, as he's been out of government since serving as Clinton's CIA director. He is close to former House Speaker Newt Gingrich, a major Trump advocate.

An adviser to McCain's 2008 presidential campaign, Woolsey joined the Trump campaign as a national security adviser in September. He said that was because he favored Trump's proposal to lift the caps on defense spending.

Woolsey did not respond to calls seeking comment, although he wrote an op-ed Friday in the South China Morning Post headlined: "Under Donald Trump, the U.S. will accept China's rise — as long as it doesn't challenge the status quo." That article was not in coordination with the campaign, a source said.

Other dark horses are possible, too, especially after last week's transition shake-up could bring a fresh set of eyes to the potential candidates. Ayotte's name has come up for example, although she's an unlikely selection given that she pulled her endorsement of Trump late in the campaign.

Another possibility, retired Lt. Gen. Michael Flynn, is probably more in line for national security adviser or a top intelligence post. He would require Congress to approve his service as Defense secretary since federal law requires military officers to wait seven years before becoming the Pentagon's civilian leader.

Back

BLM finishes methane rule, but GOP opposition looms Back

By Alex Guillén | 11/15/2016 01:20 PM EDT

The Interior Department issued a rule Tuesday aimed at reducing emissions of methane that is vented or flared from oil and gas drilling wells on federal lands — but it may have a short life if President-elect Donald Trump's fulfills his promise to scrap the Obama administration's energy policies.

The Bureau of Land Management says the final Methane Waste Prevention rule will bring climate benefits while also boosting federal royalty revenue by potentially hundreds of millions of dollars.

"This rule to prevent waste of our nation's natural gas supplies is good government, plain and simple," said Interior Secretary Sally Jewell. Natural gas recovered under the rule can feed power plants, while preventing wasted emissions and increasing revenue for production on federal lands, she added.

However, the rule's release in the waning days of the Obama administration makes it vulnerable to a Congressional Review Act challenge early next year. Republicans and the oil and gas industry have criticized the regulation, and Trump has promised to "unleash an energy revolution" that would to expand oil and gas production.

Industry quickly piled on criticisms, blunting Interior's argument that the rule will benefit the industry.

Dan Naatz, senior vice president of government relations at the Independent Petroleum Association of America, said that the industry lacks infrastructure needed to gather waste gas and transport it to market.

"This is an 11th hour shot by an administration that doesn't fully understand how its rules impact our businesses," Naatz said. "Furthermore, potentially raising royalties on an industry that has been financially hurting is counterintuitive to any business certainty."

Erik Milito of the American Petroleum Institute called the rule rushed and "an example of poor government policy and a left hand not knowing what the right hand is doing." He suggested instead that BLM "focus on on fixing permitting, infrastructure and pipeline delays that slow our nation's ability to capture more natural gas and deliver affordable energy to

consumers."

Set to take effect on Jan. 17, the rule for the first time phases in limits on flaring of methane, which is a major component of natural gas and a potent greenhouse gas. Drillers will be allowed to flare 5,400 thousand cubic feet of gas per well per year in 2018. That rate phases down to 750 MCf per well per year in 2025, a significantly lower figure than in the rule proposed earlier this year. Those capture targets can be met by individual leases or averaged across state-wide operations on federal lands, which BLM says will allow operators to find the least expensive ways to comply.

The rule requires operators to capture 85 percent of their total volume of gas produced each month in 2018, ramping up to 98 percent in 2026. The final rule appears to be structured somewhat differently from the proposal, which set across-the-board flaring limits per well. BLM says the changes were based on industry suggestions to make the rule less costly.

BLM also gave itself authority to set up alternative requirements for operators that may not be able to meet the baseline flare reductions.

The agency says its rule will capture 41 billion cubic feet of gas annually, enough to supply almost a quarter-million homes. The flaring portion of the rule would cover 16 percent of existing wells, but those sources make up 87 percent of flared gas.

Flaring will drop by 49 percent, while venting and leaks will drop 35 percent compared to 2015 levels, according to BLM. The rule also largely prohibits venting natural gas, and includes new requirements for equipment to directly monitor, locate and repair leaks, as well as regular inspections that would become less frequent if few leaks are discovered.

It does not apply to wells on private land, only those on federally owned land, which the Congressional Research Service said accounted for 16 percent of all U.S. gas production in 2015.

Environmentalists and taxpayer groups praised the regulation.

Taxpayers for Common Sense President Ryan Alexander argued that the federal government and states have lost out on billions of dollars' worth of revenue from flared and vented methane.

"It is BLM's job to prevent the waste of natural gas from federal lands and to ensure that taxpayers are fairly compensated for these resources," he said.

Despite the threat that the incoming Trump administration and the Republican Congress could overturn it, several environmentalists remained optimistic the rule could survive by appealing to conservative fiscal values.

Jon Goldstein, a senior policy manager at the Environmental Defense Fund, argued it was too early to say for sure it would be killed, since the issue that has "such a direct positive impact to the taxpayer and goes to what is really a bedrock conservative value of protecting taxpayers and reducing waste from federal government, I think ought to stand."

"Once members of Congress take a look at the final standards — which are quite flexible, quite common sense and really just about modernizing the development of energy to prevent our publicly owned resources from going up in smoke — they will decide to support them,"

said Sarah Uhl of the Clean Air Task Force.

Industry sues over BLM flaring rule just minutes after release Back

By Alex Guillén | 11/15/2016 12:56 PM EDT

Two industry groups filed a lawsuit over the Interior Department's methane venting and flaring rule today just minutes after the department released the rule.

The suit, filed by the Western Energy Alliance and the Independent Petroleum Association of America in the U.S. District Court in Wyoming, argues that the rule is "unlawful and unconstitutional."

Air quality is supposed to be regulated via the Clean Air Act by EPA and states, not BLM, the groups argued.

They also argue that it "places arbitrary limits on flaring, relies on flawed scientific, engineering, and economic assumptions and methodologies to estimate regulatory impacts, improperly relies on EPA air quality rules and the administrative record underlying those rules, which themselves are being litigated; and conflicts with or unlawfully usurps the primary jurisdiction of state and tribal governments."

SEC releases plan for 'CAT' market surveillance tool Back

By Patrick Temple-West | 11/15/2016 03:00 PM EDT

The Securities and Exchange Commission today released the details of its plan to create a market surveillance tool known as the "consolidated audit trail."

The SEC's three commissioners are meeting this afternoon to approve the plan. The agency first envisioned it in 2010 as one of its responses to the "flash crash" in the stock market that year.

POLITICO Pro Q&A: SEC Chair Mary Jo White Back

By Patrick Temple-West | 11/15/2016 10:40 AM EDT

In one of her first public remarks as head of the SEC in 2013, Mary Jo White dedicated a speech to the importance of independence at the agency and her commitment to preserving its political objectivity.

"We make our decisions based on an impartial assessment of the law and the facts and what we believe will further our mission — and never in response to political pressure, lobbying, or

even public clamor," White said.

At the time, White could not have imagined that in 2015 the public clamor would include a billboard truck driving around Washington, named the "Dump (Mary Jo) Truck," that called for President Barack Obama to replace White over the SEC's enforcement settlements.

That same year, liberal-leaning advocacy groups bought advertisements in Washington's Union Station portraying White as a superhero who needed to advance a political disclosure spending rule at the SEC to combat hidden company campaign contributions.

Days before she announced she would be stepping down from the SEC, White sat down for an interview with POLITICO in her 10th-floor office at the agency. She declined to take any parting shots at the political forces that dogged her tenure at the agency. Nor did White give a specific date for her last day at the SEC, but said: "I'm going to basically follow what prior chairs have done for the last five decades, and my plan is to step down around the end of the Obama administration."

The following has been edited for length and clarity.

Is your SEC departure contingent on the next president naming a successor?

The plan is around the end of the Obama administration. I can't say more than that.

Are you stepping down with something lined up afterward? Do you have any idea what you'll do next?

I'm really not even thinking about that until I actually leave. I plan to drive the agenda until the day I do leave.

With your pending departure, is this "pencils down" for regulations in the works?

Not at all.

What will you prioritize in the weeks and months ahead?

What I expect to certainly emphasize in the coming few months is the adoption of CAT [the "consolidated audit trail"]. Title VII [of the 2010 Dodd-Frank Act] and in particular finishing the dealer regime. [And] derivatives in our asset-management space. Those are the ones that come to the top of my mind.

Is there anything on the CAT proposal that might be changed or repurposed? The exchanges have been bickering about costs, and some of the investor advocates said it was not strong enough. Is there anything that would be changed from the proposal?

I can't comment specifically to get ahead of the action the commission does take. Clearly we listen to all the comments that we get before reaching a final decision.

Did you feel pressure from Sen. Elizabeth Warren to step down?

Not at all.

Were you planning to step down before her letter to Obama?

The answer is normal course, assuming I was still here this late in the Obama administration, I always planned to step down at the end of the administration. Again, chairs have done that for five decades.

Do you feel the political pressure from Democrats and Republicans got worse as your tenure went on? How did that make this job harder?

It comes with the territory. I don't think it makes the job harder. You want to listen to all constituents, including all constituents on the Hill, very seriously. The SEC does a lot of very significant rulemaking that people have very different views about. The answer is it is up to us — not just me — but my fellow commissioners to do what they think is the right thing at the end of the day having gotten full input to further our mission in the most optimal way for investors and markets.

What is your No. 1 piece of advice for your successor?

I'm not a person who gives advice particularly. But I would say be true to yourself and true to the SEC's mission.

I wanted to ask about the attorney general opening because I hear frequently people say that you wanted the attorney general job. Can you set the record straight now? Did you want the job?

I really can't comment on that. I was asked, and was privileged to be asked, to do this job, and I'm doing it.

In a couple of interviews before Congress left for recess, I asked Rep. Scott Garrett about your tenure here. He applauded you for taking the political spending disclosure rule off the SEC agenda. But Sen. Sherrod Brown said, "We are all flummoxed and confused about why she does not want to move on it." Do you stand by your decisions on that rule and do you have any advice for your successor about how to proceed on that issue?

In terms of any rulemaking, any policy decision, that will be up to whoever my successor is.

Brown also said the SEC has granted too many waivers. He cited the Wells Fargo scandal as just the latest evidence that financial firms do not feel threatened by regulators. He said: "There seems to be a disincentive for them to behave. I put part of the blame for that on the SEC." What is your response?

The SEC very rigorously applies the legal criteria for granting or not granting waivers when there is a disqualification.

Does the issue get too much attention from Democrats?

I don't fault anyone for paying attention to any and all of the issues that are before the SEC.

Going back to the political disclosure rule, is there anything you could have done differently or would have done differently to navigate that better?

I've said the chronology the agency followed with respect to that subject and I don't think I have anything to add.

There has been criticism of you and [SEC enforcement director] Andrew Ceresney for ties to the private sector. Do you believe such criticism will discourage people in the private sector from looking to do public service in the future?

I don't think so and I certainly hope not. We want the best people for public service jobs wherever they may come from.

Is there one item on the regulatory agenda that you regret you won't be able to finish?

The one that I would mention is the uniform fiduciary duty rule for investment advisers and broker dealers. The current status of that is the [SEC] staff has given a very detailed outline to my fellow two commissioners as to how they would proceed. But I think it will have to wait until [there is] a full commission to be carried forward.

Garrett criticized the SEC for not moving on that and Brown said Republicans wanted to SEC to move that rule because Republicans knew the agency would never get it finished. What's your response?

I made a decision about a year and a half ago for myself that I thought it was important for the SEC to move forward on the uniform fiduciary duty rule for broker-dealers and investment advisers under section 913 of the Dodd-Frank Act. It was a difficult, not quick rule to do, and we certainly didn't want to end up at the end of the day driving away from retail investors, reliable, reasonably priced advice. But I also made clear that I was just one vote with respect to that point of view and my fellow commissioners have spoken on that subject themselves. So there are different points of view on that within the commission. For that rule to advance would require a full commission.

Garrett and Brown also split over your work at FSOC. Brown applauded your work on FSOC, but Garrett suggested maybe FSOC was driving the asset-manager rules. What's your response to the lawmakers over the control that FSOC might have over the SEC?

First, I think FSOC is an enormously important entity to be there for the safety of our financial system. And I'm very glad to be a voting member of FSOC. In terms of the asset-management space, obviously that's one of our core responsibilities of the SEC. It has been since 1940. We're quite a ways through a very aggressive rulemaking agenda on that of our own to really modernize regulation of the asset management industry. FSOC comes from a different perspective, which is basically what in the asset-management space may present systemic risks to our financial system. As I've said before, what FSOC is looking at in the asset-management space is complementary to what the SEC is doing. And we're proceeding with our authorities to strengthen our own regime.

Can you talk about the derivatives rulemaking? Commissioner [Michael] Piwowar said last month the SEC might not get that done this year.

I can just say that it is a priority to complete this year.

Going back to enforcement, there were a handful of cases that you did not participate in

this year. There was a JPMorgan settlement in January ($4 million), Qualcomm in March ($7.5 million), Novartis AG in March ($25 million) and the Bank of New York Mellon in June ($30 million). Why didn't you participate in these votes?

We don't comment on recusals or the basis for them.

Given that only two commissioners approved those settlements, could the SEC have gotten more money out of those settlements if you had participated?

I'm recused so I can't really comment.

Looking ahead to the politics of the agency, what advice might you have to your successor about how to ameliorate the divisiveness so that they will not face some of the same tensions that you did during your term?

Again, the commission structure is built to have different points of view expressed. You can't have more than three members be from the same political party as the president. So you want that. You want that exchange of different points of view. We've certainly had that in this commission. But I think again you look at what we accomplished with both the commission that is three members now and prior to that. It is an extraordinary record of accomplishments. It is probably the most ambitious rulemaking the agency has ever faced. It is a structure built for expressing different points of view and coming out with stronger rules as a result.

Can you think of one day as the best for your time at the agency? And a day that was the most troubling for you and why?

I tend not to think in terms of one day or one accomplishment standing out above others. I certainly can think of any number of our rulemaking actions or enforcement actions that I think redounded significantly to benefit investors and the financial system. I think our money market reforms are enormously important. Our SCI rulemaking, "security compliance and integrity," to enhance the resiliency of our critical market infrastructures is another. Any number of those redounds to the huge benefit of investors. A troubling day? You can run into a barrier in an enforcement case you have to work your way through, but nothing particularly stands out.

You prioritized diversity on corporate boards. If the U.S. does not mandate that, what is a way to get more diversity on corporate boards without forcing companies?

The SEC does not have the power to essentially say who you should put on your boards. That is more a subject of state law. We do have disclosure power. We have used those in that space. As you know I have had the staff look at the issue of whether we shouldn't enhance those disclosures to be more explicit with respect to gender race and ethnicity. That is something that is proceeding. Stepping back, this is something that is in the hands of CEOs and boards to fix. A very significant positive development was the Business Roundtable saying we're going to put this front and center. It's not a supply issue. There are lots of diverse candidates — gender, diversity, racially — who are highly qualified to be on boards. I look to CEOs and boards to not necessarily go to their traditional sources of candidates, but to look more broadly. One cannot ignore the study after study that is showing that boards function better on behalf of shareholders if they do have a diverse boards.

You mentioned the disclosure effectiveness review, and I know there is a FAST Act

report on how to improve and make changes to disclosures, but I'm wondering if you believe disclosure should include sustainability and ESG (environmental, social and governance) issues that are out there? That is something Garrett is worried about — that disclosure will stretch too far beyond what's material.

We have, in terms of climate change, guidance that we published some time ago that if the risks presented by climate change are material then they need to be disclosed. Now we're looking very hard at those issues. In our S-K concept released in April, we specifically teed up sustainability. And the reason, from my point of view, that we teed them up was that they are enormously important issues. And for the SEC to decide after studying really the points of view of all the constituents what really are our next best steps in that space. But it is an enormously important area.

The most recent survey of employee satisfaction at executive-branch agencies shows that morale at the SEC has improved during your tenure. How do you rank the SEC's morale ratings against the CFTC, CFPB or other agencies? Is there a jockeying going on in government agencies?

It's really not a jockeying. I'm enormously pleased that by all measures and indications the SEC's morale, the staff's morale, has risen significantly since 2013. When I came there seemed to be, and there were, issues. We've spent a fair amount of time focusing on that. We instituted the "all invested" initiative, which is really the umbrella name for paying more attention to acknowledging accomplishments. We did a campaign where staff members, line staff people, talked about the values of the SEC — integrity, excellence. It really made a big difference. I've certainly walked the halls to chat with people informally. Write notes to people, thanking them for their hard work on particular matters. Letting them know when we have an open rulemaking so that not only the press knows we are going to do that but the entire agency does. We are now, I think, third of 37 in terms of positive employee engagement and attitudes. Of the large agencies, it's not a competition, you just want morale to be very high, and I'm pleased to see it has gotten back to where it should be.

SEC approves stock market's 'Hubble Telescope' Back

By Patrick Temple-West | 11/15/2016 04:27 PM EDT

The Securities and Exchange Commission today unanimously approved a plan to build a stock market surveillance tool.

Known as the "consolidated audit trail," the tool was first envisioned by the SEC in 2010 as a response to the "flash crash" in the stock market that year.

"Regulators will now have state-of-the-art capabilities to ensure that our capital markets remain the most robust and reliable in the world," SEC Chair Mary Jo White said at the meeting this afternoon.

Democratic Commissioner Kara Stein said the CAT would be "the Hubble telescope" for the securities markets.

"Market participants should be pleased with where things have landed," Republican SEC Commissioner Michael Piwowar said.

Now, stock exchanges must hire a company to build and operate the CAT. They can either go to the Financial Industry Regulatory Authority, or to one of two technology companies, SunGard or Thesys.

Brady says tax reform will be deficit-neutral Back

By Brian Faler | 11/15/2016 02:40 PM EDT

House Ways and Means Committee Chairman Kevin Brady predicted tax reform will happen next year, and said the plan he's working on is designed to be deficit-neutral.

"Tax reform is going to happen in 2017," he said today at a tax conference sponsored by Bloomberg BNA and KPMG. "We're designing this to break even."

"We're already in the ballpark [of neutrality] with the blueprint — I feel comfortable where we're at," he said.

Brady said he couldn't lay out a timeline for action next year, such as when his committee would act or when the entire House would vote. That's still to be determined, Brady said.

Asked about the possibility of financing a major infrastructure package with revenue raised by reform, he said: "I have not seen the details of the package being developed by the Trump administration — I think it's under construction as we speak right now and so we'll have that discussion."

Diverting revenue to pay for highways would leave less for reducing tax rates, which Brady alluded to, saying, "in our blueprint, we applied those revenues to more growth and more competitive rates."

Brady also said he's not interested in reviving a rump group of tax extenders in a lame-duck session of Congress, and expressed hope a President Donald Trump would kill the Obama administration's recently released "earnings stripping" regulations.

"I'm hopeful that he stops those regulations cold because, while the revised regulations are better than the proposed ones initially, they are still damaging to the economy."

Hatch aide: Corporate integration draft almost done Back

By Brian Faler | 11/15/2016 03:59 PM EDT

A long-incubating "corporate integration" tax reform plan by Senate Finance Chairman Orrin Hatch is almost completed, according to a top aide.

The plan will be deficit-neutral, using conventional budgeting techniques, and it will keep the same income distribution as under current law, Mark Prater said today at a tax conference sponsored by Bloomberg BNA and KPMG.

Hatch has not yet signed off on releasing the proposal, he added.

"We're very close to completion," said Prater. "We will meet with him and he will make the final call on whether the draft goes out."

The draft would include legislative language, a dynamic as well as conventional budget score and technical explanation, he said.

Back

DOT watchdog: Core NextGen programs falling short Back

By Jennifer Scholtes | 11/15/2016 12:15 PM EDT

The bulk of the FAA's "transformational" NextGen programs haven't been very effective at transforming air traffic management so far, DOT's inspector general reported today.

The IG's follow-up report explained that the agency has made changes to cost and schedules for NextGen programs since the agency was dinged in a 2012 assessment. But the six most pivotal NextGen programs still don't have final price tags or ultimate deadlines and have yet to live up to their lofty goals, the IG reported in this newest take.

"FAA originally identified the transformational programs as efforts that would fundamentally change the way the agency would manage air traffic," the IG reported. "However, our review has found that, at least until 2020, most of the transformational programs will not transform how air traffic is managed ..."

The FAA now has initial baseline costs for each NextGen program and has approved nearly $2 billion — for example — for the first segment of the DataComm initiative to enable air traffic controllers to send digital messages to pilots. However, each program's total cost, timeline and ultimate benefits remain unclear, the IG explained.

"Since our last report, FAA has not adjusted anticipated benefits for its transformational programs, and many benefits remain unquantified, broad, or uncertain for improving the flow of air traffic and reducing Agency operating costs," the IG concluded.

Senate Commerce Committee leaders from both sides of the aisle requested the IG update.

The FAA "non-concurred" with the inspector general's recommendations, and the IG is asking the agency to reconsider its response.

Back

FHA fund shows strong gains Back

By Lorraine Woellert | 11/15/2016 01:00 PM EDT

The Federal Housing Administration's mortgage insurance program showed improved health for the fourth year amid rising home prices, fewer defaults and a surge of new borrowers.

The capital cushion of the Mutual Mortgage Insurance Fund grew to 2.32 percent in fiscal 2016, up from 2.07 percent. It was only the second year since 2008 that the capital ratio, a proxy for the fund's health, exceeded the 2 percent minimum required by law.

The net worth of the fund, which stands behind $1 trillion in U.S. home loans and serves as a sort of savings account to pay lender claims if borrowers default, grew by $3.8 billion to $27.6 billion.

"The Obama administration has turned this fund around," HUD Secretary Julian Castro said. "The FHA is stronger, it's able to offer greater opportunity to responsible borrowers. We're in a much different position today from what we were just a few years ago."

In 2013, losses forced FHA to seek financial aid from Congress for the first time in its 82-year history. The $1.7 billion cash infusion helped right the program, which had been hobbled by weakness in reverse mortgages, which allow elderly homeowners to convert their home equity to cash without making payments.

By January 2015, the FHA fund had rebounded to such a degree that President Barack Obama ordered the agency to cut its mortgage insurance premiums from 1.35 percent to 0.85 percent as a way to make home loans more affordable.

Despite this year's strong performance, the agency signaled no immediate plans to lower the premium again, despite calls from mortgage and real estate lobbyists.

"Clearly, these very strong results do indicate there is room to return to pricing to that reflects risk in the program," said Ed Golding, who leads the FHA program.

At the same time, because excess premiums help fund the federal budget, a premium reduction would have to be made up with spending cuts.

Castro has yet to hear from President-elect Donald Trump's transition team, but said it's too early to draw the conclusion that housing is low on the next administration's agenda.

"My hope is it will be a smooth transition," Castro said.

Back

Obama administration: Colleges must 'respond aggressively' to racially charged incidents Back

By Benjamin Wermund | 11/15/2016 02:08 PM EDT

After a week of heightened tension on college campuses, Education Secretary John B. King Jr. on Tuesday urged public university leaders to "respond aggressively" to any cases of racial harassment.

In his first comments since Donald Trump was elected president, the Education secretary called on university leaders to take it upon themselves to protect students — many of whom,

he said, feel unsafe following the election.

The "challenging national moment ... has left many of our students feeling vulnerable," King told a crowd of public university administrators at the Association of Public and Land-grant Universities meeting in Austin. "We've got to make sure all of our students feel like our campuses are a place they belong and will feel supported all the way through to graduation. We've got to respond aggressively to incidents where that safety is violated and we have to set a tone on all of our campuses that we see diversity as an asset."

The racially charged incidents in the past week included a cyber-bullying attack that targeted a group of black freshman students at the University of Pennsylvania, and a profanity-laced flier that appeared at Utah Valley University. The flier warned "liberals" to "shut the f--- up" about Muslim rights and gay rights.

In his speech Tuesday, King called on university leaders to be "loud voices" for undocumented students now living in fear of deportation. Trump has vowed to swiftly crack down on illegal immigration, saying he would deport as many as 3 million people immediately.

"The political rhetoric of the last year and a half has been very scary, I think, to our undocumented students and to their families," King said. "We've got to try to make our campuses safe for them and then we've got to be loud voices in the political discourse, not just at a national level, but at the state level — advocating on behalf of those students, their safety and their educational opportunity.

"We would be a worse country for giving up on our undocumented students and a better country for seeing their hope and promise, and investing in them," King said.

King also said he hopes the Trump administration will "understand that the department has a responsibility to enforce civil rights and to protect students." During the campaign, Trump's surrogates called for eliminating the Education Department's Office for Civil Rights.

"What I would ultimately urge all of us to do is, regardless of the position the department takes on any specific procedural matters, all of us have the responsibility to make our schools safe places," King said.

The Education secretary began his speech by pointing to what he said was the historical context "as we reflect on this moment." Specifically, he pointed to President James Buchanan's veto of the Morrill Act that created land-grant universities. Buchanan, he said, is now regarded as one of the least-effective leaders in American history.

The veto, he said, is "a reminder that sometimes our democracy does not always produce leaders with the right judgment."

Back

Schumer's leadership team in flux ahead of elections Back

By Burgess Everett and Elana Schor | 11/15/2016 05:53 PM EDT

Senate Democrats are scrambling to recruit a leader for their campaign arm and some

Democrats say they are in the dark as Chuck Schumer assembles his leadership team with the party's elections just a day away.

The most pressing issue: No one seems to want to take over the Democratic Senatorial Campaign Committee. The party faces a daunting 2018 map and the prospect of Republicans padding their majority.

Also unresolved is what Sen. Patty Murray (D-Wash.) will do as she pointedly refuses to take a challenge to Senate Minority Whip Dick Durbin (D-Ill.) off the table.

Senior Democrats have been eyeing Rep. Chris Van Hollen (D-Md.), who was just elected to the Senate, for the DSCC post. But in an interview on Tuesday, Van Hollen said there's no plan in place for him to take the position. Democrats will be defending 25 seats, including 10 in states that Trump won.

"I'm really focused right now on orientation. I really haven't had a chance to focus on it. I'm not planning on that," Van Hollen said. "Nothing's been decided."

Van Hollen would be an attractive choice for Democrats. He has good relationships with donors from his time chairing the House Democrats' campaign arm.

Though it would be highly unusual for a freshman senator to take the job, several Democrats said Van Hollen is "likely" to be selected for the position.

Other high-profile senators such as Cory Booker of New Jersey and Al Franken of Minnesota have passed on the job. Sen. Chris Coons (D-Del.), another possibility, officially ruled out the job on Tuesday as well.

"This is really not the right time for my family to be taking on the challenging role of chairing the DSCC for the 2018 cycle. And I've conveyed that to my caucus leadership," said Coons, who wants to spend time with his children while they are still in school. "I just think taking a chairmanship of a role that would be so demanding ... is just not the right choice."

Another Democrat who could head the DSCC is Sen. Jeanne Shaheen (D-N.H.), who won a brutal reelection race against former Sen. Scott Brown in 2014.

But Shaheen said "stop that rumor," making clear she would not take the position.

Murray (D-Wash.), the No. 4 Democrat in leadership, has refused to say what her plans are beyond talking to Senate Democrats about the party's future. Most Democrats believe she will not challenge Durbin, because she is not actively working to round up supporters.

"Nobody's fighting for votes," said one senator who has spoken to Murray.

Democrats said it was unusual that so many of them are in the dark going in, although one senator said "we've got bigger fish to fry" than focusing on palace intrigue.

Senate Minority Leader Harry Reid's retirement has opened up a vacancy in the upper rungs of leadership, and Murray is set to move up regardless.

Schumer (D-N.Y.) declined to answer questions about the leadership limbo his caucus is in. He said he will not speak until after Wednesday morning's leadership elections. Some senators

said privately they have not been briefed on his plans.

Durbin's office has repeatedly asserted he has the votes locked up to keep the whip job. Only the top two jobs are elected positions in the Democratic leadership — the rest are up to Schumer.

Sen. Bernie Sanders (I-Vt.) is also pursuing a leadership role, Democrats said, but he appears unlikely to leapfrog Murray. Still, there is some talk of adding new blood to the leadership team, either with Sanders or perhaps the elevation of Sen. Jeff Merkley (D-Ore.), another prominent liberal.

Asked about his possible leadership aspirations Tuesday, Sanders said: "If the question is, will I contest Sen. Schumer or Sen. Durbin, no, I've never had any intention of doing that."

Sanders later declined to rule out seeking another spot in leadership, telling reporters that "we're thinking about it."

Merkley also shrugged off talk of adding himself or another liberal to Democratic leadership. "I'm just happy to have Sen. Schumer lay out his plan" for steering the caucus, Merkley said. "There are many, many ways I can express my opinions and my involvement."

Sen. Sheldon Whitehouse (D-R.I.), another leading liberal, sought to quash discontent on the left over Schumer's close ties to Wall Street. The Democratic leader's "support for the No. 1 target of big banks," the Dodd-Frank financial regulations bill passed after the market meltdown of 2008, shows he can stand up to Wall Street, Whitehouse told reporters.

The likely ascension of Murray and Sen. Debbie Stabenow (D-Mich.) would open up a slot in the lower tier of Democratic leaders. Currently, Sens. Elizabeth Warren of Massachusetts, Mark Warner of Virginia and Amy Klobuchar of Minnesota are also on Reid's team.

TODAY: Secretary Jewell, Senator Tester to Announce Milestone with Blackfeet Tribe, Devon Energy Corporation Regarding Oil and Gas Leases

WASHINGTON – Today, Wednesday, November 16, U.S. Secretary of the Interior Sally Jewell and Senator Jon Tester will hold an event with the Blackfeet Nation and Devon Energy Corporation in Washington, D.C. to announce a milestone related to oil and gas leases in the Badger-Two Medicine area of the Lewis and Clark National Forest in northwest Montana.

The Badger-Two Medicine Area is a 130,000-acre area along the Rocky Mountain Front within the Lewis and Clark National Forest. Glacier National Park, the Bob Marshall Wilderness and the Blackfeet Indian Reservation surround the area, which is considered sacred by the Blackfeet Tribe and is part of a recognized Traditional Cultural District. These characteristics caused Congress to legislatively withdraw the area from mineral development in 2006.

Earlier this year, Secretary Jewell announced the cancellation by the Bureau of Land Management of an oil and gas lease in the Badger-Two Medicine area. All of the originally issued leases in the area have been the subject of a variety of administrative, legal and legislative actions since they were issued over 30 years ago because of the significance of the resources in the area and concerns about the circumstances surrounding leasing ordinance.

WHO: **Sally Jewell**, U.S. Secretary of the Interior
Jon Tester, U.S. Senator, Montana
Harry Barnes, Chairman, Blackfeet Nation
Dave Hager, CEO, Devon Energy Corporation

WHAT: Announcement regarding oil and gas leases in Badger-Two Medicine Area

WHEN: Today, Wednesday, November 16, 2016
10:45 AM EDT – Media check-in
11:00 AM EDT – Signing ceremony

WHERE: U.S. Department of the Interior

1849 C. Street NW
Washington, D.C. 20240

MEDIA: Credentialed members of the media are encouraged to RSVP here. For those unable to attend, the event will be livestreamed.

Great news, Dylan - we'd love to have Senator Tester speak. I'm in a meeting but will send you the agenda/briefing when I'm back at my desk shortly.

Re: parking, I've copied Mr. Hargrave who may be able to arrange garage parking it C St parking (C St is easier, in my opinion).

I'm also copying our Comms leads in case you all have Q's related to press.

Be back in touch shortly.

Hey Francis:

Senator Tester would like to attend. Do you have an agenda for this event? We would be happy to have the boss give a quick two minute speech if possible. Fortunately I work for a guy who talks for a minute when you offer him two so I hope this works. Finally, our boss will have to be in and out relatively quick so I'm curious if there are any parking arrangement we can set up ahead of time.

Trecia -

Secretary Jewell is hosting Blackfeet Nation, Devon Energy, and other stakeholders for a signing ceremony around Badger Two Medicine tomorrow at 11:00am, in her office. We'd like to invite the Senator to attend and speak, if his schedule allows.

Apologies for the late notice here (a complete oversight on our end).

Many thanks,

Francis

Thanks Chelsea. Do you have any more details about the decision you can share (embargoed of course)? With White River NF being in his district Rep. Polis is very interested, and we are hoping to send someone/put out press after the event, depending on the info in the announcement.

Thanks,
Blaine

Secretary Jewell, Senator Tester, Blackfeet Nation and Devon Energy Announce Cancellation of Oil & Gas Leases in Montana's Lewis and Clark National Forest

Action Represents Significant Milestone in Protecting Badger-Two Medicine Area from Impacts of Energy Development

WASHINGTON – U.S. Secretary of the Interior Sally Jewell today joined U.S. Senator Jon Tester, Blackfeet Nation Chairman Harry Barnes and Devon Energy Corporation President and CEO David Hager to announce that the Bureau of Land Management (BLM) has canceled 15 additional oil and gas leases in the Badger-Two Medicine area of the Lewis and Clark National Forest in northwestern Montana. Devon Energy owns an interest in these federal leases. The lease cancellations address outstanding concerns about the potential for oil and gas development in this culturally and ecologically important area.

"Today's action honors the Badger-Two Medicine Area's rich

cultural and natural resources and will ensure it is protected for future generations," said Secretary Jewell. "We are proud to have worked alongside the Blackfeet Nation, U.S. Forest Service and Devon Energy to achieve this important milestone, rolling back decades-old leases and reinforcing the importance of developing resources in the right ways and the right places."

"There are special places in this world where we just shouldn't drill, and the Badger-Two Medicine is one of those places. This region carries great cultural and historical significance to the Blackfeet Tribe and today's announcement will ensure that the Badger-Two Medicine will remain pristine for both the Tribe and the folks who love to hunt, hike, and fish near Glacier Park and the Bob Marshall Wilderness," said Senator Tester.

The Badger-Two Medicine Area is a 130,000-acre area along the Rocky Mountain Front within the Lewis and Clark National Forest, managed by the U.S. Forest Service. Glacier National Park, the Bob Marshall Wilderness, and the Blackfeet Indian Reservation surround the area, which is considered sacred by the Blackfeet Tribe and is part of a recognized Traditional Cultural District. These characteristics caused Congress to legislatively withdraw the area from mineral development in 2006.

"We're pleased and proud to celebrate the collaboration that has brought us to this agreement," said Dave Hager. "We know how important this is to the Blackfeet people, and we appreciate the work the Interior Department has done to make it possible. For Devon, cancellation of these leases at this time is simply the right thing to do."

The leases being canceled today were issued in the 1980s and have not had any drilling on the area since issuance.

"Our pursuit to protect the Badger-Two Medicine has lasted more than three decades, and it will continue until all the illegal oil and gas leases are cancelled and the area is permanently protected," Chairman Barnes said. "This area is sacred to the Blackfeet people, and we appreciate that others are starting to recognize it as well. There are many who have helped us get to this point today, but I want to especially recognize Devon Energy for its leadership and willingness to partner with Indian Country."

The cancellation respects recommendations by the U.S. Forest Service, the Advisory Council on Historic Preservation, and concerns expressed by the Blackfeet Tribe and interested members of the public. It is also consistent with the BLM decision earlier this year to cancel the lease held by Solonex LLC.

Because the Devon leases were never developed, the area remains undisturbed. Cancellation of the leases entitles Devon to a refund for

all rents and bonus bids paid – about $200,000. After today's announcement, there are only two remaining leases in the area.

To:

Good afternoon,

We wanted to share with you the news that today U.S. Secretary of the Interior Sally Jewell and Bureau of Ocean Energy Management (BOEM) Director Abigail Hopper will release the final plan to guide future energy development for the Nation's Outer Continental Shelf (OCS) for 2017-2022. The plan takes a balanced approach to best meet the nation's energy needs by including areas offshore with high resource potential and mature infrastructure while protecting regions with critical ecological resources.

The Proposed Final Program offers 11 potential lease sales in four planning areas – 10 sales in the portions of three Gulf of Mexico Program Areas that are not under moratorium and one sale off the coast of Alaska in the Cook Inlet Program Area.

More information about this announcement is contained in the attached news release and Q & A document. **Information related to this announcement is EMBARGOED UNTIL 1PM Eastern**.

Thank you.

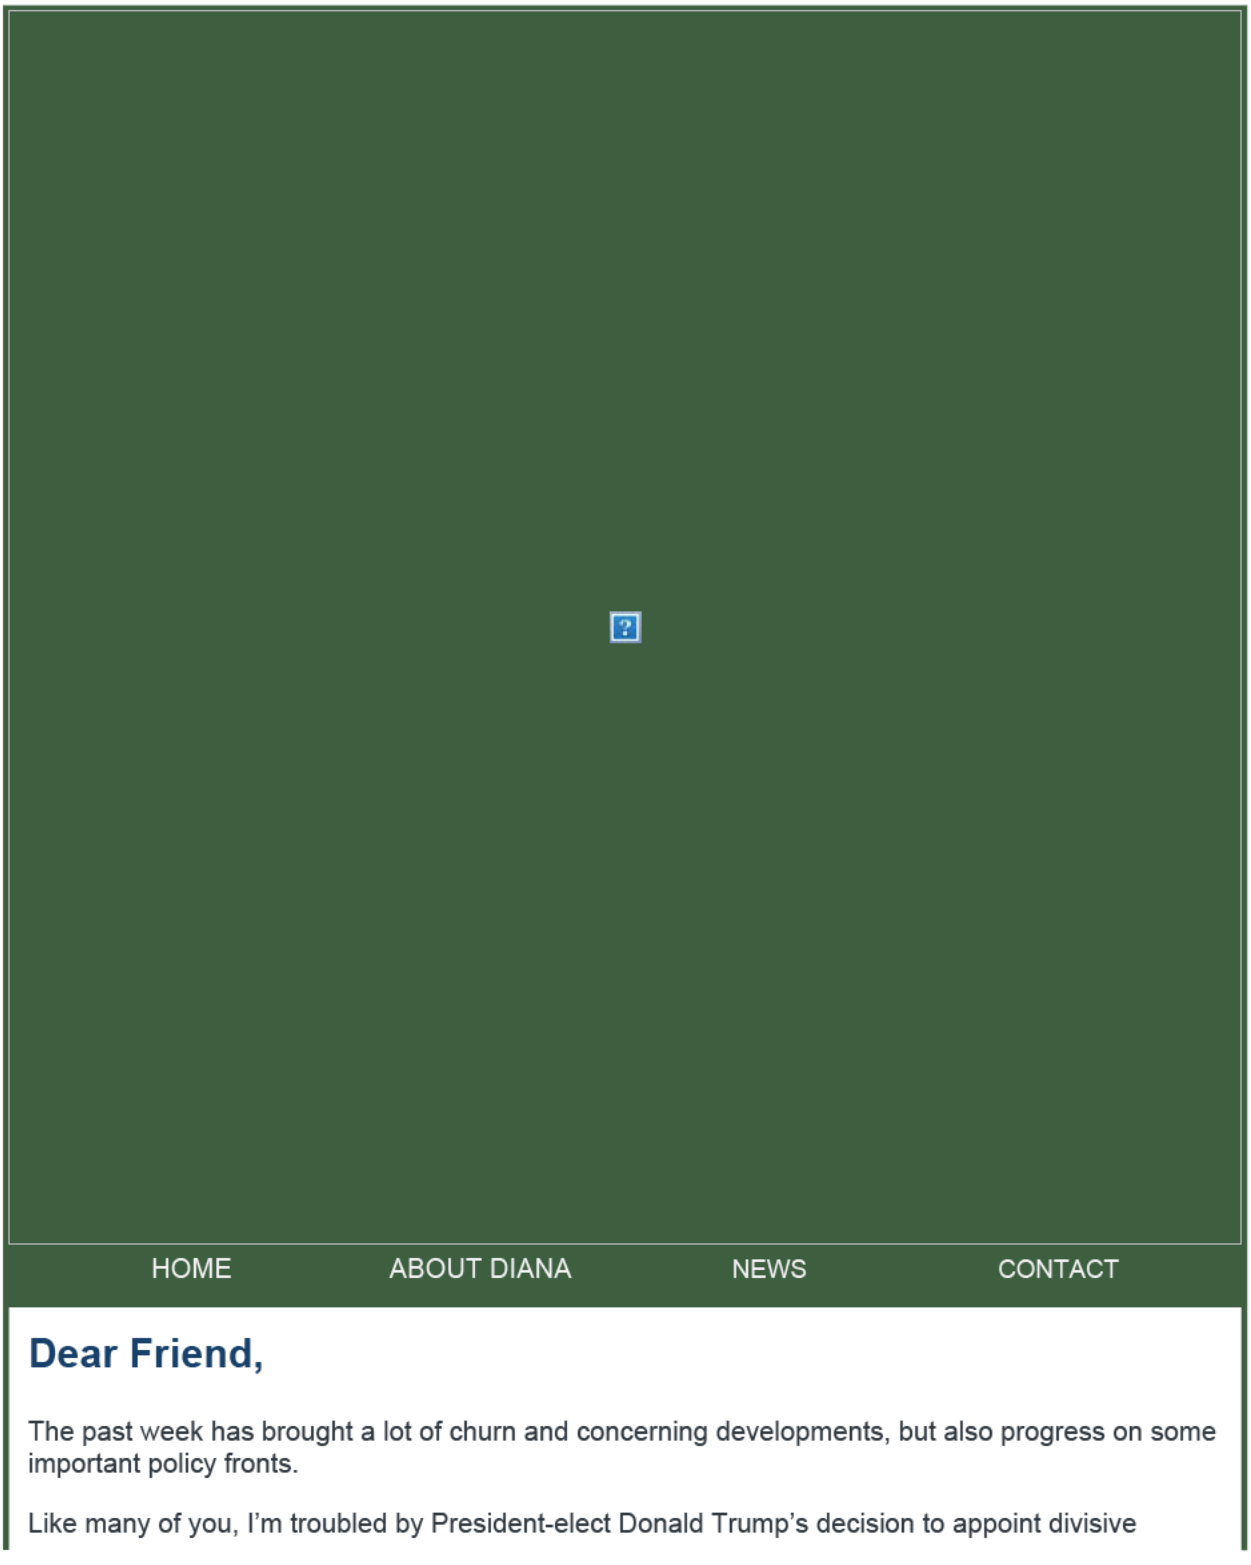
News from Representative DeGette

Open in its own browser Open a plain text version Forward



HOME ABOUT DIANA NEWS CONTACT

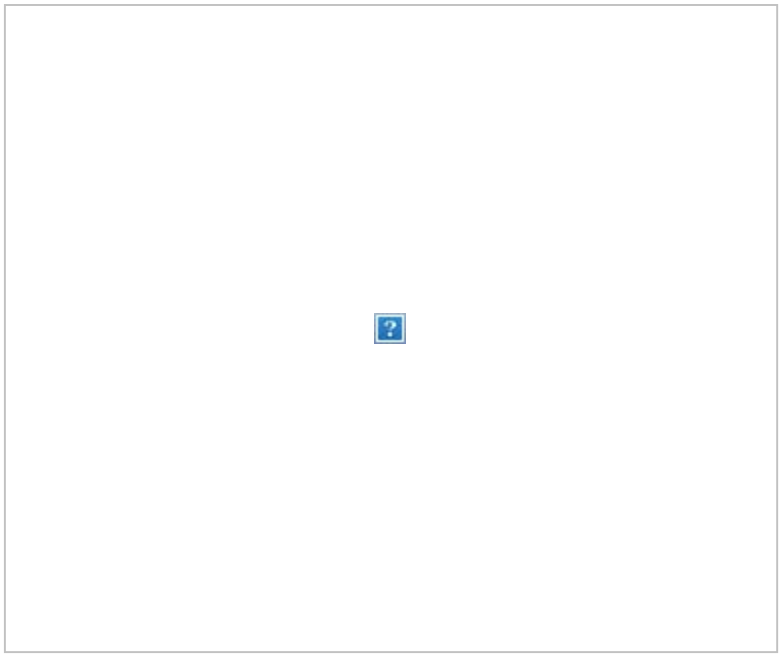
Dear Friend,

The past week has brought a lot of churn and concerning developments, but also progress on some important policy fronts.

Like many of you, I'm troubled by President-elect Donald Trump's decision to appoint divisive

figures to high-level positions in his cabinet and staff. Early in the week, I expressed my views: If we remain a divided country, we won't rise to our full promise. It's now everyone's duty- from the grass roots to the top leaders of this great nation- to look beyond party lines, ethnic and religious backgrounds, special interests and other divisions and to make a better future for us all.

I also joined fellow House Democrats in calling for President-elect Trump to reverse the appointment of Steve Bannon as his chief strategist. In a letter sent to Trump, 169 House members said Bannon's work at Breitbart, an online news and opinion source that publishes bigoted content, makes him the wrong choice to help steer an administration that will unite a divided nation.



Across the country and here in Congress, people are showing solidarity with those who feel vulnerable. Let's show them, whether with a symbolic safety pin, social media, protests or other peaceful means, that we will stand up for one another's rights.

On a positive note, the House passed the National Diabetes Clinical Care Commission Act (H.R. 1192), which will create a committee of experts to improve medical care for people with diabetes and associated conditions. In urging its passage I noted the widespread human and economic impact of the disease and its everyday effects on families and caregivers. Fittingly enough, the bill came to the House floor on World Diabetes Day.

With Republicans ready to assume control of all branches of government, women's reproductive rights are also at great risk. Congressional Republicans have just approved additional funding for the Select Panel, doubling its budget and putting it on track to spend more than $1.5 million of taxpayer funds by the end of this year. This panel has jeopardized lives and medical research. It's a dangerous waste of money and time, and it is poised to do even more harm. My fellow Select Panel Democrats and I will continue standing up to the majority's attacks against women's health.

On Wednesday, we held a hearing on cybersecurity threats in medical devices. Approximately 10 to 15 million medical devices in circulation in the United States today use networked technologies that could be compromised through hacking, malware and unauthorized access. The panel's testimony made clear that the ever-expanding "internet of things" poses serious security risks, and Congress must ensure these devices remain safe. Earlier this month, I sent a letter to the Food and Drug

Administration requesting an update on its cybersecurity measures and policies.

Locally, the week brought good news on the environmental front. On Thursday, the U.S. Department of the Interior announced the resolution of disputed oil and gas leases in the Thompson Divide. I've been involved in this issue for many years, listening to the concerns of groups such as the Thompson Divide Coalition and working to designate more protected lands by introducing the Colorado Wilderness Act in Congress. The agreement will ensure responsible development that protects our state's spectacular natural beauty, keeping Colorado colorful.

And finally, the U.S. Department of the Interior also issued a new rule on methane and waste prevention. This rule, which requires oil and gas operations on public and tribal lands to use the latest technologies to reduce venting and flaring, will build on recent years of environmental improvement, resulting in less pollution and more abundant energy. Together with new U.S. Environmental Protection Agency policies on methane that I advocated for earlier this year, this step will help keep our air and land cleaner while also saving taxpayer money by reducing waste.

As always, you can visit my website at www.degette.house.gov, where you can read my positions on issues and learn about the different ways my staff can assist you. While you're there, be sure to visit the "Contact" page and send me an email about what matters most to you and your family. Finally, be sure to share this email with your friends, family, and neighbors so that they too can be a part of this important dialogue.

Have a safe and wonderful weekend.

Sincerely,

Diana DeGette

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Wednesday, December 7: The House will meet at 12:00 p.m. for legislative business. The House is expected to consider **H.R. 5143** – Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (Subject to a Rule). The House is also expected to consider bills listed for consideration under suspension of the Rules.

THE DAILY QUOTE

"Republican leaders planned to unveil on Tuesday a stopgap measure to fund the government that they hoped would clear Congress by Friday… But the 11th-hour effort to complete the bill draft Monday night means Congress will be on a strict timeline to get the measure passed by Friday's deadline… A new stopgap is needed because Congress failed to pass its annual spending bills on time for the current fiscal year, which began Oct. 1. 'Everybody back home laughs at that stuff,' [Rep. Dave] Brat [R-VA] said of the continuing resolution. 'Everyone's laughing, but everybody's crying at the same time.'"

8. **H.R. 4680** – National Park Service Centennial Act, as amended (Rep. Bishop (UT) – Natural Resources)
9. **H.R. 1219** – Arbuckle Project Maintenance Complex and District Office Conveyance Act of 2016 (Rep. Cole – Natural Resources)
10. **H.R. 6401** – Northern Mariana Islands Economic Expansion Act (Rep. Sablan – Natural Resources)
11. **S. 817** – To provide for the addition of certain real property to the reservation of the Siletz Tribe in the State of Oregon (Sen. Wyden – Natural Resources)
12. **S. 818** – To amend the Grand Ronde Reservation Act to make technical corrections, and for other purposes (Sen. Wyden – Natural Resources)
13. **S. 3028** – Daniel J. Evans Olympic National Park Wilderness Act (Sen. Cantwell – Natural Resources)
14. **H.R. 875** – Cross-Border Trade Enhancement Act of 2016, as amended (Rep. Cuellar – Ways and Means)
15. **H.R. 6416** – Jeff Miller and Richard Blumenthal Veterans Health Care and Benefits Improvement Act of 2016 (Rep. Roe – Veterans' Affairs)
16. **H.R. 5399** – Ethical Patient Care for Veterans Act of 2016 (Rep. Roe – Veterans' Affairs)
17. **H.R. 4150** – Department of Veterans Affairs Emergency Medical Staffing Recruitment and Retention Act, as amended (Rep. Ruiz – Veterans' Affairs)
18. **H.R. 4352** – Faster Care for Veterans Act of 2016 (Rep. Moulton – Veterans'

Affairs)

19. **H.R. 5428** – Military Residency Choice Act (Rep. Forbes – Veterans' Affairs)
20. **S. 3492** – To designate the Department of Veterans Affairs community-based outpatient clinic in Traverse City, Michigan, as the "Colonel Demas T. Craw VA Clinic" (Sen. Peters – Veterans' Affairs)
21. **S. 3076** – Charles Duncan Buried with Honor Act of 2016 (Sen. Cotton – Veterans' Affairs)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Wednesday, December 7: The House will meet at 12:00 p.m. for legislative business. The House is expected to consider **H.R. 5143** – Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (Subject to a Rule). The House is also expected to consider bills listed for consideration under suspension of the Rules.

THE DAILY QUOTE

"Republican leaders planned to unveil on Tuesday a stopgap measure to fund the government that they hoped would clear Congress by Friday… But the 11th-hour effort to complete the bill draft Monday night means Congress will be on a strict timeline to get the measure passed by Friday's deadline… A new stopgap is needed because Congress failed to pass its annual spending bills on time for the current fiscal year, which began Oct. 1. 'Everybody back home laughs at that stuff,' [Rep. Dave] Brat [R-VA] said of the continuing resolution. 'Everyone's laughing, but everybody's crying at the same time.'"

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Wednesday, December 7: The House will meet at 12:00 p.m. for legislative business. The House is expected to consider **H.R. 5143** – Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (Subject to a Rule). The House is also expected to consider bills listed for consideration under suspension of the Rules.

THE DAILY QUOTE

"Republican leaders planned to unveil on Tuesday a stopgap measure to fund the government that they hoped would clear Congress by Friday… But the 11th-hour effort to complete the bill draft Monday night means Congress will be on a strict timeline to get the measure passed by Friday's deadline… A new stopgap is needed because Congress failed to pass its annual spending bills on time for the current fiscal year, which began Oct. 1. 'Everybody back home laughs at that stuff,' [Rep. Dave] Brat [R-VA] said of the continuing resolution. 'Everyone's laughing, but everybody's crying at the same time.'"

how is this? bluff is in the upper right hand corner.

PO Box 338, Bluff, UT 84512

February 8, 2016

The Honorable Rob Bishop
123 Cannon House Office Building
Washington, DC 20540

The Honorable Jason Chaffetz
2464 Rayburn House Office Building
Washington, DC 20515

Dear Congressmen Chaffetz and Bishop:

The Public Lands Initiative has been an ambitious proposition from the beginning. As a local, on-the-ground nonprofit based in rural San Juan County, Friends of Cedar Mesa (FCM) shares your ambition for finding common ground and creative solutions. We are grateful for all the hard work your team has put into this project.

FCM sees an urgent need for protection of the Cedar Mesa area, as well as many surrounding areas rich in cultural/archaeological resources. With continued looting, increased visitation, spiraling user conflicts, and mired bureaucracy, this landscape just cannot go another 5 or 10 years without being protected. From the beginning, we have invested huge amounts of time into your locally driven, legislative solution. We attended every meeting of the San Juan County Lands Council and every public meeting on the PLI in San Juan County. While we cannot support the bill in its current form, we continue to believe congressional action has the potential to be the best way to find win-wins for conservation, recreation, and economic development.

Per your request, we are providing below a fairly lengthy and detailed list of concerns we have with the current "Discussion Draft" of the PLI. We commit to engaging in an honest, transparent dialogue with you in order to achieve creative solutions and real negotiation on these points. Throughout this process, we have intentionally refrained from "bashing" the PLI, which we've worked on for so long. While we do plan to share our concerns with our interested membership, we will continue to do so in a spirit of honesty and pragmatism.

Friends of Cedar Mesa will continue to work towards a PLI bill we can support. However, we are not willing to put the future of this landscape solely in the hands of Congress. We must pursue any possible

avenue to protect a landscape that should have been protected 100 years ago. As such, we will continue to urge the Administration to use all the tools it has available, including the Antiquities Act, to protect this place if the PLI legislation does not pass in a timely fashion.

Recommendations:

Critical archaeological and scenic resources in the Bluff area left out of the Bears Ears NCA

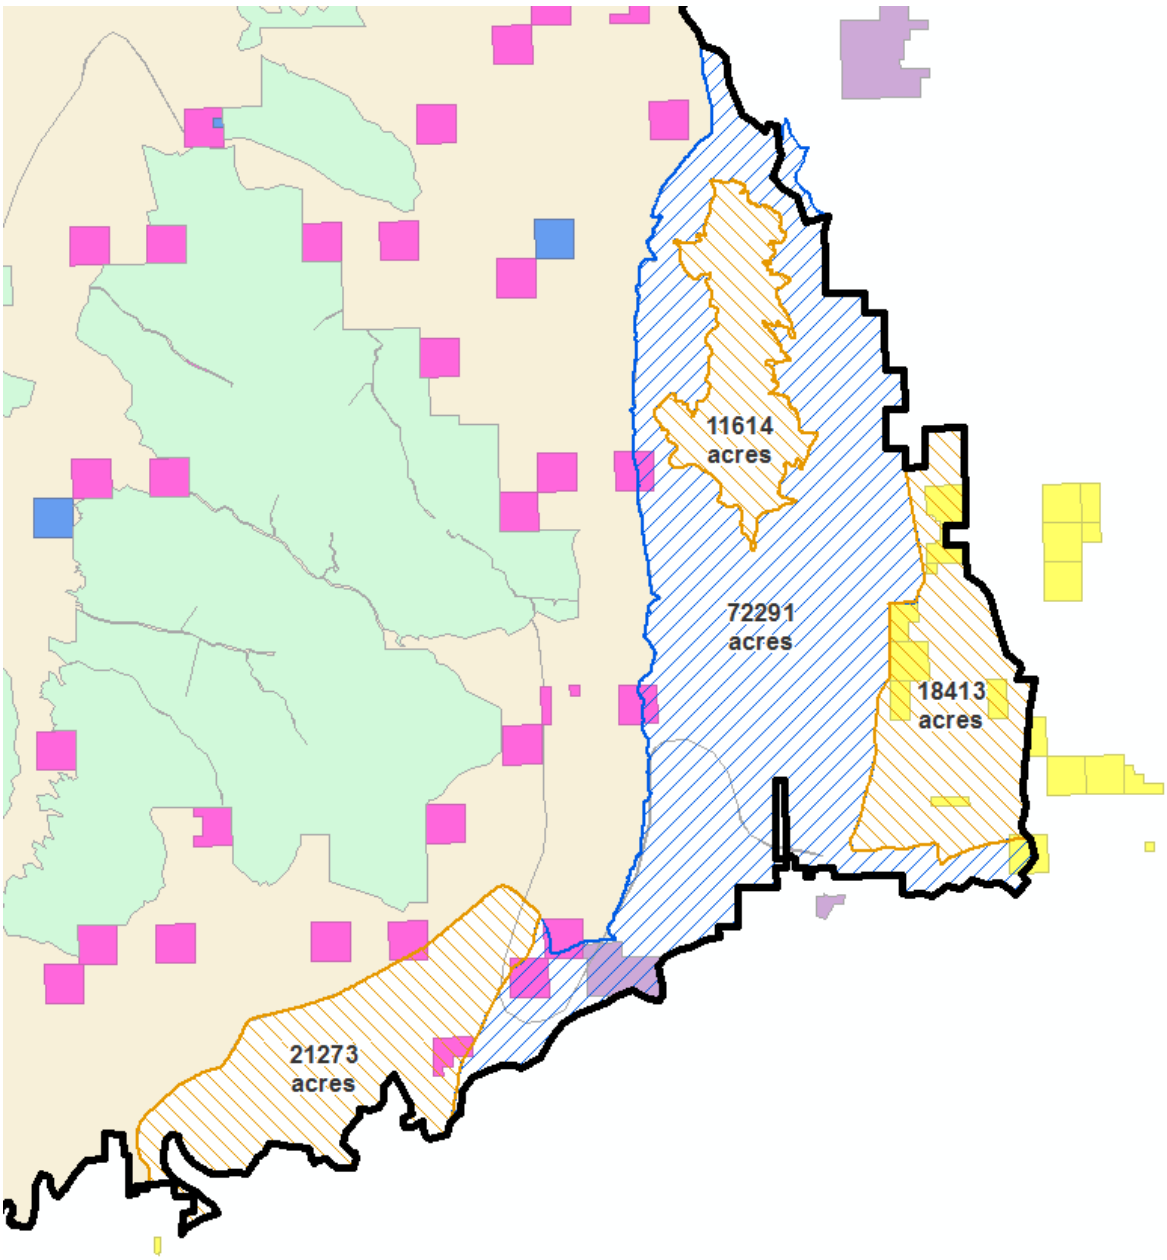
We believe all of the lands in the Tribal proposal for protection of the Bears Ears cultural landscape are deserving of permanent protection. However, we are most passionate and knowledgeable about the area surrounding Bluff that was left out of the NCA, specifically the San Juan River Corridor, Lower Comb Ridge, Tank Mesa and Cottonwood Wash. This is one of the most archaeologically important areas in all of San Juan County, including:

- The oldest rock art image in the United States
- Several of the largest and most significant rock art panels in Utah
- Four ancient Chacoan road segments
- Thousands of archaeological sites, including pueblos, kivas, cliff dwellings historic Navajo hogans and Ute tipi rings.
- The most significant Clovis archaeological site in Utah (earliest Americans on record - 13,000 BC)
- San Juan Hill, one of the most significant historical sites in the State of Utah
- Launch and campground for floating the San Juan River, an international river rafting destination

In the spirit of compromise, we could support a reduction in the acreage Friends of Cedar Mesa originally proposed in this area. We have attached a map and GIS shapefiles outlining a modest 72,291 (blue cross hatched area) acre addition to the Bears Ears NCA. Within this area, we would suggest trading out SITLA parcels as is contemplated in the rest of the NCA, consolidating them east of Highway 191. While it is heartbreaking for us to leave out such scenic areas as Chimney Rocks, Recapture Pocket, and Lime Ridge (yellow cross hatched areas on map), we also understand the political dynamics and want to find a reasonable compromise. This represents a 51,300 acre reduction to what we originally proposed in the Bluff area.

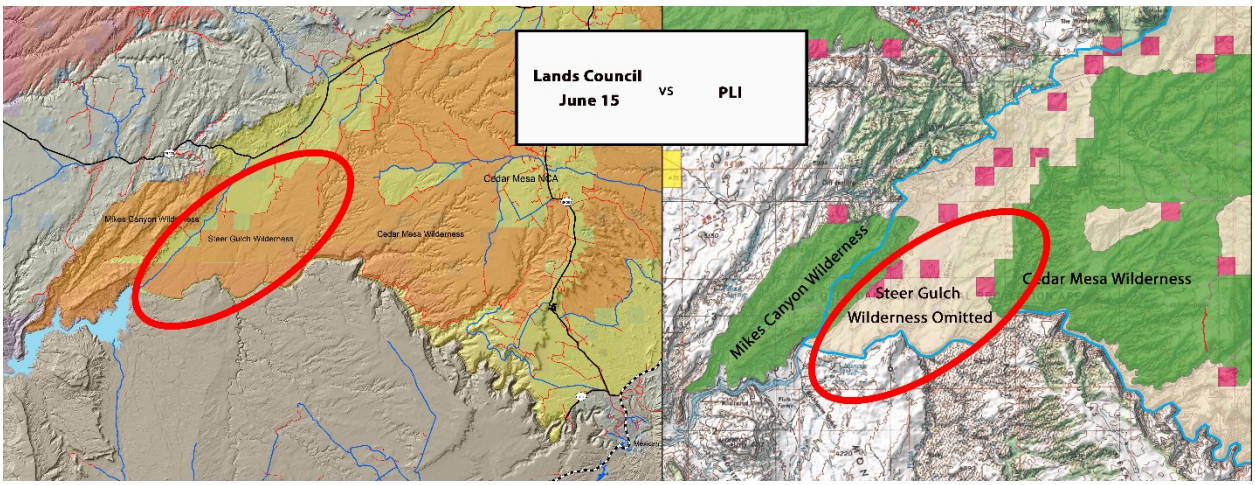
FCM is based in Bluff, and the Bluff Bench is literally our backyard. Unlike other communities in San Juan County that may have fears about federal designations, Bluff is very supportive of protections for the lands surrounding our town. We are passionate about protecting the archaeological resources and vistas in this vicinity, and we cannot support legislation that leaves out protection for this critical area.

(for map see next page)



Omission of the proposed Steer Gulch Wilderness area West of Grand Gulch

The San Juan County Lands Council unanimously supported expansion of wilderness on Cedar Mesa to include a relatively small but culturally significant area west of Grand Gulch, which we refer to as the Steer Gulch Wilderness Area. This area is previously managed to preserve its untrammeled, wilderness character and was included on the final San Juan County proposal of June 15 , 2015. We hope this area was unintentionally left out from the bill and will be added back in. The images below demonstrate the County June 15 proposal vs. the PLI wilderness.



Need planning alternative for responsible energy development near sensitive archaeological areas left out of NCA

San Juan County may well be the most archaeologically rich county in the United States. Understandably, it may not be politically feasible to protect all of the important archaeology in the county via inclusion in a National Conservation Area. However, failure to consider ways to preserve archaeological resources while allowing for well-planned energy development is a recipe for continued conflict and litigation, not the multi-use certainty the PLI seeks to achieve. Besides the area near Bluff mentioned above, other archaeologically rich areas need a planning process more rigorous than what resulted in the 2008 BLM Resource Management Plan (RMP).

For example, the Montezuma Canyon and Alkali Ridge area contain the four largest archaeological sites in Utah. There has been oil drilling in the area in the past (although often not well done from an archaeological preservation standpoint). We believe there are opportunities for drilling that do not impact cultural sites, utilize No Surface Occupancy stipulations and leverage horizontal drilling technologies.

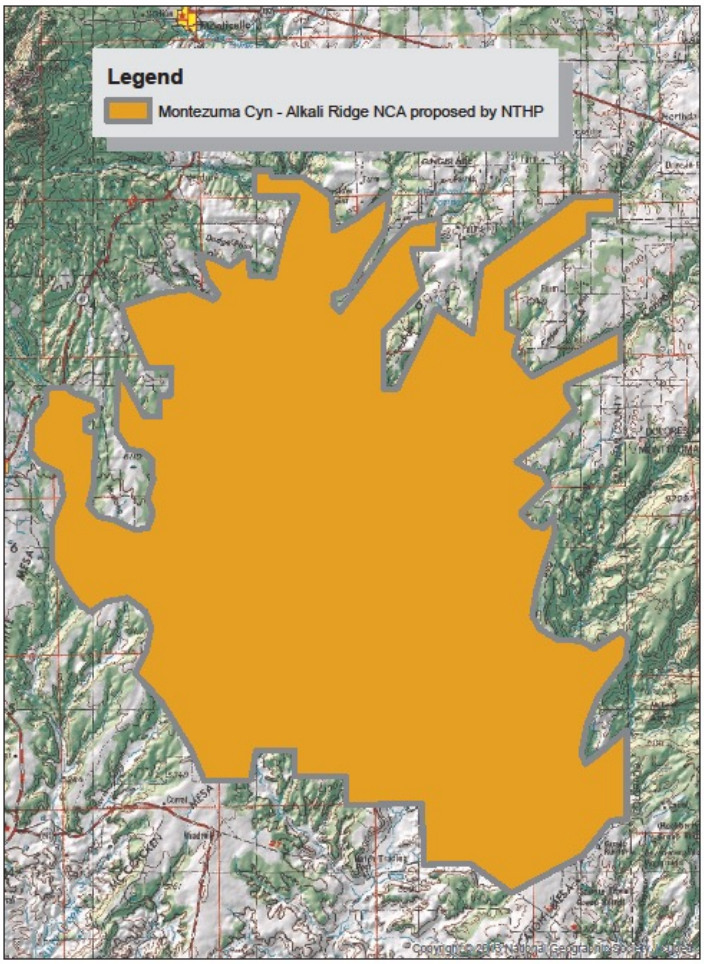
Similarly, the Allen Canyon and Chippean Ridge areas hold innumerable cliff dwellings and surface sites of deep importance to Native American people and archaeological research. Finally, the Moqui Canyon area has many documented sites of great archaeological importance.

From our participation in the Moab Master Leasing plan (as a Section 106 consulting party), we see that process as holding enormous potential for resolving conflict and allowing for win-win outcomes where energy development can move forward while preserving other key resources (like archaeology and recreational assets). Accordingly, we would urge you to remove from the bill language in Title XI, SEC. 1101 sub (a) preventing implementation of BLM Instructional Memorandum 2010-117.

Should removal of such language not be politically feasible, some other method of thoughtful planning for archaeology and energy development is needed to avoid decades of litigation under the National Historic Preservation Act and other applicable laws. This might be achieved by creating smart energy planning zones for the areas listed above, particularly in the Montezuma Canyon/Alkali Ridge area. One idea of a boundary in this area could be to utilize the area identified by the National Trust for Historic

Preservation (proposed as an NCA *see map below*) for use as a "cultural resource sensitivity planning district" where the appropriate energy development with NSO and other BMP stipulations could be facilitated while protecting archaeology.

The bill doesn't allow for minimal, permanent road closure to protect cultural sites in NCAs and



Wilderness Areas

The legislation needs to allow for minimal closure of roads in order to protect cultural sites. We know of a small number of roads that go through archaeological sites where the current road is not appropriate. As this applies to the culturally-rich Bears Ears NCA, the language needs to be changed to reflect important cultural resource protection priorities, which may mean road closures. We are specifically concerned with Sec. 204 and suggest the language be changed to allow for minimal permanent road closure to protect endangered cultural resources.

Additionally, Sec. 204 on closure and rerouting is problematic for cultural resources, emergency service providers and land managers because it does not create or allow for a mechanism to expediently temporarily close or reroute a road in an emergency situation. There can be situations where personal life safety or archaeology are threatened, and an immediate land management response should not be limited by the temporary closure process outlined in the bill.

Language on R.S. 2477 Road Claims being disallowed in NCAs and Wilderness is not sufficiently clear

Title XII Sec. 1201 on Long-Term Travel management as it currently reads is not clear that R.S. 2477 claims would be dropped in newly created National Conservation Areas and wilderness. We would very much support such a provision, which is necessary to preserve the natural and cultural values in wilderness and NCAs. Unfortunately, the current language lacks clarity and has the potential to cause land management conflicts down the road.

> *Suggested language:* (a) IN GENERAL. Subject to valid existing rights and consistent with this section, the Secretary of the Interior shall grant a right-of-way to the state for public travel and access upon the following roads:
>
> … (2) all roads claimed as Class D highways identified as rights-of-way in judicial actions in the federal court system as of January 1, 2016, in Uintah, Summit, Duchesne, Carbon, Emery, Grand, and San Juan counties, except for R.S. 2477 claimed Class D highways that pass through United States Forest Service or National Forest System lands, Bureau of Land Management lands designated as National Conservation Lands including lands designated as wilderness or National Conservation Area under this Act, ~~by Congress as wilderness~~, excluding those roads which are cherry-stemmed, ~~including lands designated as wilderness or National Conservation Area under this Act,~~ ~~or~~ and lands designated by Congress as a-National Park as of the date of enactment of this Act.

An important caveat about the cherry stem language is that the current PLI maps show many roads that are not currently on management plans and should not be included in this bill (or on cherry stem maps).

Outside of NCA and wilderness areas, we see the county and state receiving a large "win" from their perspectives. However, FCM is not supportive of the blanket granting to counties of Class D roads on roads with significant cultural resource implications. For example, we know of one road outside of the NCA that completely bisects a large 12 century Pueblo site.

Bears Ears NCA commission fails to elevate tribal interests or include important stakeholders

Friends of Cedar Mesa will not attempt to speak for Native Americans regarding the interaction of sovereign tribal nations and the Federal government in land management. However, the proposed commission with two tribal representatives, one county representative and one state representative clearly falls short of providing adequate representation for Tribal interests. FCM has worked with Navajo, Ute, Hopi, Zuni and the New Mexico Pueblos on the land in the Cedar Mesa Area. All have important perspectives in managing these lands and the cultural resources they hold. FCM believes sovereign nations should be engaged in a more direct and empowered way than tribes have been engaged in the past. Many key issues facing archaeological resources can and will only be solved by

unprecedented tribal leadership. Out of respect for tribes, we will not attempt to propose language or a structure here. However, we urge the creation of a mechanism for tribal leadership that is not watered down by being mixed in with more standard "stakeholder" participation and collaboration.

On the topic of stakeholders, the bill does not provide for the involvement of important stakeholders, such as archaeologists, local conservation groups, human-powered recreationists, motorized recreationists, hunters, guides and outfitters, or ranchers. We encourage your offices to include language designating key stakeholders to participate in an advisory role in building the management plan for the NCA. Model processes for engagement of stakeholders in management planning have occurred in nearby communities, such as for the NCAs near Grand Junction, Colorado.

The bill fails to protect the internationally significant San Juan River as a Wild & Scenic River

Wild & Scenic River designation for sections of the San Juan River were noticeably absent from the bill, despite the fact that these sections have been found suitable by the BLM for a designation based on their inarguable aesthetic and recreational qualities. Three particular sections of the San Juan River qualify as Recreational river areas or Wild river areas within the National Wild and Scenic Rivers System, which would offer protection for the river and riparian zone.

Specifically, the San Juan River from River Mile 9 to River Mile 23, and from River Mile 28 to River Mile 45 should be designated as Wild River Areas, as was determined in the BLM's assessment *Eligible Rivers for Suitability Study in the Wild and Scenic Process*, signed July 2, 2009. The section of the San Juan River from River Mile 23 to River Mile 28 was found suitable as a Recreational river area in the aforementioned study.

> *Suggested added language:* Title 6 Sec. 601(a)…(xxx) SAN JUAN RIVER. The following segment(s) in the State of Utah, to be administered by the Secretary of the Interior as follows:
>
> (A) The approximately 14 mile segment from River Mile 9 to River Mile 23 above Mexican Hat formation as a wild river.
> (B) The approximately 5 mile segment from River Mile 23 to River Mile 28 as a recreational river.
> (C) The approximately 17 mile segment from River Mile 28 to River Mile 45 in the Glen Canyon NRA as a wild river.

Transfers of ownership of the entire Hole-in-the-Rock Trail corridor to San Juan County, creating the possibility of incompatible uses with surrounding federal lands

We do not support the transfer of the Hole-in-the-Rock Trail away from managing agencies to the County. This trail is of both local and national historic significance and would be best managed as a National Historic Trail. By joining the National Trails System, this trail would continue to be managed in the context of the surrounding landscape (e.g. motorized use on existing roads and foot access in wilderness areas) while being afforded the national historical recognition it deserves. We suggest that a Trail Management Advisory Committee be established in order to encourage the participation of living descendants of the original Hole-in-the-Rock pioneers, land managers, conservation groups, non-profits and local government in the management of the National Historic Trail designation. We also encourage involvement and/or leadership on the part of the Hole-in-the-Rock Foundation.

Currently, the Hole-in-the-Rock Trail is managed by land management agencies for Heritage Tourism in consultation with Utah State Historic Preservation Office and Native American tribes, as well as interested stakeholder groups. A National Historic Trail designation would elevate its historical status and offers a management solution that listens to diverse input from local stakeholders.

In addition to a National Historic Trail designation, the management of the Hole-in-the-Rock trail requires more funding in order to determine and demarcate the actual route and its corridor. The map of the trail presented in the bill contains numerous errors, since some of the route remains unknown or uncertain in areas.

> *Suggested language:* Remove from Title VI Sec. 601. Land Conveyances: ~~(12) HOLE IN THE ROCK TRAIL–The approximately 694 acres of land generally depicted on the map entitled Utah PLI Land Conveyances Map and dated ____, as "The Hole in the Rock Trail", to San Juan County, Utah for use as an outdoor recreation and historical trail.~~
>
> *Add to the bill language reflecting a National Historic Trail designation*: This Act adds to the National Historic Trail System the corridor known as "The Hole-in-the-Rock Trail" to be managed as a historic trail and to remain in the management of current land managers. This Act further establishes a Hole-in-the-Rock Historic Trail Management Advisory Committee to advise land managers on the administration of the trail. Living descendants of the original Hole-in-the-Rock pioneers, conservation groups, non-profits, local government and other stakeholders will work collaboratively as members of the Committee to promote cultural and historic values in the management and administration of the trail.

Only allows acquisition to wilderness, NCA and Wild & Scenic Rivers by donation and exchange, ignoring a realistic market for conservation parcels

Section 108, Section 203 and Section 601 currently only allow acquisition of land within the boundaries of wilderness and NCAs by donation or exchange. There are important conservation parcels within proposed NCAs and Wilderness in San Juan County that would be wise investments for tax payers particularly given that programs like the Land and Water Conservation Fund typically leverage federal dollars many times with private dollars. Several local landowners have no interest in a trade and would be unwilling to donate their property outright but would be happy to sell at a reasonable price or even below market value.

> *Suggested language:* Sec. 203(d)(a)(1) IN GENERAL. The Secretary of the Interior may acquire land or interest in land within the boundaries of the National Conservation Areas designated by section 201 only by purchase involving at least 70% private dollars, donation or exchange.

Transfers land near Bluff to San Juan County for potential use as an ATV trail or sewer facility, when these local decisions would be best made by Bluff residents

Sec. 601(a)(21) of the bill suggests the transfer of 177 acres of the "Bluff River Recreation Area" to the County for recreational and municipal facilities. Not only would this decision be opposed to by many Bluff residents, it would be usurping their local say and control.

Instead, this 177-acre parcel would be best transferred to the Bluff Service Area (BSA) so that decision making and control regarding a proposed recreation trail and municipal facilities is kept local. Municipal facilities, including a sewage treatment plant, may be in Bluff's future but should be decided by the BSA - not County Commissioners.

After almost two decades of planning, a dedicated committee of Bluff residents has succeeded in working with adjacent private landowners to donate/sell parcels for access and easements to create to San Juan River Trail that would run through the 177-acre parcel. The committee also recently completed a Memorandum of Understanding that includes the BLM, the Grand Canyon Trust, the Bluff Historic Preservation Association and adjacent private landowners, to construct, improve and manage the trail. This land transfer could complicate the years of collaborative work the town has put into organizing a trail that could have positive tourism and economic, not to mention recreational, impacts for the town and businesses.

> *Suggested language:* (21) BLUFF RIVER RECREATION AREA. - The approximately 177 acres generally depicted on the map entitled Utah PLI Land Conveyances Map and dated _____ as "Bluff River Recreation Area," to ~~San Juan County~~ the Bluff Service Area Board of Trustees, for use as recreation and municipal facilities.

Transfers ownership of the Bluff airport, including a large surrounding area running all the way from Highway 163 to the San Juan River to San Juan County

We are perplexed as to the need to transfer the large sum of 1,406 acres to San Juan County for the Bluff Airport, which currently sits on less than 100 acres. Three hundred acres is more than enough for the future needs of the Bluff airport. In no foreseeable future would the County need 1,400 acres to manage and administer the Bluff airport. The land running north and south of the airport that is not associated with the facilities and airstrip should remain under the management of the BLM.

> *Suggested language:* (9) BLUFF AIRPORT. The approximately ~~1,406~~ 300 acres immediately surrounding the Bluff Airport, generally depicted on the map entitled Utah PLI Land Conveyances Map and dated _____ as "Bluff Airport," to San Juan County, Utah, for a municipal airport.

Grazing in wilderness and NCAs receives a higher level of protection than in other BLM areas, with no leeway for management to protect cultural resources or respond to long-term droughts

Language in the bill prioritizes the protection of grazing over land and ecological health in new Wilderness and NCAs. Unlike other NCA bills that allow for the continuation of existing uses, this bill mandates AUMs to be continued at existing levels or increased. This ignores the increasing likelihood of long-term droughts in the area and the realities on the ground of continuing damage to cultural resources by cattle at sensitive archaeological sites.

We do not support weakening the provisions of the 1964 Wildness Act, which provide for reasonable access to grazing improvements.

While we understand the interest of local ranching families to continue their operations within the NCA and wilderness, the grazing section should include language that would allow for voluntary retirement of grazing permits (or portions of permits near archaeological sites) by willing sellers who agree to compensation provided by private parties (per language in other bills and the Rural Economic Vitalization Act).

Exemption of plant and animal viability requirements of section 219 of title 36 contradicts the US Forest Service's sustainable multiple-use mandate

With regards to grazing administration in the wilderness, NCA and SMA sections of the draft (see Title I Wilderness Section 103(d)(3), Title II National Conservation Areas Sec. 204(d)(3) and Title II Special Management Areas Sec. 303 (g)(3)) and elsewhere in the working draft, grazing on Forest Service lands is exempt from being managed in accordance with plant and animal ecological sustainability imperatives set forth in section 219 of title 36. This significant planning chapter requires the evaluation of species diversity and ecological conditions that, if ignored, would compromise the ecological integrity of ecosystems upon which grazing depends.

Suggested language: Remove all section 219 exemption language from the legislation.

The National Conservation Area administration section fails to promote recreation or secure access for recreation

Suggested language: Add to Section 204 (x) RECREATION. The Secretary shall continue to authorize, maintain, and enhance the recreational use of the conservation area, including hunting, fishing, camping, hiking, backpacking, cross-country skiing, hang gliding, paragliding, rock climbing, canyoneering, sightseeing, nature study, horseback riding, mountain biking, rafting, motorized recreation on authorized routes, and other recreational activities, so long as such recreational use is consistent with the purposes of the conservation area, this section, other applicable law (including regulations), and applicable management plans.

The bill does not explicitly maintain recreational access at the North and South Six-Shooter Peaks

The Dugout Ranch Transfer provision of the bill was a completely new idea to us, which we would need to hear much more detail about before feeling comfortable with the idea. The current language granting several thousands acres of land including the North and South Six-Shooter Peaks to the Utah State University for research neglects to specify the purpose and need of this land transfer, nor does it guarantee continued recreational access, including rock climbing, to these famous climbing destinations. We also wonder who would patrol this remote area to ensure protection of cultural sites and protection of the natural environment. Finally, we are concerned about the construction of buildings and facilities in this area known for its scenic and wild values.

Native American Economic Development Provisions

No details have been publically released for this title. We would support transfer of mineral rights to the Utah Navajo Trust Land for lands in the McCracken Mesa area. However, we would need to see details around the "land transfers on the San Juan River" language before we could support such provisions. The San Juan River is an international destination for river runners, and changes in ownership near the river should be carefully studied.

Mapping Data Clarifications/Errors

1. Several private parcels in the Cedar Mesa area are inappropriately labeled as being SITLA parcels where SITLA would maintain surface rights but trade out minerals.
2. Several key disputed roads (closed in the 2008 RMP or non-existent on the ground) are shown on the PLI maps with the label "Roads to be added closed in RMP." These mapped roads are inconsistent with what we believed to be the proposal for not granting R.S. 2477 rights on roads within wilderness or NCA areas. A number of these roads, if reopened, would be very problematic for cultural resource preservation and would dramatically impact the wilderness experience. At least one of these roads was driven on illegally during a recent grave-robbing incident.
3. The Hole in the Rock Trail data is grossly inaccurate, in some cases putting the trail miles from its actual route. See our comments above concerning the need for research into the actual route and our proposal for this trail to be given the recognition it deserves as a National Historic Trail.

Language concerning future National Monument designations

As we noted above, there are very important archaeological areas, with true antiquities, that are left out of protection as an NCA or wilderness area, and we have only commented on areas of direct concern to San Juan County (other counties are not in our mission). If other tools, such as Master Leasing Plans, cannot protect critical areas, such as Montezuma Canyon, we cannot support a permanent exemption from the Antiquities Act. We would be willing to consider giving the NCA and other agency management tools ten years to see if it results in the balance of protection needed. However, if antiquities are being threatened by irresponsible development, we may be forced to advocate for national monument additions or new unit creations in the future.

Conclusion

We know these FCM comments and concerns represent a small portion of those you're receiving on this bill. We hope you will consider addressing these issues so a PLI bill can be introduced that we can support. We'd welcome further discussion on the points we've raised and are happy to answer any questions you might have. We understand it's an enormous task to compile all the feedback and draft a bill that might find the right balance necessary to gain the support of the Senate and the President.

We respectfully request your consideration of FCM's recommendations for the inclusion in final legislation. We would like nothing more than to be able to support the final version of this bill. Thank you again for the opportunity to participate in the process.

Sincerely,

Josh Ewing

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR WEDNESDAY, DECEMBER 7, 2016

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative Business Fifteen "One Minutes"	1:30 – 2:30 p.m.	6:30 – 7:30 p.m.

H.Res. 944 – Rule providing for consideration of H.R. 5143 – Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (One hour of debate). The Rules Committee has recommended a structured Rule that provides for one hour of general debate, equally divided and controlled by the Chair and Ranking Member of the Committee on Financial Services. The Rule allows for 1 amendment, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

The Rule also allows for Suspension Authority through the legislative day of December 8, 2016. **Members are urged to VOTE NO.**

H.R. 5143 – The Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (One hour of debate). H.R. 5143 would severely weaken critical Wall Street reforms enacted to protect the U.S. and global financial system from risks posed by large insurance companies. In the aftermath of the 2008 Great Recession, which was precipitated by the near-collapse of the international insurance giant American International Group (AIG), the Dodd-Frank Act significantly improved and strengthened regulatory oversight of the insurance industry.

With respect to robust and prudent regulation of the insurance industry, Dodd-Frank established a system to examine risks posed by the insurance industry to both the U.S. and global financial system. For example, Dodd-Frank provided for the establishment of the Federal Insurance Office (FIO), which is authorized to "coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters, including representing the United States, as appropriate, in the International Association of Insurance Supervisors (IAIS) and assisting the Treasury secretary in negotiating covered agreements." Dodd-Frank also expanded the Federal Reserve's supervisory authority so that it now serves as the consolidated supervisor of insurance holding companies that own either a Federally chartered thrift or a bank, as well as non-bank financial companies designated by the Financial Stability Oversight Council (FSOC).

Significantly, Dodd-Frank recognized and protected the critical role that state insurance commissioners play in regulating insurance companies doing business in

their jurisdictions. To that end, Dodd-Frank provides that state insurance commissions, the Federal Reserve, and FIO work together and coordinate with one another in negotiations over insurance standards at IAIS to ensure that that the state-based system of insurance regulation, which has worked well for decades to protect consumers, is represented and respected in international negotiations.

The Dodd-Frank insurance regulatory framework to date has effectively balanced the U.S.' interest in preserving the regulatory authority of state insurance commissions over insurance companies and their products while giving federal regulators the tools they need to ensure that no domestic or international insurance companies takes on risks that threaten financial stability or necessitate a taxpayer bailout

If enacted, H.R. 5143 would hamstring U.S. representatives in international negotiations regarding international insurance standards, and establish several new and cumbersome processes and reporting requirements to be completed before any international standard could be agreed to. These requirements would cause significant delays and impose limitations for developing an international insurance capital standard, and weaken the ability of U.S. regulators to negotiate standards that both accommodate the U.S.'s unique insurance regulatory system and strengthen oversight of insurance companies whose size and complexity could pose a risk to the global financial system. They would also undermine the president's constitutional authority to determine the time, scope, and objectives of international negotiations.

Because H.R. 5143 would tie the hands of U.S. insurance regulators in international talks, in an unconstitutional manner, and prevent them from effectively negotiating on international insurance matters, in the Statement of Administration Policy, the president's senior advisors stated that they would recommend he veto this bill.

The Rule makes in order 1 amendment, debatable for 10 minutes, equally divided between the offeror and an opponent. The amendment is:

> **DeSantis Amendment.** Adds an additional requirement that the international agreement must be written in plain writing, as defined by the Plain Writing Act of 2010.
>
> ***Bill Text for H.R. 5143:***
> PDF Version

13. **S. 2854** – Emmett Till Unsolved Civil Rights Crimes Reauthorization Act of 2016, as amended (Sen. Burr – Judiciary)

Postponed Suspensions (2 bills)

1. **H.R. 1219** – Arbuckle Project Maintenance Complex and District Office Conveyance Act of 2016 (Rep. Cole – Natural Resources)
2. **S. 3028** – Daniel J. Evans Olympic National Park Wilderness Act (Sen. Cantwell – Natural Resources)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Thursday, December 8: The House will meet at 9:00 a.m. for legislative business. The House is expected to consider the Water Resources Development Act of 2016. The House is also expected to consider a Continuing Resolution for FY 2017 Appropriations.

THE DAILY QUOTE

"After weeks of wrangling, Republican leaders unveiled a stopgap spending bill Tuesday night that would fund the government through April at current levels… 'This legislation is just a Band-Aid…' House Appropriations Chairman Harold Rogers, R-Ky., said in a statement… The bottom line: Lawmakers are likely to avoid a government shutdown, but look for a nasty fight over the stopgap package this week."

13. **S. 2854** – Emmett Till Unsolved Civil Rights Crimes Reauthorization Act of 2016, as amended (Sen. Burr – Judiciary)

Postponed Suspensions (2 bills)

1. **H.R. 1219** – Arbuckle Project Maintenance Complex and District Office Conveyance Act of 2016 (Rep. Cole – Natural Resources)
2. **S. 3028** – Daniel J. Evans Olympic National Park Wilderness Act (Sen. Cantwell – Natural Resources)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Thursday, December 8: The House will meet at 9:00 a.m. for legislative business. The House is expected to consider the Water Resources Development Act of 2016. The House is also expected to consider a Continuing Resolution for FY 2017 Appropriations.

THE DAILY QUOTE

"After weeks of wrangling, Republican leaders unveiled a stopgap spending bill Tuesday night that would fund the government through April at current levels… 'This legislation is just a Band-Aid…' House Appropriations Chairman Harold Rogers, R-Ky., said in a statement… The bottom line: Lawmakers are likely to avoid a government shutdown, but look for a nasty fight over the stopgap package this week."

Date: Wednesday, December 07, 2016 10:53:22 AM

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR WEDNESDAY, DECEMBER 7, 2016

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	6:30 – 7:30 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 944 – Rule providing for consideration of H.R. 5143 – Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (One hour of debate). The Rules Committee has recommended a structured Rule that provides for one hour of general debate, equally divided and controlled by the Chair and Ranking Member of the Committee on Financial Services. The Rule allows for 1 amendment, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

The Rule also allows for Suspension Authority through the legislative day of December 8, 2016. **Members are urged to VOTE NO.**

H.R. 5143 – The Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (One hour of debate). H.R. 5143 would severely weaken critical Wall Street reforms enacted to protect the U.S. and global financial system from risks posed by large insurance companies. In the aftermath of the 2008 Great Recession, which was precipitated by the near-collapse of the international insurance giant American International Group (AIG), the Dodd-Frank Act significantly improved and strengthened regulatory oversight of the insurance industry.

With respect to robust and prudent regulation of the insurance industry, Dodd-Frank established a system to examine risks posed by the insurance industry to both the U.S. and global financial system. For example, Dodd-Frank provided for the establishment of the Federal Insurance Office (FIO), which is authorized to "coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters, including representing the United States, as appropriate, in the International Association of Insurance Supervisors (IAIS) and assisting the Treasury secretary in negotiating covered agreements." Dodd-Frank also expanded the Federal Reserve's supervisory authority so that it now serves as the consolidated supervisor of insurance holding companies that own either a Federally chartered thrift or a bank, as well as non-bank financial companies designated by the Financial Stability Oversight Council (FSOC).

Significantly, Dodd-Frank recognized and protected the critical role that state insurance commissioners play in regulating insurance companies doing business in their jurisdictions. To that end, Dodd-Frank provides that state insurance commissions, the Federal Reserve, and FIO work together and coordinate with one another in negotiations over insurance standards at IAIS to ensure that that the state-based system of insurance regulation, which has worked well for decades to protect consumers, is represented and respected in international negotiations.

The Dodd-Frank insurance regulatory framework to date has effectively balanced the U.S.' interest in preserving the regulatory authority of state insurance commissions over insurance companies and their products while giving federal regulators the tools they need to ensure that no domestic or international insurance companies takes on risks that threaten financial stability or necessitate a taxpayer bailout

If enacted, H.R. 5143 would hamstring U.S. representatives in international negotiations regarding international insurance standards, and establish several new and cumbersome processes and reporting requirements to be completed before any international standard could be agreed to. These requirements would cause significant delays and impose limitations for developing an international insurance capital standard, and weaken the ability of U.S. regulators to negotiate standards that both accommodate the U.S.'s unique insurance regulatory system and strengthen oversight of insurance companies whose size and complexity could pose a risk to the global financial system. They would also undermine the president's constitutional authority to determine the time, scope, and objectives of international negotiations.

Because H.R. 5143 would tie the hands of U.S. insurance regulators in international talks, in an unconstitutional manner, and prevent them from effectively negotiating on international insurance matters, in the Statement of Administration Policy, the president's senior advisors stated that they would recommend he veto this bill.

The Rule makes in order 1 amendment, debatable for 10 minutes, equally divided between the offeror and an opponent. The amendment is:

> **DeSantis Amendment.** Adds an additional requirement that the international agreement must be written in plain writing, as defined by the Plain Writing Act of 2010.
>
> ***Bill Text for H.R. 5143:***
> PDF Version
>
> ***Background for H.R. 5143:***
> House Report (HTML Version)

9. **H.R. 4298** – Vietnam Helicopter Crew Memorial Act (Rep. Amodei – Armed Services)
10. **H.R. 6130** – Holocaust Expropriated Art Recovery Act of 2016 (Rep. Goodlatte – Judiciary)
11. **H.R. 4919** – Kevin and Avonte's Law of 2016, as amended (Rep. Smith (NJ) – Judiciary)
12. **H.R. 6431** – Promoting Travel, Commerce, and National Security Act of 2016 (Rep. Kuster – Judiciary)
13. **S. 2854** – Emmett Till Unsolved Civil Rights Crimes Reauthorization Act of 2016, as amended (Sen. Burr – Judiciary)

Postponed Suspensions (2 bills)

1. **H.R. 1219** – Arbuckle Project Maintenance Complex and District Office Conveyance Act of 2016 (Rep. Cole – Natural Resources)
2. **S. 3028** – Daniel J. Evans Olympic National Park Wilderness Act (Sen. Cantwell – Natural Resources)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Thursday, December 8: The House will meet at 9:00 a.m. for legislative business. The House is expected to consider the Water Resources Development Act of 2016. The House is also expected to consider a Continuing Resolution for FY 2017 Appropriations.

THE DAILY QUOTE

"After weeks of wrangling, Republican leaders unveiled a stopgap spending bill Tuesday night that would fund the government through April at current levels… 'This legislation is just a Band-Aid…' House Appropriations Chairman Harold Rogers, R-Ky., said in a statement… The bottom line: Lawmakers are likely to avoid a government shutdown, but look for a nasty fight over the stopgap package this week."

Subject: THE DAILY WHIP: WEDNESDAY, DECEMBER 7, 2016
Date: Wednesday, December 07, 2016 11:03:42 AM

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR WEDNESDAY, DECEMBER 7, 2016

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	6:30 – 7:30 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 944 – Rule providing for consideration of H.R. 5143 – Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (One hour of debate). The Rules Committee has recommended a structured Rule that provides for one hour of general debate, equally divided and controlled by the Chair and Ranking Member of the Committee on Financial Services. The Rule allows for 1 amendment, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

The Rule also allows for Suspension Authority through the legislative day of December 8, 2016. **Members are urged to VOTE NO.**

H.R. 5143 – The Transparent Insurance Standards Act of 2016 (Rep. Luetkemeyer – Financial Services) (One hour of debate). H.R. 5143 would severely weaken critical Wall Street reforms enacted to protect the U.S. and global financial system from risks posed by large insurance companies. In the aftermath of the 2008 Great Recession, which was precipitated by the near-collapse of the international insurance giant American International Group (AIG), the Dodd-Frank Act significantly improved and strengthened regulatory oversight of the insurance industry.

With respect to robust and prudent regulation of the insurance industry, Dodd-Frank established a system to examine risks posed by the insurance industry to both the U.S. and global financial system. For example, Dodd-Frank provided for the establishment of the Federal Insurance Office (FIO), which is authorized to "coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters, including representing the United States, as appropriate, in the International Association of Insurance Supervisors (IAIS) and assisting the Treasury secretary in negotiating covered agreements." Dodd-Frank also expanded the Federal Reserve's supervisory authority so that it now serves as the consolidated supervisor of insurance holding companies that own either a Federally chartered thrift or a bank, as well as non-bank financial companies designated by the Financial Stability Oversight Council (FSOC).

Significantly, Dodd-Frank recognized and protected the critical role that state insurance commissioners play in regulating insurance companies doing business in their jurisdictions. To that end, Dodd-Frank provides that state insurance commissions, the Federal Reserve, and FIO work together and coordinate with one another in negotiations over insurance standards at IAIS to ensure that that the state-based system of insurance regulation, which has worked well for decades to protect consumers, is represented and respected in international negotiations.

The Dodd-Frank insurance regulatory framework to date has effectively balanced the U.S.' interest in preserving the regulatory authority of state insurance commissions over insurance companies and their products while giving federal regulators the tools they need to ensure that no domestic or international insurance companies takes on risks that threaten financial stability or necessitate a taxpayer bailout

If enacted, H.R. 5143 would hamstring U.S. representatives in international negotiations regarding international insurance standards, and establish several new and cumbersome processes and reporting requirements to be completed before any international standard could be agreed to. These requirements would cause significant delays and impose limitations for developing an international insurance capital standard, and weaken the ability of U.S. regulators to negotiate standards that both accommodate the U.S.'s unique insurance regulatory system and strengthen oversight of insurance companies whose size and complexity could pose a risk to the global financial system. They would also undermine the president's constitutional authority to determine the time, scope, and objectives of international negotiations.

Because H.R. 5143 would tie the hands of U.S. insurance regulators in international talks, in an unconstitutional manner, and prevent them from effectively negotiating on international insurance matters, in the Statement of Administration Policy, the president's senior advisors stated that they would recommend he veto this bill.

The Rule makes in order 1 amendment, debatable for 10 minutes, equally divided between the offeror and an opponent. The amendment is:

> **DeSantis Amendment.** Adds an additional requirement that the international agreement must be written in plain writing, as defined by the Plain Writing Act of 2010.
>
> ***Bill Text for H.R. 5143:***
> PDF Version
>
> ***Background for H.R. 5143:***
> House Report (HTML Version)
> House Report (PDF Version)

Suspensions (13 bills)

1. **H.R. 329** – Indian Employment, Training and Related Services Consolidation Act of 2016, as amended (Rep. Young (AK) – Natural Resources)
2. **H.R. 6400** – To revise the boundaries of certain John H. Chafee Coastal Barrier Resources System units in New Jersey (Rep. Pallone – Natural Resources)
3. **H.R. 3711** – Chicano Park Preservation Act (Rep. Vargas – Natural Resources)
4. **H.R. 6435** – To authorize the Directors of Veterans Integrated Service Networks of the Department of Veterans Affairs to enter into contracts with appropriate civilian accreditation entities or appropriate health care evaluation

entities to investigate medical centers of the Department of Veterans Affairs (Rep. Mullin – Veterans' Affairs)

5. **H.R. 5099** – CHIP IN for Vets Act of 2016, as amended (Rep. Ashford – Veterans' Affairs)
6. **H.R. 6076** – TREAT Astronauts Act, as amended (Rep. Babin – Science, Space, and Technology)
7. **H.R. 5790** – Federal Bureau of Investigation Whistleblower Protection Enhancement Act of 2016, as amended (Rep. Chaffetz – Oversight and Government Reform)
8. **House Amendment to S. 2971** – National Urban Search and Rescue Response System Act of 2016, as amended (Sen. Portman – Transportation and Infrastructure)
9. **H.R. 4298** – Vietnam Helicopter Crew Memorial Act (Rep. Amodei – Armed Services)
10. **H.R. 6130** – Holocaust Expropriated Art Recovery Act of 2016 (Rep. Goodlatte – Judiciary)
11. **H.R. 4919** – Kevin and Avonte's Law of 2016, as amended (Rep. Smith (NJ) – Judiciary)
12. **H.R. 6431** – Promoting Travel, Commerce, and National Security Act of 2016 (Rep. Kuster – Judiciary)
13. **S. 2854** – Emmett Till Unsolved Civil Rights Crimes Reauthorization Act of 2016, as amended (Sen. Burr – Judiciary)

Postponed Suspensions (2 bills)

1. **H.R. 1219** – Arbuckle Project Maintenance Complex and District Office Conveyance Act of 2016 (Rep. Cole – Natural Resources)
2. **S. 3028** – Daniel J. Evans Olympic National Park Wilderness Act (Sen. Cantwell – Natural Resources)

Subject: FLOOR UPDATE - 4 VOTES

dem_whip_floor_update.jpg

At approximately 1:20 – 1:25 p.m., the House will take the following votes:

1) **Motion on Ordering the Previous Question on the Rule** providing for consideration of H.R. 5143. Democrats are urged to vote no on the Previous Question so that Mr. Hastings of Florida can offer his amendment to the Rule, which would make in order Mr. Pascrell's bill H.R. 2963 – Bring Jobs Home Act. H.R. 2963, which has been a part of House Democrats' Make It In America plan, eliminates the tax deduction for moving expenses for companies sending jobs overseas and provides a new tax credit for 20% of expenses for companies that bring jobs back to the U.S. – **VOTE NO** – 15 minutes

2) **H.Res. 944** – Rule providing for consideration of H.R. 5143 – The Transparent Insurance Standards Act of 2016 – **VOTE NO** – 5 minutes

3) **H.R. 1219** – Arbuckle Project Maintenance Complex and District Office Conveyance Act of 2016 (Rep. Cole – Natural Resources) Suspension bill – 5 minutes

4) **S. 3028** – Daniel J. Evans Olympic National Park Wilderness Act (Sen. Cantwell – Natural Resources) Suspension bill – 5 minutes

Following votes, the House will continue consideration of the bills listed for consideration under suspensions of the Rules. After debate on several suspensions, the House will begin one hour of general debate on H.R. 5143 – Transparent Insurance Standards Act of 2016. Following general debate, the House will debate the one amendment to H.R. 5143. After amendment debate, the House will take votes. These will be the last votes for the day.

Following last votes, the House will complete consideration of the bills listed for consideration under suspension of the Rules. Any recorded votes requested will be postponed.

Next/Last votes predicted: approximately 5:30 – 6:00 p m., on amendments, motion to recommit, and final passage of H.R. 5143 and suspensions.

If you have any questions please contact: Shuwanza Goff, Danielle Aviles, or Ray Salazar at 5-3130.

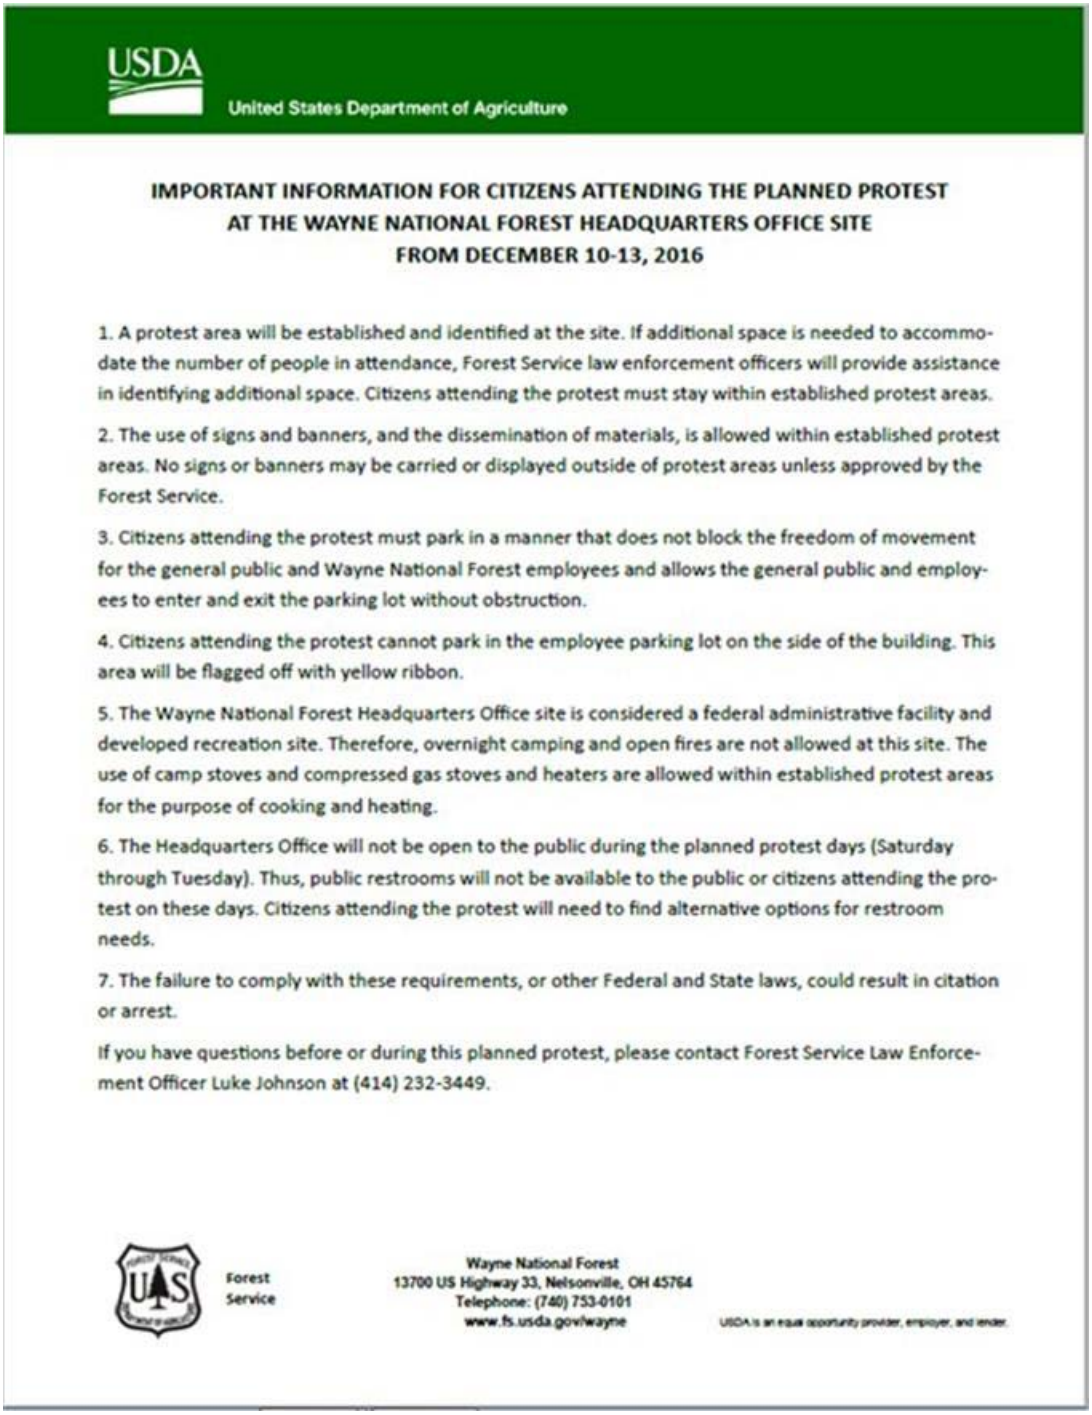
Subject: Important Information for Citizens Attending the Planned Protest at the Wayne National Forest Headquarters Office Site, 12/10-13

The Wayne National Forest is planning for a scheduled protest for an upcoming BLM Oil and Gas Lease Auction at our headquarters from 12/10-13. We would appreciate your help in distributing the attached information for citizens attending the planned protest.



USDA

United States Department of Agriculture

IMPORTANT INFORMATION FOR CITIZENS ATTENDING THE PLANNED PROTEST AT THE WAYNE NATIONAL FOREST HEADQUARTERS OFFICE SITE FROM DECEMBER 10-13, 2016

1. A protest area will be established and identified at the site. If additional space is needed to accommodate the number of people in attendance, Forest Service law enforcement officers will provide assistance in identifying additional space. Citizens attending the protest must stay within established protest areas.

2. The use of signs and banners, and the dissemination of materials, is allowed within established protest areas. No signs or banners may be carried or displayed outside of protest areas unless approved by the Forest Service.

3. Citizens attending the protest must park in a manner that does not block the freedom of movement for the general public and Wayne National Forest employees and allows the general public and employees to enter and exit the parking lot without obstruction.

4. Citizens attending the protest cannot park in the employee parking lot on the side of the building. This area will be flagged off with yellow ribbon.

5. The Wayne National Forest Headquarters Office site is considered a federal administrative facility and developed recreation site. Therefore, overnight camping and open fires are not allowed at this site. The use of camp stoves and compressed gas stoves and heaters are allowed within established protest areas for the purpose of cooking and heating.

6. The Headquarters Office will not be open to the public during the planned protest days (Saturday through Tuesday). Thus, public restrooms will not be available to the public or citizens attending the protest on these days. Citizens attending the protest will need to find alternative options for restroom needs.

7. The failure to comply with these requirements, or other Federal and State laws, could result in citation or arrest.

If you have questions before or during this planned protest, please contact Forest Service Law Enforcement Officer Luke Johnson at (414) 232-3449.

Chris

Can we connect today?

I want to explore the Secretary's authority and ability under a specific oil lease that is on a large, unique veterans affairs campus that my boss has made a priority and for which we recently passed legislation regulating land use. We just learned of an oil and gas lease that BLM is looking at amending on the campus.

The lease, the location, the bill, and the deed for the campus are attached. I have reached out to BLM and honestly have not got a ton of helpful information. My boss wants to consider weighing in directly with the Secretary.

Thanks,

Tristan Colonius

BUREAU OF LAND MANAGEMENT

PROTECTIVE OIL AND GAS LEASE

Office and Serial Number

Riverside

R 1956

THIS LEASE, entered into as of January 1, 1969, by and between the United States of America, through the Bureau of Land Management, hereinafter called the lessor, and Occidental Petroleum Corporation, 5000 Stockdale Highway, Bakersfield, California 93309,

hereinafter called the lessee, under the supervisory authority of the Secretary of the Interior (40 Op. Atty. Gen. 41), and subject to the provisions of Public Land Order 4270 of September 11, 1967, as amended by Public Land Order 4312 of October 31, 1967.

WITNESSETH:

Sec. 1. *Rights of lessee.* In consideration of rents and royalties to be paid, and the conditions and covenants to be observed as herein set forth, the lessor does hereby grant to the lessee the exclusive right and privilege to drill for, mine, extract, remove, and dispose of all the oil and gas deposits owned by the lessor, except helium gas, in or under the following-described land situated in Sawtelle Field,

San Bernardino Meridian

T. 1 S., R. 15 W.,

as more particularly described as Parcels A and B in Exhibit B attached hereto and made a part hereof,

containing 70.58 acres, more or less, for a period of five years and so long thereafter as oil or gas is produced in paying quantities: *Provided, That* this lease shall not be deemed to expire by reason of suspension of operations or production pursuant to any order or consent of the Secretary of the Interior. Except as otherwise provided and subject to the conditions herein specified, the lessee shall have the right to construct and maintain upon the leased lands all works, buildings, plants, waterways, roads, telegraph or telephone lines, pipe lines, reservoirs, tanks, pumping stations, or other structures as may be necessary to the full enjoyment of this lease.

Sec. 1(a) See following Sec. 10.

Sec. 2. The lessee hereby agrees:

(a) *Bonds.* To furnish and maintain at all times as required by the Lessor a bond in the penal sum of $ 10,000 with approved corporate surety, conditioned upon compliance with the terms of this lease.

(b) *Drilling agreement or unit plan.* Within 30 days of demand to subscribe to and operate under such reasonable communitization or drilling agreement, or under such cooperative or unit plan, embracing all or a portion of the lands included herein as the Secretary of the Interior may determine to be practicable and necessary or advisable, which agreement or plan shall adequately protect the rights of all parties in interest, including the United States, and which shall modify the terms hereof to the extent provided in such agreement or plan.

(c) *Wells.* To commence the drilling of a well or wells within the time and at such location as may be prescribed in Attachment *A* which is made a part hereof.

(d) *Rentals and royalties.* (1) To pay annual rentals and royalties on production under this lease as provided in Attachment *B* which is made a part hereof.

(2) At the option of the Lessor to pay the respective royalties herein provided for in value or in amount of production. If paid in value such royalties shall be due and payable monthly on the last day of the month next following the month in which produced. If paid in amount of production the respective royalty products shall be delivered in merchantable condition on the premises where produced without cost to Lessor, unless otherwise agreed to by the parties hereto, at such times and at such shipping point as may be designated by the Lessor, or in the case of crude oil, in such tanks provided by the Lessee as reasonably may be required by the Lessor, but in no event shall the Lessee be required to hold royalty oil or other royalty products in storage beyond the last day of the month next following the month in which produced. The Lessee shall not be responsible or held liable for the loss or destruction of royalty oil or other products in storage from causes over which the Lessee has no control.

(3) It is expressly agreed that the Secretary of the Interior may establish reasonable minimum values for purposes of computing royalty on any or all oil, gas, natural gasoline, and other products obtained from gas; due consideration being given to the highest price paid for a part or for a majority of production of like quality in the same field, to the price received by the Lessee, to posted prices and to other relevant matters and, whenever appropriate, after notice and opportunity to be heard.

(4) Royalties shall be subject to reduction on the entire leasehold or on any portion thereof segregated for

royalty purposes if the Secretary of the Interior finds that the lease cannot be successfully operated upon the royalties fixed herein, or that such action will encourage the greatest ultimate recovery of oil or gas or promote conservation.

(e) *Contracts for disposal of products.* To file with the Oil and Gas Supervisor of the Geological Survey not later than 30 days after the effective date thereof, any contract, or evidence of other arrangement, for the sale or disposal of oil, gas, natural gasoline, and other products of the leased land: *Provided, That* nothing in any such contract or other arrangement shall be construed as modifying any of the provisions of this lease, including, but not limited to provisions relating to gas waste, the Government's option to purchase gas, taking royalty in kind, and the method of computing royalties due as based on a minimum valuation, and in accordance with the Oil and Gas Operating Regulations.

(f) *Statements, plats, and reports.* At such time and in such form as the Lessor may prescribe, to furnish detailed statements showing the amounts and quality of all products removed and sold from the lease, the proceeds therefrom, and the amounts used for production purposes or unavoidably lost; a plat showing development work and improvements on the leased lands and a report with respect to stockholders, investment, depreciation, and costs.

(g) *Well records.* To keep a daily drilling record, a log, and complete information on all well surveys and tests in form acceptable to or prescribed by the Lessor of all wells drilled on the leased lands, and an acceptable record of all subsurface investigations affecting said lands, and to furnish them, or copies thereof to the Lessor when required.

(h) *Inspection.* To keep open at all reasonable times for the inspection of any duly authorized officer of the Department, the leased premises and all wells, improvements, machinery, and fixtures thereon and all books, accounts, maps, and records relative to operations and surveys or investigations on the leased lands or under the lease.

(i) *Payments.* Unless otherwise directed by the Secretary of the Interior, to make rental, royalty, or other payments to the Lessor, to the order of the United States Geological Survey, such payments to be tendered as directed by the Oil and Gas Supervisor of the Geological Survey.

(j) *Diligence, prevention of waste, health and safety of workmen.* To exercise reasonable diligence in drilling and producing the wells herein provided for unless consent to suspend operations temporarily is granted by the Lessor; to carry on all operations in accordance with approved methods and practice as provided in the operating regulations, having due regard for the prevention of waste of oil or gas or damage to deposits or formations containing oil, gas, or water or to coal measures or other mineral deposits, for conservation of gas energy, for the preservation and conservation of the property for future productive operations, and for the health and safety of workmen and employees; to plug properly and effectively all wells before abandoning the same; to carry out at expense of the Lessee all reasonable orders of the Lessor relative to the matters in this paragraph, and that on failure of the Lessee so to do the Lessor shall have the right to enter on the property and to accomplish the purpose of such orders at the Lessee's expense: *Provided, That* the Lessee shall not be held responsible for delays or casualties occasioned by causes beyond Lessee's control.

(k) *Taxes and wages, freedom of purchase.* To pay when due, all taxes lawfully assessed and levied under the laws of the State or the United States upon improvements, oil, and gas produced from the lands hereunder, or other rights, property, or assets of the Lessee; to accord all workmen and employees complete freedom of purchase, and to pay all wages due workmen and employees at least twice each month in the lawful money of the United States.

(l) *Equal Opportunity clauses.* During the performance of this contract, the Lessee agrees as follows:

(1) The Lessee will not discriminate against any employee or applicant for employment because of race, creed, color, or national origin. The Lessee will take affirmative action to ensure that applicants are employed, and employees are treated during employment, without regard to their race, creed, color, or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising, layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Lessee agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

(2) The Lessee will, in all solicitations or advertisements for employees placed by or on behalf of the Lessee, state that all qualified applicants will receive consideration for employment without regard to race, creed, color, or national origin.

(3) The Lessee will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of the Lessee's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(4) The Lessee will comply with all provisions of Executive Order No. 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(5) The Lessee will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(6) In the event of the Lessee's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated or suspended in whole or in part and the Lessee may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 11246 of September 24, 1965, and such other sanctions may be imposed and remedies involved as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(7) The Lessee will include the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The Lessee will take such action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions including sanctions for noncompliance: *Provided, however,* That in the event the Lessee

becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the contracting agency, the Lessee may request the United States to enter into such litigation to protect the interests of the United States.

(m) *Assignment of lease or interest therein.* To file with the Lessor within 90 days from the date of final execution any instrument of transfer made of this lease, or any interest therein, such instrument to take effect upon its final approval by the Bureau of Land Management, as of the first day of the month following the date of filing.

(n) *Pipe lines to purchase or convey at reasonable rates and without discrimination.* If owner, or operator, or owner of a controlling interest in any pipe line or of any company operating the same which may be operated accessible to the oil or gas derived from lands under this lease, to accept and convey and, if a purchaser of such products, to purchase at reasonable rates and without discrimination the oil or gas of the Government or of any citizen or company not the owner of any pipe line, operating a lease or purchasing or selling oil, gas, natural gasoline, or other products obtained under a lease or permit granted by the United States.

(o) *Reserved deposits.* To comply with all statutory requirements and regulations thereunder, if the lands embraced herein have been or shall hereafter be disposed of under the laws reserving to the United States the deposits of oil and gas therein, subject to such conditions as are or may hereafter be provided by the laws reserving such oil or gas.

(p) *Overriding royalties.* Not to create overriding royalties or payments out of production in excess of 5 percent on the leasehold or any part thereof or any zone segregated for the computation of royalties without approval by the Lessor.

(q) *Use and protection of property.* To comply with the stipulations governing the use and protection of the leased lands prescribed in Attachment C which is made a part hereof.

(r) *Damage to property.* To pay the Lessor or his tenant, as the case may be, for any and all damage to or destruction of property caused by Lessee's operations hereunder; to save and hold the Lessor harmless from all damage or claims for damage to persons or property resulting from the Lessee's operations under this lease.

(s) *Restoration of surface of land.* Upon any partial or total relinquishment, cancellation, or expiration of lease, Lessee shall, as to that part of the leased land as to which his rights have terminated, and to the extent deemed necessary by the Lessor fill all sump holes, ditches and other excavations, remove or cover all debris, and shall, so far as reasonably possible, restore the surface of the leased land to its former condition.

(t) *Local agent.* To appoint and maintain at all times during the term of this lease an agent upon whom may be served written orders or notices respecting matters contained in this section, and within 15 days after the date of this lease to inform the Oil and Gas Supervisor of the U. S. Geological Survey, in writing, the name and address of such agent. If a substitute agent is appointed, Lessee shall immediately so inform the said official.

(u) *Oil and gas operating regulations.* To comply with and operate in accordance with the provisions of the Oil and Gas Operating Regulations (30 CFR, Part 221), to the extent that such regulations are not inconsistent with the specific terms hereof.

Sec. 3. The Lessor expressly reserves:

(a) *Easement and rights-of-way.* The right to permit for joint or several use easements or rights-of-way, including easements in tunnels upon, through, or in the lands leased, occupied, or used as may be necessary or appropriate to the working of the same, and the treatment and shipment of products thereof by or under authority of the Government, its Lessees or Permittees, and for other public purposes.

(b) *Disposition of surface.* The right to lease, sell, or otherwise dispose of the surface of any of the lands embraced within this lease which are owned by the United States under existing law or laws hereafter enacted, insofar as said surface is not necessary for the use of the Lessee in the extraction and removal of the oil and gas therein.

(c) *Monopoly and fair prices.* Full power and authority to promulgate and enforce all orders necessary to insure the sale of the production of the leased lands to the United States and to the public at reasonable prices, to protect the interests of the United States, to prevent monoply, and to safeguard the public welfare.

(d) *Helium.* The ownership and the right to extract helium from all gas produced under this lease, subject to such rules and regulations as shall be prescribed by the Secretary of the Interior. In case the Lessor elects to take the helium the Lessee shall deliver all gas containing same, or portion thereof desired, to the Lessor at any point on the leased premises in the manner required by the Lessor, for the extraction of the helium in such plant or reduction works for that purpose as the Lessor may provide, whereupon the residue shall be returned to the Lessee with no substantial delay in the delivery of gas produced from the well to the Purchaser thereof. The Lessee shall not suffer a diminution of value of the gas from which the helium has been extracted, or loss otherwise, for which he is not reasonably compensated, save for the value of the helium extracted. The Lessor further reserves the right to erect, maintain, and operate any and all reduction works and other equipment necessary for the extraction of helium on the premises leased.

Sec. 4. *Drilling and producing restrictions.* It is covenanted and agreed that the rate of prospecting and developing and the quantity and rate of production from the lands covered by this lease shall be subject to control in the public interest by the Secretary of the Interior, and in the exercise of his judgment the Secretary may take into consideration, among other things, Federal laws, State laws, and regulations issued thereunder, or lawful agreement among operators regulating either drilling or production, or both. After unitization, the Secretary of the Interior, or any person, committee or State or Federal officer or agency so authorized in the unit plan, may alter or modify from time to time, the rate of prospecting and development and the quantity and rate of production from the lands covered by this lease.

Sec. 5. *Surrender and termination of lease.* The Lessee may surrender this lease, as to all or part of the leased land, by filing in the proper land office a written relinquishment, in triplicate, which shall be effective as of the date of filing subject to the continued obligation of the Lessee and his surety to make payment of all accrued rentals and royalties and to place all wells on the land to be relinquished in condition for suspension or abandonment in accordance with the applicable operating regulations and lease terms.

Sec. 6. *Purchase of materials etc., on termination of lease.* Upon the expiration of this lease, or the earlier termination thereof pursuant to the last preceding section, the Lessee shall have the privilege at any time within a period of 90 days thereafter of removing from the premises all machinery, equipment, tools, and materials other than improvements needed for producing wells. Any materials, tools, appliances, machinery, structures, and equipment subject to removal as above provided, which are allowed to remain on the leased lands shall become the property of the Lessor on expiration of the 90-day period of such extension thereof as may be granted because of adverse climatic conditions throughout said period: *Provided, That* the Lessee shall remove any or all of such property where so directed by the Lessor.

Sec. 7. *Proceedings in case of default.* If the Lessee fails to comply with any of the provisions of the lease or defaults in the performance or observance of any of the terms hereof and such noncompliance or default shall continue for a period of 30 days after service of written notice thereof by the Lessor, this lease may be canceled by the Secretary of the Interior, but this provision shall not be construed to prevent the exercise by the Lessor of any legal or equitable remedy which the Lessor might otherwise have. Upon cancellation of this lease, any casing, material or equipment determined by the Lessor to be necessary for use in plugging or preserving any well drilled on the leased land shall become the property of the Lessor. A waiver of any particular cause of forfeiture shall not prevent the cancellation and forfeiture of this lease for any other cause of forfeiture, or for the same cause occurring at any other time.

Sec. 8. *Preference of Government to purchase gas.* Any executive department of the Government shall have the option to purchase at the market price on the date of sale up to 50 percent, or such greater percentage as may be agreed upon, of the gas produced and saved from the leased premises after 6 months advance notice to the Lessee by the Secretary of the Interior; *Provided,* such gas is not being utilized for repressuring or secondary recovery purposes for the benefit of this lease.

Sec. 9. *Heirs and successors in interest.* It is further covenanted and agreed that each obligation hereunder shall extend to and be binding upon, and every benefit hereof shall inure to the heirs, executors, administrators, successors, or assigns of the respective parties hereto.

Sec. 10. *Unlawful interests.* It is also further agreed that no Member of, or Delegate to, Congress, or Resident Commissioner, after his election or appointment, or either before or after he has qualified, and during his continuance in office, and no officer, agent, or employee of the Department of the Interior, shall hold any share or part in this lease or derive any benefit that may arise therefrom; and that the provisions of Section 3741 of the Revised Statutes of the United States, and sections 431, 432, and 433, Title 18, United States Code, relating to contracts, shall enter into and form a part of this lease as the same may be applicable.

Sec. 1(a). Pursuant to Lessor's reservation of easements and rights of way under Sec. 3a of oil and gas lease Los Angeles 0138800, the Lessee is hereby granted subsurface easements and rights of way through such leasehold as may be necessary for the orderly development of "Parcel A" hereof, subject to any conditions deemed necessary by, and subject to the approval of, the Regional Oil and Gas Supervisor of the Geological Survey having supervision over the operations hereunder.

RIVERSIDE, CALIF

ATTACHMENT A

(c) Wells

1. Lessee shall commence drilling operations within 90 days from the effective date hereof. Lessee shall complete said well on the leased lands to production or abandonment at a depth sufficient to test the formation found productive in wells on lands adjacent to the leased lands. Such operations may be conducted on the leased lands at a surface location on the area described in Attachment C-1, and shown on Exhibit A or from a surface location on lands other than the leased lands.

2. Lessee shall drill and produce such other wells as are necessary to protect the leased lands from drainage, or in lieu of any part of such drilling and production, with the consent of the Regional Oil and Gas Supervisor of the Geological Survey, compensate the lessor in full each month for the estimated loss of royalty through drainage in the amount determined by said Supervisor.

3. Lessee may elect to drill and produce other wells in conformity with any system of well spacing or production allotments affecting the field or area in which the leased lands are situated, which is authorized and sanctioned by applicable law or by the Secretary of the Interior.

4. Promptly after due notice in writing, lessee shall drill and produce such other wells as the lessor may reasonably require in order that the leased premises may be properly and timely developed and produced in accordance with good operating practice.

INITIAL

ATTACHMENT C

(q) Use and Protection of Property

1. The portion of the surface of the leased lands available for drilling and production facilities shall be limited to the area designated in Attachment C-1, and shown on Exhibit "A".

2. Drilling equipment shall be operated by muffled internal combustion engines or electric motors.

3. During production periods pumping operations shall be conducted by adequately muffled internal combustion engines or electric motors.

4. When pumping is conducted by bottom hole hydraulic pumps, these may be powered by muffled internal combustion engines, provided these are completely enclosed within buildings insulated with sound-deadening materials.

5. The derrick shall be soundproofed with standard materials used at the present time and which are acceptable to the City Fire Chief; drilling operations shall be conducted so as to prevent objectionable noise. Derrick and drilling equipment shall be removed from the wellsite within sixty days after completion of drilling operations.

6. Application shall be made for an industrial Waste Disposal Permit, and all regulations and requirements of the Air Pollution Control District shall be complied with.

7. Illumination from excess gas-burning standpipes shall be shielded from adjacent properties on which residences are located, or on which Veterans Administration Hospital buildings or other installations are located.

8. The producing wellsite and necessary field storage and production facilities shall be fenced so as to prevent access thereto by unauthorized persons, such fence to be chain link and wood lath fence eight feet in height.

9. Storage and tank facilities shall not exceed the capacity reasonably necessary for producing operations.

10. All sumps shall be fenced so as to prevent access thereto by unauthorized persons, such fence to be chain link or other industrial type fence and not less than six feet in height.

INITIAL

Items 11 through 18 continued on page 2.

11. After drilling is completed, the producing wellsite and storage facilities shall be landscaped with trees, shrubbery, and plants to screen the facilities from public view and blend with the surrounding area, and shall be maintained. If buildings are constructed adjacent to the wellsite, the wellsite shall always have an aesthetic design reasonably compatible with the adjacent improvements or changes.

12. Permanent structures and equipment shall be painted in neutral colors so as to blend with the natural surroundings.

13. The yard area shall be maintained in a neat and orderly condition, and so far as practicable all operations conducted on said site and service roads shall be carried on with a minimum of objectionable noise and dust.

14. All pipes laid outside the drilling site in connection with drilling or production operations shall be covered to a depth of not less than one foot. The location of these pipe lines must be approved by the Director of the Veterans Administration Center.

15. Existing water lines and fire hydrants on the drilling and production area must be relocated at the sole cost of the Lessee as directed by the Director of the Veterans Administration Center.

16. All private roads used for ingress and egress to and from the drill site shall be surfaced and maintained during drilling and production operations.

17. Signs shall not be constructed, erected,maintained, or placed on the premises or any part thereof except those required by law or ordinance to be displayed in connection with the drilling or maintenance of the well and those required for public safety.

18. Whenever the operations of the Lessee hereunder are conducted in a manner which in the judgment of the Administrator of Veterans Affairs, or his designate, is inimical to the safety and welfare of the patients of the Veterans Administration Center, the Lessee, upon notice thereof, shall cease and desist such operations immediately. Such operations shall continue suspended until corrective measures satisfactory to the Administrator, or his designate, have been adopted by the Lessee, and in addition, the Lessee, within 60 days from the date of cessation of such operations, shall begin in good faith and with reasonable diligence to take corrective measures acceptable to the Administrator, or his designate, to remedy such operations.

INITIAL

ATTACHMENT B

(d) Rentals and Royalties

1. Lessee shall pay the lessor, in advance, an annual rental of two dollars per acre or fraction thereof for each lease year which commences prior to a discovery of oil or gas in paying quantities on the leased lands.

2. Lessee shall pay the lessor a royalty of 16-2/3 percent of the amount or value of production obtained and saved from the leased lands.

3. Lessee shall pay the lessor, in lieu of rental, at the expiration of each lease year beginning after a discovery of oil or gas on the leased lands, a minimum royalty of one dollar per acre or fraction thereof, or if there is production, the amount, if any, that such minimum royalty exceeds royalties on production.

4. Prior to a discovery of oil or gas on the leased lands, the lessee shall make rental payments due the lessor to the order of the Bureau of Land Management at the Land Office having jurisdiction over the area in which the leased lands are located.

5. After discovery of oil or gas on the leased lands, the lessee shall make royalty and minimum royalty payments due the lessor to the order of the Geological Survey at the office of the Regional Oil and Gas Supervisor having supervision over the operations hereunder.

An Act

Sept. 29, 2016
[H.R. 5936]

To authorize the Secretary of Veterans Affairs to enter into certain leases at the Department of Veterans Affairs West Los Angeles Campus in Los Angeles, California, to make certain improvements to the enhanced-use lease authority of the Department, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

West Los Angeles Leasing Act of 2016.
38 USC 101 note.

SECTION 1. SHORT TITLE.

This Act may be cited as the "West Los Angeles Leasing Act of 2016".

SEC. 2. AUTHORITY TO ENTER INTO CERTAIN LEASES AT THE DEPARTMENT OF VETERANS AFFAIRS WEST LOS ANGELES CAMPUS.

(a) IN GENERAL.—The Secretary of Veterans Affairs may carry out leases described in subsection (b) at the Department of Veterans Affairs West Los Angeles Campus in Los Angeles, California (hereinafter in this section referred to as the "Campus").

Real property.

(b) LEASES DESCRIBED.—Leases described in this subsection are the following:

(1) Any enhanced-use lease of real property under subchapter V of chapter 81 of title 38, United States Code, for purposes of providing supportive housing, as that term is defined in section 8161(3) of such title, that principally benefit veterans and their families.

(2) Any lease of real property for a term not to exceed 50 years to a third party to provide services that principally benefit veterans and their families and that are limited to one or more of the following purposes:

(A) The promotion of health and wellness, including nutrition and spiritual wellness.

(B) Education.

(C) Vocational training, skills building, or other training related to employment.

(D) Peer activities, socialization, or physical recreation.

(E) Assistance with legal issues and Federal benefits.

(F) Volunteerism.

(G) Family support services, including child care.

(H) Transportation.

(I) Services in support of one or more of the purposes specified in subparagraphs (A) through (H).

Regents of the University of California.

(3) A lease of real property for a term not to exceed 10 years to The Regents of the University of California, a corporation organized under the laws of the State of California, on

behalf of its University of California, Los Angeles (UCLA) campus (hereinafter in this section referred to as "The Regents"), if—

(A) the lease is consistent with the master plan described in subsection (g);

(B) the provision of services to veterans is the predominant focus of the activities of The Regents at the Campus during the term of the lease;

(C) The Regents expressly agrees to provide, during the term of the lease and to an extent and in a manner that the Secretary considers appropriate, additional services and support (for which The Regents is not compensated by the Secretary or through an existing medical affiliation agreement) that—

(i) principally benefit veterans and their families, including veterans that are severely disabled, women, aging, or homeless; and

(ii) may consist of activities relating to the medical, clinical, therapeutic, dietary, rehabilitative, legal, mental, spiritual, physical, recreational, research, and counseling needs of veterans and their families or any of the purposes specified in any of subparagraphs (A) through (I) of paragraph (2); and

(D) The Regents maintains records documenting the value of the additional services and support that The Regents provides pursuant to subparagraph (C) for the duration of the lease and makes such records available to the Secretary. Records.

(c) LIMITATION ON LAND-SHARING AGREEMENTS.—The Secretary may not carry out any land-sharing agreement pursuant to section 8153 of title 38, United States Code, at the Campus unless such agreement—

(1) provides additional health-care resources to the Campus; and

(2) benefits veterans and their families other than from the generation of revenue for the Department of Veterans Affairs.

(d) REVENUES FROM LEASES AT THE CAMPUS.—Any funds received by the Secretary under a lease described in subsection (b) shall be credited to the applicable Department medical facilities account and shall be available, without fiscal year limitation and without further appropriation, exclusively for the renovation and maintenance of the land and facilities at the Campus.

(e) EASEMENTS.—

(1) IN GENERAL.—Notwithstanding any other provision of law (other than Federal laws relating to environmental and historic preservation), pursuant to section 8124 of title 38, United States Code, the Secretary may grant easements or rights-of-way on, above, or under lands at the Campus to—

(A) any local or regional public transportation authority to access, construct, use, operate, maintain, repair, or reconstruct public mass transit facilities, including, fixed guideway facilities and transportation centers; and

(B) the State of California, County of Los Angeles, City of Los Angeles, or any agency or political subdivision

thereof, or any public utility company (including any company providing electricity, gas, water, sewage, or telecommunication services to the public) for the purpose of providing such public utilities.

(2) IMPROVEMENTS.—Any improvements proposed pursuant to an easement or right-of-way authorized under paragraph (1) shall be subject to such terms and conditions as the Secretary considers appropriate.

(3) TERMINATION.—Any easement or right-of-way authorized under paragraph (1) shall be terminated upon the abandonment or nonuse of the easement or right-of-way and all right, title, and interest in the land covered by the easement or right-of-way shall revert to the United States.

(f) PROHIBITION ON SALE OF PROPERTY.—Notwithstanding section 8164 of title 38, United States Code, the Secretary may not sell or otherwise convey to a third party fee simple title to any real property or improvements to real property made at the Campus.

(g) CONSISTENCY WITH MASTER PLAN.—The Secretary shall ensure that each lease carried out under this section is consistent with the draft master plan approved by the Secretary on January 28, 2016, or successor master plans.

(h) COMPLIANCE WITH CERTAIN LAWS.—

Determination. Certification. Recommendations.

(1) LAWS RELATING TO LEASES AND LAND USE.—If the Inspector General of the Department of Veterans Affairs determines, as part of an audit report or evaluation conducted by the Inspector General, that the Department is not in compliance with all Federal laws relating to leases and land use at the Campus, or that significant mismanagement has occurred with respect to leases or land use at the Campus, the Secretary may not enter into any lease or land-sharing agreement at the Campus, or renew any such lease or land-sharing agreement that is not in compliance with such laws, until the Secretary certifies to the Committees on Veterans' Affairs of the Senate and House of Representatives, the Committees on Appropriations of the Senate and House of Representatives, and each Member of the Senate and the House of Representatives who represents the area in which the Campus is located that all recommendations included in the audit report or evaluation have been implemented.

(2) COMPLIANCE OF PARTICULAR LEASES.—Except as otherwise expressly provided by this section, no lease may be entered into or renewed under this section unless the lease complies with chapter 33 of title 41, United States Code, and all Federal laws relating to environmental and historic preservation.

Establishment.

(i) VETERANS AND COMMUNITY OVERSIGHT AND ENGAGEMENT BOARD.—

Deadline. Recommendations.

(1) IN GENERAL.—Not later than 180 days after the date of the enactment of this Act, the Secretary shall establish a Veterans and Community Oversight and Engagement Board (in this subsection referred to as the "Board") for the Campus to coordinate locally with the Department of Veterans Affairs to—

(A) identify the goals of the community and veteran partnership;

(B) provide advice and recommendations to the Secretary to improve services and outcomes for veterans, members of the Armed Forces, and the families of such veterans and members; and

(C) provide advice and recommendations on the implementation of the draft master plan approved by the Secretary on January 28, 2016, and on the creation and implementation of any successor master plans.

(2) MEMBERS.—The Board shall be comprised of a number of members that the Secretary determines appropriate, of which not less than 50 percent shall be veterans. The nonveteran members shall be family members of veterans, veteran advocates, service providers, real estate professionals familiar with housing development projects, or stakeholders. Determination.

(3) COMMUNITY INPUT.—In carrying out paragraph (1), the Board shall—

(A) provide the community opportunities to collaborate and communicate with the Board, including by conducting public forums on the Campus; and

(B) focus on local issues regarding the Department that are identified by the community, including with respect to health care, implementation of the draft master plan and any subsequent plans, benefits, and memorial services at the Campus.

(j) NOTIFICATION AND REPORTS.—

(1) CONGRESSIONAL NOTIFICATION.—With respect to each lease or land-sharing agreement intended to be entered into or renewed at the Campus, the Secretary shall notify the Committees on Veterans' Affairs of the Senate and House of Representatives, the Committees on Appropriations of the Senate and House of Representatives, and each Member of the Senate and the House of Representatives who represents the area in which the Campus is located of the intent of the Secretary to enter into or renew the lease or land-sharing agreement not later than 45 days before entering into or renewing the lease or land-sharing agreement.

(2) ANNUAL REPORT.—Not later than one year after the date of the enactment of this Act, and not less frequently than annually thereafter, the Secretary shall submit to the Committees on Veterans' Affairs of the Senate and House of Representatives, the Committees on Appropriations of the Senate and House of Representatives, and each Member of the Senate and the House of Representatives who represents the area in which the Campus is located an annual report evaluating all leases and land-sharing agreements carried out at the Campus, including—

(A) an evaluation of the management of the revenue generated by the leases; and Evaluation.

(B) the records described in subsection (b)(3)(D). Records.

(3) INSPECTOR GENERAL REPORT.—

(A) IN GENERAL.—Not later than each of two years and five years after the date of the enactment of this Act, and as determined necessary by the Inspector General of the Department of Veterans Affairs thereafter, the Inspector General shall submit to the Committees on Veterans' Affairs of the Senate and House of Representatives and the Committees on Appropriations of the Senate and Determination. Assessment.

House of Representatives, and each Member of the Senate and the House of Representatives who represents the area in which the Campus is located a report on all leases carried out at the Campus and the management by the Department of the use of land at the Campus, including an assessment of the efforts of the Department to implement the master plan described in subsection (g) with respect to the Campus.

(B) CONSIDERATION OF ANNUAL REPORT.—In preparing each report required by subparagraph (A), the Inspector General shall take into account the most recent report submitted to Congress by the Secretary under paragraph (2).

(k) RULE OF CONSTRUCTION.—Nothing in this section shall be construed as a limitation on the authority of the Secretary to enter into other agreements regarding the Campus that are authorized by law and not inconsistent with this section.

(l) PRINCIPALLY BENEFIT VETERANS AND THEIR FAMILIES DEFINED.—In this section the term "principally benefit veterans and their families", with respect to services provided by a person or entity under a lease of property or land-sharing agreement—

(1) means services—

(A) provided exclusively to veterans and their families; or

(B) that are designed for the particular needs of veterans and their families, as opposed to the general public, and any benefit of those services to the general public is distinct from the intended benefit to veterans and their families; and

(2) excludes services in which the only benefit to veterans and their families is the generation of revenue for the Department of Veterans Affairs.

(m) CONFORMING AMENDMENTS.—

(1) PROHIBITION ON DISPOSAL OF PROPERTY.—Section 224(a) of the Military Construction and Veterans Affairs and Related Agencies Appropriations Act, 2008 (Public Law 110–161; 121 Stat. 2272) is amended by striking "The Secretary of Veterans Affairs" and inserting "Except as authorized under the Los Angeles Homeless Veterans Leasing Act of 2016, the Secretary of Veterans Affairs".

(2) ENHANCED-USE LEASES.—Section 8162(c) of title 38, United States Code, is amended by inserting ", other than an enhanced-use lease under the Los Angeles Homeless Veterans Leasing Act of 2016," before "shall be considered".

SEC. 3. IMPROVEMENTS TO ENHANCED-USE LEASE AUTHORITY OF DEPARTMENT OF VETERANS AFFAIRS.

(a) PROHIBITION ON WAIVER OF OBLIGATION OF LESSEE.—Paragraph (3) of section 8162(b) of title 38, United States Code, is amended by adding at the following new subparagraph:

"(D) The Secretary may not waive or postpone the obligation of a lessee to pay any consideration under an enhanced-use lease, including monthly rent.".

(b) CLARIFICATION OF LIABILITY OF FEDERAL GOVERNMENT TO THIRD PARTIES.—Section 8162 of such title is amended by adding at the end the following new subsection:

"(d)(1) Nothing in this subchapter authorizes the Secretary to enter into an enhanced-use lease that provides for, is contingent upon, or otherwise authorizes the Federal Government to guarantee a loan made by a third party to a lessee for purposes of the enhanced-use lease.

"(2) Nothing in this subchapter shall be construed to abrogate or constitute a waiver of the sovereign immunity of the United States with respect to any loan, financing, or other financial agreement entered into by the lessee and a third party relating to an enhanced-use lease.".

(c) TRANSPARENCY.—

(1) NOTICE.—Section 8163(c)(1) of such title is amended— 38 USC 8163.

(A) by inserting ", the Committees on Appropriations of the House of Representatives and the Senate, and the Committees on the Budget of the House of Representatives and the Senate" after "congressional veterans' affairs committees";

(B) by striking "and shall publish" and inserting ", shall publish";

(C) by inserting before the period at the end the following: ", and shall submit to the congressional veterans' affairs committees a copy of the proposed lease"; and

(D) by adding at the end the following new sentence: "With respect to a major enhanced-use lease, upon the request of the congressional veterans' affairs committees, not later than 30 days after the date of such notice, the Secretary shall testify before the committees on the major enhanced-use lease, including with respect to the status of the lease, the cost, and the plans to carry out the activities under the lease. The Secretary may not delegate such testifying below the level of the head of the Office of Asset Enterprise Management of the Department or any successor to such office.". Deadline. Testimony.

(2) ANNUAL REPORTS.—Section 8168 of such title is amended—

(A) by striking "to Congress" each place it appears and inserting "to the congressional veterans' affairs committees, the Committees on Appropriations of the House of Representatives and the Senate, and the Committees on the Budget of the House of Representatives and the Senate";

(B) in subsection (a)—

(i) by striking "Not later" and inserting "(1) Not later";

(ii) by striking "a report" and all that follows through the period at the end and inserting "a report on enhanced-use leases."; and

(iii) by adding at the end the following new paragraph:

"(2) Each report under paragraph (1) shall include the following:

"(A) Identification of the actions taken by the Secretary to implement and administer enhanced-use leases.

"(B) For the most recent fiscal year covered by the report, the amounts deposited into the Medical Care Collection Fund account that were derived from enhanced-use leases.

"(C) Identification of the actions taken by the Secretary using the amounts described in subparagraph (B).

"(D) Documents of the Department supporting the contents of the report described in subparagraphs (A) through (C).";
and

(C) in subsection (b)—

(i) by striking "Each year" and inserting "(1) Each year";

(ii) by striking "this subchapter," and all that follows through the period at the end and inserting "this subchapter."; and

(iii) by adding at the end the following new paragraph:

"(2) Each report under paragraph (1) shall include the following with respect to each enhanced-use lease covered by the report:

"(A) An overview of how the Secretary is using consideration received by the Secretary under the lease to support veterans.

"(B) The amount of consideration received by the Secretary under the lease.

"(C) The amount of any revenues collected by the Secretary relating to the lease not covered by subparagraph (B), including a description of any in-kind assistance or services provided by the lessee to the Secretary or to veterans under an agreement entered into by the Secretary pursuant to any provision of law.

"(D) The costs to the Secretary of carrying out the lease.

"(E) Documents of the Department supporting the contents of the report described in subparagraphs (A) through (D).".

(d) ADDITIONAL DEFINITIONS.—Section 8161 of such title is amended by adding at the end the following new paragraphs:

"(4) The term 'lessee' means the party with whom the Secretary has entered into an enhanced-use lease under this subchapter.

"(5) The term 'major enhanced-use lease' means an enhanced-use lease that includes consideration consisting of an average annual rent of more than $10,000,000.".

(e) COMPTROLLER GENERAL AUDIT.—

(1) REPORT.—Not later than 270 days after the date of the enactment of this Act, the Comptroller General of the United States shall submit to the appropriate congressional committees a report containing an audit of the enhanced-use lease program of the Department of Veterans Affairs under subchapter V of chapter 81 of title 38, United States Code.

(2) MATTERS INCLUDED.—The report under paragraph (1) shall include the following:

(A) The financial impact of the enhanced-use lease authority on the Department of Veterans Affairs and whether the revenue realized from such authority and other financial benefits would have been realized without such authority.

(B) The use by the Secretary of such authority and whether the arrangements made under such authority would have been made without such authority.

(C) An identification of the controls that are in place to ensure accountability and transparency and to protect the Federal Government.

Assessment.

(D) An overall assessment of the activities of the Secretary under such authority to ensure procurement cost

avoidance, negotiated cost avoidance, in-contract cost avoidance, and rate reductions.

(3) APPROPRIATE CONGRESSIONAL COMMITTEES DEFINED.—In this subsection, the term "appropriate congressional committees" means—

(A) the Committees on Veterans' Affairs of the House of Representatives and the Senate;

(B) the Committees on Appropriations of the House of Representatives and the Senate; and

(C) the Committees on the Budget of the House of Representatives and the Senate.

Approved September 29, 2016.

Date Dec. 11, 1970 Ray E. Lee Recorder
County of Los Angeles
State of California

This indenture made the third day of March one thousand eight hundred and eighty eight, by and between John P. Jones and Arcadia B. de Baker, the parties of the first part and the National Home for Disabled Volunteer Soldiers a corporation formed and now existing under the laws of the United States the parties of the second part.

Witnesseth, that whereas by an act of Congress approved March 2nd 1887, to provide for the location and erection of a branch home for disabled volunteer soldiers West of the Rocky Mountains, the Board of Managers of the National Home for Disabled Volunteer Soldiers, were authorized, empowered and directed to locate, establish, construct and permanently maintain a branch of said National Home for Disabled Volunteer Soldiers, to be by such Board, located at such place in the States West of the Rocky Mountains as to said Board should appear most desirable and advantageous.

And whereas, the parties hereto of the first part in consideration that the party hereto of the second part should locate, establish, construct and permanently maintain a branch of said National Home for Disabled Volunteer Soldiers on a site to be selected by its Board of Managers along the dividing line between the Ranchos San Jose de Buenos Ayres and San Vicente y Santa Monica offered to donate to the said party of the second part, three hundred acres of land, being a portion of said Rancho San Vicente y Santa Monica belonging to them the said parties of the first part, on which to locate, establish, construct and permanently maintain such branch of said National Home for Disabled Volunteer Soldiers.

And Whereas, the Board of Managers of said National Home for Disabled Volunteer Soldiers, in consideration of said offer have selected the land and premises hereinafter described for the purpose aforesaid and have notified the parties of the first part of such selection.

Now Therefore, in consideration of the premises and of the location, establishment, construction and permanent maintenance of a branch of said National Home for Disabled Volunteer Soldiers on such tract of land so selected and of the benefits to accrue to the said parties of the first part, owners of the said Rancho San Vicente y Santa Monica by such location have given and granted and by these presents do give and grant unto said party of the second part all the following described land and premises, situate lying and being in the County of Los Angeles, State of California and particularly bounded and described as follows:

Commencing at a point on the boundary line between the Ranchos San Vicente y Santa Monica and San Jose de Buenos Ayres distant 6044 feet Northerly from the corner post on the line between the said Rancho San Vicente y Santa Monica and the Rancho La Ballona, which post is the common corner of the Rancho San Vicente y Santa Monica and the Rancho San Jose de Buenos Ayres running from said point of beginning South 34½° West 2780 2/10 feet to a stake being the Southwest corner of the tract herein conveyed, then North 54½° East

2780 2/10 feet to a stake on the boundary line between the said Ranchos San Vicente y Santa Monica and San Jose de Buenos Ayres; South 35½° East along said boundary line 4385 feet to the place of beginning, containing three hundred (300) acres of land.

Together with all and singular, the tenements, hereditaments and appurtenances thereunto belonging or in anywise appertaining, to have and to hold the said land and promises, with appurtenances unto the said party Disabled Volunteer Soldiers to be thereon so located, established, constructed and permanently maintained.

In Witness Whereof, the said parties of the first have hereunto set their hands and seals the day and year first above written.

Hi, Sarah –

Do you know if there was an underlying reasoning for withdrawing parts of the Atlantic and Artic but not the Pacific from oil and gas drilling under OSCLA?

Thanks,

Ken

The Honorable Sally Jewell
Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, D.C. 20240

Dear Madam Secretary:

On December 28, 2016, President Obama designated the Bears Ears National Monument in Utah and the Gold Butte National Monument in Nevada pursuant to his authority under the Antiquities Act.[1] Advocates for this action touted it as a means to establish a co-management agreement for Bears Ears between the federal government and a group of Native American tribes.[2] In fact, in the press release announcing these new national monuments, the White House recognizes the importance of tribal participation in the management of the land and asserts this action serves as a tool to achieve co-management.[3] Co-management of public lands, however, requires the approval of Congress.[4] Advocacy organizations, federal agencies, and the White House have all put out differing opinions on co-management, and it is important to clarify the bounds of the President's authority. I am writing to obtain more information about how and why the President exercised his authority in this case.

[3] FACT SHEET: President Obama to Designate New National Monuments Protecting Significant Natural and Cultural Resources in Utah and Nevada, https://www.whitehouse.gov/the-press-office/2016/12/28/fact-sheet-president-obama-designate-new-national-monuments-protecting.

[4] *See U.S. Telecom Ass'n v. FCC*, 359 F.3d 554, 565-66 (D.C. Cir. 2004) ("[S]ubdelegations to outside parties are assumed to be improper absent an affirmative showing of congressional authorization . . . . When an agency delegates authority to its subordinate, responsibility—and thus accountability—clearly remain with the federal agency. But when an agency delegates power to outside parties, lines of accountability may blur, undermining an important democratic check on government decision-making. Also, delegation to outside entities increases the risk that these parties will not share the agency's "national vision and perspective . . . ."). *See also High Country Citizens' Alliance v. Norton*, 448 F. Supp. 2d 1235, 1246-1247 (D. Colo. 2006) (similar, citing U.S. Telecom).

The President has exercised his authority under the Antiquities Act to create or expand at least 25 national monuments—more than any other president in history.[5] His sweeping application of the Antiquities Act raises questions about the Administration's commitment to transparency and consultation with local stakeholders with respect to designating national monuments. It also raises serious questions about whether these designations are limited to the, "smallest area compatible with proper care and management of the objects to be protected."[6] The Antiquities Act "was designed to protect federal lands and resources quickly" in response to concerns about "theft from and destruction of archaeological sites."[7] In most cases, however, the processes outlined by the National Environmental Policy Act (NEPA) and the Federal Land Policy Management Act (FLPMA) are most appropriate because they require environmental studies, a review of the public purpose, and an opportunity for public participation before any federal agency action.[8] The NEPA and the FLPMA processes provide for a more thoughtful determination, whereas the Antiquities Act was meant to be reserved for emergency scenarios.

Until yesterday, the Administration's actions with respect to Bears Ears more closely resembled the NEPA and FLPMA process. In anticipation of the Bears Ears designation, the Department of the Interior took on a large role in gathering input and coordinating planning.[9] You, Secretary Jewell, visited the potential site for a listening session.[10] In fact, during a hearing before the Subcommittee on the Interior, Bureau of Land Management (BLM) Director Neil Kornze testified that BLM and the White House have been coordinating.[11] It is therefore unclear why the President opted to designate a massive national monument in Utah via the Antiquities Act in the waning days of his presidency, and to ignore federal environmental and procedural laws enacted to ensure stakeholders and other affected parties have a meaningful role in determining the outcome.

Similarly, the President's actions with regard to the Gold Butte National Monument designation bypassed Congress and the public. Located in Clark County, Nevada, the Gold Butte National Monument spans nearly 300,000 acres.[12] Such a large designation, made unilaterally, deprives the American people and their elected representatives a collaborative discussion on how best to protect the land for all to enjoy. Large designations such as Gold Butte Monument are the type of major federal agency action envisioned by our federal environmental and procedural laws.

Furthermore, in a letter dated March 29, 2016, this Committee, along with the House Committees on Natural Resources and on Appropriations, requested information related to use of the Antiquities Act of 1906.[13] After receiving an inadequate response, a follow up letter was sent on May 11, 2016.[14] As outlined in both letters, the Committees are interested in the Administration's process for using the Antiquities Act. Specifically, the Committees requested documents and communications from the Council on Environmental Quality and the Department of the Interior (DOI) referring or relating to the selection or designation of national monuments under the Antiquities Act of 1906 by the President from January 1, 2015, to the present.

To date, DOI has only provided a very limited response to the Committee that largely consisted of public statements and news clippings. If the Department does not produce these documents voluntarily, the Committee will be required to obtain them through compulsory measures.

Please immediately provide the documents requested in the Committee's March 29th and May 11th letters. In addition, please produce the following documents as soon as possible, but not later than January 13, 2017:

1. All calendars, including all meetings and attendees, for all DOI employees involved or referenced in any discussions related to any national monument selection or designation.

2. The daily schedules and call logs for Secretary Jewell, Tommy Beaudreau, Nikki Buffa and Neil Kornze from April 21, 2013, to present.

3. All communications between any DOI employee and White House staff, including but not limited to Senior Advisor Brian Deese, between January 2015 and present.

4. All documents and communications referring or related to the selection or designation of national monuments under the Antiquities Act of 1906 by the President from April 21, 2013, to present.

5. All documents and communications related to the reduction in size, limitation, or repeal of a national monument from January 20, 2009, to present.

Additionally, please make available for transcribed interview the following three DOI officials as soon as possible, but not later than January 20, 2017: Bureau of Land Management Director Neil Kornze; your Chief of Staff Tommy Beaudreau; and DOI employee Nikki Buffa.

Interior Department Cancels Remaining Oil and Gas Leases in Montana's Badger-Two Medicine Area

Action Represents Significant Milestone in Protecting Area from Impacts of Energy Development

WASHINGTON – The Department of Interior today announced the Bureau of Land Management has canceled the final two oil and gas leases in the Badger-Two Medicine area within the Lewis and Clark National Forest in Northwest Montana. The two lease cancellations address outstanding concerns about the potential for oil and gas development in this culturally and ecologically important area.

"We are proud to have worked alongside the Blackfeet Nation and the U.S. Forest Service throughout this process to roll back decades-old leases and reinforce the importance of developing resources in the right way and the right places." said Secretary Jewell. "The cancellation of the final two leases in the rich cultural and natural Badger-Two Medicine Area will ensure it is protected for future generations."

The BLM notified J.G. Kluthe Trust of Nebraska and W.A. Moncrief Jr. of Texas of the cancellations of the final two leases in the area. The lease cancellations occur after thirty years of administrative, legal and legislative actions and reflect the historical and cultural significance of the area to the Blackfeet Tribe and concerns regarding leasing issuance.

The Badger-Two Medicine is a 130,000 acre area, bounded by Glacier National Park, the Bob Marshall Wilderness, and the Blackfeet Indian Reservation. This portion of the Rocky Mountain Front is considered sacred by the Blackfeet Tribe, and is part of a Traditional Cultural District. These characteristics caused Congress to legislatively withdraw the area from mineral development in 2006.

The leases being canceled today were issued in the 1980s and have not had any drilling in the area since issuance.

The cancellation respects recommendations by the U.S. Forest Service, the Advisory Council on Historic Preservation, and concerns expressed by the Blackfeet Tribe and interested members of the public. In 2016, Secretary of the Interior Sally Jewell announced the cancellation of 16 leases in the area. The leases were held by Solonex LLC and Devon Energy.

Dear *NEWSWAVE* Subscribers:

We are pleased to share our Fall 2016/Winter 2017 issue.

In this issue:

- DOI's Blue Portfolio
- The recent expansion of Papahanaumokuakea Marine National Monument and the first marine monument in the Atlantic,
- The Nation's first regional ocean plans,
- National Park Service's Centennial celebrations,
- The discovery of an historic anchor
- Continued progress on Everglades Ecosystem Restoration, and
- Chesapeake Bay science

Our special feature is an article about Arctic research cruise, Hidden Ocean 2016, as seen through the eyes of BOEM oceanographer Kate Segarra. Read about her science mission at the top of the world.

The **Surfing Bison** feature explores how DOI protects marine mammals. Through the Marine Mammal Protection Act, the Endangered Species Act and the Convention on International Trade in Endangered Species of Wild Fauna and Flora, the USFWS helps protect a variety of marine mammals.

Come explore and learn with us.

Another great way to keep up with Interior's ocean, Great Lakes, and coastal activities on a daily basis is through our Facebook page. We follow all Facebook pages available for each of the 88 ocean and coastal National Park units, 180 ocean and coastal National Wildlife refuges, Bureau of Land Management's coastal monuments, and the science conducted by USGS and the Bureau of Ocean Energy Management. Visit and 'like' us today!

First U.S. Marine National Monument in Atlantic

See it as You've Never Seen it Before!

By Ann Tihansky (USGS) and Erica Wales (DOI)

On September 15, 2016, President Obama designated the first Marine National Monument in the Atlantic Ocean on the first day of the 3rd "Our Ocean" Conference. The Northeast Canyons and Seamounts Marine National Monument will protect 4,913 square miles of fragile deep-sea ecosystems off the coast of Cape Cod National Seashore. By protecting this striking underwater landscape of mountains and canyons, critical ecosystems for deep-sea coral and

See Northeast Monument page 3

DOI's Blue Portfolio

The Department of the Interior's (DOI) blue portfolio and stewardship responsibilities for ocean and coastal resources have recently increased with President Obama signing a proclamation expanding the Papahānaumokuākea Marine National Monument (*see related story, page 1*) and designating the first marine national monument in the Atlantic Ocean. While the Papahānaumokuākea Marine National Monument is one of the largest marine protected area (MPA) on the planet, the Northeast Canyons and Seamounts Marine National Monument is the first to protect 4,913 square

See Portfolio page 3

Expanding Papahānaumokuākea Marine Monument

By Randy Bowman (DOI)

On August 26, 2016, President Obama issued a proclamation under the authority of the Antiquities Act expanding the Papahānaumokuākea Marine National Monument to include 582,578 square miles of land and sea. The designation more than quadruples the size of the existing marine monument, including all the waters and submerged lands within the seaward limit of the U.S. Exclusive Economic Zone west of 163° west longitude. Previously the largest contiguous fully protected

The U.S. Geological Survey (USGS) responded to Hurricane Matthew by forecasting coastal change and monitoring it using "before and after" photos.

New low-altitude aerial photos of Southeastern U.S. beaches taken before and after Hurricane Matthew show roads, dunes and structures lost. At left, these "before and after" photos show a new inlet that formed between the Atlantic Ocean and the Matanzas River near St. Augustine, Florida, stripping away a 3.7 meter (12-foot) dune and carrying sand into the estuary. Portfolio continued from page 1

miles of fragile deep-sea ecosystems off the coast of Cape Cod National Seashore (*see related story, page 1*). As one of our Nation's principal stewards for our ocean, Great Lakes and coastal (OGLC) resources, DOI recognizes the vital connection between the health of our Nation's natural resources and human health and economy. DOI's responsibilities continue to grow with expanding our oldest Marine National Monument and adding our Nation's newest Atlantic marine national monument.

DOI's blue portfolio includes more than 35,000 miles of coastline and 34 million acres in 88 marine and coastal National Parks, including many of America's favorite beaches from Cape Cod and Cape Hatteras to the Golden Gate National Recreational Area and beyond to Hawai'i Volcanoes National Park and 756,477,162 acres in marine national monuments and national wildlife refuges in the Pacific alone as of September 2016. We protect 180 marine and coastal national wildlife refuges, 1,100 miles of coastline of the California Coastal National Monument and DOI plays an important role in ensuring safe and responsible energy development in our coastal areas and offshore waters.

In addition, Interior Bureaus provide robust scientific programs that inform decisions and reduce risk; ensure safe and responsible development of natural, mineral and energy resources; promote healthy and productive ecosystems through informed management and monitoring; protect native species and their habitats; preserve rich cultural and recreational opportunities for the public; and support Tribal, state, regional and local partnerships.

In the past 2 years, the DOI invested more than $50 million from the Land and Water Conservation Fund to acquire and conserve nearly 20,000 acres of critical coastal lands for all Americans to enjoy.

See related story about the DOI's coordinated ocean, Great Lakes and coastal team on page 27.

This map shows coastal lands and waters conserved by the Obama Administration since 2015. Photo credit: DOI

Northeast Monument continued from page 1

endangered whales and sea turtles are preserved. *See related story, page 1*.

Three of the underwater canyons are deeper than the Grand Canyon and the underwater mountains, known as seamounts, provide habitat for invertebrates like sponges, corals, octopus, skates, crabs and bottom fish like flounder. Seamounts are some of the most biologically diverse habitats on Earth, and the New England seamounts are known to house many rare and endemic species, several of which are new to science and are not known to live anywhere else on Earth. The canyons and seamounts also attract larger open water marine species, such as sea turtles, marine mammals, tuna, billfish, squid, and sharks.

Bathymetric terrain models, showing measurements of water depth, were created with data collected by several agencies; these data were compiled by the USGS Coastal and Marine Geology Program and published as a collaborative effort between USGS, National Oceanic and Atmospheric Administration (NOAA), and University of New Hampshire. Learn more about the USGS Atlantic Margin bathymetry at *http://pubs.usgs.gov/of/2012/1266/title_page.html*

The Nation's First Ocean Plans!

By Robert LaBelle (BOEM; Mid-Atlantic RPB Federal Co-Lead) and Betsy Nicholson (NOAA; Northeast RPB Federal Co-Lead)

On December 7, the National Ocean Council finalized the Nation's first ocean plans, taking an historic step toward fulfilling President Obama's commitment to healthy ocean ecosystems and a strong, sustainable marine economy. The two regional plans, the Northeast Ocean Plan and the Mid-Atlantic Ocean Action Plan, promote the use of integrated ocean data and best practices for informed and efficient management of the Nation's shared marine resources.

After years of collaboration among States, Tribes, Federal agencies, and Fishery Management Councils, with input from marine stakeholders, the Northeast Ocean Plan and the Mid-Atlantic Ocean Action Plan build on the data provided in the Northeast and Mid-Atlantic Data Portals, which are publicly accessible and provide new maps and data products. The plans also describe best management practices to guide effective interagency coordination and to ensure that agencies have the data needed to inform planning and environmental review of new activities. This approach is designed to work across all levels of government and to advance economic, environmental, and cultural priorities within each region. The plans are the result of extensive participation from marine stakeholders representing fishing, recreation, energy, transportation, telecommunications, and many other interests. Once implementation begins, the plans will reinforce the commitment to healthy ocean ecosystems and a strong, sustainable marine economy.

White House blog: *https://www.whitehouse.gov/blog/2016/12/07/nations-first-ocean-plans*

Northeast Ocean Portal: *https://www.northeastoceandata.org/*

Mid-Atlantic Data Portal: *http://midatlanticocean.org/data-portal/*

Expansion continued from page 1

conservation area in the United States, the expanded boundaries make it one of the largest MPAs on the planet that is nearly the size of the Gulf of Mexico. Read the full proclamation here: *https://www.whitehouse.gov/the-press-office/2016/08/26/presidential-proclamation-papahanaumokuakea-marine-national-monument*

The expansion provides critical protections for more than 7,000 marine species and is also considered a sacred place for the Native Hawaiian community. Important geological features of the expansion area include more than 75 seamounts, as well as a nonvolcanic ridge that extends southwest towards Johnston Atoll. Together, these features form biodiversity hotspots in the open ocean that provide habitat for deep-sea species, including sponges, other invertebrates, fish, and corals—some of which are thousands of years old. Albatrosses (*Diomedea* spp.) and Great Frigatebirds (*Fregata minor*) rely on the expansion area while feeding their chicks, when their foraging is focused within 200 miles of the nesting colonies on the Monument's islands. The expansion area is also a foraging and migration path for five species of protected sea turtles.

Additionally, there are sunken vessels (including the USS *Yorktown*) and downed aircraft from the Battle of Midway in World War II, a battle that marked a major shift in the progress of the war in favor of the Allies, within the expansion area.

On September 1, 2016, the President visited Midway Atoll National Wildlife Refuge (Refuge), within the Monument, to mark the significance of the expansion and tour some of the Monument's resources in person. The President visited the memorial to the Battle of Midway, met with island staff, toured wildlife and plant restoration sites, and observed corals and other marine resources while snorkeling. Read President Obama's full remarks from Turtle Beach here: *https://www.whitehouse.gov/the-press-office/2016/09/01/remarks-president-designation-papahanaumokuakea-marine-national-monument*

The Monument was originally created in 2006 by President George W. Bush and designated as a United Nations Educational, Scientific and Cultural Organization (UNESCO) World Heritage Site in 2010. Since that time, scientific exploration has revealed new species and deep-sea habitats in the expansion area, as well as important ecological connections between the existing monument and the expansion area. In addition to marine areas, the Monument includes (1) the Midway Atoll Refuge, (2) the eight atolls, reefs, and islands of the Hawaiian Islands Refuge, and (3) Kure Atoll, which is under the jurisdiction of the State of Hawai'i.

DOI Secretary Sally Jewell and Secretary of Commerce Penny Pritzker also announced that the Departments will soon sign an agreement with Hawaii's Department of Natural Resources and Office of Hawaiian Affairs (OHA), strengthening the coordination of management and adding OHA as the fourth Monument co-trustee.

On September 1, 2016, President Obama visited Midway Atoll National Wildlife Refuge where Refuge Manager Robert Peyton provided geographic reference information on the recent Marine National Monument expansion which was followed by a tour of Turtle Beach. Centennial Celebrations Mark the National Park Service's 100th Birthday!

By Erica Wales (DOI)

Happy 100th birthday NPS! Photo credit: NPS

August 25, 2016, marked the 100th birthday of the National Park Service (NPS). Back in 1916, NPS was created by the "Act to Establish a National Park Service (Organic Act), 1916," giving NPS the duty to promote and regulate parks and monuments in order "to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

In honor of the momentous occasion, national parks from around the country and in the Pacific celebrated the centennial in style and opened the parks for free admission August 25–28. Here are a few ways OGLC parks marked the occasion:

- *American Memorial Park, Saipan*—The park held a Day of Service on Saturday, August 27, where more than 300 volunteers from the American Red Cross, schools, AmeriCorps, and the public assisted with park projects. The volunteers removed invasive vines, cleaned debris, painted the parking lot and amphitheater, and beautified the memorials.
- *Cape Cod National Seashore, Massachusetts*—The seashore held a Seashore Science Day on August 25. The day included a "Science Street Fair" in the morning, where visitors could engage in hands-on, interactive presentations by staff, researchers, and interns; and a "Science in the Seashore Symposium" in the afternoon, where the public heard lectures from scientists on topics including seals, ticks and Lyme disease, landscape management, and climate change.

Glacier Bay National Park tribal house dedication. Photo credit: NPS

Touch tank at Cape Cod National Seashore Centennial celebrations. Photo credit: Kekoa Rosehill

- *Everglades and Dry Tortugas National Parks, Florida*—The Everglades National Park celebrated by hosting Sing Across America events to provide musical entertainment and hosted an exhibit, "This Land is Your Land: A Second Century for America's National Parks," which featured images, videos, and artifacts from Florida parks and preserves. Reenactors at Dry Tortugas National Park highlighted daily life at Fort Jefferson during the Civil War area, and guided tours were given of the 110-foot Motor Vessel *Fort Jefferson*, the primary tender vessel of the park.
- *Cabrillo National Monument, California*—The national monument celebrated with an antique vehicle display, lighthouse postcard painting, guided park tours, NPS trivia, tours of the lighthouse tower, and other events to highlight the history of the NPS and the New Point Loma Lighthouse at Cabrillo.
- *Glacier Bay National Park, Alaska*—The park celebrated with a dedication of the Huna Tribal House (Xunaa Shuká Hít), which featured carvings, hand carved dugout canoes, traditional songs and regalia, Tlingit oratory, traditional ceremonies and dances, and the rhythm of drums.

Climate Change Threatening Alaska Coastal Villages

Denali Commission Approves Funding

By Randy Bowman (DOI)

During the first-ever Presidential visit to the U.S. Arctic last fall, President Obama designated the Denali Commission, a Federal Regional development agency, as the lead Federal contact for Alaska Native Villages threatened by erosion, flooding, and other issues resulting from climate change. This was in response to recommendations from the Arctic Executive Steering Committee, established by E.O. 13689 to coordinate Federal Arctic policy, to designate the Commission as the lead contact and similar previous recommendations for a lead agency designation from the Government Accountability Office.

*The Denali Commission is providing $6,650,000 in new funding. Most of this will go to the four most immediately threatened villages—**Newtok, Kivalina, Shaktoolik, and Shismaref**—with slightly more than $1.5 million held as a contingency fund for unexpected developments.*

The village of **Newtok**, located between the Ningliq River and the Bering Sea, is eroding away and unlikely to be a viable site within 4 to 5 years. The village is in the process of relocating to a new site, called Metarvik, about 9 miles away on higher ground. The Commission approved $3,020,000 to assist this effort. These funds will be in addition to money from the State of Alaska, U.S. Department of Agriculture, DOI's Bureau of Indian Affairs, and Federal Emergency Management Agency previously provided for the village.

Flooding in the village of Newtok during the 2005 Fall Sea Storm. Photo credit: Stanley Tom, Newtok Traditional Council

The funds will be used for preparation of an overall National Environmental Policy Act document for the move; development of a final site plan; geotechnical investigation to supplement existing information for efficient design of roads, building foundations and other infrastructure; development of the quarry to provide stone for construction; design of a bulk fuel storage facility; preliminary design of community power, water, sewer and solid waste facilities; and to serve as matching/gap funds for other related activities identified by the community.

The village of **Shaktoolik** will receive $1,020,000 to be used to support "soft erosion" protection measures and design of a consolidated fuel storage facility above the 100-year flood level, and serve as matching/gap funds for other related activities identified by the community.

The villages of **Kivalina** and **Shismaref** will each receive $520,000 to be used as the local match for existing U.S. Army Corps of Engineers (USACE) funds for a site specific 100-year flood analysis and for design of an armor rock revetment to temporarily protect the islands on which the villages are located.

At all four villages, the funds will also be used to support the existing Community Relocation Coordinator; prepare emergency response plans, conduct emergency drills, and as matching/gap funds for other related activities identified by the community.

The Commission also allocated $490,000 for other to-be-determined threatened communities and $1,080,000 for a Statewide Disaster Response Fund that can be used to respond quickly, or to provide matching funds to complement other funders for disaster response and recovery and other statewide initiatives related to the problem.

Celebrating the Next Phase of Everglades Ecosystem Restoration

On June 3, 2016, NPS and Florida Department of Transportation (DOT) announced the construction of the 2.6-mile bridge and roadway project in South Florida on the Tamiami Trail with a contract awarded to the joint venture team of Condotte America Inc. and Stantec. This next phase of bridging will allow additional freshwater flow in Everglades National Park, improving ecological conditions both in the park and in the central Everglades north of Tamiami Trail.

The new trail will raise a 2.5-mile section of U.S. Highway 41 in the South Florida region and is the latest milestone in the Obama Administration's efforts to conserve the Everglades' historic and iconic wildlife habitat and water flows.

Secretary Jewell visited Everglades National Park on Earth Day 2016 with President Obama to highlight steps the Administration has taken to act on climate change. "It's a vital piece of this Administration's efforts with our Florida partners to deliver increased flows of clean, fresh water to an area that desperately needs them to make the ecosystem sustainable, including critical marsh lands, Florida Bay and aquifers important to South Florida's water supply. The Everglades is an internationally recognized ecological treasure that we must restore and protect for future generations," said Jewell.

Secretary Jewell and Pedro Ramos visited seagrass beds in Everglades National Park. These iconic wildlife habitats will benefit by restoring historic water flows. Photo credit: Tami A. Heilemann, DOI

Secretary Sally Jewell celebrated Earth Day with Florida DOT District Secretary Gus Pego by announcing the next phase of bridging on the Tamiami Trail in Everglades National Park. Photo credit: Tami A. Heilemann, DOI

"This new bridge is part of the largest conservation effort ever undertaken by the National Park Service and will return water flows to more historic levels, favorably impacting key plant and animal species like the American crocodile and many native birds," said Secretary Jewell, on Earth Day, April 22, 2016.

"The partnership between the NPS and Florida DOT has helped advance the Everglades restoration effort," said Pedro Ramos, Superintendent of Everglades and Dry Tortugas National Parks." The completion of the 2.6 mile bridging project is essential in establishing the natural flow of water to Everglades National Park and Florida Bay."

The event followed Secretary Jewell's conservation speech at National Geographic on April 19, where she outlined a major course correction in how we approach conservation to ensure a bright future for our public lands and waters. Restored Beach Project Supports Science Education and Coastal Community at Virginia Beach

By Marjorie Weisskohl (BOEM)

On July 26, 2016, Bureau of Ocean Energy Management (BOEM) Director Abigail Ross Hopper toured the Virginia Aquarium and Marine Science Center in Virginia Beach, Virginia. Aquarium Executive Director, Lynn Clements, and Director of Conservation Programs, Mark Swingle, briefed Hopper and her team on the Aquarium's in-depth science program, which covers everything from global ecosystems to how the Chesapeake Bay was formed, including information about the oyster beds and other aquatic life living just off the back deck in Owl Creek.

Hopper joined students from the Young Men's Christian Association who were thrilled to be learning about ocean and coastal sciences and conservation through touching sting rays in a touch tank, seeing giant sea turtles and tiny yellow striped frogs, and seeing "Trash-Talking Turtles" made of marine debris from local beaches. Hopper then visited Sandbridge Beach, south of the city, to see the beach and dunes that were restored with sand borrowed from the Outer Continental Shelf (OCS) through BOEM's Marine Minerals Program. Officials from the Virginia Beach Department of Public Works and the USACE, who had been involved in the project, joined her for an informative discussion. Over the years, the Sandbridge project has helped reduce damage to roads and other infrastructure from storms and hurricanes, restored wildlife habitat, and enabled Americans to enjoy the great outdoors.

For more information, visit: *http://www.boem.gov/Marine-Minerals-Program/*

Coastal Parks Adapt to Climate Change

Two new reports from NPS show how coastal parks across the country are devising innovative and unique solutions to adapt to climate change. "Coastal Adaptation Strategies: Case Studies" includes 24 park studies in a variety of settings that describe how they are preparing and responding to climate change impacts. A followup report, "Coastal Adaptation Strategies Handbook," highlights the need to plan for climate change in how we manage America's iconic natural, historic, and cultural landscapes. It is a summary of what scientists and park managers know about climate adaptation in coastal areas and includes processes and tools that parks have available to respond and recover from tropical storms and hurricanes and offers strategies to address rising sea levels.

The case study report highlights different ways NPS is mitigating these coastal impacts such as increased stormy weather, sea-level rise, shoreline erosion, melting sea ice and permafrost, ocean acidification, warming temperatures, groundwater inundation, precipitation, and drought.

Adaptation efforts include preserving historic structures, completing archaeological surveys, collecting baseline data, restoring habitat, engineering solutions, redesigning and relocating infrastructure, and developing broad management plans that consider climate change.

At Olympic National Park, Washington, work is focused on preparing archeological sites and traditional cultural resources, whereas ancient Indian shell mound sites threatened by sea-level rise and erosion are of concern in Florida at the Canaveral National Seashore. At Fort Pulaski National Monument in Georgia, NPS

Climate Change continued from page 8

is designing a lighthouse stabilization system to incorporate sea-level rise. Gateway National Recreation Area, New York, is restoring Jamaica Bay wetlands, and the National Park of American Samoa is learning to recognize coral adaptations to environmental stressors. At Gulf Islands National Seashore, Massachusetts, large-scale restoration of barrier island systems and cultural resource protection is being done through sediment placement along the northern Gulf of Mexico shoreline. Along the mid-Atlantic shorelines of Maryland and Virginia, NPS is relocating visitor facilities that are threatened by erosion at the Assateague Island National Seashore. In California, NPS is working to develop a multiagency vision for an urban coastline at the Golden Gate National Recreation Area. You can read about more examples here: *https://www.nps.gov/subjects/climatechange/coastaladaptationstrategies.htm*

NPS Coastal Adaptation Strategies Handbook: *https://www.nps.gov/subjects/climatechange/coastalhandbook.htm*

International Partnership Discovers Potentially Producible Gas Hydrate in Indian Ocean

By Alex Demas and Tim Collett (USGS)

USGS has assisted the Government of India in the discovery of large, highly enriched accumulations of natural gas hydrate in the Bay of Bengal during a research expedition, called the Indian National Gas Hydrate Program Expedition 02. This is the second joint exploration for gas hydrate potential in the Indian Ocean and is the first discovery of its kind in the Indian Ocean that has the potential to be producible. The first expedition, also a partnership between scientists from India and the United States, discovered gas hydrate accumulations but in formations that are currently unlikely to be producible.

Natural gas hydrates are a naturally occurring, ice-like combination of natural gas and water found in the world's oceans and polar regions. The amount of gas within the world's gas hydrate accumulations is estimated to greatly exceed the volume of all known conventional gas resources.

"Advances like the Bay of Bengal discovery will help unlock the global energy resource potential of gas hydrates as well help define the technology needed to safely produce them," said Walter Guidroz, USGS Energy Resources Program Coordinator. "The USGS is proud to have played a key role on this project in collaboration with our international partner, the Indian Government."

This discovery is the result of the most comprehensive gas hydrate field venture in the world to date, made up of scientists from India, Japan, and the United States. The scientists completed ocean drilling, conventional sediment coring, pressure coring, downhole logging, and analytical activities to assess the geologic occurrence, regional context, and characteristics of gas hydrate deposits offshore of India.

Although it is possible to produce natural gas from gas hydrates, there are substantial technical challenges, depending on the location and type of formation.

"The results from this expedition mark a critical step forward to understanding the energy resource potential of gas hydrates," said USGS Senior Scientist Tim Collett, who participated in the expedition. "The discovery of what we believe to be several of the largest and most concentrated gas hydrate accumulations yet found in the world will yield the geologic and engineering data needed to better understand the geologic controls on the occurrence of gas hydrate in nature and to assess the technologies needed to safely produce gas hydrates."

The international team of scientists was led by the Oil and Natural Gas Corporation Limited of India on behalf of the Ministry of Petroleum and Natural Gas India, in cooperation with USGS, the Japanese Drilling Company, and the Japan Agency for Marine-Earth Science and Technology. In addition, USGS is working closely with the National Institute of Advanced Industrial Science and Technology Japan on the analysis of pressure core samples collected from sand reservoirs with high gas hydrate concentrations. USGS has a globally recognized research program studying natural gas hydrates in deepwater and permafrost settings worldwide. USGS researchers focus on the potential of gas hydrates as an energy resource, the effect of climate change on gas hydrates, and seafloor stability issues.

Read more about the study and other USGS energy research here: *http://woodshole.er.usgs.gov/project-pages/hydrates/*

Dive Your Park!

SCUBA is an Important Tool for Managing NPS Resources

Many NPS coastal parks are underwater. For example, 95 percent of Biscayne National Park in South Florida is underwater; therefore, park managers and scientists use SCUBA diving to get firsthand understanding of these resources to effectively manage them. This is helpful for a variety of missions, including natural and cultural resource condition assessments, scientific studies, invasive species management, restoration activities, maintenance projects, and law enforcement. During 2015, 20 park divers collectively logged 1,228 dives completed in support of various park missions. These dives account for 39,473 minutes spent underwater; if all that work was done by one person, that person would have spent almost an entire month underwater!

Understanding Benefits from Carbon Storage

Partnering with the Nisqually Indian Tribe

By Mike Murray (USFWS)

The U.S. Fish and Wildlife Service (USFWS) and Nisqually Indian Tribe have restored 902 acres of tidally influenced coastal marsh in the Nisqually River Delta (NRD), making it the largest estuary-restoration project in the Pacific Northwest to date. Marsh restoration increases the capacity of the estuary to support a diversity of wildlife species. Restoration also increases carbon production of marsh plant communities that support food webs for wildlife and can help mitigate climate change through long-term carbon storage in marsh soils.

In order to better understand the benefits of carbon for wetland wildlife and storage in the NRD, in 2015 an interdisciplinary team of USGS researchers began scientific work to advance our ability to determine marsh ecosystem carbon balance and understand wildlife benefits and carbon storage from restored and natural coastal marshes in the NRD.

Messy work! Walking through the thick mud can be exhausting. This researcher takes a break on some solid ground. Photo credit: Mike Murray, USFWS

Walking across the wetland to get out to the study site. The mud came up to the researchers' hips in some parts of the muddy wetland, making it extremely difficult to get out. Plus, they had to get through the mud carrying all the gear they would need for the day. Photo credit: Mike Murray, USFWS

Historic NRDAR Settlement Reached for *Deepwater Horizon* Spill

By Nanciann Regalado (DOI)

On April 20, 2010, the *Deepwater Horizon* oil rig blew up and was consumed by fire. Eleven men died and many others were injured. For 87 days the well spewed oil—a total of 134 million gallons were released into the Gulf of Mexico. Ultimately, more than 43,000 square miles of the Gulf and its shoreline were oiled. The *Deepwater Horizon* oil spill was the worst environmental disaster in our Nation's history. *See related story, page 12.*

As the volume of oil released grew, and the inevitability of widespread injury and death of wildlife became apparent, many people worried whether or not those responsible for the spill would be held accountable. On April 4, 2016, District Judge Carl Barbier approved a settlement for $20.8 billion and effectively ended almost 6 years of litigation over British Petroleum's (BP) responsibility for civil penalties and future litigation for natural resource damages arising from the 2010 *Deepwater Horizon* oil spill. The settlement included provisions for the largest recovery of natural resource damages ever approved for injuries to natural resources.

Under the settlement, BP will pay the Natural Resource Damage Assessment and Restoration (NRDAR) Trustees (five Gulf States and four Federal agencies) as much as $8.8 billion for restoration to address natural resource injuries. The settlement includes the following:

- $1 billion already committed during early restoration.
- $7.1 billion for restoration over 15+ years, beginning in April 2017.
- As much as an additional $700 million to respond to natural resource damages unknown at the time of the agreement, provide for adaptive management, or both.

The settlement also provides an additional $5.5 billion in funding from Clean Water Act civil penalties. As required by legislation adopted after the spill only 20 percent of those penalties will go directly to the Oil Spill Liability Trust Fund. In accordance with the Resources and Ecosystems Sustainability, Tourist Opportunities, and Revived Economies of the Gulf Coast States (RESTORE) Act, 80 percent or $4.4 billion will be sent directly to a fund specifically established to support the environmental and economic restoration of the Gulf of Mexico. The remainder of the $20.8 billion total of the settlement includes claims under the False Claims Act, royalties and reimbursement of natural resource damage assessment costs, and other expenses due to the incident.

The USFWS and NPS played a critical role in assessing injuries to Federal lands and other natural resources that were caused by the *Deepwater Horizon* oil spill. They not only assessed injury to the Refuges and national parks all along the Gulf coast but also assessed injury to migratory birds, threatened and endangered species, some jurisdictional fish, and natural resource services, such as recreational use of Federal lands.

Other parts of the *Deepwater Horizon* oil spill injury assessment were completed by our fellow Trustees; for example, the NOAA assessed the spill's effects on the water column, deep sea environment, and marine mammals. Together, the Trustees undertook an ecosystem-based approach to assessing and restoring the natural resources injured by the spill.

The injury assessment shaped the restoration plan approved by the Trustees in March 2016. The "Programmatic Damage Assessment and Restoration Plan and Programmatic Environmental Impact Statement" provides a framework for future restoration strategies, plans, and projects. It identifies five restoration goals: restore and conserve habitat; restore water quality; replenish and protect living coastal and marine resources; provide and enhance recreational opportunities; and provide for monitoring, adaptive management, and administrative oversight to support restoration implementation. The programmatic plan also identifies 13 restoration types that will address the injury experienced by the Gulf's natural resources: wetlands, coastal, and nearshore habitats; habitat projects on federally managed lands; nutrient reduction; water quality; fish and water column invertebrates; sturgeon; submerged aquatic vegetation; oysters; sea turtles; marine mammals; birds; mesophotic and benthic (low light and ocean floor) communities; and provide and enhance recreational opportunities.

The *Deepwater Horizon* oil spill settlement is bringing an unprecedented amount of restoration funding to the Gulf of Mexico. For the NRDAR funds, the schedule for payment extends across more than 15 years. There will be much work to do and much to learn over the next two decades. We look forward to sharing our successes and lessons learned.

The *New Carissa* Oil Spill—Restored from Environmental Disaster

By Elizabeth Materna (USFWS)

During a major winter storm in 1999, the freighter *New Carissa* ran aground on a beach near Coos Bay, Oregon. The vessel spilled 140,000 gallons of heavy fuel oil and created one of the worst ecological disasters in Oregon's history—killing an estimated 2,875 seabirds and 40 different types of shorebirds, including 262 threatened marbled murrelets (*Brachyramphus marmoratus*) and several threatened western snowy plovers (*Charadrius alexandrinus*).

Although the oil spill was a natural resource disaster, it created a legacy of restoration in its wake. Working closely with the other Federal and State agencies and two tribes, USFWS developed a suite of projects to restore species and habitats affected by the spill. *See related story, page 11*.

The largest project involves the purchase and management of 4,300 acres of coastal forest for nesting marbled murrelets. Other projects include:

- Monitoring colonies of nesting seabirds for predators in order to trap and remove problem individuals.

Shorebirds return to the Ni-les'tun unit in Oregon. Photo credit: USFWS

New Carissa oil spill. Photo credit: USFWS

An oiled murre killed by the *New Carissa* oil spill. Photo credit: USFWS

- Purchasing predator-proof trash cans to help control predators near seabird colonies along with signage to inform people that leaving trash can lead to increased mortality of chicks.
- Creating a smartphone app to teach Oregon coast beachgoers about nesting seabirds.
- Producing 60 interpretive panels to be placed at State parks and waysides along the Oregon coast to teach people about seabird biology, conservation, and the need to leave nesting colonies undisturbed.
- Restoring 400 acres of tidal marsh at Bandon Marsh Refuge.
- Restoring 30 acres of coastal dune habitat for nesting Western Snowy Plovers.

Thanks to this multiagency effort led by USFWS, devastating effects from the *New Carissa* oil spill have been lessened by a suite of projects designed to restore habitat, protect nesting seabirds, and educate the public about marine resources along the Oregon coast.

Historic Anchor Discovered During the Decommissioning of an Oil and Gas Platform

By Christopher Horrell (BSEE)

The trawl vessel was dragging the seafloor during the final stages of decommissioning an oil and gas platform in the Gulf of Mexico. It was a routine mission in 70 feet of water depth about 40 nautical miles off the coast of Louisiana—part of a comprehensive effort to fulfill the platform operator's legal requirement to bring the leased parcel of seafloor back to prelease conditions. Dragging the bottom usually results in the retrieval of sections of pipe, bumper tires, and random pieces of metal, but during one of the net pulls, something unusual was spotted: an historic anchor from the age of sail.

The next step should have been to cease operations and notify the DOI's Bureau of Safety and Environmental Enforcement (BSEE). Specifically, the Federal regulation instructs those who "discover any archaeological resource while conducting operations in the lease or right-of-way area" to "immediately halt operations within the area of the discovery and report the discovery to the BSEE Regional Director." Instead, the anchor was brought to Port Fourchon, Louisiana, where the operator's company representative contacted his supervisor, who then claimed the anchor for his private collection, displaying it beside his backyard pool.

Time had definitely left its mark on the anchor, although it was pretty well intact after many years beneath the water's surface. What the boss may not have known, however, is that iron submerged in seawater will come to a stable equilibrium over time. Once anything iron is removed from the marine environment and begins to dry out, the chlorides from the seawater that have permeated the iron structure will start to expand. At that

See Historic Anchor page 13

Historic Anchor continued from page 12

point rapid deterioration begins. For this reason, archaeologists typically keep metal artifacts such as anchors submerged in seawater tanks until conservation efforts can begin.

In compliance with U.S. regulations, the platform operator filed a report listing the variety of items retrieved by the trawler, including the anchor. BSEE's Historic Preservation Program within the Office of Environmental Compliance was called, and an archaeologist at BSEE asked for a photo of the anchor and its current location. The photo confirmed an unusual find, possibly from the 19th century, but it would have been very unlikely that a ship of that era would have laid anchor 40 miles offshore in 70 feet of water. It was more likely to be evidence of a dire situation at sea more than 200 years ago, possibly a shipwreck. The anchor appeared to be an early 19th century Admiralty Anchor.

By listing the anchor, the operator avoided a variety of more serious violations, but the find was not handled in accordance with Federal regulations. The platform operator responded immediately once the violations were pointed out. An Incident of Noncompliance—BSEE's version of a citation—was issued along with a Corrective Action Order. The order required the operator to provide funds for the transportation, conservation, and long-term curation of the anchor. Additionally, the operator was ordered to complete a high-resolution remote sensing survey using a magnetometer, side-scan sound navigation and ranging (sonar), and subbottom profiler to identify any other remains of a potential shipwreck at the site.

Time was the enemy; deterioration had begun.

BSEE needed to find the best organization to restore and preserve the anchor. The operator, in coordination with BSEE, put together a conservation and curation plan for the anchor. BSEE's

Conservation of the historic anchor should have begun with its discovery during decommissioning operations. (*A*) and (*B*) The anchor was inappropriately transported to a private residence and began to deteriorate. (*C*) Dr. John Bratten and his students from UWF worked to conserve the anchor. (*D*) Through conservation, the name R. Flinn and a number appear on the crown and shaft of the anchor. Photo credits: John Bratten (Univ. of West Florida) and Christopher Horrell (BSEE)

Historic Preservation Program worked with the operator and the University of West Florida's (UWF) Archaeology Institute. The anchor, it was decided, should become the permanent property of UWF, where it would receive proper treatment and be used as a teaching tool for students.

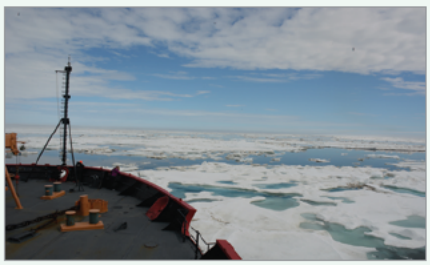
During the conservation process, as decades of fouling were carefully removed, the name R. Flinn was discovered on the crown of the anchor. After completing historical research, UWF maritime archaeologist Dr. John Bratten and his students discovered that Robert Flinn manufactured chains and anchors in England up until 1826. We now knew the anchor was well over a century-and-a-half old, dating to a time that was somewhere around the War of 1812. *See related story, page 16.*

In addition, several promising targets of a potential shipwreck were identified during the high-resolution remote sensing survey. BSEE archeologist and scientists, who are members of the Seafloor Compliance Monitoring Assessment Program and the BSEE Scientific Diving Program, mobilized to investigate the targets. Nothing of interest was located, so BSEE determined that the anchor was an isolated find and that a shipwreck was not present in the area where the trawling activities had occurred.

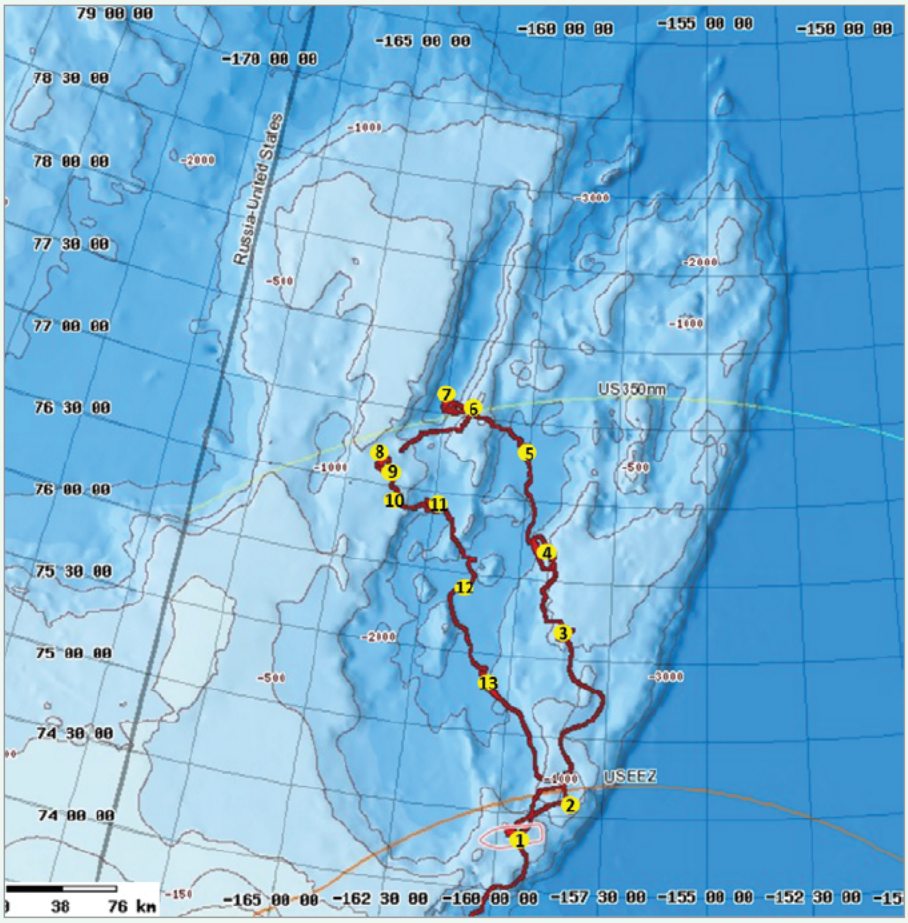
While the anchor tells the story of continued human use of the sea and connects us across the centuries, the story of the Flinn anchor also has raised awareness about preserving marine artifacts because other anchors have been reported since that event. It seems like offshore industry is now more aware of their responsibility to stop working when they encounter a marine artifact. That's good news.

What to do if you find historic maritime artifacts: *https://www.bsee.gov/sites/bsee.gov/files/research-guidance-manuals-or-best-practices/fact-sheet/guidance.pdf*

Hidden Ocean 2016—Arctic Science Discovery



Above: Kate Segarra, an oceanographer for BOEM, was aboard the *Healy* in the Arctic Ocean for 40 days this summer. The view of the ice-covered Chukchi from the deck of the *Healy*. Photo credits: Kate Segarra, BOEM



At right: This map displays all 13 stations visited and sampled in the Chukchi Borderlands during the Hidden Ocean 2016 expedition. Image credit: Katrin Iken, UAF, and The Hidden Ocean 2016: Chukchi Borderlands

By Kate Segarra (BOEM)

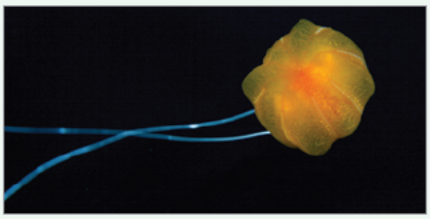
This summer, I had the opportunity to sail aboard the U.S. Coast Guard Cutter *Healy* as part of the Hidden Ocean 2016, a NOAA-led expedition from Seward, Alaska, north into the Chukchi Sea. In the Chukchi Borderlands, water masses from the Pacific, Atlantic, and Arctic Oceans converge over an area of complex bathymetry. The primary focus of the Hidden Ocean 2016 was to explore this rapidly changing and poorly understood ecosystem. The science party was led by chief scientists, Dr. Russ Hopcroft and Dr. Katrin Iken, of the University of Alaska Fairbanks (UAF). Using both traditional oceanographic methods (such as nets, CTD package, and box cores) and a remotely operated vehicle (ROV) equipped with ultrahigh-resolution video camera, known as 4K, the science party explored the pelagic and benthic biodiversity of the Chukchi Borderlands. The study subjects ranged from the microbial communities within sea ice to the polar bears that hunt upon it. The science party also included a seabird surveyor from USFWS, Elizabeth Labunski. As expedition coordinator for the cruise, I served as a liaison for NOAA's Office of Ocean Exploration and Research during the expedition. I worked very closely with the science party to track mission progress and communicate detailed updates to our colleagues back on shore.

The Arctic is warming at a rate around twice that of the global average (*see related story, page 6*). In the weeks leading up to the cruise, data suggested that 2016 was on track to set the record for the lowest Arctic sea ice extent. Now that the melt season is over, 2012 still holds that title; 2016 tied for second with 2007 since records began in 1979. It's a depressing statistic, especially when one sees how critical sea ice is to these ecosystems; however, low sea ice does not mean no sea ice. Although there was a great deal of open water during our expedition, there were also plenty of patches of thick ice in the Chukchi. One ice floe was so thick (more than 4 meters in some places) that it took the *Healy* almost 4 days to break its way out of it.

While I was detailed on assignment with the NOAA for this cruise, the *Healy* experience will certainly enhance my work as an oceanographer for the BOEM. I have a new perspective on the Arctic research

A juvenile walrus swims up for a closer look at the *Healy*. Photo credit: Kate Segarra, BOEM

This is one of several (less than 10) polar bears observed during the expedition. Photo credit: Kate Segarra, BOEM



This is an undescribed ctenophore photographed in the water column by the ROV. Photo credit: The Hidden Ocean 2016: Chukchi Borderlands and Oceaneering-Deep Sea Systems International

completed through our Environmental Studies Program; for example, Hanna Shoal is an ecologically important region on the Chukchi Plateau and described as a "walrus hotspot" in many environmental assessment documents. As we came upon Hanna Shoal in the faint light of the midnight sun, I saw what I thought were patches of dirty ice on the horizon. As we came closer, I realized those patches were walrus. There were at least 100 walrus in this one small area where they forage on the bountiful clam beds below. There were many similar examples of sightings and experiences, which brought life to textbooks and policy papers I'd previously read.

I understand now how, after the failure of the *Endurance* expedition and more than 1 year stuck in the ice, Shackleton returned to Antarctica for more. Not only is there a rhythmic zen to ship life, but the sense of discovery and adventure of this cruise was intoxicating. In just a few short weeks, the expedition collected at least six jellyfish and ctenophores that may represent new species. Of course "new" is a bit of a misnomer—these graceful animals were around long before human existence. The correct taxonomic term is "undescribed." It will take members of the science party months to years to write the species description papers. It's funny to think how these strange creatures are still floating out there, waiting to be announced to the rest of the world. These and other discoveries from this cruise will greatly improve the understanding of this underexplored region. The Hidden Ocean 2016 will also serve as a comparison for past and future surveys of the region to allow scientists to examine how the ecosystem is changing over time, and whether or not climate change is a predominant factor.

We left the last of the Chukchi Sea ice behind around 01:00 on August 4. Forty days on a ship seemed like a long time before we left Seward in early July. But, as we transited back south at the end of the cruise and I watched the last few lone pieces of sea ice floating in the twilight, I wished we could turn around and do it all over again. I guess I'll have to wait until the next Arctic adventure.

To learn more about the Hidden Ocean 2016 Expedition, please visit: *http://oceanexplorer.noaa.gov/explorations/16arctic/welcome.html*

New Arctic Fish Species Inventory

USGS and BOEM recently released a report describing 109 marine fish species from the Chukchi and Beaufort Seas. Twenty of the fish species are newly confirmed, and the inventory includes 104 new descriptions that include distribution maps and life cycles.

The report summarizes the natural history of the species and discusses adaptations and limitations of fish populations in the Arctic. The information in the report will be used by BOEM, who requested the research carried out by USGS and the University of California, Santa Barbara, to evaluate potential environmental effects of oil and gas development offshore. Natural resource managers can also use the research to identify high-priority marine fish species to help guide future research, management, conservation, and environmental policy.

Keeping in mind the native and indigenous peoples of the Arctic, the report includes Inupiat names for the marine fish species. Salmon, whitefish, and char are used for subsistence and are key species for food security of Native Alaskan communities.

Read the report, "Alaska Arctic Marine Fish Ecology Catalog: Beaufort and Chukchi Seas," here: *https://pubs.er.usgs.gov/publication/sir20165038*

USGS Researchers Study the Effects of Trawling on Sediment Resuspension

The fishing industry commonly uses trawling, a practice where large nets with metal doors and chains are dragged over the seafloor to catch fish. Because the equipment comes into direct contact with the seafloor, great environmental damage can be done (including removing seafloor dwelling marine life and resuspending sediment). Sediment in the water column can change the chemistry of the water (including nutrient levels), reduce light levels, and lower photosynthesis in plants. The resuspended sediment can be washed away by ocean currents, either deposited elsewhere on the shelf or in deeper waters and lost to the local environment. Removing sediment and changing the seafloor to rock removes habitat and lowers the diversity of life located within the seabed. Scientists have studied how bottom trawling can hurt the marine environment, especially the effects on corals, sponges, fishes, and other animals; however, little research has been done on the effects of bottom trawling on the seabed itself. *See related story, page 12*.

While the seabed had been previously labeled as "trawled" or "untrawled" in studies, USGS researchers have developed a new method for calculating bottom-trawling-induced sediment resuspension, which allows for a range of classifications according to how often the seafloor was disturbed by bottom trawling. This new method of calculation provides a new tool for seafloor management and can help assess effects from bottom trawling. The researchers calculated how much sediment from the seafloor was resuspended during bottom trawling and determined the amount was about the same as the amount of sediment rivers deposit on the continental shelf (almost 22 gigatons).

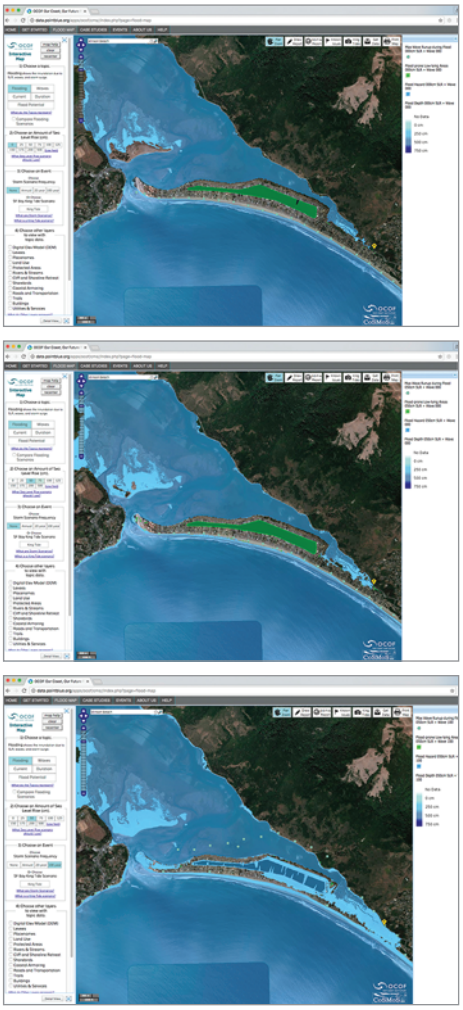
Helping Communities Understand Future Coastal Hazards

By Juliette Finzi Hart (USGS)

With the stunning beauty of our coastline throughout the United States and its territories, it's no surprise that many people want to live along the coast. This coastal living, however, comes with vulnerability to impacts from



Examples of projections from the OCOF viewer for Stinson Beach in San Francisco for daily conditions for a day in October 2016 (top), daily conditions plus 50 centimeters of sea level rise-expected by about mid-century (center), and a 100-year (or 1 percent) storm with 50 centimeters of sea-level rise (bottom). These projections demonstrate how neglecting to plan for storm impacts could lead to a substantial underestimation of risk along the coast. Image credits: OCOF, CoSMoS Model Results Product Suite

See Help for Coastal Hazards page 17

Help for Coastal Hazards continued from page 16

natural hazards, such as hurricanes, winter storms, tsunamis, and erosion of beaches and coastal cliffs. Climate change will intensify these hazards. Even today, many coastal communities along the east coast are experiencing increased nuisance flooding—also referred to as sunny-day flooding—in which streets and infrastructure flood simply because of high tides or windy days. This flooding has been exacerbated in recent decades by sea-level rise. U.S. coastal communities look to expertise from USGS to provide cutting-edge projections of natural hazard impacts today and into the future.

On the west coast of the United States, the USGS Pacific Coastal and Marine Science Center's Coastal Processes Team, led by Patrick Barnard and a group of 10 modelers, geologists, engineers, and oceanographers, has developed the Coastal Storm Modeling System (CoSMoS, *http://walrus.wr.usgs.gov/coastal_processes/cosmos/*) to help the 20 million residents of California coastal communities understand their vulnerabilities from storms and sea-level rise. CoSMoS is a state-of-the-art modeling system that models all the relevant physics of a coastal storm (for example, tides, waves, and storm surge), which are then scaled down to local flood projections. Rather than relying on historic storm records, CoSMoS uses wind and pressure from global climate models to project coastal storms under changing climatic conditions. Projections of multiple storm scenarios (daily conditions, annual storm, 20-year and 100-year return intervals) are provided under a suite of sea-level rise scenarios ranging from 0 to 2 meters, along with a catastrophic 5-meter scenario. This allows users to manage and meet their own planning horizons and specify degrees of risk tolerance.

To ensure that the modeling results meet the needs of the coastal communities it serves, the USGS has been working with a diverse group of partners and stakeholders to support the development of climate change impact plans through the Our Coast, Our Future (OCOF) program (*http://ourcoastourfuture.org*). The OCOF is a partnership among USGS, Point Blue Conservation Science, Greater Farallones National Marine Sanctuary, NOAA's Office for Coastal Management, National Estuarine Research Reserve System, Bay Area Ecosystems Climate Change Consortium, NPS, and Ecosystem-Based Management Tools Network. By working closely with Point Blue Conservation Science to develop the OCOF website and flood map, USGS is delivering tools and information that can inform California coastal communities about managing coastal flooding risks across the California coast. The OCOF web resources provide a user-friendly format in which coastal professionals and stakeholders are able to access and use information from the CoSMoS model for short- and long-term climate change planning.

Patrick Barnard (right) discusses some of the initial projections for Venice and Marina del Rey with City of Los Angeles planning officials at a recent AdaptLA meeting, cosponsored by the City of Santa Monica and USC Sea Grant Program. Photo credit: Holly Rindge

To date, OCOF has directly served 14 San Francisco Bay Area communities/counties by supporting climate adaptation planning projects. Both CoSMoS and OCOF are recognized as leading tools and sources of information for short- and long-term planning by California State agencies, such as the California State Coastal Conservancy, California Coastal Commission, California DOT, and California's Office of Emergency Services. The CoSMoS results are also being used by researchers at University of California, Berkeley and other local universities to identify vulnerability at finer scales for use by planners, emergency personnel, and natural-resource managers.

Earlier this year, the CoSMoS team was honored with the 2016 Point Blue Outstanding Partner Award. Accepting on behalf of the CoSMoS team, Barnard noted, "Working with Point Blue and all of our partners throughout the S.F. Bay Area has helped our group better understand what kind of information coastal communities need to prepare for natural hazards today and with climate change. We are honored to have received this tremendous accolade from Point Blue Conservation Science."

In 2014, the CoSMoS team began developing projections for southern California, from Santa Barbara to the United States/Mexico border. Results from this modeling will be released in fall 2016. Following the OCOF example from northern California, the CoSMoS team has established partners throughout southern California, such as the University of Southern California's (USC) Sea Grant Program, AdaptLA, and San Diego Regional Climate Collaborative, to engage coastal communities and fine-tune model projections and products to meet their needs. New work along the central coast of California will begin in winter 2017, which will lead to methodologically consistent coverage of nearly all the California coastline.

River Herring Return to Saugatucket River

By Samantha Spiece (DOI)

For the first time in decades, during the 2016 spring migration, tens of thousands of river herring were able to migrate up Rhode Island's Saugatucket River without the help of humans lifting them over a dam.

River herring are born in freshwater ponds and lakes and then swim out to sea where they spend years growing to adulthood before returning to their birthplace to spawn. Unfortunately, for many years, river herring migration routes have been blocked along the Saugatucket River, where dams and mills stop the natural follow of water, serving as barriers between river herring and the freshwater lakes they need to reproduce. Over time, disruptions in migration have drastically reduced river herring populations. This is unfortunate for other species, such as otters, ospreys, and striped bass that rely on river herring as a primary food source.

One way to restore the food chain and bring back the fish is to help fish get around the barriers by building fish ladders. Settlement funds from the 1996 North Cape oil spill off South Kingstown combined with financing through a host of Federal, State, and private partnerships provided $772,000 to improve fish passage at the three barriers. USFWS staff from Fish and Aquatic Conservation (Bryan Sojkowski), Wildlife and Sport Fish Restoration (Colleen Sculley), and Ecological Services (Molly Sperduto) collaborated to provide technical assistance and funding for the effort. The new fish ladders make it easier for the river herring to navigate their way from the ocean to these important inland breeding areas.

For more information: *http://ripr.org/post/fishways-improved-along-saugatucket-river-wakefield*

Hughesville Dam Removal—Improving the Environment and Human Safety

By Cathy Marion (USFWS)

On September 8, 2016, DOI Secretary Sally Jewell joined Federal, State, and local partners to celebrate the $1.5 million Hughesville Dam removal project on the Musconetcong River in Warren and Hunterdon Counties, New Jersey. Located 3.5 miles upstream from the confluence with the Delaware River, the Hughesville Dam—18 feet tall and 150 feet wide—was built in 1889 to generate hydropower for local paper production but has not been in operation since 1999.

Secretary Jewell's visit was organized to highlight efforts by the Obama administration to work with local governments and private dam owners to remove obsolete dams. Functioning dams are intended to store and divert water, processes that can provide humans with benefits, such as drinking water, hydropower, irrigation, and flood control. However, the vast majority of dams in the United States are aging and obsolete, no longer serving the purpose that they were built to provide decades or centuries ago.

The cost of repairing and maintaining obsolete dams can be substantial and is often more expensive than removal. Additionally, the environmental costs of dams are high. Dams fundamentally alter rivers by blocking and slowing the flow of water, and they degrade water quality by increasing water temperature, increasing nutrients and algal blooms, and retaining sediments and environmental contaminants. Many fish and other aquatic species are sensitive to the habitat changes caused by dams. As a result, we often see decreases in resident fishes in dammed rivers and decreases in migratory fishes that are physically blocked from their historic spawning and rearing grounds. The

See Hughesville Dam Removal page 19

Hughesville Dam Removal continued from page 18

Secretary Jewell visited the Hughesville Dam removal site in September 2016. Photo credit: Tami A. Heilemann, DOI

Hughesville Dam removal will permanently open up 9 river miles of habitat for migratory fish species, such as American eel, American shad, and river herring, and will generally improve water quality and habitat conditions for numerous resident fish species.

In addition to ecological benefits, the Hughesville Dam removal will help ensure the safety and well-being of people living in nearby communities by reducing the risk of flooding. It is projected that the Hughesville Dam removal has the potential to reduce local flood events by 1 to nearly 10 feet. Furthermore, the removal will improve water quality for humans and wildlife; reduce drowning risks associated with low-head dam hydraulics; and improve fishing, boating, and other recreational activities.

The Hughesville Dam will be the fifth dam removed on the Musconetcong River. The removals are part of a larger partner-based effort to restore the 42-mile Musconetcong River—designated as a "Wild and Scenic River"—to a free-flowing state. Funding for the Hughesville Dam removal comes from settlement funds under the Natural Resources Damage Assessment and Restoration Program for the Combe Fill South Landfill Superfund Site and Federal funds from the Hurricane Sandy Disaster Relief Appropriations Act of 2013.

National Parks for Marine Science Education

By Gary Bremen (NPS)

One of Biscayne National Park's main goals for celebrating the Centennial of the NPS was to more fully integrate the agency's resources into marine science classrooms nationwide. Park staff worked to increase the agency's presence at the National Marine Educators Association's annual conference where some 500 teachers, aquarium staffs, and informal educators from parks and nature centers gather each summer. The effort started at 2015's conference in Newport, Rhode Island, with a small sponsorship and grew considerably when NPS became a major sponsor of the 2016 conference in Orlando with financial support from the NPS's Water Resources Division and logistical support from the Ocean and Coastal Resources Branch.

Staff from four national parks attended the conference and presented on topics like climate change, invasive species, citizen science light monitoring in sea turtle nesting areas, and sex underwater. Park volunteers staffed a booth sharing information about the 88 ocean, Great Lakes and coastal parks. A conference highlight was the keynote Stegner Lecture, which annually features an inspirational closing to 3 days of concurrent sessions. This year's lecture used storytelling and music to highlight some of the many reasons national parks matter—not simply for protecting wildlife, scenery, and history, but also for building bonds of connection among families and friends. A nighttime field trip to Canaveral National Seashore was almost rained out, but those who went got to witness five turtles coming ashore to nest.

The centennial is nearly over, but the groundwork for future participation is set. Other projects generated at the conference are in the works, including

one with elementary schools, universities, and national parks in Florida and the Netherlands to release data-gathering miniboats that circumnavigate the Atlantic Ocean, and participation in the 2016 Youth Ocean Conservation Summit (held on December 10, 2016, *http://youth-oceanconservationsummit.weebly.com/2016-summit.html*) included not only the summit itself but also follow-up field trips to Biscayne National Park in the spring of 2017.

Chesapeake Bay Science

The Chesapeake Bay is our Nation's largest estuary with an enormous watershed extending from New York to Virginia. The continued restoration and protection of this national resource is a priority for designated Federal and State agencies and non-governmental stakeholders through the Chesapeake Bay Program (CBP). Given the ecologic and economic importance of the Chesapeake Bay, in 2009, President Obama issued an Executive Order for increased Federal leadership to restore and protect the Bay and its watershed.

The Chesapeake Bay watershed spans six States and the District of Columbia. Image credit: EPA

DOI is an important partner in this effort, with USGS and USFWS providing resource science and management guidance. The USGS has the critical role of providing scientific information for improved understanding and management of the Bay ecosystem and working with Federal, State, and academic science partners to provide research, assessment, monitoring, and modeling. *See related story, page 21.*

USGS Chesapeake Bay science activities are grouped under four major topics:

- Land and Climate Change—Forecast and assess impacts of climate and land-use change.
- Water Quality—Assess and explain water-quality conditions and change.
- Fish, Wildlife, and Habitats—Document the status and change of the health of fish, wildlife, and critical habitats.
- Decision Support—Promote adaptive management and decision support to enhance ecosystem management.

Intersex Fish Characteristics are Linked to Water Quality

USGS fish biologist, Vicki Blazer, brought her team to the Shenandoah River in Front Royal, Virginia, to collect and study smallmouth bass (*Micropterus dolomieu*), a species in which intersex characteristics have been linked to chemical contaminants in the Chesapeake Bay region.

Intersex conditions occur when exposure to chemicals disrupts the hormonal systems of an animal, leading to the presence of both male and female characteristics in an animal that should exhibit the characteristics of just one sex in its lifetime. In the case of smallmouth bass, male intersex fish are found with immature eggs in their testes, which indicates exposure to estrogenic and antiandrogenic chemicals.

"The sources of estrogenic chemicals are most likely complex mixtures from both agricultural sources, such as animal wastes, pesticides and herbicides, and human sources from wastewater treatment plant effluent and other sewage discharges," says Blazer, who first discovered intersex characteristics in fish while studying fish kills in the South Branch of the Potomac River and the Shenandoah River.

Science Seminar on Nutrients and Suspended Sediment Loads

USGS scientist Doug Moyer delivered the seminar, "Nitrogen, Phosphorus and Suspended Sediment Loads and Trends Measured at the Chesapeake Bay Non-Tidal Network Stations," as part of the University of Maryland's Center for Environmental Science Integration and Application Network (IAN) Seminar Series.

You can tune into the University of Maryland's Center for Environmental Science IAN Seminar Series and find Doug Moyer's presentation here: *http://ian.umces.edu/seminarseries/seminar/117/usgs_watershed_monitoring_results_2016-02-25/*

The goal of the IAN Seminar Series is to provide concise, thought-provoking ideas related to Chesapeake Bay science and management. Short presentations (less than 15 minutes) are immediately followed by a lunchtime discussion of the presentation. Each discussion is summarized and posted along with a PDF version of the seminar slides. The seminars also are captured on video and posted under a Creative Commons license so they can be freely shared.

Restoring Wetlands on Agricultural Lands within the Chesapeake Watershed

By Jennifer Greiner (USFWS)

Healthy wetlands are vital to a healthy Chesapeake Bay. Located where land meets water, wetlands trap polluted runoff and slow the flow of nutrients, sediment, and chemical contaminants into rivers, streams and the Bay. By soaking up storm water and dampening storm surges, wetlands slow the erosion of shorelines and protect properties from floods. Wetlands also provide critical habitat for fish, birds, mammals, and invertebrates, and support recreational fishing and hunting across the watershed. Land purchases and conservation easements can protect wetland habitat. The removal of invasive species—like phragmites, purple loosestrife, or nutria—can help rehabilitate degraded wetlands.

Between 2010 and 2014, 6,191 acres of wetlands were established, rehabilitated, or reestablished on agricultural lands in the Chesapeake Bay watershed.

In 2014, the CBP adopted a goal to create or reestablish 85,000 acres of tidal and nontidal wetlands by 2025. This goal is based on the wetland restoration targets outlined in the Watershed Implementation Plans that will help jurisdictions meet the goals of the Bay's "pollution diet," or total maximum daily load. Under this target, 83,000 acres of tidal and nontidal wetlands should be created or reestablished on agricultural lands. So far, just more than 7 percent of the goal has been achieved for the wetlands on agricultural lands. *See related story, page 20.*

Microscopic Organisms of the Everglades

By Barry H. Rosen (USGS)

A new report, "Catalog of Microscopic Organisms of the Everglades Part 1: The Cyanobacteria," is part 1 in a series that describes microscopic organisms identified in the shallow wetland areas of the Everglades. The first report describes the cyanobacteria and includes a suite of images with the most current taxonomic treatment of each taxon. Most of the images are of live organisms, allowing their true color to be represented. A number of newly discovered species are illustrated that have not been described before.

The resource will be helpful to other researchers looking at these organisms in subtropical wetlands worldwide. It is anticipated that these images will facilitate current and future ecological studies on the Everglades, such as understanding food-web dynamics, sediment formation and accumulation, the effects of nutrients and flow, and climate change—all of which are needed to effectively manage water resources in the region. *See related story, page 7.*

Read the report: *http://dx.doi.org/10.3133/ofr20161114*

DOI Experts Join International Coral Reefs Community in Hawai'i

By Amy West (USGS)

For a coral reef symposium that happens just once every 4 years, Oahu, Hawai'i, is also the site for a variety of research done by USGS and other DOI partners.

The 13th International Coral Reef Symposium (ICRS), which has been held in the United States only three times during its four decades of existence, drew the largest attendance of any previous symposium—nearly 2,500 attendees representing 90 countries. Participants included a mix of coral reef scientists, resource managers, policy personnel, and even makeup manufacturers and heads of island nations. Topics of talks and posters ranged from potential damage to reefs by sunscreens, to how communities manage their coastal areas, to the threats from bleaching, viruses, and pollution.

USGS scientist Curt Storlazzi explained that the meeting "twenty years ago was all science," and now it includes policy, management, and even social media. "There was clearly a shift," said USGS scientist Christina Kellogg, who noticed the difference from the ICRS meeting held in Florida just 8 years ago. For instance, "microbiology was a minor component of it in 2008," said Kellogg. "But this meeting was crammed with microbiology!"

Several scientific field trips associated with the conference allowed attendees the chance to dive into some "science in action." Storlazzi, along with colleagues from Hawai'i's Department of Aquatic Resources, the University of Hawai'i, and NOAA, co-led a 3-day, 4-night field trip titled, "Managing Maui's MPA's from Watersheds to Co-Management" along West Maui. The participants included scientists, professors and students.

During a scientific field trip associated with the 13th International Coral Reef Symposium, tour participants used SCUBA to explore the north side of Molokini Crater near Maui, HI to observe the area where a large coral bleaching event occurred during the El Niño event of 2015–16. Photo credit: Curt Storlazzi, USGS

They visited Olowalu, a place the USGS determined to be a vital source of coral larvae for West Maui and adjacent islands in Hawai'i. Locals used USGS science to protect this important reef from a large proposed development project. Then the group dove in one of Hawai'i's oldest marine protected areas at Molokini to witness the effect of 2015–16 coral bleaching, which hit Olowalu as well. The tour also visited coral researchers at the island's aquarium: the Maui Ocean Center. The final visit to two sites that have been areas of concern for the U.S. Coral Reef Task Force (USCRTF)—Honolua Bay and Kahekili, both now State of Hawai'i marine protected areas—focused on the deleterious effects on corals from detrimental land-use activities.

Members of DOI played a prominent role in this coral reef meeting. USGS scientists chaired several meeting sessions; scientists from other DOI bureaus, such as NPS and USFWS, also participated by giving talks or chairing science sessions. As it was also the 10th anniversary of the Papahānaumokuākea Marine National Monument (*http://www.papahanaumokuakea.gov/*), managed by both USFWS and NOAA, the meeting helped highlight the threats to these coral ecosystems and benefits in protecting them. *See related story, page 1.*

Hafa Adai! from the Mariana Islands

News from the U.S. Coral Reef Task Force

By Cheryl Fossani (DOI)

In September 2016, the USCRTF held its 36th meeting in the Mariana Islands. This meeting brought together stakeholders and partners to address diverse issues affecting the health of coral reefs in several watersheds in Guam and the Northern Mariana Islands and the communities that rely on them. Governor Torres of the Commonwealth of the Northern Mariana Islands opened the meeting with remarks welcoming the USCRTF to Saipan and expressing the importance of the partnerships formed and accomplishments made through the efforts of the USCRTF. USCRTF Co-Chairs Lori Faeth, DOI's Deputy Assistant Secretary for Policy and International Affairs, and Eileen Sobeck, Assistant Administrator for NOAA National Marine Fisheries Service, also provided remarks about 2016 being a benchmark year for ocean and coral reef conservation.

With more than 200 registered participants, this year's USCRTF meeting was a great success! During the business meeting, the USCRTF heard several presentations that highlighted regional watershed management and coral reef conservation and restoration efforts, as well as coral reef challenges that pose threats on a global scale. Dr. David Burdick, from the Guam Coral Reef Monitoring Program, Dr. Peter Houk, from the University of Guam, and Mr. Marlowe Sabater, from the Western Pacific Regional Fisheries Management Council, informed the USCRTF of the status of coral reefs in the region; and Dr. Charles Birkeland, from the University of Hawai'i, gave a presentation about the future that coral reefs face with climate change and changes in ocean chemistry.

Members of the USCRTF at the business meeting in Guam. Photo credit: Trevor Boykin, University of Guam Sea Grant Program

Bamboo is an invasive species in Guam and causes problems for watersheds, including flooding when the clumps of bamboo fall and dam the river. Watershed workshop participants visited the Manell-Geus watershed and saw firsthand the issue of invasive bamboo and how Guam is working to find solutions to remove the invasive species. Photo credit: Erica Wales, DOI

U.S. Coral Reef Task Force Co-chairs Lori Faeth (DOI) and Eileen Sobeck (NOAA) are accompanied by staff during a visit to the War in the Pacific National Historical Park. Photo credit: Erica Wales, DOI

This year's USCRTF meeting included several site visits and workshops to address coral reef conservation issues specific to the northern Pacific Islands. The USCRTF Watershed Working Group convened a workshop that highlighted issues and management practices associated with sedimentation and stormwater runoff. Coral reefs ecosystems in the Pacific Islands are heavily impacted by sedimentation from many sources, including unpaved roads, unstable stream banks, and large areas of bare ground. During the Watershed Workshop, experts shared presentations and led discussions that focused on successful sediment control strategies and how they can be used locally to help stabilize sediments along stream banks and already entrained in stream channels. After the workshop, participants visited the Manell-Geus watershed to witness the challenges contributing to sedimentation and the mitigation projects currently underway. *See related story, page 22.*

While visiting, Lori Faeth met with National Park Superintendents, USFWS Refuge Managers, and staff, and toured the War in the Pacific National Historical Park and the Guam Wildlife Refuge. This visit offered an opportunity to discuss the local issues affecting coral reef health and how these conservation sites are working to manage and mitigate those issues.

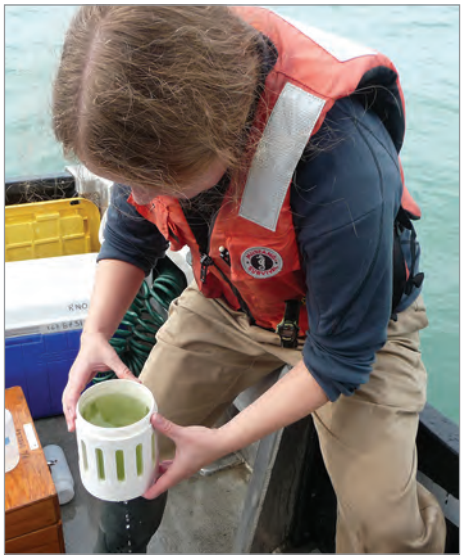
Collaboratives in the Great Lakes Basin—Joining Forces for a Collective Impact

By Josh Miller (USGS)

The Great Lakes ecosystem is divided by an international boundary, eight State boundaries, Tribal and First-Nations lands and jurisdictions, and countless local government boundaries. Though still a productive and stunningly beautiful ecosystem, the region has undergone dramatic changes in the past 200 years as a result of an industrial economy, urbanization, invasive species, and commercial fishing. The complexity of jurisdictions, provision of substantial ecosystem services to innumerable stakeholders (such as the $7 billion fishery), and history of environmental change have made for an extremely challenging system for coastal, nearshore, and offshore natural resource managers.

USGS scientists in the Great Lakes region help managers address large-scale, challenging issues by providing Federal leadership in drawing partners together across jurisdictions and connecting science to management. The USGS Great Lakes Science Center has done this in recent years by establishing formal "collaboratives" that bring together scientists and managers from public, private, and academic sectors on both sides of the international border. These collaboratives rest upon the key elements of "collective impact" as identified by John Kania and Mark Kramer in 2011. The collective impact approach emerged as a method for addressing complex societal problems like childhood obesity, education reform, and restoration of urban watersheds in contrast to "isolated impact," where one actor seeks to solve a complex problem alone or in competition with others. The Great Lakes collaboratives have been built



Dr. Mary Anne Evans, USGS limnologist and algal ecologist, studies the ecology of HABs in the shallow, western basin of Lake Erie and other Great Lakes bays. These HABs have gained increasing attention across the basin in recent years. The issue requires collaboration across vast areas because it spans from farm fields and urbanized landscapes to coastal and open-water ecosystems. Photo credit: Josh Miller, USGS

to address highly complex, natural resource management issues.

One of the issues in the region is the management and prevention of the spread of invasive *Phragmites australis*, or common reed, in coastal and inland wetlands. In partnership with the Great Lakes Commission (a binational and inter-State organization that is the crucial backbone-support role for all the Great Lakes collaborations), the USGS established the Great Lakes Phragmites Collaborative (*http://greatlakesphragmites.net/*), which draws together land managers from across the Great Lakes basin who are combating the invasive plant. The goal is to generate more coordinated, efficient, and strategic approaches to research, management, and restoration across the numerous boundaries within the Great Lakes basin. The binational collaborative serves as a communication conduit to facilitate access to information and resources, encourage technology transfer, and build networks among land managers, governmental agencies, academic institutions, and private landowners.

This fall, the collaborative started the Phragmites Adaptive Management Framework, which will connect land managers and scientists across the basin, to facilitate a shift in management strategy that will, over time, refine and improve best management practices for controlling invasive *Phragmites australis* in a suite of site conditions throughout the Great Lakes basin. Watch a video on the Phragmites Adaptive Management Framework available on YouTube: *https://youtu.be/UCHpKGaZN_M*

A second large-scale, complex societal issue in the region is the reemergence of harmful algal blooms (HABs) in some nearshore areas and bays in the Great Lakes basin. These HABs, which can be toxic to wildlife, pets, and humans, are increasingly affecting coastal communities and their economies by fouling beaches, inhibiting recreational uses, and threatening

Dr. Kurt Kowalski, a USGS plant ecologist, studies the biology, ecology, and approaches to management of invasive *Phragmites australis*. The invasive plant can reach high densities and enormous heights, substantially affecting the value of wetlands and shoreline property. Collaboration among land owners and managers is critical. Photo credit: USGS

See Great Lakes page 29

Great Lakes continued from page 28

public safety. In August 2014, an HAB in Lake Erie's western basin caused local officials to issue a temporary "do not drink the water" advisory for the municipal water supply to more than 400,000 residents of Toledo, Ohio.

That same year, USGS helped to form the Great Lakes HABs Collaboratory. The collaboratory seeks to create a collective laboratory ("co-laboratory") that enables science-based information sharing among scientists and between scientists and decisions makers working on HABs in the Great Lakes. The collaboratory also provides a network for developing a mutual understanding of current science and science needs, strategies for transferring technology, and opportunities for receiving feedback from managers.

The collaborative approach has proven to be an effective means of drawing together scientists and managers at multiple scales to address complex coastal, nearshore, and offshore issues that cross jurisdictions and compromise the resilience of coastal communities. In 2014, Secretary Sally Jewell awarded the St. Clair-Detroit River System Initiative the prestigious Partners in Conservation award. This initiative began as the Huron-Erie Corridor Initiative, working to address fish habitat impairments under the Great Lakes Water Quality Agreement, and has grown into a vast group of Federal, State, local, Tribal, provincial, First Nations, private, non-profit, and academic stakeholders with a shared vision statement and common agenda, restoring a major, bi-national connecting channel and world-class river. The collaborative and collective impact approach is beginning to work its way from the Great Lakes region across the Nation among USGS and partner agencies and organizations, connecting science to management to address complex issues related to natural resources.

BOEM's Marine Archaeology Role

The 50th Anniversary of the National Historic Preservation Act

By Melanie Damour (BOEM)

BOEM celebrates the 50th anniversary of the National Historic Preservation Act (NHPA) in October and highlights its Historic Preservation program in the July/August/September 2016 issue of their quarterly journal, "BOEM Ocean Science."

BOEM, as a regulatory agency with jurisdiction in Federal waters of the U.S. OCS, is responsible for oversight of conventional and renewable energy development and marine minerals extraction while complying with Federal laws enacted to protect the environment.

Part of BOEM's responsibility, as mandated by the NHPA, is to properly consider the potential impacts of BOEM-permitted activities on cultural resources, including historic shipwrecks, submerged indigenous archaeological sites, and Traditional Cultural Properties. BOEM's Environmental Studies Program (ESP), initiated in 1973 under Section 20 of the OCS Lands Act (1953), acquires the scientific information needed to inform BOEM's decision making. Through the ESP, BOEM has funded more than $14 million toward cultural resource-related studies across all its OCS regions (Atlantic, Gulf of Mexico, Pacific, and Alaska). Regional inventory studies completed in the 1970s and 1980s formed the cornerstone of BOEM's Historic Preservation Program. Recent and ongoing studies continue to inform the program's best management practices for cultural resource management on the OCS. Several of these key cultural resources studies are highlighted in the new issue of "BOEM Ocean Science." *http://www.boem.gov/Ocean-Science/*

"Monumental" Changes in Ocean Protection

By Lauren Wenzel (NOAA)

In August 2016, just before the world's conservation leaders met in Hawai'i for the World Conservation Congress (WCC), President Obama announced the increase of the Papahānaumokuākea Marine National Monument. The expansion was motivated by a desire to increase the resilience of marine life to climate impacts, as was the creation of the new Northeast Canyons and Seamounts Monument off the Atlantic coast in September. *See related stories, page 1.*

The United States now has 26 percent of its waters (from 0 to 200 nautical miles) protected through MPAs. These include not only special places far offshore like Papahānamokuākea, but also the many national parks, refuges, marine sanctuaries, and similar State-managed programs that protect marine life across the country. Joining many other coastal countries, the United States has pledged to protect 10 percent of its oceans (including coastal waters and the Great Lakes) in MPAs to conserve marine biodiversity. Although the spatial part of this target has been met, challenges remain.

First, many scientists believe that the 10 percent target is not enough to protect biodiversity, leading to a resolution at the WCC calling for protection of 30 percent of the world's ocean. Also, science-based global targets emphasize that MPAs should be organized into well-managed, ecologically connected networks. Networks allow for marine species to move through different habitats they need at different life stages. They can also increase the "spillover" of young and adults of fished species into adjacent areas where fishermen can benefit. But ecological networks are still a fairly new idea in the United States, best seen in California's statewide network of MPAs. Second, MPA networks must be well managed to achieve their goals, including having management plans and consistent resources to implement them. Many MPA programs are increasingly partnering with outside organizations to help bring additional resources to support activities, such as education, monitoring, and research.

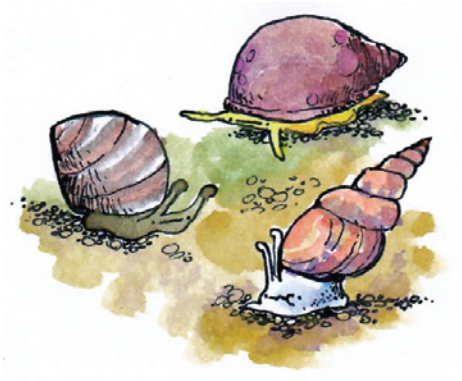

Illustration credit: Cole Goco

The Marine Protected Areas Federal Advisory Committee is currently working on two sets of recommendations to address these issues. One report will focus on how MPA managers can apply tools and guidelines to incorporate spatial ecological connectivity when managing existing MPAs and when designing new MPA networks. The second report outlines options for tapping into external sources of funding for MPA management, including grants, corporate donations, and other sources. Both sets of recommendations were completed in December 2016.

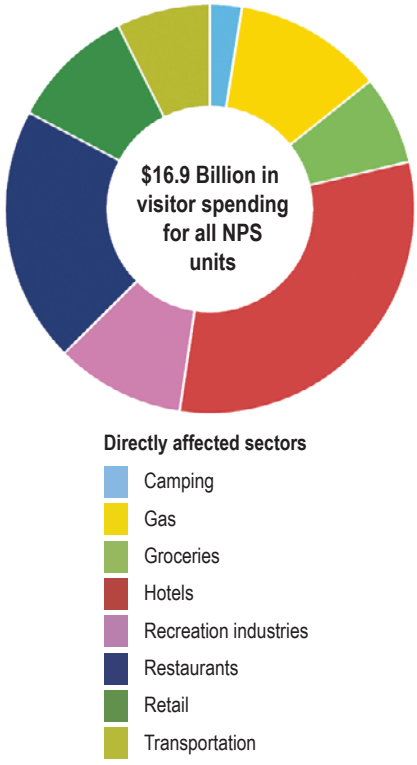
Our Valuable Ocean and Coastal Parks

In June 2016, NPS published the annual Economic Report for 2015. In 2015, park visitors spent an estimated $16.9 billion in local gateway regions while visiting NPS lands across the country. These expenditures supported a total of 295,300 jobs, $11.1 billion in labor income, $18.4 billion in value added, and $32 billion in economic output in the national economy. Learn more about park visitor spending effects: *https://www.nps.gov/subjects/socialscience/vse.htm*
For our 88 OGLC parks, this benefit translates to:

- Visitor spending: $5,026,054
- Jobs: 72,237
- Visits: 89,212,379



NPS visitor spending in 2015.

Enhancing Exchange across the Ocean, Great Lakes and Coastal Team

By Liza Johnson (DOI)

In June 2016, after nearly 6 years working together to implement the National Ocean Policy, representatives from DOI's OGLC offices and bureaus met in Shepherdstown, West Virginia, for a strategic planning workshop. The group welcomed new team members from across DOI and included people from almost all regions and with different types of expertise, ranging from managers and policy experts to scientists and communicators. They gathered to celebrate accomplishments, talk about coordinating priorities and activities, and begin developing a strategy for OGLC work going forward into the next 5 years. DOI's previous Principal Deputy Assistant Secretary, Kris Sarri, gave opening remarks and underscored the importance of developing a strategy for a coordinated effort to implement OGLC actions through internal and external partnerships. Retreat participants left with a renewed sense of vision, commitment, a refreshed network, and great information they will use going forward. The team looks forward to sharing this progress in future issues of *NEWSWAVE*.

Protecting Marine Mammals—A Quick Reference Guide

https://www.fws.gov/international/animals/marine-mammals.html

"Marine Mammal Policy" Fact Sheet:
https://www.fws.gov/international/pdf/factsheet-marine-mammal-policy-2013.pdf

By Erica Wales (DOI)

Marine mammals (whales, dolphins, porpoises, seals, sea lions, walrus, polar bears, sea and marine otters, dugongs, and manatees) may vary in taxa, habitat, and behavior, but they all share one thing in common—dependency on the ocean for survival. These mammals are a balancing factor in marine ecosystems, helping to steady the food chain and control prey populations. Because of habitat loss, by-catch, and exploitation, many of these species are in danger of survival and are legally protected under various U.S. and international laws to aid in their survival. DOI's USFWS and NOAA's National Marine Fisheries Service (NMFS) share responsibility in the protection, conservation, and management of marine mammals. Below are descriptions and links to learn more.

Marine Mammal Protection Act (MMPA)—The MMPA was enacted in 1972 and prohibits, with a few exceptions, the "taking" of marine mammals in U.S. waters and by U.S. citizens on the high seas, as well as the importation of marine mammals or products. A "take" is defined as "to harass, hunt, capture, collect, or kill, or attempt to harass, hunt, capture, collect, or kill any marine mammal." NMFS has jurisdiction over whales, dolphins, porpoises, seals and sea lions, whereas the USFWS has jurisdiction over walrus, polar bears, sea and marine otters, dugongs, and manatees. *https://www.fws.gov/international/laws-treaties-agreements/us-conservation-laws/marine-mammal-protection-act.html*

Endangered Species Act (ESA)—The ESA of 1973 protects domestic and international species, and provides a framework to conserve and protect endangered and threatened species and the habitats upon which those species depend. Under the ESA, it is illegal to take (defined under the ESA as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct"), import, export, sell or offer to sell, and possess or transport listed species. Like the MMPA, NMFS has jurisdiction over whales, dolphins, porpoises, seals, and sea lions, whereas USFWS has jurisdiction over walrus, polar bears, sea and marine otters, dugongs, and manatees. *https://www.fws.gov/international/laws-treaties-agreements/us-conservation-laws/endangered-species-act.html*

Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)—The CITES treaty came into effect in 1975 and has the purpose of ensuring the survival of plants and animals is not threatened by international trade. USFWS is responsible for carrying out the provisions of this convention for all marine mammals protected under CITES (which includes whales, dolphins, porpoises, manatees, dugongs, seals, otters, walrus, and polar bears). *https://www.fws.gov/international/cites/index.html*

Subject: Interior"s NEWSWAVE Fall 2016/Winter 2017 issue
Date: Friday, January 13, 2017 1:39:23 PM
Attachments: NEWSWAVE_Fall2016_Winter2017-4web.pdf

Dear *NEWSWAVE* Subscribers:

We are pleased to share our Fall 2016/Winter 2017 issue.

In this issue:

- DOI's Blue Portfolio
- The recent expansion of Papahanaumokuakea Marine National Monument and the first marine monument in the Atlantic,
- The Nation's first regional ocean plans,
- National Park Service's Centennial celebrations,
- The discovery of an historic anchor
- Continued progress on Everglades Ecosystem Restoration, and
- Chesapeake Bay science

Our special feature is an article about Arctic research cruise, Hidden Ocean 2016, as seen through the eyes of BOEM oceanographer Kate Segarra. Read about her science mission at the top of the world.

The **Surfing Bison** feature explores how DOI protects marine mammals. Through the Marine Mammal Protection Act, the Endangered Species Act and the Convention on International Trade in Endangered Species of Wild Fauna and Flora, the USFWS helps protect a variety of marine mammals.

Come explore and learn with us.

Another great way to keep up with Interior's ocean, Great Lakes, and coastal activities on a daily basis is through our Facebook page. We follow all Facebook pages available for each of the 88 ocean and coastal National Park units, 180 ocean and coastal National Wildlife refuges, Bureau of Land Management's coastal monuments, and the science conducted by USGS and the Bureau of Ocean Energy Management. Visit and 'like' us today!

https://www.facebook.com/USInterioroceanscoastsgreatlakes

We hope you enjoy this issue and will share it widely. It is both attached here and available on-line: http://www.doi.gov/pmb/ocean/news/Newswave/index.cfm

Sincerely,

Ann, Erica and Liza

First U.S. Marine National Monument in Atlantic

See it as You've Never Seen it Before!

By Ann Tihansky (USGS) and Erica Wales (DOI)

On September 15, 2016, President Obama designated the first Marine National Monument in the Atlantic Ocean on the first day of the 3rd "Our Ocean" Conference. The Northeast Canyons and Seamounts Marine National Monument will protect 4,913 square miles of fragile deep-sea ecosystems off the coast of Cape Cod National Seashore. By protecting this striking underwater landscape of mountains and canyons, critical ecosystems for deep-sea coral and

See Northeast Monument page 3

DOI's Blue Portfolio

The Department of the Interior's (DOI) blue portfolio and stewardship responsibilities for ocean and coastal resources have recently increased with President Obama signing a proclamation expanding the Papahānaumokuākea Marine National Monument (*see related story, page 1*) and designating the first marine national monument in the Atlantic Ocean. While the Papahānaumokuākea Marine National Monument is one of the largest marine protected area (MPA) on the planet, the Northeast Canyons and Seamounts Marine National Monument is the first to protect 4,913 square

See Portfolio page 3

Expanding Papahānaumokuākea Marine Monument

By Randy Bowman (DOI)

On August 26, 2016, President Obama issued a proclamation under the authority of the Antiquities Act expanding the Papahānaumokuākea Marine National Monument to include 582,578 square miles of land and sea. The designation more than quadruples the size of the existing marine monument, including all the waters and submerged lands within the seaward limit of the U.S. Exclusive Economic Zone west of 163° west longitude. Previously the largest contiguous fully protected

The U.S. Geological Survey (USGS) responded to Hurricane Matthew by forecasting coastal change and monitoring it using "before and after" photos.

New low-altitude aerial photos of Southeastern U.S. beaches taken before and after Hurricane Matthew show roads, dunes and structures lost. At left, these "before and after" photos show a new inlet that formed between the Atlantic Ocean and the Matanzas River near St. Augustine, Florida, stripping away a 3.7 meter (12-foot) dune and carrying sand into the estuary. Portfolio continued from page 1

miles of fragile deep-sea ecosystems off the coast of Cape Cod National Seashore (*see related story, page 1*). As one of our Nation's principal stewards for our ocean, Great Lakes and coastal (OGLC) resources, DOI recognizes the vital connection between the health of our Nation's natural resources and human health and economy. DOI's responsibilities continue to grow with expanding our oldest Marine National Monument and adding our Nation's newest Atlantic marine national monument.

DOI's blue portfolio includes more than 35,000 miles of coastline and 34 million acres in 88 marine and coastal National Parks, including many of America's favorite beaches from Cape Cod and Cape Hatteras to the Golden Gate National Recreational Area and beyond to Hawai'i Volcanoes National Park and 756,477,162 acres in marine national monuments and national wildlife refuges in the Pacific alone as of September 2016. We protect 180 marine and coastal national wildlife refuges, 1,100 miles of coastline of the California Coastal National Monument and DOI plays an important role in ensuring safe and responsible energy development in our coastal areas and offshore waters.

In addition, Interior Bureaus provide robust scientific programs that inform decisions and reduce risk; ensure safe and responsible development of natural, mineral and energy resources; promote healthy and productive ecosystems through informed management and monitoring; protect native species and their habitats; preserve rich cultural and recreational opportunities for the public; and support Tribal, state, regional and local partnerships.

In the past 2 years, the DOI invested more than $50 million from the Land and Water Conservation Fund to acquire and conserve nearly 20,000 acres of critical coastal lands for all Americans to enjoy.

See related story about the DOI's coordinated ocean, Great Lakes and coastal team on page 27.

This map shows coastal lands and waters conserved by the Obama Administration since 2015. Photo credit: DOI

Northeast Monument continued from page 1

endangered whales and sea turtles are preserved. *See related story, page 1*.

Three of the underwater canyons are deeper than the Grand Canyon and the underwater mountains, known as seamounts, provide habitat for invertebrates like sponges, corals, octopus, skates, crabs and bottom fish like flounder. Seamounts are some of the most biologically diverse habitats on Earth, and the New England seamounts are known to house many rare and endemic species, several of which are new to science and are not known to live anywhere else on Earth. The canyons and seamounts also attract larger open water marine species, such as sea turtles, marine mammals, tuna, billfish, squid, and sharks.

Bathymetric terrain models, showing measurements of water depth, were created with data collected by several agencies; these data were compiled by the USGS Coastal and Marine Geology Program and published as a collaborative effort between USGS, National Oceanic and Atmospheric Administration (NOAA), and University of New Hampshire. Learn more about the USGS Atlantic Margin bathymetry at *http://pubs.usgs.gov/of/2012/1266/title_page.html*

The Nation's First Ocean Plans!

By Robert LaBelle (BOEM; Mid-Atlantic RPB Federal Co-Lead) and Betsy Nicholson (NOAA; Northeast RPB Federal Co-Lead)

On December 7, the National Ocean Council finalized the Nation's first ocean plans, taking an historic step toward fulfilling President Obama's commitment to healthy ocean ecosystems and a strong, sustainable marine economy. The two regional plans, the Northeast Ocean Plan and the Mid-Atlantic Ocean Action Plan, promote the use of integrated ocean data and best practices for informed and efficient management of the Nation's shared marine resources.

After years of collaboration among States, Tribes, Federal agencies, and Fishery Management Councils, with input from marine stakeholders, the Northeast Ocean Plan and the Mid-Atlantic Ocean Action Plan build on the data provided in the Northeast and Mid-Atlantic Data Portals, which are publicly accessible and provide new maps and data products. The plans also describe best management practices to guide effective interagency coordination and to ensure that agencies have the data needed to inform planning and environmental review of new activities. This approach is designed to work across all levels of government and to advance economic, environmental, and cultural priorities within each region. The plans are the result of extensive participation from marine stakeholders representing fishing, recreation, energy, transportation, telecommunications, and many other interests. Once implementation begins, the plans will reinforce the commitment to healthy ocean ecosystems and a strong, sustainable marine economy.

White House blog: *https://www.whitehouse.gov/blog/2016/12/07/nations-first-ocean-plans*

Northeast Ocean Portal: *https://www.northeastoceandata.org/*

Mid-Atlantic Data Portal: *http://midatlanticocean.org/data-portal/*

Expansion continued from page 1

conservation area in the United States, the expanded boundaries make it one of the largest MPAs on the planet that is nearly the size of the Gulf of Mexico. Read the full proclamation here: *https://www.whitehouse.gov/the-press-office/2016/08/26/presidential-proclamation-papahanaumokuakea-marine-national-monument*

The expansion provides critical protections for more than 7,000 marine species and is also considered a sacred place for the Native Hawaiian community. Important geological features of the expansion area include more than 75 seamounts, as well as a nonvolcanic ridge that extends southwest towards Johnston Atoll. Together, these features form biodiversity hotspots in the open ocean that provide habitat for deep-sea species, including sponges, other invertebrates, fish, and corals—some of which are thousands of years old. Albatrosses (*Diomedea* spp.) and Great Frigatebirds (*Fregata minor*) rely on the expansion area while feeding their chicks, when their foraging is focused within 200 miles of the nesting colonies on the Monument's islands. The expansion area is also a foraging and migration path for five species of protected sea turtles.

Additionally, there are sunken vessels (including the USS *Yorktown*) and downed aircraft from the Battle of Midway in World War II, a battle that marked a major shift in the progress of the war in favor of the Allies, within the expansion area.

On September 1, 2016, the President visited Midway Atoll National Wildlife Refuge (Refuge), within the Monument, to mark the significance of the expansion and tour some of the Monument's resources in person. The President visited the memorial to the Battle of Midway, met with island staff, toured wildlife and plant restoration sites, and observed corals and other marine resources while snorkeling. Read President Obama's full remarks from Turtle Beach here: *https://www.whitehouse.gov/the-press-office/2016/09/01/remarks-president-designation-papahanaumokuakea-marine-national-monument*

The Monument was originally created in 2006 by President George W. Bush and designated as a United Nations Educational, Scientific and Cultural Organization (UNESCO) World Heritage Site in 2010. Since that time, scientific exploration has revealed new species and deep-sea habitats in the expansion area, as well as important ecological connections between the existing monument and the expansion area. In addition to marine areas, the Monument includes (1) the Midway Atoll Refuge, (2) the eight atolls, reefs, and islands of the Hawaiian Islands Refuge, and (3) Kure Atoll, which is under the jurisdiction of the State of Hawai'i.

DOI Secretary Sally Jewell and Secretary of Commerce Penny Pritzker also announced that the Departments will soon sign an agreement with Hawaii's Department of Natural Resources and Office of Hawaiian Affairs (OHA), strengthening the coordination of management and adding OHA as the fourth Monument co-trustee.

On September 1, 2016, President Obama visited Midway Atoll National Wildlife Refuge where Refuge Manager Robert Peyton provided geographic reference information on the recent Marine National Monument expansion which was followed by a tour of Turtle Beach. Centennial Celebrations Mark the National Park Service's 100th Birthday!

By Erica Wales (DOI)

Happy 100th birthday NPS! Photo credit: NPS

August 25, 2016, marked the 100th birthday of the National Park Service (NPS). Back in 1916, NPS was created by the "Act to Establish a National Park Service (Organic Act), 1916," giving NPS the duty to promote and regulate parks and monuments in order "to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

In honor of the momentous occasion, national parks from around the country and in the Pacific celebrated the centennial in style and opened the parks for free admission August 25–28. Here are a few ways OGLC parks marked the occasion:

- *American Memorial Park, Saipan*—The park held a Day of Service on Saturday, August 27, where more than 300 volunteers from the American Red Cross, schools, AmeriCorps, and the public assisted with park projects. The volunteers removed invasive vines, cleaned debris, painted the parking lot and amphitheater, and beautified the memorials.
- *Cape Cod National Seashore, Massachusetts*—The seashore held a Seashore Science Day on August 25. The day included a "Science Street Fair" in the morning, where visitors could engage in hands-on, interactive presentations by staff, researchers, and interns; and a "Science in the Seashore Symposium" in the afternoon, where the public heard lectures from scientists on topics including seals, ticks and Lyme disease, landscape management, and climate change.

Glacier Bay National Park tribal house dedication. Photo credit: NPS

Touch tank at Cape Cod National Seashore Centennial celebrations. Photo credit: Kekoa Rosehill

- *Everglades and Dry Tortugas National Parks, Florida*—The Everglades National Park celebrated by hosting Sing Across America events to provide musical entertainment and hosted an exhibit, "This Land is Your Land: A Second Century for America's National Parks," which featured images, videos, and artifacts from Florida parks and preserves. Reenactors at Dry Tortugas National Park highlighted daily life at Fort Jefferson during the Civil War area, and guided tours were given of the 110-foot Motor Vessel *Fort Jefferson*, the primary tender vessel of the park.
- *Cabrillo National Monument, California*—The national monument celebrated with an antique vehicle display, lighthouse postcard painting, guided park tours, NPS trivia, tours of the lighthouse tower, and other events to highlight the history of the NPS and the New Point Loma Lighthouse at Cabrillo.
- *Glacier Bay National Park, Alaska*—The park celebrated with a dedication of the Huna Tribal House (Xunaa Shuká Hít), which featured carvings, hand carved dugout canoes, traditional songs and regalia, Tlingit oratory, traditional ceremonies and dances, and the rhythm of drums.

Climate Change Threatening Alaska Coastal Villages

Denali Commission Approves Funding

By Randy Bowman (DOI)

During the first-ever Presidential visit to the U.S. Arctic last fall, President Obama designated the Denali Commission, a Federal Regional development agency, as the lead Federal contact for Alaska Native Villages threatened by erosion, flooding, and other issues resulting from climate change. This was in response to recommendations from the Arctic Executive Steering Committee, established by E.O. 13689 to coordinate Federal Arctic policy, to designate the Commission as the lead contact and similar previous recommendations for a lead agency designation from the Government Accountability Office.

*The Denali Commission is providing $6,650,000 in new funding. Most of this will go to the four most immediately threatened villages—**Newtok, Kivalina, Shaktoolik, and Shismaref**—with slightly more than $1.5 million held as a contingency fund for unexpected developments.*

The village of **Newtok**, located between the Ningliq River and the Bering Sea, is eroding away and unlikely to be a viable site within 4 to 5 years. The village is in the process of relocating to a new site, called Metarvik, about 9 miles away on higher ground. The Commission approved $3,020,000 to assist this effort. These funds will be in addition to money from the State of Alaska, U.S. Department of Agriculture, DOI's Bureau of Indian Affairs, and Federal Emergency Management Agency previously provided for the village.

Flooding in the village of Newtok during the 2005 Fall Sea Storm. Photo credit: Stanley Tom, Newtok Traditional Council

The funds will be used for preparation of an overall National Environmental Policy Act document for the move; development of a final site plan; geotechnical investigation to supplement existing information for efficient design of roads, building foundations and other infrastructure; development of the quarry to provide stone for construction; design of a bulk fuel storage facility; preliminary design of community power, water, sewer and solid waste facilities; and to serve as matching/gap funds for other related activities identified by the community.

The village of **Shaktoolik** will receive $1,020,000 to be used to support "soft erosion" protection measures and design of a consolidated fuel storage facility above the 100-year flood level, and serve as matching/gap funds for other related activities identified by the community.

The villages of **Kivalina** and **Shismaref** will each receive $520,000 to be used as the local match for existing U.S. Army Corps of Engineers (USACE) funds for a site specific 100-year flood analysis and for design of an armor rock revetment to temporarily protect the islands on which the villages are located.

At all four villages, the funds will also be used to support the existing Community Relocation Coordinator; prepare emergency response plans, conduct emergency drills, and as matching/gap funds for other related activities identified by the community.

The Commission also allocated $490,000 for other to-be-determined threatened communities and $1,080,000 for a Statewide Disaster Response Fund that can be used to respond quickly, or to provide matching funds to complement other funders for disaster response and recovery and other statewide initiatives related to the problem.

Celebrating the Next Phase of Everglades Ecosystem Restoration

On June 3, 2016, NPS and Florida Department of Transportation (DOT) announced the construction of the 2.6-mile bridge and roadway project in South Florida on the Tamiami Trail with a contract awarded to the joint venture team of Condotte America Inc. and Stantec. This next phase of bridging will allow additional freshwater flow in Everglades National Park, improving ecological conditions both in the park and in the central Everglades north of Tamiami Trail.

The new trail will raise a 2.5-mile section of U.S. Highway 41 in the South Florida region and is the latest milestone in the Obama Administration's efforts to conserve the Everglades' historic and iconic wildlife habitat and water flows.

Secretary Jewell visited Everglades National Park on Earth Day 2016 with President Obama to highlight steps the Administration has taken to act on climate change. "It's a vital piece of this Administration's efforts with our Florida partners to deliver increased flows of clean, fresh water to an area that desperately needs them to make the ecosystem sustainable, including critical marsh lands, Florida Bay and aquifers important to South Florida's water supply. The Everglades is an internationally recognized ecological treasure that we must restore and protect for future generations," said Jewell.

Secretary Jewell and Pedro Ramos visited seagrass beds in Everglades National Park. These iconic wildlife habitats will benefit by restoring historic water flows. Photo credit: Tami A. Heilemann, DOI

Secretary Sally Jewell celebrated Earth Day with Florida DOT District Secretary Gus Pego by announcing the next phase of bridging on the Tamiami Trail in Everglades National Park. Photo credit: Tami A. Heilemann, DOI

"This new bridge is part of the largest conservation effort ever undertaken by the National Park Service and will return water flows to more historic levels, favorably impacting key plant and animal species like the American crocodile and many native birds," said Secretary Jewell, on Earth Day, April 22, 2016.

"The partnership between the NPS and Florida DOT has helped advance the Everglades restoration effort," said Pedro Ramos, Superintendent of Everglades and Dry Tortugas National Parks." The completion of the 2.6 mile bridging project is essential in establishing the natural flow of water to Everglades National Park and Florida Bay."

The event followed Secretary Jewell's conservation speech at National Geographic on April 19, where she outlined a major course correction in how we approach conservation to ensure a bright future for our public lands and waters. Restored Beach Project Supports Science Education and Coastal Community at Virginia Beach

By Marjorie Weisskohl (BOEM)

On July 26, 2016, Bureau of Ocean Energy Management (BOEM) Director Abigail Ross Hopper toured the Virginia Aquarium and Marine Science Center in Virginia Beach, Virginia. Aquarium Executive Director, Lynn Clements, and Director of Conservation Programs, Mark Swingle, briefed Hopper and her team on the Aquarium's in-depth science program, which covers everything from global ecosystems to how the Chesapeake Bay was formed, including information about the oyster beds and other aquatic life living just off the back deck in Owl Creek.

Hopper joined students from the Young Men's Christian Association who were thrilled to be learning about ocean and coastal sciences and conservation through touching sting rays in a touch tank, seeing giant sea turtles and tiny yellow striped frogs, and seeing "Trash-Talking Turtles" made of marine debris from local beaches. Hopper then visited Sandbridge Beach, south of the city, to see the beach and dunes that were restored with sand borrowed from the Outer Continental Shelf (OCS) through BOEM's Marine Minerals Program. Officials from the Virginia Beach Department of Public Works and the USACE, who had been involved in the project, joined her for an informative discussion. Over the years, the Sandbridge project has helped reduce damage to roads and other infrastructure from storms and hurricanes, restored wildlife habitat, and enabled Americans to enjoy the great outdoors.

For more information, visit: *http://www.boem.gov/Marine-Minerals-Program/*

Coastal Parks Adapt to Climate Change

Two new reports from NPS show how coastal parks across the country are devising innovative and unique solutions to adapt to climate change. "Coastal Adaptation Strategies: Case Studies" includes 24 park studies in a variety of settings that describe how they are preparing and responding to climate change impacts. A followup report, "Coastal Adaptation Strategies Handbook," highlights the need to plan for climate change in how we manage America's iconic natural, historic, and cultural landscapes. It is a summary of what scientists and park managers know about climate adaptation in coastal areas and includes processes and tools that parks have available to respond and recover from tropical storms and hurricanes and offers strategies to address rising sea levels.

The case study report highlights different ways NPS is mitigating these coastal impacts such as increased stormy weather, sea-level rise, shoreline erosion, melting sea ice and permafrost, ocean acidification, warming temperatures, groundwater inundation, precipitation, and drought.

Adaptation efforts include preserving historic structures, completing archaeological surveys, collecting baseline data, restoring habitat, engineering solutions, redesigning and relocating infrastructure, and developing broad management plans that consider climate change.

At Olympic National Park, Washington, work is focused on preparing archeological sites and traditional cultural resources, whereas ancient Indian shell mound sites threatened by sea-level rise and erosion are of concern in Florida at the Canaveral National Seashore. At Fort Pulaski National Monument in Georgia, NPS

See Climate Change page 9

Climate Change continued from page 8

is designing a lighthouse stabilization system to incorporate sea-level rise. Gateway National Recreation Area, New York, is restoring Jamaica Bay wetlands, and the National Park of American Samoa is learning to recognize coral adaptations to environmental stressors. At Gulf Islands National Seashore, Massachusetts, large-scale restoration of barrier island systems and cultural resource protection is being done through sediment placement along the northern Gulf of Mexico shoreline. Along the mid-Atlantic shorelines of Maryland and Virginia, NPS is relocating visitor facilities that are threatened by erosion at the Assateague Island National Seashore. In California, NPS is working to develop a multiagency vision for an urban coastline at the Golden Gate National Recreation Area. You can read about more examples here: *https://www.nps.gov/subjects/climatechange/coastaladaptationstrategies.htm*

NPS Coastal Adaptation Strategies Handbook: *https://www.nps.gov/subjects/climatechange/coastalhandbook.htm*

International Partnership Discovers Potentially Producible Gas Hydrate in Indian Ocean

By Alex Demas and Tim Collett (USGS)

USGS has assisted the Government of India in the discovery of large, highly enriched accumulations of natural gas hydrate in the Bay of Bengal during a research expedition, called the Indian National Gas Hydrate Program Expedition 02. This is the second joint exploration for gas hydrate potential in the Indian Ocean and is the first discovery of its kind in the Indian Ocean that has the potential to be producible. The first expedition, also a partnership between scientists from India and the United States, discovered gas hydrate accumulations but in formations that are currently unlikely to be producible.

Natural gas hydrates are a naturally occurring, ice-like combination of natural gas and water found in the world's oceans and polar regions. The amount of gas within the world's gas hydrate accumulations is estimated to greatly exceed the volume of all known conventional gas resources.

"Advances like the Bay of Bengal discovery will help unlock the global energy resource potential of gas hydrates as well help define the technology needed to safely produce them," said Walter Guidroz, USGS Energy Resources Program Coordinator. "The USGS is proud to have played a key role on this project in collaboration with our international partner, the Indian Government."

This discovery is the result of the most comprehensive gas hydrate field venture in the world to date, made up of scientists from India, Japan, and the United States. The scientists completed ocean drilling, conventional sediment coring, pressure coring, downhole logging, and analytical activities to assess the geologic occurrence, regional context, and characteristics of gas hydrate deposits offshore of India.

Although it is possible to produce natural gas from gas hydrates, there are substantial technical challenges, depending on the location and type of formation.

"The results from this expedition mark a critical step forward to understanding the energy resource potential of gas hydrates," said USGS Senior Scientist Tim Collett, who participated in the expedition. "The discovery of what we believe to be several of the largest and most concentrated gas hydrate accumulations yet found in the world will yield the geologic and engineering data needed to better understand the geologic controls on the occurrence of gas hydrate in nature and to assess the technologies needed to safely produce gas hydrates."

The international team of scientists was led by the Oil and Natural Gas Corporation Limited of India on behalf of the Ministry of Petroleum and Natural Gas India, in cooperation with USGS, the Japanese Drilling Company, and the Japan Agency for Marine-Earth Science and Technology. In addition, USGS is working closely with the National Institute of Advanced Industrial Science and Technology Japan on the analysis of pressure core samples collected from sand reservoirs with high gas hydrate concentrations. USGS has a globally recognized research program studying natural gas hydrates in deepwater and permafrost settings worldwide. USGS researchers focus on the potential of gas hydrates as an energy resource, the effect of climate change on gas hydrates, and seafloor stability issues.

Dive Your Park!

SCUBA is an Important Tool for Managing NPS Resources

Many NPS coastal parks are underwater. For example, 95 percent of Biscayne National Park in South Florida is underwater; therefore, park managers and scientists use SCUBA diving to get firsthand understanding of these resources to effectively manage them. This is helpful for a variety of missions, including natural and cultural resource condition assessments, scientific studies, invasive species management, restoration activities, maintenance projects, and law enforcement. During 2015, 20 park divers collectively logged 1,228 dives completed in support of various park missions. These dives account for 39,473 minutes spent underwater; if all that work was done by one person, that person would have spent almost an entire month underwater!

Understanding Benefits from Carbon Storage

Partnering with the Nisqually Indian Tribe

By Mike Murray (USFWS)

The U.S. Fish and Wildlife Service (USFWS) and Nisqually Indian Tribe have restored 902 acres of tidally influenced coastal marsh in the Nisqually River Delta (NRD), making it the largest estuary-restoration project in the Pacific Northwest to date. Marsh restoration increases the capacity of the estuary to support a diversity of wildlife species. Restoration also increases carbon production of marsh plant communities that support food webs for wildlife and can help mitigate climate change through long-term carbon storage in marsh soils.

In order to better understand the benefits of carbon for wetland wildlife and storage in the NRD, in 2015 an interdisciplinary team of USGS researchers began scientific work to advance our ability to determine marsh ecosystem carbon balance and understand wildlife benefits and carbon storage from restored and natural coastal marshes in the NRD.

Messy work! Walking through the thick mud can be exhausting. This researcher takes a break on some solid ground. Photo credit: Mike Murray, USFWS

Walking across the wetland to get out to the study site. The mud came up to the researchers' hips in some parts of the muddy wetland, making it extremely difficult to get out. Plus, they had to get through the mud carrying all the gear they would need for the day. Photo credit: Mike Murray, USFWS

Historic NRDAR Settlement Reached for *Deepwater Horizon* Spill

By Nanciann Regalado (DOI)

On April 20, 2010, the *Deepwater Horizon* oil rig blew up and was consumed by fire. Eleven men died and many others were injured. For 87 days the well spewed oil—a total of 134 million gallons were released into the Gulf of Mexico. Ultimately, more than 43,000 square miles of the Gulf and its shoreline were oiled. The *Deepwater Horizon* oil spill was the worst environmental disaster in our Nation's history. *See related story, page 12.*

As the volume of oil released grew, and the inevitability of widespread injury and death of wildlife became apparent, many people worried whether or not those responsible for the spill would be held accountable. On April 4, 2016, District Judge Carl Barbier approved a settlement for $20.8 billion and effectively ended almost 6 years of litigation over British Petroleum's (BP) responsibility for civil penalties and future litigation for natural resource damages arising from the 2010 *Deepwater Horizon* oil spill. The settlement included provisions for the largest recovery of natural resource damages ever approved for injuries to natural resources.

Under the settlement, BP will pay the Natural Resource Damage Assessment and Restoration (NRDAR) Trustees (five Gulf States and four Federal agencies) as much as $8.8 billion for restoration to address natural resource injuries. The settlement includes the following:

- $1 billion already committed during early restoration.
- $7.1 billion for restoration over 15+ years, beginning in April 2017.
- As much as an additional $700 million to respond to natural resource damages unknown at the time of the agreement, provide for adaptive management, or both.

The settlement also provides an additional $5.5 billion in funding from Clean Water Act civil penalties. As required by legislation adopted after the spill only 20 percent of those penalties will go directly to the Oil Spill Liability Trust Fund. In accordance with the Resources and Ecosystems Sustainability, Tourist Opportunities, and Revived Economies of the Gulf Coast States (RESTORE) Act, 80 percent or $4.4 billion will be sent directly to a fund specifically established to support the environmental and economic restoration of the Gulf of Mexico. The remainder of the $20.8 billion total of the settlement includes claims under the False Claims Act, royalties and reimbursement of natural resource damage assessment costs, and other expenses due to the incident.

The USFWS and NPS played a critical role in assessing injuries to Federal lands and other natural resources that were caused by the *Deepwater Horizon* oil spill. They not only assessed injury to the Refuges and national parks all along the Gulf coast but also assessed injury to migratory birds, threatened and endangered species, some jurisdictional fish, and natural resource services, such as recreational use of Federal lands.

Other parts of the *Deepwater Horizon* oil spill injury assessment were completed by our fellow Trustees; for example, the NOAA assessed the spill's effects on the water column, deep sea environment, and marine mammals. Together, the Trustees undertook an ecosystem-based approach to assessing and restoring the natural resources injured by the spill.

The injury assessment shaped the restoration plan approved by the Trustees in March 2016. The "Programmatic Damage Assessment and Restoration Plan and Programmatic Environmental Impact Statement" provides a framework for future restoration strategies, plans, and projects. It identifies five restoration goals: restore and conserve habitat; restore water quality; replenish and protect living coastal and marine resources; provide and enhance recreational opportunities; and provide for monitoring, adaptive management, and administrative oversight to support restoration implementation. The programmatic plan also identifies 13 restoration types that will address the injury experienced by the Gulf's natural resources: wetlands, coastal, and nearshore habitats; habitat projects on federally managed lands; nutrient reduction; water quality; fish and water column invertebrates; sturgeon; submerged aquatic vegetation; oysters; sea turtles; marine mammals; birds; mesophotic and benthic (low light and ocean floor) communities; and provide and enhance recreational opportunities.

The *Deepwater Horizon* oil spill settlement is bringing an unprecedented amount of restoration funding to the Gulf of Mexico. For the NRDAR funds, the schedule for payment extends across more than 15 years. There will be much work to do and much to learn over the next two decades. We look forward to sharing our successes and lessons learned.

The *New Carissa* Oil Spill—Restored from Environmental Disaster

By Elizabeth Materna (USFWS)

During a major winter storm in 1999, the freighter *New Carissa* ran aground on a beach near Coos Bay, Oregon. The vessel spilled 140,000 gallons of heavy fuel oil and created one of the worst ecological disasters in Oregon's history—killing an estimated 2,875 seabirds and 40 different types of shorebirds, including 262 threatened marbled murrelets (*Brachyramphus marmoratus*) and several threatened western snowy plovers (*Charadrius alexandrinus*).

Although the oil spill was a natural resource disaster, it created a legacy of restoration in its wake. Working closely with the other Federal and State agencies and two tribes, USFWS developed a suite of projects to restore species and habitats affected by the spill. *See related story, page 11*.

The largest project involves the purchase and management of 4,300 acres of coastal forest for nesting marbled murrelets. Other projects include:

- Monitoring colonies of nesting seabirds for predators in order to trap and remove problem individuals.

Shorebirds return to the Ni-les'tun unit in Oregon. Photo credit: USFWS

New Carissa oil spill. Photo credit: USFWS

An oiled murre killed by the *New Carissa* oil spill. Photo credit: USFWS

- Purchasing predator-proof trash cans to help control predators near seabird colonies along with signage to inform people that leaving trash can lead to increased mortality of chicks.
- Creating a smartphone app to teach Oregon coast beachgoers about nesting seabirds.
- Producing 60 interpretive panels to be placed at State parks and waysides along the Oregon coast to teach people about seabird biology, conservation, and the need to leave nesting colonies undisturbed.
- Restoring 400 acres of tidal marsh at Bandon Marsh Refuge.
- Restoring 30 acres of coastal dune habitat for nesting Western Snowy Plovers.

Thanks to this multiagency effort led by USFWS, devastating effects from the *New Carissa* oil spill have been lessened by a suite of projects designed to restore habitat, protect nesting seabirds, and educate the public about marine resources along the Oregon coast.

Historic Anchor Discovered During the Decommissioning of an Oil and Gas Platform

By Christopher Horrell (BSEE)

The trawl vessel was dragging the seafloor during the final stages of decommissioning an oil and gas platform in the Gulf of Mexico. It was a routine mission in 70 feet of water depth about 40 nautical miles off the coast of Louisiana—part of a comprehensive effort to fulfill the platform operator's legal requirement to bring the leased parcel of seafloor back to prelease conditions. Dragging the bottom usually results in the retrieval of sections of pipe, bumper tires, and random pieces of metal, but during one of the net pulls, something unusual was spotted: an historic anchor from the age of sail.

The next step should have been to cease operations and notify the DOI's Bureau of Safety and Environmental Enforcement (BSEE). Specifically, the Federal regulation instructs those who "discover any archaeological resource while conducting operations in the lease or right-of-way area" to "immediately halt operations within the area of the discovery and report the discovery to the BSEE Regional Director." Instead, the anchor was brought to Port Fourchon, Louisiana, where the operator's company representative contacted his supervisor, who then claimed the anchor for his private collection, displaying it beside his backyard pool.

Time had definitely left its mark on the anchor, although it was pretty well intact after many years beneath the water's surface. What the boss may not have known, however, is that iron submerged in seawater will come to a stable equilibrium over time. Once anything iron is removed from the marine environment and begins to dry out, the chlorides from the seawater that have permeated the iron structure will start to expand. At that

See Historic Anchor page 13

Historic Anchor continued from page 12

point rapid deterioration begins. For this reason, archaeologists typically keep metal artifacts such as anchors submerged in seawater tanks until conservation efforts can begin.

In compliance with U.S. regulations, the platform operator filed a report listing the variety of items retrieved by the trawler, including the anchor. BSEE's Historic Preservation Program within the Office of Environmental Compliance was called, and an archaeologist at BSEE asked for a photo of the anchor and its current location. The photo confirmed an unusual find, possibly from the 19th century, but it would have been very unlikely that a ship of that era would have laid anchor 40 miles offshore in 70 feet of water. It was more likely to be evidence of a dire situation at sea more than 200 years ago, possibly a shipwreck. The anchor appeared to be an early 19th century Admiralty Anchor.

By listing the anchor, the operator avoided a variety of more serious violations, but the find was not handled in accordance with Federal regulations. The platform operator responded immediately once the violations were pointed out. An Incident of Noncompliance—BSEE's version of a citation—was issued along with a Corrective Action Order. The order required the operator to provide funds for the transportation, conservation, and long-term curation of the anchor. Additionally, the operator was ordered to complete a high-resolution remote sensing survey using a magnetometer, side-scan sound navigation and ranging (sonar), and subbottom profiler to identify any other remains of a potential shipwreck at the site.

Time was the enemy; deterioration had begun.

BSEE needed to find the best organization to restore and preserve the anchor. The operator, in coordination with BSEE, put together a conservation and curation plan for the anchor. BSEE's

Conservation of the historic anchor should have begun with its discovery during decommissioning operations. (*A*) and (*B*) The anchor was inappropriately transported to a private residence and began to deteriorate. (*C*) Dr. John Bratten and his students from UWF worked to conserve the anchor. (*D*) Through conservation, the name R. Flinn and a number appear on the crown and shaft of the anchor. Photo credits: John Bratten (Univ. of West Florida) and Christopher Horrell (BSEE)

Historic Preservation Program worked with the operator and the University of West Florida's (UWF) Archaeology Institute. The anchor, it was decided, should become the permanent property of UWF, where it would receive proper treatment and be used as a teaching tool for students.

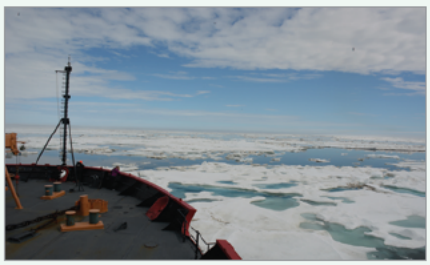
During the conservation process, as decades of fouling were carefully removed, the name R. Flinn was discovered on the crown of the anchor. After completing historical research, UWF maritime archaeologist Dr. John Bratten and his students discovered that Robert Flinn manufactured chains and anchors in England up until 1826. We now knew the anchor was well over a century-and-a-half old, dating to a time that was somewhere around the War of 1812. *See related story, page 16.*

In addition, several promising targets of a potential shipwreck were identified during the high-resolution remote sensing survey. BSEE archeologist and scientists, who are members of the Seafloor Compliance Monitoring Assessment Program and the BSEE Scientific Diving Program, mobilized to investigate the targets. Nothing of interest was located, so BSEE determined that the anchor was an isolated find and that a shipwreck was not present in the area where the trawling activities had occurred.

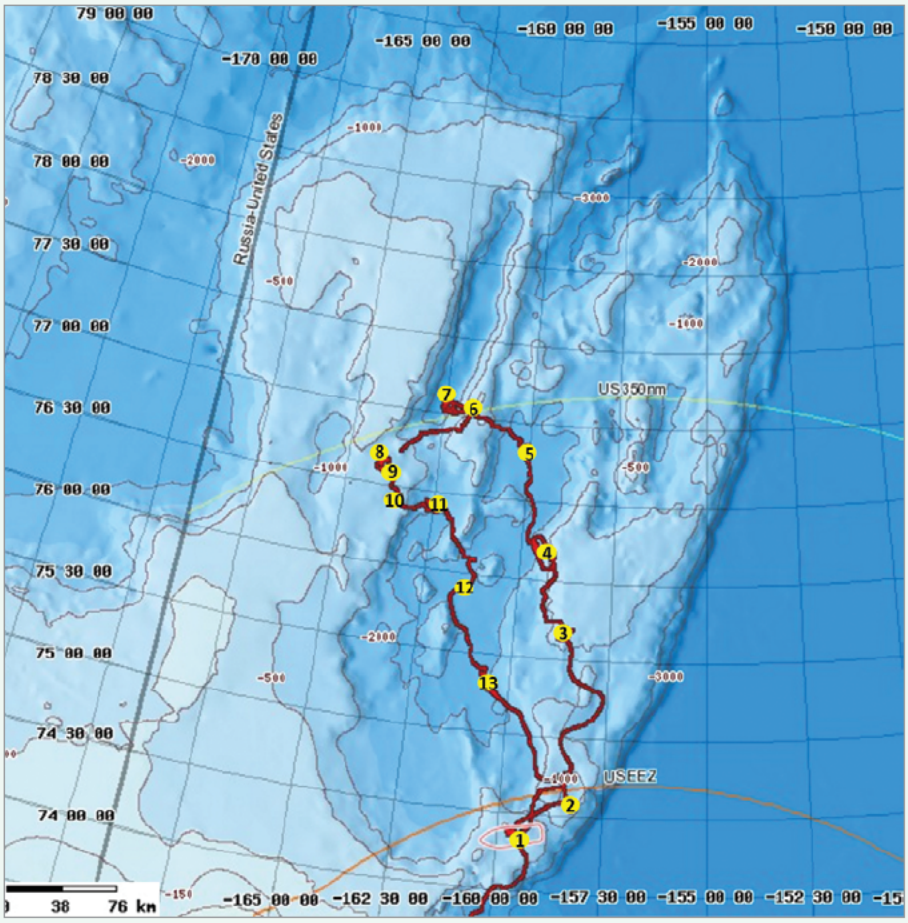
While the anchor tells the story of continued human use of the sea and connects us across the centuries, the story of the Flinn anchor also has raised awareness about preserving marine artifacts because other anchors have been reported since that event. It seems like offshore industry is now more aware of their responsibility to stop working when they encounter a marine artifact. That's good news.

What to do if you find historic maritime artifacts: *https://www.bsee.gov/sites/bsee.gov/files/research-guidance-manuals-or-best-practices/fact-sheet/guidance.pdf*

Hidden Ocean 2016—Arctic Science Discovery



Above: Kate Segarra, an oceanographer for BOEM, was aboard the *Healy* in the Arctic Ocean for 40 days this summer. The view of the ice-covered Chukchi from the deck of the *Healy*. Photo credits: Kate Segarra, BOEM



At right: This map displays all 13 stations visited and sampled in the Chukchi Borderlands during the Hidden Ocean 2016 expedition. Image credit: Katrin Iken, UAF, and The Hidden Ocean 2016: Chukchi Borderlands

By Kate Segarra (BOEM)

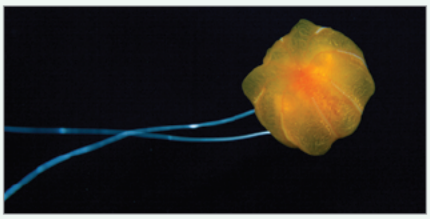
This summer, I had the opportunity to sail aboard the U.S. Coast Guard Cutter *Healy* as part of the Hidden Ocean 2016, a NOAA-led expedition from Seward, Alaska, north into the Chukchi Sea. In the Chukchi Borderlands, water masses from the Pacific, Atlantic, and Arctic Oceans converge over an area of complex bathymetry. The primary focus of the Hidden Ocean 2016 was to explore this rapidly changing and poorly understood ecosystem. The science party was led by chief scientists, Dr. Russ Hopcroft and Dr. Katrin Iken, of the University of Alaska Fairbanks (UAF). Using both traditional oceanographic methods (such as nets, CTD package, and box cores) and a remotely operated vehicle (ROV) equipped with ultrahigh-resolution video camera, known as 4K, the science party explored the pelagic and benthic biodiversity of the Chukchi Borderlands. The study subjects ranged from the microbial communities within sea ice to the polar bears that hunt upon it. The science party also included a seabird surveyor from USFWS, Elizabeth Labunski. As expedition coordinator for the cruise, I served as a liaison for NOAA's Office of Ocean Exploration and Research during the expedition. I worked very closely with the science party to track mission progress and communicate detailed updates to our colleagues back on shore.

The Arctic is warming at a rate around twice that of the global average (*see related story, page 6*). In the weeks leading up to the cruise, data suggested that 2016 was on track to set the record for the lowest Arctic sea ice extent. Now that the melt season is over, 2012 still holds that title; 2016 tied for second with 2007 since records began in 1979. It's a depressing statistic, especially when one sees how critical sea ice is to these ecosystems; however, low sea ice does not mean no sea ice. Although there was a great deal of open water during our expedition, there were also plenty of patches of thick ice in the Chukchi. One ice floe was so thick (more than 4 meters in some places) that it took the *Healy* almost 4 days to break its way out of it.

While I was detailed on assignment with the NOAA for this cruise, the *Healy* experience will certainly enhance my work as an oceanographer for the BOEM. I have a new perspective on the Arctic research

A juvenile walrus swims up for a closer look at the *Healy*. Photo credit: Kate Segarra, BOEM

This is one of several (less than 10) polar bears observed during the expedition. Photo credit: Kate Segarra, BOEM



This is an undescribed ctenophore photographed in the water column by the ROV. Photo credit: The Hidden Ocean 2016: Chukchi Borderlands and Oceaneering-Deep Sea Systems International

completed through our Environmental Studies Program; for example, Hanna Shoal is an ecologically important region on the Chukchi Plateau and described as a "walrus hotspot" in many environmental assessment documents. As we came upon Hanna Shoal in the faint light of the midnight sun, I saw what I thought were patches of dirty ice on the horizon. As we came closer, I realized those patches were walrus. There were at least 100 walrus in this one small area where they forage on the bountiful clam beds below. There were many similar examples of sightings and experiences, which brought life to textbooks and policy papers I'd previously read.

I understand now how, after the failure of the *Endurance* expedition and more than 1 year stuck in the ice, Shackleton returned to Antarctica for more. Not only is there a rhythmic zen to ship life, but the sense of discovery and adventure of this cruise was intoxicating. In just a few short weeks, the expedition collected at least six jellyfish and ctenophores that may represent new species. Of course "new" is a bit of a misnomer—these graceful animals were around long before human existence. The correct taxonomic term is "undescribed." It will take members of the science party months to years to write the species description papers. It's funny to think how these strange creatures are still floating out there, waiting to be announced to the rest of the world. These and other discoveries from this cruise will greatly improve the understanding of this underexplored region. The Hidden Ocean 2016 will also serve as a comparison for past and future surveys of the region to allow scientists to examine how the ecosystem is changing over time, and whether or not climate change is a predominant factor.

We left the last of the Chukchi Sea ice behind around 01:00 on August 4. Forty days on a ship seemed like a long time before we left Seward in early July. But, as we transited back south at the end of the cruise and I watched the last few lone pieces of sea ice floating in the twilight, I wished we could turn around and do it all over again. I guess I'll have to wait until the next Arctic adventure.

To learn more about the Hidden Ocean 2016 Expedition, please visit: *http://oceanexplorer.noaa.gov/explorations/16arctic/welcome.html*

New Arctic Fish Species Inventory

USGS and BOEM recently released a report describing 109 marine fish species from the Chukchi and Beaufort Seas. Twenty of the fish species are newly confirmed, and the inventory includes 104 new descriptions that include distribution maps and life cycles.

The report summarizes the natural history of the species and discusses adaptations and limitations of fish populations in the Arctic. The information in the report will be used by BOEM, who requested the research carried out by USGS and the University of California, Santa Barbara, to evaluate potential environmental effects of oil and gas development offshore. Natural resource managers can also use the research to identify high-priority marine fish species to help guide future research, management, conservation, and environmental policy.

Keeping in mind the native and indigenous peoples of the Arctic, the report includes Inupiat names for the marine fish species. Salmon, whitefish, and char are used for subsistence and are key species for food security of Native Alaskan communities.

Read the report, "Alaska Arctic Marine Fish Ecology Catalog: Beaufort and Chukchi Seas," here: *https://pubs.er.usgs.gov/publication/sir20165038*

USGS Researchers Study the Effects of Trawling on Sediment Resuspension

The fishing industry commonly uses trawling, a practice where large nets with metal doors and chains are dragged over the seafloor to catch fish. Because the equipment comes into direct contact with the seafloor, great environmental damage can be done (including removing seafloor dwelling marine life and resuspending sediment). Sediment in the water column can change the chemistry of the water (including nutrient levels), reduce light levels, and lower photosynthesis in plants. The resuspended sediment can be washed away by ocean currents, either deposited elsewhere on the shelf or in deeper waters and lost to the local environment. Removing sediment and changing the seafloor to rock removes habitat and lowers the diversity of life located within the seabed. Scientists have studied how bottom trawling can hurt the marine environment, especially the effects on corals, sponges, fishes, and other animals; however, little research has been done on the effects of bottom trawling on the seabed itself. *See related story, page 12*.

While the seabed had been previously labeled as "trawled" or "untrawled" in studies, USGS researchers have developed a new method for calculating bottom-trawling-induced sediment resuspension, which allows for a range of classifications according to how often the seafloor was disturbed by bottom trawling. This new method of calculation provides a new tool for seafloor management and can help assess effects from bottom trawling. The researchers calculated how much sediment from the seafloor was resuspended during bottom trawling and determined the amount was about the same as the amount of sediment rivers deposit on the continental shelf (almost 22 gigatons).

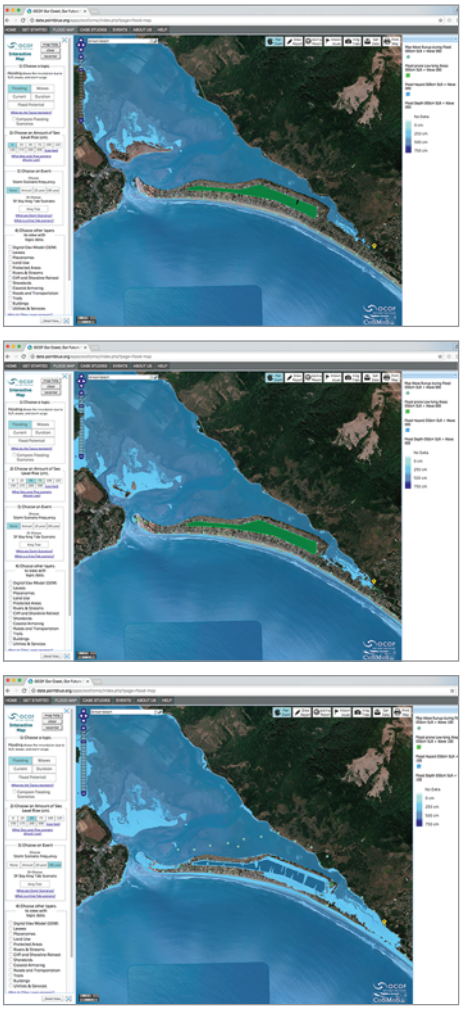
Helping Communities Understand Future Coastal Hazards

By Juliette Finzi Hart (USGS)

With the stunning beauty of our coastline throughout the United States and its territories, it's no surprise that many people want to live along the coast. This coastal living, however, comes with vulnerability to impacts from



Examples of projections from the OCOF viewer for Stinson Beach in San Francisco for daily conditions for a day in October 2016 (top), daily conditions plus 50 centimeters of sea level rise-expected by about mid-century (center), and a 100-year (or 1 percent) storm with 50 centimeters of sea-level rise (bottom). These projections demonstrate how neglecting to plan for storm impacts could lead to a substantial underestimation of risk along the coast. Image credits: OCOF, CoSMoS Model Results Product Suite

See Help for Coastal Hazards page 17

Help for Coastal Hazards continued from page 16

natural hazards, such as hurricanes, winter storms, tsunamis, and erosion of beaches and coastal cliffs. Climate change will intensify these hazards. Even today, many coastal communities along the east coast are experiencing increased nuisance flooding—also referred to as sunny-day flooding—in which streets and infrastructure flood simply because of high tides or windy days. This flooding has been exacerbated in recent decades by sea-level rise. U.S. coastal communities look to expertise from USGS to provide cutting-edge projections of natural hazard impacts today and into the future.

On the west coast of the United States, the USGS Pacific Coastal and Marine Science Center's Coastal Processes Team, led by Patrick Barnard and a group of 10 modelers, geologists, engineers, and oceanographers, has developed the Coastal Storm Modeling System (CoSMoS, *http://walrus.wr.usgs.gov/coastal_processes/cosmos/*) to help the 20 million residents of California coastal communities understand their vulnerabilities from storms and sea-level rise. CoSMoS is a state-of-the-art modeling system that models all the relevant physics of a coastal storm (for example, tides, waves, and storm surge), which are then scaled down to local flood projections. Rather than relying on historic storm records, CoSMoS uses wind and pressure from global climate models to project coastal storms under changing climatic conditions. Projections of multiple storm scenarios (daily conditions, annual storm, 20-year and 100-year return intervals) are provided under a suite of sea-level rise scenarios ranging from 0 to 2 meters, along with a catastrophic 5-meter scenario. This allows users to manage and meet their own planning horizons and specify degrees of risk tolerance.

To ensure that the modeling results meet the needs of the coastal communities it serves, the USGS has been working with a diverse group of partners and stakeholders to support the development of climate change impact plans through the Our Coast, Our Future (OCOF) program (*http://ourcoastourfuture.org*). The OCOF is a partnership among USGS, Point Blue Conservation Science, Greater Farallones National Marine Sanctuary, NOAA's Office for Coastal Management, National Estuarine Research Reserve System, Bay Area Ecosystems Climate Change Consortium, NPS, and Ecosystem-Based Management Tools Network. By working closely with Point Blue Conservation Science to develop the OCOF website and flood map, USGS is delivering tools and information that can inform California coastal communities about managing coastal flooding risks across the California coast. The OCOF web resources provide a user-friendly format in which coastal professionals and stakeholders are able to access and use information from the CoSMoS model for short- and long-term climate change planning.

Patrick Barnard (right) discusses some of the initial projections for Venice and Marina del Rey with City of Los Angeles planning officials at a recent AdaptLA meeting, cosponsored by the City of Santa Monica and USC Sea Grant Program. Photo credit: Holly Rindge

To date, OCOF has directly served 14 San Francisco Bay Area communities/counties by supporting climate adaptation planning projects. Both CoSMoS and OCOF are recognized as leading tools and sources of information for short- and long-term planning by California State agencies, such as the California State Coastal Conservancy, California Coastal Commission, California DOT, and California's Office of Emergency Services. The CoSMoS results are also being used by researchers at University of California, Berkeley and other local universities to identify vulnerability at finer scales for use by planners, emergency personnel, and natural-resource managers.

Earlier this year, the CoSMoS team was honored with the 2016 Point Blue Outstanding Partner Award. Accepting on behalf of the CoSMoS team, Barnard noted, "Working with Point Blue and all of our partners throughout the S.F. Bay Area has helped our group better understand what kind of information coastal communities need to prepare for natural hazards today and with climate change. We are honored to have received this tremendous accolade from Point Blue Conservation Science."

In 2014, the CoSMoS team began developing projections for southern California, from Santa Barbara to the United States/Mexico border. Results from this modeling will be released in fall 2016. Following the OCOF example from northern California, the CoSMoS team has established partners throughout southern California, such as the University of Southern California's (USC) Sea Grant Program, AdaptLA, and San Diego Regional Climate Collaborative, to engage coastal communities and fine-tune model projections and products to meet their needs. New work along the central coast of California will begin in winter 2017, which will lead to methodologically consistent coverage of nearly all the California coastline.

River Herring Return to Saugatucket River

By Samantha Spiece (DOI)

For the first time in decades, during the 2016 spring migration, tens of thousands of river herring were able to migrate up Rhode Island's Saugatucket River without the help of humans lifting them over a dam.

River herring are born in freshwater ponds and lakes and then swim out to sea where they spend years growing to adulthood before returning to their birthplace to spawn. Unfortunately, for many years, river herring migration routes have been blocked along the Saugatucket River, where dams and mills stop the natural follow of water, serving as barriers between river herring and the freshwater lakes they need to reproduce. Over time, disruptions in migration have drastically reduced river herring populations. This is unfortunate for other species, such as otters, ospreys, and striped bass that rely on river herring as a primary food source.

One way to restore the food chain and bring back the fish is to help fish get around the barriers by building fish ladders. Settlement funds from the 1996 North Cape oil spill off South Kingstown combined with financing through a host of Federal, State, and private partnerships provided $772,000 to improve fish passage at the three barriers. USFWS staff from Fish and Aquatic Conservation (Bryan Sojkowski), Wildlife and Sport Fish Restoration (Colleen Sculley), and Ecological Services (Molly Sperduto) collaborated to provide technical assistance and funding for the effort. The new fish ladders make it easier for the river herring to navigate their way from the ocean to these important inland breeding areas.

For more information: *http://ripr.org/post/fishways-improved-along-saugatucket-river-wakefield*

Hughesville Dam Removal—Improving the Environment and Human Safety

By Cathy Marion (USFWS)

On September 8, 2016, DOI Secretary Sally Jewell joined Federal, State, and local partners to celebrate the $1.5 million Hughesville Dam removal project on the Musconetcong River in Warren and Hunterdon Counties, New Jersey. Located 3.5 miles upstream from the confluence with the Delaware River, the Hughesville Dam—18 feet tall and 150 feet wide—was built in 1889 to generate hydropower for local paper production but has not been in operation since 1999.

Secretary Jewell's visit was organized to highlight efforts by the Obama administration to work with local governments and private dam owners to remove obsolete dams. Functioning dams are intended to store and divert water, processes that can provide humans with benefits, such as drinking water, hydropower, irrigation, and flood control. However, the vast majority of dams in the United States are aging and obsolete, no longer serving the purpose that they were built to provide decades or centuries ago.

The cost of repairing and maintaining obsolete dams can be substantial and is often more expensive than removal. Additionally, the environmental costs of dams are high. Dams fundamentally alter rivers by blocking and slowing the flow of water, and they degrade water quality by increasing water temperature, increasing nutrients and algal blooms, and retaining sediments and environmental contaminants. Many fish and other aquatic species are sensitive to the habitat changes caused by dams. As a result, we often see decreases in resident fishes in dammed rivers and decreases in migratory fishes that are physically blocked from their historic spawning and rearing grounds. The

See Hughesville Dam Removal page 19

Hughesville Dam Removal continued from page 18

Secretary Jewell visited the Hughesville Dam removal site in September 2016. Photo credit: Tami A. Heilemann, DOI

Hughesville Dam removal will permanently open up 9 river miles of habitat for migratory fish species, such as American eel, American shad, and river herring, and will generally improve water quality and habitat conditions for numerous resident fish species.

In addition to ecological benefits, the Hughesville Dam removal will help ensure the safety and well-being of people living in nearby communities by reducing the risk of flooding. It is projected that the Hughesville Dam removal has the potential to reduce local flood events by 1 to nearly 10 feet. Furthermore, the removal will improve water quality for humans and wildlife; reduce drowning risks associated with low-head dam hydraulics; and improve fishing, boating, and other recreational activities.

The Hughesville Dam will be the fifth dam removed on the Musconetcong River. The removals are part of a larger partner-based effort to restore the 42-mile Musconetcong River—designated as a "Wild and Scenic River"—to a free-flowing state. Funding for the Hughesville Dam removal comes from settlement funds under the Natural Resources Damage Assessment and Restoration Program for the Combe Fill South Landfill Superfund Site and Federal funds from the Hurricane Sandy Disaster Relief Appropriations Act of 2013.

National Parks for Marine Science Education

By Gary Bremen (NPS)

One of Biscayne National Park's main goals for celebrating the Centennial of the NPS was to more fully integrate the agency's resources into marine science classrooms nationwide. Park staff worked to increase the agency's presence at the National Marine Educators Association's annual conference where some 500 teachers, aquarium staffs, and informal educators from parks and nature centers gather each summer. The effort started at 2015's conference in Newport, Rhode Island, with a small sponsorship and grew considerably when NPS became a major sponsor of the 2016 conference in Orlando with financial support from the NPS's Water Resources Division and logistical support from the Ocean and Coastal Resources Branch.

Staff from four national parks attended the conference and presented on topics like climate change, invasive species, citizen science light monitoring in sea turtle nesting areas, and sex underwater. Park volunteers staffed a booth sharing information about the 88 ocean, Great Lakes and coastal parks. A conference highlight was the keynote Stegner Lecture, which annually features an inspirational closing to 3 days of concurrent sessions. This year's lecture used storytelling and music to highlight some of the many reasons national parks matter—not simply for protecting wildlife, scenery, and history, but also for building bonds of connection among families and friends. A nighttime field trip to Canaveral National Seashore was almost rained out, but those who went got to witness five turtles coming ashore to nest.

The centennial is nearly over, but the groundwork for future participation is set. Other projects generated at the conference are in the works, including

one with elementary schools, universities, and national parks in Florida and the Netherlands to release data-gathering miniboats that circumnavigate the Atlantic Ocean, and participation in the 2016 Youth Ocean Conservation Summit (held on December 10, 2016, *http://youth-oceanconservationsummit.weebly.com/2016-summit.html*) included not only the summit itself but also follow-up field trips to Biscayne National Park in the spring of 2017.

Chesapeake Bay Science

The Chesapeake Bay is our Nation's largest estuary with an enormous watershed extending from New York to Virginia. The continued restoration and protection of this national resource is a priority for designated Federal and State agencies and non-governmental stakeholders through the Chesapeake Bay Program (CBP). Given the ecologic and economic importance of the Chesapeake Bay, in 2009, President Obama issued an Executive Order for increased Federal leadership to restore and protect the Bay and its watershed.

The Chesapeake Bay watershed spans six States and the District of Columbia. Image credit: EPA

DOI is an important partner in this effort, with USGS and USFWS providing resource science and management guidance. The USGS has the critical role of providing scientific information for improved understanding and management of the Bay ecosystem and working with Federal, State, and academic science partners to provide research, assessment, monitoring, and modeling. *See related story, page 21.*

USGS Chesapeake Bay science activities are grouped under four major topics:

- Land and Climate Change—Forecast and assess impacts of climate and land-use change.
- Water Quality—Assess and explain water-quality conditions and change.
- Fish, Wildlife, and Habitats—Document the status and change of the health of fish, wildlife, and critical habitats.
- Decision Support—Promote adaptive management and decision support to enhance ecosystem management.

Intersex Fish Characteristics are Linked to Water Quality

USGS fish biologist, Vicki Blazer, brought her team to the Shenandoah River in Front Royal, Virginia, to collect and study smallmouth bass (*Micropterus dolomieu*), a species in which intersex characteristics have been linked to chemical contaminants in the Chesapeake Bay region.

Intersex conditions occur when exposure to chemicals disrupts the hormonal systems of an animal, leading to the presence of both male and female characteristics in an animal that should exhibit the characteristics of just one sex in its lifetime. In the case of smallmouth bass, male intersex fish are found with immature eggs in their testes, which indicates exposure to estrogenic and antiandrogenic chemicals.

"The sources of estrogenic chemicals are most likely complex mixtures from both agricultural sources, such as animal wastes, pesticides and herbicides, and human sources from wastewater treatment plant effluent and other sewage discharges," says Blazer, who first discovered intersex characteristics in fish while studying fish kills in the South Branch of the Potomac River and the Shenandoah River.

Science Seminar on Nutrients and Suspended Sediment Loads

USGS scientist Doug Moyer delivered the seminar, "Nitrogen, Phosphorus and Suspended Sediment Loads and Trends Measured at the Chesapeake Bay Non-Tidal Network Stations," as part of the University of Maryland's Center for Environmental Science Integration and Application Network (IAN) Seminar Series.

You can tune into the University of Maryland's Center for Environmental Science IAN Seminar Series and find Doug Moyer's presentation here: *http://ian.umces.edu/seminarseries/seminar/117/usgs_watershed_monitoring_results_2016-02-25/*

The goal of the IAN Seminar Series is to provide concise, thought-provoking ideas related to Chesapeake Bay science and management. Short presentations (less than 15 minutes) are immediately followed by a lunchtime discussion of the presentation. Each discussion is summarized and posted along with a PDF version of the seminar slides. The seminars also are captured on video and posted under a Creative Commons license so they can be freely shared.

Restoring Wetlands on Agricultural Lands within the Chesapeake Watershed

By Jennifer Greiner (USFWS)

Healthy wetlands are vital to a healthy Chesapeake Bay. Located where land meets water, wetlands trap polluted runoff and slow the flow of nutrients, sediment, and chemical contaminants into rivers, streams and the Bay. By soaking up storm water and dampening storm surges, wetlands slow the erosion of shorelines and protect properties from floods. Wetlands also provide critical habitat for fish, birds, mammals, and invertebrates, and support recreational fishing and hunting across the watershed. Land purchases and conservation easements can protect wetland habitat. The removal of invasive species—like phragmites, purple loosestrife, or nutria—can help rehabilitate degraded wetlands.

Between 2010 and 2014, 6,191 acres of wetlands were established, rehabilitated, or reestablished on agricultural lands in the Chesapeake Bay watershed.

In 2014, the CBP adopted a goal to create or reestablish 85,000 acres of tidal and nontidal wetlands by 2025. This goal is based on the wetland restoration targets outlined in the Watershed Implementation Plans that will help jurisdictions meet the goals of the Bay's "pollution diet," or total maximum daily load. Under this target, 83,000 acres of tidal and nontidal wetlands should be created or reestablished on agricultural lands. So far, just more than 7 percent of the goal has been achieved for the wetlands on agricultural lands. *See related story, page 20.*

Microscopic Organisms of the Everglades

By Barry H. Rosen (USGS)

A new report, "Catalog of Microscopic Organisms of the Everglades Part 1: The Cyanobacteria," is part 1 in a series that describes microscopic organisms identified in the shallow wetland areas of the Everglades. The first report describes the cyanobacteria and includes a suite of images with the most current taxonomic treatment of each taxon. Most of the images are of live organisms, allowing their true color to be represented. A number of newly discovered species are illustrated that have not been described before.

The resource will be helpful to other researchers looking at these organisms in subtropical wetlands worldwide. It is anticipated that these images will facilitate current and future ecological studies on the Everglades, such as understanding food-web dynamics, sediment formation and accumulation, the effects of nutrients and flow, and climate change—all of which are needed to effectively manage water resources in the region. *See related story, page 7.*

Read the report: *http://dx.doi.org/10.3133/ofr20161114*

DOI Experts Join International Coral Reefs Community in Hawai'i

By Amy West (USGS)

For a coral reef symposium that happens just once every 4 years, Oahu, Hawai'i, is also the site for a variety of research done by USGS and other DOI partners.

The 13th International Coral Reef Symposium (ICRS), which has been held in the United States only three times during its four decades of existence, drew the largest attendance of any previous symposium—nearly 2,500 attendees representing 90 countries. Participants included a mix of coral reef scientists, resource managers, policy personnel, and even makeup manufacturers and heads of island nations. Topics of talks and posters ranged from potential damage to reefs by sunscreens, to how communities manage their coastal areas, to the threats from bleaching, viruses, and pollution.

USGS scientist Curt Storlazzi explained that the meeting "twenty years ago was all science," and now it includes policy, management, and even social media. "There was clearly a shift," said USGS scientist Christina Kellogg, who noticed the difference from the ICRS meeting held in Florida just 8 years ago. For instance, "microbiology was a minor component of it in 2008," said Kellogg. "But this meeting was crammed with microbiology!"

Several scientific field trips associated with the conference allowed attendees the chance to dive into some "science in action." Storlazzi, along with colleagues from Hawai'i's Department of Aquatic Resources, the University of Hawai'i, and NOAA, co-led a 3-day, 4-night field trip titled, "Managing Maui's MPA's from Watersheds to Co-Management" along West Maui. The participants included scientists, professors and students.

During a scientific field trip associated with the 13th International Coral Reef Symposium, tour participants used SCUBA to explore the north side of Molokini Crater near Maui, HI to observe the area where a large coral bleaching event occurred during the El Niño event of 2015–16. Photo credit: Curt Storlazzi, USGS

They visited Olowalu, a place the USGS determined to be a vital source of coral larvae for West Maui and adjacent islands in Hawai'i. Locals used USGS science to protect this important reef from a large proposed development project. Then the group dove in one of Hawai'i's oldest marine protected areas at Molokini to witness the effect of 2015–16 coral bleaching, which hit Olowalu as well. The tour also visited coral researchers at the island's aquarium: the Maui Ocean Center. The final visit to two sites that have been areas of concern for the U.S. Coral Reef Task Force (USCRTF)—Honolua Bay and Kahekili, both now State of Hawai'i marine protected areas—focused on the deleterious effects on corals from detrimental land-use activities.

Members of DOI played a prominent role in this coral reef meeting. USGS scientists chaired several meeting sessions; scientists from other DOI bureaus, such as NPS and USFWS, also participated by giving talks or chairing science sessions. As it was also the 10th anniversary of the Papahānaumokuākea Marine National Monument (*http://www.papahanaumokuakea.gov/*), managed by both USFWS and NOAA, the meeting helped highlight the threats to these coral ecosystems and benefits in protecting them. *See related story, page 1.*

Hafa Adai! from the Mariana Islands

News from the U.S. Coral Reef Task Force

By Cheryl Fossani (DOI)

In September 2016, the USCRTF held its 36th meeting in the Mariana Islands. This meeting brought together stakeholders and partners to address diverse issues affecting the health of coral reefs in several watersheds in Guam and the Northern Mariana Islands and the communities that rely on them. Governor Torres of the Commonwealth of the Northern Mariana Islands opened the meeting with remarks welcoming the USCRTF to Saipan and expressing the importance of the partnerships formed and accomplishments made through the efforts of the USCRTF. USCRTF Co-Chairs Lori Faeth, DOI's Deputy Assistant Secretary for Policy and International Affairs, and Eileen Sobeck, Assistant Administrator for NOAA National Marine Fisheries Service, also provided remarks about 2016 being a benchmark year for ocean and coral reef conservation.

With more than 200 registered participants, this year's USCRTF meeting was a great success! During the business meeting, the USCRTF heard several presentations that highlighted regional watershed management and coral reef conservation and restoration efforts, as well as coral reef challenges that pose threats on a global scale. Dr. David Burdick, from the Guam Coral Reef Monitoring Program, Dr. Peter Houk, from the University of Guam, and Mr. Marlowe Sabater, from the Western Pacific Regional Fisheries Management Council, informed the USCRTF of the status of coral reefs in the region; and Dr. Charles Birkeland, from the University of Hawai'i, gave a presentation about the future that coral reefs face with climate change and changes in ocean chemistry.

Members of the USCRTF at the business meeting in Guam. Photo credit: Trevor Boykin, University of Guam Sea Grant Program

Bamboo is an invasive species in Guam and causes problems for watersheds, including flooding when the clumps of bamboo fall and dam the river. Watershed workshop participants visited the Manell-Geus watershed and saw firsthand the issue of invasive bamboo and how Guam is working to find solutions to remove the invasive species. Photo credit: Erica Wales, DOI

U.S. Coral Reef Task Force Co-chairs Lori Faeth (DOI) and Eileen Sobeck (NOAA) are accompanied by staff during a visit to the War in the Pacific National Historical Park. Photo credit: Erica Wales, DOI

This year's USCRTF meeting included several site visits and workshops to address coral reef conservation issues specific to the northern Pacific Islands. The USCRTF Watershed Working Group convened a workshop that highlighted issues and management practices associated with sedimentation and stormwater runoff. Coral reefs ecosystems in the Pacific Islands are heavily impacted by sedimentation from many sources, including unpaved roads, unstable stream banks, and large areas of bare ground. During the Watershed Workshop, experts shared presentations and led discussions that focused on successful sediment control strategies and how they can be used locally to help stabilize sediments along stream banks and already entrained in stream channels. After the workshop, participants visited the Manell-Geus watershed to witness the challenges contributing to sedimentation and the mitigation projects currently underway. *See related story, page 22.*

While visiting, Lori Faeth met with National Park Superintendents, USFWS Refuge Managers, and staff, and toured the War in the Pacific National Historical Park and the Guam Wildlife Refuge. This visit offered an opportunity to discuss the local issues affecting coral reef health and how these conservation sites are working to manage and mitigate those issues.

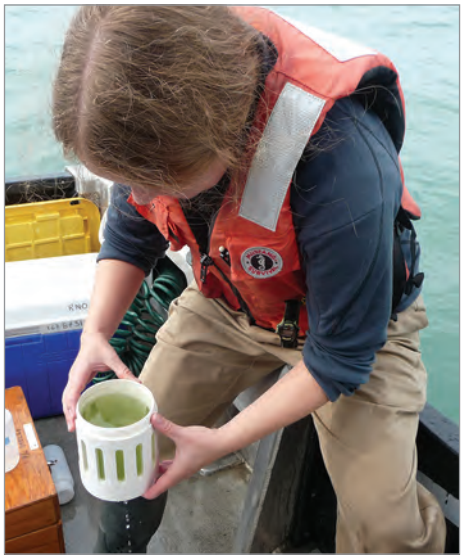
Collaboratives in the Great Lakes Basin—Joining Forces for a Collective Impact

By Josh Miller (USGS)

The Great Lakes ecosystem is divided by an international boundary, eight State boundaries, Tribal and First-Nations lands and jurisdictions, and countless local government boundaries. Though still a productive and stunningly beautiful ecosystem, the region has undergone dramatic changes in the past 200 years as a result of an industrial economy, urbanization, invasive species, and commercial fishing. The complexity of jurisdictions, provision of substantial ecosystem services to innumerable stakeholders (such as the $7 billion fishery), and history of environmental change have made for an extremely challenging system for coastal, nearshore, and offshore natural resource managers.

USGS scientists in the Great Lakes region help managers address large-scale, challenging issues by providing Federal leadership in drawing partners together across jurisdictions and connecting science to management. The USGS Great Lakes Science Center has done this in recent years by establishing formal "collaboratives" that bring together scientists and managers from public, private, and academic sectors on both sides of the international border. These collaboratives rest upon the key elements of "collective impact" as identified by John Kania and Mark Kramer in 2011. The collective impact approach emerged as a method for addressing complex societal problems like childhood obesity, education reform, and restoration of urban watersheds in contrast to "isolated impact," where one actor seeks to solve a complex problem alone or in competition with others. The Great Lakes collaboratives have been built



Dr. Mary Anne Evans, USGS limnologist and algal ecologist, studies the ecology of HABs in the shallow, western basin of Lake Erie and other Great Lakes bays. These HABs have gained increasing attention across the basin in recent years. The issue requires collaboration across vast areas because it spans from farm fields and urbanized landscapes to coastal and open-water ecosystems. Photo credit: Josh Miller, USGS

to address highly complex, natural resource management issues.

One of the issues in the region is the management and prevention of the spread of invasive *Phragmites australis*, or common reed, in coastal and inland wetlands. In partnership with the Great Lakes Commission (a binational and inter-State organization that is the crucial backbone-support role for all the Great Lakes collaborations), the USGS established the Great Lakes Phragmites Collaborative (*http://greatlakesphragmites.net/*), which draws together land managers from across the Great Lakes basin who are combating the invasive plant. The goal is to generate more coordinated, efficient, and strategic approaches to research, management, and restoration across the numerous boundaries within the Great Lakes basin. The binational collaborative serves as a communication conduit to facilitate access to information and resources, encourage technology transfer, and build networks among land managers, governmental agencies, academic institutions, and private landowners.

This fall, the collaborative started the Phragmites Adaptive Management Framework, which will connect land managers and scientists across the basin, to facilitate a shift in management strategy that will, over time, refine and improve best management practices for controlling invasive *Phragmites australis* in a suite of site conditions throughout the Great Lakes basin. Watch a video on the Phragmites Adaptive Management Framework available on YouTube: *https://youtu.be/UCHpKGaZN_M*

A second large-scale, complex societal issue in the region is the reemergence of harmful algal blooms (HABs) in some nearshore areas and bays in the Great Lakes basin. These HABs, which can be toxic to wildlife, pets, and humans, are increasingly affecting coastal communities and their economies by fouling beaches, inhibiting recreational uses, and threatening

Dr. Kurt Kowalski, a USGS plant ecologist, studies the biology, ecology, and approaches to management of invasive *Phragmites australis*. The invasive plant can reach high densities and enormous heights, substantially affecting the value of wetlands and shoreline property. Collaboration among land owners and managers is critical. Photo credit: USGS

See Great Lakes page 29

Great Lakes continued from page 28

public safety. In August 2014, an HAB in Lake Erie's western basin caused local officials to issue a temporary "do not drink the water" advisory for the municipal water supply to more than 400,000 residents of Toledo, Ohio.

That same year, USGS helped to form the Great Lakes HABs Collaboratory. The collaboratory seeks to create a collective laboratory ("co-laboratory") that enables science-based information sharing among scientists and between scientists and decisions makers working on HABs in the Great Lakes. The collaboratory also provides a network for developing a mutual understanding of current science and science needs, strategies for transferring technology, and opportunities for receiving feedback from managers.

The collaborative approach has proven to be an effective means of drawing together scientists and managers at multiple scales to address complex coastal, nearshore, and offshore issues that cross jurisdictions and compromise the resilience of coastal communities. In 2014, Secretary Sally Jewell awarded the St. Clair-Detroit River System Initiative the prestigious Partners in Conservation award. This initiative began as the Huron-Erie Corridor Initiative, working to address fish habitat impairments under the Great Lakes Water Quality Agreement, and has grown into a vast group of Federal, State, local, Tribal, provincial, First Nations, private, non-profit, and academic stakeholders with a shared vision statement and common agenda, restoring a major, bi-national connecting channel and world-class river. The collaborative and collective impact approach is beginning to work its way from the Great Lakes region across the Nation among USGS and partner agencies and organizations, connecting science to management to address complex issues related to natural resources.

BOEM's Marine Archaeology Role

The 50th Anniversary of the National Historic Preservation Act

By Melanie Damour (BOEM)

BOEM celebrates the 50th anniversary of the National Historic Preservation Act (NHPA) in October and highlights its Historic Preservation program in the July/August/September 2016 issue of their quarterly journal, "BOEM Ocean Science."

BOEM, as a regulatory agency with jurisdiction in Federal waters of the U.S. OCS, is responsible for oversight of conventional and renewable energy development and marine minerals extraction while complying with Federal laws enacted to protect the environment.

Part of BOEM's responsibility, as mandated by the NHPA, is to properly consider the potential impacts of BOEM-permitted activities on cultural resources, including historic shipwrecks, submerged indigenous archaeological sites, and Traditional Cultural Properties. BOEM's Environmental Studies Program (ESP), initiated in 1973 under Section 20 of the OCS Lands Act (1953), acquires the scientific information needed to inform BOEM's decision making. Through the ESP, BOEM has funded more than $14 million toward cultural resource-related studies across all its OCS regions (Atlantic, Gulf of Mexico, Pacific, and Alaska). Regional inventory studies completed in the 1970s and 1980s formed the cornerstone of BOEM's Historic Preservation Program. Recent and ongoing studies continue to inform the program's best management practices for cultural resource management on the OCS. Several of these key cultural resources studies are highlighted in the new issue of "BOEM Ocean Science." *http://www.boem.gov/Ocean-Science/*

"Monumental" Changes in Ocean Protection

By Lauren Wenzel (NOAA)

In August 2016, just before the world's conservation leaders met in Hawai'i for the World Conservation Congress (WCC), President Obama announced the increase of the Papahānaumokuākea Marine National Monument. The expansion was motivated by a desire to increase the resilience of marine life to climate impacts, as was the creation of the new Northeast Canyons and Seamounts Monument off the Atlantic coast in September. *See related stories, page 1.*

The United States now has 26 percent of its waters (from 0 to 200 nautical miles) protected through MPAs. These include not only special places far offshore like Papahānamokuākea, but also the many national parks, refuges, marine sanctuaries, and similar State-managed programs that protect marine life across the country. Joining many other coastal countries, the United States has pledged to protect 10 percent of its oceans (including coastal waters and the Great Lakes) in MPAs to conserve marine biodiversity. Although the spatial part of this target has been met, challenges remain.

First, many scientists believe that the 10 percent target is not enough to protect biodiversity, leading to a resolution at the WCC calling for protection of 30 percent of the world's ocean. Also, science-based global targets emphasize that MPAs should be organized into well-managed, ecologically connected networks. Networks allow for marine species to move through different habitats they need at different life stages. They can also increase the "spillover" of young and adults of fished species into adjacent areas where fishermen can benefit. But ecological networks are still a fairly new idea in the United States, best seen in California's statewide network of MPAs. Second, MPA networks must be well managed to achieve their goals, including having management plans and consistent resources to implement them. Many MPA programs are increasingly partnering with outside organizations to help bring additional resources to support activities, such as education, monitoring, and research.

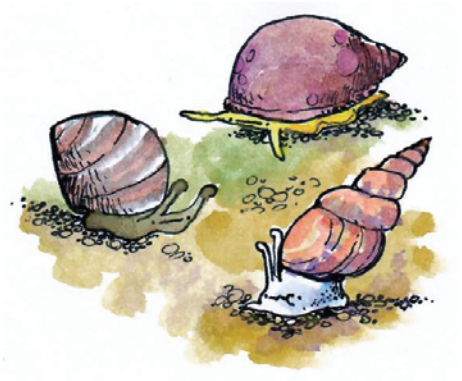

Illustration credit: Cole Goco

The Marine Protected Areas Federal Advisory Committee is currently working on two sets of recommendations to address these issues. One report will focus on how MPA managers can apply tools and guidelines to incorporate spatial ecological connectivity when managing existing MPAs and when designing new MPA networks. The second report outlines options for tapping into external sources of funding for MPA management, including grants, corporate donations, and other sources. Both sets of recommendations were completed in December 2016.

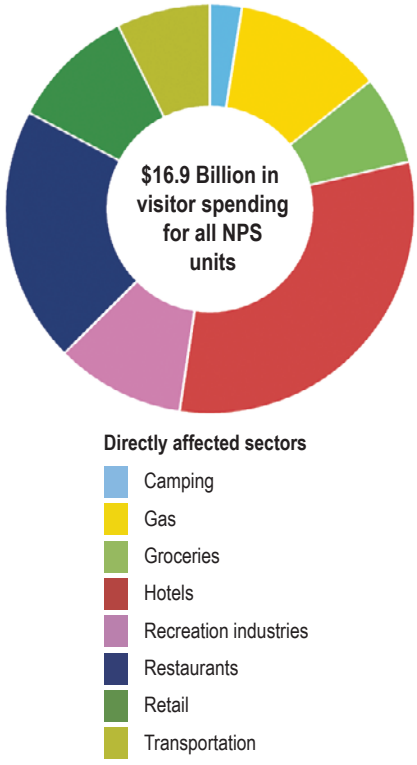
Our Valuable Ocean and Coastal Parks

In June 2016, NPS published the annual Economic Report for 2015. In 2015, park visitors spent an estimated $16.9 billion in local gateway regions while visiting NPS lands across the country. These expenditures supported a total of 295,300 jobs, $11.1 billion in labor income, $18.4 billion in value added, and $32 billion in economic output in the national economy. Learn more about park visitor spending effects: *https://www.nps.gov/subjects/socialscience/vse.htm*
For our 88 OGLC parks, this benefit translates to:

- Visitor spending: $5,026,054
- Jobs: 72,237
- Visits: 89,212,379



NPS visitor spending in 2015.

Enhancing Exchange across the Ocean, Great Lakes and Coastal Team

By Liza Johnson (DOI)

In June 2016, after nearly 6 years working together to implement the National Ocean Policy, representatives from DOI's OGLC offices and bureaus met in Shepherdstown, West Virginia, for a strategic planning workshop. The group welcomed new team members from across DOI and included people from almost all regions and with different types of expertise, ranging from managers and policy experts to scientists and communicators. They gathered to celebrate accomplishments, talk about coordinating priorities and activities, and begin developing a strategy for OGLC work going forward into the next 5 years. DOI's previous Principal Deputy Assistant Secretary, Kris Sarri, gave opening remarks and underscored the importance of developing a strategy for a coordinated effort to implement OGLC actions through internal and external partnerships. Retreat participants left with a renewed sense of vision, commitment, a refreshed network, and great information they will use going forward. The team looks forward to sharing this progress in future issues of *NEWSWAVE*.

BOEM's July/August/September 2016 issue.
See related stories, pages 12 and 25.

It takes a large group to coordinate the diverse ocean, Great Lakes and coastal (OGLC) activities across the DOI. These are most of the participants from the workshop who represent many more across the nation contributing to DOI's blue portfolio. Photo credit: Susan Goodwin, DOI

Regional Contacts

DOI leadership supports State-led regional ocean partnerships (ROPs), as well as Federal-State-Tribal marine planning partnerships called regional planning bodies (RPBs). Five geographic regions now have operational RPBs: Northeast, Mid-Atlantic, Caribbean, the Pacific Islands and the West Coast.

Protecting Marine Mammals—A Quick Reference Guide

https://www.fws.gov/international/animals/marine-mammals.html

"Marine Mammal Policy" Fact Sheet:
https://www.fws.gov/international/pdf/factsheet-marine-mammal-policy-2013.pdf

By Erica Wales (DOI)

Marine mammals (whales, dolphins, porpoises, seals, sea lions, walrus, polar bears, sea and marine otters, dugongs, and manatees) may vary in taxa, habitat, and behavior, but they all share one thing in common—dependency on the ocean for survival. These mammals are a balancing factor in marine ecosystems, helping to steady the food chain and control prey populations. Because of habitat loss, by-catch, and exploitation, many of these species are in danger of survival and are legally protected under various U.S. and international laws to aid in their survival. DOI's USFWS and NOAA's National Marine Fisheries Service (NMFS) share responsibility in the protection, conservation, and management of marine mammals. Below are descriptions and links to learn more.

Marine Mammal Protection Act (MMPA)—The MMPA was enacted in 1972 and prohibits, with a few exceptions, the "taking" of marine mammals in U.S. waters and by U.S. citizens on the high seas, as well as the importation of marine mammals or products. A "take" is defined as "to harass, hunt, capture, collect, or kill, or attempt to harass, hunt, capture, collect, or kill any marine mammal." NMFS has jurisdiction over whales, dolphins, porpoises, seals and sea lions, whereas the USFWS has jurisdiction over walrus, polar bears, sea and marine otters, dugongs, and manatees. *https://www.fws.gov/international/laws-treaties-agreements/us-conservation-laws/marine-mammal-protection-act.html*

Endangered Species Act (ESA)—The ESA of 1973 protects domestic and international species, and provides a framework to conserve and protect endangered and threatened species and the habitats upon which those species depend. Under the ESA, it is illegal to take (defined under the ESA as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct"), import, export, sell or offer to sell, and possess or transport listed species. Like the MMPA, NMFS has jurisdiction over whales, dolphins, porpoises, seals, and sea lions, whereas USFWS has jurisdiction over walrus, polar bears, sea and marine otters, dugongs, and manatees. *https://www.fws.gov/international/laws-treaties-agreements/us-conservation-laws/endangered-species-act.html*

Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)—The CITES treaty came into effect in 1975 and has the purpose of ensuring the survival of plants and animals is not threatened by international trade. USFWS is responsible for carrying out the provisions of this convention for all marine mammals protected under CITES (which includes whales, dolphins, porpoises, manatees, dugongs, seals, otters, walrus, and polar bears). *https://www.fws.gov/international/cites/index.html*

From: Office of Senator Ted Cruz
To: Lara_Levison@ios.doi.gov
Subject: Cruz News: Ensuring Greater Promise, Opportunity, and Protection of Our Future Generations
Date: Friday, January 27, 2017 8:14:18 PM

January 27, 2017

Greetings,

This week, millions of Americans across the country gathered to help ensure greater promise, opportunity, and protection of our future generations.

On Tuesday, Texans rallied in Austin in support of legislative measures before the Texas legislature that will expand school choice. And today, millions of Americans came together in cities all across the country and in Washington to recognize our fundamental right to life and remember the 57 million innocent, unborn lives that have been ended by abortion since Roe v. Wade.

We have tremendous opportunities before us to unleash the potential of every child by expanding school choice, and to defend unborn life by passing legislation that will reduce and discourage abortion. I remain committed to leading on both of these issues which I believe are crucial to improving lives and protecting our future.

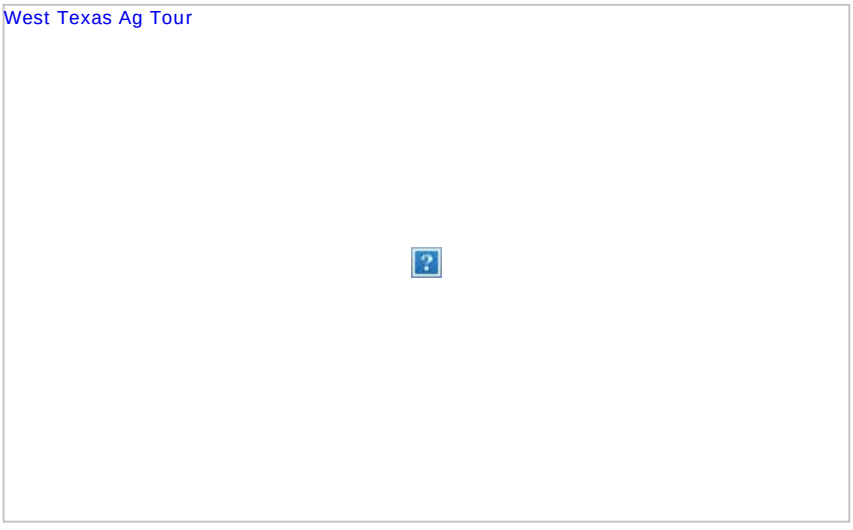
Please read below for an update from this last week.

Keep Texas Strong,

TC Sig

Ted Cruz

Sen. Cruz Thanks Pro-Life Marchers for Unwavering Support for Life



Sen. Cruz released the following statement in recognition of the March for Life, where

millions of Americans will gather in D.C. and across the nation in defense of policies at all levels of government that defend innocent life:

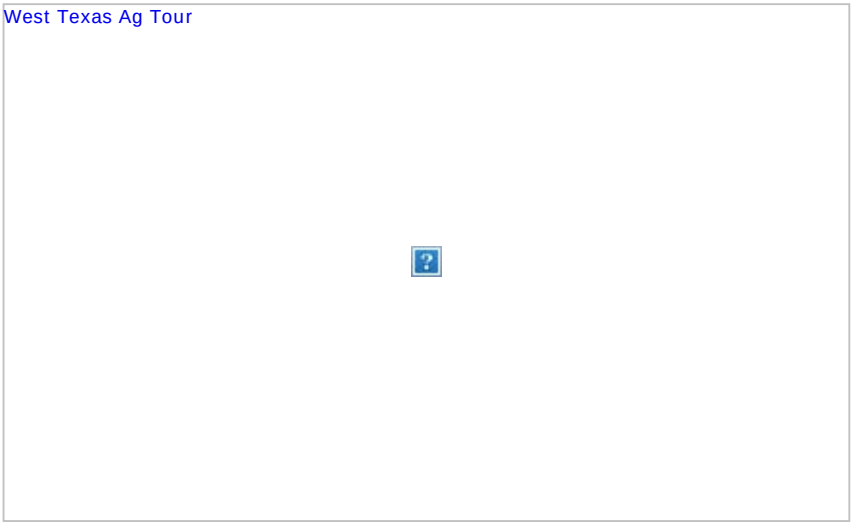
“As millions of Americans gather in D.C. and cities all across the country today to recognize the fundamental right to life, we mourn and remember the 57 million innocent, unborn lives that have been ended by abortion since Roe v. Wade was decided 44 years ago. I want to thank all who are marching today and all who are fighting tirelessly to rectify this injustice and defend the unborn. Their heroic efforts continue to speak the truth in love and make great strides in restoring the sanctity of life throughout the 50 states. I stand with you all and remain firmly committed to efforts that will minimize and, hopefully one day, put an end to the scourge of abortion upon our society. With your efforts we can bring a light of hope and restore a culture of life in America. Each life is a gift from God. Without life, there is no liberty. So today, and every day, we stand united for life, and we resolve to always cherish and defend it."

Sen. Cruz has been a leader in efforts to defend life throughout his career. Earlier this week, he joined with colleagues to reintroduce the Born-Alive Abortion Survivors Protection Act, sponsored by Sen. Ben Sasse, which requires that a child born alive as a result of an abortion must be given the same degree of health care as any other child born alive at that gestational stage. He also advocated last Friday in a Senate resolution to reinstate the Mexico City policy to ensure that American taxpayer dollars are not spent to promote abortion in foreign countries. After years of not being enforced under the Obama Administration, President Donald Trump reinstated the Mexico City policy via executive order earlier this week.

In the U.S. Senate, Sen. Cruz has led efforts to take away taxpayer dollars from Planned Parenthood and advocated for an investigation into abortion practices in the U.S. to put a stop to facilities and doctors illegally performing late term abortions and infanticide. As Solicitor General of Texas he led the charge on behalf of 13 states to successfully defend a federal law that bans partial birth abortion before the U.S. Supreme Court.

The full press release can be viewed here.

Sen. Cruz Recognizes School Choice Week 2017



On Tuesday, Sen. Cruz penned the following op-ed in recognition of School Choice week, where thousands will gather in support of school choice legislation before the 85th Texas Legislature.

“Every child deserves an equal opportunity to learn. Yet today millions of children across our nation find themselves in failing schools, barring them from the chance to receive the education they need to climb out of poverty and up the economic ladder,” Sen. Cruz wrote.

“All parents and students who want educational choice should have it. Yet in Texas alone, 105,000 kids are waiting to be admitted to charter schools, and throughout the nation, more than a million children await acceptance into charter schools.

“While there remains an enormous task before us to give every child access to a quality education, I am encouraged by progress that has been made in my home state of Texas. Since 2000, the number of charter schools in Texas has more than tripled. And currently before the Texas Legislature are measures that will continue to expand school choice across our state…”

The full op-ed may be viewed here.

Sen. Cruz: President Trump’s Actions Are Just the Beginning of What Can Be Done to Create Job Opportunities for American Workers

On Monday, Sen. Cruz issued the following statement regarding President Trump’s executive actions to advance construction of the Dakota Access and Keystone XL pipelines:

“From building the infrastructure we need to transport energy resources and increase our energy independence, to removing unnecessary barriers to permitting and exploration, these measures are just the beginning of what can be done to unleash the American Energy Renaissance and create unlimited job opportunities for workers all across our country," Sen. Cruz said. "We stand at the edge of an energy revolution that is sweeping the nation, and I look forward to opportunities to work with the Trump Administration to empower the next generation of energy pioneers and tap into the natural resources at our fingertips that are crucial to restoring jobs and economic growth.”

The full press release can be viewed here.

Sen. Cruz Statement on President Trump's Executive Actions to Secure Border and Enforce the Law

Sen. Cruz released the following statement on President Trump’s actions to secure the border and enforce our immigration laws:

“Today, President Trump took action that will launch the process of securing our southern border and effectively enforcing our nation’s immigration laws. These are policies on which Americans have waited far too long for action, and I stand ready to work with my colleagues to support these measures with any additional Congressional action that may be necessary to ensure they are timely and effectively implemented.”

Sen. Cruz is the Senate sponsor of Kate’s Law, which would amend federal law to impose a mandatory minimum sentence of five years for any illegal reentry offense and is crucial to ensuing that deported illegal aliens – especially those with violent criminal records – are deterred from illegally reentering the United States. The legislation is named for Kate Steinle, a 32-year-old woman tragically shot and killed in San Francisco by an illegal alien who had several felony convictions and had been deported from the United States five times.

Sen. Cruz reintroduced Kate's Law earlier this month – which he first introduced in the Senate in July 2015 – along with cosponsors Sens. Chuck Grassley (R-Iowa), David Perdue (R-Georgia), Ron Johnson (R-Wisconsin), Marco Rubio (R-Florida), Jim Inhofe (R-Oklahoma), and Ben Sasse (R-Nebraska).

The full press release can be viewed here.

Sen. Cruz and Rep. Poe Move to Protect State Governors' Right to Refuse Refugees

This week, Sen. Ted Cruz and Rep. Ted Poe (R-Texas), chairman of the House Terrorism Subcommittee, reintroduced the State Refugee Security Act of 2017. This joint Senate-House effort mandates that the federal government notifies a state at least 21 days prior to resettling a refugee there. During that period, if a state governor certifies that the federal government has not provided adequate assurances that the refugee does not present a security risk, the federal government is prohibited from resettling that refugee in the state.

The first obligation of the president is to keep this country safe as commander in chief," said Sen. Cruz. "I am encouraged that, unlike the previous administration, one of President Trump's top priorities is to defeat radical Islamic terrorism. To augment the efforts of the new administration, this legislation I have introduced will reinforce the authority of the states and governors to keep their citizens safe. I am honored to work with Rep. Poe on this legislation and I hope that Congress will pass it and send it to the president's desk."

The full press release can be viewed here.

Sen. Cruz Takes Gavel of Constitution Subcommittee, Continues Leading Subcommittee on Space, Science, and Competitiveness

Sen. Ted Cruz has assumed a new leadership position as chairman of the Senate Judiciary Subcommittee on The Constitution, and will continue to lead the Senate Commerce Subcommittee on Space, Science, and Competitiveness during the 115th Congress, whose first session kicked off this month. Sen. Cruz will also continue to serve on the Senate Armed Services Committee, the Senate Rules Committee, and the Joint Economic Committee.

"For my entire life, I have revered the United States Constitution," said Sen. Cruz. "It's creation was truly a moment of genius. For, as Thomas Jefferson once observed, it provides the necessary 'chains' to bind the 'mischief' of government. I am honored to be trusted with the task of leading Senate oversight of constitutional issues. As the chairman of the Subcommittee on The Constitution during the 115th Congress, I pledge to work as hard as I can to ensure that our government remains faithful to the Constitution's guarantees of federalism, separation of powers, and individual liberty for American citizens."

Cruz continued, "I look forward to continuing the progress we have made on the Space, Science, and Competitiveness subcommittee in advancing a bipartisan NASA reauthorization bill that will provide NASA with the stability it needs and ensure that America remains a leader in space exploration in the 21st century. And I also look forward to continuing to work with the Senate Armed Services Committee to strengthen our national defense, and provide our service men and women with the resources they need to defend our nation. Our work on both of these committees will foster economic growth and job creation for the state of Texas, and strengthen our state's role in supporting the missions of NASA and our military."

The full press release can be viewed here.

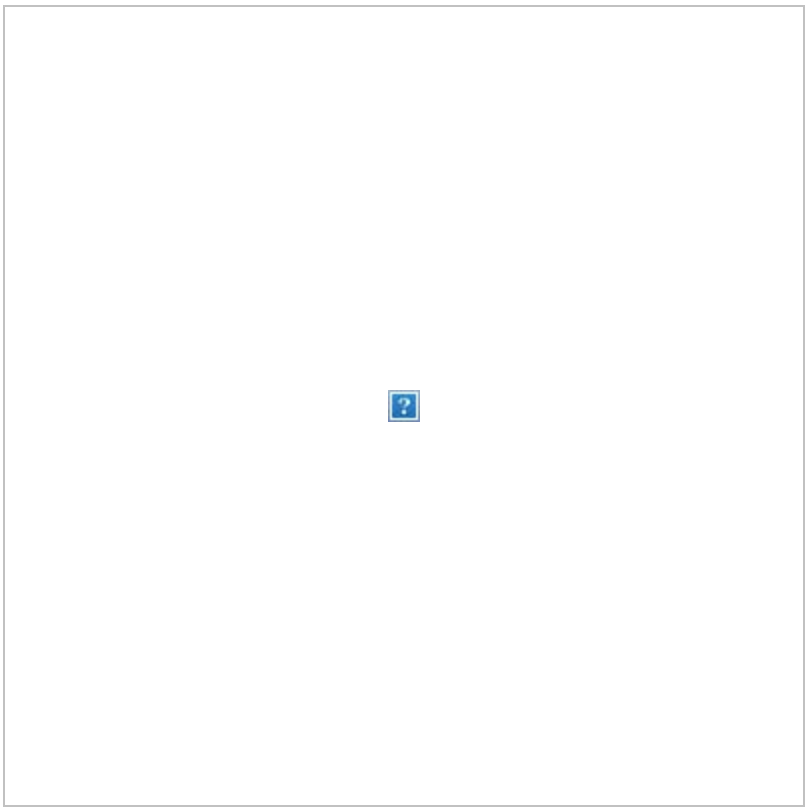
Subject: BLM Methane Venting and Flaring Rule
Date: Thursday, February 02, 2017 1:18:44 PM



Press Office
February 2, 2017

Mike Long, Matt Sparks
View Online

BLM Methane Venting and Flaring Rule

Summary

The House will use the Congressional Review Act to overturn the **Bureau of Land Management (BLM) venting and flaring rule** on Friday, which would further cap methane emissions in the oil and gas industry. However, this rule is costly, redundant, and illegitimate. The industry is already subject to Clean Air Act standards through the Environmental Protection Agency (EPA) and has leveraged technological advances to dramatically reduce methane emissions.

Not to mention, Congress has never granted BLM the authority to regulate air quality—power that is far outside of the agency's jurisdiction.

The Effect

Methane emissions have already decline 21% from 1990 to 2014, even as natural gas production has increased by nearly 47%. Yet the bureaucracy is ignoring this progress by adding on another rule that could **cost an estimated $1 billion by 2025**.

As federal lands become less cost-effective to produce energy on, this unnecessary rule adds to that burden and could wipe out marginal wells run by family-owned businesses who can't pack up and move their operations. Beyond the losses of jobs, state and federal governments would lose up to $114,112,000 in tax receipts.

Who It Hurts

Former Army Captain, Operation Desert Storm Veteran, recipient of the Silver Star, Bronze Star, and Purple Hart, and Vets4Energy National Program Director James McCormick said this rule hurts Americans and forces us to rely on foreign energy. "It feels as though our government is saying they'd prefer other less-caring countries to supply us with energy rather than allow us to do it ourselves," he said. "The pile-on of additional regulations, especially unneeded ones that are already being addressed by the industry, makes it seem like they are **intentionally trying to put Americans out of work** and decrease our energy independence."

Local governments are particularly nervous. **Carla Sonntag**, President of the New Mexico Business Coalition, said that one-third of New Mexico's state budget is derived from oil and natural gas, and that this revenue is the number one source of funding for public schools. Destroy the industry, and **America's public school students suffer**.

Why We're Doing This

The bureaucracy is a threat to our

- Economy
- Constitution
- and People

The House has already passed legislation to change the structure in Washington so the federal bureaucracy is subject to the people and so we stop getting the same bad results year after year. Now, we're targeting specific harmful regulations and stripping them off the books.

- Constitution
- and People

The House has already passed legislation to change the structure in Washington so the federal bureaucracy is subject to the people and so we stop getting the same bad results year after year. Now, we're targeting specific harmful regulations and stripping them off the books.

Subject: THE DAILY WHIP: FRIDAY, FEBRUARY 3, 2017
Date: Friday, February 03, 2017 9:49:01 AM

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR FRIDAY, FEBRUARY 3, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
9:00 a.m.: Legislative Business	10:00 – 10:30 a.m.	10:30 – 11:00 a.m.

Five "One Minutes"		

H.J.Res. 36 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the final rule of the Bureau of Land Management relating to "Waste Prevention, Production Subject to Royalties, and Resource Conservation" (Rep. Bishop (UT) – Natural Resources) (One hour of debate). The resolution disapproves of the Bureau of Land Management (BLM) Methane Waste Final Rule which was published in November of 2016. This rule requires that oil and gas producers implement measures and limits to intentional venting, flaring, and leakage of methane from new and existing oil and gas producers on federal lands in order to reduce natural gas waste and prevent harm to the environment, as methane is a potent greenhouse gas and a precursor to ground-level ozone. The rule will save up to 41 billion cubic feet of natural gas per year, enough to supply up to 740,000 households, and allow the government to earn up to $14 million in additional royalties that will go to states and the federal treasury. Additionally, the rule will result in 175,000 to 180,000 fewer tons of methane emissions each year, equivalent to the emissions of nearly 1 million vehicles.

Supporters of H.J.Res. 36 argue that the Interior Department exceeded its authority in the implementation of the rule, but the department worked closely with the Environmental Protection Agency (EPA) to avoid inconsistency or redundancy in regulations. Opponents of the rule also argue that the failure to capture methane results from BLM permitting delays slowing the construction of pipelines to gather gas. The oil and gas industry and several states have filed a lawsuit over these two issues, but a judge recently rejected an industry request for a preliminary injunction on the rule, and a recent Government Accountability Office (GAO) report found that only 9% of venting and flaring applications to BLM were due to lack of infrastructure.

Undoing this rule will result in the loss of jobs and valuable resources in the expanding methane control industry. Approximately 80% of voters in Western states support requirements for companies to capture and sell methane instead of burning this resource in the air. This rule was carefully and transparently crafted over a period of several years in conjunction with industry professionals and the public through meetings, which resulted in hundreds of thousands of comments. Now Republicans want to undo the rule in one brief, partisan debate.

The Rule, which was adopted yesterday, provides for one hour of general debate equally divided and controlled by the Committee on Natural Resources.

THE DAILY QUOTE

"The fallout Monday from President Trump's sweeping immigration order exposed

painful rifts within the Republican Party, alarmed members of his Cabinet and fueled suspicions among his top advisers. That left the defiant commander in chief stewing over who was to blame — capped by Trump's remarkable decision late Monday to fire the acting attorney general because she refused to enforce the order as potentially unlawful. For all the promises of Republican bonhomie, Trump and his aides kept GOP congressional leaders almost completely in the dark about the most consequential act of his young presidency: a temporary ban on refugees and on anyone from seven majority-Muslim nations."

To: jhoset_burgosrodriguez@ios.doi.gov
Subject: President's Executive Action Mirrors Financial CHOICE Act
Date: Friday, February 03, 2017 1:49:44 PM

PRESS RELEASE

February 3, 2017

For Immediate Release | Contacts: Jeff Emerson (202) 226-0471; Sarah Rozier (202) 226-2467

President's Executive Action Mirrors Financial CHOICE Act

WASHINGTON -- House Financial Services Committee Chairman Jeb Hensarling (R-TX) and Oversight and Investigations Subcommittee Chairman Ann Wagner (R-MO) made the following comments about President Trump's core principles for regulating the financial system, which were detailed today in an Executive Order:

Chairman Hensarling: "I'm very pleased that President Trump signed this executive action, which closely mirrors provisions that are found in the Financial CHOICE Act to end Wall Street bailouts, end 'too big to fail,' and end top-down regulations that make it harder for our economy to grow and for hardworking Americans to achieve financial independence. When Dodd-Frank was passed, Americans were promised a healthier economy, an end to bailouts and better consumer protections. Instead, we have the weakest recovery in history, a guarantee of more Wall Street bailouts, and consumer costs have gone up while their choices have gone down. Today the big banks are bigger and the small banks are fewer. Everything from mortgages to credit cards to monthly checking fees costs more because of Dodd-Frank's red tape, if consumers can even get access to them.

"Dodd-Frank failed to keep its promises, but President Trump is following through on his promise to the American people to dismantle Dodd-Frank. That's not what Wall Street wants, but it is what hardworking Americans need to have a healthy economy with more opportunities so they can achieve financial independence. Republicans are eager to work with the President to end and replace the Dodd-Frank mistake with legislation that holds Wall Street and Washington accountable, ends taxpayer-funded bailouts forever, and unleashes America's economic potential."

Chairman Wagner: "I applaud President Trump for signing this executive order to comprehensively review our financial system's regulatory framework and identify rules and regulations that are impeding economic growth and opportunities for consumers, investors, and entrepreneurs. President Trump's order is consistent with our vision in Congress to end the 'Washington-knows-best' mentality, as we move forward with the Financial CHOICE Act to kick-start our economy and provide hardworking Americans with clear opportunities for a successful future."

For more information on the Financial CHOICE Act please visit financialservices.house.gov/choice/.

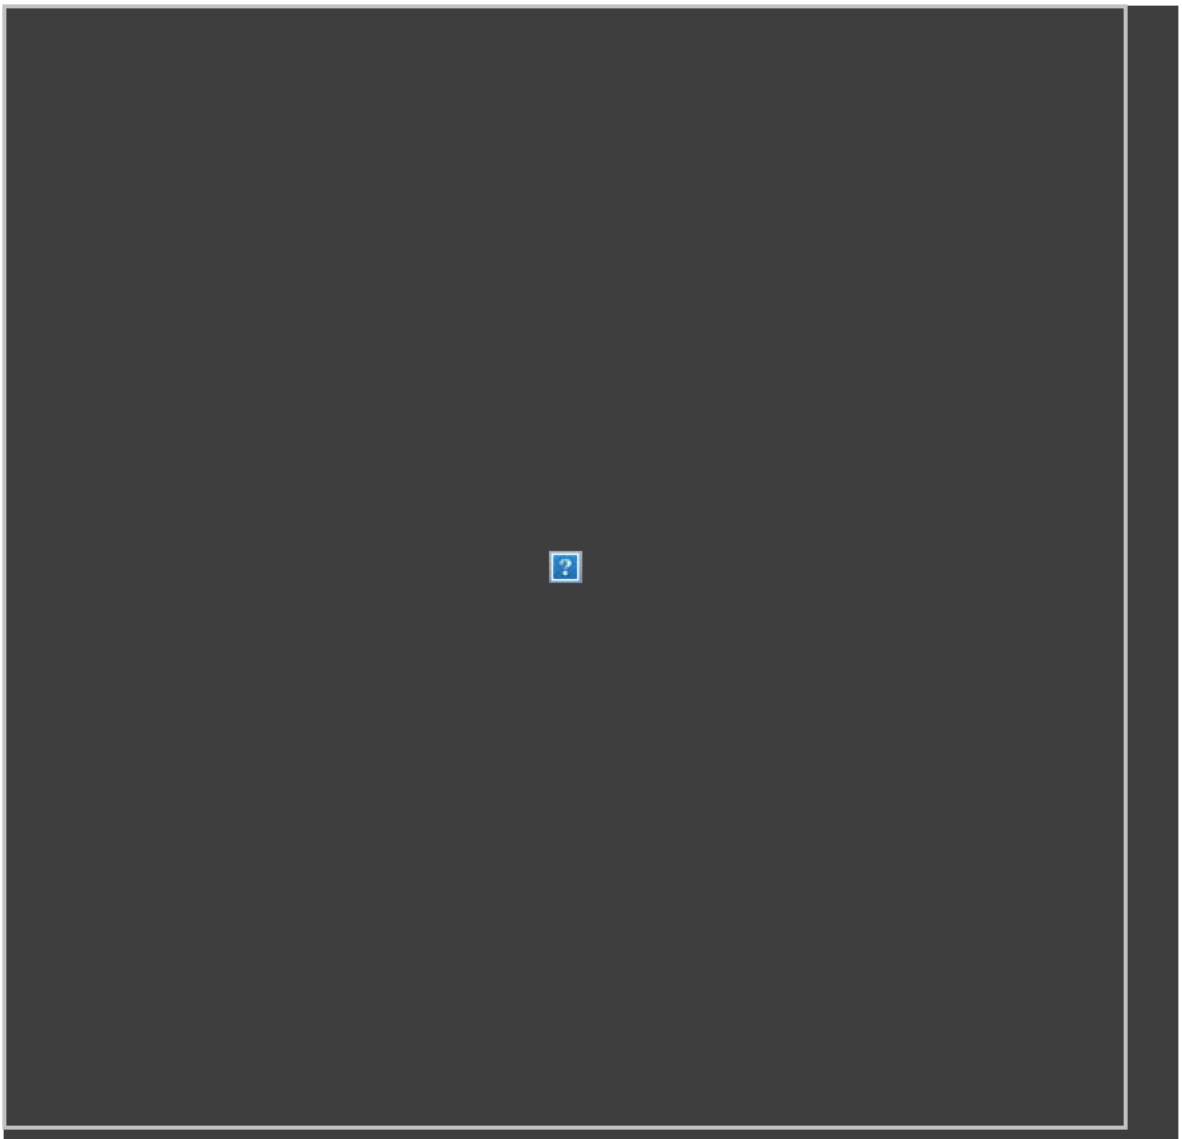
This Week in Congress
February 3, 2017

- **Insular reps: Include us in health reform**
- **CW bill again passes House**
- **GAO wage and labor report update**

- **Education and Workforce Dems organize**
- **Airport wait-times now online**
- **Ban on U.S. entry for certain foreign citizens**
- **Veterans Resource Fair**
- **FEMA sends CUC $6.5M for Soudelor**
- **Maintaining connections with Pacific neighbors**
- **Opportunities – Federal grants, jobs for/in the Marianas**
- **Highlights in the legislative program**

Insular reps: Include us in health reform

This week I led a **letter from all five insular representatives** in Congress – Republican and Democrat – to House leadership on inclusion of our areas in health care reform. We were largely left out of Obamacare, so now, with "repeal and replace" on the table, we want any replacement to meet President Trump's standard of "insurance for everybody." I am grateful to my counterparts – Resident Commissioner Jenniffer González-Colón (R-Puerto Rico), Aumua Amata Coleman Radewagen (R-American Samoa), Stacey Plaskett (D-Virgin Islands), and Madeleine Z. Bordallo (D-Guam) – for joining with me in this bipartisan position statement to Majority Leader Kevin McCarthy and Minority Leader Nancy Pelosi, both of California. Among the reforms we want are ending the cap on Medicaid insurance payments to insular areas and computing the federal/local shares of Medicaid in a way comparable to states. We also support Speaker Paul Ryan's (R-Wisconsin) idea to have federally-supported, refundable tax credits for health insurance.

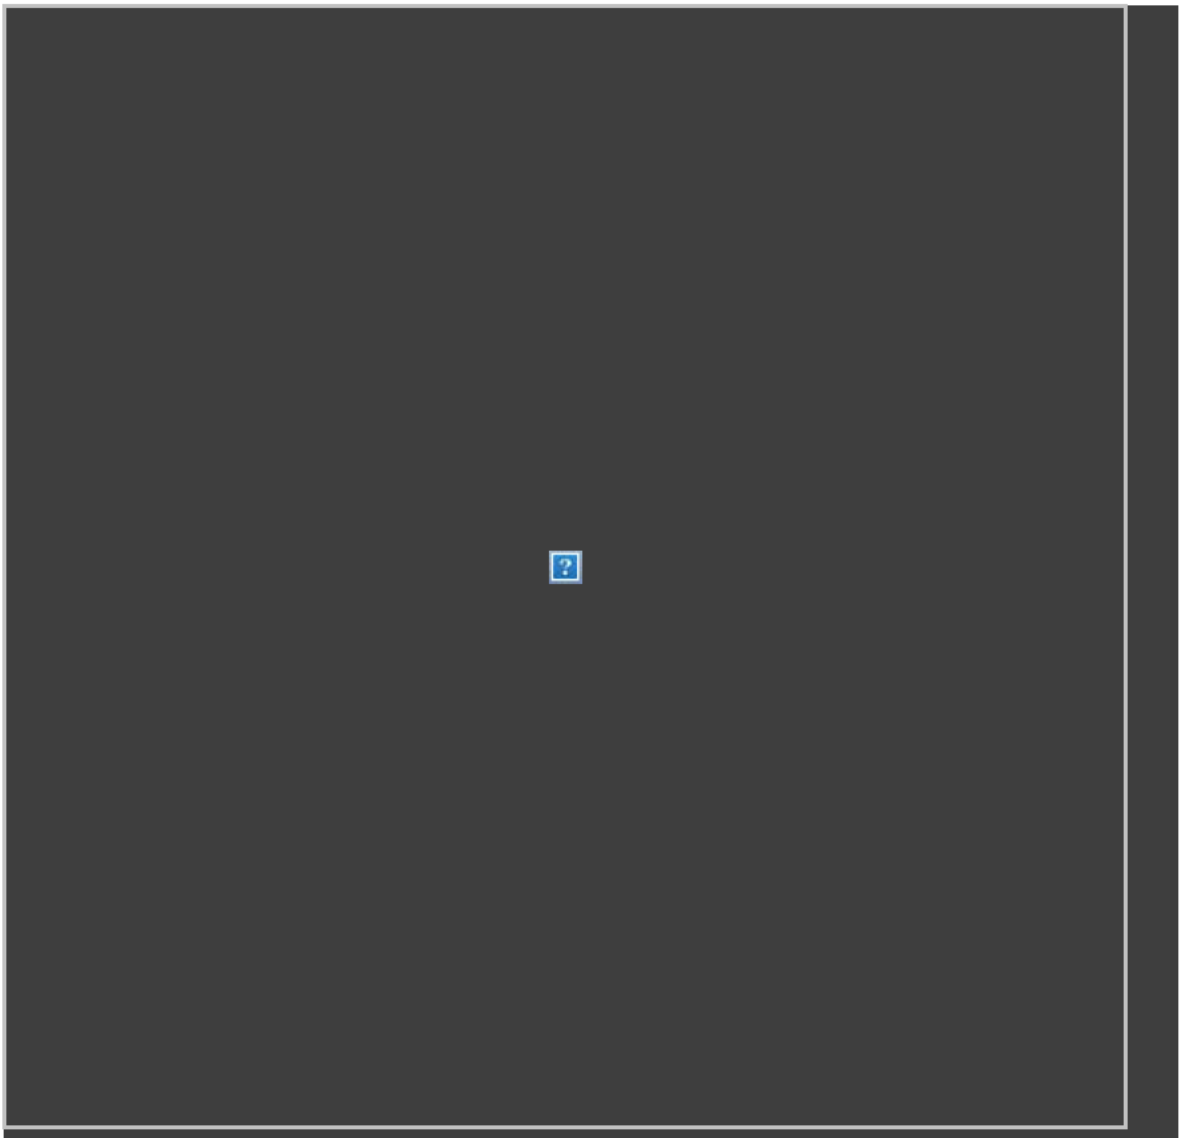


Local businesses – and our hospital – will be unable to renew CW permits in the coming months, because so many were used up for foreign construction workers in October. My bill, **H.R. 339**, addresses the problem and passed the House on Monday without dissent.

CW bill again passes House

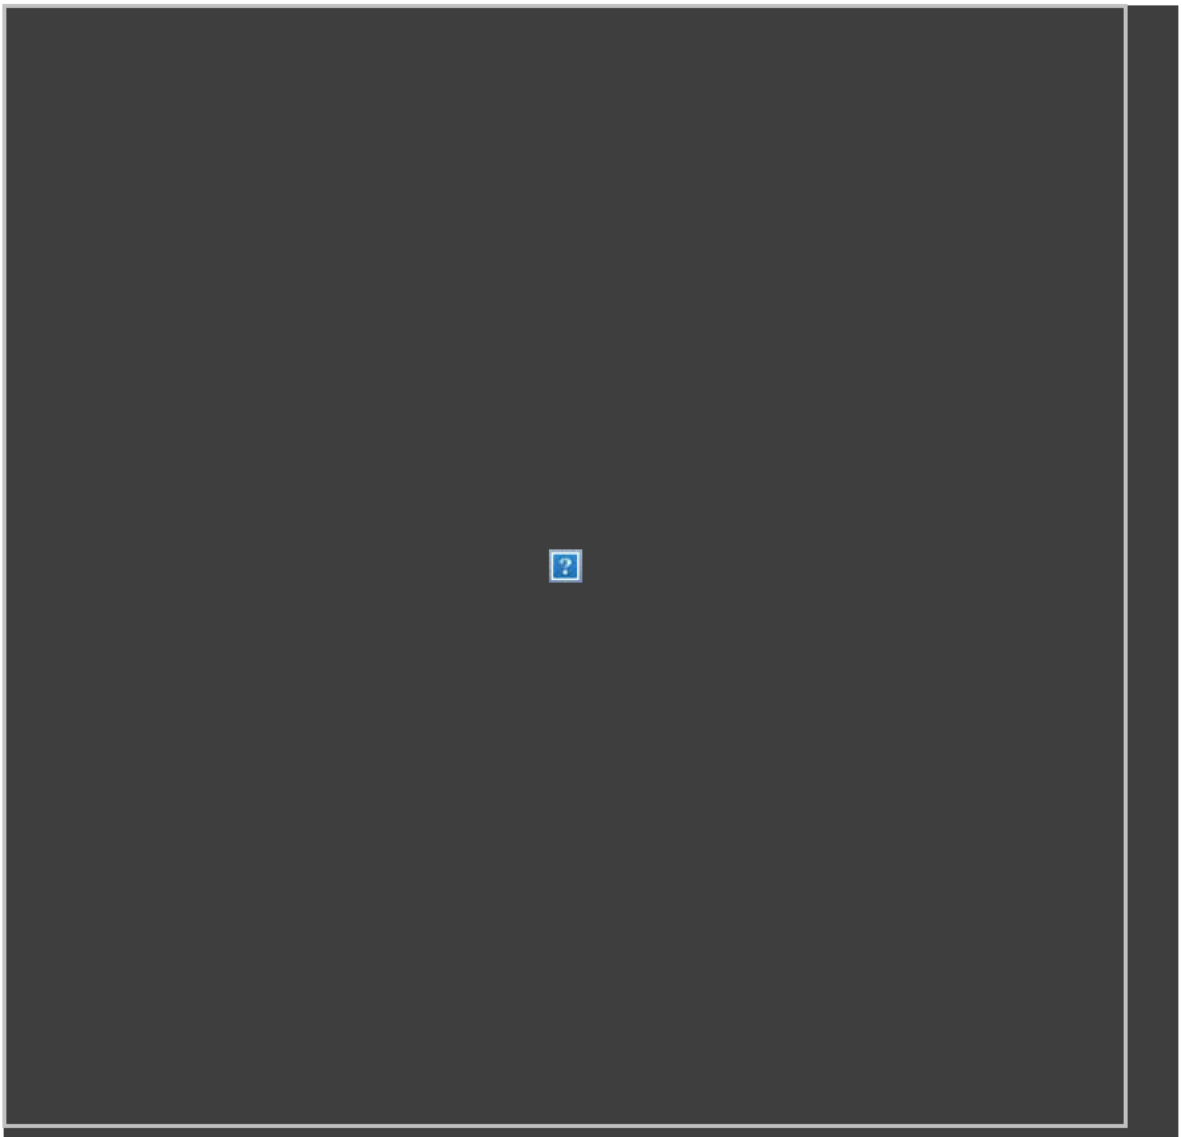
My bill, **H.R. 339**, adding 2,002 CW permits to the number allowed this year, passed the House of Representatives on Monday without dissent. This same bill passed on December 6, but Congress adjourned four days later without action by the Senate. Increasing permits remains as important as ever especially to many local, small business owners, who have employed CW workers for years and now cannot apply to renew their permits. Our local

businesses were squeezed out when the CW cap was reached last October by a rush of foreign construction workers, who should use unlimited H-2B visas, not the scarce CW permits. My legislation will give those local businesses – and the Commonwealth Healthcare Center, which is in the same predicament – an opportunity to keep their legacy employees, until they can be replaced with U.S. workers. Thanks to Governor Ralph DLG. Torres and the business community for their continued support.

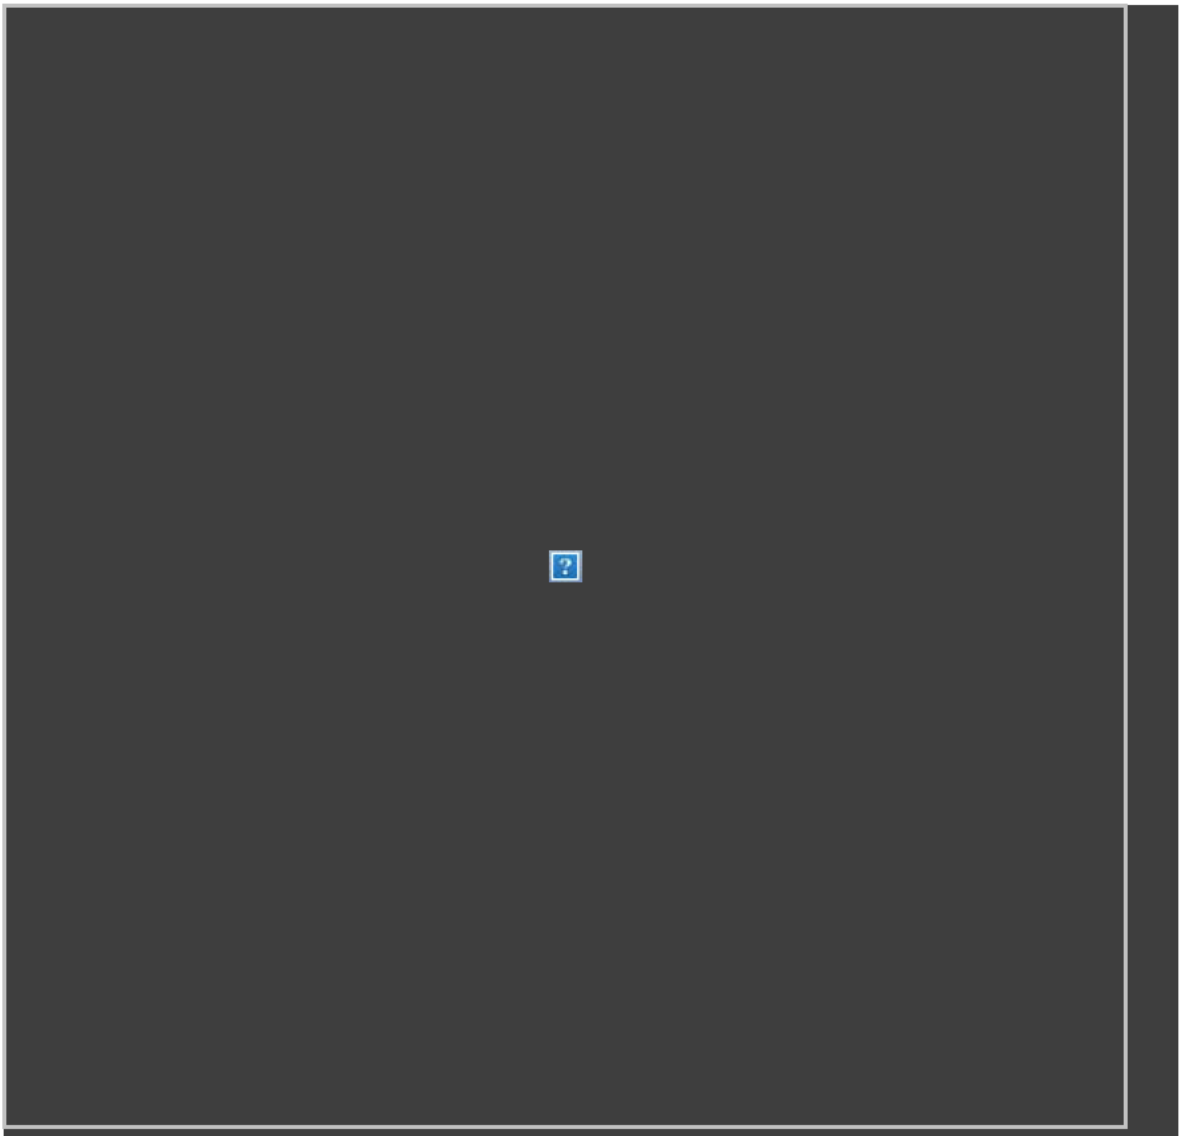


Dr. David Gootnick and Dr. Emil Friberg updated me on field work done by their Government Accountability Office team on the impact of minimum wage increases and aspects of the foreign labor program in the Marianas. A GAO

report on these issues is due this spring and will add to the discussion on long-term solutions for our islands' labor needs. GAO is also at work on a report on government debt loads in all the insular areas.



Democratic members of the House Education and the Workforce Committee selected their leaders and subcommittee responsibilities on Tuesday. As a senior committee member, I will be taking the lead on the Health, Employment, Labor, and Pensions Subcommittee as Ranking Member. And I will serve on the Higher Education and Workforce Development Subcommittee, working for Northern Marianas College and our undergraduate and graduate students everywhere.



After meeting with me last week, U.S. Customs and Border Protection has begun adding wait-time information collected daily at the Saipan International Airport to its website (**https://awt.cbp.gov/**). The same data is also available there for other international airports around our country. The agency publishes average and maximum wait-times and the number of passengers processed in quarter-hour intervals, as well as staffing details.

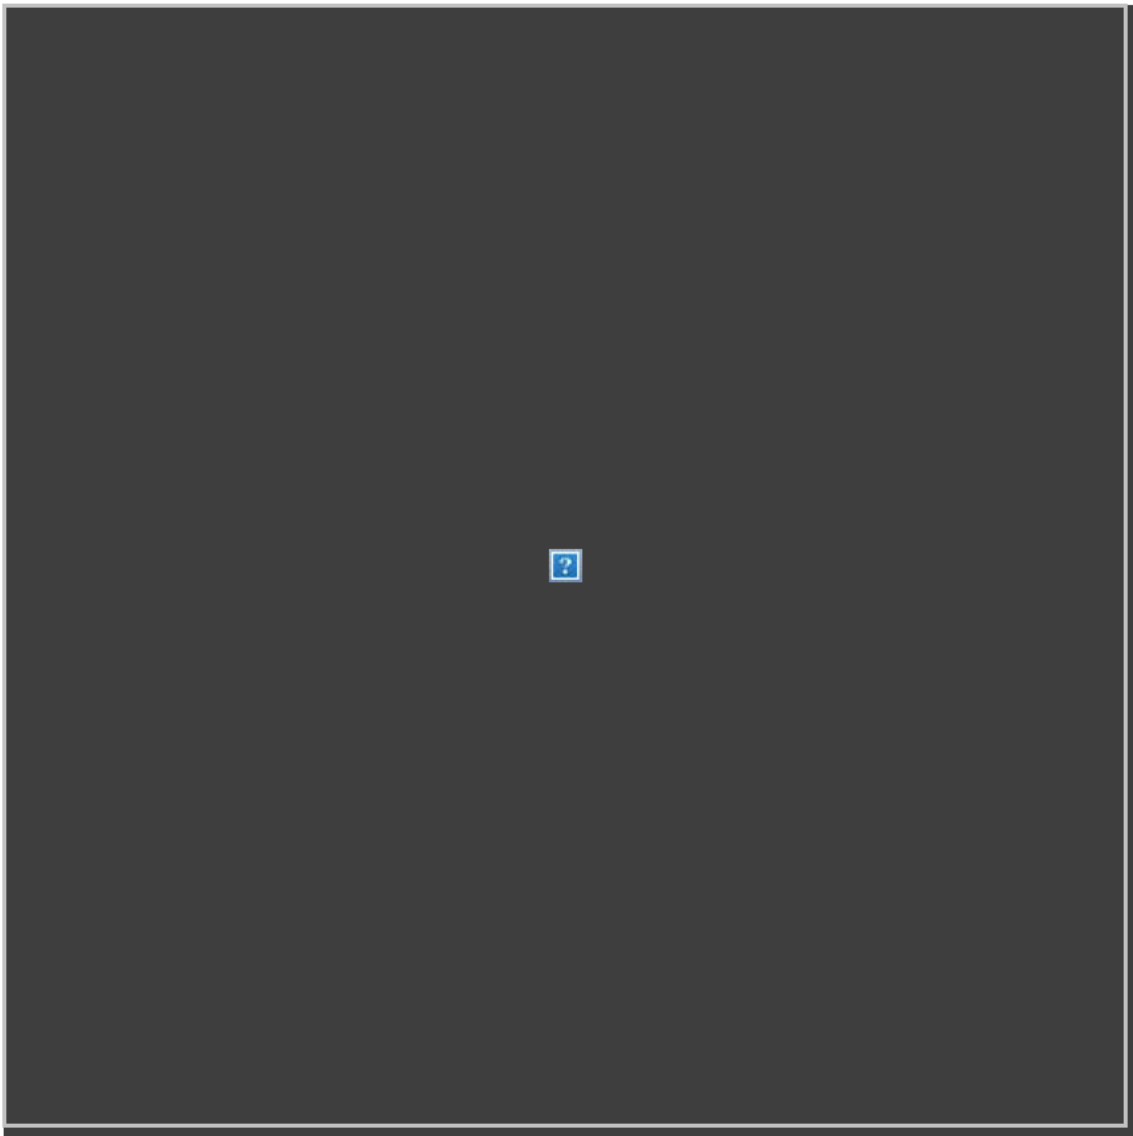
Ban on U.S. entry for certain foreign citizens

Constituents in the Marianas are asking how President Trump's **Executive Order on Protecting the Nation from Foreign Terrorist Entry to the United States** last week may affect them. In summary, the order bars citizens of seven predominantly Muslim countries – Iran, Iraq, Libya, Somalia, Sudan, Syria, and Yemen – from entering the United States for 90 days. Lawful Permanent Residents, also known as "green card" holders, from those countries are exempted, but may face additional vetting during the entry process. Refugees from any nation are barred from admission for 120 days. Syrian refugees are barred indefinitely. The congressional office is at all times prohibited from giving legal advice, so citizens of any of the affected countries, living in the Northern Marianas, are encouraged to seek private legal counsel before traveling. I spoke on the House floor this week in favor of Congress voting whether this Executive Order should be rescinded. In my view, it hurts innocent people.

FEMA sends CUC $6.5M for Soudelor

The Federal Emergency Management Agency announced this week a grant of $6,596,263.11 in federal funding to the Commonwealth of the Northern Mariana Islands. The funds are intended for reimbursement of the Commonwealth Utilities Corporation for costs incurred repairing damage to the electrical system and restoring power after Typhoon Soudelor. To date FEMA has provided $25 million to individuals and households in the Northern Marianas for Soudelor recovery and $35.7 million for restoration of public infrastructure. The disaster relief grants are authorized by Congress under

Section 406 of the Robert T. Stafford Act.



Mr. Peseta Sam Lotu-Iiga, the member of the New Zealand Parliament for the Maungakiekie electorate, and Ms. Caroline Eszes, Second Political Secretary at the New Zealand Embassy (not in photo), visited the congressional office in Washington, DC on Tuesday. We discussed fisheries, trade, energy and other issues of shared interest and cooperation in the Pacific. **Tena korua**.

BACK TO TOP

Federal Opportunities for/in the Marianas

Scholarship:

- **US Pacific Territories Capacity-Building Scholarship** – The Western Pacific Fishery Management Council is offering up to three academic scholarships to support the capacity building of the Northern Mariana Islands, American Samoa, and Guam to effectively manage their fisheries and related resources. BLM Planning 2.0 Rule

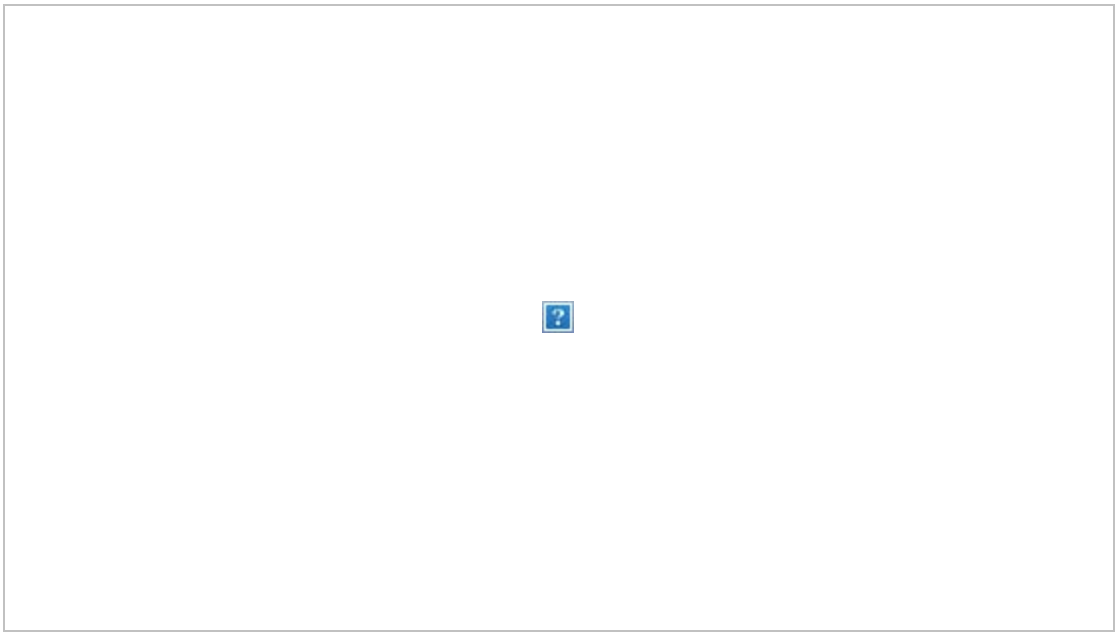
Summary

The House will use the Congressional Review Act to overturn the **Bureau of Land Management Planning 2.0 rule** on Tuesday, which was intended to improve BLM's ability to administer public lands. In reality, this power grab centralizes control in the federal government over large swaths of land, especially out west.

The rule reduces the authority of county commissioners and of state and field officers who know their land best, giving that power to Washington bureaucrats to centrally manage resources in places they don't even live.

The Effect

This rule isn't small-ball. It will consolidate BLM's authority to prepare and implement resource management plans for more than **175 million acres of lands in 11 western states**, according to the American Stewards of Liberty. That's **over 4,000 times the size of Washington, D.C.**



According to the National Association of Counties, the BLM manages land in 477 of the nation's 3,069 counties, sometimes controlling over 90% of a county's land.

Who It Hurts

In Garfield Count, Colorado, over 60% of their land is owned by the federal government. When Washington applied the same type of approach as BLM's Planning 2.0 rule for sage-grouse conservation, County Commissioner Tom Jankovsky said, it blocked **$33 billion in natural gas reserves in the county from being accessed**.

Why We're Doing This

The bureaucracy is a threat to our

- Economy
- Constitution
- and People

The House has already passed legislation to change the structure in Washington so the federal bureaucracy is subject to the people and so we stop getting the same bad results year after year. Now, we're targeting specific harmful regulations and stripping them off the books.

What We've Already Done

The House has already voted to overturn five harmful regulations using the Congressional Review Act:

- The Stream Buffer Rule
- The SEC Disclosure Rule for Resource Extraction
- The SSA's Second Amendment Restrictions
- The Federal Contracts Blacklisting Rule
- The BLM Venting and Flaring Rule

FLOOR SCHEDULE FOR MONDAY, FEBRUARY 6, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
12:00 p.m.: Morning Hour 2:00 p.m.: Legislative	6:30 p.m.	7:00 p.m.

Business **Unlimited "One Minutes"**		

**Following one minute speeches, the House is expected to recess until approximately 4:45 p.m. At that time, the House will reconvene and consider the bills listed for consideration under suspension of the Rules. Any recorded votes requested will be postponed until 6:30 p.m.

Suspensions (7 bills)

1. **H.R. 618** – Crags, Colorado Land Exchange Act of 2017 (Rep. Lamborn – Natural Resources)
2. **H.R. 698** – Elkhorn Ranch and White River National Forest Conveyance Act of 2017 (Rep. Tipton – Natural Resources)
3. **H.R. 688** – Arapaho National Forest Boundary Adjustment Act of 2017 (Rep. Polis – Natural Resources)
4. **H.R. 689** – Bolts Ditch Access and Use Act (Rep. Polis – Natural Resources)
5. **H.R. 337** – Black Hills National Cemetery Boundary Expansion Act (Rep. Noem – Natural Resources)
6. **H.R. 494** – Fort Frederica National Monument Boundary Expansion Act (Rep. Carter (GA) – Natural Resources)
7. **H.R. 387** – Email Privacy Act (Rep. Yoder – Judiciary)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Tuesday, February 7: The House will meet at 12:00 p.m. for legislative business. The House is expected to consider **H.J.Res. 44** – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources) (Subject to a Rule), **H.J.Res. 58** – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce) (Subject to a Rule), and **H.J.Res. 57** – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (Subject to a Rule).

THE DAILY QUOTE

"President Trump's agenda is getting off to a slow start in Congress, as GOP lawmakers search for a path forward on an ObamaCare replacement bill and push other big-ticket items to the back burner… But intraparty divisions… are already

slowing the pace of work on legislation… Within the GOP, there are already signs of division that could prove troublesome, particularly when it comes to ObamaCare. Conservatives insist on scrapping as much of the healthcare law as possible as fast as possible, while other Republicans are now emphasizing a 'repair' of the law as it exists. Add in the fact that Republicans have yet to flesh out the details of their replacement plan, and it's clear that there are major roadblocks ahead."

The GOP Leadership has announced the following schedule for Tuesday, February 7: The House will meet at 12:00 p.m. for legislative business. The House is expected to consider **H.J.Res. 44** – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources) (Subject to a Rule), **H.J.Res. 58** – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce) (Subject to a Rule), and **H.J.Res. 57** – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (Subject to a Rule).

THE DAILY QUOTE

"President Trump's agenda is getting off to a slow start in Congress, as GOP lawmakers search for a path forward on an ObamaCare replacement bill and push other big-ticket items to the back burner… But intraparty divisions… are already

slowing the pace of work on legislation… Within the GOP, there are already signs of division that could prove troublesome, particularly when it comes to ObamaCare. Conservatives insist on scrapping as much of the healthcare law as possible as fast as possible, while other Republicans are now emphasizing a 'repair' of the law as it exists. Add in the fact that Republicans have yet to flesh out the details of their replacement plan, and it's clear that there are major roadblocks ahead."

On Tuesday, the House will meet at 10:00 a.m. for Morning Hour debate and 12:00 p.m. for legislative business.

First votes expected: 1:30 – 2:30 p.m.

Last votes expected: 5:30 – 6:30 p.m.

"One Minutes" (15 per side)

H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources) (Subject to a Rule)

The Rule provides for one hour of debate equally divided and controlled by the Chair and Ranking Member of the Committee on Natural Resources.

H.J.Res. 58 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce) (Subject to a Rule)

The Rule provides for one hour of debate equally divided and controlled by the Chair and Ranking Member of the Committee on Education and the Workforce.

H.J.Res. 57 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (Subject to a Rule)

The Rule provides for one hour of debate equally divided and controlled by the Chair and Ranking Member of the Committee on Education and the Workforce.

Subject: THE DAILY WHIP: TUESDAY, FEBRUARY 7, 2017
Date: Tuesday, February 07, 2017 10:27:30 AM

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR TUESDAY, FEBRUARY 7, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	5:30 – 6:30 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 91 – Rule providing for consideration of H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources), H.J.Res. 58 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce), and H.J.Res. 57 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (One hour of debate). The Rules committee has recommended one Rule which provides for consideration of 3 measures.

For H.J.Res. 44, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Natural Resources. The Rule allows one motion to recommit and waives all points of order against the resolution.

For H.J.Res. 58, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution.

For H.J.Res. 57, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution. **Members are urged to VOTE NO.**

H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources) (One hour of debate). The resolution disapproves of the Bureau of Land Management (BLM) Planning Rule, also known as the "Planning 2.0" Rule, which was finalized at the end of last year. The rule modifies the regulatory framework for updating and maintaining Resource Management Plans (RMPs) for the 245 million acres of public land and 200 million acres of sub-surface mineral estate that BLM manages.

Planning 2.0 gives stakeholders such as state and local governments, Tribes, partner agencies, and local populations a larger role in the process by allowing for their input throughout the stages of development and increasing the level of transparency during the entire process. Additionally the Rule emphasizes the role of "high quality information," including requiring that the best available science be used in the decision making process in order to protect critical habitats, allow continued access to recreation, and protect the environment from the impacts of climate change.

Prior to Planning 2.0 being issued, the previous Rule had been in place since the Reagan Administration. State and Local governments and resources users had requested an update to the process because it had become too slow and hidden from the public, taking an average of eight years to update or revise existing RMPs.

Republicans continually talk about how they want to repeal laws that allow "unelected bureaucrats" to enforce regulations on the public without taking the wishes of the American people into account, but H.J.Res. 44 is a clear example of their hypocrisy. Planning 2.0 gives more power to people living in local communities that are directly impacted by RMPs by allowing those people to have a greater voice and a clear role in the entire process.

Planning 2.0 was carefully and transparently crafted over a period of two years in conjunction with industry professionals and the public. Now Republicans want to undo this Rule and go back to an antiquated process after just one hour of debate on the House Floor, and they are doing so by using the Congressional Review Act (CRA) process, which allows for a vote by a simple majority in the Senate and blocks promulgation of any substantially similar rule in the future.

Bill Text for H.J.Res. 44:
PDF Version

Background for H.J.Res. 44:
Fact Sheet From the Democratic Staff on the Committee on Natural Resources

H.J.Res. 58 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce) (One hour of debate). The resolution disapproves of the Rule issued by the Department of Education relating to teacher preparation. The Rule was created to ensure consistency, quality, and transparency in teacher preparation programs to benefit students, parents, prospective teachers, current teachers, school systems and state educational organizations.

In 2013-2014, roughly 460,000 individuals were enrolled in traditional and alternative teacher certification preparation programs. This Rule would ensure that every student or prospective student is aware of the employment outcomes, level of preparedness for the classroom, and demonstrated success in improving student learning outcomes

of previous students who completed such programs. The transparency required in the Rule also allows the prospective teacher candidate to see the strengths of different programs so they can choose a program that is right for them. This Rule, not only protects those students seeking teacher certification, but it also ensures that the students in the classrooms of those prospective teachers are taught by someone who feels prepared and capable of succeeding in the classroom, while also providing valuable information to employers seeking to hire teachers.

Consistent with the 2008 bipartisan comprehensive reauthorization of the Higher Education Act (HEA), the Rule provides flexibility to states in assessing the quality of teacher certification preparation program. States, not the federal government would decide what constitutes a "high-quality" teacher preparation program by: (1) including as many metrics as they want: (2) weighing such metrics any way they would like; and (3) developing quality performance levels. Additionally, it ensures that recipients of the Teacher Education Assistance for College and Higher Education (TEACH) grant, who will eventually go on to teach at a high-needs school, only attend a teacher preparation program that "provides high-quality teacher education."

H.J.Res. 58 would not only undo all of the improvements to the current system for both students and teachers but it would do so by rolling back a rule that was crafted with extensive stakeholder and public feedback through four years of public hearings and comment periods, in a short, partisan debate. It would also prevent future consideration of a "substantially similar" rule under the Congressional Revue Act (CRA) procedure

Bill Text for H.J.Res. 58:

Background for H.J.Res. 58:
Fact Sheet From the Democratic Staff on the Committee on Education and the Workforce

H.J.Res. 57 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (One hour of debate). The resolution disapproves of the Every Student Succeeds Act (ESSA) rule which addresses the implementation of a state's accountability system when receiving federal education funding. ESSA, the bipartisan reauthorization of the Elementary and Secondary Education Act (ESEA) in 2015, the first since No Child Left Behind (NCLB) in 2001, relied on a balance between increased flexibility to states while maintaining the federal guardrails that protect the civil rights of all students. This rule appropriately clarifies the intended balance of implementing challenging academic standards, collecting and reporting important information to measure school performance, and accounting for resource equity with the flexibility to States to

develop their own standards and innovate at the state level. The Rule was written with extensive feedback from the public and stakeholders across the education system. States have already begun working on their plans to transition from the top down NCLB to the more flexible ESSA. Disapproving this Rule would disproportionately affect students from Title I schools and create confusion amongst states that have already begun implementing ESSA. Finally, disapproving this rule by using the Congressional Revue Act (CRA) would prevent future rules that are "substantially similar" from being promulgated.

10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	5:30 – 6:30 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 91 – Rule providing for consideration of H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources), H.J.Res. 58 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce), and H.J.Res. 57 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (One hour of debate). The Rules committee has recommended one Rule which provides for consideration of 3 measures.

For H.J.Res. 44, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Natural Resources. The Rule allows one motion to recommit and waives all points of order against the resolution.

For H.J.Res. 58, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution.

For H.J.Res. 57, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution. **Members are urged to VOTE NO.**

H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources) (One hour of debate). The resolution disapproves of the Bureau of Land Management (BLM) Planning Rule, also known as the "Planning 2.0" Rule, which was finalized at the end of last year. The rule modifies the regulatory framework for updating and maintaining Resource Management Plans (RMPs) for the 245 million acres of public land and 200 million acres of sub-surface mineral estate that BLM manages.

Planning 2.0 gives stakeholders such as state and local governments, Tribes, partner agencies, and local populations a larger role in the process by allowing for their input throughout the stages of development and increasing the level of transparency during the entire process. Additionally the Rule emphasizes the role of "high quality information," including requiring that the best available science be used in the decision making process in order to protect critical habitats, allow continued access to recreation, and protect the environment from the impacts of climate change.

Prior to Planning 2.0 being issued, the previous Rule had been in place since the Reagan Administration. State and Local governments and resources users had requested an update to the process because it had become too slow and hidden from the public, taking an average of eight years to update or revise existing RMPs.

Republicans continually talk about how they want to repeal laws that allow "unelected bureaucrats" to enforce regulations on the public without taking the wishes of the American people into account, but H.J.Res. 44 is a clear example of their hypocrisy. Planning 2.0 gives more power to people living in local communities that are directly impacted by RMPs by allowing those people to have a greater voice and a clear role in the entire process.

Planning 2.0 was carefully and transparently crafted over a period of two years in conjunction with industry professionals and the public. Now Republicans want to undo this Rule and go back to an antiquated process after just one hour of debate on the House Floor, and they are doing so by using the Congressional Review Act (CRA) process, which allows for a vote by a simple majority in the Senate and blocks promulgation of any substantially similar rule in the future.

H.Res. 91 – Rule providing for consideration of H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources), H.J.Res. 58 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce), and H.J.Res. 57 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (One hour of debate). The Rules committee has recommended one Rule which provides for consideration of 3 measures.

For H.J.Res. 44, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Natural Resources. The Rule allows one motion to recommit and waives all points of order against the resolution.

For H.J.Res. 58, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution.

For H.J.Res. 57, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution. **Members are urged to VOTE NO.**

H.J.Res. 44 – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Rep. Cheney – Natural Resources) (One hour of debate). The resolution disapproves of the Bureau of Land Management (BLM) Planning Rule, also known as the "Planning 2.0" Rule, which was finalized at the end of last year. The rule modifies the regulatory framework for updating and maintaining Resource Management Plans (RMPs) for the 245 million acres of public land and 200 million acres of sub-surface mineral estate that BLM manages.

Planning 2.0 gives stakeholders such as state and local governments, Tribes, partner agencies, and local populations a larger role in the process by allowing for their input throughout the stages of development and increasing the level of transparency during the entire process. Additionally the Rule emphasizes the role of "high quality information," including requiring that the best available science be used in the decision making process in order to protect critical habitats, allow continued access to recreation, and protect the environment from the impacts of climate change.

Prior to Planning 2.0 being issued, the previous Rule had been in place since the Reagan Administration. State and Local governments and resources users had requested an update to the process because it had become too slow and hidden from the public, taking an average of eight years to update or revise existing RMPs.

Republicans continually talk about how they want to repeal laws that allow "unelected bureaucrats" to enforce regulations on the public without taking the wishes of the American people into account, but H.J.Res. 44 is a clear example of their hypocrisy. Planning 2.0 gives more power to people living in local communities that are directly impacted by RMPs by allowing those people to have a greater voice and a clear role in the entire process.

Planning 2.0 was carefully and transparently crafted over a period of two years in conjunction with industry professionals and the public. Now Republicans want to undo this Rule and go back to an antiquated process after just one hour of debate on the House Floor, and they are doing so by using the Congressional Review Act (CRA) process, which allows for a vote by a simple majority in the Senate and blocks promulgation of any substantially similar rule in the future.

Background for H.J.Res. 44:
Fact Sheet From the Democratic Staff on the Committee on Natural Resources

H.J.Res. 58 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Rep. Guthrie – Education and Workforce) (One hour of debate). The resolution disapproves of the Rule issued by the Department of Education relating to teacher preparation. The Rule was created to ensure consistency, quality, and transparency in teacher preparation programs to benefit students, parents, prospective teachers, current teachers, school systems and state educational organizations.

In 2013-2014, roughly 460,000 individuals were enrolled in traditional and alternative teacher certification preparation programs. This Rule would ensure that every student or prospective student is aware of the employment outcomes, level of preparedness for the classroom, and demonstrated success in improving student learning outcomes

of previous students who completed such programs. The transparency required in the Rule also allows the prospective teacher candidate to see the strengths of different programs so they can choose a program that is right for them. This Rule, not only protects those students seeking teacher certification, but it also ensures that the students in the classrooms of those prospective teachers are taught by someone who feels prepared and capable of succeeding in the classroom, while also providing valuable information to employers seeking to hire teachers.

Consistent with the 2008 bipartisan comprehensive reauthorization of the Higher Education Act (HEA), the Rule provides flexibility to states in assessing the quality of teacher certification preparation program. States, not the federal government would decide what constitutes a "high-quality" teacher preparation program by: (1) including as many metrics as they want: (2) weighing such metrics any way they would like; and (3) developing quality performance levels. Additionally, it ensures that recipients of the Teacher Education Assistance for College and Higher Education (TEACH) grant, who will eventually go on to teach at a high-needs school, only attend a teacher preparation program that "provides high-quality teacher education."

H.J.Res. 58 would not only undo all of the improvements to the current system for both students and teachers but it would do so by rolling back a rule that was crafted with extensive stakeholder and public feedback through four years of public hearings and comment periods, in a short, partisan debate. It would also prevent future consideration of a "substantially similar" rule under the Congressional Revue Act (CRA) procedure

Bill Text for H.J.Res. 58:
PDF Version

Background for H.J.Res. 58:
Fact Sheet From the Democratic Staff on the Committee on Education and the Workforce

H.J.Res. 57 – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965 (Rep. Rokita – Education and Workforce) (One hour of debate). The resolution disapproves of the Every Student Succeeds Act (ESSA) rule which addresses the implementation of a state's accountability system when receiving federal education funding. ESSA, the bipartisan reauthorization of the Elementary and Secondary Education Act (ESEA) in 2015, the first since No Child Left Behind (NCLB) in 2001, relied on a balance between increased flexibility to states while maintaining the federal guardrails that protect the civil rights of all students. This rule appropriately clarifies the intended balance of implementing challenging academic standards, collecting and reporting important information to measure school performance, and accounting for resource equity with the flexibility to States to

develop their own standards and innovate at the state level. The Rule was written with extensive feedback from the public and stakeholders across the education system. States have already begun working on their plans to transition from the top down NCLB to the more flexible ESSA. Disapproving this Rule would disproportionately affect students from Title I schools and create confusion amongst states that have already begun implementing ESSA. Finally, disapproving this rule by using the Congressional Revue Act (CRA) would prevent future rules that are "substantially similar" from being promulgated.

Hey Amanda,
Thought you may be interested in seeing these attached letters. We also expect to receive individual letters from Montana Stockgrowers and Montana Farm Bureau. However, these groups have signed onto the attached letters as well:

Montana Farm Bureau Federation
Montana Association of State Grazing Districts
Montana Public Lands Council
Montana Stockgrowers Association
Montana Wool Growers Association

Let me know if you want to discuss.

Washington, D.C. 20510

Dear Senator Daines:

We are writing to express our support for a Congressional Review Act resolution by Sen.Lisa Murkowski expressing congressional disapproval of the final rule submitted by the Director of the Bureau of Land Management relating to resource management planning.

We believe the final rule still front loads public comments, which could give people outside the planning area more opportunities to influence planning documents, restricts consistency reviews with state, local plans, policies and programs. Also, the final rule replaces decision authority at the "state director and field manager" with the "BLM" in general. That could centralize more influence in Washington.

Thank you for your consideration of our comments.

Best Regards,

David M. Wheelihan

The Montana Petroleum Association (MPA) represents more than 180 member-companies in the oil and natural gas industry, from upstream to downstream. The economic impact of Montana's oil and natural gas industry represents that of an industry twice its size. The enormous benefits are the result of very high wage jobs, local and state tax revenues, and exported goods.

MPA finds the Planning 2.0 initiative of the Bureau of Land Management problematic for numerous reasons.

First, the initiative fundamentally changes the process by which the public, including state, local and tribal local governments and stakeholders participate in land management planning. The rule reduces the formal comment period from 90 to 60 days, in spite of frequent requests for extended comment deadlines.

Second, 'Landscape level planning' shifts the input and decision-making processes regarding Resource Management Plans away from local and district offices to Washington D.C. Not only does this shift the planning and decision-making away from those with the most working knowledge of the land and resources, but it opens the door to special interests who might seek to influence land use management decisions.

Third, 'Planning 2.0' removes the congressional mandate that BLM report to Congress prior to implementation of any Resource Management Plan which would eliminate "one or more principal or major uses for 2 or more years with respect to a tract of 100,000 acres or more."

To place the non-use of lands over sustainable development, without congressional approval, undermines our system of checks and balances, and threatens future opportunities for new exploration.

In Montana, studies of potential resources indicate that large volumes of natural gas and oil remain to be discovered in the Rocky Mountain region.

The National Wilderness Preservation System currently comprises 756 wilderness areas on 109,492,591 acres in 44 states. When combined with the many other land use allocations and designations that remove federal lands from multiple uses, such as National Parks, National Wildlife Refuges, Wild and Scenic Rivers, Wilderness Study Areas, National Monuments and Forest Service Roadless Areas, less than half of federal land is open to multiple-use activities that include natural resource development.

It is the position of the Montana Petroleum Association that public lands that are not part of a designated national park or wilderness and open for multiple-use must remain open for those purposes, including oil and natural gas, timber, mining, grazing, and recreational activities. State and local economies must not be further encumbered in favor of sweeping preservation measures because utilizing public lands for multiple uses are key to economic development and sustainability in the local communities. The removal of any lands from multiple-use status will disproportionately affect the counties and rural school districts surrounding the public land.

MPA opposes reducing the availability of multiple-use public lands for any reason and by any method. Similarly, MPA opposes restrictions on multiple-use public lands that place onerous restrictions on the development of public minerals and other natural resources. All too often national park, wilderness, and monument rules are extended into buffer zones beyond the legal boundaries of such areas. MPA opposes any buffer zone that extends restrictions beyond national park and wilderness boundaries established by law.

Sincerely,

Alan Olson
Executive Director

Washington, DC 20510

RE: Congressional Review Act – BLM Resource Management Planning Rule

Dear Chairman Murkowski:

The Montana Mining Association (MMA) supports and encourages the use of the Congressional Review Act to set aside the Bureau of Land Management's Resource Management Planning Rule commonly known as the Planning 2.0 Rule. We applaud your efforts to bring forward a joint resolution of disapproval for this rule.

The Montana Mining Association is a trade association of mineral developers, producers, and vendors from fifteen states, including Montana, and two Canadian Provinces. The mining industry is a major employer and taxpayer in Montana and we believe the continued viability and growth of our members' operations are significant factors in the economic health of our state and its citizens. Most of our members are small businesses who are critically important to the health and vibrancy of our rural communities.

The BLM initiated this rulemaking as part of a broader effort known as "Planning 2.0" to respond to a 2011 BLM strategic review that identified challenges and opportunities for the BLM and to recent Executive and Secretarial direction. In 2011, the BLM released a strategic plan titled "Winning the Challenges of the Future: A Roadmap for Success in 2016." This plan identified several challenges for the BLM in managing the public lands consistent with its statutory direction "that management be on the basis of multiple use and sustained yield unless otherwise specified by law" (43 U.S.C. 1701(a)(7))."

Based on the last sentence of the previous paragraph, it is clear to the MMA the BLM direction in developing the Planning 2.0 rule as dictated by Executive Order and Secretarial direction, was NOT intended to fully embrace The Federal Land Policy and Management Act of 1976 (FLPMA). FLPMA firmly establishes the agency's mission to manage on the basis of multiple-use and sustained yield and that BLM-administered public land be managed in a manner which recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from public land.

BLM appeared to be rushed to enact the rules before the conclusion of the Obama Administration. Planning 2.0 not only diminishes the voice of local stakeholders and their elected leaders in the critical planning processes for management of public lands in their area, but ignores the growing need for domestic production of natural resources, demanded by an ever-consuming population. Further, the rule would restrict all resource providers from producing those necessary resources from BLM-administered public land by increasing uncertainty in planning for land users and hindering necessary long-term planning by resource producers. These factors will certainly lead to reduced development of federal minerals and other natural resources and increase our nation's reliance on development and production off shore.

The Bureau of Land Management (BLM) manages more than 245 million acres of land, of which approximately 8.1 million acres are in Montana. The BLM also administers 700 million acres of sub-surface mineral estate throughout the nation, which are very important to our membership. The MMA strongly believes that our nation's laws, rules and regulations need to provide a system that is predictable and consistent. Planning 2.0, if allowed to move forward, will become a boondoggle where planning is never completed and would absolutely be the antitheses of consistency and predictability.

Montana Mining Association strongly supports your efforts to negate this clear overreach of BLM authority and we urge Congress to quickly overturn BLM's Planning 2.0 rule. On behalf of our membership, I thank you for your leadership on this issue.

Sincerely yours,

Tamara J. Johnson
Executive Director

CC Senator Steve Daines

The Honorable Steve Daines
Hart Senate Office Building Room 320
Washington, DC 20510

The Montana Association of Counties (MACo) joins with National Association of Counties (NACo), NACo's Western Interstate Region (WIR) and other State Associations to urge Congress to Repeal BLM Planning 2.0 Regulation.

The Federal Land Policy Management Act 1976 (FLPMA) gave special recognition to local governments in the land use and planning process. These were collaboration, coordination, and cooperation. FLPMA did not give that same status to "special interest" groups. If Congress' intent was to give "special interest" groups a seat at the table, they would have put in statute. Local government are representative of all residents within that jurisdiction and were hand-picked by the voters to represent their interest. Part of local governments responsibility is to be co-regulators and intergovernmental partners in the BLM's land use management mission. Counties have a significant interest in providing BLM with the most meaningful information and analysis possible to help craft BLM regulations and land-use and resource management plans. The BLM Planning 2.0 Regulation undermines FLPMA intent and somewhat insulting to Congress and their authority.

The Bureau of Land Management's Resource Management Planning Rule, commonly referred to as "Planning 2.0" was published on December 13, 2016 and went into effect on January 11, 2017. Planning 2.0 sets out the processes under which the BLM will develop its Resource Management Plans (RMPs). RMPs set parameters to guide approved uses and actions on the over 245 million acres of surface land and over 700 million acres of subsurface minerals currently managed by the BLM - mostly in the Western United States.

The National Association of Counties and the Montana Association of Counties have been engaged throughout the Planning 2.0 process to ensure local government involvement is at the forefront of BLM resource management planning and that local governments were given the time necessary to analyze the implications of the substantive regulatory changes presented in the Planning 2.0 rule. After securing an extension of the initial comment period, NACo submitted comments <http://www.naco.org/resources/naco-comments-blm-proposed-planning-20-rule>
to BLM on the proposed rule on May 19, 2016. NACo also hosted numerous webinars and forums with BLM staff and county officials to provide other opportunities for the county voice to be heard.

MACo urges Congress to keep the intent of FLPMA intact and stop "Planning 2.0" from proceeding.

Sincerely,

Todd Devlin

The Honorable Mitch McConnell
Majority Leader
United States Senate
U.S. Capitol Building, Room: S-230
Washington, D.C. 20510

The Honorable Charles Schumer
Minority Leader
United States Senate
Hart Senate Office Building, Room: 419
Washington, D.C. 20510

Dear Majority Leader McConnell and Minority Leader Schumer:

On behalf of the nation's 3,000 conservation districts and the 17,000 men and women who work with millions of cooperating landowners and operators to help them manage and protect land and water resources on private and public lands in the United States, the National Association of Conservation Districts (NACD) urges you to support, S.J. Res. 15 - A joint resolution providing for congressional disapproval under chapter 8 of title 5, United States Code, of the final rule submitted by the Director of the Bureau of Land Management relating to resource management planning.

Established under state law, conservation districts share a single mission: to work cooperatively with federal, state and other local resource management agencies as well as private sector entities to provide technical, financial and other assistance to help landowners and operators implement conservation practices on the landscape. Because of this mission, NACD has closely followed the development of the BLM's planning rule and submitted comments during the public comment period.

The BLM's initial intent was good: seeking to update a 30-year-old planning process that needs improvement. The end result however often skirts the Federal Lands Policy Management Act and reduces the ability of local government involvement. The removal of local governments opportunity to submit policies and programs when lacking official approved and adopted management plans among other changes add and undue financial burden to continue to participate in the land use planning process as they previously had and at the same time local governments have had to cut their budgets.

With over 3,353 comments submitted and requiring review of the BLM, the final rule seems forced and blind to the many issues raised during the public comment period. A comprehensive, locally led-strategy is the best approach to public-lands management. This rule does not encourage locally led management. The CRA allows for the BLM to go back to the BLM 2.0 drawing board and write a planning rule that truly increases local government involvement as opposed to centralizing the planning process.

Sincerely,

Brent Van Dyke

The Honorable Nancy Pelosi
Minority Leader
United States House of Representatives
U.S. Capitol Building, Room: H-204
Washington, DC 20515

Dear Majority Leader McConnell, Minority Leader Schumer, Speaker Ryan and Minority Leader Pelosi:

As representatives of state and local governments and public lands stakeholders from across the United States, we encourage Congress to use its legislative authority to review the Bureau of Land Management's (BLM) Planning 2.0 rule. As partners with the federal government, we continue to encourage the BLM to engage in meaningful collaboration with local stakeholders during the development of policies and guidelines. And despite representations by the BLM to do just that, we remain unconvinced that Planning 2.0 in its final form does much to satisfy the objective of meaningful collaboration and consultation with non-federal governmental entities.

Robust coordination and cooperation between states and local governments and the BLM allows federal decision-makers to be responsive to the concerns of state and local government officials during policy development and sets the stage for more effective and efficient implementation of federal policies by involving multi-jurisdictional resources and expertise. Simply put, gathering meaningful, on the ground, input from the states and localities that will be most impacted by BLM's planning regulations is critical to ensuring a practical federal policy that works at the local level.

For years to come, the proposed Planning 2.0 rule will have a substantial impact on how the BLM engages with state and local government and manages its 245 million acres of public lands and 700 million acres of subsurface minerals. We encourage Congress to act to ensure BLM's Planning 2.0 rule does not go into effect and instruct the agency to work with intergovernmental partners to ensure the policy has benefited from meaningful, on the ground, collaboration with state and local governments.

The Honorable Mitch McConnell
Majority Leader
United States Senate
S-230, U.S. Capitol
Washington, DC 20510

The Honorable Paul Ryan
Speaker
U.S. House of Representatives
H-232, U.S. Capitol
Washington, DC 20515

Dear Majority Leader McConnell and Speaker Ryan:

The United States Department of the Interior's Bureau of Management (BLM) manages more than 245 million acres of land, mostly located in 11 contiguous western states and Alaska. Land management decisions and permitted uses under the agency's regulatory philosophy are vitally important to western economies. Western states and rural communities depend on their ability to use public lands for grazing, timber harvest, mining, energy development and recreation.

The BLM, during the final days of the Obama Administration, finalized a new rule specific to land use planning on BLM managed public lands. The rule, dubbed Planning 2.0, has incorporated numerous Obama-era presidential and secretarial orders along with internal agency guidance and policy documents. The rule demonstrated a clear overreach by the BLM, in spite of the agency's claim that the "primary goal of the proposed rulemaking process is to improve the agency's ability to respond to environmental, economic and social changes in a timely manner."

Under the guise of "climate change" and "landscape-scale" management, the agency's final rule will allow implementation of unilateral management schemes, mitigation, adaptive management and other internal agency pronouncements. As a group, we the undersigned are concerned that the Planning 2.0 rule will diminish the statutory requirements of multiple use and dismantle the cooperative ideals of Federalism.

Congress, through the Federal Land Policy Management Act (FLPMA) of 1976, recognizes the importance of the public domain to the future of the western states. Through defined multiple use principles, Congress has mandated that these lands be used to meet "the nation's need for domestic sources of minerals, energy, food, timber and fiber from public lands." BLM Planning 2.0 runs counter to these national interests.

FLPMA recognizes state and local government as cooperating agencies. Their participation in planning is required when the agency is developing Resource Management Plans (RMPs). It is disconcerting that Planning 2.0 in Section 1610.3-1 states BLM will collaborate with cooperating agencies "as feasible and appropriate given their interests, scope of expertise and the constraints of their resources." This language clearly devalues local input. In addition, it subjects local recommendations to bureaucratic scrutiny and bias, not congressional intent.

FLPMA requires “meaningful coordination” with state and local governments and local land use plans. Historically, public land management decisions have critically weighed their impacts on the history, culture, and the economy of the West. It’s unclear whether the “social” values identified in Planning 2.0 will be reflective of local interests and the western way of life.

The BLM standard for an Economic and Threshold Analysis is not defensible. Federal law requires federal agencies engaged in rulemaking to assess the economic impacts and cost increases to consumers, individual industries, and governments. The Planning 2.0 analysis concluded implementation of these “regulatory changes would cost less than $100 million annually” and would not materially affect the economy, a single business sector, productivity, competition, and jobs. That analysis alone should discredit the Planning 2.0 rulemaking process.

BLM Planning 2.0 lacked appropriate input coupled with open and honest evaluation of the costs and impacts of the rulemaking. BLM did not fully evaluate the impacts on consumers, public lands-dependent ranching families, energy, mining, recreation, and rural communities across the American West. Additionally, new definitions and requirements created by the rule exceed statutory authorities and multiple use mandates established by FLMPA and the National Environmental Policy Act.

Planning 2.0 represents a significant departure from the historical way local governments have been involved in BLM decision making. The final rule provides less opportunity for local governments to have meaningful and significant input, in violation of FLPMA. Specifically, Planning 2.0 strictly limits the types of local government plans the BLM will consider as part of its consistency review. The BLM under FLPMA is obligated to take all practical measures to resolve conflicts between federal and local government land use plans.

Because of the numerous departures from historical protocols and legal obligations for managing the western public lands, we the undersigned Farm Bureaus respectfully request that BLM Planning 2.0 be rescinded as part of current efforts related to regulatory reform and making government more responsive to the American people.

Respectfully yours,

American Farm Bureau Federation

Members of the House Natural Resources Committee

January 18, 2017

The Honorable Mitch McConnell
Majority Leader
S-230, The Capitol
Washington, DC 20510

The Honorable John Cornyn
Majority Whip
517 Hart Senate Office Building
Washington, DC 20510

Dear Senate Leadership:

The Public Lands Council is the only national organization dedicated solely to representing the roughly 22,000 ranchers who operate on federal lands. NCBA is the beef industry's largest and oldest national marketing and trade association, representing American cattlemen and women who proved much of the nation's supply of food and own or manage a large portion of America's private property. The American Sheep Industry Association is the national voice of the 88,000 sheep producers throughout the country who produce America's lamb and wool.

PLC, NCBA, and ASI strongly support Congress' use of its authority under the Congressional Review Act (CRA) to withdraw the Bureau of Land Management's Planning 2.0 rulemaking. Collectively, the members of these associations are substantially impacted by any federal land management planning process, and Planning 2.0 – finalized in December of last year as part of the outgoing administration's onslaught of midnight rulemakings – will radically alter both the objectives of such processes and the manner in which they proceed.

As stated in our public comments submitted on the proposed rule last year (attached), we applaud the BLM's acknowledgement that the current resource management planning process is in need of modernization and overhaul. Additionally, we appreciate the revisions that the BLM made to the final rule in response to public comment. Unfortunately, these changes are mostly cosmetic and fail to address the wholesale shift in management focus and elimination of local input brought about by this rule. Despite a mandate to manage for multiple use and sustained yield, Planning 2.0 shifts that focus toward new objectives like environmental and social change.

As has been the case all too often in the past eight years, flowery public statements and summaries regarding cooperation with local impacted communities or sensitivity to local impacts belies the reality of reduced comment period lengths, reduced communication through elimination of the role of BLM state directors, and overall reduced input into the process. Further, we object to the continued exclusion of federal grazing permittees and other multiple uses as legitimate stakeholders; instead lumping all such groups under the general category of "public" despite the existence of formal business relationships with the federal government.

A prime example of the disregard shown to impacted local communities and stakeholders is made evident by the very "public process" by which this rulemaking evolved. Public meetings were not held in the rural areas or communities where the impacts would be most heavily felt. Instead, they

were held in downtown Sacramento, CA and downtown Denver, CO, where attendance was overwhelmingly urban dwellers without livelihoods or homes at stake, or any real knowledge of the impacts on the people and businesses that exist in the impacted areas. This led to biased and inaccurate public sentiment.

PLC, NCBA, and ASI applaud your efforts and appreciate the opportunity to provide input on behalf of our members – the nation's food and fiber producers. We encourage members of Congress to take action to withdraw BLM's Planning 2.0 final rule and provide the incoming administration an opportunity to begin a new, inclusive, constructive process to overhaul land use planning processes.

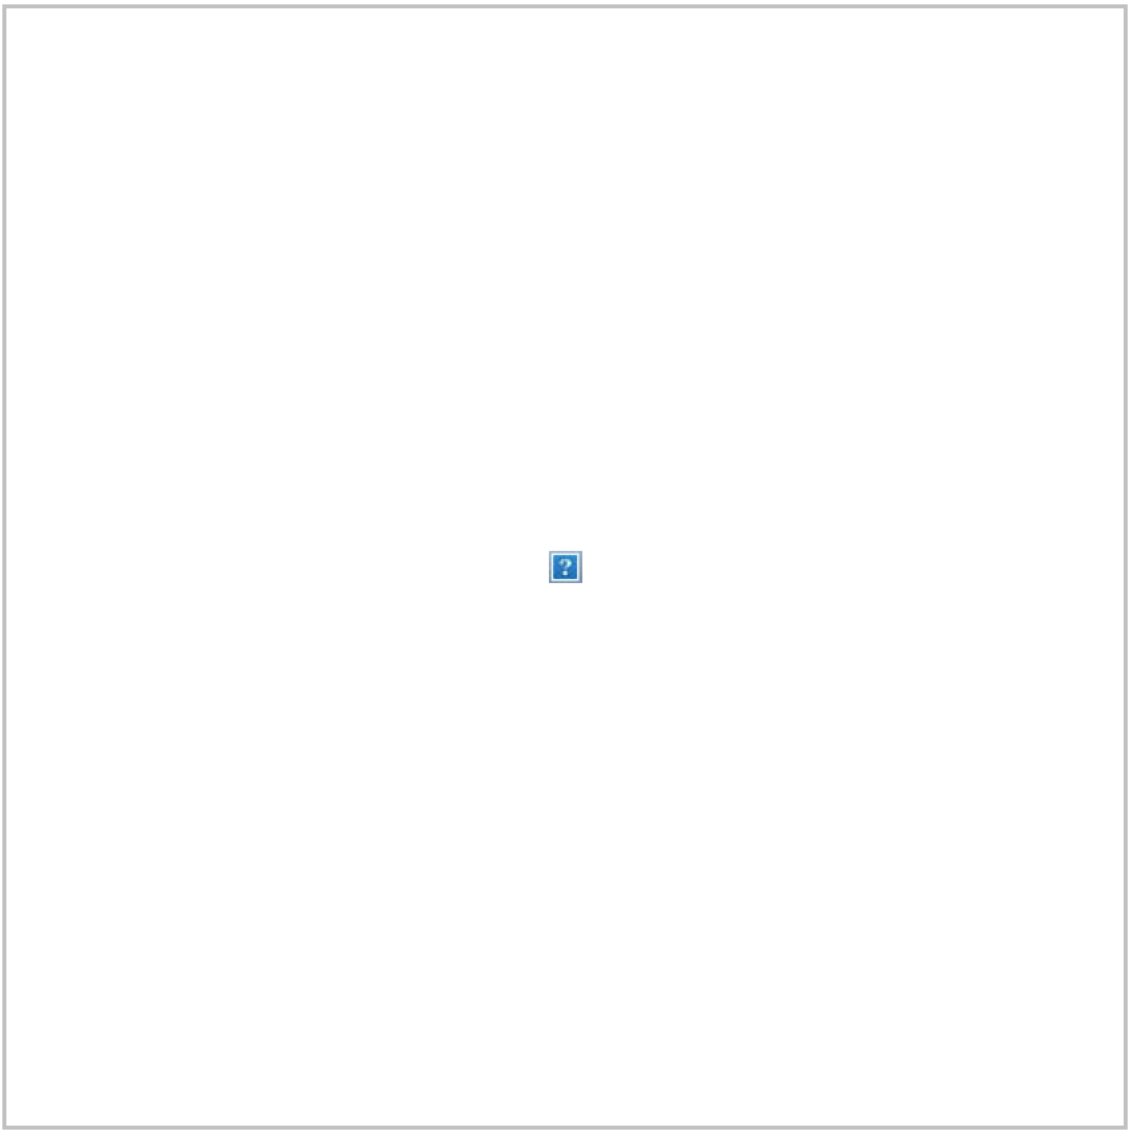
This Week in Congress
February 10, 2017

- **First time ever: CODEL to visit Rota**
- **Veterans Resource Fair**
- **Marianas gets seat on vets committee**

- **Opportunities – Federal grants, jobs for/in the Marianas**
- **Highlights in the legislative program**

First time ever: CODEL to visit Rota

A congressional delegation will visit Rota for the first time ever on February 23. I made a special request for this stopover to Rob Bishop (R-Utah), Chairman of the House Natural Resources Committee and leader of the CODEL. He kindly agreed. On February 22, the eight members of our group will land on Saipan. The next day we travel to Tinian and then on to Rota, where we will be briefed by a National Park Service team. They are holding **public meetings** as part of their **study of the feasibility** of establishing a unit of the National Park System on Rota to protect areas of recognized national importance like I'Chenchon Bird Sanctuary, Monchong Latte Village site, and Taga Latte Quarry. I included authorization for this three-year study in the **2015 National Defense Authorization Act** and funding in the **2016 Consolidated Appropriations Act**. But the Park idea really began with then-Rota Legislative Delegation leader Senator Diego Songao in 2004. Rota Representative Teresita Santos also helped with **convincing testimony** to Congress in 2010, as did Mayor Melchor A. Mendiola and Senator Paul A. Manglona. Study recommendations will go to the Natural Resources Committee, which is responsible for decisions about our national parks.



Marianas gets seat on vets committee

Veterans and their families in the Marianas—and around our nation—are too often forgotten, after giving so much. That is why I asked—**and this week was granted**—a special waiver to serve on the House Veterans' Affairs Committee. Democratic Members are usually limited to membership on two committees, but I will now serve on three. The Committee has jurisdiction over the U.S. Department of Veterans Affairs, which provides veterans with medical care, housing and educational benefits, and other compensation for their service. Committee membership gives me more opportunities to address disparities in these services for veterans living in remote areas of our country,

like the Marianas. Thanks to Democratic Leader Nancy Pelosi and the House Democratic Steering and Policy Committee for approving my waiver request. I also appreciate Veterans' Affairs Ranking Member Tim Walz and House Natural Resources Ranking Member Raul Grijalva for their support of the request.

BACK TO TOP

Federal Opportunities for/in the Marianas

Jobs:

- **Staff Assistant** – Congressman Gregorio Kilili Camacho Sablan is seeking a Staff Assistant in the Washington, D.C. congressional office. Responsibilities include answering phones, maintaining the front office, greeting visitors and giving Capitol tours, answering constituent requests for general information, assisting the office manager with scheduling and bookkeeping, and assisting staff with other various administrative and legislative duties in a supportive role. The Assistant will also be responsible for selecting books at the Library of Congress for the Congressman's "Let's Read" initiative.

  Excellent writing, verbal and organizational skills are essential. Candidates should be well-organized, hard-working, detail oriented, and willing to learn. High degree of professionalism required, as well as an ability to work a flexible schedule. Ties to the Northern Mariana Islands preferred.

  Qualified candidates should submit a cover letter, resume and two writing samples to **bob.schwalbach@mail.house.gov**. No phone calls or drop-ins, please.

- **Food Service Worker** – The Commander, Navy Installations has an opening for a Food Service Worker on Guam. Incumbent will assist in

setting up food service counters, preparing and serving food, and operating a cash register among other duties. Position is open until February 13, 2017. For more information, go to **https://www.usajobs.gov/GetJob/ViewDetails/464020000/**.

- **Child and Youth Program Operations Clerk** – The Commander, Navy Installations has an opening for a Child and Youth Program Operations Clerk in Guam. Duties are related to recordkeeping and reporting, liaising with families and programs, and collecting and monitoring fees and supplies. Position is open until February 14, 2017. For more information, go to **https://www.usajobs.gov/GetJob/ViewDetails/464093600/**.
- **Substitute Teacher** – The Department of Defense Education Activity has an opening for a Substitute Teacher on Guam. Incumbent will present instructions in accordance with an established lesson plan and curriculum to students in a classroom environment, among other duties. Position is open until December 31, 2017. For more information, go to **https://www.usajobs.gov/GetJob/ViewDetails/461039600/**.

Highlights in the Legislative Program

THIS WEEK

On the Floor

- **H.J. Res. 44** – Disapproving the rule submitted by the Department of the Interior relating to Bureau of Land Management regulations that establish the procedures used to prepare, revise, or amend land use plans pursuant to the Federal Land Policy and Management Act of 1976 (Passed, 234-186)
- **H.J. Res. 57** – Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Department of Education relating to accountability and State plans under the Elementary and Secondary Education Act of 1965. (Passed, 234-190)
- **H.J. Res. 58** – Providing for congressional disapproval under chapter 8

of title 5, United States Code, of the rule submitted by the Department of Education relating to teacher preparation issues (Passed, 240-181)
- **H.R. 387** – Email Privacy Act (Agreed to by voice vote)

Legislation I Co-Sponsored

- **H.R.868** — To establish within the Smithsonian Institution the National Museum of Asian Pacific American History and Culture, and for other purposes.
- **H.R.869** — Commission to Study the Potential Creation of a National Museum of Asian Pacific American History and Culture Act
- **H.R.874** — To amend title 38, United States Code, to ensure that certain veterans receive in-patient psychiatric care provided by the Department of Veterans Affairs.
- **H.R.902** — To amend title 38, United States Code, to improve the authority of the Secretary of Veterans Affairs to hire psychiatrists.
- **H.R.909** — To protect victims of domestic violence, sexual assault, stalking, and dating violence from emotional and psychological trauma caused by acts of violence or threats of violence against their pets.

NEXT WEEK

On the Floor

- **H.R. 512** — WINGMAN Act
- **H.R. 244** — HIRE Vets Act
- **H.R. 974** — BRAVE Act
- **H.J.Res. 42** — Disapproving the rule submitted by the Department of Labor relating to drug testing of unemployment compensation applicants
- **H.J.Res. 66** — Disapproving the rule submitted by the Department of Labor relating to savings arrangements established by States for non-governmental employees
- **H.J.Res. 67** — Disapproving the rule submitted by the Department of Labor relating to savings arrangements established by qualified State political subdivisions for non-governmental employees
- **H.J.Res. 69** — Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the final rule of the Department of the Interior relating to "Non-Subsistence Take of Wildlife, and Public Participation and Closure Procedures, on National Wildlife Refuges in Alaska"

- **H.J.Res. 43** — Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the final rule submitted by Secretary of Health and Human Services relating to compliance with title X requirements by project recipients in selecting subrecipients

To: camille_touton@ios.doi.gov
Subject: This Week in ENR
Date: Sunday, February 12, 2017 9:30:13 AM

Dear Camille Calimlim,

Happy Sunday! Last week, the Senate schedule was filled with debate and votes on Cabinet nominees, although none in the energy and environment space. Below is a quick summary of what happened last week and what to expect this coming week.

CATCHING UP

Cantwell works to protect scientists from political interference. In the wake of recent reports that Trump administration officials had placed gag orders on agency employees, Sen. Cantwell introduced the Scientific Integrity Act to protect government scientists from political interference. "*Science should not be used as a political tool, but rather a search for the truth – the verifiable facts. With truth and fact under siege, now is a particularly dangerous time to be silencing our scientists. This bill will help ensure the public is kept safe and informed, tax dollars are spent most effectively, and our laws and policies are based on accurate, verifiable information*," Cantwell said.

Senators slam the Dakota Access Pipeline decision for undermining tribal rights. Sen. Cantwell and other congressional leaders wrote the Trump administration, blasting their approval of the final easement to build the Dakota Access Pipeline (DAPL) and their failure to consult with Native American tribes. "*This blatant disregard for federal law and our country's treaty and trust responsibilities to Native American tribes is unacceptable. We strongly oppose this decision and any efforts to undermine tribal rights. We urge you to immediately reverse this decision and follow the appropriate procedures required for tribal consultation, environmental law and due process*."

New opinion piece in The Hill highlights the Yakima River basin project as a model. The Family Farm Alliance and Trout Unlimited called for inclusion of Western water infrastructure in the Trump administration's infrastructure plan. They highlight as a model the work in the Yakima River basin in eastern Washington: "*The Kittitas Reclamation District, working in partnership with Trout Unlimited, the Washington State Department of Ecology and other stakeholders, has implemented … projects … that help keep Yakima tributaries flowing to benefit farms, communities, and salmon and steelhead populations. … Its huge potential can only be met if they get the needed federal share of funding from Congress*." Last Congress, Sen. Cantwell introduced and passed legislation to get this project moving; her work will continue this Congress to get a bill to the president's desk.

COMING UP

No confirmed dates yet on floor debate or votes on the Perry and Zinke nominations, although we suspect at least on may move sometime next week. Speaking of which—the Tri-City Herald published an editorial on Gov. Perry's nomination, which ended: "*You have doubters who are skeptical you will embrace the scientific foundation at DOE. Prove them wrong*."

The same goes for any Congressional Review Act (CRA) disapproval resolutions. It is possible we could start voting as early on Tuesday on some CRAs, but two that aren't energy or environmentally focused appear to be ahead in the queue—i.e., on guns and Social Security. No hard dates for the BLM Methane Waste Rule or the BLM Planning 2.0 Rule yet, but we will keep you posted.

As always, feel free to reach out with questions, and check out @EnergyDems for up-to-date information and timely news clips.

Dear Joshua,

Happy Sunday! Last week, the Senate schedule was filled with debate and votes on Cabinet nominees, although none in the energy and environment space. Below is a quick summary of what happened last week and what to expect this coming week.

CATCHING UP

Cantwell works to protect scientists from political interference. In the wake of recent reports that Trump administration officials had placed gag orders on agency employees, Sen. Cantwell introduced the Scientific Integrity Act to protect government scientists from political interference. "*Science should not be used as a political tool, but rather a search for the truth – the verifiable facts. With truth and fact under siege, now is a particularly dangerous time to be silencing our scientists. This bill will help ensure the public is kept safe and informed, tax dollars are spent most effectively, and our laws and policies are based on accurate, verifiable information*," Cantwell said.

Senators slam the Dakota Access Pipeline decision for undermining tribal rights. Sen. Cantwell and other congressional leaders wrote the Trump administration, blasting their approval of the final easement to build the Dakota Access Pipeline (DAPL) and their failure to consult with Native American tribes. "*This blatant disregard for federal law and our country's treaty and trust responsibilities to Native American tribes is unacceptable. We strongly oppose this decision and any efforts to undermine tribal rights. We urge you to immediately reverse this decision and follow the appropriate procedures required for tribal consultation, environmental law and due process*."

From:	Bolen, Brittany (RPC)
To:	Magallanes, Downey
Subject:	FW: H.J. Res. 36, Resolution of disapproval regarding BLM's methane rule
Date:	Wednesday, February 15, 2017 1:27:07 PM

From: Bolen, Brittany (RPC)
Sent: Monday, February 13, 2017 9:34 AM
Subject: H.J. Res. 36, Resolution of disapproval regarding BLM's methane rule

The Senate is expected to consider H.J. Res. 36, a resolution of disapproval under the Congressional Review Act regarding the Bureau of Land Management's final "Waste Prevention, Production Subject to Royalties, and Resource Conservation" rule.

H.J. Res. 36, Resolution of disapproval regarding BLM's methane rule

Summary

The resolution provides for congressional disapproval under the CRA of the BLM's final "Waste Prevention, Production Subject to Royalties, and Resource Conservation" rule.

On February 3, the House passed H.J. Res. 36 by a bipartisan vote of 221 to 191. Senate consideration is expected to follow.

Background

On November 18, 2016, the BLM rule was published in the Federal Register, and it went into effect on January 17. BLM is an office in the Department of the Interior. The rule regulates methane emissions from and establishes new royalty rates for oil and natural gas production on federal and Indian lands. BLM estimated the rule would cost up to $279 million each year over a 10-year period (2017-2026) and impose an annual burden of 82,170 paperwork hours.

On January 30, Sen. John Barrasso, introduced S.J. Res. 11, and Rep. Rob Bishop introduced H.J. Res. 36, which provide for congressional disapproval of the rule under the Congressional Review Act. Currently, S.J. Res. 11 has 14 co-sponsors.

Congress and the new administration can repeal midnight rules finalized after June 13, 2016, through a resolution of disapproval under the 1996 Congressional Review Act. H. J. Res. 36 deems that BLM's final rule shall have no force or effect and prohibits the agency from issuing any future rule that is "substantially the same" form.

On February 1, the Trump administration issued a Statement of Administration Policy

that "strongly supports" H.J. Res. 36 and indicated the president would sign it into law.

Considerations

Methane is the primary component of natural gas. During the course of oil and natural gas production, methane may be emitted. Because it is a valuable commodity, oil and natural gas producers have an incentive to capture and process methane to provide energy to American consumers. In its proposed rule, BLM itself acknowledged that "operators do not want to waste gas." However, in the interest of worker safety, producers and operators will at times find it necessary to let methane escape (i.e. vent) or combust it (i.e. flare). Flaring also occurs in areas that lack gas-gathering infrastructure, which consists of small pipelines that ship natural gas from oil and gas wells to processing plants. BLM's proposed rule admitted that flaring takes place in areas: (1) "where capture and processing infrastructure has not yet been built out"; and (2) "with existing capture infrastructure, but where the rate of new-well construction is outpacing the infrastructure capacity."

Last year, BLM issued a proposed methane rule, which was published in the Federal Register on February 8, 2016. Days after the election, on November 15, 2016, BLM released a 337-page prepublication version of the final rule, which unusually specified an effective date of January 17, 2017. The final rule has already been affecting oil and natural gas operations. Since January 17, the venting prohibition and new royalty rates have been in effect, and operators have been required to submit a plan to comply with BLM's waste-prevention controls with any new application for a permit to develop a well.

Exceeds BLM's authority

BLM promulgated the rule under Mineral Leasing Act of 1920, which provides BLM authority to address undue waste on federal and Indian lands. Rather than abide by this authority, BLM designed the rule to address air quality by imposing specific requirements to curb methane emissions. Under the Clean Air Act, Congress vested the authority to regulate air quality with the Environmental Protection Agency in partnership with the states. Concerns over BLM's lack of authority have been expressed by several state and tribal officials, including:

- New Mexico's Energy, Minerals, and Natural Resources Department commented: "It appears as though BLM is attempting to promulgate Clean Air Act rules under the guide of a waste rule. Certainly, [the EPA] and its state counterpart, the Environment Department, have the statutory authority to regulate air quality matters."

- The Wyoming Department of Environmental Quality, Air Quality Division,

commented: “Congress knew that the complicated nature of air emissions would be best understood and managed by the states and the … EPA, not the BLM.”

- The Attorney General of the state of Montana, stated: “the Rule, as written, impermissibly intrudes upon the sovereign authority of state oil and gas conservation commissions to define and control oil and gas waste, and it unnecessarily creates jurisdictional confusion over the specific regulatory standards that Operators of wells must meet.”

- The chairman of the Southern Ute Indian tribe, located in southwest Colorado, stated: “the BLM lacks legal authority under the Clean Air Act to impose air quality control aspects of the rule and, even if it had authority, the rule creates a regulatory conflict between the BLM and the U.S. EPA.”

A federal district court judge also expressed significant concerns with the rule’s overlap with EPA and state regulation. In a January 16 order, Judge Scott Skavdahl wrote: “It appears the asserted cost benefits of the Rule are predominantly based upon emission reductions, which is outside of BLM’s expertise, and not attributed to the purported waste prevention purpose of the Rule.”

Duplicative of state and EPA regulation

The rule is duplicative of existing state and EPA regulation of oil and natural gas facilities. The BLM’s rule is based on Wyoming and Colorado regulations. Nearly all energy-producing states have issued similar emission control requirements. BLM’s fact sheet on the final rule even stated, “[s]everal states, including North Dakota, Colorado, Wyoming, Utah and most recently Pennsylvania, as well as the U.S. Environmental Protection Agency (EPA), have also taken steps to limit venting, flaring and/or leaks.” Since 2012, EPA has issued two regulations addressing emissions from oil and gas facilities nationwide, including one last May that specifically targets methane from new and modified existing oil and natural gas facilities. Many sources of methane emissions within oil and natural gas facilities are covered by both BLM and EPA’s rules. Moreover, days after the election and before BLM issued its final rule, the EPA submitted an immense information collection request to the oil and natural gas industry in order to develop a rule to regulate unmodified existing oil and gas sources.

While BLM’s final rule said it “seeks to minimize regulatory overlap,” the rule creates greater confusion for and burden on producers as well as state and federal regulators. For instance, the North Dakota Industrial Commission, which includes the governor, attorney general, and agriculture commissioner of the state, commented: “The highly detailed leak detection and repair requirements in the [BLM’s] proposed rule may be consistent with EPA [regulation] initially, but will likely result in conflicting requirements when either agency makes changes or issues guidance.”

Ignores commonsense solutions

BLM claims the rule is necessary to capture more methane in order to garner increased royalty revenue; yet the rule may actually decrease production and royalties. The rule's costly and burdensome requirements could result in the shut-in of a number of producing wells on federal and Indian lands. This would not only reduce the royalty revenue assumed in the rule but would reduce American consumers' access to affordable energy. While BLM estimates the rule would provide $23 million more in annual royalties, additional economic analyses have reported that based on current market prices of natural gas the rule would create no more than $3.68 million in additional royalties and would reduce federal and state tax revenue by an annual $114 million.

The oil and gas industry has already taken voluntary steps to capture methane that has generated revenue for the U.S. Treasury – absent federal regulation. In 2012 alone, voluntary measures to reduce methane emission by the oil and gas industry generated $264 million in revenue. In a state such as Wyoming, which already regulates methane emissions, Gov. Matt Mead reported last year that only 0.26 percent of produced gas is flared. In June 2016, the U.S. Energy Information Administration reported that flaring in North Dakota declined more than 20 percent in the two years following state regulation of methane emissions.

Nationwide, as natural gas production rose 47 percent from 1990 to 2014, EPA's greenhouse gas inventory reported natural gas systems have reduced methane emissions by roughly 15 percent during the same period of time. This figure almost certainly underestimates the reduction, as EPA dramatically altered its methodology for estimating methane emissions from oil and gas production last year. The agency started applying emission levels from larger facilities to small facilities that are not included in EPA's greenhouse gas reporting program.

Rather than impede this progress, BLM should embrace a common-sense solution to capture more methane and increase production royalties on federal lands by providing increased access to pipelines and gathering lines to process and transport methane to market. By fixing permitting and pipeline delays, natural gas can reach consumers more quickly. In a letter to House Speaker Paul Ryan supporting congressional repeal of BLM's rule, New Mexico Gov. Susana Martinez further explained: "Insufficient pipeline capacity and gas processing capacity make it difficult for producers to capture and sell as much of their product as possible. The Department of Interior can correct the root causes of venting and flaring events by approving pipeline right-of-ways more efficiently, which will increase pipeline capacity."

Even BLM has admitted that unnecessary venting and flaring takes place in areas with a lack of pipelines or pipeline capacity. A bipartisan majority of senators voted last year in

favor of expediting permitting process for natural gas gathering lines on federal and Indian lands. At his nomination hearing to be secretary of the interior, Rep. Ryan Zinke also expressed support for repealing BLM's rule and agreed that a better network of pipelines and gathering lines would provide greater capture and transport of natural gas for sale.

Provides no meaningful environmental benefits

BLM also asserts the rule is needed to fulfill President Obama's climate action plan and strategy to reduce methane. However, BLM's rule produces no meaningful climate benefits. As a practical matter, by causing producers to shut-in wells, BLM's rule could have the effect of increasing energy production in other countries with weaker environmental standards and greater global methane emissions.

Moreover, absent the flawed royalty assumptions, BLM's only other asserted monetized benefits of the rule are attributed to the novel, so-called social cost of methane metric. This metric has nothing to do with BLM's authority to capture undue waste and has been widely challenged for failing to follow information quality and peer review guidelines. Had BLM conducted a proper cost-benefit analysis, the costs of the rule would overwhelming exceed the benefits.

Methane emissions addressed by BLM's rule also pose no significant contribution to global climate change. EPA reported the most recent estimates of global methane emissions at 8,375 million metric tons of carbon dioxide equivalents per year. EPA's 2016 GHG Inventory reported that U.S. methane emissions are estimated at 730.8 million metric tons of CO2 equivalents per year. BLM estimates its final rule would reduce roughly 4.4-4.5 million metric tons of CO2 equivalents per year. In other words, BLM's rule would address 0.61 percent of domestic methane emissions and 0.053 percent of global methane emissions.

Hi Tricia:

Please review the attached pages of your hearing. Could you please let me know by Thursday, March 2, 2017 if you approve or have changes. Also, will you be my contact for the Department of the Interior for the fiscal year 2018 hearings?

Thank you for your help,

Elmer

United States Senate

COMMITTEE ON APPROPRIATIONS

PROOF FOR FINAL REVIEW

Attached please find a PDF file of the Department of the Interior hearing held on Wednesday, March 2, 2016. If you have any changes please mark up the PDF file and send back the marked-up document as a PDF attachment. Inserts can be sent to me by email or fax inserts and/or corrected pages only (202–228–2348).

If you have any questions or concerns about the attachment please don't hesitate to contact me. Also, please send me an email if the final proof is acceptable to you.

Thank you.

DEPARTMENT OF THE INTERIOR, ENVIRONMENT, AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 2017

WEDNESDAY, MARCH 2, 2016

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 10:02 a.m., in room SD–124, Dirksen Senate Office Building, Hon. Lisa Murkowski (chairman) presiding.

Present: Senators Murkowski, Cochran, Blunt, Daines, Cassidy, Udall, Feinstein, Leahy, Reed, Tester, and Merkley.

DEPARTMENT OF THE INTERIOR

OFFICE OF THE SECRETARY

STATEMENT OF HON. SALLY JEWELL, SECRETARY

ACCOMPANIED BY:
MICHAEL CONNOR, DEPUTY SECRETARY
KRISTEN SARRI, PRINCIPAL DEPUTY ASSISTANT SECRETARY

OPENING STATEMENT OF SENATOR LISA MURKOWSKI

Senator MURKOWSKI. Good morning. I would like to welcome everyone to our first hearing of the Interior Appropriations Subcommittee for fiscal year 2017. We are here to review the budget request for the Department of the Interior.

I would like to welcome our witnesses this morning. We have the Honorable Secretary Sally Jewell, who is accompanied by Deputy Secretary Mike Connor as well as Principal Deputy Assistant Secretary Kris Sarri. Welcome to all of you.

Since this is our first hearing this year, I will just remind colleagues that we will follow past practices and adhere to the early bird rule for recognizing members for questions. I will call on members in the order they arrive, going back and forth between majority and the minority. We will do 6-minute rounds of questions.

My expectation this morning is that we will likely do two to three rounds of questions, depending on votes and schedules of the members and the witnesses. I will try to accommodate everyone so that they have an opportunity to address the issues that they wish to raise.

I also want to thank and welcome my ranking member, Senator Udall. We managed to mark up this bill for the first time in 6 years in fiscal year 2016. While we didn't agree on everything that was in the bill, things were never disagreeable. I really appreciate that.

February 15, 2017 (11:14 p.m.)

I think that my friend from New Mexico has an overall good nature and a passion for the issues that are important to this subcommittee and I greatly respect it. So I am looking forward to another productive year for the subcommittee, working with both you and all the members of the subcommittee.

Turning to the budget request for the Department of the Interior, it is $12.25 billion for programs within this subcommittee's jurisdiction. This includes $290 million for a proposal similar to last year, which allows certain firefighting costs to be appropriated as disaster funds. This total is 2 percent above the enacted level.

But I should note for my colleagues that the department's request does not include funds for the Payments in Lieu of Taxes program (PILT) as part of the discretionary budget.

Funding for PILT was provided within our bill last year at the fully authorized level of $452 million. So when you look at an apples-to-apples comparison to fiscal year 2016, my assessment is that the President's request is roughly 5.8 percent above current levels.

Secretary, as I noted when you appeared before the Energy Committee last week, there are a number of aspects of the President's budget proposal that I do find troubling. It includes a number of mandatory spending proposals without providing any offsets.

Mandatory spending for the Land and Water Conservation Fund (LWCF) is at $425 million without an offset. Similarly, for the National Park Service, the budget proposes mandatory spending of $1.5 billion over a 3-year window, again with no offsets.

This administration has engaged in this somewhat questionable practice of proposing mandatory funding for popular programs with no offsets during the last several budget cycles. This approach raises expectations that funding will materialize when we all know that finding payfors—even for the most popular programs—is extremely difficult in this budget environment.

If the authorizing committees are unable to find offsets in their jurisdiction to pay for these proposals, it puts more pressure on this subcommittee to find funds out of our limited resources.

The budget also prioritizes certain programs within this subcommittee's jurisdiction over others, and essentially places them on autopilot at the expense of other dire needs. Some of those needs, and I am sure we will hear about them this morning, are the needs in Indian country, where our schools are failing and suicide rates are so far above the national average that it is just heartbreaking.

I know, Secretary, that you share concerns about what is headed in Indian Country with me.

The healthcare system is strained to its limits, often providing services in facilities that are over 100 years old.

So you have a situation where funding increases, as proposed for LWCF and the National Park Service, are elevated and prioritized each year among all the programs over which this subcommittee has oversight. This budget appears to have done just that.

I don't want to send the wrong impression here. I will work with the administration and my colleagues on a responsible, bipartisan National Park Service centennial bill. I think that is important. But I do think the $1.5 billion proposal put forward is not realistic. I hope we can be creative in the use of public/private partnerships

and other means to stretch our Federal funding further and to reach consensus on a bill that appropriately celebrates the 100th anniversary of our national parks.

I am also concerned that, yet again, when oil prices have fallen dramatically and many companies are on the verge of bankruptcy, the department indicates in its budget request that it will propose a host of new fees and royalty rate increases on energy producers that will exceed $1.7 billion. There are also new fees on grazing and hard-rock mining.

I just don't see how making it more expensive to do business on public lands is sound policy or good for the United States Treasury.

I am pleased that this budget fully funds contract support costs and adopts the approach that I put forward in the Senate mark for fiscal year 2016, which establishes a separate, indefinite appropriation for these costs to ensure that these legal obligations are met and other programs will not be affected.

We have come a long way since a couple years ago when the administration proposed circumventing the tribes' victory in the Ramah decision and sought to cap these costs. I thank all my colleagues both here in the Senate and in the House for their support in this effort.

Finally, Madam Secretary, there remains King Cove, which is still totally unresolved. We once again discussed this issue last week in your testimony before the Energy Committee. But, again, I don't see anything in this budget request to help those whose lives are in needless danger. You did agree last week, Secretary, to publicly release the nonroad, nonsolutions study that Interior commissioned for King Cove during the budget hearing. When we get to the questions time, I do plan to ask you about the timing on this report.

I have talked to virtually all of my colleagues about the need for a lifesaving road to King Cove. I mention it again here, particularly for the information of members who are not on the Energy Committee, so that they remain aware that I remain committed to do everything in my power as the chairman of that committee and as chairman of the Interior Subcommittee to fight for the construction of this critical road.

With that, I want to thank, again, the Secretary and the Deputy Secretaries, and my colleagues for their appearance here this morning.

And I will now turn to Ranking Member Udall for any comments that he would like to make.

STATEMENT OF SENATOR TOM UDALL

Senator UDALL. Good morning. Thank you, Madam Chair, for those very kind comments at the beginning. I will reciprocate here in a minute with some also.

Good morning, also, Secretary Jewell. We are very pleased to have you appear before the subcommittee to discuss the Department of the Interior's fiscal year 2017 budget request. I am also pleased to welcome Deputy Secretary Mike Connor and Deputy Assistant Secretary Kris Sarri before the subcommittee.

Before we turn to the budget, I want to thank Chairman Murkowski for working with me to produce what I think is a very good

budget for the department in 2016. Madam Chairman, we have had some challenging policy issues to work through, so I am very pleased that we were able to pass a bill that included critical increases for national parks, tribal programs, Land and Water Conservation Fund, and many of the programs that we will discuss this morning.

I also want to recognize, Madam Chair, your hard work and your leadership of this subcommittee. I know it will be a pleasure to work with you again this year, and to work with your very fine staff to support our common interests in this bill.

That said, this subcommittee's job is not going to be easy. Under the Budget Control Act, discretionary spending for nondefense programs is essentially flat in 2017. At the same time, we have to fund certain must-do increases across the Government, including firefighting and tribal contract support costs for this subcommittee. So that flat funding level effectively means a cut.

On paper, the department's discretionary request also looks flat compared to fiscal year 2016, in keeping with the budget caps. But if you dig a little deeper, it is clear that the President used savings from a number of proposals to create room for some significant increases. These proposals include funding part of the firefighting budget with a new disaster cap authorization and providing mandatory funding for the Payment in Lieu of Taxes program.

In fact, when you factor in all the sources of funding, this budget is really a 2 percent increase overall for the department. I like many of the increases that this budget proposes. It provides a 9 percent increase for our national parks and a 5 percent increase for the Bureau of Indian Affairs to support tribal education and social service needs.

I could not agree, Chairman Murkowski, with you more, in talking about the dire state and dire situation in Indian country, in terms of education.

This budget also expands on the increases that we provided in the 2016 omnibus to the Land and Water Conservation Fund (LWCF). It proposes $475 million for LWCF programs funded by this bill, and proposes to transition the program to its full authorized level of $900 million in future years.

There are many important increases as well for wildlife refuges, energy development, science and climate change programs—all very important investments. But let's be clear. Since funding is tight, our ability to fund many of these increases depends on getting agreement to reform the wildland firefighting budget and enacting a long-term mandatory funding source for the Payment in Lieu of Taxes program.

Until we are successful in enacting those changes, we will have to prioritize what we fund very carefully, and that means very tough trade-offs.

The budget also includes some important legislative proposals that I expect we will discuss today. In particular, I want to applaud the administration's leadership to reform energy and mining activities on public lands and make sure that taxpayers are getting a fair return from the development of those lands. I am pleased to see that your budget addresses hard-rock mining reforms, including setting a fair royalty for mining operations on public lands and pro-

posing a hard-rock abandoned mine fee to address legacy cleanup issues.

I have also sponsored legislation to take on this issue. We need real mining reform, and we have needed it for a long time. It makes no sense that we still rely on an antiquated law that is nearly 150 years old as the framework for mining in this country.

Events like the Gold King Mine disaster should serve as a wake-up call for all of us. We have to get serious about cleaning up abandoned mines. There are abandoned toxic mine sites throughout the West. These mines are ticking time bombs. They are releasing a slow-motion stream of lead, arsenic, cadmium, and toxins into water supplies, water we need for drinking, irrigation, and recreation.

The cleanup costs are absolutely astronomical. I have seen estimates between $9 billion and $21 billion. In New Mexico alone, the cost is estimated between $385 million and $840 million.

Today's mining industry has much better standards, but this toxic legacy cannot be left unaddressed. The damage has been done, and taxpayers should not be left holding the bag for the mess as well as for future cleanup costs. The cost of inaction on mining reform has been too great already. We cannot afford to wait, and it is time that we act.

You are doing the right thing, Secretary Jewell, and I want to work with you to enact common-sense reforms.

Thank you again for appearing before us. I look forward to hearing your testimony and having a good discussion and dialogue.

Thank you, Madam Chair.

Senator MURKOWSKI. Thank you, Senator Udall.

We have the chairman of the full Appropriations Committee with us this morning.

Mr. Chairman, would you care to make any comments or statements before we hear from the Secretary?

STATEMENT OF SENATOR THAD COCHRAN

Senator COCHRAN. Madam Chair, I appreciate the recognition. I am delighted to be able to announce that, this year, the City of Natchez, Mississippi, is celebrating its tricentennial anniversary, a very rich history. A historically significant area of the Lower Mississippi River Valley will be brought together with local municipalities and counties in helping make sure that tourists know of this destination site where you will learn a lot and meet a lot of fine people. So come to Natchez and help us celebrate. Thank you.

Senator MURKOWSKI. Thank you, Mr. Chair.

I just had to think, tricentennial. As a State, we are about 58 years old in Alaska. So boy, if that does not remind you——

Senator COCHRAN. To be 58 again. [Laughter]

Senator MURKOWSKI. To be 58 again, yes. America is a beautiful place.

With that, let us go to the Secretary of the Interior. Welcome this morning. We appreciate you being here and look forward to your comments and the questions that will follow.

SUMMARY STATEMENT OF HON. SALLY JEWELL

Secretary JEWELL. Thank you. And congratulations on the tricentennial. It would be fun to be there.

Chairman Murkowski, Ranking Member Udall, Chairman Cochran, and members of the subcommittee, thank you so much for the opportunity to discuss the fiscal year 2017 budget request for the Department of the Interior. This is the administration's final budget, and I want to take the opportunity to thank all of you and your capable staffs for working with me over the last 3 years to help the Department meet its mission for the American people.

I would like also to take a moment to mention the incident at the Malheur National Wildlife Refuge in Harney County, Oregon. Through tremendous patience and professionalism, the FBI, with support from State and local law enforcement, ended the occupation on February 11 as quickly and safely as possible after more than 40 days.

It was an incredibly disruptive and distressing time for our employees, their families, and the Harney County community. I am proud of our Department of the Interior law enforcement personnel who supported the response and helped keep our employees safe.

We continue to cooperate with DOJ, the FBI, and others, as the investigations move forward. And we remain committed to working with local communities on the management of public lands.

Interior's overall fiscal year 2017 budget request is $13.4 billion, a lion's share within this subcommittee. Specifically for programs within this subcommittee's jurisdiction, as mentioned, is $12.3 billion.

It builds on the successes we are achieving through partnerships, the application of science and innovation, and balanced stewardship. It gives us the tools to help communities strengthen resilience in the face of climate change, conserve natural and cultural resources, secure clean and sustainable water, engage the next generation with the great outdoors, promote a balanced approach to safe and responsible energy development, and expand opportunities for Native American communities.

These areas are core to our mission and play a vital rule in job creation and economic growth.

The budget invests in our public lands, providing $5 billion to support operations of our national parks, historical and cultural sites, wildlife refuges and habitats, and managing multiple use and sustained yield on our Nation's public lands.

It focuses investment on important working landscapes like the western Sage-Steppe, and the Arctic, and proposes a 10-year, $2 billion coastal climate resilience program to support at-risk coastal States and local governments, including funding for communities in Alaska to prepare for and adapt to climate change.

As the National Park Service begins its second century, the budget provides $3 billion and includes a proposal to dedicate significant funding to reduce the deferred maintenance backlog. It calls for full and permanent funding of the Land and Water Conservation Fund and extends the expired authority for the Historic Preservation Fund.

It reflects the administration's strategy to more effectively budget for catastrophic wildfires, as you pointed out. And in response to drought challenges across the West, it continues to safeguard sustainable and secure water supplies.

We continue to engage the next generation of Americans to play, learn, serve, and work outdoors with $103 million for youth engagement. This includes mentoring and research opportunities at the U.S. Geological Survey; urban community partnerships; scholarships and job corps training for tribal, rural, and urban youth; and work opportunities within our bureaus. There is $20 million for the Every Kid in a Park initiative, which introduces America's fourth graders to their public lands, providing education programs across the country and transportation support for low-income students.

We continue to promote a balanced approach to safe and responsible energy development that maximizes a fair return for taxpayers with $800 million for renewable and conventional energy development, a $42 million increase. We are on track to meet the President's goals of permitting 20,000 megawatts of renewable energy capacity on public lands by 2020, with nearly $100 million for renewable energy development and infrastructure.

Offshore, this budget supports the Bureau of Ocean Energy Management and the Bureau of Safety and Environmental Enforcement with funding to reform and strengthen responsiveness, oversight, and safety for oil and gas development.

Onshore, an increase of $21 million supports the Bureau of Land Management's (BLM's) efforts to develop a landscape-level approach to oil and gas development, modernize and streamline permitting, and strengthen inspection capacity.

We are expanding educational and job opportunities for Native American communities with $3 billion for Indian Affairs, a 5 percent increase, to support native youth education, American Indian and Alaskan Native families, public safety, and building resilience to climate change. The President's budget calls for a $1 billion investment in Indian education as part of Generation Indigenous, and $278 million to fully fund contract support costs, a cornerstone of tribal self determination.

The budget supports our commitment to resolve Indian water right settlements and supports sustainable water management in Indian country with $215 million, a $5 million increase.

The budget includes funding to strengthen cybersecurity controls across all agencies. It also invests in science and innovation with $150 million for natural hazards at the USGS, an $11 million increase. Funding will continue development of Landsat 9, a critical new satellite expected to launch in 2021.

This is a smart budget that builds on our previous successes and strengthens partnerships to ensure we balance the needs of today with opportunity for future generations. So thank you, members of the subcommittee. I look forward to any questions you may have.

[The statement follows:]

PREPARED STATEMENT OF HON. SALLY JEWELL

Madame Chairman, Ranking Member Udall, and members of the subcommittee, I am pleased to present the 2017 President's budget for the Department of the Interior providing $13.4 billion for the Department's programs with $290 million avail-

able in the event of catastrophic fires. Of this amount, $12.3 billion is within the jurisdiction of this subcommittee, an increase of $224.4 million with the fire cap adjustment.

This is a strong budget that builds on our accomplishments. Our request enables us to carry out our important missions—maintain our core capabilities, meet commitments, and invest in key priorities. The investments in this request show the administration remains focused on meeting the Nation's greatest challenges looking forward and ensuring our economy works for all.

Our budget is part of the President's broader strategy to make critical investments in domestic and national security priorities while adhering to the bipartisan budget agreement signed into law last fall, and lifts sequestration in future years to continue investment in the future. This budget recognizes the importance of Interior's programs to the overall strength of the Nation's economy. To put this into perspective, in 2014, Interior-managed lands and activities contributed about $360 billion in national economic output, supporting an estimated 2 million jobs. Of this, energy and mineral development on Interior-managed lands and offshore areas generated more than $241 billion in economic activity and supported nearly 1.1 million jobs.

At the same time, our 2017 proposed investments lay the groundwork for promoting renewable energy development, managing the Nation's lands responsibly, helping to protect communities in the face of climate change, and investing in science to inform natural resource management. Our budget features investments to launch the second century of the national parks and expand public accessibility to and enjoyment of America's public lands. It supports tribal priorities in Indian Country, including a $1.1 billion investment to transform Indian schools and education, and provides full funding for tribal contract support costs. This request addresses significant resource challenges for the Nation, including water availability, particularly in the arid West, and makes important investments in America's water infrastructure.

The 2017 budget includes $1.0 billion for research and development activities throughout the Department, an increase of $84.5 million from the 2016 enacted level. Activities supported include scientific analysis of natural systems and applied field research to address specific problems, such as thawing permafrost, invasive species, and flooding. With multiple science programs across the Department's bureaus and offices, science coordination remains a critical component in the process of effective science application. Interior is well served by the deployment of science advisors in each bureau. These advisors serve critical roles within the organizations and across the Department by sharing information concerning new research efforts, identifying and evaluating emerging science needs, and ensuring effective science delivery and application. The Interior 2017 budget reflects high priority needs identified for scientific research across the Department.

THE 2017 BUDGET ADVANCES A RECORD OF ACHIEVEMENT

This budget builds on a record of achievement across Interior's diverse mission. For the past several years, the Department led an unprecedented proactive strategy to develop land use plans with Federal, State, and local partners to address the deteriorating health of America's sagebrush landscapes and the declining population of the Greater sage-grouse. This landscape scale conservation effort is an extraordinary collaboration to significantly address threats to the Greater sage-grouse across 90 percent of the species' breeding habitat. These efforts enabled the U.S. Fish and Wildlife Service to conclude the charismatic rangeland bird does not warrant protection under the Endangered Species Act. This collaborative, science-based strategy is the largest land conservation effort in U.S. history, and helps to protect the species and its habitat while also providing certainty needed for sustainable economic development across millions of acres of Federal and private lands throughout the western United States. The 2017 budget includes $89.7 million for Sage Steppe conservation, an increase of $22.9 million over 2016 enacted.

This budget continues to advance development of renewable energy. Over the summer of 2015, Interior's offshore wind energy leasing efforts led to beginning construction of the first offshore wind farm. This first of its kind project will provide a model for future development of offshore wind energy. Since 2009, Interior has approved 56 wind, solar, and geothermal utility scale projects on public or tribal lands. When built, these projects could provide about 14,600 megawatts—enough energy to power nearly 4.9 million homes and support more than 24,000 construction jobs. The 2017 budget includes $97.3 million for clean energy programs, an increase of $3.1 million over 2016 enacted.

The 2017 budget sustains President Obama's strong commitment to tribal self-determination, strengthening tribal nations, and investing in the future of Native youth. Interior established the Land Buy Back Program which, in only 2 years of active land purchases, invested more than $730 million in Indian Country to restore nearly 1.5 million acres of land to Indian tribes. The effort to improve and transform the Bureau of Indian Education to better serve American Indian and Alaska Native youth is building the foundation for improved student outcomes and enduring traditions and native cultures. In 2016, work will begin to replace the final 2 of 14 Bureau of Indian Education schools identified in 2004 as requiring the greatest need for replacement construction. Also, in 2016, Interior will finalize the next list of replacement schools determined through a negotiated rulemaking process. This budget includes $138.3 million for education construction and maintains a commitment to continue to invest in improving educational opportunities and quality from the earliest years through college.

Interior continues to engage in innovative efforts to leverage youth engagement and partnerships to advance the Department's extraordinary mission. Interior set the goal to provide 40,000 work and training opportunities during 2014 and 2015 for young adults, toward a goal of 100,000 by 2017. Interior met its priority goal—providing 52,596 work and training opportunities over the past two fiscal years by collaborating across all levels of government and mobilizing the 21st Century Conservation Corps. From Denali to the Everglades, members of the youth conservation corps are gaining work experience, helping improve the visitor experience, and mobilizing entire communities in the stewardship of our parks, refuges, waters and heritage. The 2017 budget includes a total of $102.5 million, an increase of $37.6 million over 2016 enacted, for programs to advance youth engagement.

Partnerships are critical to enhancing our public lands and providing additional recreational opportunities to the public. An example of the significant impact of these efforts is the CityArchRiver project is a public-private partnership building connections that enhance downtown St. Louis, the Gateway Arch grounds at the Jefferson National Expansion Memorial, and the Mississippi riverfront. This partnership includes the National Park Service, Missouri Department of Transportation, Great Rivers Greenway District, City of St. Louis, Bi-State Development Agency, CityArchRiver Foundation, and others. In January, the Foundation completed a $250 million capital campaign which means the Foundation has raised $221 million in private funding for construction of the $380 million CityArchRiver project and an additional $29 million to seed an endowment that will help maintain and operate the park moving forward.

PROMOTES THE CONSERVATION AND PROTECTION OF AMERICA'S NATURAL AND CULTURAL RESOURCES

This year, the National Park Service celebrates 100 years of preserving and sharing America's natural, cultural, and historic treasures. Interior's 2017 budget makes investments to connect a new generation to "America's Best Idea," and to care for and maintain our national parks for the next 100 years. Last year, the National Park Service's 410 units welcomed 307 million visitors—setting a new visitation record. Every tax dollar invested in a park returns more than $10 to the U.S. economy.

The budget includes a discretionary increase of $190.5 million to invest in the next century of the National Park Service. This includes a $20.0 million increase for the *Every Kid in a Park* initiative, a $20.0 million increase to the Centennial Challenge program providing a Federal match to leverage partner donations for projects and programs at national parks, and a $150.5 million increase to address high priority deferred maintenance needs across the national park system.

This current funding is complemented by a legislative proposal to provide new mandatory funding, The National Park Service Centennial Act includes $100.0 million a year, for 3 years, for Centennial Challenge projects to provide the Federal match in support of signature projects at park units; $100.0 million a year for 3 years for the Public Lands Centennial Fund, a competitive opportunity for public lands agencies to support conservation and maintenance projects; and $300.0 million a year, for 3 years, for Second Century Infrastructure Investment projects to make a meaningful and lasting impact on the NPS deferred maintenance backlog. The Act also provides authority to collect and retain additional camping or lodging fees and funds collected from purchases of the lifetime pass for citizens 62 years of age or older. Receipts for this Second Century Fund will be matched by donations to fund visitor enhancement projects.

Together, the discretionary and mandatory funding proposals will allow the National Park Service to make targeted, measurable upgrades over the next 10 years

to all of its highest priority, non-transportation assets, restoring and maintaining them in good condition.

America's public lands and waters offer space to get outside and get active, and provide living classrooms with hands-on opportunities to build skills. The administration launched the *Every Kid in a Park* Initiative to inspire the next generation to discover all America's public lands and waters have to offer. Starting with the 2015–2016 school year, all fourth grade students and their families are able to receive free admission to all national parks and other Federal lands for a full year. The National Park Service budget for 2017 includes $20.0 million for *Every Kid in a Park* to introduce at least one million fourth grade students from elementary schools serving disadvantaged students in urban areas to nearby national parks and provide park programs tailored for young people and their families, especially at high visitation and urban parks.

Investments in America's great outdoors create and sustain millions of jobs and spur billions of dollars in national economic activity through outdoor recreation and tourism. An estimated 423 million recreational visits to Interior lands contributed $42 billion to the economy and supported about 375,000 jobs nationwide. The 2017 budget proposes full funding for Land and Water Conservation Fund (LWCF) programs at Interior and the Department of Agriculture. This innovative, highly successful program reinvests royalties from offshore oil and gas activities into public lands across the Nation. Starting in 2017, the budget will invest $900.0 million annually into conservation and recreation projects, equal to the amount of receipts authorized for deposit into the LWCF each year, through a combination of $475.0 million in current discretionary funding and $425.0 million in mandatory funding. These investments will conserve public lands in or near national parks, refuges, forests and other public lands, and provide grants to States for close-to-home recreation and conservation projects on non-Federal lands.

The budget continues efforts to manage and promote the health and resilience of ecosystems on a landscape scale, including a continued focus in priority landscapes such as the California Bay-Delta, the Everglades, the Great Lakes, Chesapeake Bay, and the Gulf Coast. The request includes a total of $79.2 million for Bureau of Land Management efforts, to protect and restore America's vast sage steppe landscape supporting abundant wildlife and significant economic activity, including recreation, ranching and energy development. This investment reflects Interior's continued support of the unprecedented Federal and State collaboration to conserve the imperiled sage steppe landscape in the face of threats from fire, invasive species, expanding development, and habitat fragmentation. The budget also invests $160.6 million in landscape scale efforts to address the complex natural resource issues facing the Arctic.

IMPLEMENTS THE PRESIDENT'S CLIMATE ACTION PLAN

As manager of roughly 20 percent of the land area of the United States and a partner with tribal, Federal, State, local, and territorial government land managers, the Interior Department works to address the challenges of natural hazards brought on by a changing climate as an integral part of its mission. The budget includes funding to improve the resilience of communities and ecosystems to changing stressors, including flooding, severe storm events, and drought as part of the administration's effort to better understand and prepare for the impacts of a changing climate.

The budget proposes $2.0 billion in mandatory funding for a new Coastal Climate Resilience program, to provide resources over 10 years for at-risk coastal States, local governments, and their communities to prepare for and adapt to climate change. This program would be paid for by redirecting roughly half of the savings that result from the repeal of offshore oil and gas revenue sharing payments that are set to be paid to only four States under current law. A portion of these program funds would be set aside to cover the unique impacts of climate change in Alaska where rising seas, coastal erosion, and storm surges are threatening Native Villages that must prepare for potential relocations.

Population growth near forests and rangelands and a changing climate are increasing wildfire risk and resulting costs. The budget calls for a new funding framework for wildland fire suppression, similar to how other natural disasters are addressed. The budget includes base level funding of 70 percent of the 10-year average for suppression costs and an additional $290.0 million through a cap adjustment, available in the event of the most severe fire activity, which comprises only 2 percent of the fires but 30 percent of the costs. This framework allows for a balanced suppression and fuels management and restoration program, with flexibility to ac-

commodate peak fire seasons, but not at the cost of other Interior and U.S. Department of Agriculture missions.

Healthy communities require secure, sustainable water supplies. This is particularly challenging with record drought conditions and increasing demand taxing watersheds throughout the country, especially in the arid West. To help increase the security and sustainability of Western watersheds, the budget continues investment in the Department's WaterSMART program to promote water reuse, recycling, and conservation, in partnership with States, tribes, and other partners. Funding is also included for research, development, and challenge competitions to find longer term solutions through new water technologies. The budget invests in the Nation's water infrastructure to ensure millions of customers receive the water and power that are the foundation of a healthy economy.

POWERS THE FUTURE THROUGH BALANCED ENERGY DEVELOPMENT

To enhance national energy security and create jobs in new industries, the budget invests in renewable energy development programs to review and permit renewable energy projects on public lands and in offshore waters. Under the President's Climate Action Plan, these funds will allow Interior to continue progress toward its goal of increasing approved capacity authorized for renewable—solar, wind, geothermal, and hydropower—energy resources affecting Interior managed lands, while ensuring full environmental review, to at least 16,600 Megawatts (since the end of fiscal year 2009). The budget includes an increase of $2.0 million for the Office of Insular Affairs to provide assistance to implement energy projects identified by the territories in their comprehensive sustainable energy strategies.

To address the continuing legacy of abandoned mine lands on the health, safety, environment, and economic opportunity of communities, the budget proposes $1.0 billion to States and tribes over 5 years from the unappropriated balance of the AML Trust Fund, administered by the Office of Surface Mining Reclamation and Enforcement. As part of the President's POWER+ Plan, the AML funding will be used to target the reclamation of mine land sites and associated polluted waters in a manner that promotes sustainable redevelopment in economically distressed coalfield communities. The budget includes legislative reforms to strengthen the healthcare and pension plans that provide for the health and retirement security of coal miners and their families.

The budget provides support for onshore energy permitting and oversight on Federal lands, with the Bureau of Land Management's discretionary and permanent oil and gas program receiving a 17 percent increase in funding compared to the 2016 enacted level. The funding increase will enhance BLM's capacity to oversee safe, environmentally-sound development and ensure a fair return to taxpayers, with increases targeted to improve leasing processes, implementation of new regulations and rules, and a modernized automated permitting process. The BLM's costs would be partially offset through new inspection fees totaling $48 million in 2017, requiring the onshore oil and gas industry to share in the cost of managing the program from which it benefits, just as the offshore industry currently does.

The budget also supports reforms to strengthen oversight of offshore industry operations following the 2010 *Deepwater Horizon* oil spill, with an additional emphasis on risk management. The budget includes $175.1 million for the Bureau of Ocean Energy Management and $204.9 million for the Bureau of Safety and Environmental Enforcement, which share responsibility for overseeing development of oil and gas resources on the Outer Continental Shelf.

STRENGTHENING TRIBAL NATIONS

The President's budget maintains the administration's strong support for the principle of tribal self-determination and strengthening tribal communities across Indian Country. This commitment is reflected in a nearly 5 percent increase for the Bureau of Indian Affairs over the 2016 enacted level. The budget calls for full funding for contract support costs that Tribes incur from managing Federal programs, complemented by a proposal to secure mandatory funding in future years. The budget provides significant increases across a wide range of Federal programs that serve tribes; proposes a "one-stop" approach to improve and coordinate access to Federal programs and resources; seeks to improve the quality of data by partnering with the Census Bureau; supports sustainable stewardship of land, water, and other natural resources; provides funds for communities to plan, prepare, and respond to the impacts of climate change; and expands resources to promote tribally based solutions and capacity building to strengthen tribal communities as a whole. The budget continues to address Indian water rights settlement commitments and programs to sup-

port tribes in resolving water rights claims, developing water sharing agreements, and supporting sustainable water management.

The budget includes key investments to support Generation Indigenous, an initiative addressing barriers to success for American Indian and Alaska Native children and teenagers. In addition to Interior, multiple agencies—including the Departments of Education, Housing and Urban Development, Health and Human Services, Agriculture, and Justice—are working collaboratively with tribes on new and increased investments to implement education reforms and address issues facing Native youth. The budget provides over $1 billion for Interior investments in Indian education.

IMPROVES OVERSIGHT AND USE OF FEDERAL DOLLARS

Interior has several multi-year efforts underway to reduce its nationwide facilities footprint, and improve the efficiency and effectiveness of its information technology infrastructure and financial reporting capabilities. The budget includes $6.4 million to consolidate building space and reduce costs to the taxpayer for privately leased space. Interior achieved a 4.6 percent reduction—2.1 million square feet—in office and warehouse space between fiscal year 2012 and fiscal year 2015. This represents a net annual cost avoidance of approximately $8 million. In 2016, the modernization of the sixth and final wing of the Main Interior Building will be completed, including infrastructure upgrades that improve energy efficiency and sustainability and reconfigured space to support higher occupancy.

The budget includes $3.0 million for Interior's Digital Services team to increase the efficiency and effectiveness of the agency's highest impact digital services. The budget continues to optimize the Department-wide Financial and Business Management System with targeted investments to improve reporting and increase data quality and transparency, as envisioned in the DATA Act.

The budget includes an increase of $2.6 million to support implementation of Federal Information Technology Acquisition Reform Act, to improve standardization of information technology investments by strengthening the role of the Department's Chief Information Officer in strategic planning, budget formulation and execution, and acquisition of information management and technology activities. The budget includes $34.7 million in the appropriated working capital fund to continue the Department's remediation of its cybersecurity systems and processes, an increase of $24.7 million above the 2016 enacted level. The additional funding will allow the Department to secure its valuable information on behalf of our employees, customers, partners and the American public.

The United States Treasury received $7.2 billion in 2015 from fees, royalties and other payments related to oil and gas development on public lands and waters. A number of studies by the Government Accountability Office and Interior's Office of Inspector General found taxpayers could earn a better return through policy changes and more rigorous oversight. The budget proposes a package of legislative reforms to bolster administrative actions focused on advancing royalty reforms, encouraging diligent development of oil and gas leases, and improving revenue collection processes. The administration is committed to ensuring American taxpayers receive a fair return from the sale of public resources and benefit from the development of energy resources owned by all Americans.

The budget includes legislative proposals related to Reforms of Hardrock Mining. To increase safety and minimize environmental impacts, the budget proposes a fee on hardrock mining, with receipts to be used by States, tribes and Federal agencies to restore the most hazardous sites—similar to how coal Abandoned Mine Lands funds are used. In addition, to ensure taxpayers receive a fair return from mineral development on public lands, the budget proposes a royalty on select hardrock minerals—such as silver, gold and copper—and terminating unwarranted payments to coal producing States and tribes that no longer need funds to clean up abandoned coal mines.

BUREAU HIGHLIGHTS

Bureau of Land Management.—The 2017 request is $1.3 billion, $7.1 million above 2016. This includes $1.2 billion for BLM operations, an increase of $2.1 million above the 2016 enacted level, with $1.1 billion for Management of Lands and Resources and $107.0 million for Oregon and California Grant Lands programs. The change in total program resources from 2016 and 2017 is larger, as the budget proposes offsetting user fees in the Rangeland Management and Oil and Gas Management programs which reduce the total request by $64.5 million.

The budget also includes $44.0 million in current appropriations for LWCF land acquisition, including $8.0 million to improve access to public lands for hunting,

fishing, and other recreation. BLM's LWCF land acquisition investments promote the conservation of natural landscapes and resources by consolidating public lands through purchase, exchange and donation to increase management efficiency and preserve areas of natural, cultural, and recreational importance. The BLM estimates 23 million acres (or nine percent) of BLM-managed public lands lack public access or have inadequate public access, primarily due to checkerboard land ownership patterns. The BLM's proposed land acquisition project within the Rio Grande del Norte National Monument in New Mexico illustrates the many benefits of land acquisition to BLM's mission. An investment of $1.3 million would allow BLM to acquire 1,186 acres of private inholdings within the monument to preserve traditional uses, secure connectivity to the Rio Grande Wild & Scenic Corridor, preserver avian and wildlife habitat, protect prehistoric human habitation sites, and improve recreation and tourism.

Complementing the second century of the parks, the BLM budget includes investments in the National Conservation Lands, which recently celebrated their 15th anniversary. Thirteen new National Conservation Lands units were designated during the current administration and visitation and visitor expectations and demands have consistently increased for the whole National Conservation Lands system during this period. The 2017 budget features a $13.7 million increase to meet basic operating requirements and support critical and overdue investments to effectively safeguard the cultural, ecological, and scientific values for which they were designated and provide the quality of recreational opportunities intended with the National Conservation Lands designation. A program increase of $1.1 million in Cultural Resources Management will enhance BLM's capacity to preserve and protect the vast treasure of heritage resources on public lands and a program increase of $2.0 million in Recreation Resources Management will further implement a National Recreation Strategy to facilitate access to public lands.

The BLM continues to support the President's broad energy strategy, with significant increases requested in 2017 to strengthen its ability to effectively manage onshore oil and gas development on Federal lands. The 2017 budget for oil and gas management activities, including the request for direct and fee funded appropriations and estimated permanent appropriations totals $186.6 million, an increase of $27.6 million in total program resources over the 2016 enacted level.

For direct appropriations, the oil and gas request is a net program increase of $19.9 million. Within this net total, $13.1 million will support implementation of rules and regulations to ensure oil and gas operations are safe, environmentally responsible, and ensure a fair return to the taxpayer. These include new oil and gas measurement and site security regulations, hydraulic fracturing regulations, and venting and flaring regulations. A $2.1 million increase will complete modernization of the Automated Fluid Minerals Support System. The development work associated with Phase II of AFMSS modernization includes new functionality supporting new proposed rules and those currently expected to be finalized in 2016. Overall, the AFMSS modernization project also will support greater efficiencies in oil and gas permitting and inspection activities.

The Oil and Gas Management request also includes a program increase of $2.6 million for oil and gas special pay costs to improve BLM's ability to recruit and retain high caliber oil and gas program staff to provide effective oversight and meet workload and industry demand. Finally, the BLM budget request includes a program increase of $2.8 million to enhance BLM's capability to address high priority legacy wells in the National Petroleum Reserve-Alaska to supplement permanent funds provided in the Helium Security Act of 2013. The 2017 budget continues to request authority to charge inspection fees similar to those in place for offshore oil and gas inspections. Such authority will reduce the net costs to taxpayers of operating BLM's oil and gas program and allow BLM to be more responsive to industry demand and increased inspection workload in the future. A $48.0 million decrease in requested appropriations reflects shifting the cost of inspection activities to fees.

In 2017, BLM will continue to invest heavily in the Greater Sage Grouse Conservation Strategy and the budget includes a program increase of $14.2 million to protect, improve, or restore sage steppe habitat. Funds will also assist States in implementing GSG conservation plans. The BLM's efforts to implement the Greater Sage Grouse Conservation Strategy are also reliant upon successful execution of the National Seed Strategy, which is also integral to the administration's wildland fire rehabilitation efforts and the success of the Secretary's Integrated Rangeland Fire Management Strategy. The budget includes a $5.0 million program increase within Wildlife Management to more aggressively implement the National Seed Strategy.

Other budget highlights include program increases totaling $16.9 million in the Resource Management Planning, Assessment, and Monitoring subactivity. This includes $4.3 million to expand the BLM Assessment, Inventory, and Monitoring pro-

gram for increased data collection and monitoring central to the success of high priority landscape management efforts such as the Western Solar Energy Plan, as well as implementation of the Department's plan for the National Petroleum Reserve-Alaska, the Greater Sage Grouse Conservation Strategy, and the broader landscape mitigation strategy. The request also includes an increase of $6.9 million to accelerate implementation of the BLM enterprise geographic information system, which aggregates data across boundaries to capture ecological conditions and trends; natural and human influences; and opportunities for resource conservation, restoration, development, and partnering. The remaining $5.7 million increase will support high priority planning efforts that could include the initiation of new plan revisions in 2017, as well as plan evaluations and implementation strategies.

Bureau of Ocean Energy Management.—The 2017 President's budget for BOEM is $175.1 million, including $80.2 million in current appropriations and $94.9 million in offsetting collections. This is a net increase of $4.3 million in current appropriations above the 2016 enacted level.

The total 2017 estimate of $94.9 million for offsetting collections is a net decrease of $1.7 million, including reductions in rental receipts partially offset by a new $2.9 million cost recovery fee for the Risk Management Program. An increase in direct appropriations of $6.0 million makes up for the projected decrease in rental receipts.

The budget provides $23.9 million for offshore renewable energy activities. To date, BOEM has issued 11 commercial wind energy leases offshore; conducted 5 competitive wind energy lease sales for areas offshore Maryland, Massachusetts, New Jersey, Rhode Island, and Virginia; and approved the Construction and Operations Plan for the Cape Wind project offshore Massachusetts. Additionally, BOEM is in the planning stages for wind leasing offshore New York, North Carolina, and South Carolina. In 2015, BOEM executed the first wind energy research lease in U.S. Federal waters with the Commonwealth of Virginia's Department of Mines, Minerals, and Energy.

The 2017 budget provides $64.2 million for conventional energy development, a programmatic increase of $4.2 million above 2016. These funds support high priority offshore oil and gas development activities, including lease sales outlined in BOEM's Five Year OCS Oil and Gas Leasing Program for 2012–2017. Under this program, BOEM's eight sales generated over $2.97 billion in high bids. Five lease sales remain on the lease sale schedule through mid-2017. The next lease sales are Eastern Gulf of Mexico Lease Sale 226, Central Gulf of Mexico Lease Sale 241, and Western Gulf of Mexico Lease Sale 248, all scheduled to be held during 2016.

The 2017 provides $68.4 million for BOEM's Environmental Programs. These funds support world class scientific research to provide critical information informing policy decisions regarding energy and mineral development on the OCS.

Bureau of Safety and Environmental Enforcement.—The 2017 President's budget for the Bureau of Safety and Environmental Enforcement is $204.9 million, including $96.3 million in current appropriations and $108.5 million in offsetting collections. The 2017 budget is a net $196,000 increase above the 2016 enacted level, reflecting an increase of $7.9 million in current appropriations and a $7.7 million decrease in offsetting collections. The total 2017 estimate of $108.5 million in offsetting collections assumes decreases from 2016 of $11.5 million for rental receipts, $2.2 million for cost recoveries, and a $6.0 million increase for inspection fee collections. Funding for Oil Spill Research is maintained at the 2016 enacted level of $14.9 million. The 2017 budget supports continued safe and responsible offshore energy development.

Office of Surface Mining Reclamation and Enforcement.—The 2017 budget request is $157.9 million, $82.6 million below the 2016 enacted level.

The 2017 budget for Regulation and Technology is $127.6 million, $4.3 million above 2016. The request includes $10.5 million, $1.8 million above 2016, to improve implementation of existing laws and support State and tribal programs. The 2017 budget includes $65.5 million for State and tribal regulatory grants, this level of funding supports State requirements.

The budget includes program increases of $2.5 million to advance the Bureau's GeoMine Project; $1.2 million for applied science to conduct studies to advance technologies and practices specific to coal mined sites for more comprehensive ecosystem restoration; $1.0 million to expand the use of reforestation techniques in coal mine reclamation and provide opportunities for youth and community engagement; $2.3 million to support Technical Assistance; and $1.6 million for National Environment Policy Act compliance document preparation, legal review, and program monitoring.

The 2017 budget for the Abandoned Mine Reclamation Fund is $30.4 million, $86.9 million below 2016. The 2016 enacted level included a $90.0 million increase for grants to three States for the reclamation of abandoned mine lands in conjunction with economic and community development activities. The 2017 budget pro-

poses a broader legislative effort to support reclamation and economic and community development as part of the administration's POWER+ Plan. POWER+ would provide $200 million per year to target the cleanup and redevelopment of AML sites and AML coal mine polluted waters in a manner that facilitates sustainable revitalization in economically depressed coalfield communities. The budget includes a $1.5 million program increase for technical assistance to States, tribes, and communities to address AML technological advances and issues for AML site reclamation. The budget also includes program increases of $525,000 for applied science studies pertaining to abandoned mines, $799,000 to enhance and expedite current OSMRE efforts in digitizing underground mine maps, and $287,000 for support within the Office of the Solicitor.

U.S. Geological Survey.—The 2017 budget is $1.2 billion, $106.8 million above 2016, to advance our national commitment to research and development that supports economic growth, balances priorities on resource use, addresses climate change, and ensures the security and well- being of the Nation. The budget improves response to and warning of natural disasters, responds to drought and other water challenges, supports sustainable domestic energy and minerals development, and advances scientific understanding of land use, land change, and the effects of resource decisions to assist communities and land managers in making choices informed by sound science.

The 2017 budget invests in the USGS's capabilities for science and innovation to monitor and respond to natural disasters with increases for priority science to help stabilize and rehabilitate ecosystems after fires and provide geospatial information, monitoring strategies, and other relevant scientific information faster for real-time fire response. Related increases build USGS' capability to respond to landslide crises, and expand the use of flood inundation mapping and rapidly deployable streamgages to meet urgent needs of flood-threatened communities lacking a permanent streamgage.

The budget continues $8.2 million to develop the West Coast Earthquake Early Warning system to complete a production prototype system, expand coverage, and beta-test alerts. The budget continues funding of $3.0 million to repair and upgrade monitoring stations on high-threat volcanoes. The budget includes funding to assume long-term operations of the Central and Eastern United States Seismic Network from the National Science Foundation and allows USGS to continue a 5-year effort to deploy, install and improve the Global Seismic Network, ensuring that the Network continues to provide global earthquake and tsunami monitoring, nuclear treaty research and verification, and earth science research.

The budget provides an increase of $18.4 million for science to support sustainable water management, nearly doubling the investment made in 2016. As climate models forecast increasingly frequent and more intense droughts, improving water management science is a paramount concern for land and water management agencies, States, local governments, and tribes. The budget would improve water use information and research, provide grants to State water resource agencies, and create hydrologic models and databases for better decision support. The budget also includes $3.9 million for drought science and $4.0 million to develop methods to assess regional and national water use trends during drought. Innovation is critical to address the severe threats to water supply posed by drought and climate change.

The budget provides increases across several programs to advance understanding of conventional and unconventional energy, critical minerals such as rare earth elements, and the environmental health effects of resource development. These investments include $3.6 million to provide decision ready information to support safe and prudent unconventional oil and gas development, $2.0 million to study the environmental impacts of uranium mining in the Grand Canyon, and $1.0 million to identify and evaluate new sources of critical minerals and continue criticality analysis for mineral commodities.

The USGS budget increases science investments for changing landscapes, including $9.8 million in the Arctic, $3.0 million for the vulnerable sagebrush habitats of the Intermountain West, and $3.9 to improve coastal science that will help communities build resilient coastal landscapes and improve post-storm contaminant monitoring network along the Atlantic coast. The budget also establishes a Great Lakes Climate Science Center to focus on the many natural resource challenges in the distinct bio-geographic Great Lakes region. As with the eight existing Climate Science Centers, the Great Lakes CSC will help address regional concerns associated with climate change, providing a pathway to resilience and supporting local community priorities.

The budget includes increases of $2.1 million to address research on pollinator health and expand the small group of USGS researchers working on this critical component of agricultural and ecosystem health, $1.4 million for tribal climate

science partnerships, and $2.5 million for better tools to detect and control invasive species, particularly new and emerging invasive species. The budget continues a commitment to priority ecosystems including the Chesapeake Bay, the Everglades, Puget Sound, the Upper Mississippi River, the California Bay-Delta, and the Gulf Coast.

The USGS plays a pivotal role in providing research, analysis, and decision support tools. The budget supports these efforts and includes investments to extend the four-decade long Landsat satellite program with the development of Landsat 9, and provide information to better understand and respond to changes in the environment. The 2017 budget provides an increase of $17.6 million for satellite operations, funding the development of Landsat 9 ground systems and satellite operations and an investment to retrieve and disseminate data from the European Space Agency's Sentinel-2 earth observation satellite. The budget provides an increase of $4.9 million to expand the three-dimensional elevation program and leverage partnerships across the Nation, accelerate Alaskan map modernization, and provide coastal imaging to help communities make infrastructure resilience investments. The budget also provides $3.0 million to develop the computing resources necessary to produce and disseminate Landsat-based information products.

High-quality science depends on a strong science infrastructure. The budget makes necessary investments to continue the USGS legacy of reliable, valuable scientific information and monitoring. These investments fund science support, facilities and equipment, including laboratories, and the administrative support that is the backbone of science production and delivery. The 2017 budget also includes program increases to enhance the Mendenhall post-doctoral program, support tribal science coordination, enhance science education, and engage youth in underserved communities in earth and biological sciences through outreach activities and science camps.

Fish and Wildlife Service.—The 2017 budget for FWS includes current appropriations of $1.6 billion, an increase of $54.5 million compared to the 2016 enacted level.

The 2017 request for FWS includes $1.3 billion for FWS operations, of which $506.6 million supports National Wildlife Refuge System operations and maintenance. A feature of the 2017 FWS budget is support to expand opportunities for all Americans to access public lands and experience the great outdoors, regardless of where they live. With 80 percent of the U.S. population currently residing in urban communities near more than 260 wildlife refuges, Interior is leveraging the National Wildlife Refuge System to encourage urbanites to rediscover the outdoors. The request includes $10.0 million for the Refuge System's Urban Wildlife Conservation Partnerships to expand opportunities for urban populations including an increase of $2.0 million for additional Refuge System law enforcement officers to ensure the safety of visitors, natural and cultural resources, and Federal employees and facilities. The budget includes $40.7 million for general Refuge Law Enforcement operations.

The request also includes funding within Law Enforcement and International Affairs to combat wildlife trafficking. The budget provides $75.1 million for the law enforcement program to investigate wildlife crimes, enforce the laws governing the Nation's wildlife trade, and continue cooperative international efforts to prevent poaching and trade in illegal wildlife products. The request includes $15.8 million for the International Affairs Program, an increase of $1.1 million above 2016. This includes increases of $500,000 to provide technical support for international efforts to reduce illegal wildlife trafficking and develop innovative conservation activities. Also within International Affairs, is $550,000 to support the U.S. Chairmanship of the Arctic Council.

The budget invests in resources for the Refuge System which has lost more than 400 staff positions since 2010. The request for the Refuge System is $506.6 million, an increase of $25.2 million above 2016. This includes increases of $1.0 million for pollinator conservation, $3.7 million for wildlife and habitat inventory and monitoring, $2.0 million to establish management capability across 418 million acres of submerged land and water within the Pacific Marine National Monuments, and $4.4 million to begin rebuilding capacity within the Refuge System to improve the condition of refuge system facilities and resources, improve the visitor experience and manage natural resources.

The budget emphasizes improving the resilience of communities and wild landscapes, enabling them to better adapt to a rapidly changing environment, and uses smart investments in conservation and landscape-level planning to improve the Service's ability to facilitate economic growth, while avoiding and mitigating the impacts on wildlife and habitat.

Within the FWS main operating account, the request provides $252.3 million for Ecological Services to conserve, protect, and enhance listed and at-risk species and

their habitat, an increase of $18.3 million. Since 2008, FWS has downlisted or delisted 15 species, more than in any other administration. The increases within Ecological Services include $5.7 million to support conservation, restoration and economic development across the Gulf Coast region and other parts of the Country.

The budget includes $152.8 million for Fish and Aquatic Conservation, a program increase of $4.6 million. Within this request is $53.8 million for operation of the National Fish Hatchery System and $7.9 million to combat the spread of Asian carp in the Missouri, Ohio, upper Mississippi Rivers, and other high priority watersheds. The request also includes an increase of $1.5 million to support fish passage while improving the resilience of communities to withstand flooding.

The budget funds Cooperative Landscape Conservation at $17.8 million, an increase of $4.8 million above 2016. The approach employed by Landscape Conservation Cooperatives to identify landscape scale conservation solutions fosters collaboration across a wide variety of partners and builds capabilities beyond the scale any single State, tribe, Federal agency, or community could achieve alone. The requested increase will support landscape planning and design, and partner cooperation that will improve the condition of wildlife habitat and enhance the resilience of communities.

The 2017 budget for Science Support is $20.6 million, an increase of $3.6 million above 2016. The request includes an additional $1.0 million to expand application of Strategic Habitat Conservation, an approach to conservation that, in cooperation with stakeholders, identifies priority species and habitat, desired biological outcomes, and develops conservation strategies to achieve these outcomes. This approach supports the design of successful management strategies that deliver measureable improvements to wildlife populations and habitats. The FWS will use a program increase of $2.6 million to obtain high priority data and scientific tools needed by on-the-ground resource managers.

The FWS budget includes $137.6 million for LWCF Federal land acquisition, composed of $58.7 million in current funding and $79.0 million in permanent funding. Within the request for current funding, is $19.9 million for high priority acquisition projects focused on FWS specific needs, including $16.0 million for collaborative projects in coordination with partners and other Federal agencies, and $2.5 million to support increased access to FWS lands for sportsmen and recreationists. The FWS requests $2.5 million in discretionary funding for the Everglades Headwaters National Wildlife Refuge and Conservation Area, one of the great grassland and savanna landscapes of eastern North America, to acquire nearly 1,000 acres to help protect high-quality habitat for 278 Federal and State listed species. Acquisition of this property would protect the headwaters, groundwater recharge, and watershed of the Kissimmee Chain of Lakes, Kissimmee River, and Lake Okeechobee region, and improve water quantity and quality in the Everglades watershed, supporting the Comprehensive Everglades Restoration Plan goals and protecting the water supply for millions of people.

Supporting the administration's America's Great Outdoors initiative objectives is $106.0 million for grant programs administered by FWS. The 2017 budget maintains 2016 funding levels for grants through the Cooperative Endangered Species Conservation Fund, North American Wetlands Conservation Fund, Multinational Species Conservation Fund, and the Neotropical Migratory Bird Conservation Fund. Funding for the State and Tribal Wildlife grant program on which many States and tribes rely to fund non-game animal conservation, is an increase of $6.4 million.

National Park Service.—The 2017 President's current budget request for NPS of $3.1 billion is $250.2 million above the 2016 enacted level. Highlights of the 2017 budget include $190.5 million in increases for the NPS Centennial, as well as a focus on the stewardship of natural and cultural resources, including a $20.0 million increase for the Historic Preservation Fund grant programs to document and preserve stories and sites related to the Civil Rights Movement.

The NPS budget request for operations is $2.5 billion, an increase of $154.8 million from 2016. A $2.2 million programmatic reduction to refocus operations funding partially offsets the following increases: $49.2 million for additional repair and rehabilitation projects, $46.6 million for additional cyclic maintenance projects, $20.0 million for the Every Kid in a Park initiative, $10.7 million for new parks and responsibilities, $8.1 million for healthcare insurance for seasonal employees, $3.0 million for climate change adaptation projects, $2.6 million for increased communications bandwidth at parks, $2.0 million for the Vanishing Treasures program, $1.2 million to address energy development near parks, $1.1 million for Arctic science and monitoring, and $1.0 million for uranium mining studies in the Grand Canyon.

The 2017 budget provides a total of $35.0 million for the Centennial Challenge matching program, an increase of $20.0 million. These funds will provide a Federal match to leverage partner donations for signature projects and programs at national

parks into the NPS' second century. All Federal funds must be matched on at least a 50:50 basis. In 2016, Congress appropriated $15 million for projects which will be matched by almost $33 million from more than 90 park partners. This program is bolstered by the administration's legislative proposal to fund an additional $100.0 million a year for 3 years for this program as a permanent appropriation.

The 2017 request for the Historic Preservation Fund is $87.4 million, an increase of $22.0 million from 2016. Of this total, $46.9 million is requested for grants-in-aid to States and Territories, which is level with 2016. A total of $12.0 million is requested for grants-in-aid to tribes, an increase of $2.0 million. The remaining $20.0 million increase is for grants to document and preserve the sites and stories of the Civil Rights Movement; of which $17.0 million is for competitive grants, and $3.0 million is for grants to Historically Black Colleges and Universities.

The 2017 budget includes $54.4 million for National Recreation and Preservation programs that support local community efforts to preserve natural and cultural resources. This is a decrease of $8.2 million compared to 2016. These changes consist of a program reduction of $10.4 million to Heritage Partnership Programs; and programmatic increases of $0.9 million for modernization and digitization in the National Register program, $0.8 million for the Preservation Technology and Training grants program, $0.3 million for the Federal Lands to Parks program, and fixed costs increases.

Construction funding totals $252.0 million, $59.1 million above 2016. This request provides funding critical to the implementation of the Centennial initiative to make a meaningful impact on the NPS deferred maintenance backlog. The budget includes $153.3 million for line-item construction projects, a $37.1 million increase, which will fund projects such as the $13.2 million rehabilitation of the Paradise Inn Annex and snow bridge connection at Mount Rainier National Park in Washington, and $13.9 million for the final phase of the rehabilitation of the El Portal sanitary sewer to prevent raw sewage spills at Yosemite National Park in California.

The 2017 current funding request for LWCF Land Acquisition and State Assistance is $178.2 million, an increase of $4.6 million from 2016. This includes $110.0 million for State Assistance grants, maintaining the increase provided in 2016. The budget requests $68.2 million for Federal Land Acquisition, an increase of $4.6 million. This provides $26.6 for projects addressing NPS specific needs, $10.8 million for collaborative acquisition projects, $2.0 million for projects to improve recreation access, and $10.0 million for American Battlefield Protection Program acquisition grants. A high priority for NPS, the Hawaii Volcanoes National Park is also part of the Island Forests at Risk collaborative landscape proposal. An investment of $6.0 million would allow NPS to begin acquisition of a parcel which protects the hawksbill and Green turtles, and island monk seal habitat, and contains anchialine pond communities and coastal strands of endangered plants. Significant archaeological sites, cultural landscapes, petroglyphs and ancient trails are also present. Time is a concern as the area faces potential rezoning from conservation to medium density urban and resort development.

Indian Affairs.—The 2017 President's budget for Indian Affairs is $2.9 billion in current appropriations, $137.6 million above the 2016 level. Funding for the main operating account for Indian Affairs, Operation of Indian Programs is $2.4 billion, $127.9 million above 2016. The 2017 request for Construction is $197.0 million, $3.0 million above 2016.

The 2017 budget supports continuing efforts to advance self-governance and self-determination, improve educational outcomes for American Indian children, support human services activities, prudently manage tribal natural resources, build stronger economies and self-sufficiency, and maintain safer Indian communities.

Key to self-governance and self-determination is full funding for Contract Support Costs. The 2017 request includes $278.0 million for Contract Support Costs, $1.0 million above 2016, which will fully fund these costs based on the most recent analysis. As in the 2016 enacted bill, the budget requests funding for Contract Support Costs in a separate dedicated current account. To further stabilize long-term funding, the 2017 budget includes a legislative proposal to reclassify these costs as permanent funding beginning in fiscal year 2018.

The Interior budget proposes a $1.1 billion investment in Indian education and construction to continue to support the transformation of the BIE to support tribes in educating their youth, and deliver an improved and culturally appropriate education across Indian Country. The budget includes $49.3 million in increases across a number of programmatic areas in BIE related to the transformation.

The budget includes $138.3 million for Education Construction, maintaining the $63.7 million increase provided in 2016. The request will provide the funding stability necessary to develop an orderly education construction pipeline and properly pace projects. The 2016 enacted appropriation will replace two remaining BIE school

campuses on the 2004 priority list—Little Singer Community School and Cove Day School, both in Arizona—and support planning for the schools identified on the new school replacement construction list nearing finalization. The 2017 funding will be applied to construction costs for projects chosen from the new list.

To further higher education, the budget includes increases of $9.4 million for scholarships, adult education and tribal colleges and universities; and $3.6 million for Johnson O'Malley education grants to provide additional resources to tribes and organizations to meet the unique and specialized educational needs of American Indian and Alaska Native students.

To foster public-private partnerships to improve the student experience at BIE-funded schools, the 2017 budget again proposes appropriations language enabling the Secretary to reactivate the National Foundation for American Indian Education. The proposed bill language will initiate a foundation focused on fundraising to create opportunities for Indian students in and out of the classroom.

As part of the President's commitment to protect and promote the development of prosperous tribal communities, Indian Affairs proposes to expand the Tiwahe "family" initiative. This effort takes an integrated approach to address the inter-related challenges impacting the lives of youth, families, and communities in Indian Country—including poverty, violence, and substance abuse. The Tiwahe approach seeks to empower individuals and families through health promotion, family stability, and strengthening communities as a whole.

The 2017 budget expands the Tiwahe initiative with increases totaling $21.0 million for programs in social services, Indian Child Welfare Act, housing, tribal courts, and job placement and training. To better focus funding and evaluate outcomes in meeting social service needs in Indian Country, the Department will evaluate social service and community development needs in Indian Country in 2016. The evaluation will inform programmatic design, assessments, management, and budgeting.

The budget contains a number of increases to support tribal nation-building and economic development. The budget includes $4.0 million for a Native One-Stop Support Center to make it easier for tribes to find and access hundreds of services available to tribes across the Federal Government. The 2017 budget includes $1.0 million to help tribes adopt uniform commercial codes which help build the legal infrastructure on reservations to promote credit and other capital transactions. The budget provides $12.0 million to enable Interior to work with American Indian/Alaskan Native communities to improve Federal data quality and availability, to create a reimbursable agreement with the Census Bureau to address data gaps in Indian Country, and to create an Office of Indian Affairs Policy, Program Evaluation, and Data to support effective, data-driven, tribal policy making and program implementation. The budget also proposes $1.3 million increase for the Small and Needy Tribes program to assist eligible tribes in expanding and sustaining tribal governance.

The 2017 budget strongly supports sustainable stewardship of trust lands, natural resources, and the environment in Indian Country. These priorities include the protection and restoration of ecosystems and important landscapes; stewardship of land, water, ocean, and energy resources; resilience in the face of a changing climate; and clean and sustainable energy development.

The budget provides a $15.1 million program increase over 2016 across eight natural resource programs to support tribes in developing science, tools, training, planning, and implementation of actions to build resilience into resource management, infrastructure, and community development activities. Funding will be set-aside to support Alaska Native Villages in the Arctic and other critically vulnerable communities to evaluate options for the long-term resilience of their communities. The budget also includes $2.0 million to address subsistence management in Alaska to better prepare for the impacts of climate change, as part of an ongoing commitment to improve the Nation's resilience. In addition, the budget includes a total increase of $8.7 million for trust real estate service activities to reinforce the stewardship of trust resources. The expanded capacity will address the probate backlog, land title and records processing, geospatial support needs, and database management in addition to providing expanded technical and legal support for authorized settlements involving tribal water rights.

The 2017 budget request for Indian Land and Water Claim Settlements is $55.2 million, a $5.7 million increase over the 2016 enacted level for payments on enacted settlements. The budget includes $25.0 million for the final payment to the Aamodt settlement and $10.0 million in one-time funding to provide the Yurok Tribe, located in Northern California, funds to acquire lands as authorized in the Hoopa-Yurok Settlement Act. This acquisition supports efforts by the Yurok Tribe, State of California, private foundations and individual donors to conserve over 47,000 acres of the Klamath-Siskiyou ecoregion to ensure the long-term health of temperate forests, rare wildlife, and extraordinary runs of wild salmon. The land, to be conserved as

a salmon sanctuary and sustainable community forest, will restore the Yurok Tribe's historic connection to the land, support the Yurok economy through jobs in forestry and restoration, and provide revenue to the tribe through sustainable timber and salmon harvests and the sale of carbon credits. The budget also includes increases totaling $12.9 million in the Operation of Indian Programs account to provide expanded technical and legal support for tribal water rights settlement negotiations and implementation. A reduction of $29.2 million in the settlement account reflects completion of the Taos Pueblos water settlement in 2016.

The 2017 budget request for the Indian Guaranteed Loan Program is $7.8 million, the same as 2016, which will provide loan guarantee and insurance authority for $106.0 million in loan principal to support Indian economic development.

Departmental Offices.—The 2017 budget request for Departmental Operations is $278.4 million, a decrease of $443.4 million below the 2016 enacted level. The decrease reflects a reduction of $452.0 million associated with the Payments in Lieu of Taxes program. In 2017, the budget proposes to fund PILT as permanent funding not subject to appropriation. State and local governments depend on PILT funding to finance such vital services as firefighting and police protection, construction of public schools and roads, and search and rescue operations. Providing a mandatory source of funding will create greater certainty that PILT investments will be available in future years. The budget proposes mandatory PILT funding for 1 year, while a sustainable long-term funding solution is developed for the program.

The budget proposes program increases of $1.5 million for work with the National Invasive Species Council to develop an Early Detection Rapid Response framework. Early detection and rapid response (EDRR) has the potential to result in significant cost savings, as compared to battling invasive species such as Asian carp, cheatgrass, and emerald ash borer once established. The EDRR request support multiple pilot projects to demonstrate early detection and rapid response approaches, as well as conducting assessments to identify current capacities and gaps in capacities to implement EDRR.

The budget includes $1.0 million for Native Hawaiian community development through capacity building and technical assistance. This request will allow the Department to provide support to Native Hawaiians similar to the capacity building and technical assistance the Department provides to other Native Americans, and the Insular areas consistent with the Hawaiian Homes Commission Act and Hawaiian Homes Land Recovery Act. The Department will work with the Native Hawaiian community on a variety of economic, social, and cultural projects.

The 2017 Budget includes critical investments to ensure effectiveness and compliance of Interior information technology investments. The request includes $3.0 million to develop a Digital Service Team responsible for driving the efficiency and effectiveness of the Department's highest-impact digital services. Additional information technology investments are proposed under the Working Capital Fund appropriated account.

Within the request for Departmental Operations is $129.3 million for Office of Natural Resources Revenue's receipts management programs, $3.8 million above 2016. The increase includes $968,000 to fully fund Osage Trust Accounting responsibilities in compliance with the Osage settlement agreement; $1.0 million to expand Geospatial Information Systems; and $1.2 million to strengthen ONRR's audit and compliance mission activities.

The 2017 request for the Office of Insular Affairs is $102.7 million, $12.4 million above the 2016 level excluding Palau Compact Extension funding of $13.1 million. The 2017 budget proposes $149.0 million in permanent funding to support enactment of a new Compact with Palau. The appropriated funding request includes increases of $4.0 million for community, landscape and infrastructure adaptation and resilience initiatives; $3.9 million to improve health and safety conditions in insular school facilities; $2.0 million to implement energy projects; $2.0 million for Coral Reef Initiative and Natural Resources; $1.6 million for direct technical assistance grants; and $1.0 million to support invasive species eradication efforts, including the coconut rhinoceros beetle and little fire ant. Brown Treesnake Control is funded at $3.0 million, a program decrease of $500,000, reflecting completion of an automated aerial bait system in 2015. The budget requests $3.3 million for Compact of Free Association, level with 2016, excluding $13.1 million provided for Palau Compact Extension in 2016.

The budget includes $69.4 million for the Office of the Solicitor, $3.6 million above 2016 to support additional personnel and necessary legal services for delivering the Department's mission. The Office of the Solicitor's ability to provide early and continuous legal counsel in new priority areas to ensure that developing programs are grounded in established legal principles and precedents is absolutely vital. The requested increase will allow the Office of the Solicitor to provide the much needed

preventive assistance that is lost to the demands of non-discretionary litigation. The additional funding will also be used to restart the Honors Program, where recent law graduates are hired at the entry level and trained to assume senior positions. This program will ensure DOI has experienced lawyers as many senior staff becomes eligible for retirement.

The request for the Office of the Inspector General is $55.9 million, $5.9 million above 2016 to support audits concerning Offshore Energy Oversight, Indian Country, and Cybersecurity, and Offshore Energy Investigations.

The Office of the Special Trustee request is $140.4 million, $1.4 million above 2016. The budget includes increases of $1.5 million to provide additional estate planning opportunities to Indian Trust beneficiaries; $1.3 million for an appraiser training program to address the shortage of qualified appraisers and the resulting delays in completing appraisal evaluations; $1.5 million to enhance talent management capabilities and systems automation; and less than $400,000 to modernize and improve business processes and enhance the Trust Funds Accounting System. These increases are partially offset by a $3.4 million reduction in funding for Historical Trust Accounting based on anticipated workload levels.

Department-wide Programs.—The 2017 request for the Department's Wildland Fire Management program is $824.6 million without the proposed fire cap adjustment, and $1.1 billion including the adjustment. The base budget includes $276.3 million for fire suppression, which is 70 percent of the 10 year suppression average spending. The cap adjustment of $290.0 million covers the remaining 30 percent of the 10-year average and provides a contingency. The cap adjustment would only be used for the most severe fires, since it is 2 percent of the fires that cause 30 percent of the costs. The new budget framework for Wildland Fire Management eliminates the need for additional funds through the FLAME Act.

The 2017 budget includes $179.1 million for Fuels Management and Resilient Landscapes subactivities, $9.1 million above 2016 enacted. Of this, $30.0 million is proposed in a new Resilient Landscapes subactivity to build on resilient landscapes activities supported by Congress in 2015 and 2016. This equates to a $20.0 million increase for the program to take better advantage of the shared goals of bureau resource management programs to treat large landscapes to achieve and maintain fire-adapted ecosystems that both reduce the threat of catastrophic wildfire and achieve restoration and other ecological objectives. The increase for Resilient Landscapes is partially offset with a program realignment of $21.7 million in the Fuels Management program from 2016.

Other highlights in the Wildland Fire Management budget include an increase of $6.9 million in Preparedness to maintain or strengthen initial and extended attack capacity. Specific increases include $2.8 million to enhance the initial attack capability of rural fire departments and rural fire protection associations. The budget includes program increases of $1.6 million to purchase replacement vehicles for the BIA fire program and $1.5 million to cover utility costs for the Alaska Fire Service's leased space. The budget includes $20.4 million for Burned Area Rehabilitation, a $1.5 million increase to address greater post-fire rehabilitation needs caused by the 2015 and 2016 fire seasons; and $10.0 million for Facilities Construction and Deferred Maintenance, a $3.6 million increase to address the deferred maintenance backlog.

The 2017 budget request for the Central Hazardous Materials Fund is $13.5 million, $3.5 million above 2016, to fund the remedial design for the Red Devil Mine cleanup in Alaska. The 2017 request for Natural Resource Damage Assessment and Restoration is $9.2 million, $1.5 million above 2016 to increase restoration activities.

The 2017 budget proposes $111.5 million for the appropriated portion of the Department's Working Capital Fund, $44.4 million above 2016. The majority of the increase, $24.7 million, continues cybersecurity remediation in the wake of the serious cyber intrusions experienced during 2015. Other increases include: $10.2 million to support the Department's multi-year effort to implement requirements identified under the Digital Accountability and Transparency Act, known as the DATA Act, and monitor compliance; $5.2 million for the Department's Office Consolidation Strategy; $2.6 million to fund Federal Information Technology Acquisition Reform Act coordination and reporting activities for the Department; $1.0 million for Cultural and Scientific Collections; and $702,000 for Service First activities.

LEGISLATIVE PROPOSALS

The 2017 President's budget includes a suite of legislative and offsetting collection proposals affecting spending, revenues, and available budget authority that require action by the congressional authorizing committees. These mandatory proposals address a range of administration priorities, from investing in high-priority conserva-

tion and recreation programs to achieving a fair return to the American taxpayer from the sale of Federal resources and reducing unnecessary spending. The 2017 budget includes seven spending proposals with an estimated $18.0 billion in outlays over the next decade. This spending is partially offset by revenue and savings proposals to reduce outlays from the Treasury by an estimated $4.5 billion over the next decade.

Gulf of Mexico Energy Security Act and the Coastal Climate Resilience Program.—The administration is committed to ensuring American taxpayers receive a fair return from the sale of public resources and taxpayers throughout the Country benefit from the development of offshore energy resources owned by all Americans. The Gulf of Mexico Energy Security Act of 2006 opened some additional areas in the Gulf of Mexico for offshore oil and gas leasing, while maintaining moratoria on activities east of the Military Mission Line and within certain distances from the coastline of Florida. The Act provides that 37.5 percent of Outer Continental Shelf revenues from certain leases be distributed to just four coastal States—Alabama, Louisiana, Mississippi, and Texas—and their local governments based on a complex allocation formula. The administration proposes to repeal GOMESA revenue-sharing payments to these select States from Gulf of Mexico oil and gas leases, which are set to expand substantially starting in 2018.

More than half of the savings, $2.0 billion, from the repeal of GOMESA revenue sharing payments to States will be redirected to a new Coastal Climate Resilience Program to provide resources for at-risk coastal States, local governments, and their communities to prepare for and adapt to climate change. A portion of these program funds would be set aside to cover the unique impacts of climate change in Alaska where some native villages are so threatened by rising seas, coastal erosion, and storm surges, that they must prepare for potential relocation.

Historic Preservation Fund.—The budget includes a legislative proposal to extend the authority to deposit $150.0 million in receipts from offshore oil and gas revenues annually into the Historic Preservation Fund.

Bureau of Indian Affairs Contract Support Costs.—The budget includes a legislative proposal to reclassify funding for the existing Contract Support Costs program from discretionary to mandatory beginning in fiscal year 2018. The budget proposes to adjust the discretionary budget caps to reflect the reclassification to mandatory funding. New contract support cost estimates will be provided on a 3-year cycle as part of the reauthorization process.

POWER+ Accelerate AML Distribution for Mine Cleanup and Economic Recovery.—The budget proposes to allocate a portion of the remaining unappropriated balance of the Abandoned Mine Lands Fund to target the cleanup and redevelopment of AML sites and AML coal mine polluted waters in a manner that facilitates sustainable revitalization in economically depressed coalfield communities. The proposal will provide $1.0 billion over 5 years to States based on AML program and economic eligibility factors—such as the unemployment rate of coal mining regions—and remaining priority coal problems, including abandoned mine drainage, where reclamation linked to job creating economic development strategies will help revitalize impacted communities.

United Mineworkers of America Pension Reform.—The budget proposes to better provide for retired coal miners and their families by revising the formula for general fund payments to the 1993 UMWA Health Benefit Plan. The new formula will consider all beneficiaries enrolled in the plan as of enactment, as well as those retirees whose health benefits were denied or reduced as the result of a bituminous coal industry bankruptcy proceeding commenced in 2012. Additionally, the proposal will transfer funds through the Pension Benefit Guaranty Corporation to the trustees of the 1974 UMWA Pension Plan to ensure the plan's long-term solvency. The plan, which covers more than 100,000 mineworkers, is underfunded and approaching insolvency. The new formula will provide an additional $375.0 million to the UMWA in 2017 and $4.2 billion over 10 years.

Land and Water Conservation Fund.—The budget proposes $900.0 million in combined current and mandatory funding in 2017, and starting in 2018, the budget proposes permanent authorization of $900.0 million in mandatory funding for LWCF programs in the Departments of the Interior and Agriculture. During a transition to mandatory funding in 2017, the budget proposes $425.0 million for mandatory funding and $475.0 million for current funding, to be shared by Interior and Agriculture.

National Parks Centennial Act.—The budget proposes enactment of legislation, the National Park Service Centennial Act, to honor the Park Service's 100th anniversary. The Act specifically authorizes the following: $100.0 million a year for 3 years for the Centennial Challenge to leverage private donations; $300.0 million a year for 3 years for NPS deferred maintenance; and $100.0 million a year for 3

years for a Public Lands Centennial Fund, which will competitively allocate funds for projects on public lands to enhance visitor services and outdoor recreation opportunities, restore lands, repair facilities, and increase energy and water efficiency. The availability of mandatory funding to address deferred maintenance and other conservation projects will allow NPS to plan ahead more efficiently to achieve significant results. Stable and predictable funding streams will allow projects to be appropriately scheduled and phased for more effective project delivery and completion. The proposal includes the authority to collect additional camping or lodging fees, and funds from purchases of the lifetime pass for citizens 62 years of age or older. Receipts for this Second Century Fund will be matched by donations in order to fund visitor enhancement projects. The impact of this new revenue source is estimated at $40.4 million in 2017. Also included is a proposal to establish a program to allow a Visitor Services Management Authority to award and manage contracts for the operation of commercial visitor services programs and activities.

Federal Land Transaction Facilitation Act.—The budget proposes to reauthorize this Act which expired on July 25, 2011, to allow lands identified as suitable for disposal in recent land use plans to be sold using this authority. The sales revenue will be used to fund the acquisition of environmentally sensitive lands and administrative costs associated with conducting the sales.

Recreation Fee Program.—The budget proposes legislation to permanently authorize the Federal Lands Recreation Enhancement Act, authorized through September 30, 2017. The program currently brings in an estimated $335 million in recreation fees annually under this authority that are used to enhance the visitor experience on Federal land recreation sites.

Federal Oil and Gas Reforms.—The budget includes a package of legislative reforms to bolster administrative actions to reform management of Interior's onshore and offshore oil and gas programs, with a key focus on improving the return to taxpayers from the sale of these Federal resources and on improving transparency and oversight. Proposed statutory and administrative changes fall into three general categories: advancing royalty reforms, encouraging diligent development of oil and gas leases, and improving revenue collection processes. Collectively, these reforms will generate roughly $1.7 billion in revenue to the Treasury over 10 years, of which $1.2 billion will result from statutory changes. Many States also will benefit from higher Federal revenue sharing payments as a result of these reforms.

Palau Compact.—On September 3, 2010, the U.S. and the Republic of Palau successfully concluded the review of the Compact of Free Association and signed a 15-year agreement that includes a package of assistance. The budget assumes authorization of mandatory funding for the Compact in 2017 to strengthen the foundations for economic development in Palau by developing public infrastructure and improving healthcare and education. The cost for this proposal for 2017–2024 is $149.0 million.

Payments in Lieu of Taxes.—The budget proposes to extend PILT mandatory funding for an additional year with the current PILT payment formula based on the amount of Federal land within an eligible unit of local government, its population, and certain other Federal payments the local government may receive. The cost of a 1 year extension of the PILT program is estimated to be $480.0 million in 2017.

Reclamation of Abandoned Hardrock Mines.—The budget proposes to create an Abandoned Mine Lands Program for abandoned hardrock sites financed through a new AML fee on hardrock production on both public and private lands. The fee is estimated to generate $1.8 billion through 2026 to reclaim the highest priority hardrock abandoned sites on Federal, State, tribal, and private lands.

Reform Hardrock Mining on Federal Lands.—The budget proposes to institute a leasing program under the Mineral Leasing Act of 1920 for certain hardrock minerals, including gold, silver, lead, zinc, copper, uranium, and molybdenum, currently covered by the General Mining Law of 1872. Half of the receipts will be distributed to the States in which the leases are located and the remaining half will be deposited in the U.S. Treasury. The proposal is projected to generate revenues to the U.S. Treasury of $80.0 million over 10 years, with larger revenues estimated in following years.

Return Coal Abandoned Mine Land Reclamation Fees to Historic Levels.—The budget proposes legislation to modify the 2006 amendments to the Surface Mining Control and Reclamation Act, which lowered the per-ton coal fee companies pay into the AML Fund. The proposal would return the current fee of 28 cents per ton of surface mined coal to 35 cents a ton, the same level companies paid prior to the 2006 fee reduction. The additional revenue, estimated at $258 million over 10 years, will be used to reclaim high priority abandoned coal mines and reduce a portion of the estimated $6.0 billion needed to address remaining dangerous coal AML sites nationwide.

Termination of AML Payments to Certified States.—The 2017 budget proposes to discontinue unrestricted payments to States and tribes certified for completing their coal reclamation work. This proposal terminates all such payments with estimated savings of $520.0 million over the next 10 years.

Termination of EPAct Geothermal Payments to Counties.—The 2017 budget proposes to repeal Section 224(b) of the Energy Policy Act of 2005 to permanently discontinue payments to counties and restore the disposition of Federal geothermal leasing revenues to the historical formula of 50 percent to the States and 50 percent to the Treasury. This results in estimated savings of $41.0 million over 10 years.

Bureau of Land Management Foundation.—The budget proposes to establish a congressionally chartered National BLM Foundation to leverage private funding to support public lands, achieve shared outcomes, and focus public support on the BLM mission.

National Foundation for American Indian Education.—The budget proposes appropriations language enabling the Secretary to reactivate a foundation created by Congress in 2000 to generate private donations in support of the mission of the Bureau of Indian Education. The proposal will allow the foundation to start anew to obtain nonprofit tax exempt status, with a new Board of Directors focused on making the foundation a successful fund raising entity.

Migratory Bird Hunting and Conservation Stamp Act—Duck Stamp.—The budget includes a legislative proposal to provide limited authority to increase the price of a Duck Stamp, with the approval of the Migratory Bird Conservation Commission, to keep pace with inflation.

Wildland Fire Suppression Disaster Cap Adjustment.—The budget proposes to amend the Balanced Budget and Emergency Deficit Control Act to establish a new framework for funding Fire Suppression Operations to provide stable funding, while minimizing the adverse impacts of fire transfers on the budgets of other programs. Under this new framework, the 2017 budget request covers 70 percent of the 10-year suppression average within the domestic discretionary cap or $276.3 million for the Department of the Interior. This base level ensures the cap adjustment will only be used for the most severe fire activity as 2 percent of the fires incur 30 percent of the costs. Only extreme fires that require emergency response or are near urban areas or activities during abnormally active fire seasons—which rightly should be considered disasters—will be permitted to be funded through the adjustment to the discretionary spending limits. For 2017, the request for the budget cap adjustment for the Department is $290.0 million. The cap adjustment does not increase overall spending, as the ceiling for the existing disaster relief cap will be reduced by the same amount as the increase required for fire suppression.

OFFSETTING COLLECTIONS AND FEES

Bureau of Ocean Energy Management Risk Management Fee.—The budget proposes appropriations language for a new cost recovery fee to recoup funds for services rendered by the Risk Management Program. The program is critical to protecting the American taxpayer from becoming financially responsible for liabilities associated with oil and gas and renewable energy operations on the Outer Continental Shelf. This proposed fee will generate an estimated $2.9 million annually, fully offsetting the requested risk management programmatic increase in 2017.

Bureau of Safety and Environmental Enforcement Inspection Fee.—The budget includes appropriations language modifying and expanding the enacted inspection fee language to clarify that facilities subject to multiple inspections are subject to additional fees for each inspection. The BSEE estimates the inspection fees will generate $65.0 million in 2017.

Fee for Onshore Oil and Gas Inspections.—Through appropriations language, Interior proposes to implement inspection fees in 2017 for onshore oil and gas activities subject to inspection by BLM. The proposed inspection fees are expected to generate $48.0 million in 2017, level with 2016. The fees are similar to those already in place for offshore operations and will support Federal efforts to increase production accountability, safety, and environmental protection.

Grazing Administrative Fee.—The budget proposes a grazing administrative fee to offset costs to administer the program. The budget proposes to implement a fee of $2.50 per animal unit month through appropriations language on a pilot basis. Interior estimates the fee will generate $16.5 million in 2017 to support the Rangeland Management program at the 2016 level. During the period of the pilot, BLM will work to promulgate regulations to continue this cost recovery fee administratively, once the pilot expires.

National Wildlife Refuge Damage Cost Recovery.—The budget includes appropriations language to authorize the Fish and Wildlife Service to retain recoveries for the cost to restore or replace damaged habitat from responsible parties.

CONCLUSION

Thank you for the opportunity to testify on the President's 2017 budget request for the Department of the Interior. This budget is responsible, and proposes to maintain core capabilities with targeted investments to advance the stewardship of lands and resources, renewable energy, oil and gas development and reforms, water conservation, youth employment and engagement, and improvements in the quality of life in Indian communities. I thank you again for your continued support of the Department's mission. I look forward to answering questions about this budget. This concludes my written statement.

Senator MURKOWSKI. Thank you, Secretary.

Mr. Connor or Ms. Sarri, were either of you prepared to provide an opening statement or should we just go to questions?

Secretary JEWELL. Just questions.

Senator MURKOWSKI. Okay, thank you.

KING COVE

Let me start off, Madam Secretary, as I mentioned to you in my opening statement, and as we discussed in the Energy Committee hearing last week, my ongoing concern about the situation in King Cove, the promise that you had made to me and to the committee to do what you could to help the people of King Cove. As I noted, I do not see anything in the President's budget that would help to facilitate that promise.

You have indicated that the report that you had requested has been completed. I asked if that would be released. You indicated that it would be. Can you give me an indication as to when we might expect that?

Secretary JEWELL. I did ask my Chief of Staff, as you know, an Alaskan, to follow up on that, which he is doing. One complication I did not realize last week is it is actually the Army Corps' report, so we will need to work with them on posting it. But Tommy is working through it, and we will make sure we get it to your office as soon as we are able to do that.

Senator MURKOWSKI. We conveniently have a hearing with the Army Corps this afternoon, so perhaps I will have a chance to ask them that question at that point in time.

Are you able to provide me any details of the report at this point in time?

Secretary JEWELL. I am happy to go through just a high-level overview. As I expressed in the letter from July, three alternatives were identified in that report. As we discussed, and I know we differ on this point, I do not support a road through the refuge because of the extraordinary damage we believe——

Senator MURKOWSKI. I understand that. If what you are telling me is that what we will see in this report is what we have seen before, then I would rather not take the subcommittee's time to have you detail that right now, because, as you know, that was unacceptable not only to me before, but it was unacceptable to the people of King Cove.

WILDLIFE MANAGEMENT

So we will continue this discussion, but let me move to another issue that is equally unsettling to the people of Alaska right now. That is the proposed regulations from the Park Service and Fish and Wildlife on the proposal to govern wildlife management and procedures to close areas that are currently open to hunting and fishing in the State.

These are controversial because they call into question State management authority over fish and game, over resources within their borders. This is contrary and inconsistent with the Alaska National Interest Lands Conservation Act (ANILCA), a statute which gives the State of Alaska and the Department of Fish and Game management inside our preserves, our refuges, and our parks. Do you believe that the State of Alaska has the right to manage its wildlife within the borders of the State?

Secretary JEWELL. Certainly, Senator Murkowski, I believe the State has the right to manage its wildlife. I also, though, say that the Fish and Wildlife Service and the Park Service must operate within the congressional mandates they have. What they have struck in this is really around non-subsistence take of predators, things like——

Senator MURKOWSKI. Let me ask about that subsistence take, because I know you have said that these regs do not impact subsistence. But since the amount of game that is available for natives around the State is definitely impacted by the take of wildlife by predators, how can you suggest that somehow the subsistence rights of our native people are not impacted by these new predator control policies?

A bigger question is whether you think it is proper for the Federal Government to effectively reverse the State Board of Game decisions, because that is effectively what we are seeing here. From Alaska's perspective, we have ANILCA that says the State has the right to manage. Now you have the Federal Government, the Park Service, the Fish and Wildlife Service, saying, yes, except for when we think that what we are doing is more appropriate.

It is a violation of what has been set out not only within ANILCA but within the United States Constitution. I hope you appreciate the anxiety that has been created right now in the State because of these proposed regulations.

I know you had a discussion with Congressman Young about this yesterday. You know where he is coming from, clearly. I think you know where myself and Senator Sullivan are coming from on it.

We have a collision going on right now between your Federal agencies with the Park Service and with the Fish and Wildlife Service stepping in and telling a State that, effectively, we do not think that the State can manage what by Constitution and Federal law we have given you that authority to manage.

That is more of a rhetorical question for you, but you need to understand how significant an issue this has become in the State of Alaska. It may be right up there with the fight on the Arctic National Wildlife Refuge (ANWR) and King Cove. It may surpass them all, because this truly does go to a State's rights issue.

I am out of my 6 minutes already, so I am going to turn to my ranking member, but we will have time for multiple rounds here.

Senator Udall.

Senator UDALL. Thank you, Madam Chair.

Several Senators on my side have urgent hearings to actually chair, so I am going to defer my questions and call on Senator Leahy to ask questions at this point. Thank you very much, Madam Chair.

Senator LEAHY. Thank you, Madam Chair.

Thank you, Senator Udall.

Secretary Jewell, as I mentioned to you earlier, it is great to see you here. I was thinking, as we were looking at the picture, when you were in Vermont this time for the Leahy Environmental Summit, I am glad you were able to enjoy a day of snowshoeing in Vermont's Green Mountains, something both my wife and I love to do at our home.

But you know what? Last year, you had about 6 feet of snow in Vermont's backcountry. If you were there today, the grass would be sticking up through the little bit of snow on the ground. At our home, we have not been able to snowshoe or cross-country ski. It has just been strange, so let me ask you a couple questions.

I understand you got an earful on the House side yesterday. Members blamed you and the administration for all sorts of harm to the States, almost suggesting you personally control the price of fossil fuels. Oil just went up, so I am sure they are all going to call you this morning and give you credit for that, too.

But I want to praise you for your foresight and leadership in addressing this problem. We have an obligation not only to current taxpayers, but to future generations to see that all Federal programs deliver a fair return to American taxpayers. That can be coal mining activity, offshore oil exploration, logging, even our Federal grazing permits. The price to extract these natural resources should not be so heavily subsidized that it encourages damage to our Federal lands or wildlife or causes, as it could, permanent damage to the taxpayers of this country.

COAL LEASING PROGRAM REVIEW

My question is, does your proposed fiscal year 2017 budget provide the resources to complete a full evaluation of the coal leasing program? Will it include a cost-benefit analysis to consider, among other things, carbon emissions and medium- and long-term impacts of climate change? Could you do a similar valuation on oil exploration?

Secretary JEWELL. Thank you very much, Senator Leahy. It was a pleasure to be in your State.

I will say, a year ago, when I was in Senator Murkowski's State, the green grass was poking through, because they did not have snow.

We are launching a programmatic environmental impact statement on the coal program. It has not been done for 30 years. It is very evident from a Government Accountability Office (GAO) report and our own Inspector General report, there are not only questions about the adequacy of payment to the taxpayers, but also that it does not take into account the impact of climate change.

The assessment we will launch with this programmatic environmental impact statement (PEIS) will take into account climate change and the impact broadly of the coal program, as well as the returns and the royalties.

I cannot get it done within the time I am here. It is too complicated. It takes too long. We will have an interim report, which will scope out exactly what will be done, with a timeline through which we intend to complete that work.

I have not, at this point, contemplated a similar program on the oil and gas activities. Coal has been criticized, as I mentioned, by our own Inspector General and the GAO, so I am prioritizing that.

WIND ENERGY AND BATS

Senator LEAHY. There are other programs that you have for development of renewable energy projects. You have wind energy on Federal land. I wrote to the department last week on Bat Week. I will point out that I don't talk about fictional Batman. I talk about real bats and what they do helping with our crops, keeping down pests, and other all these other things.

If you have wind energy, you also have this question of bat and bird interaction, migrating birds, bats, and so on. If additional resources are available, what could your department do to, one, make progress on wind energy, but also in a way that would help with flights of birds and flights of bats, all of which are so important to our whole ecosystem.

Secretary JEWELL. Thank you very much for pointing out the importance of bats, in particular, as pollinators, and they are in real trouble right now because of White-Nose Syndrome, which you are well aware of.

I have seen through the USGS the work we are doing with the wind energy industry and others on early warning systems to detect when there are avian species like bats and birds in the area, that will proactively shutdown wind turbines. It is a relatively modest amount, and I would say that if we had more, we could probably accelerate that work. Some of it is being paid for by industry, which is also appropriate, to reduce those impacts. And it is a concern of the Fish and Wildlife Service.

Where we site these wind energy projects on public lands, it does take into account the migration patterns and the potential impact.

But with more resources, we certainly could do more.

Senator LEAHY. Let me and my office help you with that, and also, help you with industry, because people are concerned, as you know. And I know you are.

TEMPORARY EMPLOYEES

One last question. Your department, like others, relies on temporary employees for programs we have funded either through partnership agreements or the discretion of Congress. I worry sometimes these temporary employees are on permanent things.

For example, at the risk of being at all parochial in this committee of all committees, we have the Lake Champlain sea lamprey control. The Fish and Wildlife Service has run this continuously now for 25 years. Some of the employees are classified as temporary. We always have money in there for this program.

I worry these temporary—they have to be experts. If they are temporary, they say, I can get a job somewhere else, and they leave and we lose all the expertise. How do we make these people permanent?

Secretary JEWELL. Madam Chair, do you mind if I respond? I know we are over time.

Senator LEAHY. I am sure she has similar things in Alaska, for that matter.

Secretary JEWELL. Well, quickly, I will say our budget does support an increase for the wildlife refuge system. That would enable us to take some positions that are temporary and make them permanent.

Specific to the sea lamprey, we actually have four positions that are supported by the State Department because of the cross-border issues with Canada. Those, because they are not funded by our department, are term positions, and, are therefore, temporary. We certainly would be willing to look at a more permanent authorization for them.

There is a blend of the Fish and Wildlife budget being lower in the past, and we asked for increases, but also part of it is being supported by the State Department. We appreciate the challenge.

Senator LEAHY. Thank you.

Thank you, Madam Chair.

Senator MURKOWSKI. Senator Cassidy.

Senator CASSIDY. If one of my colleagues has a hearing to chair, they can go ahead.

Senator REED. I have a hearing. Thank you. Very gracious.

Senator MURKOWSKI. Senator Reed.

Senator REED. Thank you, Madam Chairman. Let me begin by commending you and your colleague for your great leadership. Thank you very much.

BLACKSTONE NATIONAL HISTORIC PARK

Madam Secretary, thank you. One of the major developments in Rhode Island, as you know, is the creation of the Blackstone National Historic Park. Thank you, because you were there with us kayaking along the Blackstone River. We thank you for that.

The way it is envisioned, it is a partnership park. The existing Blackstone Valley Heritage Corridor, a federally funded entity, is going to work in partnership with the National Park Service to develop the plan to implement it and to do all those things.

But there is a growing concern, and I would like your comments about how you balance these two entities, so that they have adequate resources to continue their jobs and one does not suffer at the expense of the other as we go forward and coordinate their operations. Could you comment on that, Madam Secretary?

Secretary JEWELL. I will make a quick comment. We have just slightly above the funding recommended for 2017 versus 2016. For 2017, it is $932,000. In 2016, the funding with the National Heritage Areas was $501,000. Once we get the 2017 amount, the Park Service will work closely with the National Heritage Area to figure out what the appropriate split is.

I certainly understand how important that funding is, and I will pass that along to the Park Service.

Senator REED. Thank you. I think both entities now have to continue at an appropriate pace. At some point, there might be a transition point where the Park Service accumulates more support and activities as we go forward. But at this point, I think it is important to keep both those entities empowered, resourced, and working together.

Another issue with respect to the park, because it is such a major undertaking, the first one in our State, and we are all looking forward to its successful implementation, one of the first sites is likely to be Slater Mill, which is really the beginning of the Industrial Revolution in the United States. It is the first real factory in America.

That is likely to be the first component of the park. Do you have any notion about how that transfer will be completed in this fiscal year, the resources available, and sort of anything else you might want to add?

Secretary JEWELL. I have been to the Slater Mill site. It is extraordinary, and compliments to the community on that. I have not spoken with the Park Service specifically about plans for Slater Mill, so let me get back to you on the record for that one.

[The information follows:]

SLATER MILL

The National Park Service (NPS) is working closely with the Old Slater Mill Association to acquire the Historic Slater Mill campus. The board of the non-profit has agreed to the property transfer, which will make this property the anchor and manageable unit of the new park. The estimate for the transfer of the property is spring 2017. Currently, title work is underway.

Once the property is owned by the NPS, it is anticipated that the Old Slater Mill Association will continue to offer high quality programming at Slater Mill and remain an active partner in the management of the national park property. The NPS will use its current budget to support that programming, as well as preserve and maintain the historic structures. Of the $926,000 budget this fiscal year, the park retained $425,000 and transferred $501,000 to the national heritage area. This $425,000 is the core of the resources available for the new park, though it is also anticipated that the NPS will fund one-time projects such as investing in waysides and signs within the next year.

Senator REED. Thank you, Secretary, and your staff.

And I want to thank the chairwoman again, and particularly thank Senator Cassidy for his graciousness. Because I have to get back to another hearing, I will just wish you well.

Thank you.

Senator MURKOWSKI. So, theoretically, that was the majority's turn. We should go to this side, but Senator Cassidy was gracious, so I do not know, we will ask you, Senator Cassidy.

Senator REED. We all vote for Senator Cassidy.

Senator MURKOWSKI. Thank you.

OIL AND GAS RULEMAKING

Senator CASSIDY. Secretary Jewell, when you put out the well control rule and the Bureau of Land Management (BLM) venting rule, I am told that you used $80 oil and $4 natural gas to justify the economics. Is that correct?

Secretary JEWELL. I do not know specifically what was used in the economic assumptions. That probably is correct, given the timing that it was done, but we can get back to you and confirm that.

Senator CASSIDY. Is it fair to say that probably the economics of that are now different because of the lower prices?

Secretary JEWELL. To the extent the economics are dependent on oil prices, it would be, but oil prices, of course, are a commodity and they fluctuate from $100 to below $30 a barrel. So, I do not know how much that specifically impacts the cost of the well control rule. It certainly impacts the industry.

Senator CASSIDY. Now, when it impacts the economics of the industry, it is fair to say that a well that could be economically developed at $80 a barrel probably cannot be at $30. That just goes without saying. There is a marginal cost to compliance with regulation, and if that marginal cost is on $30 as opposed to $80, it is going to make a difference in economics. I think that goes without saying.

Secretary JEWELL. Well, if I can just say there are a lot of things that will impact the economics. The cost of the rig, the cost to drill, the risk, and all of those things are factored in.

Senator CASSIDY. Absolutely.

Secretary JEWELL. I used to do this for a living, so I certainly understand that.

Senator CASSIDY. I get that. But, marginal cost of regulation is a cost.

WELL CONTROL RULE

Now, according to a Wood Mackenzie report, the well control rule, the cost of compliance, could cause a decline of 55 percent in exploratory wells by 2030. I just say that for the record. Others may fuss with that.

But at the same time, it is fair to say that there is some cost associated with the well control rule.

That said, one of the concerns that has been raised with me regarding the well control rule is that the Bureau of Safety and Environmental Enforcement (BSEE) is promulgating this, and they are promulgating it, but it apparently violates a congressional mandate that specifically is the National Technology Transfer and Advancement Act, the NTTAA, which bars the use of government unique technical standards in lieu of voluntary consensus standards. Again, I have a document here that goes through the statement of it.

Any thoughts about that? Because it does seem, what I have heard about the well control rule is being given kind of ex cathedra as opposed to from a voluntary consensus methodology.

Secretary JEWELL. I have never heard of the Act you referenced, but I am confident through our solicitors that everything we are doing in regard to the well control rule is within our rights and consistent with what we believe we must do for the safe and responsible development of offshore resources, particularly in the wake of the *Deepwater Horizon* spill.

Senator CASSIDY. It isn't insofar as—believe me, I care about the *Deepwater Horizon.* It is not insofar as regulations are not required but rather that BSEE is supposed to show that voluntary consensus standards are impractical. I am not sure that it is clear that the voluntary consensus standards are impractical, and I am not sure that it has been shown.

So, it is not so much the regulation should not be promulgated but rather the technique should be first the consensus standards, and then only, again, my term, if you will, is ex cathedra being prescribed without the consensus standards being formed.

Obviously, that might be something a little technical, but if you could address that for the record, I would appreciate that.

Secretary JEWELL. We are happy to follow up.

Senator CASSIDY. Related to that, and again on the well control rule, is that, clearly, if we are going to have an impact upon the ability of oil wells to be drilled, that is going to affect the energy supply in the United States. I am told that under Executive Order 13211, from May 18, 2001, such things require a statement of energy effects.

BSEE has denied that there is an impact upon energy supply from these regulations, which seems a little crazy. But nonetheless, if they do, it means that they have another reporting requirement.

Any thoughts about that? It just seems so self-evident that if you are going to have an impact upon the supply of oil and gas that you are going to have an energy effect. That may be a little technical for this conversation. I do not know if you are prepared to comment on that.

Secretary JEWELL. I will just comment briefly that the well control rule really codifies many of the practices currently in place in the Gulf that were addressed after the *Deepwater Horizon* spill. I do not support the notion that the regulation itself would impact energy supply. I am happy to get back to you for the record.

[The information follows:]

IMPACT OF THE NTTAA ON THE DEVELOPMENT OF THE WELL CONTROL RULE

BSEE's promulgation of the rule is consistent with the NTTAA's requirement that agencies use technical standards that are developed or adopted by voluntary consensus standards bodies rather than government-unique standards, except where inconsistent with law or impractical. BSEE expressly proposed to incorporate the following voluntary consensus technical standards in its rule:

—American Petroleum Institute (API) Standard 53 (Blowout Prevention Equipment Systems for Drilling Wells);
—American National Standards Institute (ANSI)/API Specification (Spec.) 11D1 (Packers and Bridge Plugs);
—ANSI/API Spec. 16A (Drill-through Equipment);
—API Spec. 16C (Choke and Kill Systems);
—API Spec. 16D (Control Systems for Drilling Well Control Equipment and Control Systems for Diverter Equipment);
—ANSI/API Spec. 17D (Design and Operation of Subsea Production Systems—Subsea Wellhead and Tree Equipment); and
—ANSI/API RP 17H (Remotely Operated Vehicle Interfaces on Subsea Production Systems).

The NTTAA and the associated implementing guidance in Office of Management and Budget (OMB) Circular A–119 permit an agency to include in its regulations a voluntary consensus standard "in whole [or] in part . . . ." (OMB Circular A–119, at p. 3). Thus, the NTTAA does not require that BSEE incorporate every provision of each standard. For example, BSEE has excluded from its regulations the API Standard 53 provision that authorizes offshore operators to "opt-out" of the requirement to use dual shear rams for BOPs on floating facilities. BSEE believes that a decision to "opt out" should be based on a risk assessment subject to oversight.

In addition, OMB explains that the NTTAA:

> [D]oes not preempt or restrict agencies' authorities and responsibilities to make regulatory decisions authorized by statute. Such regulatory authorities and responsibilities include determining the level of acceptable risk and risk-management, and due care; setting the level of protection; and bal-

ancing risk, cost, and availability of alternative approaches in establishing regulatory requirements. (OMB Circular A–119, at p. 25).

BSEE's proposed variations from the industry standard do not indicate that the bureau is seeking to use government-unique standards in its regulations. Rather, BSEE's non-incorporation of portions of industry standards is fully consistent with the NTTAA because OMB has clarified that agencies may incorporate consensus standards in whole or in part in their regulations. Additionally, OMB has clarified that the NTTAA does not preempt or restrict an agency's authority to make regulatory determinations about the level of acceptable risk and risk-management, and due care, setting the level of protection, and balancing risk and cost. BSEE's incorporation of less than all of API Standard 53 is based upon these principles and is not inconsistent with the NTTAA.

The potential impacts of the well control rule on oil and gas supplies:

BSEE received comments that the initial Regulatory Impact Analysis did not account for asserted impacts of the proposed regulation on national energy security. These comments appear to assume that this rulemaking will cause a reduction in domestic oil production, thereby implicating the requirements of Executive Order 13211 applicable to agency actions that significantly affect the Nation's energy supply, distribution, or use. These comments suggested that the rule would weaken national energy security by reducing domestic oil production and increasing reliance on foreign oil. BSEE does not agree with this comment. BSEE's own analysis indicates that the net effect of the final rule on the oil and gas industry would be positive (*i.e.,* the potential benefits exceed the potential costs). This does not support the assumption that the rule would precipitate a reduction in domestic oil production. The regulations consist of an envisioned level of safety derived from numerous post-*Deepwater Horizon* studies and existing industry standards. The regulations also allow for alternative methods to achieve the envisioned level of safety. There is no reason to conclude that this approach will adversely affect U.S. energy production. Technological advancements and variable market factors, such as the price of oil, which are unrelated to the requirements of the proposed rule, are likely to be the most important factors to affect future domestic oil production.

Senator CASSIDY. Please. And I will say that, speaking to folks, they actually feel like the initial rules that came out after the Macondo were actually fairly reasonable. It is those that were proposed that would go beyond it that are again being given almost, in effect, by fiat, not with consensus standards.

According to at least one consultant, it is going to have a significant impact upon the drilling of exploratory wells.

So we will fashion these for the record, and look forward to your reply.

Secretary JEWELL. If I could just say briefly, there was a lot of industry input after the draft rule. Those have been taken into account, and I believe you will see significant changes from the draft rule to the final when it is released.

Senator CASSIDY. Sounds great.

LAND BUY-BACK PROGRAM

On the Land Buy-Back Program, what is the cost basis for the sale of the land? Does that include the mineral rights that might be beneath it, the grazing rights, et cetera?

Secretary JEWELL. Mike.

Mr. CONNOR. We are not typically acquiring land through the Land Buy-Back Program with mineral rights on it. We are right now excluding——

Senator CASSIDY. I thought this is where the Indian tribes were allowed—the Native American tribes were allowed to buy land back from the United States. Did I misunderstand that program?

Mr. CONNOR. This is one where resources are provided to acquire these fractionated interests in lands and restore to tribal ownership. So there are significant tracks out there that do not have mineral interests. We are doing appraisals of those lands and restoring those to tribal——

Senator CASSIDY. I see. So, those typically do not have mineral and grazing rights associated with them.

Mr. CONNOR. That is correct.

Secretary JEWELL. Just to clarify, they are not Federal lands. Typically, they are in fractionated private ownership consolidated for the tribes.

Senator CASSIDY. Okay. I yield back. Thank you.

Senator MURKOWSKI. Senator Tester.

Senator TESTER. Thank you, Madam Chair.

LAND AND WATER CONSERVATION FUND

I, too, want to thank Senator Cassidy for his courtesy. That happens seldom around here, so we thank you for that very, very much, even though I was not the beneficiary directly.

Secretary Jewell, thank you for being here. I want to talk about the Land and Water Conservation Fund for a second. We have been over the numbers before. You know the impact it has on Montana's overall economy—$5.8 billion in consumer spending in a State of 1 million people. Seventy percent of Montana businesses list public access as a major reason they do business in our State.

In 1978, this fund was funded at $900 million—1978, the year I graduated from college, a long time ago. Now we are finally back up to $900 million, $475 million discretionary, $425 million mandatory. I appreciate that.

Back in 1978, it was supposed to be funded by offshore oil revenue. When we had this debate on the Senate floor, people said there was lots of money in this account, lots of money in this account. It was my understanding it flows into the general fund.

The question for you is, do we need an offset for the Land and Water Conservation Fund? When it was set up in 1978, it was set up to be at $900 million, and somebody took that money and we never heard a word about offset back in those days.

Secretary JEWELL. There are people here with much more history on this body than I have. It was authorized at $900 million. It has fluctuated wildly, and less than half, I believe, has actually been appropriated, and the rest has been used for other purposes.

Senator TESTER. Was it appropriated at $900 million back then, do you know?

Secretary JEWELL. It was.

Senator TESTER. And it has been appropriated at that level a few times since then.

The reason I bring this up is because in my opinion at least these places are not going to be around forever. They might not be around in 10 or 20 years. When you are looking at proposals, what are you looking at when you utilize this fund money?

Secretary JEWELL. There is a stateside program, which is prioritized by States. That is very, very important. On the Federal programs, we really have a list that is far longer than what we are able to do for things like sportsman's access, critical parcels be-

tween pieces of public land that promote access, inholdings where it is costing us money to provide rights-of-way that would actually reduce our costs. There are a number of different things.

Senator TESTER. Does the $900 million bring you up to a point where you can address all of the requests?

Secretary JEWELL. No.

Senator TESTER. Half the requests?

Secretary JEWELL. No. It would just enable us to make progress. There is a much longer list of requests.

Senator TESTER. I appreciate you trying to get back to the $900 million figure. It actually should have been indexed so it would be more than that now, in my opinion. These are special ecosystems that are not going to be around much longer.

COAL LEASING PROGRAM REVIEW

I want to talk about the Federal coal program for a second. I believe in transparency. I believe in a fair return to the taxpayer. These public lands are owned by every citizen in this country, contrary to what some might say.

I think that it is critical that we get a fair return on those coal dollars. I think, and correct me if I am wrong, the last time there was an assessment done on Federal land, coal leasing was in the early 1980s. Is that correct?

Secretary JEWELL. It was 30 years ago. It was 1986.

Senator TESTER. Nineteen eighty-six, the year that I bought a brand-new Chevy pickup four-wheel drive, three-quarter ton for $12,000. That same pickup would cost around $38,000 now, by the way, because I am looking to trade it off.

But that aside, can you tell me, I think it is a good idea to do the research and it is a good idea to make sure we are getting a fair return, but this cannot go on forever. I mean, it has to be a date certain.

I have heard 3 years. Is 3 years a reasonable amount time to get this survey done? And, if it is, would you support legislation saying that?

Secretary JEWELL. I would support legislation putting a date certain. Three years, we believe, is as fast as we could do it. The program review done in the 1980s was longer than that. The pause on coal leasing extended longer than that, as a result.

I will be putting in place a date certain timeline when I leave, but that could be undone by a successor and I would welcome a clear timeline so we can complete this in a timely way.

GRAZING FEES

Senator TESTER. Okay, Madam Chairman brought up the Federal grazing fee. It was raised up to $2.11 in this budget, correct me if I am wrong, maybe it was not. Maybe it was done before that.

The point I want to make is this. There are some who want to transfer our Federal lands to our States. The amount of grazing fees that are charged by the States are much, much, much higher. And the private grazing fees are much higher than the State fees.

Could you talk about, because I do not know that a lot of people are talking about this—we have more cattle in Montana than we have people, by the way. Can you talk about the impact transfer-

ring these Federal BLM or Forest Service lands to States would have on grazing fees?

Secretary JEWELL. The impact would be dramatic. The Federal Government charges $2.11, which was set by Congress many years ago. While our budget asks for an administrative fee of $2.50, right now we cannot even cover 35 percent of our costs of administering the program.

Just to give you some examples, in your home State, the State charges $19.57 compared to the Federal Government's $2.11. In Colorado, it varies between $9 and $15.25. In Wyoming, it is $6.14. On private lands, it is $21, 10 times what the Federal Government rate is. That is pretty consistent.

I would say that for the grazing interests, people are getting an incredibly good deal on BLM lands right now. The increase we are talking about still would not even fully cover our costs just to administer the program.

Senator TESTER. Thank you very much. I look forward to working with you on this budget.

Thank you, Madam Chair.

Senator MURKOWSKI. Thank you, Senator Tester.

Senator Daines.

Senator DAINES. Thank you, Madam Chair.

Good to see you again, Secretary Jewell.

COAL LEASING PROGRAM REVIEW

Last week in the Energy Committee, I mentioned my concerns about the programmatic review and the pause on coal leasing. It is very troubling for many back home in Montana and for the Crow tribe. I think we need to be careful to not make producing Federal coal completely uneconomical.

That is a reality that is dangerously close under the current administration's moratorium on coal leasing, and if not inevitable, if our States and I think our tribes are left out of the process.

At last week's hearing, I asked about gathering input from the States and the tribes, and you mentioned six listening sessions the department has had, and that there is a very open process. Several tribal members and others who rely on these coal jobs to provide for their families for the revenues, for the general fund, expressed strong concern regarding potential administration actions at the listening session that was actually held in Billings, Montana. In fact, most present there expressed concern.

Yet the administration is moving forward with this programmatic review and a coal leasing moratorium. Quite frankly, I think there needs to be something more formal to allow the States and tribes and other stakeholders a more predictable and impactful seat at the table, like the Royalty Policy Committee, which actually you allowed to lapse in 2014. I think Congresswoman Lummis mentioned that yesterday in a hearing.

ROYALTY POLICY COMMITTEE

The question was, why did the agency allow the proposed rulemaking initiative to move forward when the Royalty Policy Committee, which was important—it has members from the States, from the tribes, from non-governmental organizations (NGOs), from

industry, the committee lapsed in 2014, a very important voice in this process. Why did we go forward with rulemaking initiatives when you allowed that committee to lapse?

COAL PROGRAM

Secretary JEWELL. Let me say a couple things, if I may. First, I will have to look into the committee lapsing, but royalty rates on the Federal coal program have not changed in 30 years, so I am not sure of the function of the committee.

There are minimum royalty rates set, and then a lot of exceptions that actually reduce the royalty rates. We have seen a real decline in revenue coming in from the coal program, and the decline in production is really due to economic factors like the switch to natural gas and a change in the interest in exports of coal, which I know the Crow tribe was interested in.

The bonuses over the last 10 years were about $.875 per ton. And in 2015, $.315 a ton, so the price is collapsing on coal due to market conditions.

ROYALTY POLICY COMMITTEE

Senator DAINES. Right. I understand the dynamic nature certainly of what is going on. I guess, it makes it in my opinion even more important—why wouldn't we want to have the States' voice, the tribes' voice, industries' voice, NGOs' voices there in a more formal process as far as their input goes, which was a key part of this Royalty Policy Committee, which lapsed in 2014?

Secretary JEWELL. I just had some more recent information handed to me.

The Royalty Policy Committee last met in 2008. The charter was renewed in 2010, but did not meet because of other events—*Deepwater Horizon,* after which the Minerals Management Service, was reorganized and created the Office of Natural Resources Revenue was created. The Royalty Policy Committee was set up to expire in 2012.

It was renewed as a potential vehicle for the Extractive Industries Transparency Initiative multi-stakeholder group, but the most recent charter expired in 2014, and our Office of Natural Resources Revenue did not feel it made sense to reestablish it.

But we are happy to look into that more for the record. That is as much information as I have right now.

Senator DAINES. The concern I hear back home is that we want to make sure the States' voices are heard in that process, that the tribes' voices are heard in that process, the industry voices are in that process, as well as NGOs. I think the stakes are perhaps much higher now than they might have been in the past and why it is so important.

I believe this policy needs to be reinstated. And I am concerned why rulemaking is going forward here without having that important body functioning, given I think the dynamics and the stakes are a lot higher today than they might have been in the past.

COAL LEASING PROGRAM REVIEW

Secretary JEWELL. Just to adjust a little bit, rulemaking is not what is happening. It is a programmatic and environmental impact statement, which is a review of the overall program. We absolutely will be listening to industry. We will be listening to tribes. We will be listening States, local stakeholders, local communities. People impacted by this on the ground will be a very robust part of this process, I promise you.

Senator DAINES. I appreciate Senator Tester's concerns voiced a little earlier about trying to get a 3-year date certain, in terms of this programmatic review. I have an amendment that I am trying to work to get bipartisan support on that to, again, deliver some certainty here in what is very much an uncertain process in many regards.

TRIBAL CONSULTATION

I want to pivot over and talk about the meaningful consultation with Indian tribes. The Crow tribe I do not think believes they have had meaningful consultation.

What does meaningful consultation look like to you, Secretary Jewell, because they are saying that they do not really feel like they have had a meaningful consultation.

Secretary JEWELL. I have not met with the Crow for probably 1.5 years, maybe a bit more. But, if they feel the consultation they had is not meaningful, please have them let us know, and we will make sure we are responsive.

I would say meaningful consultation is not necessarily reaching an agreement on a position a tribe necessarily wants, but it is making sure their position is known and heard. We have been committed to that throughout this administration.

Senator DAINES. As you know, their unemployment rate today is about 40 percent. The loss of these jobs takes the unemployment rate to north of 80 percent. It is devastating for the tribe.

Secretary JEWELL. I understand, and I know you understand, too, that the economics of coal are changing dramatically. What we are looking to do is not the cause of that. There is a multifaceted global market for coal that is, in fact, going down dramatically.

Senator DAINES. I would argue that the EPA power plan is having a tremendous impact right now in creating uncertainty there as well.

I understand the economic dynamics. The EPA power plan is probably the single most devastating impact right now on the coal business up there in Montana. Thank you.

Senator MURKOWSKI. Senator Daines, I appreciate you bringing up the issue, though, of tribal consultation. Secretary, I am going to turn to Senator Feinstein, but I would just like to put you on notice.

I have a large delegation of Alaskan Native leaders that are in Washington, DC, this week. Every single one of them is bringing up with me the breakdown that they are seeing with tribal consultation with the agency. So I will put that on your plate as well, and I can speak with you about specifics.

Senator Feinstein.

Senator FEINSTEIN. Thank you very much, Madam Chairman.

I just want to say, it is fortuitous you are also chairman of the Energy Committee, and the subject I want to bring up today is a bill that we have submitted for your consideration, and that is a California water bill, which would hopefully be part of a Western water bill.

I cannot express too strongly how serious this drought is for California. A lot of people have counted on El Niño. It may or may not bear real fruition, but the State has really had dramatic problems. Let me just give you a few.

We have 69 California communities that face significant water supply and water quality issues. In other words, most of them do not have water. We have lost $2.7 billion from the drought in just 2015. More than 1 million acres of California farmland have been fallowed in 2015. The drought has led to a loss of 35,000 permanent jobs in the State.

Land subsidence in the southern Central Valley has caused large areas to begin to sink because of overpumping groundwater, and it is sinking as much as 2 inches per month. As a result, bridges, aqueducts, and roads have begun to crack.

So, I would like to ask a couple questions of the Deputy Secretary on the subject. Deputy Secretary Connor, is it true that we have worked closely with Reclamation and your office in the drafting, redrafting, and amending of this bill?

Mr. CONNOR. It is absolutely true.

Senator FEINSTEIN. Deputy Secretary Connor, is it true that every amendment or suggestion, and there have been many, made by Reclamation and your office has been worked through and incorporated into the bill?

Mr. CONNOR. Senator, a great many. I would hesitate to say all, but I think for the most part, most of the very substantive ones have been addressed. I believe there may be some technical issues that we still are discussing. But yes, in general, I agree with your statement.

Senator FEINSTEIN. Okay, I would like to know, not now, but what those technical issues are.

Do you believe that the bill, if enacted, would increase operational flexibility and increase water supply during this drought?

Mr. CONNOR. I agree, yes, on both counts.

Operational flexibility in the bill incorporates provisions that reflect the flexibility we have tried to maintain in our water operations, and that we have over the past couple years developed, consistent with our drought contingency plan.

It institutionalizes those provisions. It provides greater resources for monitoring activities that greatly help in our operations. It facilitates transfer. I think in the midst of this drought, it does increase flexibility and has the capacity to provide for more water. I would say, in the long-term, it absolutely, unquestionably will provide for more water supply reliability for California.

Senator FEINSTEIN. Thank you very much. I appreciate that.

FUNDING FOR CALIFORNIA MONUMENTS

Madam Secretary, if I may, I want to thank you for your efforts related to the President's designation of three new national monuments in the California desert. The California desert has been a very big deal for me. We have done two desert bills. As a city girl, the California desert is such a wonderful place to visit. At night, the shadows, the dawn, the flora, the fauna, the petroglyphs, it is just an incredible place. So I am very delighted to see these monuments.

If I understand your budget request, it includes $6.5 million for the BLM office in California that is responsible for managing the national monuments. That is an increase of $1.9 million when compared with last year.

While I understand the monuments were designated after submission of the President's fiscal year 2017 budget, do you believe the additional $1.9 million will be enough for BLM to manage the 1.7 million acres of land it is now responsible for?

Secretary JEWELL. I am just going to do a high level answer, and then turn it to Kris for the direct answer.

I want to say a profound thank you for your work on the drought legislation—hard, hard work—and also for your tireless work over many, many years on the protection of the California Desert.

Senator FEINSTEIN. You might be interested to know, Madam Secretary, we have done 26 drafts of that legislation and made 41 amendments to it, as the time has gone on, and as we have talked and consulted with others. So, that has been 2 years of work, and I might say, much harder than the desert bill.

Secretary JEWELL. It was very constructive. And the subsidence you pointed out is something few people know about.

We have increased money in the budget overall for the National Landscape Conservation System in BLM that does include the California deserts. There is not specific money in the budget for them beyond an allocation for that, because of the timing of the monuments. We will be doing a lot of planning associated with that, and future budgets will reflect that.

But, Kris, do you want to jump in?

Ms. SARRI. Sure.

Senator, thank you very much for the question. As the Secretary mentioned, there is an increase for BLM's conservation lands. We are up to $50 million for the request. That does include the $1.9 million increase for the California areas. BLM thinks that will be sufficient if they get the budgetary increase to take care of the new monument.

Senator FEINSTEIN. Thank you. That is very helpful. I appreciate it.

ABANDONED MINES

Just a quickie, one of the prior Senators mentioned the problem with abandoned mines. It is a serious problem in our State. We have some 24,422 abandoned mines. According to BLM, there are 1,672 known mine sites on or near BLM property. BLM estimates that there were an additional 22,730 sites that have yet to be even inventoried.

BLM says that will require $118 million just to complete the inventory. That is an enormous cost just to inventory.

My question is, would you take a look at that cost? I am concerned about these. I know we get $1 million, $2 million a year to deal with these, and some have been boarded up where people can fall into them. But I am very concerned that we could still have some kind of a catastrophic event.

So, if you would take a look, BLM has requested $20 million in discretionary funding for its nationwide Abandoned Mine Lands program. You propose $1.8 billion in mandatory funding from a new fee that most people think will not go anywhere in Congress.

So, if you have some suggestions, Madam Secretary, I would love to hear them.

Secretary JEWELL. I will just say thank you for pointing out this issue, as did Senator Udall. He does have some legislation he is proposing.

This is an enormous problem. We will certainly look into the cost and get back to you on the record for that, because I do not have a great answer, except that I know that just to inventory across landscape is hundreds of millions of dollars. That is because these are remote sites. To inventory them, we have to understand what is happening, and the features within those sites. That is very labor-intensive work.

But we will look into that and be happy to work with this subcommittee and others on bringing a long-term solution.

Senator FEINSTEIN. Let me ask you just quickly this question. To inventory them first, so much money, could there be another criteria for selecting abandoned mines to take care of? It seems to me those would be the mines where you have hikers, visitors, where there is the most jeopardy of an accident. Could it be done on that basis?

Secretary JEWELL. I will talk to the BLM and ask them. I am fairly confident those are the ones they have prioritized within the National Park Service, those that do have closed visitor access. But we will check into that, and I will get back to you on it. Thank you very much.

[The information follows:]

ABANDONED MINE LANDS

The BLM confirms the estimated cost of completing an inventory of abandoned mine lands in the State of California is $118 million. The BLM also confirms for both conducting inventories and reclaiming AML sites, priority is given to areas and sites with high visitation or near population centers.

Senator FEINSTEIN. Thank you, Madam Chairman.

Senator MURKOWSKI. Senator Blunt.

Senator BLUNT. Thank you, Chairman.

ST. LOUIS ARCH

Secretary Jewell, I want to thank you for mentioning the arch in your written testimony. It is one of the very first projects, and maybe in terms of private funding the largest project in terms of local funding that is going into that partnership.

It does seem to me that we have a real opportunity there and in other places to really usher in what I believe is your vision of

the second century of the Park Service. I would say that I hope it would not hurt his reputation in the service, but the new regional director, Cam Sholly, appears to fully understand the importance of setting this model. We are enjoying working with him, as, more importantly, the people locally are enjoying working with him.

We were able to get some language in the omnibus appropriations bill. Chairman Murkowski supported that legislation that just would help attract private dollars.

What that language does is direct the Treasury Department to invest the dollars privately raised in interest-bearing accounts. I know in the case of the arch the goal is to raise $29 million of endowment funding. I would hope the endowment funding and any future funding raised for that and other projects benefits from that new sense of direction to the Park Service and, more importantly, to the Treasury. I do not think the Park Service ever resisted the idea that private money should actually benefit the project it had been raised for as opposed to any interest going into the general treasury.

Secretary JEWELL. We share a common interest in that. I have to compliment the St. Louis community; $250 million of private money raised for the CityArchRiver project, which is extraordinary.

Thank you for your efforts, so that they could use the interest during the interim timeframe as opposed to going to the Treasury. That is very helpful. We will continue to advocate for that, broadly.

STE. GENEVIEVE SPECIAL RESOURCE STUDY

Senator BLUNT. Right. There is another study going on that should be released any time. I will just bring it to your attention to be sure that you spend a little time looking at it. This is on Ste. Genevieve, Missouri, which is just south of St. Louis on the Mississippi River.

It is a French settlement that still actually has a substantial number of 18th-century French buildings in that community, some of which have been under the direction of the State parks system for some time.

But my belief is that both the State parks system and study that the National Park Service is about to do will reach the conclusion that a better place to preserve that unique part of our history is probably as a unit of the National Park Service. I would expect that to come out any day. I hope you have a chance to look at it.

Like I said, these are 18th-century structures west of the Mississippi River. A lot of them are the vertical log structure that was unique to the way the French were building housing compared to the horizontal structure that other people were. I am interested in that and hope you will be, too.

COAL LEASING PROGRAM REVIEW

Just to follow up a little bit on one of Senator Daines' comments, on the 3-year date certain on the coal study, I actually do not know how much there is to figure out about coal that we do not already know. I was going to suggest that I thought 3 years was an excessive amount of time for that study.

So, you hear that point of view, as well as just promise us that you will get it done in 3 years.

I really think you should look at this and determine what you are going to know that takes 3 years as opposed to half that time or 2 years or sometime that is less than 3 years. I think the questions on coal have already been well asked.

I will say that, in Missouri, we are 80 percent coal-dependent for utilities. Ninety percent of that coal comes from the Powder River Basin. The fact that a taxpayer should get a fair return there is important, but it is also important in the other energy resources. While oil and gas on State and private lands have almost doubled between 2010 and 2014, there have been no changes, no appreciable change, on Federal Government lands.

I do think return to taxpayers for what we can minimize the intrusiveness of in terms of oil and gas is an important return.

SOLAR PROJECTS

I also know that on a significant amount of Federal land, over 30 solar projects have been approved since 2010. I am not opposed to solar at all, but if you are worried about impacting the way the landscape should look, or it would look if people were not involved in the landscape, I am sure 30 solar projects have more impact on that topic.

And there is no Federal return, there is no taxpayer return, on solar. I am not objecting to that. I am not opposed to solar. I am not opposed to wind. I am actually truly an all-of-the-above person.

But if we are interested in fair taxpayer return, it would seem to me that we would be looking pretty aggressively at why we have 89 percent more production in State and Federal lands and essentially no more production on Federal lands. I will let you respond to that.

Secretary JEWELL. Let me just clear up one point. We do actually charge solar energy companies when they are leasing Federal land for solar, and for wind. There is a charge to them. Just as we are doing for offshore wind in the Atlantic, we are doing lease sales similar to what we do in the Gulf of Mexico for offshore oil and gas.

Senator BLUNT. Good. Would you provide me or the subcommittee how that works?

Secretary JEWELL. Yes, we are happy to.

[The information follows:]

Solar and wind energy developments are authorized under the authority of the Federal Land Policy and Management Act, which requires that the BLM generally receive fair market value for an authorization. The BLM has established payment requirements for solar and wind energy developments based off of comparable commercial practices from non-Federal lands. The payments to BLM consist of both an acreage rent and megawatt (MW) capacity fee. The acreage rent is required annually each year, regardless of the operational status of the development, and is determined based upon the location of the development on the public lands. A per MW capacity fee is required annually at the start of energy generation of the development, and is determined based upon the development's capacity and efficiency of the technology. The annual payments may differ between solar and wind energy developments based upon the acreage encumbered, efficiency of the technology used, and the generation capacity for that development.

The BLM has received increased payments for solar and wind energy developments since 2010, corresponding with the increasing number of rights-of-way issued. In 2010, the BLM received little more than $3 million in payments, almost all of which was from wind energy developments. In 2015, the BLM received over $15 million in annual payments for solar and wind energy developments, of which over $10.5 million were annual payments for solar developments, compared to $4.5 mil-

lion for wind energy developments. In addition to the annual payments, the BLM may also hold auctions for solar developments in designated areas. Such auctions are held infrequently; the most recent was held in 2014 for lands in Nevada. The BLM received over $5.8 million in bids for the parcels auctioned. Both the bonus bid revenues and the required annual rental payments are returned to the Treasury.

Senator BLUNT. If that is a one-time payment or an ongoing payment, as you would have from production from other facilities. I would like to see that.

Secretary JEWELL. Yes, we are happy to do that. It is an ongoing rental payment. There is a bonus paid upfront, and then there is an ongoing rental payment. I think it is per acre or per tract, but we will get back to you on that.

COAL LEASING PROGRAM REVIEW

Also, just to point out, because I had not said it earlier today, on the programmatic EIS for coal, it actually is complicated. There are a lot of different interests at stake and a number of different States at stake. There is metallurgical coal. There is steam coal.

We do believe, based on how long it takes us, for example, to do a programmatic EIS on an offshore leasing program, that 3 years is a pretty expedited timeframe.

I will be not in this job, clearly. That will change in about 11 months, maybe we're down to 10.5. We do have 20 years of supply of Powder River Basin coal, Federal coal, under lease to companies already. We do have emergency provisions in the pause that we put on the leasing program during the PEIS to allow companies to continue to mine and to get a permit, if their mine is at risk of closing because of the pause or if a coal-fired power plant is at risk of closing because of the pause. We also grandfathered projects that were nearing their completion.

So we do not believe there will be disruption in the supply of coal or to the jobs.

Senator BLUNT. Let me make one point there before the end of my time, and we are at the end of my time, but I noticed last time was little extensive too.

How long the study would take if the study hadn't put long-term Government program in abeyance until the study was over, I think that is two different questions. Patriot Coal in St. Louis just went into bankruptcy. Shortly after they went into bankruptcy, as I understand it, I have not talked to them, but everything I have read about this would indicate that one of the things they thought would bring them out of bankruptcy was that they were right at the end of the permit process to get access to some coal mining area that they hadn't previously had.

That is now postponed until the study is over. I do not know what impact that is going to have on the company, but I assume it is significant. They, as many others would have, would have pursued what they understood to be Government policy, which just suddenly stopped so the Government can figure out what they were doing. It does seem to me the Government can figure out what they are doing without necessarily stopping everything we have been doing for a long time.

Thank you, Chairman.

Senator MURKOWSKI. Senator Merkley.

Senator MERKLEY. Thank you, Madam Chairman.

MALHEUR NATIONAL WILDLIFE REFUGE

And thank you, Madam Secretary, for being here and helping us understand a variety of things.

When you started out your commentary, you mentioned Harney County and Malheur Refuge. That has been a traumatic experience for Oregon. We are hoping to work with the Department of Justice in terms of some compensation back to the completely overstrapped local system of justice that was dealing with that, in partnership with FBI.

But also the Burns Paiute Tribe, and this would be more relevant to Interior, had to incur a lot of increased costs and damage to sacred sites. It is still being evaluated.

Is it possible that the BIA could assist the tribe in some of these expenses that they are going to incur?

Secretary JEWELL. It is certainly something we would be happy to look at. I know that the FBI left recently, and we are just now doing an inventory of the damage. But certainly, we can work with the Bureau of Indian Affairs (BIA) if there are costs incurred by the tribes in addressing that.

I did meet with the tribes on the phone beforehand. I did meet with Judge Grasty from the county recently in my office. I will be making a trip there when the time is right to visit. We will make sure we encompass the tribes and I engage with the BIA as well.

Senator MERKLEY. Thank you. I really appreciate that. I know the tribe appreciates that as well.

One of the ironies is that that particular county where the occupation occurred has had some terrific successes on collaboration, the types of successes that we all say need to happen through dialogue and cooperation and sharing perspectives and so forth, one including sage-grouse conservation, another being the Malheur Refuge itself, management of the refuge.

Judge Grasty, who you mentioned, has thought that, given their successes in Federal-county collaboration, this would be a very good place to have a center that helped advance that type of collaboration, both from the local experiences, but bringing in the issues from throughout the West.

So, I think it is a terrific idea. There are tensions that certainly are natural between a longstanding landlord, the Federal Government, and a longstanding ranching and grazing tenants, and issues over the use of the land. And having a center to facilitate collaboration, it seems like a pretty cool thing.

Any chance we could get some support for that idea from the administration?

Secretary JEWELL. This is a new concept I have not really considered, so we would be happy to consider it.

I will say what happened in advance of the occupation of the refuge and the cooperation that has happened throughout Oregon with not just our own agencies, but also the Natural Resources Conservation Service has been extraordinary. I think there are models there to learn from.

I would hope it will set a model for every office—Fish and Wildlife Service, BLM—working cooperatively across the landscape. But

we are happy to do give that consideration, and I will chat with Judge Grasty the next time we talk.

Senator MERKLEY. Thank you very much. I appreciate that.

KLAMATH

I also appreciate the administration's support for the Klamath settlement efforts. We had substantial development with the process of decommissioning the dams being taken offline and, therefore, removing some of the obstacles. There is still a lot of work to be done to capture through legislation the water certainty for the irrigators, the land for the Klamath Tribes, habitat restoration, and so on and so forth. You have been a great partner.

Can we continue to ask you to assist us?

Secretary JEWELL. We absolutely will be there. We know there is a legislative fix that is needed to move this forward, and we are fully supportive.

Senator MERKLEY. Thank you. I appreciate it.

And there was, by the way, $3 million appropriated in fiscal year 2016 to support the agreements, specifically habitat restoration. Because the agreements were not concluded or the legislation was not concluded, we just want to try to make sure that the $3 million actually does get spent on the habitat restoration efforts, so it would be helpful to keep moving the process forward as much is possible.

Mr. CONNOR. I believe that process will continue with additional funds that were made available from Reclamation with the spending plan. The upper basin agreement with the Klamath Tribes is still in effect, and there is some restoration activity that is contemplated as part of that agreement, and we want to carry forward with that.

Senator MERKLEY. Great. Thank you. Thank you for all your assistance on this, Michael.

COAL LEASING PROGRAM REVIEW

Turning to coal leasing, I think it flies to the top of the chart for questions that you have been asked. It shows how much different Senators care about this from substantially diverse perspectives.

I certainly agreed with Senator Blunt when he was saying that we should be able to figure out the answer in a shorter period of time. To me, the answer is already obvious, but it is probably the opposite of what Senator Blunt might conclude.

Currently, we have, I believe, in terms of leases, already granted about a 20-year supply of coal already leased out for extraction. Am I in the ballpark on that?

Secretary JEWELL. That is correct. It is 20 at current production rates, and production rates are declining, so it is likely more than 20.

Senator MERKLEY. So we have a tremendous supply that already has been leased. And we also know that when you do a new lease, that lease might be exploited for decades thereafter. So if we do a new lease now—there are occasions where a lease has been exploited for 30, 40, even 50 years—we are essentially locking in a contract for many decades in the future. Am I still on track?

Secretary JEWELL. That is correct.

Senator MERKLEY. So here is the thing, we are seeing the impact of burning fossil fuels all over Oregon from the growth of the pine beetle because winters are warmer and so damage to our forest.

We have three of the worst ever droughts in the last 15 years in Klamath Basin, a huge impact on agricultural families.

The winter sports in the Cascades have declined as the snowpack has declined. The trout streams are getting smaller and warmer, which nobody who fishes likes to see smaller, warmer streams.

Our oysters on the coast are having trouble reproducing because the ocean is more acidic, 30 percent more acidic than before the Industrial Revolution. If that is not a canary in the coal mine, I do not know what it is.

So we have the knowledge, not just in some theoretical model in the future, but right now facts on the ground. We know there is extensive damage to our forestry, to our fishing, to our farming, to our natural resources. And therefore, why would we possibly do a new lease locking in more extraction and combustion decades into the future?

So that is the conclusion I would come to. If the administration reaches the same conclusion, as you put it, before your time is up, I would love to see the coal leasing program ended.

Secretary JEWELL. All right. Thank you.

Senator MERKLEY. Thank you.

Senator MURKOWSKI. Senator Udall.

Senator UDALL. Madam Chair, thank you very much.

NATIONAL PARKS DEFERRED MAINTENANCE

Secretary Jewell, I am pleased to see that you have proposed a 9 percent increase for national parks, including major investments in construction and maintenance programs to address the estimated $11.9 billion maintenance backlog at parks nationwide. It is mind-boggling, that number.

CARLSBAD CAVERNS

We have a particular issue with park maintenance in New Mexico I want to briefly raise. The public elevators at Carlsbad Caverns National Park have been out of service since early November, leaving visitors to hike in and out of the caverns if they want to visit.

Obviously, the lack of elevator service creates a problem for visitors who have accessibility issues as well as a problem for the general public.

I have had the chance to raise this issue with you personally. And you know how important it is to me for the Park Service to restore temporary elevator service at the park as possible and to come up with a plan to permanently upgrade the elevators. I appreciate you working with me on this to resolve this issue as quickly as possible and to ensure that the local communities know what to expect.

VALLES CALDERA NATIONAL PRESERVE

I also would like to thank you for your strong support of the Valles Caldera National Preserve during its recent transition to be-

come part of the national park system. I am also pleased to note that you have included $3.3 million in your budget request to continue funding for the preserve into 2017.

Now that you have visited, I know you will agree with me that the preserve is one of the crown jewels of the national park system. What makes it so special is not just a stunning landscape, however. There is recreation, hunting, fishing, and grazing at Valles Caldera. All those make it a vibrant park for New Mexico's community and for our local economies.

That is why I am concerned to hear that the Park Service is still weighing whether to continue traditional grazing permits on the preserve for this upcoming season. The law that transferred the Valles Caldera to the National Park Service allows these longstanding permits to remain in place while the Park Service develops its long-term management policies. These ranchers deserve to know now that they can count on their grazing permits for the season.

Can I have your commitment that you will work with me and other members of the congressional delegation who are also very concerned about this to resolve this issue quickly and avoid any further disruption to these traditional grazing permits?

Secretary JEWELL. Certainly, Senator, we will be happy to engage directly with you. The Park Service is well aware of the need to act fast on this.

I will say there are some complexities, an endangered species, for example, that needs to be incorporated into their planning process, and figuring out the market rates for appropriate grazing fees. But we are very happy to work with your office to keep the priority high for the Park Service.

Senator UDALL. Thank you very much. I think on the endangered species issues, there are areas where there are not endangered species issues, and I think the park superintendent is very aware of those, and the local people on the ground.

Another issue related to the transition of the Valles Caldera is the importance of continuing a multiyear stewardship contract with the Jemez Pueblo. This project supports vital landscape restoration work and jobs for tribal members.

As you know, I worked to include $1.5 million in the 2016 omnibus to support forest restoration projects at new parks like Valles Caldera. Could you tell me what work you expect to accomplish this year with the funding we provided? Is funding included in your fiscal year 2017 budget to continue this effort?

Secretary JEWELL. So the short answer is yes, funding is included. It is going to be used for thinning about 1,200 acres of forest. As we are both aware, they had devastating forest fires, and that is really important. So that will continue.

Senator UDALL. Great. Thank you very much for that response.

VENTING AND FLARING

As you know, I am very supportive of the department's efforts to develop new rules related to methane venting and flaring. New Mexico's natural resources provide jobs and royalty payments that are an important part of our State's economy, but outdated requirements are resulting in over $100 million worth of natural gas being

wasted, which has cost my State $43 million in lost royalties since 2009.

There is also a serious health component to this issue.

I understand that you are now in the public comment period on the methane venting and flaring rule. Could you give us a sense of the timeline for the final rule? What are some of the issues you are hearing from industry that you believe will be addressed in the final rule?

Secretary JEWELL. At this point, the public comment period ends next month on April 8. So far, we have had two public listening sessions, one in Farmington, New Mexico, the other one in Oklahoma City. We will be taking input on all of those comments.

I cannot tell you what all of them are because we have not analyzed them yet. I am sure you are aware of what some of them are, in terms of cost and methodology and the importance of doing this. But once we have all of those comments in, we will be happy to analyze them and factor that into the rulemaking.

Senator UDALL. Great, thank you very much.

COAL

I have a question here on coal, but that one is kind of like beating a dead horse. Senator Wyden and I have a piece of legislation on that, and I think I will submit that one for the record.

INDIAN EDUCATION CONSTRUCTION

I am very pleased that this subcommittee was able to provide an 85 percent increase for Indian school construction and improvements in the 2016 omnibus. That amount includes funds to finish the schools on the 2004 school construction priority list. It also provides a down payment to begin work on new schools that the Bureau of Indian Education (BIE) is in the process of selecting. I am glad that you were able to include another $45 million for replacement school construction in your 2017 budget.

I know that BIE is currently considering applications for schools that want to be considered for the next round of funding. There are four schools in New Mexico that are currently competing for a place on the final list, and they are all very anxious to find out whether they will get selected.

In addition, this subcommittee needs to know how the funds in your budget will be used so that we can support your efforts during the appropriations process.

When do you expect to finalize your new school construction list? And what is your plan for providing the subcommittee with more detail on how year 2017 budget request will align with that list?

Secretary JEWELL. The Indian Affairs team is hard at work, and they are nearing finalizing the list. We narrowed the list down from many, many schools to 10 that submitted additional information, which has been received. It is being analyzed, and I would expect that sometime in the coming weeks to see the final version of the list for the new school construction.

There are also replacement buildings, which would be considered afterwards.

We are very happy to provide you with information on how the funding would be used. We are happy to work with the committee and provide you with an inventory of that.

But as you pointed out, this is a much bigger issue than we have money in the budget to address. We can just begin to chip away at the list and work on stemming the increase in deferred maintenance.

But we need a longer-term solution, as happened with the Department of Defense schools, to really address this long-term systemic problem, which is afflicting fully a third of our schools that are considered in poor condition, including a bunch of them in your State.

Senator UDALL. Thank you. I know you have a real passion for this.

Madam Chair, I see I am well over time here. I do not know whether we are doing another round or not.

Senator MURKOWSKI. I have some more questions. We have given our colleagues some latitude here so they can move on to other things, but if we can continue for a little bit longer, that would be great.

MITIGATION

Madam Secretary, I want to go back to some of the lands issues. Something that has caused a level of concern is where we are in this big discussion about mitigation.

As you know, the President has issued this memorandum on mitigation, and then you have your Secretarial Order Number 3330. I think these two issues are causing more questions than resolving any issues.

Just a couple years ago, as we were dealing with issues within the National Petroleum Reserve, the concern was the metrics that were relied on to arrive at a $8 million cost for mitigation within the National Petroleum Reserve-Alaska (NPRA). BLM, at that time, had discussed a real rigorous understanding of how this impacted subsistence use. It seemed to so many who were observing that this was just kind of divined from different individuals, agencies, and that it had come to a point where it was, how much can we get? That is not a standard that anyone would suggest is reasonable.

But the bigger question is whether or not there is authority to require mitigation for projects on public lands in the first place. When you move forward on natural resource development, responsible natural resource development by definition includes reclamation of disturbed lands and our Federal laws require that reclamation then occur. Laws that govern multiple use on public lands do not have this mitigation requirement.

I led a letter that went out just about a week ago with about 18 other colleagues here in the Senate outlining a series of questions to DOI focusing on we are with developing this program guidance—not only for DOI but for all the relevant agencies that are involved.

So a couple questions on mitigation. Can you provide a status update as to program guidance about the bigger point, which is what is the authority that the department has to require mitigation for projects on public lands in the first place? Additionally, the bigger

problem and the consideration that we face in Alaska is that you have multiple agencies that have seemingly different standards or different approach to mitigation. As a consequence of the lack of certainty, operators are not even able to begin a project, because whose standards are we going to be looking to?

So, a longer question that hopefully has a clear answer. We have not gotten the guidance that we have asked for.

We are going to be having a hearing in the Energy and Natural Resources Committee on this within this month to hopefully gain more clarity. Can give me a little bit of guidance here from your perspective?

Secretary JEWELL. Let me do a high level answer and then I am going to turn it over to Mike Connor, who has worked on the details for me on this.

First, we believe the individual, localized mitigation does not actually address sometimes the bigger issue that development has on the landscape. This is something that I looked at from day one.

When you have the fragmentation of habitat, when you have road networks and so on, there tend to be impacts to the landscape, the animal migration patterns, and so on, that are not necessarily contained within the footprint of that area. We are looking at landscape-level mitigation, understanding what those impacts are.

Good examples of that, I would say, in the National Petroleum Reserve in Alaska, understanding the caribou calving grounds, understanding the oil and gas development potential, understanding that if there is offshore development, how do you move that. All of those things were factored in.

As a project gets done, there is now a greater understanding of what the impact will be. That is the whole concept of mitigation.

Senator MURKOWSKI. Can I interrupt on that? What you are describing is that it is going to be a case-by-case determination. How can you give some level of certainty then to anybody who is looking to develop a project, whether it is oil and gas or whether it is a new runway or whether it is a driveway? How can there be any level of certainty and understanding when everything is done on a case-by-case basis?

Because what you described is going to depend on what is happening with the landscape around it. Every landscape is going to be different.

Secretary JEWELL. The intent is to bring certainty. Another example, the Desert Renewable Energy Conservation Plan, what are the areas that are set aside for development? What are the areas critical to conserve?

So as this gets developed, the mitigation would be used on the area that is highest priority for conservation, not necessarily on that footprint. The overall intent, to bring greater certainty, not less.

I am going to turn it over to Mike for the specifics on what he is working on.

Mr. CONNOR. I think I would just continue along the lines with the view that the President's memo I think gets to the point you are trying to have us do, which is having more consistency across the agencies in developing our mitigation criteria and not doing it project-by-project, by doing these planning efforts, which I think

have demonstrated they do facilitate permitting processes because they add more certainty as we work with companies.

A perfect example is the Western Solar Plan and the Solar Energy Zones we did in Dry Lake in Nevada. We identified the corridors of development, and the appropriate mitigation standards, that should apply there. We worked with companies taking environmental analysis that used to take 18 to 24 months down to 6 months to complete those environmental analyses.

I think the NPRA is a situation I am particularly familiar with having been involved in the discussions with ConocoPhillips. The mitigation was not pie-in-the-sky what can we get. It was very specifically related to the intrusion on the Fish Creek barrier. That was the issue we were discussing with ConocoPhillips. We talked about specific ways to compensate for that. We had a disagreement about methodology.

Quite frankly, we all agreed there was a range of dollar figures we were talking about to compensate for that particular intrusion, and it could best be applied toward developing a regional mitigation plan with the affected communities, including the Alaskan Native communities. That is the process that is ongoing right now, which should add greater clarity to further developments in the NPRA, quite frankly.

Senator MURKOWSKI. I think what you established there is a precedent that basically says, if you want to operate within this area, you are going to pay, not mitigation—it is not being viewed as mitigation by those who are looking—a penalty. We would differ mightily in terms of the specific project with Conoco and whether or not that $8 million that was ultimately arrived at or settled upon was where it was started. We recognize that was not where the conversation started. It was being used more as a bargaining tool for Conoco to be able to move forward.

So, again, we have a letter out there that we are looking for concrete answers on, and we will have an opportunity to have this before us in the Energy Committee to get a better understanding.

This is a concern that, again, we are not talking just about development of oil and gas opportunities in my State or in others. It is the opportunity to advance any kind of a project, whether it might be an area for school or runway or what have you.

I want to recognize that Senator Udall will have more questions, too, but let me follow on to a couple comments that were made by Senator Udall in his opening, and by Senator Feinstein.

ABANDONED WELLS

Senator Feinstein was talking about abandoned mines, developing potential for an inventory. As you all know, legacy wells, which is horribly, horribly misnamed, are abandoned oil and gas wells in Alaska that were drilled by the Government and then just left in varying states of disrepair. We have been making some progress. We have identified the universe there in terms of the cleanup.

To Senator Feinstein's point, when she talks about an inventory, I think we have established that at least in Alaska. You identify what it is that you have, now you have to prioritize how we are

going to be spending the money. We were successful in getting $50 million, with helium funding last year.

I appreciate the fact that we have a path, an action spend plan, for that $50 million. But my concern is that there is still going to be a significant number of wells that will need to be attended to when that fund is exhausted.

You have included $3.8 million in this budget for next year. I understand that this is a budget for this year. But we are still hoping to get an understanding as to how we intend to deal with all of the Federal Government's obligations to clean up these wells up on the North Slope. Because if you are suggesting that it is $3.8 million this year, and perhaps a like amount next year, I am told we are looking at 30, 40 years to clean up these wells, if that is the case.

Do you have an estimate of the likely cost to finish this environmental cleanup project, in both money and time?

Secretary JEWELL. I will give you the information I do have, and we will get back to you on the record for what I do not have.

There are 136 wells, these legacy wells. Fifty were identified in 2013 as requiring remediation.

Senator MURKOWSKI. I want to make sure that we are both clear on that, because I have heard that there is still some disagreement between the State of Alaska and Interior in terms of whether or not some of these wells require that level of remediation. I understand what you are saying, but I want to make sure that we are in alignment between State and the Federal Government on what the level of responsibility is.

Secretary JEWELL. Okay. I am not aware of that dispute, but I will say, because of the work that you did with the Helium Fund, we will have 29 left requiring work at the end of 2016. We will have three to five wells we can do with what is in the budget for 2017, the Wolf Creek cluster. I think because they are together, we will be able to address that.

That still will leave somewhere on the order of the mid-20s that need to be cleaned up. What I do not have is the estimated cost to do that or the amount of time it would take.

Of course, we would welcome the opportunity to work with you on a more permanent funding solution for this, just as we would on abandoned mines, and just as we would on school construction. It is very difficult putting small amounts of money toward a program each year that is much larger than what we can address in the regular budget cycle.

Senator MURKOWSKI. Understood. Absolutely. But I think this is one of those glaring examples where our Federal Government is being absolutely hypocritical when it comes to environmental standards. In this case, it is the Government that has drilled wells, and the Government that has walked away. The Government acknowledges that it left a mess, and yet the budget does not prioritize that.

Part of the problem is, unlike perhaps abandoned mines in California where you have a lot of people who are wandering around and hiking, the North Slope is a long way away, and there are not that many people on that North Slope.

You and I both agree that we have a responsibility to clean up that land. We have a responsibility to those subsistence hunters

and fishers up there who are worried about the contamination. Our Federal Government left a mess, and they have an obligation to clean it up.

I am going to continue my push on this, and we need to be working together.

CONTAMINATED LANDS

I also want to raise the contaminated lands issues. These are lands that have been conveyed to Alaskan Natives under the Alaska Native Claims Settlement Act that are separate from the legacy wells the Federal Government drilled.

Here we have a situation where lands have been conveyed that were already contaminated. These are Native lands, given to Natives as part of a settlement.

We have done an inventory of these lands. We have asked that inventory be updated. At the budget hearing last year, you said the survey was nearing completion, and that it would be soon released.

We are still sitting here a year later. It still is not public. I am told by BLM officials that it will be released soon. But we were told it was going to be released last year.

Assuming that this inventory is completed and will soon be made publicly available, I would like to have an assurance that, along with legacy wells, there is going to be an action plan from the Department of the Interior to accelerate the cleanup of contamination on Native lands that the BIA, the BLM, the Fish and Wildlife Service, the National Park Service, or the Bureau of Mines actually caused.

I also need to know that there is going to be some level of coordination in terms of how we are going to clean this up, because there are other Federal agencies, that have responsibilities, whether it is DOD or FAA.

Understanding how we are going to meet our Federal responsibility for this cleanup is something that we are going to continue to knock on your door, bang on the drum, raise our voices, because it is a responsibility that we have.

Can you give me any updates on when we might see the inventory, the updated inventory?

Secretary JEWELL. The information I have says next month. That is the best I can do. I do not know why it has taken so long, but that is the best information I have at this point.

Senator MURKOWSKI. And that information will be made public?

Secretary JEWELL. I do not know.

Do you know?

Ms. SARRI. I will get back to you on that one after I talk to BLM a little bit more about it.

[The information follows:]

ALASKA CONTAMINATED LANDS

The requested report on Contaminated Lands in Alaska has been drafted and is currently in the review stage. It will be transmitted to the Committee soon. The BLM plans to publicly release the Contaminated Lands Inventory database. With the Committee's permission, BLM would also like to make the report public by posting it on the BLM Web site.

Senator MURKOWSKI. The first inventory was completed at the request of my father in the 1990s. It had a timeline to be renewed

and updated frequently and prioritized. So "frequently" has now turned into almost a decade.

It is not just this administration's fault. If for some reason it is not going to be released next month, I would certainly appreciate a very detailed explanation as to why it is not, because you can count on me to continue to make a big stink about this.

Senator Udall.

Senator UDALL. Thank you, Madam Chair.

REPATRIATION OF SACRED OBJECTS

Secretary Jewell, an issue of serious importance for tribes in New Mexico is the repatriation of sacred objects back to the tribes.

First, I want to applaud your recent efforts to work with French authorities to seek cooperation in these efforts. As you know, these items are not pieces of art to be sold. They are sacred objects that are deeply important for tribal identity. What's more, it is illegal to traffic these items within the United States.

I think we need to be doing more to crack down on the sales of these priceless cultural objects. One idea I have heard from the Pueblo of Acoma is to establish an antiquities unit within the BIA to investigate these kinds of cases.

I want to work with you to ensure that BIA and other bureaus within the department have the ability to put a stop to these illegal trafficking efforts.

Can you elaborate on the work of the department in terms of bringing awareness to this issue and preventing tribal objects from being trafficked? And are there specialized law enforcement resources within the department able to handle these repatriation cases?

Secretary JEWELL. Senator, this is a significant issue. When I was in Paris as part of the climate talks, I met with the Minister of Justice for France, and I also met with the individual that administers the auction houses in France.

They typically produce a catalog with a number of these items that are exactly as you described. They are not works of art. They are critical artifacts that were removed from the tribes for whatever means many, many decades ago and have been circulating in the art market. They do not provide sufficient time for the tribes to even know they are there, let alone take the kind of action the French authorities say they need.

I was met with a very sympathetic voice in the Minister of Justice. Unfortunately, she just quit, so we will have to start over again with the next minister.

I do think there was a path forward that we learned about, about the repatriation of articles taken in Nazi Germany from families at that time. That may be a path we can use.

On the international market, I would say the State Department is a critical ally in this effort. They have the people that work the legal systems there. I would say that to dedicate someone from BIA's law enforcement to this is something that would have to come out of another area of BIA's law enforcement, so it is a tradeoff, given the law enforcement challenges we have in Indian country.

But I do think the BLM has some capabilities in this area. I know the State Department, Interpol, the international organizations do. It is on our agenda to raise awareness internationally to see if we can actually address this.

I will also say we are not without fault. Our auction houses in New York City, for example, do trade in artifacts. And they may be those that are inappropriate to trade, and then we do not find out about it until too late.

This is very, very important. The New Mexico tribes are quite active in this, but so are the Alaska tribes as well. It is important. And thanks for raising visibility.

Senator UDALL. Thank you for your efforts on that.

BUREAU OF INDIAN EDUCATION REORGANIZATION

As you know, we have had extensive discussions, and I know the chairman has also been involved, on this reorganization of the Bureau of Indian Education. And I understand the department is now moving forward with the first phase of proposed reorganization of the BIE, including the establishment of new educational resource centers that your 2017 budget anticipates additional changes to the bureau.

This subcommittee supports your efforts to improve education for Native students, and we recognize that you are tackling some of the very tough issues as you overall the bureau. But I want to make sure that the reorganization is done right and actually leads to concrete improvements in the classroom.

I also want to make sure stakeholders at all levels, from tribal governments to educators and parents, understand clearly what to expect from these changes. As part of the first phase of the reorganization you have proposed a number of staffing changes, including changes to the regional office in Albuquerque to create these new centers to assist BIE and tribally controlled schools.

What is your timeline for staffing up these centers? And what services can schools expect to receive starting in the fall? And what is your plan to ensure that all stakeholders, including BIE employees whose jobs may be affected, know what to expect during the reorganization?

There are other questions there that I will submit for the record, but I want to get an answer from you on those.

Secretary JEWELL. Okay, I am happy to give you a quick update. I will also say that taking on reorganization of something as storied, and not necessarily in a good way, as the BIE is, from a business person's perspective, unbelievably difficult over a multiyear period of time and extraordinarily difficult in the timeframe I have left.

The goal is to set a path forward so we continue to make progress on Indian education reform. It is not all going to be done in 1 year.

We have had multiple meetings with all employees. Those were held in February, and we outlined the whole process. On February 22, so just a week or so ago, we announced 65 vacancy announcements across the BIE. Some of them are vacant. Some are new positions. People will apply. Those positions will close on March 11,

and we will begin filling the jobs in April. So, it is really a fast timeline.

I would say what you will see in terms of near-term improvements, we have been working now for more than a year on professional development of teachers aligned with Common Core. We have been providing training for effective school boards, financial accountability training for school leadership, and then training for certain tribes that have wanted alternative accountability standards like the Miccosukee and Navajo.

There is a lot of work going on. I personally met with leadership of the BIE to see how it is going. We have a lot of work to do, but I would say people understand the importance of this. People are now a bit more reassured all their jobs are not in jeopardy. We are working toward a common end, which is better education for these students and self determination in education by tribal communities that want to take control of the schools.

So we continue to have an open door to any suggestions you have in this regard, but we are well on our way.

Senator UDALL. Thank you very much, and thank you for your hard work on that.

LAND AND WATER CONSERVATION FUND

Since Senator Murkowski mentioned her father, just as a closing comment here, when we were talking about the Land and Water Conservation Fund, and Senator Tester asked a question, as you know, my father worked in the 1960s when he was Secretary of Interior to start the Land and Water Conservation Fund. He worked with Congress. He went down and I believe met with a Congressman by the name of Wilbur Mills from Arkansas, and they came up with idea of taking offshore oil and gas, knowing that these resources are limited, taking some of it and dedicating it to permanent protection of land.

The original idea I think came from a national commission, a blue ribbon panel, an incredible panel headed I think by Lawrence Rockefeller and others that said, what do we need to do in terms of parks? The suggestion was from this commission—these were people outside of politics—you should spend $1 billion a year and everybody should know you are going to spend that and split it up between the State program, as you talked about, and the Federal program. And the reason you do that is everybody can plan. All these city councils and States and Federal Government and its agencies can all plan and look to see that money is there.

As Senator Tester pointed out, we have now reached the point where we have authorized it at that level. The money is over there in the fund. But somehow we do not dedicate the resources there.

So we are all trying to figure out how we got to this place. I know President Obama and you have encouraged us now to move forward.

I thank very much, Senator Murkowski, for working with me on the increase that happened in Land and Water Conservation Fund. That was a good step. But we are not anywhere near where we need to be in terms of the original idea behind the Land and Water Conservation Fund.

But thank you very much. I know she was trying to get out of here. We are running over here a little bit.

Senator MURKOWSKI. Thank you, Senator Udall.

Yet one more reason why this energy bill is a good energy bill that we are going to try to get moved through the Senate, because we do have the LWCF piece in there that allows for permanent reauthorization. It does have some reforms in terms of reminding us of the significance of State-side LWCF at the same time we have Federal.

Secretary, I know that you have to go. I have just a couple more questions and hopefully your answers will be yes and no.

ALASKA LAND CONVEYANCE

I mentioned the land conveyance and reductions that we have seen in the budget, a 20 percent reduction from last year. I have raised the issue of the methodology for the survey. There is a peer-review that is going on. BLM has agreed to that.

Can you commit to me that BLM will not act unilaterally to implement their preferred method of survey, if the State of Alaska formally objects, once that peer-reviewed process is complete? I just want to know that the State has been heard on this.

Secretary JEWELL. We absolutely are working closely with the State. I hope it does not come down to a veto of what we want to do. We are working now with the National Society of Professional Surveyors at the State's request.

Senator MURKOWSKI. Yes.

Secretary JEWELL. We are providing them with all the needed information. I think it is our collective hope they will come to a meeting of the minds, and it does not come down to the State saying this is not acceptable. I hope they can find something that both agree is acceptable.

Senator MURKOWSKI. We are going through that peer review process, so I think that is important.

TRIBAL COURTS

I will submit for the record several questions, one on tribal courts. We were successful in getting funding for Public Law 280 States for the first time last year in the amount of $10 million. The President's request cuts this by $8 million. I am very concerned about that.

EARTHQUAKE HAZARDS

We just sent a letter to you, the Alaska delegation, on the USGS earthquake program. I mentioned that to you. I would like assurances that any future summits or meetings you are conducting regarding earthquake preparedness at least include Alaska. Additionally, the earthquake monitoring cost-benefit study is being formulated, and I would like to see the status of that report. Can you let me know when we might see some of the findings?

BOTTLED WATER BAN

I also want to raise the bottle ban on bottled water in parks, not the ban but giving parks the option to eliminate the sale of bottled

water on a park-by-park-basis. We have asked for a report within the omnibus about the justification for making this determination. The report was due February 16. We have not gotten it. I would hope that you can let us know when you are expecting that report.

I still have some concerns. We can sell bottled sugar water in the parks, but we cannot sell good glacier water. We are actually drinking Alaskan Glacier water here at the committee.

I was contacted by the COO of Alaska Glacier Products. He is worried that he is not going to be able to sell his Alaska product in the Alaska park units. This concerns me.

I do not know whether or not, for instance, Denali National Park is opting not to sell bottled water.

I understand we are trying to eliminate the waste, but you are still allowing the waste from pop in our parks as well. Not every parent is able to bring or remembers to bring water bottles.

ALASKA MAPPING

The last thing that I am going to raise is where we are on Alaskan mapping, the Alaska Mapping Initiative, improving our topographic maps for the State.

I was present at a celebration in Alaska last summer where we celebrated 55 percent completion of mapping the State. Where else in America would you celebrate being just a little over halfway?

We have a way to go on this. I remain concerned that, as we look at our priorities, mapping, both terrestrial mapping and mapping our waters, is something where we are woefully behind.

I have much more that I will submit to you all, and we would hope for timely responses. I appreciate you being here before the subcommittee, and I apologize that the subcommittee has gone over time.

Thank you for your indulgence, and we look forward to your responses. Thank you very much.

Secretary JEWELL. Can I just say that I actually do have a response on the mapping.

Senator MURKOWSKI. Yes, please. Go ahead.

Secretary JEWELL. We were at 63 percent at the end of last year. By the end of 2017, we will be 70 percent complete. We should be fully complete by 2020.

I do have personal vested interest. My son actually is a critical care flight nurse and does medevac flights.

Senator MURKOWSKI. He knows.

Secretary JEWELL. He knows. He does that in Alaska as well. So, we share the concern and also share the urgency of why this is so important for the State of Alaska.

Thank you both very much. This is a little different in terms of tenor and tone than the session that I was at yesterday. I do appreciate the constructive nature and also the flexibility with which you ran the agenda to allow me time to answer after time had expired. So thank you both very much, and we look forward to working with you.

Senator MURKOWSKI. Thank you.

ADDITIONAL COMMITTEE QUESTIONS

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED TO HON. SALLY JEWELL

QUESTIONS SUBMITTED BY SENATOR LISA MURKOWSKI

Question (1). Last year the Alaskan Village of Council Presidents (AVCP) was selected to participate in the Tiwahe d emonstration project and has received approximately $986,000 in base and Tiwahe funding. For those of you not familiar with the AVCP, it is a consortium of 56 Alaska Native villages in western Alaska. The villages are remote and somewhat isolated over a 59,000 square mile area with a population of approximately 25,000. All travel to and from the villages is by small plane or boat. The AVCP administers programs, fund projects, and provides social services to the villages.

The Tiwahe initiative is a 5-year pilot program that aims to help tribes develop a comprehensive approach for the delivery of services to communities through partnerships with the tribe, local communities and the State and Federal Government. The overall goals and objectives are, to improve screening and access to family and social services, to create alternatives to incarceration via solution focused sentencing, improving links to appropriate prevention, intervention and treatment opportunities.

a. I understand this is a 5-year pilot program, but I am interested in hearing more about how the program is structured for each tribe and how the funding for each pilot site is determined. Would you briefly explain how the sites are selected, how the pilot is designed, and how the funding is determined and delivered?

Answer. Tiwahe sites were selected based on geographic diversity, governance structure diversity, unmet need, and capacity. Alaska's geographic diversity from the lower 48 tribes and level of Federal resources to support tribal families, combined with AVCP's administrative capacity and interest in developing wrap-around services, led to BIA's selection of AVCP as a pilot site.

Tribes at the six pilot sites (four in fiscal year 2015 and two in fiscal year 2016) are required to develop plans to address their needs. Each site plan must address goals in the areas of social services, child welfare, employment and training, recidivism and/or tribal courts. BIA provided funding through a 50 percent increase to their Social Services Tribal Priority Allocation (TPA) and Indian Child Welfare Act (ICWA) fiscal year 2014 base level funding, and a pro rata increase in Job Placement and Training Funds. BIA delivered funding through either an Indian Self Determination and Education Assistance Act (ISDEAA) contract or compact. In addition to the funding received by the pilot sites, all tribes and BIA regions operating social services and ICWA programs received increases from their fiscal year 2014 base levels as part of the Initiative.

b. The President's proposal for the initiative is $21 million over fiscal year 2016 enacted levels. What is the plan for this increase? Would you seek to expand the pilot to additional sites in Alaska and elsewhere?

Answer. Of the $21.0 million Tiwahe Initiative increase in the fiscal year 2017 request, $18.4 million is for social/human services programs and $2.6 million is for the Public Safety and Justice's Tribal Courts program. Here is a summary of the funding breakdown:

—+$12.3 million—Social Services (TPA)
  —$5.0 million: Provide expanded social services such as child welfare and family and domestic services at five additional Tiwahe sites;
  —$5.2 million: Focus on capacity building at specific tribal sites, including the hiring of 30 additional social workers in Indian Country;
  —$1.0 million: Support the continuation of the Research and Evaluation contract which will assist tribes with goals and performance measures;
  —$1.1 million: Support the continuation of the Center for Excellence which gives tribes opportunities to continue learning, cross training, and to conduct information sharing in areas related to leadership, best practices, research, support and training.
—+$3.4 million—Indian Child Welfare Act (ICWA) TPA: Increase tribal preventive services efforts in providing family assistance and home improvement serv-

ices, which should build stronger families and decrease instances of child removal from the home.

—+$1.7 million—Housing Improvement Program (HIP): Improve housing conditions, and access to suitable housing, at the Tiwahe sites with a focus on veterans and single family households.

—+$1.0 million—Job Placement &Training Program (JPT): Support employment and training activities at Tiwahe sites.

—+2.6 million—Tribal Courts: Sustain the existing Tiwahe sites and provide targeted base funding to five additional locations under the Tiwahe Initiative. The resources will assist tribes in creating stronger tribal court infrastructure to address issues related to children and family services, as well as develop special projects to reduce the rate of repeat offenders and criminal recidivism.

If funded at the President's request, BIA would add five additional Tiwahe sites in fiscal year 2017. These five would join the original four selected in fiscal year 2015, and the two selected in fiscal year 2016 (bringing the total number of Tiwahe sites to eleven by the end of fiscal year 2017).

Question (2). ANILCA is perhaps the largest conservation contribution in the world's history and certainly the Nation's. Alaska has more Conservation System Units ("CSUs") than the entire Nation combined, yet we continue to see more and more land taken off the table for development. Land planning in Alaska is managed in a tenuous and never-ending process that specifically ignores ANILCA. The process results in outcomes that do not favor development. In addition, few people have the time, energy, and expertise to participate in these plans. For example: Bering Sea/Western Interior RMP contained 56 maps, 1,200 pages, and 63GB of data. Furthermore, this plan and similar plans exclude multiple-use through ACECs, RNAs, and other proposed closures. What is being done to ensure the balance for conservation and economic opportunity intended by ANILCA is considered for future land management plans?

Answer. The land use planning process in Alaska encourages collaboration and partnerships that assist the Bureau of Land Management (BLM) in determining how to balance the needs of adjacent communities with the management of public land resources. Recognizing the challenges associated with the timeliness of long term planning activities, BLM has recently developed the Planning 2.0 initiative that will improve the bureau's ability to respond to environmental, economic and social changes in a timely manner; strengthen opportunities for State and local governments, Indian Tribes, and the public to be involved in initial decisions leading to the development of land use plans; and improve the BLM's ability to address landscape-scale resource issues. In Alaska, the provisions of the Alaska National Interest Lands Conservation Act (ANILCA) and the Alaska Native Claims Settlement Act (ANCSA) are regularly incorporated into the planning process and when considering mitigation, provisions of FLPMA and ANILCA help identify significant resources and Conservation System Units that could be impacted by development. Early and frequent public engagement and a robust planning process that balance both conservation and resource use will continue to be the key to BLM's land use planning.

Question (3). As you know, once covering 160 million acres, the Public Land Orders ("PLOs") were put in place after 1971 to guarantee that Alaska Natives could select their ANCSA selections. The Department's own report in 2004 said there was no need for any more than 6.7 million acres to still be encumbered—and that number has since been further reduced over the past dozen years with the completion of revised Bureau of Land Management plans. Moreover, Natives have now filed all their selections.

a. Please provide specifically what actions your agency is taking to actively lift the remaining Public Land Orders (PLOs) reserving lands throughout the State of Alaska.

Answer. Public Land Orders (PLOs) determine which lands are or are not available for selection by either an Alaska Native Claims Settlement Act (ANCSA) corporation or the State of Alaska. This authorizes the Secretary to classify and reclassify the lands withdrawn and to open the lands to appropriation in accordance with the Secretary's classification. The original PLOs state that any lands not conveyed to an ANCSA corporation would remain reserved for study and review for the purpose of classification or reclassification. The Bureau's land-use planning process satisfies the requirement for such study, review, and classification and is the appropriate mechanism for recommending a withdrawal be lifted. Over the decades, many of these PLOs were amended several times to allow for millions of acres to be made available for State selection and/or entry under the mining laws.

The State currently has an estimated remaining entitlement of 5.2 million acres, but an estimated 14.9 million acres selected. By contrast, the State has 6.5 million acres of "top-filings" (future selections that would "attach" if and when the pertinent withdrawal (PLO) is lifted). It should be noted that the State has a statutory 25 percent limitation on its over selections. Based on its existing remaining entitlement, the State should have only 6.6 million acres of selections. The State is currently 8.3 million acres over its statutory limit on over-selections. Lifting any PLOs to make more lands available for the State to select would further increase its over-selection.

Currently, lands selected by the State are not available for a rural subsistence priority. Accordingly, lifting PLOs to allow a State top-filing to attach and become a selection will reduce the acreage of lands available for rural subsistence priority. This is one of the reasons the BLM feels that the Bureau's land use planning process, which is open to public input and comment (including by the State) is the appropriate mechanism for recommending a withdrawal be lifted.

b. I would like your commitment to lift all the remaining PLOs as soon as possible, and please provide a timeline by which you commit to abide.

Answer. The appropriate mechanism for recommending withdrawals is through the Bureau's land-use planning process. This process is open to public input (including the State of Alaska) and comment. Since 2007 in Alaska, four resource management plans have been completed where recommendations were made to lift withdrawals and currently there are three resource management plans ongoing where recommendations will be made upon completion.

Question (4). On February 4, I sent you a letter with Chairman Cochran, Chairman Rogers, and Subcommittee Chairman Calvert regarding the Office of Surface Mining's Stream Buffer Zone Rule. The letter related to the directive in the fiscal year 2016 omnibus that required the Office of Surface Mining to provide States with information they requested related to the Stream Buffer Zone Rule, as well as to meet with States at their request.

I am extremely concerned about the manner in which this rule has been written—primarily because 9 out of 10 of the States who entered the process as cooperating agencies decided to withdraw from the process because of a lack of meaningful consultation with OSM. This directive was meant to reverse course and ensure that OSM moves forward in a more cooperative manner.

Shortly after my letter was sent, the State of Alaska sent the Department a letter related to the requirement that OSM provide States with relevant reports, data and analyses. As an initial step, the State of Alaska requested that OSM provide a summary of the documents. The letter indicated that Alaska would then request a subset of those documents and eventually, request a meeting with OSM.

a. Have you provided the State of Alaska with the summary of documents they requested? If not, when do you anticipate that such information will be provided?

Answer. OSMRE made these documents available to all of the States on March 24, 2016, by uploading reference materials cited in the proposed rule on the Web site *regulations.gov* with the exception of reference materials protected by copyright law. OSMRE has also offered assistance through its librarian to those States that request such help to obtain copyright protected materials. The materials are available to the public. The Assistant Secretary and OSMRE officials are holding meetings with the State of Alaska on May 18–22, 2016.

b. In a recent budget hearing in the Senate Energy Committee, Deputy Director Connor said the documents specified in the report language would be ready for the States "in a few weeks." What is your plan for meeting with States after they have had time to review the information you are required to provide them?

Answer. OSMRE offered to dedicate its time at the Interstate Mining Compact Commission on April 18, 2016, to meet with the States. During these meetings, the Stream Protection Rule as well as other topics were discussed. In addition, OSMRE scheduled a series of technical meetings to further engage the States. Staff from 6 State regulatory authorities participated in the meeting on April 14, 2016 and 5 State regulatory authorities participated in the meeting on April 21, 2016.

c. Additionally, can you share the timing and process you envision for moving forward with the stream buffer zone rule? Given that the States will presumably be raising a number of new issues based on the information they receive in the technical documents, will you reopen the comment period so that the public has the opportunity to comment on that information as well?

Answer. OSMRE has prepared a summary of the State meetings for the administrative record. No additional public comment period for the rulemaking is currently planned.

Question (5). Within the Fish and Wildlife Service's Ecological Services budget, and specifically within the Endangered Species Listing program, the Department has proposed shifting a sizeable portion of the budget from "critical habitat designations" to "petitions." I am concerned about this shift because I am still hearing concerns from members who opposed the Department's decision to enter into a multi-species settlement agreement in 2011.

I have heard from members that this effort, which required the Service to make listing determinations on more than 250 species was done without consultation of local governments or communities that are impacted by that settlement agreement. With the actions required in that settlement agreement coming to an end in 2016, I am concerned that the Service will see fit to enter into another similar agreement.

How can I be certain that, if we decide to shift money from critical habitat designations to petitions, the Service will not be inclined to enter into a similar, closed-door settlement agreement?

Answer. The Endangered Species Act establishes mandatory duties and timeframes for various listing duties including petition findings, listing determinations, and critical habitat designations. Failure to meet the statutory timeframes can lead to lawsuits. When it is in the best interest of the Government to do so, litigation can be resolved through settlement agreements; this typically occurs when the Service does not have a viable defense and a settlement is expected to achieve more favorable terms through negotiation. To avoid litigation, the Service strives to meet the ESA's deadlines and has requested the funding needed to do so.

The requested amounts in the Listing subactivity reflect the anticipated fiscal year 2017 workload. In fiscal year 2017, the Service will need less funding than in fiscal year 2016 to address critical habitat designation for already listed species because there are fewer such critical habitat designations outstanding. In contrast, the anticipated workload for petition findings will be greater in fiscal year 2017 than in fiscal year 2016; thus, the budget includes funding under the subcap for the functional area to be increased. By having the subcaps reflect the distribution of the workload, the Service hopes to reduce litigation by working on all types of outstanding actions.

Question (6). I have been concerned with the Department's actions related to the polar bear for a number of years. I disagree with the 2008 listing determination and vehemently disagree with the designation of more than 187,000 square miles of land—an area larger than the State of California—as "critical habitat" for polar bears. When combined with the other hostile actions undertaken by the administration when it comes to developing our public lands, the listing and designation has the potential to devastate our State's economy.

My concern has long been that the Department based its listing decision more on the expectation that climate change would decrease polar bear habitat and stocks in the future, than on fact that stocks are currently in decline. I have seen no data to show that polar bear stocks currently are in significant decline across northern Alaska (the issue of potential Russian poaching aside) and thus, the species does not warrant protections under the Endangered Species Act.

Has the Department undertaken any recent efforts to consider new science related to polar bears in an effort to determine whether the species should be listed under the Endangered Species Act? If so, please provide me with the studies that you have considered. If not, please share with me the reason for not moving forward and whether there is a plan for moving forward.

Answer. The Fish and Wildlife Service (Service) initiated a 5-year status review under the Endangered Species Act of 1973, as amended (ESA), for the polar bear (*Ursus maritimus*) on October 13, 2015. The purpose of this 5-year review is to ensure that the polar bear has the appropriate level of protection under the Act. The polar bear's "threatened" status reflects the finding that it is not presently in danger of extinction, but is likely to become endangered in the foreseeable future. A 5-year review affords the opportunity to periodically take a comprehensive look at the full body of information available for a species and assess its progress toward recovery. These reviews assist the Service and its partners in identifying conservation needs, better targeting and prioritizing conservation efforts for the species, and determining whether a species may warrant downlisting, delisting, or uplisting.

As a part of the 5-year review, the Service published its intent to collect the following data regarding the polar bear species: species biology, including but not limited to population trends, distribution, abundance, demographics, and genetics; habitat conditions, including but not limited to amount, distribution, and suitability; conservation measures that have benefited the species; threat status and trends;

and other new information, data, or corrections, including but not limited to changes in taxonomy or nomenclature and identification of erroneous information contained in the List of Endangered and Threatened Wildlife and Plants.

In addition to the 5-year review process, through the Service's participation in co-management arrangements via the U.S.-Russia Bilateral and Inuvialuit-Inupiat Agreements, the Service considers new science on an annual basis as it relates to sustainable harvest levels for the Chukchi and Southern Beaufort Sea subpopulations of the polar bear, which are harvested for subsistence. The Service does not have a recent population estimate for the Chukchi Sea subpopulation, but does have evidence that polar bear body size and condition remains stable despite the declines in habitat (sea ice). In the Southern Beaufort Sea subpopulation, multiple lines of evidence suggest that polar bears may be in decline due to decreased sea ice availability, including reductions in body size, body condition, and recruitment in recent decades (Regehr et al. 2006, Rode et al. 2010, 2014a). A recent publication (Bromaghin et al. 2015) indicates that polar bear numbers in the Southern Beaufort Sea subpopulation significantly declined from 2004 to 2007 and survival of subadult bears declined throughout the entire period of 2001–2010.

Regehr et al. 2006:

Regehr E.V., S.C. Amstrup, and I. Stirling. 2006. Polar bear population status in the southern Beaufort Sea. U.S. Geological Survey Open-File Report 2006–1337, U.S. Geological Survey, Alaska Science Center, Anchorage, AK, USA.

Question (7). The Fish and Wildlife Service has requested the authority to seek compensation from responsible parties who damage or destroy National Wildlife Refuge System or other Service resources. This legislative language has been circulating for a number of years. In 2014, a hearing was held in the Environment and Public Works Committee a bill that was introduced by Senator Cardin. My understanding is that no legislation has been introduced in the current Congress and the Environment and Public Works Committee has not taken action on the matter.

a. Why has the Department only requested this authority for the Fish and Wildlife Service? I understand the National Park Service has similar authority already, but the Bureau of Land Management does not. Is there a reason that the request was made only for the Fish and Wildlife Service?

Answer. The National Park Service (NPS) and Bureau of Land Management both have authorities to allow them to retain collections from damages for repair and restoration.

The NPS authority provided by 54 U.S.C 100721–25 allows NPS to use response costs and damages recovered under the authority or amounts recovered under any statute as a result of damage (destruction, loss of, or injury) to any resource within a unit of the National Park System to be retained and used for response costs, damage assessments, restoration, and replacements.

The Bureau of Land Management's annual appropriations language for Service Charges, Deposits and Forfeitures provides general Federal authority to collect fees for rehabilitation of damaged public lands. The BLM has specific requirements in the BLM Realty Trespass Abatement Handbook on the deposit and use of rehabilitation/stabilization funds. It states that funds received for rehabilitation/stabilization of damaged lands as result of trespass settlement or bond forfeiture are deposited into the Service Charges, Deposits and Forfeitures account and are available for in-State rehabilitation and stabilization work on lands damaged by trespass.

b. I have heard concerns that providing this authority will lead to additional prosecutions of individual because the Service will be incentivized by the prospect of additional revenue. What can you do to assure me that this will not happen?

Answer. The Service has a responsibility to manage public resources for both current and future generations. In order to maintain these resources, the Service expects parties responsible for damaging them, not taxpayers, to pay restoration costs. The intent of this authority is to ensure that the Service, and the American people, will not have to pay for restoration activities and that those causing these impacts pay for their restoration. It is not intended to generate revenue for the Service.

While this authority would be new for the Service, it is not a new authority for government agencies. The National Park Service (NPS), National Oceanic and Atmospheric Administration (NOAA), and the Bureau of Land Management (BLM) have similar authorities and we look to their models to implement this law, if enacted.

Any funds collected to compensate for resource injuries will be used to rectify that specific injury alone. The legislation, if enacted, would deposit the recovered funds into the Department of the Interior Natural Resource Damage Assessment and Restoration Fund, as is done with natural resource damages recovered under the Comprehensive Environmental Response, Compensation, and Liability Act, the Oil Pollution Act, and the Park System Resource Protection Act (16 USC 19jj). These funds would be maintained separately and used solely for cases handled under this authority.

Question (8). The fiscal year 2016 Omnibus Appropriations bill contained a substantial increase for the Land and Water Conservation Fund (LWCF). The total discretionary appropriation was $450 million, an increase of $50 million over the President's fiscal year 2016 discretionary total and $144 million over the fiscal year 2015 enacted level of $306 million. Congress was able to fund the President's proposed discretionary funding lists and increase the NPS State side program to $110 million. Given the funding pressures for the Interior bill this year it will be hard to meet the fiscal year 2016 appropriated level; therefore, we need to carefully look at the projects the President has proposed in his budget submission to make sure they have been fully vetted and are ready to go.

The explanatory statement on the fiscal year 2016 Omnibus stated that many of the projects the administration has proposed over the years lack sufficient information, and that requested projects should have identified properties, willing sellers, updated appraisals or market information, and the support of Federal, State, and local officials.

Have all of the projects submitted in the fiscal year 2017 budget met all of these conditions?

Answer. To the greatest extent possible, LWCF land acquisition projects proposed by the fiscal year 2017 budget meet the conditions laid out by the fiscal year 2016 Omnibus explanatory statement; however, the Department chooses to use discretion when it comes to disclosing certain details on the projects in the Greenbooks for a variety of reasons. Upon request from the Appropriations Committee, the bureaus may provide further details to cover the conditions, and both the bureaus and Department make a point to alert in a timely manner the Interior Appropriations Subcommittees if project details and/or status change.

The bureaus included the following information in the Greenbook project data sheets, as well as briefing materials for Congress, for each proposed acquisition:

—Full page profiles and maps of each acquisition, including estimated cost, acres, and location. Should those details change or be updated, the bureaus and Department relay that information to the Appropriations Committee.

—Contributors known to the bureaus' State and regional offices that are partners or supporters of the proposal acquisition. These identified contributors may include, but are not limited to, the following: State, county or local governments or agencies; national, State or local private non-profit organizations; Federal Government partner agencies; charitable foundations; land and battlefield trusts; and local and regional committees or networks (including those representing ranchers, farmers, hunters, anglers, and other outdoorsmen).

The bureaus did not cite by name in the Greenbook project data sheets individual Federal, State, and local officials who support projects, choosing instead—where applicable—to cite the support of Federal, State, county, or local governments or agencies.

Willing sellers are not identified in the budget for several reasons. Bureaus, working through their field and regional offices, identify land parcels in or adjacent to public lands for purchase, as well as potential willing sellers. Given that acquisition projects may take 2 to 3 years to complete, in the early stage of a budget request,

bureaus may not have concrete willing sellers yet (only potential). Privacy issues may arise when landowners and potentially willing sellers do not want their neighbors to know that they are talking to the government about selling. Additionally, there is the value expectation. If a landowner sees his or her name listed along with a request number, the landowner comes to expect the entire amount, regardless of the actual appraised value.

Details on each land acquisition project also reflect consideration of several additional criteria important to the bureaus and Department, including the ecological, economic, and cultural values the project conserves; contribution of leveraged funds; partner participation and support; and the urgency of project completion to protect natural areas and wildlife species habitats from development or other incompatible uses.

In a continuing effort to provide user friendly data, the Department provides an interactive map of the properties it submitted for consideration to Congress for the 2017 budget at: https://www.doi.gov/sites/doi.gov/files/uploads/LWCF__BIB__map__FY2017.pdf.

Question (9). The explanatory statement also expressed that the agencies should include the feasibility of phasing projects as well as a description of which parcels are being considered for conservation easements or fee simple acquisition.

Discuss compliance with this guidance. What number or percent of the requested projects were identified as able to be accomplished in phases? What number or percent of the projects were identified as acquisitions for conservation easements versus fee simple acquisitions?

Answer. For the BLM, several of the fiscal year 2017 projects could be phased—within discretionary funding 10 of the 14 projects (or 71 percent) could be phased. Within BLM discretionary funding, 68 percent would be invested in fee acquisitions and 32 percent would be invested in easement acquisitions.

The FWS discretionary request for fiscal year 2017 would purchase approximately 16,375 fee acres (39 percent) and 25,670 conservation easement acres (61 percent). Most of the FWS projects have already been phased; however, four of the projects, or 25 percent, can be further phased since they are comprised of multiple tracts.

Of the 33 projects included in the NPS fiscal year 2017 budget for Federal land acquisition, four projects are parts of phased acquisitions:

1. *Grand Teton NP(Discretionary):* The State of Wyoming entered into an agreement with the United States for a phased conveyance of approximately 1,400 acres of State-owned land within Grand Teton National Park. The fiscal year 2017 budget includes $22.5 million which will be obligated to cover the Federal cost of a portion of that phased conveyance.
2. *Hawaii Volcanoes NP (Discretionary):* Funding requested ($6 million) will be used to acquire half of the 16,467-acre Pohue Bay/Kau Coast property at the park.
3. *Hawaii Volcanoes NP (Mandatory):* Funding requested ($6 million), if appropriated, will be used to acquire the second half of the Pohue Bay/Kau Coast property at the park.
4. *Palo Alto NHP (Mandatory):* The requested funds would commence a phased acquisition of a tract containing 1,353.84 acres of land (Total Estimated Value: $9,125,000) located within the national historic site.

Of the 33 projects included in the NPS fiscal year 2017 budget request for Federal land acquisition, three projects are identified as easement or less-than-fee acquisitions (Death Valley NP, Katmai NP and Redwood NP), one project involves both fee and easement acquisitions (Martin Van Buren NHS), and two projects may involve either fee or easement acquisitions (Little River Canyon NPres and Nez Perce NHP). The possibility of acquiring a conservation easement varies, depending on the contemplated Federal use of the property and the willingness of the landowner to sell such easement.

Question (10). The explanatory statement also included language to increase the transparency of the project selection and prioritization processes in the annual budget requests, particularly in regard to collaborative landscape projects. Over the years, there has been concern among many in the community and here in Congress about how the administration picks projects for the discretionary and mandatory lists. It appears that many of the projects have been geared toward the Western US and that geographic distribution of funds has not been a factor in your project selection. Typically Congress has funded the proposed lists in the order requested; however, with questions about the quality of projects and the process used to select projects Congress may need to revisit this approach.

Given these questions about quality and process: What process does the Department use to compile the project lists, including for identifying collaborative areas?

What considerations does the Department take into account when selecting and prioritizing projects? What is the geographic distribution of requested funds?

Answer. The President's fiscal year 2017 budget includes 135 land acquisition projects across the Department of the Interior and the Department of Agriculture's four land management agencies in 41 States. The wide range of projects proposed for funding includes important wildlife habitat and migration corridors in Florida's Everglades, grassland and wetland habitats popular with hunters and anglers in eastern North Dakota and South Dakota, historic structures associated with the Wright brothers and the early development of the airplane at the Dayton Aviation Heritage National Historical Park in Ohio, permanent public access to the South Puget Sound Coastal Forest in Washington State, scenic vistas along the Appalachian Trail, and popular public recreation sites in national monuments in Arizona, Idaho and New Mexico. The attached map shows the location of each proposed land acquisition project, and demonstrates the geographic diversity of projects in fiscal year 2017.

The National Park Service (NPS), Bureau of Land Management (BLM), and Fish and Wildlife Service (FWS) each has its own criteria that are used to evaluate and prioritize proposed land acquisitions.

NPS utilizes a nationwide priority ranking system, the Land Acquisition Ranking System (LARS). The initial information for each project is provided by the park unit and reviewed by regional or field offices of the Land Acquisition Program. Land Acquisition staff in each office assists the Regional staff in ranking the requests received using guidelines provided by the Washington (WASO) Program Office. The LARS incorporates several criteria, including, but not limited to: the threat to and preservation of the resource; a commitment has been made to acquire; involvement of partners, non-profit group support or availability of matching funds; recreational opportunities; existence of legislative authority to acquire; and ability to obligate appropriated dollars.

For BLM, submissions include a completed project narrative, fact sheet, questionnaire, representational map(s) and digital color images—and are limited to no more than 20 projects per State Office (SO). To be eligible projects must be:

1. Within or contiguous to, a unit of the National Landscape Conservation System (NLCS) (with the exception of Wilderness Study Areas), an Area of Critical Environmental Concern or a Special Recreation Management Area;
2. Comply with Section 205 (b) of the Federal Land Policy and Management Act (identified for acquisition within an approved land use plan); and
3. Be available for purchase from a willing seller owner.

Submissions are then reviewed by the National Review Team (NRT). The NRT is a multi-disciplinary team consisting of representatives from different levels of the organization. The NRT recommends a prioritized list of project proposals to the Bureau of Land Management (BLM) leadership. The BLM Land and Water Conservation Fund (LWCF) Land Acquisition list reflects bureau and departmental priorities, potential sources and levels of funding, and the latest information on willing sellers.

FWS's 2014 Strategic Growth Policy directs FWS to focus on acquiring lands and waters in fee, conservation easement, and/or donation that support three conservation priorities:

1. Recovery of threatened and endangered species;
2. Implementing the North American Waterfowl Management Plan; and
3. Conserving migratory birds of conservation concern.

Based on these three priorities to evaluate proposed NWRS land acquisitions, FWS uses the Targeted Resource Acquisition Comparison Tool (TRACT). The TRACT provides a biological, science-based, and transparent process for ranking proposed NWRS land acquisitions.

TRACT biological evaluation plays a role in LWCF budget formulation, but is not the only factor considered when making decisions about where to request LWCF funds for NWRS land acquisition. The LWCF project list submitted by FWS reflects additional considerations, such as bureau operational priorities, partner support, potential non-Federal funding sources, unique land acquisition opportunities, and the latest information on willing sellers. Land acquisition projects proposed for the fiscal year 2017 budget reflect additional important factors, including conservation partner participation, and urgency of project completion to protect natural areas from development or other incompatible uses.

The Service considers the minimum interest necessary to reach management objectives. For example, conservation efforts for the greater sage grouse and central Florida ecosystem are compatible with traditional land use. Therefore the Service may choose to seek conservation easements or, to enhance public access and rec-

reational opportunities, a combination of fee and conservation easements acquisition.

The administration's strategic approach to using LWCF land acquisition funds in fiscal year 2017 includes funding for Collaborative Landscape Planning (CLP) projects. This interagency program brings the Departments of the Interior and Agriculture together with local stakeholders to identify large natural areas where LWCF funds can achieve the most important shared conservation and community goals in the highest priority landscapes. Conserving large-scale natural areas provides multiple resource and economic benefits to the public, including clean drinking water, recreational opportunities, protected habitat for at-risk and game species, and jobs generated on and off these lands. The Secretaries of the Interior and Agriculture follow a rigorous competitive and merit-based based evaluation process to select collaborative landscapes for investment. After evaluating and prioritizing multiple ecosystems, they selected seven landscapes for discretionary and mandatory funding in fiscal year 2017:

—Island Forests at Risk (Hawaii)
—High Divide (Idaho, Montana)
—Rivers of the Chesapeake Collaborative (Maryland, Virginia, West Virginia)
—National Trails System (California, Georgia, Hawaii, Idaho, Montana, New Mexico, Oregon, Pennsylvania, Tennessee)
—Florida-Georgia Longleaf Pine Initiative (Florida)
—Southern Blue Ridge (Georgia, North Carolina, Tennessee, Virginia)
—Pathways to the Pacific (Oregon, Washington).

Qualifying projects are submitted by bureaus which are evaluated and selected for inclusion within available budget resources.

Question (11). According to the EPA, methane emissions from hydraulic fracturing at natural gas wells is down 83 percent since 2011 and total methane emissions from natural gas production are down 38 percent since 2005.

a. Is natural gas a key component of GHG reductions?

Answer. Reducing natural gas emissions reduces waste of America's public resources and provides important greenhouse gas (GHG) emission reductions. Methane, the primary component of natural gas, is an especially powerful GHG. Its climate impact is roughly 25 times that of CO_2, if measured over a 100-year period, or 86 times that of CO_2, if measured over a 20-year period.[1] Thus, measures to conserve such gas, avoid its waste, and reduce unnecessary releases significantly benefit local communities, public health, and the environment.

b. Does the use of natural gas help drive down GHG emissions?

Answer. The effect of use of natural gas on GHG emissions depends on both the energy source that would be used in lieu of the natural gas, and on the quantity of methane lost during the natural gas production process. Assuming limited methane losses, replacing coal or oil with natural gas can help drive down GHG emissions. Where natural gas replaces non-carbon energy sources, such as renewable or nuclear energy, however, the use of natural gas increases GHG emissions. Also, because methane is a far more potent GHG than CO_2, methane lost during the natural gas production process can offset the benefits of using natural gas in place of other fossil fuels.

c. Does the administration want to see U.S. natural gas production continue to help bring down GHG emissions?

Answer. The continued production and use of natural gas are consistent with the administration's goal of achieving a cleaner, more secure energy future, provided that gas losses are minimized. Consistent with this recognition and our overall climate goals, finalization of the recently proposed Methane and Waste Prevention rule will help curb waste of our Nation's natural gas supplies, reduce harmful methane emissions that worsen climate change, and provide a fair return on public resources for Federal taxpayers, tribes and States.

Question (12). Over the course of the U.S. energy boom, according to the Energy Information Administration, marketed natural gas production has increased by 35 percent, over the 9-year period from 2005 to 2013, from about 19 trillion cubic feet of gas per year to about 25 and a half trillion cubic feet of gas per year. Over this same period, EPA data show that methane emissions from hydraulically fractured natural gas wells decreased by about 80 percent, emissions from natural gas produc-

[1] See Intergovernmental Panel on Climate Change, Climate Change 2013: The Physical Science Basis, Chapter 8, *Anthropogenic and Natural Radiative Forcing,* at 714 (Table 8.7), *available at* https://www.ipcc.ch/pdf/assessment-report/ar5/wg1/WG1AR5 Chapter08 FINAL.pdf.

tion decreased by about 38 percent and total methane emissions decreased by about 11 percent.

a. In view of this information, and in view of EPA's continued efforts to reduce methane emissions from industry sources, why has the BLM, under your authority, chosen to promulgate its own methane regulations?

Answer. The proposed Methane and Waste Prevention Rule aims to reduce the waste of natural gas from BLM-administered mineral leases. This gas is lost during oil and gas production activities through flaring or venting of the gas, and equipment leaks. The BLM has an independent statutory responsibility to address this waste. Specifically, the Mineral Leasing Act of 1920 (MLA) requires the BLM to ensure that lessees "use all reasonable precautions to prevent waste of oil or gas . . ." (30 U.S.C. 225). While oil and gas production technology has advanced dramatically in recent years, the BLM's requirements to minimize waste of gas have not been updated in over 30 years. The BLM believes there are economical, cost-effective, and reasonable measures that operators should take to minimize waste, which will enhance our Nation's natural gas supplies, boost royalty receipts for American taxpayers, tribes, and States, and reduce environmental damage from venting and flaring.

EPA has finalized regulations under the Clean Air Act to reduce methane emissions from certain new, reconstructed, and modified oil and gas production activities. While these requirements will have the effect of reducing some losses of gas as well, the EPA requirements are not aimed directly at waste and would not fulfill the BLM's statutory responsibilities. For example, unlike the proposed BLM regulations, the proposed EPA regulations do not address gas losses through flaring, and do not address gas losses from existing sources, unless the existing source is modified or reconstructed (as defined by EPA).

b. Related to this question, can you describe the consultation that the BLM has undertaken with EPA, and with the State regulatory agencies with Clean Air Act authority in the states with operations on BLM lands?

Answer. The BLM has engaged in substantial stakeholder outreach in the course of developing the proposal. In 2014 and 2016, the BLM conducted a series of forums to consult with tribal governments and solicit stakeholder views to inform the development of the proposed rule (2014) and to discuss the proposed rule after publication (2016). The outreach included tribal and public meetings (some of which were livestreamed) in Colorado (2014/2016), New Mexico (2014/2016), North Dakota (2014/2016), Washington, DC (2014), and Oklahoma City (2016).[2] For each forum, BLM held a tribal outreach session in the morning and a public outreach session in the afternoon. The BLM also accepted informal comments generated as a result of the public/tribal outreach sessions (2014).

The BLM also consulted State regulators (both oil and gas regulators and air quality regulators) both while developing the proposal and since its issuance. Specifically, the BLM held discussions with regulators from: North Dakota (2014/2016), Wyoming (2014/2016), Alaska (2014/2016), Colorado (2014/2016), Utah (2014/2016), and New Mexico (2014) to discuss the States' rules and practices, their effectiveness, the States' recommendations with respect to the BLM rulemaking, and their views on the proposal. The BLM is continuing to hold further discussions with States, is looking forward to receiving detailed written comments from State regulators, and will take those comments into careful consideration in developing the final rule.

During the development of the proposed rule, the BLM and the EPA held regular discussions to share data and technical information, identify areas of potential overlap between the two regulatory efforts, consider ways to align the proposed rule requirements as much as practicable, and identify provisions where the BLM could exempt otherwise covered sources or activities because they are or are proposed to be subject to equally effective EPA requirements. Those meetings are continuing during development of the final EPA and BLM rules.

Question (13). Over the last few years the United States has undergone an energy renaissance which has created thousands of new well-paying jobs, made the United States more energy secure and less reliant on evil powers across the globe as well as make U.S. energy more affordable—just look at the cost of gasoline today—all while methane and GHG emissions have dramatically declined. During this same time BLM's permitting process continues to lag which is not only a lost opportunity for the benefits I just described, but also to the detriment of potential revenues to the Federal Treasury and the States. Additionally, the BLM has put out a number of regulations and proposals including the Hydraulic Fracturing, updates to Onshore

[2] Further information can be found at the BLM oil and gas program's outreach–events page: http://www.blm.gov/wo/st/en/prog/energy/public events on oil.html.

Orders 3, 4, and 5, and the proposed venting and flaring rule. Each of these, separately and combined, could have real effects on U.S. energy production, jobs, revenues, etc. If the goal of the Climate Action plan is to decrease GHG emissions, does it make sense to propose a suite of regulations that will shut down U.S. natural gas production?

Answer. The common-sense and cost-effective rules BLM has proposed or finalized in the last 2-plus years are an important component of its efforts to modernize its oil and gas program. These regulations—including the proposed updates to Onshore Orders 3, 4, and 5, the Hydraulic Fracturing Rule, and the proposed Methane and Waste Prevention Rule—are all necessary updates to 30-year old regulatory requirements that no longer reflect modern technology or practices. The BLM expects that these regulatory efforts will increase production and royalty accountability, enhance the safety of operations, and conserve resources, without harming U.S. energy production.

These rules often propose or adopt standards and practices developed by industry that are already being successfully employed by operators. Updating and clarifying the regulations will make them more effective, more transparent, and easier to understand and administer, which will benefit both industry and the public. The proposed and adopted changes will provide modern, effective regulation of oil and gas operations on BLM-administered leases, ensuring such development occurs in an environmentally responsible way that provides a fair return to taxpayers.

Question (14). For several years, the EPA has been working on the development of new requirements for compliance with elements of the Clean Air Act for oil and gas production operations. The process of developing new regulations for emissions from new sources has involved—indeed required—highly technical discussions, and has been characterized by regular opportunities for substantive discussion between EPA and the regulated industry. Why is the BLM undertaking its own separate rulemaking process?

a. Did the BLM work with the EPA to make sure the two packages were not in conflict with one another? If so, why are there many examples of the two rules differing or the BLM requiring something the EPA determined was not necessary or cost prohibitive?

   For example: BLM's inclusion of liquids unloading requirements when EPA has determined there is not a single cost-effective method that can address this source. Additionally, there are differences between survey frequency based on number of leaks (BLM) versus percent of components (EPA).

Answer. The BLM and the EPA have worked closely together throughout the rulemaking processes to ensure that the two regulatory packages are not in conflict with each other, as discussed in more detail in the response to Question 12a. In some cases the two rules are different because they are being adopted under different statutory authorities and they have different primary purposes.

For example, our understanding is that section 111 of the Clean Air Act requires the EPA to base its standards on an identified "best system of emission reduction." The EPA proposed that it could not identify a single best system of emission reduction that should apply in all situations to reduce emissions from liquids unloading. In contrast, the Mineral Leasing Act simply requires the BLM to ensure that lessees "use all reasonable precautions to prevent waste of oil or gas . . ." 30 U.S.C. 225. With respect to liquids unloading, the BLM has determined that there are multiple technologies and practices that would reduce gas losses from liquids unloading, depending upon the particular circumstances of the well. The BLM has not proposed to require operators to use specific technologies. Rather, the BLM has simply proposed a performance-based standard—to prohibit liquids unloading through manual well purging from new wells—allowing operators to choose the technologies or practices to apply to achieve this result.

Question (15). What assurance do we have that the two agencies' efforts can be coordinated such that BLM's rulemaking will be informed by the EPA effort so that regulatory conflict is avoided?

Answer. The BLM and the EPA fully understand the importance of coordinating their approaches, have coordinated closely throughout the rulemaking processes to date, and are committed to continuing to coordinate until both rulemakings are finalized. As a practical matter, the EPA's rulemaking was finalized before the BLM's rulemaking, which allows the BLM to take EPA's final rule fully into account before finalizing the BLM's rule.

Question (16). How do these rules interact with the State's own efforts on methane? What consideration did you give the State programs? Is there a scenario where projects will need to comply with a State methane program and regime, a different

BLM methane program and regime and a different EPA methane program and regime? Is that necessary and reasonable?

Answer. As discussed in the response to Question 12b, the BLM has reached out to many States to gain an understanding of State regulations and the States' experiences with their regulations. In fact, many of the provisions in the proposed rule track elements of effective State programs.

The BLM has also constructed its proposed rule to address concerns about the potential for multiple applicable regulations. To minimize any overlap with EPA regulations, the BLM proposed that sources meeting the EPA requirements would either be exempt from the BLM rules altogether, or be permitted to demonstrate compliance with the EPA requirements in lieu of meeting the BLM requirements, depending on the specific requirement. In addition, the BLM and the EPA proposed to align their requirements to a very significant degree and aim to further align the final rules, to the full extent consistent with legal authorities and with consideration of comments received.

With respect to State rules, the BLM proposed specific provisions to allow variances from one or more BLM requirements where one or more State requirements are equally or more effective.

Question (17). How does the cost-benefit analysis hold up when there are a lot of legacy producing wells that would cost more to comply with these proposals than the energy that is produced which would then result in production being shut-in? Would this mean that DOI loses in royalty revenue?

Answer. The proposed rule includes several exceptions and alternative limits that would apply if implementing provisions of the rule would impose such costs as to cause the operator to cease production and abandon significant recoverable oil reserves under a lease. The Regulatory Impact Analysis for the proposed rule projects that the rule would produce modest increases in both gas production and royalties.

Question (18). In January, a magnitude 7.1 earthquake hit Alaska. Though a handful of families lost their homes, damage was limited because the earthquake occurred away from populated areas. Alaska's history demonstrates clearly, however, that we are not always so fortunate.

a. In 2000, congress authorized the Advanced National Seismic System to "establish and maintain an advanced infrastructure for seismic monitoring throughout the United States that operates with high performance standards . . ." A decade and a half later, many of the baseline performance standards set by this program have not been achieved in Alaska. As other States with high earthquake hazard move on to advanced technologies, such as earthquake early warning, what is the Department doing to make sure Alaska has access to the instrumentation, technology, and funding needed to expand and modernize the seismic infrastructure?

Answer. In the past 15 years, the USGS has invested in earthquake monitoring and reporting, seismic hazard assessment, and other earthquake loss reduction activities in Alaska, and collaborates with several groups in the State. The USGS supports the Alaska Earthquake Center and the University of Alaska—Fairbanks (UAF), our regional seismic network partner in the State, at about $600,000 per year. The USGS also supports the Anchorage Strong Motion Network, a collaborative effort among the USGS National Strong Motion Project, the Alaska Volcano Observatory (a joint center of the USGS, UAF, and Alaska Division of Geological & Geophysical Surveys). The network consists of more than 30 free-field stations, a borehole site, and several instrumented buildings and bridges. USGS monitoring investments in Alaska also include USGS National Network stations, and the services provided by the USGS National Earthquake Information Center.

In recent years, the USGS invested in improvements to the Anchorage and Alaska regional seismic networks. For example, in 2010, USGS made an award to the UAF of $483,000 plus seismic equipment for upgrading these networks. The USGS has also invested in improving the Anchorage monitoring infrastructure. As a result of these improvements, high-quality data on how shaking varied across the Anchorage urban area were successfully collected from the January 2016, magnitude-7.1 earthquake. The USGS has also supported the Delaney Park geotechnical array in Anchorage, operated by the University of California, which provides field observations of earthquake activity and uses these observations as control data for testing models and simulation techniques.

b. Language was included in the fiscal year 2016 omnibus for USGS to conduct a cost benefit study related to earthquake monitoring for Alaska. Please tell me what the status of that report is and when we may be able to expect to see some of the findings?

Answer. A working group has been formed to conduct a cost-benefit study for monitoring improvements in Alaska: the study will be released in the fall of 2016 or before. The working group will evaluate the costs and benefits of seismic station adoptions, earthquake early warning, as well as improvements to existing monitoring operations. USGS will use the results of this study in its planning for future investment in seismic monitoring in Alaska.

c. President Obama's 2013 arctic strategy document emphasizes cooperative efforts with the State of Alaska to respond to natural and man-made disasters. In the last 2 years there have been significant swarms of earthquakes in the Bering Sea, Northwest Alaska and the Arctic National Wildlife Refuge. How does the Department intend to engage with the State of Alaska to develop earthquake mitigation strategies for the Arctic region?

Answer. The USGS is a member of the four-agency National Earthquake Hazards Reduction Program (NEHRP) partnership, but developing earthquake mitigation strategies are primarily the responsibility of the National Institute of Standards and Technology and Federal Emergency Management Agency. As a member of the NEHRP, the USGS conducts and supports targeted geoscience research investigations on earthquake causes and effects; produces seismic hazard maps and assessments; monitors and reports on earthquakes and shaking intensities; works to improve public understanding of earthquake hazards; and coordinates post-earthquake reconnaissance carried out and supported by NEHRP agencies and other organizations.

Question (19). The President's proposal includes an increase of $8.8 million for USGS activities related to the Arctic.

a. Could you provide more detail on the Department's Arctic priorities, particularly as they relate to the administration's "Implementation Plan for its National Strategy for the Arctic Region"?

Answer. On May 10, 2013, the President issued the National Strategy for the Arctic Region (Strategy). The accompanying Implementation Plan set forth the methodology, process, and approach for executing the Strategy. The Implementation Plan follows the structure and objectives of the Strategy's three lines of effort:

—Advance United States Security Interests
—Pursue Responsible Arctic Region Stewardship
—Strengthen International Cooperation

The Implementation Plan reflects the reality of a changing Arctic environment and upholds national interests in safety, security, and environmental protection, and works with international partners to pursue global objectives of addressing climatic changes. The Implementation Plan complements and builds upon existing initiatives by Federal, State, local, and tribal authorities, the private sector, and international partners, and focuses efforts where opportunities exist and action is most needed.

Under the Implementation Plan, the Department's priorities include:

—Ensuring the safe and responsible exploration and development of onshore and offshore Arctic non-renewable energy resources in an environmentally sound manner;
—Implementing Integrated Arctic Management and employing management approaches, such as ecosystem-based management, to enhance good governance to provide for sustainable economies in the region, ensure long-lasting benefits of balanced ecosystems, and preserve cultural activities of the people that depend on the Arctic environment; and,
—Coordinating and integrating terrestrial ecosystem research to increase the understanding of geophysical and ecosystem responses to a changing climate and to inform management decisions and subsistence uses.

The Department continues to study offshore environments, evaluate energy development and spill response capabilities, and to promote safety across all energy development activities. In cooperation with the State of Alaska and Alaska Native organizations, the Department is also encouraging use of Integrated Arctic Management, a science-based, whole-of-government approach for stewardship and planning, that integrates and balances environmental, economic, and cultural needs and objectives.

The Department is also a member of the Interagency Arctic Research Policy Committee (IARPC) to advance research in areas of common interest to member agencies. The IARPC 2013–2017 research plan was drafted with contributions from all IARPC agencies with public involvement. The plan, which is currently being updated, intentionally builds on the strong intellectual accomplishments and ideas of

the research community at the Federal, State, local, and tribal levels as well as inclusion of ideas from the academic community, non-governmental organizations, and industry. As an IARPC member, the Department is engaged in answering key research questions such as determining the impact of diminishing permafrost on Arctic ecosystems and inhabitants.

The 2017 budget request for the Department's activities in the Arctic is $160.6 million, an increase of $15.8 million above the 2016 enacted level. The request for USGS includes increases totaling $9.8 million, which includes $8.8 million in Arctic funding and a net addition of $1 million primarily for Alaska map modernization that will be applied to the Arctic. Across the USGS, these increases will be used to analyze the impacts of a changing climate, including changing distributions of fish and wildlife populations, the melting of glaciers and the resulting impact to fresh water resources; to analyze the risks posed by sea-level rise to coastal communities; and to develop predictive models.

b. Also, can you provide specific details about the type of research and activities that would be conducted if this funding were approved? For example, will these activities improve our understanding of the continental shelf offshore Alaska's north coast?

Answer. With these increases, the USGS will support research and development efforts focused on the Arctic through a multidisciplinary approach designed to both individually understand and holistically evaluate ecosystem processes and interactions in the Arctic to provide the objective science needed for effective management of Arctic resources. Additionally, an increase of $1.5 million within the National Geospatial program for Alaska map modernization will be used in the Arctic region and a proposed decrease in the Mineral Resources program reduces Arctic spending by $500,000. Including the Alaska map modernization funding to be used in the Arctic, the President's budget request includes an increase of $9.8 million for USGS Arctic activities.

The increase of $1.0 million in the Environments Program in the Ecosystems Mission Area will be used to analyze changes in fish and wildlife population distribution and habitats. Additionally, the program will use computer simulations to improve strategies for estimating polar bear populations from data gathered in Western Hudson Bay, the Chukchi Sea, and the Southern Beaufort Sea.

The increase of $500,000 for the DOI Alaska Climate Science Center and other related programs will develop a process to estimate total glacier loss in Alaska and any changes in freshwater input. These and other forecasts will improve understanding of effects on river systems and ecosystem dynamics that affect economically and culturally important species such as salmon and caribou. The funding would build upon other research investments in interior Alaska to better understand the potential for larger scale and more frequent effects of ecological drought in the region.

Additionally, the increase of $1.9 million in the Climate and Land Use Change Mission Area's Land Remote Sensing Program is to develop predictive models for permafrost melt. Using remote sensing data from satellites and airborne systems, in combination with field-based studies, this work will prepare Arctic communities for the effects of the thawing land beneath them and improve global climate modeling.

The increase of $3.5 million in the Coastal and Marine Geology program within the Natural Hazards Mission Area accelerates work for underserved communities dealing with impacts of sea level rise, severe storms and melting permafrost on their coastal communities and economies. The cost of field studies in these large and remote areas, the lack of baseline data, and the poorly understood dynamics of icebound and permafrost coasts limits the availability of coastal change tools to benefit Alaskan communities. The increase will accelerate bringing Artic communities the tools available to open-ocean coastal regions of the coterminous United States. The investment will improve coastal change models for forecasting and assessing vulnerability over the next 10–25 years.

The increase of $2.0 million for the Water Resources Water Availability and Use Science Program will address interactions among water-mediated processes in a warming Arctic and assess system feedbacks (e.g., effects of warming on hydrology and biogeochemical cycling, which subsequently affects climate and hydrology). The program will investigate methods that allow extrapolation from monitored to unmonitored locations and expand monitoring of sentinels of change, including permafrost temperature, streamflow, and materials exported from watersheds.

Within base funding, continued analyses of geologic data resulting from the joint USGS–NOAA–Department of State effort to define the limits of the Extended Continental Shelf will result in enhanced understanding of the continental shelf, slope,

and Arctic Ocean basin. Analyses of these data, and data from surveys supported by USGS–DOE investigations of methane gas hydrates, will enhance our understanding of the stability of the continental shelf and slope and the potential for and consequences of hydrate release in response to changing oceanographic conditions.

c. Will the research improve our understanding of the resource potential for new oil and gas discoveries, as well help us understand how to minimize the risks of utilizing those resources?

Answer. The USGS Energy Resources Program conducts oil and gas resource assessments across the Nation. The program has several active projects in the Arctic, including research on unconventional oil and gas (UOG), which will continue with base program funds. These continued studies of shales and other tight formations on the Alaskan North Slope will help underpin more accurate resource assessments and reduce the uncertainty associated with resource development.

The 2017 President's budget proposes several increases for unconventional oil and gas research across the Nation, including $1.0 million for the USGS Energy Resources Program, a portion of which will support field research in Alaska to assess undiscovered UOG resources on the North Slope of Alaska. This additional funding will provide for field research in Alaska on an annual basis instead of the current research cycle of every other year, allowing more comprehensive data collection and accelerating assessments.

The proposed increase for the program's unconventional oil and gas research will better characterize environmental and operational risks posed by oil and gas development (e.g., the mitigation of produced waters derived by oil and gas production), and the increase supports research and field work activities to lessen the statistical uncertainty associated with resource potential estimates, allowing efficient, environmentally responsible development. The increase for unconventional oil and gas continues leveraging capabilities with the Alaska Department of Natural Resources in support of these field studies.

The USGS Coastal and Marine Geology Program will conduct studies to provide actionable science to respond to changes along the Arctic shoreline, and help inform decisions with respect to infrastructure and development associated with development of energy resources.

Question (20). The Federal Government and the State are joint partners in the Alaska Mapping Initiative, with the goal of improving the topographic maps for the State. Some of the maps are over 50 years old and vital to aviation safety, land use planning, and research. The President's fiscal year 2017 budget proposes to increase funding for this program by $1.5 million.

a. If the President's proposed increase of $1.5 million is included in the fiscal year 2017 appropriations bill, that would bring this initiative to a total program funding level of $6.7 million. At that rate, how long would it take to complete the maps?

Answer. Alaska has many broad mapping needs, including topographic maps. The $1.5 million proposed increase relates to topographic mapping supported/implemented by the USGS National Geospatial Program (NGP). With the proposed increase and continued funding from our Federal partners, we estimate that it would take 5 years (2021) to complete statewide coverage of ifsar elevation data and 6 years (2022) to complete the statewide topographic maps for Alaska.

b. What percentage of the State now has updated maps and what areas pose the most challenges for mapping?

Answer. As of March 2016, 15.6 percent of Alaska has published topographic maps. The NGP's most challenging areas for collecting and assembling high-quality elevation map data for Alaska include low-lying coastal deltas with complex lake and river systems, the Aleutian Islands and other remote islands in the Bering Sea. Other challenges include expensive aircraft mobilization costs, limited time over the acquisition targets, and severe weather conditions.

c. Will these maps be available in digital form and how accurate will they be compared to topographic maps in the Lower 48?

Answer. All Alaska topographic maps are available online in digital format (geoPDF). The data are free and the public can easily use this file type across multiple platforms (desktop, Web, and mobile). Anyone can upload the data into digital mapping/spatial analysis software to build new applications for research, education, or industry.

USGS follows the same procedures used for map production for the lower 48 in compiling new maps for Alaska. The elevation data accuracy for the Alaska topographic maps (produced at a scale of 1:25,000) is the same for topographic maps for the lower 48 States which follow USGS' National Map Accuracy standards for

1:24,000 scale mapping. With current funding, USGS corrects major errors for the majority of Alaska map production and we have updated approximately 10 percent of the State hydrography to meet higher specifications, where State funding contributions have supported these efforts.

Question (21). The United States Geological Survey operates the Alaska Volcano Observatory, a joint entity with the University of Alaska. USGS operates five such observatories in the Western United States. The observatory maintains a series of seismic monitors on volcanoes in Alaska, largely on the Alaska Peninsula and the Aleutian Chain, near the air corridor for flights to America from Asia. Ash from eruptions is particularly dangerous to such flights as shown by the near crash of a jumbo jet years ago.

a. The President's fiscal year 2017 budget proposes a very small increase for the Volcano Hazards Program, $117,000 for fixed costs, even though the entire USGS budget request is an increase of 10 percent. I understand there has been some progress made on the repair and monitoring systems on Alaska Volcanoes and I appreciate the good work that is being done there, but I am afraid we are not doing enough. It was also brought to our attention that the good work we are doing now to repair these systems may not be in compliance with the changing Federal Communications Commission (FCC) regulations over radio frequency spectrum allocations.

Answer. USGS radio telemetry networks fall under the jurisdiction of the National Telecommunications and Information Administration (NTIA) for spectrum allocation. Telemetry networks at most Very High Threat volcanoes in Alaska (Spurr, Redoubt, Augustine, and Makushin) are nearly compliant with NTIA spectrum allocation regulations. The Alaska Volcano Observatory (AVO), operated by the USGS in partnership with the University of Alaska and the Alaska Division of Geological and Geophysical Surveys, is focused on achieving full network compliance at these volcanoes as soon as possible. As part of ongoing maintenance and repairs, the USGS typically converts six to eight stations per year from analog to digital.

To address near-term public safety concerns, the USGS used funding received in 2015 to bring defunct and severely impaired networks back on line. This required maintenance of existing analog telemetry links that USGS cannot use past 2020.

b. Are you familiar with the FCC spectrum allocation issue? Are the systems we are repairing in compliance with the FCC regulations or are we repairing a system that will need to be converted to digital in the next few years?

Answer. USGS radio telemetry networks fall under the jurisdiction of the National Telecommunications and Information Administration (NTIA) for spectrum allocation. Changes to the spectrum guidelines and allocations made USGS analog telemetry networks for volcano monitoring in Alaska non-compliant. NTIA authorization permits USGS to use the deprecated frequencies until 2020, which provides time to bring the system into compliance by transitioning the networks to new digital technology operating on an authorized spectrum.

As part of ongoing repair and maintenance, the USGS makes analog to digital conversions when possible. This typically results in converting six to eight stations per year. To address public safety concerns, the USGS used fiscal year 2015 funding to bring defunct and severely impaired networks back on line. Bringing the networks back on line required maintenance of existing analog telemetry links that the USGS cannot use past 2020.

c. Could you provide this committee with the current gaps in the monitoring infrastructure at the Alaska Volcano Observatory and the estimated costs to complete the monitoring system?

Answer. The USGS has identified five Very High Threat and 27 High Threat volcanoes in Alaska. None of these 32 volcanoes have complete monitoring networks by the USGS standards for the National Volcano Early Warning System (NVEWS) and none of the existing networks are compliant with National Telecommunications and Information Administration (NTIA) regulation and guidelines for spectrum allocation.

The USGS has until 2020 to achieve compliance with the NTIA regulations. Telemetry networks at most Very High Threat volcanoes are nearly compliant. The estimated cost of upgrading to a NTIA-compliant system is $18.5 million over 4 years over current funding levels. Completing the conversion in 3 years, instead of four, would increase the cost to $20.2 million, with the increase necessary to fund additional staff to complete the work at the accelerated pace.

Additionally, to fully reach the USGS standards for NVEWS for the 32 Very High Threat and High Threat volcanoes in Alaska, the USGS estimates 237 additional monitoring instruments (e.g., seismometers, GPS receivers, and remote cameras) are

required. The chart below describes the current monitoring capabilities of the USGS in Alaska. The average cost of deploying an instrument on an Alaskan volcano is approximately $90,000. The total estimated cost to bring Alaska's volcano monitoring networks up to NVEWS standards is $21.3 million ($4.4 million for the five Very High Threat volcanoes and $16.9 million for the 27 High Threat volcanoes). This includes all aspects of installation, including instrument procurement, logistics, power systems, data telemetry, instrument housing, and permitting, but does not include the cost associated with the telemetry upgrades needed for NTIA compliance. The telemetry upgrades are necessary to support the new instrumentation. In most cases, NVEWS-guided augmentation with additional instruments would proceed in tandem with the analog-to-digital conversion work.

Upgrading the monitoring system to NTIA compliance and completing the monitoring system to NVEWS standards would cost an estimated $39.8 to $41.5 million in total.

Current Monitoring Level	Current Monitoring Level Capabilit es	Number of Volcanoes	
		Very High Threat	High Threat
None	Eruptions detected after the fact by satellite or direct observation. Eruption forecasting is not possible. No research potential.	0	4
Minimal	Significant eruptions likely detected, but small events missed. Eruption forecasting is not possible. Little if any research potential.	0	5
Limited	Most eruptions detected. Forecasting possible under ideal circumstances. Sensor data of limited usefulness for research.	1	17
Basic	Nearly all eruptions detected and some successfully forecast. Sensor data have research potential.	4	1
Complete	All eruptions detected and most successfully forecast. Sensor data have excellent research value.	0	0
Totals		5	27

Question (22). In 2014, Congress passed the BLM Permit Processing Improvement Act of 2014.

a. How has the passage of the legislation impacted permit timelines?

Answer. The higher application for permit to drill (APD) fee of $9,500 and associated allocations to the particular BLM offices went into effect on October 1, 2015. The increased fee has the ability to generate additional revenue, and therefore provide increased resources for processing permits, all other things being equal. However, because of market forces beyond the BLM's control, most notably the recent steep drops in the price of natural gas and oil, there has been a significant drop in the number of APDs submitted, which has reduced revenues coming to BLM for APD processing. Based on the past 6 month's observation, the BLM has not seen any overall impacts to the permitting timeline as a result of the Act. That said, over the past 4 years, the BLM has made significant progress in reducing the time to process an APD—permit times have dropped from an average of 307 days in 2011 to an average of 220 days in 2015.

b. The reauthorization also required BLM to report to Congress by February 1 each fiscal year the allocation of funds to each office and the accomplishments of each office. Where is that report?

Answer. The BLM has prepared a draft report for fiscal year 2015. This report is in the Department of the Interior review process and will be submitted as soon as that process has been completed.

Question (23). Over the last several years the Department of the Interior has proposed or finalized a number of offshore and onshore rules and regulations including the BLM hydraulic fracturing rule, updates to BLM Onshore Order 3, 4, and 5, the BLM venting and flaring proposal, the release of BLM Land Use Plan Amendments that limit areas where oil and natural gas development can take place, changes to ONRR's civil penalty regulations, additional regulations to Arctic OCS operations as well as the proposed Well Control Rule, potential changes to onshore royalties, bonus bids, etc. Interior is also expected to propose updates to offshore air regulations and there are also a number of additional items included in the Unified Agenda that have not been proposed. All of this regulatory activity is taking place at a time when investment on Federal land oil and natural gas production continues to fall. Each of these items on their own may have a chilling effect on future invest-

ment and interest in Federal production of oil and gas and taken together, the cumulative impacts could potentially alter not only production on Federal lands but also government revenue as a result.

a. Are you analyzing and considering the cumulative effect of each regulation on an individual basis as well as combined with the entire suite of regulations? How do you ensure that the Department adheres to its multiple-use mandate and continues to place great value on the oil and gas production on Federal lands and the important revenues that come to the Treasury as a result?

Answer. The regulations being updated have not been revised for decades, and it is long past time to modernize them to reflect recent technological advances in oil and gas production, health and safety protection, and waste prevention. Reflecting reasonable and common-sense revisions to existing requirements, these regulatory updates incorporate modern industry practices and technology, and we therefore do not expect them to pose an undue burden on industry.

Consistent with Federal requirements, the Department has conducted analyses of the economic effects of the rules and presented those findings in the Regulatory Impact Analysis for each rule. These analyses evaluate each rule individually, because there is so much geographic and operational variability in where and when the rules will apply, and whether and how they will impact operators. That said, a number of the new standards reflect existing industry best practices, with which many operators are already in partial or full compliance. Moreover, some of the measures will actually save producers money. Finally, many of the rules incorporate grandfathering or other provisions that are specifically designed to take account of operators' concerns about the rules' impacts, including impacts on lower-producing wells.

Question (24). The decision by DOI to pull the Arctic lease sales in the 2012–2017 Five Year Program as well as the denial of lease term extensions was shortsighted and without justification. Access to oil and natural gas resources in the Alaska OCS is essential to the Nation's economy and energy security and predictable leasing and workable regulations are necessary to take advantage of this vast resource. The Arctic contains the world's largest remaining conventional undiscovered oil and natural gas. Given the resource potential and long timelines required to bring Arctic resources to market, decisions made today will have an impact on industry's ability to provide the U.S. oil production of the future.

a. How does the Department view the importance of Arctic resources and our need to continue exploration and development in the Arctic, especially as other nations continue to reap the benefits of Arctic development?

Answer. Alaska continues to be an important part of the Nation's energy strategy. BOEM estimates that there are more than 23 billion barrels of undiscovered technically recoverable oil in the Chukchi Sea and Beaufort Sea planning areas, including multiple geologic plays. This is based on information gathered from over 30 exploration wells drilled in the Arctic, seismic data, and analogous reservoir analysis.

Significant acreage in the Chukchi and Beaufort Seas is already under lease, including some of the best prospects. As of April 2016, there were 434 existing leases in the Chukchi Sea and 77 in the Beaufort Sea. In addition to the Liberty project that is currently under review, should DOI receive any exploration and development proposals from industry, we will review them to ensure safe and careful exploration and development in the Arctic.

Recognizing the significant oil and gas potential in the Arctic OCS region, industry interest, and the views of the State of Alaska, the 2017–2022 Proposed Program, published on March 18, 2016, schedules three potential sales offshore Alaska, one in each of the Beaufort Sea, Chukchi Sea, and Cook Inlet. The Department is soliciting comments on this proposal through June 16, 2016. In March, Director Hopper traveled to the North Slope of Alaska to get input on the proposed Five Year Program and the bureau will continue its outreach to encourage stakeholder and partner feedback from Alaskan communities. Comments received will inform the Proposed Final Program, scheduled to be published in late 2016.

In advance of any potential lease sale offshore Alaska, BOEM will continue to use scientific information and stakeholder and partner feedback to proactively determine which specific areas offer the greatest resource potential while minimizing potential conflicts associated with the environment, subsistence activities, and multiple use concerns.

b. Does the Department's lack of regulatory uncertainty, which only becomes greater with the proposed Arctic rule and the proposed Well Control rule, play a part in the unsuccessful project last year?

Answer. Over the course of two different offshore drilling seasons, the Department has been transparent and consistent about what it will require to ensure drilling operations conducted in the Arctic are conducted in a safe and environmentally responsible manner. On September 28, 2015, Shell announced in a press release that it "found indications of oil and gas. . . . but these were not sufficient to warrant further exploration." This followed the 2015 drilling season, during which BSEE and BOEM approvals were conditioned on requirements consistent with many of the provisions contained in the proposed Arctic Rule. These requirements were similar to a number of the requirements that BSEE and BOEM imposed on Shell during 2012.

Question (25). I am very concerned with the BOEM–BSEE proposed Arctic rule because it imposes prescriptive requirements, including the requirement for a same-season relief well, assuming that one solution universally applies to any given Arctic location. Instead, the rule should look to using performance-based rule which allow an operator to minimize risks by designing a well program specific to the landscape, ecosystem, ice conditions, water depths and weather of that particular well. The rule should focus on prevention and consider fit-for-purpose response planning alternatives to respond to potential loss of well control.

a. What is the likely timing of the final Arctic rule? Do you believe that you have an opportunity to step back and take time to assess the Arctic rules package and examine the NPC report before putting out a final rule since you've closed the door on leasing in this current Five Year program?

Answer. BSEE and BOEM have closely considered the National Petroleum Council (NPC) Arctic Potential Study, as well as many other studies and resources. Representatives from BSEE were involved in the NPC Study and were aware of many of the technical discussions and analysis that occurred prior to publication. The Department is in the process of finalizing its Arctic drilling rule, which would apply to exploratory drilling operations in the U.S. Arctic. The Department is carefully considering all comments received on the Proposed Rule as it works to complete the rulemaking process. We intend to publish a Final Rule later this year.

b. How will this timing match with the BSEE well control rule, which as you know will also apply in the Arctic? Would it make more sense to hold the Arctic rule's final release until after the well control rule is final and allow for comments to inform how both set of rules will affect the Arctic before finalizing and implementing?

Answer. The Department promulgated the Well Control Rule on April 29, 2016 (see 81 FR 25887). BSEE has carefully considered comments on each Rule and the potential overlaps between the two Rules.

c. Has DOI taken a hard look at the NPC report and made agency adjustments or taken counsel from it?

Answer. Yes, the Department has reviewed the NPC Arctic Potential Study carefully, along with many other studies and analyses. Many of the findings are consistent with BOEM and BSEE's assessment of operations in the Arctic.

For example, the NPC study recommends that BSEE "[e]ncourage innovation by providing for the incorporation of technological advancements" (NPC Study, Executive Summary, p. 51). BSEE regulations specifically allow for approval of innovative technologies that provide equal or greater protection to personnel and the environment (30 CFR § 250.141). The proposed Arctic regulations clarify that this provision can be utilized to approve equipment for use in Arctic drilling operations.

Additionally, Chapter 10, entitled "The Human Environment," presents a detailed assessment of the effects of oil and gas activities in the Arctic on human health, economic development, and culture. BSEE agrees with the NPC's recommendations that industry, government, and stakeholders should work to preserve cultural sustainability, ensure food security, optimize consultation and community engagement, develop traditional knowledge studies, standardize socioeconomic impact assessment processes, and evaluate collaboration frameworks.

In some areas, BSEE does not agree with the study. Chapter 8 of the study, entitled "Arctic Offshore Oil Spill Prevention, Control, and Response," stressed the importance of prevention "as the primary defense against loss of well control." The chapter identifies a number of controls and barriers that should be in place to prevent oil spills in the Arctic. BSEE agrees that the identified barriers and controls are crucial to operators' prevention efforts. BSEE does not, however, agree that the implementation of prudent prevention measures should eliminate the need to have available equipment and/or a rig to respond to a loss of well control.

There are many other aspects of the NPC Study—both the findings and the recommendations—that are consistent with both the proposed Arctic offshore drilling

regulations and with BSEE's overall approach to oversight of offshore drilling operations on the Arctic OCS.

Question (26). The increased domestic oil and gas production we have been witnessing is occurring almost entirely on private and State lands where the Federal Government does not have control. This is because it can still take from 240 to as much as 300 days to get a permit to drill on BLM managed lands, and where it can take as much as 10 years to complete an environmental review. The Department has taken steps to expedite the permit process for projects on Federal lands that involve renewables, or the infrastructure for renewables, but in the case of oil and gas resources the Department has increased permitting burdens.

a. Can you explain the apparent discrepancy between how the Department treats permitting for renewable energy projects, and projects for the exploration and production of natural gas and crude oil?

Answer. Since 2008, oil production is up 108 percent on lands where drilling requires a BLM permit. This doubling of production is greater than the 88 percent increase in oil production that occurred on all lands nationwide during the same time period. In fiscal year 2015, the BLM approved over 4,228 Applications for Permit to Drill (APDs) on Federal and Indian lands, yet industry only drilled 1,927 wells. The BLM also continued to make significant progress in reducing the time to process an APD—permit times have dropped from an average of 307 days in 2011 to an average of 220 days in 2015. The BLM also continued to make significant progress in fiscal year 2015 at reducing the number of pending APDs. As of the end of the year, the BLM had roughly 7,500 approved APDs that have not yet been drilled, more than ever before. These APDs are ready for immediate use by industry without further action by the BLM.

To further build upon these improvements, the BLM continues to make strategic investments in technology to streamline the permit review process. Most notably, BLM recently completed the bureau-wide deployment of the update to its permit processing system, AFMSS II. That update will help streamline the review process and will allow BLM and applicants to better track the progress of individual applications. The BLM is committed to building on this progress and continuing to improve the APD review and approval process.

It should also be noted with respect to the BLM's treatment of permitting requests for renewable energy relative to oil and gas that much of the expedited process currently used for renewable energy projects is patterned directly on efficiencies developed in the oil and gas permitting context.

Based on its experience in the oil and gas program, the BLM took the following actions with respect to the Renewable Energy Management program:

—Established special permitting offices (Renewable Energy Coordination Offices),
—Improved early coordination with State and other Federal agencies, and
—Identified important energy zones and then completed comprehensive environmental analyses (i.e. Solar PEIS, Wind PEIS and the Geothermal PEIS), in order to provide additional upfront analysis that could then be used to simplify the project-specific NEPA required for permitting individual development projects.

All of these processes were first developed and utilized for oil and gas. The processes used for both energy sources are largely driven by the same or similar land and environmental laws and procedures. The most expedited solar project approval occurred in the Dry Lake Solar Energy Zone in Nevada; utilizing these steps, the BLM took 300 days from lease sale to project approval.

Question (27). On lands administered by the BLM there are thousands of older wells, many producing less than 15 barrels of oil per day. However, in the aggregate, this so-called "stripper production" represents several percent of America's domestic crude oil production. In the past year, BLM has introduced four rulemakings (site security and commingling, measurement of crude oil, measurement of natural gas, venting and flaring) that taken together could significantly increase costs of operation on these older leases, possibly resulting in shutting in production.

a. Is an agency like BLM that already struggles to issue permits to drill from companies holding BLM leases within 300 days, staffed and equipped to manage the expansion of its regulatory mandate?

Answer. The BLM has an obligation to ensure that operators accurately measure, properly report, and account for all oil and gas production, and reduce waste associated with that production. Yet the BLM's rules governing oil and gas measurements and waste reduction have not been updated in over 25 years. As a result, the Government Accountability Office (GAO), the Office of the Inspector General, and the Department of the Interior Royalty Policy Committee have all concluded that these

existing rules provide no assurance that production is being accurately measured, that all of the royalties due are paid, and that waste is minimized. The proposed rules also address the many new technologies that have been developed and adopted by industry since the current regulations were put in place.

That said, the BLM also recognizes that the royalty risk (i.e., the risk posed by inaccurate measurement from a particular well) at a given well is a function of its overall production level and that low level wells pose less of a risk than higher level wells. It is precisely this recognition that led the BLM to include in the proposed onshore orders thresholds that reduced the requirements applicable to lower volume wells. In some cases these proposed changes reduced the compliance burdens on low volume properties relative to existing requirements. Based on the comments received, the BLM is carefully evaluating those thresholds to see if further refinements are necessary to ensure that the burden imposed on any given facility by the new measurement rules is comparable to the royalty risk presented by that facility.

In addition, the Methane and Waste Prevention Rule includes some provisions to streamline implementation for both industry and the BLM. For example, the flaring provisions would reduce regulatory burden by eliminating the existing requirement to submit a sundry notice for each request to flare gas.

b. Why is the focus of the Department and BLM on adding permit obligations for oil and gas operations when on the contrary the Department's focus is on expediting permitting for renewable energy?

Answer. As part of the administration's All-of-the Above Energy Policy, the BLM manages the public lands for both conventional and renewable energy. The BLM has a statutory obligation to balance this energy development with other use of the public lands and to ensure that the development occurs in an environmentally sound manner and provides a fair return to the taxpayers for use of those lands and mineral resources.

With respect to the permitting requirements for conventional energy development, the BLM is not adding permit obligations, but rather is proposing commonsense updates to its existing rules designed to ensure that operators accurately measure, properly report, and account for all production from Federal and Indian lands. The existing rules do not reflect modern technology or practices, and therefore, in some instances, require the review, submittal, and processing of unwarranted variance requests. These circumstances will be addressed by the final rule.

Question (28). Not long ago, the Social Security Administration engaged in an aggressive program to obtain a new custom designed computer system to deal with disability claims. After spending over $300 million, they had a very little to show for it. They had a program racked with delays and mismanagement, but no new working custom system. Likewise, the U.S. Citizenship and Immigration Services spent more than $1 billion trying to replace its approach to managing immigration documents with digital online forms, and as of this fall it had only a single online form, the form to replace a lost green card online.

You're probably wondering what does this have to do with the Federal land management agencies. But right now, as I understand the situation, those agencies are working to refurbish the Federal Government's campsite booking Web site, Recreation.gov, which hosts virtually all online booking for not only the National Park Service but also the U.S. Fish and Wildlife Service, the Bureau of Reclamation in addition to Forest Service campgrounds, and even many of the Army Corps of Engineers facilities. Many people use this online system every year, and if things go bad it could be a very big black eye for these land management agencies that could have broader impacts to the recreation fee program in general, particularly as we approach the Park Service Centennial.

I am asking for an assurance from you that you are going to do everything possible to make sure that any improvements to the online reservation system doesn't risk ending up with missed deadlines, and rollout delays caused by mismanagement and untested products or custom created software, like I mentioned. I hope you will work to ensure that the system will be dependable, time tested, secure and cost effective for the United States.

a. Will you examine the situation and make sure that we are not headed down a pathway like those I mentioned?

Answer. The Recreation.gov contract is funded entirely by revenues generated from the recreation fees and reservation fees charged to visitors who make reservations. The current contract that provides the reservation and trip planning service for Recreation.gov is nearing the end of the period of performance and will be extended as needed to ensure that there is no disruption of service.

In this digital age, software solutions should be designed not by software engineers writing code but by the people who will be using the system so that the final

product truly serves the needs of the government and the people. It is also critical to ensure that the solution is nimble enough to adapt to emerging technologies throughout the life of the contract. The Recreation One-Stop (R1S) program has been conducting market research for over 2 years in order to identify emerging technologies and additional vendors who can provide the kind of service that meets modern customer expectations.

The R1S program has adopted the tenets laid out in the US Digital Services Playbook in which we will employ 'Agile' software development principles and processes. Agile development is the new norm in the private sector and, by following its best practices, we aim to provide a superior service and pleasant customer experience. This will entail face-to-face meetings with the contractor's program management and software development teams. We intend to work in short 'sprints' to write, test, and deploy usable code that will provide all of the tools for trip planning, reservations, financial processing, reporting, design, and customer service. As sprints are completed, we will test each portion of the code to ensure that it meets the government's needs and public expectations. Code that does not pass testing will be immediately identified for correction. By using this method, the R1S program will be involved at every step to ensure that we do not end up with an unusable product when it is time to transition. The public and many other stakeholders will be involved in the development and testing throughout this process to ensure that we are able to deliver what the public wants. The contract requirements include the highest levels of information security, privacy protection, secure financial processing, and compliance with all applicable laws and regulations pertaining to government IT services.

b. As a way to ensure data security indeed does meet the highest standard, will you be using people who are Payment Card Industry Data Security Standard (PCI) compliant?

Answer. Payment Card Industry Data Security Standard (PCI) compliance is an absolute requirement in the new (and current) contract. With the number of credit card transactions processed, the contractor's system is required to meet the highest level of PCI compliance.

The contractor must also deliver security that ensures compliance with the Federal Risk and Authorization Program (FedRAMP), Federal Information Processing Standards (FIPS), Federal Information Security Management Act (FISMA), and the Privacy Act.

Question (29). While many land management agency units are available as part of Recreation.gov, we know there are additional units that could take benefit from additional exposure. What are you doing to make sure more of your units are able to be part of the recreation.gov system and timeframes for bringing them online?

Answer. Recreation.gov currently hosts reservation services for over 3,200 locations which include campgrounds, picnic shelters, cabins, lookouts, yurts, tour ticketing, event lotteries, and a variety of wilderness permits. More locations continue to be added every year. When the system was launched in 2006, the primary focus was to provide reservations for basic front country campgrounds. Since that time, the R1S program recognized the need to expand the service to cover many different types of facilities and activities. This was one of the driving factors in moving to a more agile approach that affords the agencies the flexibility to use the platform for a wide variety of facilities and activities.

The R1S program expects that, upon launch of a new contract, the service will be able to support many more operations; this should facilitate the incorporation of reservation services more broadly. The new contract also requires that the contractor proactively 'market' the service to all agencies where it is appropriate. This includes offering Web services which can improve the efficiency and effectiveness of local operations.

Question (30). What, if any, human resources planning has OSMRE done in preparation for or in advance of the proposed Stream Protection Rule?

Answer. OSMRE typically makes human resource planning decisions based upon on the overall workload for the entirety of its regulatory and oversight program. The actual staff number may change depending on the program areas, the presence or absence of problems, input from the public, and the terms of the performance agreements in each State. The estimated annual hours for Federal oversight of the proposed Stream Protection Rule does not warrant any additional human resource planning.

Question (31). Which, if any, employment assignments or employee deployments have been made as a consequence of the Stream Protection Rule?

Answer. OSMRE has not found it necessary to make new assignments or employee deployment changes as a consequence of the Stream Protection Rule.

Question (32). Does OSMRE employ any "hydrogeologists"?

Answer. OSMRE currently has about 15 highly qualified technical staff classified under the "hydrologist" title. All have formal education, experience, and technical credentials in the area of surface and groundwater hydrogeology.

Question (33). What, if any, human resources planning has BLM done to satisfy mitigation measures, both those created by the Presidential Memorandum and the Department's own mitigation manual and efforts?

Answer. In the fall of 2013, Secretary Jewell released Secretarial Order 3330, Improving Mitigation Policies and Practices of the Department of the Interior. Secretary Jewell directed the Department and each of its bureaus to follow a common set of principles for its mitigation programs while using a landscape-scale approach building on and expanding concepts pioneered in the BLM's 2013 interim mitigation policy. Consistent with Secretarial Order 3330 and incorporating key lessons learned since release of the interim mitigation policy, the BLM is working to revise and finalize its mitigation policy to ensure it is responsive to emerging best practices and compatible with similar policies being developed by sister agencies and States.

Secretarial Order 3330 and the BLM's interim mitigation policy address concepts that broadly apply to mitigation—including principles of additionality, durability, and transparency—without prescribing the amount of mitigation that might be required for any given project. In general, the BLM will continue to identify appropriate mitigation measures by evaluating the specific impacts of each project proposal, in light of applicable BLM land use plans and in compliance with the National Environmental Policy Act (NEPA).

Mitigation broadly refers to a set of tools that allows the BLM to permit projects while responding to the concerns of local communities and meeting our mission of multiple use and sustained yield. For many years, the BLM has recognized a need to bring greater consistency to the use of these tools and to increase their availability to solve resource challenges like supporting development while planning for the recovery of the Greater sage grouse. Accordingly, the BLM has sought to better plan and train staff to help support the implementation of mitigation policies that will allow for more streamlined permitting, more consistent application of mitigation across offices, and better outcomes for resources. This includes identifying a national mitigation lead in the Washington Office as part of the agency's resource planning and decision support staff to ensure greater consistency and identifying State mitigation leads in each State Office to provide expertise as well as a consistent point of contact for State governments seeking to coordinate with the BLM on mitigation efforts. Already, State governments across the West are working with the BLM and our Federal partner agencies to establish and deploy some of these innovative tools. The BLM seeks to further support these collaborative efforts.

Question (34). Which, if any, employment assignments or employee deployments have been made as a consequence of the new mitigation efforts? If the answer is that mitigation efforts have had no human resource planning or employment consequences, please explain why that is the case.

Answer. As noted above, the BLM has identified a national mitigation lead to bring greater consistency to our efforts and has identified State mitigation leads to provide stronger State-level expertise and coordination with State governments. The BLM has long considered mitigation through the agency's routine resource management planning process and through individual project reviews as appropriate, and that will continue to be the case.

Question (35). What vacancies does the Department currently have, and what are the Department's plans or intentions to fill those vacancies?

Answer. The BLM has not increased staffing levels to address mitigation efforts. However, staffing has been reorganized to meet the requirements of the Presidential Memorandum and the Department's mitigation work. This reorganization includes identifying one position on the Washington Office staff for the role of national mitigation lead. This position is currently being advertised on USAJOBS. At the State level, mitigation leads are assigned as a collateral duty and these are not new positions. At the field level, mitigation functions are generally performed by BLM's existing planning or project management specialists.

Question (36). The BLM's draft updated planning rule, known as Planning 2.0, seeks to updated the agency's planning process.

a. One of the frustrations frequently expressed by public lands communities regarding the planning process is that the BLM takes their comments, but does not truly consider the needs of the area, particularly when it comes to projects that potentially provide opportunities for economic development. How will the new rule improve BLM's coordination with State, county, and local govern-

ments? Will there be certainty for the manner in which BLM will consider the needs of State, county, and local governments.

Answer. The proposed rule would improve coordination with State, county, and local governments by requiring communication and coordination early in the planning process. Two new steps would include (1) input into the development of the planning assessment and (2) review of the preliminary alternatives, rationale for alternatives and basis for analysis prior to issuance of the draft plan.

During the planning assessment the BLM would coordinate with State and local governments to identify the best available data for the planning area. BLM frequently hears from our State and local partners that they often have the best data for a resource and they want to ensure that BLM uses this data. This proposed step would respond to these requests and ensure early coordination on data and information sharing. During this step the BLM would also coordinate with State and local governments to identify existing State and local land use plans to begin to seek consistency between local land use plans and BLM's Resource Management Plans (RMPs).

Once BLM has developed a preliminary range of alternatives, the BLM will make these preliminary alternatives and rationale available to State and local partners for review. This new coordination step will allow State and local governments to provide early feedback to the BLM on the alternatives and whether the range of alternatives adequately considers the needs of State and local governments. The BLM will use this feedback to revise the alternatives and develop a draft resource management plan that is more responsive to the needs of State, county, and local governments.

Question (37). One of the goals of Planning 2.0 is to "improve the BLM's adaptability to respond to social and environmental changes." What types of social change does the BLM need a new rule in order to adapt to? Also, what types of environmental change require the new rule?

Answer. The proposed rule would provide the BLM the tools necessary to respond to both social and environmental change in an efficient and effective manner. Examples of social change that affect the public lands include the increased demand for recreation on public lands, changes in the composition and needs of local communities, or new emerging markets such as the increasing demand for renewable energy development on public lands. Examples of environmental change that affect the public lands include severe drought, catastrophic wildfire, or changes in plant community composition due to invasive species or pest infestations.

Question (38). I've made no secret about my concerns with this administration's practices relating to mitigation. The President's Memorandum entitled, Mitigating Impacts on Natural Resources from Development and Encouraging Related Private Investment, coupled with your Secretarial Order 3330 on mitigation have only served to further my initial apprehension.

The President's Memorandum mandated that, "[w]ithin 1 year of the date of this memorandum, the Department of the Interior will develop program guidance regarding the use of mitigation projects and measures on lands administered by bureaus or offices of the Department through a land-use authorization, cooperative agreement, or other appropriate mechanism that would authorize a project proponent to conduct actions, or otherwise secure conservation benefits, for the purpose of mitigating impacts elsewhere."

a. Is there a status update as to where the DOI and its relevant agencies are in the development of program guidance?

Answer. The Department is working diligently on the policies required by the Presidential Memorandum (PM), including the guidance document identified above. The primary work by the Bureau of Land Management (BLM) and the Department since the publication of the PM has been to finalize BLM's forthcoming mitigation handbook and manual.

Question (39). I understand mitigation can be a great tool for land managers, but what authority does the Department have to require mitigation for projects on public lands under the Department's jurisdiction? And, to that end, what authority is there to require that mitigation meet a standard of benefit for natural resource damage?

Answer. The Department's authority to seek a net benefit in recommended or required mitigation actions is derived from the underlying statutory authority mandating the management of the impacted resource. Under these authorizations, the bureaus and offices of the Department are responsible for managing different resources and for different purposes.

For example, the Federal Land Policy and Management Act (FLMPA) mandates management of resources in accordance with the principle of sustained yield, which

is defined as the "maintenance in perpetuity of a high annual or regular periodic output" of such resources. Where, for example, past practices have degraded resources so as to reduce their annual or regular periodic output to low levels, requiring that mitigation achieve a net benefit is consistent with the statutory mandate to achieve and maintain a high periodic output by restoring such resources to predegradation levels.

Question (40). Along the same lines, given that much of the framework from the Presidential Memorandum reflects your own mitigation efforts stemming from your Secretarial Order 3330, please explain in detail what you hoped to achieve through your own mitigation efforts?

a. How will those efforts would be implemented across your Department and with other Department sub-agencies and among sister agencies where mitigation efforts and/or natural resource impacts straddle multiple jurisdictions.

Answer. A stated goal of the Council on Environmental Quality and the Department in establishing new mitigation policies is the transparency, efficiency, and consistency such guidance will bring to permitting processes. Although a multitude of factors play a role in successful permitting and project development, mitigation principles espoused by these policies, such as efforts to produce better avoidance and the consideration of mitigation measures early in the permitting process, are intended to reduce permit times and create better outcomes for impacted resources.

To ensure the Department's ability to achieve these objectives consistently, bureaus and offices of the Department have established common frameworks to apply the mitigation hierarchy in the development of mitigation recommendations and requirements. The frameworks create consistency in how bureaus and offices implement mitigation in a number of important ways, including the use of a compensatory mitigation goal; a clear and stated preference when selecting between compensatory mitigation providers; use of standardized definitions and terms; and adherence to a consistent set of standards to ensure equivalency among compensatory mitigation providers, among others.

Question (41). The Bureau of Land Management briefed the Senate on the Presidential Memorandum, and admitted to not having a rigorous understanding of impacts to subsistence use. Nevertheless, the Department assigned an $8 million impact in the National Petroleum Reserve—Alaska (NPR–A). What metrics are used generally to determine dollar values associated with anticipated natural resource damage(s), and specifically, what metrics were relied upon to arrive at the $8 million dollar cost in the NPR–A?

Answer. The Record of Decision for the Greater Mooses Tooth One Project included a voluntary contribution by ConocoPhillips Alaska, Inc. (CPAI) of $8 million to a compensatory mitigation fund to address impacts to subsistence uses that were not sufficiently avoided or minimized in the decision—in particular, encroachment of the project footprint into the established setbacks for Fish Creek and the Ublutuoch River. The Alaska National Interest Lands Conservation Act directs the BLM to specifically consider subsistence uses when reviewing projects and prohibits the BLM from approving projects with significant impacts that have not been adequately addressed (16 USC 3120 section 810). This contribution represents less than 1 percent of the cost estimate cited by CPAI for development of the project.

Question (42). The Department's Budget Brief for 2017 notes "(r)esource management plans provide the basis for every BLM management action and are *necessitated* by changes in resource use and demands . . ." (emphasis added)

a. What, specifically, are the changes in resource uses and demands that necessitate potential management of:

—715,000 acres of the Fortymile and Mosquito Flats Area of Critical Environmental Concern (ACECs) in the Eastern Interior Management Plan;

Answer. Based on public comment on the Eastern Interior Draft Resource Management Plan (EIRMP)/Environmental Impact Statement (EIS), the BLM considered changing the boundary of the proposed Fortymile Area of Critical Environmental Concern (ACEC) and designating a new ACEC on the Mosquito Flats, also in the Fortymile region.

The Fortymile ACEC (685,000 acres) is proposed for the purpose of protecting caribou calving and post calving habitat for the Fortymile caribou herd, and Dall sheep habitat. The Fortymile caribou herd is both a highly important subsistence resource in east central Alaska and an international resource, with a considerable portion of its historic range occurring in Canada. BLM-managed lands in the Fortymile region are used by Fortymile caribou for calving, post-calving, and winter range. The population and range of the herd is currently depressed compared to its historical extent. The herd was estimated at more than 500,000 animals in 1920, but currently numbers 50,000 animals. A cooperative planning effort, involving diverse interests in

Canada and the United States, focuses on the recovery of the herd in numbers and into historic range. Calving and post-calving habitats were identified as the most sensitive habitats by the Fortymile Recovery Planning Team. Additionally, the planning area is predicted to become warmer and drier with a likely rise in tree line. These changes will increase the importance of alpine and subalpine habitats for calving and year-round habitat. Focusing on limiting impacts to the most critical habitat areas is the most efficient strategy for maintaining this important resource.

The Mosquito Flats ACEC (30,000 acres) was proposed to protect a unique high elevation wetland. This wetland is atypical; the Mosquito Fork River flows over continuous sand beds that are uncharacteristically clean, light colored, well-sorted, and low in organics, suggesting the origin of the sand is likely from a past depositional environment, possibly related to eolian deposits of Pleistocene or later age. These wetlands are an important moose calving area and support BLM sensitive species, including nesting trumpeter swans and short-eared owls.

—Nearly 700,000 acres in the Sheefish Bering Sea-Western Interior Plan;

Answer. While developing the Bering Sea-Western Interior (BSWI) RMP, the BLM received a number of public comments and nominations from tribes, advisory councils, and individuals regarding the increased importance of non-Salmon species due to the crash of the salmon population. Sheefish is one of the species specifically mentioned.

Sheefish were mentioned as being a culturally significant fish species along the Kuskokwim River. They are harvested for subsistence use by many, especially in the middle and upper river. Sheefish are often caught before salmon in the spring, and offer an opportunity for fresh fish early in the season. In recent years, salmon have been in decline and there has been an even greater shift in harvest patterns away from salmon and more toward whitefish and other salmon species. Sheefish spawning grounds have very specific needs and occur in small numbers on the Kuskokwim River. Sheefish spawn in relatively small and specific locations, and a section of the Big River located south of McGrath has been identified as a well-known spawning area for sheefish. Local residents depend on the fish and wildlife resources of this drainage. The local Athabascan name for the river is "Zidlaghe Zighashno" which translates as "Sheefish Spearing (Harvest) River" and the river has been expressed as very important to local people.

A November 2012 ADF&G report on sheefish spawning grounds on the Kuskokwim River provides detailed information about documented spawning areas. The report shows three spawning locations on the Kuskokwim River for sheefish, located on the Tonzona, Middle Fork and Big River, all located in the upper Kuskokwim River area. Of these locations, there are BLM-managed lands near the Big River. The sheefish that populate the entire Kuskokwim River spawn in very discrete areas or, smaller tributaries of the main Kuskokwim River. Eighty percent of the sheefish spawning in the Kuskokwim River spawn in a 15.5 mile section of the Big River (Stuby, 2012, Alaska Department of Fish & Game (ADF&G) Report).

As a result of the local importance expressed in public comment and after review of the ADF&G studies, the BLM found there were relevant and important values and proposed the Sheefish ACEC to protect the sheefish spawning areas.

—Any of the over 6 million proposed acres in the Central Yukon Management Plan; and

Answer. The BLM is in the early stages of planning for the Central Yukon RMP and does not anticipate a final decision until 2019. There are approximately 1.8 million acres of existing ACECs in the Central Yukon Planning Area. These were designated in 1986 by the Central Yukon RMP and in 1991 by the Utility Corridor RMP. During scoping and public outreach in 2013–2014, the BLM received numerous nominations for new ACECs (approximately 3.7 million acres) and expansions of existing ACECs (approximately 1 million acres). Many of the nominations identify habitats of important subsistence species such as caribou, Dall sheep, and salmon. The Central Yukon interdisciplinary team members reviewed all ACEC nominations and BLM-managed lands in the planning area to determine whether any areas should be considered for designation as an ACEC. Team members also reviewed all existing ACECs and research natural areas (RNAs) to determine if the designations were still relevant. The interdisciplinary team determined that approximately 5.2 million acres met the relevance and importance criteria. These findings are published in the Central Yukon RMP Web site at: http://www.blm.gov/ak/cyrmp.

To date, the BLM has only made determinations on relevance and importance criteria and not special management attention. If needed, the special management approach is determined by the resource at risk and the BLM implements the least restrictive management needed to protect the resource. These restrictions could be seasonal restrictions on an activity, or additional stipulations on permitted activi-

ties, or limiting off highway vehicle use to designated trails. While the special management needed could be a recommendation to close the area to mineral entry, this would only be the recommendation if a closure is necessary to protect the relevant and important resource at risk.

The BLM will further analyze potential ACECs during development of draft alternatives and in the Draft RMP/EIS. The BLM will allow for public comment on both the preliminary alternatives and the Draft RMP/EIS when reaching those stages of the planning process.

—Some of the proposed ACECs would result in the closure of the public lands to mining or other activities. Please articulate how the Department would satisfy its multiple-use, sustained yield mandate in the Federal Land Policy and Management Act if any of the ACECs proposals that contemplate a form of closure are finalized.

Answer. Areas of Critical Environmental Concern (ACECs) are specifically defined in the Federal Land Policy and Management Act (FLPMA) as "areas within the public lands where special management attention is required . . . to protect and prevent irreparable damage to important historic, cultural, or scenic values, fish and wildlife resources or other natural systems or processes, or to protect life and safety from natural hazards." In FLPMA, Congress also directed that, "In the development and revision of land use plans, the Secretary shall . . . give priority to the designation and protection of areas of critical environmental concern . . ." in addition to the broader considerations of multiple use and sustained yield.

In addition to the specific discussion of ACECs, FLPMA sets a policy that the public lands be managed "in a manner that will protect the quality of scientific, scenic, historical, ecological, environmental, air and atmospheric, water resource, and archeological values; that, where appropriate, will preserve and protect certain public lands in their natural condition; that will provide food and habitat for fish and wildlife and domestic animals; and that will provide for outdoor public recreation and human occupancy and use. . . ."

FLPMA defines the term multiple use as "making the most judicious use of the land for some or all of these resources or related services over areas large enough to provide sufficient latitude for periodic adjustments in use to conform to changing needs and conditions; the use of some land for less than all of the resources; a combination of balanced and diverse resource uses that takes into account the long-term needs of future generations for renewable and nonrenewable resources, including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and natural scenic, scientific and historical values; and harmonious and coordinated management of the various resources without permanent impairment of the productivity of the land and the quality of the environment with consideration being given to the relative values of the resources and not necessarily to the combination of uses that will give the greatest economic return or the greatest unit output."

FLPMA defines sustained yield as "achievement and maintenance in perpetuity of a high-level annual or regular periodic output of the various renewable resources of the public lands consistent with multiple use."

In the event that some ACECs are closed to the mining laws, the BLM will meet FLPMA's multiple use mandate by allowing mining on lands outside of the those ACECs. For example, in the Eastern Interior RMP Fortymile Subunit, the agency preferred alternative recommends mining be allowed on more than half (70 percent) of the BLM-managed lands in the planning subunit. Should this alternative become the final decision, the BLM will meet the sustained yield mandate for caribou by designating ACECs for calving and post calving habitat.

b. Please tell me what efforts the Department has made to apprise Alaskans, and specifically Fortymile placer miners, of developing management plans, individual obligations and new enforcement approaches?

Answer. The BLM uses a variety of methods to notify and engage the public in planning efforts and changes to policy and practices, depending on the issue and the scope of the impact. For many planning efforts, the BLM is required to publish notices to the *Federal Register.* However, the BLM generally creates many more opportunities for public outreach than the *Federal Register* and is currently revising its planning regulations to include more robust public outreach and collaboration.

Other types of BLM actions require different levels of public involvement. Of recent concern was the development and implementation of the "mining IMs" in Alaska. These Instructional Memoranda (IMs) on mining reclamation and bonding are direction to staff on how to interpret the current mining regulations in 43 CFR 3809 in a consistent way. These IMs provide consistency in how the BLM evaluates reclamation performance and will provide miners with consistent methods for meas-

uring reclamation success. The regulations that define reclamation standards have been in place since 2001.

In 2013 and 2014, BLM staff began discussions with miners and mining organizations on current practices that were not meeting reclamation performance standards. There have been many advances in the last 15 years since the regulations were developed and many of the past practices for rehabilitating fish, wildlife, and riparian habitat after placer mining have, in many cases, failed to meet a number of reclamation performance standards required by regulation. The BLM was also concerned about whether there were adequate financial guarantees to cover all of the Federal mining operations in the State.

After the issuing IMs, the BLM sent a letter with associated information to every Federal miner in Alaska and met with individual miners to go over the regulations and how BLM would be measuring reclamation. The BLM also provided presentations on reclamation and a short course on revegetation with the Alaska Miner Association (AMA) and Alaska Minerals Commission in the Fall of 2015. In the summer 2015, the BLM implemented the Jack Wade Demonstration project in the Fortymile Wild and Scenic River Corridor to test new reclamation techniques for placer mined streams in Alaska. The project is designed to accelerate the recovery of in-stream and riparian habitats in a historically mined area. The ultimate goal was to find new approaches to reclamation and to help miners meet the reclamation standards more quickly. If the techniques are successful it will help miners to plan and implement their own reclamation work and assist them in meeting the reclamation performance standards required by regulation. Several Fortymile miners attended a workshop in Chicken to discuss reclamation evaluations and view the demonstration project. One of the successes from the workshop is that one of the area miners has asked BLM to help develop another demonstration project in 2016 on his mine site.

In April 2016, the BLM plans to give presentations on reclamation and a short course on revegetation at the AMA conference in Fairbanks. The BLM will also organize field workshops and demonstrations for miners in Chicken, Central and Coldfoot in the summer of 2016 and develop booklets and videos describing reclamation techniques.

c. And please elaborate on what the Department's policy is in the interim while new policies, enforcement approaches, management plans and the like are being developed. For example, is it the Department's position to continue operating under existing policies while a new policy is being drafted?

Answer. Existing operations are not affected until new policy, plans or regulations are finalized. In some instances, operations are "grandfathered in" and follow the old regulations. For example, some mining operations are covered by the 1980 version of the CFR while others are covered by the 2001 version. However both versions require revegetation and the rehabilitation of fisheries and wildlife habitat. The mining IMs outline ways to measure the effectiveness of the reclamation and assure that it meets either version of the regulations.

When the new Resource Management Plan is completed, the stipulations in the plan will only affect new or modified mining plans of operation. Existing plans of operation, or those with only minor modifications, are not affected.

Question (43). The administration has been vague on the details surrounding your proposed $10.25/barrel "fee," as you call it.

a. Has the Interior Department performed any analysis of how a $10.25/barrel fee would impact energy production on Federal lands? If not, why not?

Answer. The proposed oil fee, which would be gradually phased in over 5 years, is an important part of the administration's effort to address the challenges of our outdated transportation system. The fee would raise the funding necessary to make these new investments, while also providing for the long-term solvency of the Highway Trust Fund to ensure we maintain the infrastructure we have. By placing a fee on oil, the President's plan creates a clear incentive for private sector innovation to reduce our reliance on oil and at the same time invest in clean energy technologies that will power our future.

The proposed fee is not a wellhead tax and is not specific to oil production from Federal lands. Therefore, BLM has no reason to believe that energy production from Federal lands would be disproportionately impacted—either positively or negatively—by the fee and has not performed an analysis on its impact. The Department understands that the administration has indicated a desire to work with Congress on how to optimize collection of the fee. However, the Department would not have a direct role in developing or implementing the details of this fee proposal. Further questions about this proposal should be directed to the Department of the Treasury.

b. In 2013, a report commissioned by the Department of the Interior concluded that raising royalty rates on onshore oil and gas production on public lands would discourage investment and bring less money to the treasury, and consequently was not warranted. With oil prices drastically lower than in 2013 and the literally thousands of pages of new regulations that have come out of your Department to regulate industry over the last few months, has your Department analyzed what the cumulative impact of all of these actions will be on production on Federal lands and revenue to the treasury?

Answer. Consistent with Federal requirements, the Department has analyzed the economic effects of each rule. These analyses evaluate the rules individually, because there is so much geographic and operational variability in where and when the rules will apply and whether and how they will impact operators. That said, a number of the new standards reflect existing industry best practices, with which many operators are already in partial or full compliance, and some of the measures will actually save producers money. Additionally, many of the rules incorporate grandfathering or other provisions that are specifically designed to take account of operators' concerns about the rules' impacts, including impacts on lower-producing wells.

c. In light of these news regulations and fees, can you tell me that your actions are designed to increase production on public lands, or are you ready to concede that we have different policy objectives when it comes to energy development on Federal lands?

Answer. With respect to onshore production, the Department has a unique and broad mission to manage public lands on behalf of the American people under the dual framework of multiple use and sustained yield. This means we manage these lands for a broad range of uses including renewable and conventional energy development, livestock grazing, timber production, hunting, fishing, recreation, and conservation. These rules are part of a broad regulatory framework designed to balance oil and gas production on the public lands with the many other uses of those lands and assure development of the public's oil and gas resources occurs safely, responsibly, and in the right places.

Question (44). The fiscal year 2015 Omnibus included a requirement for a comprehensive inventory of contaminated sites conveyed through ANCSA and a detailed plan on how the Department intends to complete cleanup of each contaminated site within 180 days of enactment.

a. When will the report be completed and made public?

Answer. The report is complete and in the midst of a final review. It should be available this summer.

b. Does the Department have any plans to accelerate the cleanup of contamination on Native lands, either the lands that BIA, BLM, FWS, NPS, or Bureau of Mines actually caused, and do you have any plans to coordinate a cleanup among the other Federal agencies: DOD, FAA, the National Weather Service and the Forest Service since as Secretary you do have a trust responsibility to Alaska Natives?

Answer. The BLM developed a database with the most comprehensive inventory to date of known contaminated sites on lands conveyed to Alaska Native Corporations through the Alaska Native Claims Settlement Act (ANCSA). The database contains current information about each site's land and regulatory status, including (1) the entity to which the BLM conveyed the property; (2) the precise coordinates, if known, for where the contaminated site is located; (3) the current understanding of the site's type and amount of contaminants, if known; and (4) any data gaps. Before it can be considered final, the inventory needs to be refined with further regulatory and site characteristics, when that information is identified. Additionally, further outreach needs to be completed to those Alaska Native Corporations that did not respond during the BLM's facilitated meetings with stakeholder groups. Once finalized, the inventory will provide Alaska Native entities and the appropriate Federal and State regulators with a powerful tool to help address these contaminated sites.

It is important to stress that, once non-Department of Defense lands pass from Federal ownership, former land-managing agencies no longer have authority under CERCLA and Executive Order 12580 (Superfund) to compel or conduct clean up, although the United States may remain liable for pre-conveyance contamination. The Department of Defense is the only Federal agency besides the Environmental Protection Agency (EPA) authorized to execute or compel cleanup of contaminated lands no longer under its ownership per 10 USC 2701(c)(1)(B). The BLM and DOI have no authority over other entities that may be identified as parties responsible for existing contamination on lands conveyed to ANCSA corporations. With the comple-

tion of this comprehensive database, the BLM has worked to the full extent of its authority in fulfilling its responsibilities under the Consolidated and Further Continuing Appropriations Act, 2014 (Public Law 113–235).

Among the sites known to be in need of cleanup, the Alaska Department of Environmental Conservation (ADEC) has identified a responsible party or parties for almost all sites. For the vast majority of parcels, the BLM was not managing the lands when they became contaminated and ADEC has identified other agencies as the responsible party. Once responsible parties have been documented for the sites identified in the completed inventory, the final phase of work will be directed by the appropriate regulatory agency. Within Alaska, this authority lies with ADEC and EPA for sites not on federally managed lands. For sites where a Federal agency has been identified as the responsible party, funds for cleanup will require budgetary planning and prioritization.

c. Does the Department have any estimates or intend to develop estimates for exactly what it will cost to clean up the lands so they are usable by Natives to generate the benefits that were intended when the Native Claims Settlement Act passed 45 years ago?

Answer. The sites not currently in a clean-up program vary in levels of confirmation with regard to the extent of the contamination. Without the details related to a verification of a release, extent of hazardous material, and other site characteristics that would support estimates for cleanup, it is difficult to predict cleanup costs.

QUESTIONS SUBMITTED BY SENATOR TOM UDALL

Question (1). I'm very pleased that this subcommittee was able to provide an 85 percent increase for Indian school construction and improvements in the 2016 omnibus. That amount includes funds to finish the schools on the 2004 school construction priority list. It also provides a down payment for to begin work on new schools—that BIE is in the process of selecting.

Selecting five new schools for priority construction is only the beginning of the investment we need to make in tribal schools—and I believe we won't get there unless we develop some kind of "Marshall Plan" for Native youth that fully funds infrastructure needs. We included language in the 2016 omnibus urging the Department to follow the lead of the Defense Department—and develop a comprehensive plan to modernize and improve all BIE schools. DOD produced a plan to modernize its education facilities needs in 2009—and has been able to make significant progress towards fixing its schools as a result. There's no reason that the administration and Congress can't work together to do the same for tribal schools.

a. Secretary Jewell, can you share what steps the Department is taking to develop a comprehensive plan to improve all Indian schools?

Answer. Indian Affairs and the Department have directed the Office of Facilities, Property, and Safety Management, through its Division of Facilities Management and Construction to work with a contractor to develop a "Poor-to-Good" 5-year plan to identify the approach and resource requirements necessary to modernize our school facilities. The results of the assessment will be ready for internal review and further strategic planning development in May 2016.

b. Is there any reason that the Department can't move forward with preparing a comprehensive needs assessment—and plan to address the needs identified by such an assessment—this fiscal year?

Answer. As described above, the Office of Facilities, Property, and Safety Management, through its Division of Facilities Management and Constructions is engaged in developing such a plan. The results of the assessment will be ready for internal review and further strategic planning development in May 2016.

Question (2). I understand that the Department is now moving forward with the first phase of the proposed reorganization of the Bureau of Indian Education—including the establishment of new Educational Resource Centers—and that your 2017 budget anticipates additional changes to the Bureau. As part of the first phase of the reorganization, you have proposed a number of staffing changes, including changes to the regional office in Albuquerque, to create these new centers to assist BIE and tribally controlled schools.

a. What is your timeline for staffing up these centers, and what services can schools expect to receive starting in the fall?

Answer. Staff hiring is planned to be completed by the end of June 2016 in time for the new school year 2016–2017.

The Education Resource Centers are geographically positioned close to schools and will be staffed with School Solutions Teams. These Teams will ensure that principals and teachers have the resources and support they need to operate high achieving schools. These Teams will assist schools in their improvement efforts by providing data-supported best practice models in such areas as school management and climate, professional development, curriculum, and instruction. These Teams will not micromanage or direct reforms in schools; rather, they will listen to principals and teachers and then provide the support that is requested.

b. I am still hearing from tribes in New Mexico that they don't feel fully informed about changes to expect from the reorganization. What is your plan to ensure that all stakeholders—including BIE employees whose jobs may be affected—know what to expect during the reorganization?

Answer. The BIE has sought to inform Tribes about the expected changes to the BIE reorganization through consultation and outreach. In 2015, the BIE held 12 regional and individual consultations along with six national consultations. The BIE welcomes further questions or comments.

In terms of informing BIE employees, the BIE Office of Human Resources (HR) has held an open house, as well as encouraged BIE employees to stop by the office to discuss the reorganization and positions. All employees were notified by email that HR was available for private meetings to discuss the reorganization and the potential impact on them individually; approximately 110 individual counseling sessions were held in person or via telephone. Since February 22, 2016, the BIE has issued vacancy announcements for available positions under the new structure. The Acting HR Director and his staff have sent email updates as the vacancy announcements have been made and provided letters to all staff affected by the reorganization. In addition, information is posted on the HR Web site and distributed by the BIE newsletter and flyers. HR has also provided Webinars that can be accessed at any time by staff explaining how to access USAJobs and how to apply for jobs using USAJobs.

c. Your budget request provides $8 million dollars in new funds to implement more changes to the Bureau to "increase capacity" and provide additional services to BIE-funded schools, but it doesn't provide much more detail. What specific changes are you proposing to make, and what additional capacity will BIE build with these funds? Will these funds be used to address shortfalls in facilities management, contracting and other services provided to schools, as identified by the Governmental Accountability Office?

Answer. The additional $8 million is required to stand up the new Schools Operations Division within the Bureau of Indian Education. The School Operations Division will include the following functions: Facilities (school construction, repair and maintenance, school safety and school property); Human Resources; Educational Technology; Acquisitions; Budget and Finance; and Communications. The redesign and restructuring of the Schools Operations Division will address the Government Accountability Office recommendations related to accountability and management of funds, school safety issues, shortfalls in facilities management, and the planning and execution of acquisitions. These issues are addressed in several ways under the restructuring of the BIE as follows: (1) dedicated, additional staffing; (2) establishment of new offices with new responsibilities (e.g., auditing, technical assistance, policy development); (3) new reporting chains to ensure oversight of functional experts; (4) new business processes that support school needs, and (5) consolidation of functions to eliminate duplication.

Question (3). Secretary Jewell, I am pleased to see your 2017 budget includes a $350,000 increase to expand the Manhattan Project National Historical Park, for a total budget of $691,000. I know that the Park Service is still working with the Department of Energy to develop its plan for the park.

Could you please provide an update on what we can expect to happen with the park in 2016, particularly in Los Alamos? What activities do you plan to fund with your requested increase?

Answer. If appropriated, funding would provide for adequate initial staffing of all three park locations, including Los Alamos. A Superintendent, a site manager at each location, and some interpretive staff are planned based on the proposed budget for fiscal year 2017.

If funding is appropriated, the Los Alamos site will hire a site manager in 2017 and will expand interpretive staff. The Department of Energy is working to have the first buildings open to the public in late calendar year 2017.

In the meantime, the park has developed a brochure showing the Manhattan Project resources visitors can see in town, and will be hosting regular ranger talks and tours by summer 2016. NPS anticipates expanding the interpretive presence in

2017 with the additional funding as well as continuing to develop partnerships with the local community.

Question (4). Secretary Jewell, I am very pleased that my colleagues and I were able to provide the BLM National Conservation Lands line item with its first increase since fiscal year 2012. As you know, we recently established two new national monuments in New Mexico—the Organ Mountains-Desert Peaks National Monument in the southern border area of the State, and the Rio Grande del Norte National Monument in the north near Taos. Tourism at these monuments creates critical economic opportunities for the people in surrounding communities—and they are also places that New Mexicans enjoy visiting ourselves. The President's budget once again proposes a significant increase of $13.8 million dollars for monuments throughout the country.

a. Can you tell us what BLM's plans are for utilizing the new funds we provided in fiscal year 2016— particularly to support the monuments in New Mexico?

Answer. The BLM's National Monuments and National Conservation Areas (NM&NCA) program received a $5.0 million increase in fiscal year 2016. The increase brings the program's total appropriation to $36.8 million, which is used to administer 46 areas covering about 12.2 million acres (as of April 1, 2016). New Mexico has received $1.3 million, or 26 percent, of the increase because of several new NM&NCA designations. This brings the State's total NM&NCA program funding to $2.5 million—a 110 percent increase from fiscal year 2015.

These funds will support all NM&NCAs in New Mexico, including newer national monuments. Specific direction includes funding managers, critical staff, signage, and educational materials, among other things. Funding is also directed for New Mexico's critical maintenance needs, to inventory and protect the resources, objects, and values for which units were designated, to reduce staffing vacancies, provide education and interpretation to the public, hire youth and veterans, and provide safe and legal public access.

b. With the increased funding included in the 2017 Budget for national monuments, what will you be working on? What are the needs that should be addressed?

Answer. The BLM plans to use the proposed $13.8 million increase to the NM&NCA program as described in the fiscal year 2017 President's budget. Specifically, the program will use the increase to fill critical management and staff vacancies, conduct vital inventories, provide safe and legal public access, perform basic maintenance on infrastructure, protect wildlife habitat and irreplaceable historical resources, and provide opportunities for recreation, volunteering, youth and veteran engagement, and scientific research.

c. Since the budget was delivered, the President has designated new monuments in California, and I understand there is still the potential for additional designations. Will the funding needs for those areas be covered by the increases you've proposed? If not, how will you fund them without impacting other states like New Mexico?

Answer. The 2017 budget was formulated prior to these most recent designations. BLM base funding has been used to manage these acres prior to their designation as national monuments. Decisions on allocation of the requested increase have yet to be made. The BLM will have a better idea of 2017 funding needs for the new monuments in the coming months, and will be able to reprioritize estimated NM/NCA State allocations at that time.

Question (5). The budget proposes $1.7 million dollars to implement a Departmental Southwest Border Radio Initiative—in partnership with the Forest Service—to improve communications infrastructure amongst the various land management agencies, based on some issues the Inspector General uncovered.

a. Can you talk about how this funding specifically addresses the concerns raised by the Inspector General? Will this initiative improve Interior's ability to communicate with Border Patrol and State and local law enforcement as well?

Answer. The funding proposed for the fiscal year 2017 Bureau of Land Management Deferred Maintenance budget will allow the Department of the Interior to complete the first pilot projects aimed at resolving deficiencies in the land mobile radio program in an area with a critical need for improved communications. Projects to be completed with these funds will focus on resolving concerns over safety of DOI personnel using and maintaining land mobile radio facilities. In addition, land mobile radio infrastructure will be consolidated, removing redundant facilities and upgrading equipment on remaining sites. The priorities for work will be accomplished in collaboration with other DOI Bureaus in the region including the National Park Service (NPS), Fish and Wildlife Service, Bureau of Indian Affairs, the Bureau of

Reclamation and the U.S. Forest Service. There may be as many as 32 sites in the region which could be eliminated through this consolidation.

When completed this project will lead to reduced infrastructure costs since there will be fewer sites to maintain and the condition of the remaining sites will be much improved. A key aspect of this project is the cross Bureau cooperation within DOI and the inclusion of the USFS as a full partner. Safety and effectiveness will also be enhanced with upgraded replacement communication hardware and operational support for the infrastructure will be shared.

Radio coverage and reliability will be enhanced which should lead to better communications with other partners including the U.S. Border Patrol. The work to be done is not focused on correcting interoperability issues. These issues have been addressed through MOUs and exchange of radio frequencies and encryption keys. On the Southwest Border, the DOI and USFS Law Enforcement have been successfully interoperable with the Department of Homeland Security since 2008, in some cases much earlier. Our Officers communicate on these shared frequencies and infrastructure every day.

b. Can you tell us why BLM was chosen as the lead agency and why the Park Service and Fish and Wildlife Service do not have similar increases proposed for this project?

Answer. BLM currently administers and operates a regional interagency dispatch center in Phoenix and has been a leader in managing land mobile radio communications in the region. The Arizona BLM State Directors Office and staff have collaborated with other DOI Bureaus and the USFS to identify priority actions needed to address field communications issues and has entered into a partnership with the NPS, FWS, and the USFS in the border region of New Mexico and Arizona. Radio communications are a common operational activity and BLM has agreed to manage the requested funds to address needs across all Bureaus and the USFS. The funding will be used to consolidate existing infrastructure, removing towers that provide overlapping service and upgrading the towers that will remain and serve all the participating agencies. The specific sites to be worked on will be identified based on technical information gathered through a collaborative effort with the partners involved.

c. What are the tangible impacts we will see on the ground in New Mexico if this program is funded?

Answer. When project work is completed there should be fewer land mobile radio communication sites in New Mexico since sites that provide overlapping service will be removed. This will reduce environmental impacts and maintenance costs for unneeded sites. Maintenance visits to the sites will no longer be required reducing disturbance to sensitive species and removal of equipment and associated infrastructure will allow for restoration of previously impacted sites.

Improvements at remaining communication sites will increase radio coverage and reliability for DOI Bureaus and the USFS and should make these sites viable for colocation use by the New Mexico FirstNet Public Safety Broadband Network, counties, cities, and other Federal agencies.

Question (6). I am the lead cosponsor of legislation with Senator Wyden that would require the Department to collect royalties for coal mined on Federal lands based on the actual market value of coal. The bill also increases transparency within the Federal coal program by making it a requirement to calculate and publish the going market rate for coal and coal transportation.

I know that you have called for a comprehensive review of the coal program. What is the status of that review, and the expected timetable for completion? Will the reforms proposed in our bill be evaluated as part of your review? Please provide a comprehensive list of the issues that you expect to investigate or address as part of the review.

Answer. On January 15, 2016, the Secretary of the Interior issued Order No. 3338 directing the BLM to conduct a broad, programmatic review of the Federal coal program it administers through preparation of a Programmatic EIS under NEPA. The Order was issued in response to a range of concerns raised about the Federal coal program, including, in particular, concerns about whether American taxpayers are receiving a fair return from the development of these publicly owned resources; concerns about market conditions, which have resulted in dramatic drops in coal demand and production in recent years, with consequences for coal-dependent communities; and concerns about whether the leasing and production of large quantities of coal under the Federal coal program is consistent with the Nation's goals to reduce greenhouse gas emissions to mitigate climate change. In light of these issues, the coal Programmatic EIS will identify and evaluate a full range of potential re-

forms to the Federal coal program, including those related to ensuring a fair return to the taxpayer.

On March, 30, 2016, the Department of the Interior published a Notice of Intent (NOI) to prepare a programmatic EIS to review the Federal coal program and conduct public scoping meetings [Pages 17720–17728 [FR DOC # 2016–07138]]. Scoping meetings are scheduled for May and June 2016. The BLM will invite interested agencies, States, American Indian tribes, local governments, industry, organizations and members of the public to submit comments or suggestions to assist in identifying significant issues and in determining the scope of this Programmatic EIS. All comments and recommendations submitted during the scoping process will be collected for consideration. The estimated completion time for the program review is 3 years.

Question (7). Secretary Jewell, the demand for ivory and rhino horns has skyrocketed. The Congressional Research Service reports that a rhino horn is worth more than $50,000 per kilogram—more than even gold and platinum. The profit incentive is just staggering—so it's no surprise that terrorist networks such as al-Shabab and the Lord's Resistance Army are turning to poaching to support their operations.

The fiscal year 2016 Omnibus included $8 million dollars, a 12 percent boost, to the Fish and Wildlife Service's efforts to combat wildlife trafficking. The budget request for fiscal year 2017 would maintain that increased effort.

What progress is the Service making on hiring the planned 45 new specialists and agents, and how quickly will they get into the field? What other steps is the Service planning to take with the new funds, both in 2016 and 2017?

Answer. The fiscal year 2016 Omnibus included an $8 million dollar increase for the U.S. Fish and Wildlife Service's Office of Law Enforcement to combat wildlife trafficking. These funds are being used to strengthen the Service's capacity to combat trafficking by hiring additional international special agent attachés, digital forensic specialists, intelligence analysts, and special agents.

International attachés are experts on investigating wildlife trafficking and breaking up smuggling networks. They are stationed around the world in strategic international locations to strengthen ongoing international partnerships to protect the world's wildlife from poaching and illegal trade. In August 2015, three additional attachés were stationed at U.S. embassies in Dar es Salaam, Tanzania; Gaborone, Botswana; and Lima, Peru. The Service continues to work with the State Department to place a fifth attaché in Beijing, China in May 2016. In 2016, the Service plans to deploy an additional four international attachés in areas of the world that have been determined to be strategically important in the fight to combat illegal wildlife trafficking. The Service is in final discussions with the State Department concerning the placement of four additional attachés. The Service anticipates advertising the positions before July 2016, with selections for the positions to be made in August 2016.

Digital forensic specialists support agents in case development and execution by providing forensic results concerning computers, cell phones, and other digital technologies. The Service is currently reviewing applications for the five new special agent positions funded in the fiscal year 2016 budget. The Service aims to place the new agents at the Digital Evidence and Recovery Computer Forensics Lab by June 2016.

Intelligence analysts support special agents and wildlife inspectors working in the field in numerous ways, including providing information concerning trends in wildlife trafficking, researching information on smuggling syndicates, performing criminal history checks, and producing and distributing intelligence bulletins. The Service is on track to select a new Special Agent in Charge of the expanded Intelligence Unit in June 2016, with plans to bring the remaining agents on board shortly thereafter.

The Service has also hired 43 special agents to ensure its ability to enforce the Nation's wildlife laws and safeguard protected species. The additional special agents will address the current staffing level shortfall that has limited the Service's ability to perform ongoing investigations. A portion of the new agents have completed initial training and are already working at field locations. Final training will take place in June 2016 at the Federal Law Enforcement Training Center in Glynco, Georgia. After completion of all training, new agents will be deployed to the field for direct interdiction of illegal commercial exploitation by organized crime elements.

Through increased staff in these vital areas of expertise, the Service will strengthen our own and our global partners' capacity to prosecute and deter criminals that engage in the poaching and smuggling of wildlife and plants.

Question (8). Secretary Jewell, the Fish and Wildlife Service's efforts to reintroduce the Mexican gray wolf in New Mexico and Arizona has had a promising start. They were virtually eliminated from the wild by the 1970s, but thanks to the program, the population reached 110 wolves in 2014.

Unfortunately, the 2015 count brought some troubling news—the Mexican gray wolf population dropped to 97. I also understand that two wolves passed away during or right after being darted and tagged by the Fish and Wildlife Service. Wild populations can naturally ebb and flow, but we know that these wolves are at risk for a number of factors. It's critical that we investigate closely.

a. Do your scientists have a theory for why the population is trending downward? Are there plans underway to help support a rebound?

Answer. The drop in numbers from 2014 to 2015 represents 1 year and does not yet indicate a trend. The population decline in 2015 was due to a combination of factors. There were 13 Mexican wolf mortalities (5 illegal, 2 natural, 1 capture complication, 5 awaiting necropsy) compared to 11 in 2014. Ten additional wolves are considered fate unknown compared to three in 2014. Finally, a significantly lower proportion of pups survived to December, relative to last year: 55 percent survival in 2015 compared to 86 percent in 2014. In the 2014 Environmental Impact Statement for the revised regulations for the Mexican wolf experimental population, the Service anticipated an average annual population growth of 10 percent. In 2014, Mexican wolves had higher than usual pup survival and a population growth of 30 percent. The Service maintains that the strategy for the experimental population continues to be viable. The Service and its partners remain focused and committed to making this population genetically healthy and robust so that it can contribute to the recovery of the Mexican wolf.

b. Why did the two wolves die during the count and capture operation? Has the Fish & Wildlife Service done a full review of their policies and procedures to prevent similar accidents?

Answer. The Service conducted preliminary investigations immediately following the two deaths during the 2015 count and capture operation. Both wolves are undergoing necropsies at the Service's Forensics Laboratory in Ashland, Oregon, to determine cause of death. We have requested that the lab specifically determine if either wolf experienced capture myopathy and if there was any other contributing underlying health issue. The techniques, protocol, and drugs used were the same as those used throughout this year's and last year's count and capture operations. This year, 13 additional wolves were successfully darted, processed, collared, and released back into the wild. Based on the outcome of the necropsies, the Service will determine if any changes to protocol are needed.

QUESTIONS SUBMITTED BY SENATOR ROY BLUNT

Question (1). Could you please provide a comparison of the revenues returned in the last several fiscal years from oil, gas, and coal leases, versus any revenue brought in from solar energy. Please include in the report what the revenue is generated from, such as rents. Further, please identify where there this money is accounted for in the Interior budget. It does not appear to be documented in Interior's Office of Natural Resources Revenue which lists revenues from other sources.

Answer. A comparison of the revenues generated for oil, gas, coal and solar energy are provided in the tables below.

Revenues from oil, gas, and coal leases: Data with respect to revenue generated by the production of Federal oil, gas, and coal is maintained by ONRR on its Statistical Information Web page (http://statistics.onrr.gov/ReportTool.aspx). Information made available is broken down into information on Revenue Type (reported royalties, rents, bonus, and other revenues), Commodity (leased solid and fluid minerals), and the total Revenue collected. Definitions for these categories are provided by ONRR on its Web site.

The tables below present the total revenue collected from Federal oil, gas, and coal production on both an annual and aggregate basis from fiscal year 2010 through fiscal year 2015.

OIL AND GAS REVENUE

Fiscal Year 2010–2015

Type	Fiscal Year 2010	Fiscal Year 2011	Fiscal Year 2012	Fiscal Year 2013	Fiscal Year 2014	Fiscal Year 2015
Gas (mcf)	$1,444,790,640	$1,360,191,600	$976,195,024	$1,008,066,360	$1,161,006,314	$915,071,846
NGL (gal)	$210,688,138	$253,774,439	$298,372,582	$284,957,168	$279,379,284	$154,241,725
Oil (bbl)	$870,739,500	$1,110,883,193	$1,275,117,598	$1,459,973,589	$1,634,903,295	$1,269,596,134
Total Royalt es	$2,526,218,278	$2,724,849,233	$2,549,685,203	$2,752,997,117	$3,075,288,892	$2,338,909,704
Oil & Gas Rents	$48,800,065	$45,002,896	$43,758,281	$41,036,833	$36,684,823	$30,886,105
Oil & Gas Bonuses	$201,872,509	$233,467,555	$283,051,994	$188,982,219	$161,936,505	$112,651,284
Total Royalty, Rent and Bonus	$2,776,890,852	$3,003,319,684	$2,876,495,478	$2,983,016,170	$3,273,910,220	$2,482,447,094

COAL LEASE REVENUE

Fiscal Year 2010–2015

Fiscal Year 2010	Fiscal Year 2011	Fiscal Year 2012	Fiscal Year 2013	Fiscal Year 2014	Fiscal Year 2015	Total Fiscal Year 2010–2015
$856,793,241	$956,018,290	$1,364,744,116	$1,165,066,525	$1,161,706,509	$1,137,450,911	$6,641,809,592

Revenues from Solar Energy: ONRR does not collect renewable resource revenue information. Renewable energy revenue is reported by the BLM in the Public Land Statistics. Since 2010, the BLM has authorized 35 solar projects. As of April 2016, there are 6 projects that have been built and are providing power to the grid. The following table summarizes renewable energy revenues that BLM has collected over the past several years.

The table below reflects annual payments that the BLM collects for solar and wind energy development. It does not include revenues collected through competitive bidding for development parcels at an auction since there has only been one auction held to date, in 2014, which resulted in over $5.8 million in bids. This is an amount that the BLM collected in addition to the amounts reported in the table below. All revenues, including bid monies, are sent to the General Fund at the Treasury.

SOLAR AND WIND ENERGY REVENUE

Fiscal Year 2010–2015

Year	Solar	Wind	Fiscal Year Total
Fiscal Year 2010	$3,911.76	$3,115,480.25	$3,119,392.01
Fiscal Year 2011	$6,230,982.09	$3,713,338.16	$9,944,320.25
Fiscal Year 2012	$5,199,338.42	$4,354,260.32	$9,553,598.74
Fiscal Year 2013	$6,343,817.72	$4,315,856.99	$10,659,674.71
Fiscal Year 2014	$7,307,687.93	$5,402,276.42	$12,709,964.35
Fiscal Year 2015	$10,686,757.63	$4,538,337.65	$15,225,095.28
Totals	$35,772,495.55	$25,439,549.79	$61,212,045.34

Question (2). Given that your department has concluded that a PEIS for the coal leasing program is necessary, will you commit to refraining from other major modifications to the coal program while this analysis is being conducted?

Answer. The intent of the discretionary Programmatic EIS is to analyze potential leasing and management reforms to the current Federal coal program in response to concerns raised by the Government Accountability Office, the Interior Department's Office of Inspector General, Members of Congress, interested stakeholders and the public. Any potential reforms or changes to the Federal coal program will be identified in the scoping process.

Question (3). You have indicated that a number of coal leases that have received record of decisions will be grandfathered. Are you firmly committed to allowing those lease sales to move forward as planned?

Answer. The Secretarial Order states that applications having records of decisions or decision records issued by either the surface management agency or the bureau at the time of the order will be processed and not affected by the pause.

QUESTIONS SUBMITTED BY SENATOR MITCH MCCONNELL

Question (1). The Consolidated Appropriations Act of 2016 (Public Law 114–113) included a directive to require the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide States with technical reports, data, analyses, comments received, and documents related to the environmental review and environmental impact statements for the agency's proposed stream buffer zone regulation. To date, what has OSMRE done in conjunction with the Department of Interior to comply with Congress' directive?

Answer. OSMRE made these documents available to all of the States on March 24, 2016. Reference materials cited in the proposed rule were uploaded on the Web site *regulations.gov* with the exception of reference materials protected by copyright law.

Question (2). The Office of Surface Mining and Enforcement (OSMRE) claims that States have been reluctant to work with the agency despite their outreach efforts on the proposed stream buffer zone regulation. The Energy and Environment Cabinet in Kentucky sent a letter to your agency on February 8, 2016, indicating that the State agency would be interested in receiving the information directed by Congress in the Consolidated Appropriations Act of 2016 (Public Law 114–113) to see how those studies and assessment documents compare with their own findings and reviews. Where is your agency in the process of responding to this request? What steps will your agency take to ensure that the newly elected and appointed officials in the commonwealth of Kentucky are brought up to speed with the proposed rule and reviews and findings associated with it? What sort of engagement can the Kentucky Energy and Environment Cabinet expect from your agency before the stream buffer zone rule is finalized?

Answer. OSMRE has and will continue to honor its commitment to provide the State of Kentucky as well as all other States the information directed by Congress. In this regard, OSMRE scheduled a series of technical meetings to provide answers to questions the States might have with any of the documents provided. The State of Kentucky was invited to participate in these meetings held on April 14, 2016 and on April 21, 2016.

QUESTIONS SUBMITTED BY SENATOR BILL CASSIDY

Question (1). In 1996 Congress passed the National Technology Transfer and Advancement Act (NTTAA). The law prohibits the use of technical standards unique to the Federal government in lieu of voluntary consensus standards as they relate to agency rule making. However, the Blowout Preventer Systems and Well Control final rule, RIN 1014–AA11 violates the NTTAA by using government unique technical standards. This violation makes it impossible to implement numerous portions of the rule while remaining compliant with existing law. In its formulation of the rule BSEE also infringes upon OMB Circular A–119. The circular requires the publishing of a NTTAA "statement" in its Notice of Proposed Rulemaking (NPRM) detailing why government unique technical standards were necessary in lieu of consensus standards if exceptional reasons existed.

a. Why did BSEE not include a NTTAA statement in its original NPRM?

Answer. BSEE's Blowout Preventer Systems and Well Control final rule is consistent with the NTTAA's requirement that agencies use technical standards that are developed or adopted by voluntary consensus standards bodies rather than government-unique standards. The final rule expressly incorporates the following voluntary consensus technical standards as required by the NTTAA:

—American Petroleum Institute (API) Standard 53 ("Blowout Prevention Equipment Systems for Drilling Wells");
—ANSI/API Specification (Spec.) 11D1 (Packers and Bridge Plugs,
—ANSI/API Spec. 16A (Drill-through Equipment);
—API Spec. 16C (Choke and Kill Systems);
—API Spec. 16D (Control Systems for Drilling Well Control Equipment and Control Systems for Diverter Equipment);
—ANSI/API Spec. 17D (Design and Operation of Subsea Production Systems—Subsea Wellhead and Tree Equipment); and

—ANSI/API RP 17H (Remotely Operated Vehicle Interfaces on Subsea Production Systems).

The final rule does not use government-unique standards in lieu of voluntary consensus standards. As a result, BSEE is not required to provide a statement that identifies government-unique standards and explain why using voluntary consensus standards would be inconsistent with law or otherwise impractical.

b. How does BSEE plan to implement all of rule RIN1014–AA11 if key provisions violate existing statues?

Answer. BSEE does not believe that any provisions of the rule violate existing statutes. As BSEE described in the preamble to the proposed rule, pursuant to the Outer Continental Shelf Lands Act (OCSLA), Congress authorized BSEE to promulgate regulations concerning natural resources of the Outer Continental Shelf.[3] BSEE relied on this legal authority as its basis for developing and issuing the final Blowout Preventer Systems and Well Control rule. The final rule is consistent with OCSLA and other existing statutes described in the rulemaking record.

c. Does the Department plan to publish a NTTAA statement and reopen the public comment period?

Answer. As the Blowout Preventer Systems and Well control rule complies with the requirements of the NTTAA and the guidance in OMB Circular A–119 concerning the Bureau's identification of voluntary consensus standards used in the rule, the Department does not plan to reopen the public comment period.

Question (2). The NTTAA does allow for exceptions from the voluntary consensus standards mandate when their use "is inconsistent with applicable law or otherwise impractical" and requires agencies to "transmits to the Office of Management and Budget an explanation of the reasons for using such standards." In accordance with 15 U.S.C. § 272.

a. Please explain the Department's process for justifying a NTTAA exemption when BSEE was actively involved in creating and approving the consensus standards at issue.

Answer. BSEE's promulgation of the final Blowout Preventer Systems and Well Control rule is consistent with the NTTAA's requirement that agencies use technical standards that are developed or adopted by voluntary consensus standards bodies, rather than government–unique standards, when such technical standards are consistent with the law and practical (e.g., when the technical standards would serve the agency's program needs and would not be ineffectual, inefficient or inconsistent with the agency's mission). The final rule does not rely on an exemption from the NTTAA.

b. Please explain the justification that voluntary consensus standards are "impractical", especially taking into account that government-unique standards lack a technical basis and create potential safety risks.

Answer. Each departure from voluntary consensus standards is founded on a sound technical basis, generally accepted engineering best practices, and BSEE's determination that the relevant consensus standard, or a specific provision of the standard, does not provide an acceptable level of risk, risk management, or due care. For example, API Standard 53 contains a provision that allows an operator to opt out of a requirement to have dual shear rams on a subsea blowout preventer. The final version of the Blowout Preventer Systems and Well Control rule incorporates API Standard 53, but does not incorporate the "opt-out" provision as the Bureau determined that full incorporation of Standard 53 cannot provide the same level of safety as an absolute requirement to have dual shear rams. In instances such as this, where the Bureau decided that a departure from consensus standards was appropriate, BSEE exercised its authority carefully with an eye toward establishing an acceptable level of protection while also balancing risks, costs, and the availability of alternative approaches in establishing regulatory requirements.

Question (3). In its NPRM BSEE claims the proposed rule is not a "significant energy action" triggering the need for a Statement of Energy Effects under the Outer Continental Shelf Lands Act ("OCSLA") and procedural requirements under Executive Order 13211 (May 18, 2001) requiring a "Statement of Energy Effects." However, based on comments received from the public it is unreasonable for BSEE and the Department to continue this claim. BSEE has acknowledged that the proposed rule in total "represents one of the most substantial rulemakings in the history of the BSEE and its predecessor organizations." While simultaneously and inconsistently claiming that the proposed rule is not a significant energy action under E.O.

[3] 80 Fed. Reg. 21505 (April 17, 2015); 43 U.S.C. 1334.

13211, BSEE has not met the mandate under OCSLA for a reasoned analysis of the rule.

Given the obvious and BSEE acknowledged impact this rule will have; will the Department renew its analysis and prepare the requisite Statement of Energy Effects and submit the Statement for public comment, as required by law?

Answer. The rule represents one of the most substantial rulemakings in BSEE history because it codifies significant improvements to the safety of well control operations, not because of any possible energy effects. The Bureau's analysis of the final rule indicates that it will not have a significant adverse effect on energy supply, distribution, or use because its estimated impacts will not exceed the thresholds established by OMB.[4]

Question (4). BOEM has stated that offshore sources have not been demonstrated to impact onshore air quality. At the same time, BOEM is currently undergoing air modeling studies to inform its air quality rulemaking and these studies are not expected to conclude until 2017. However it appears the agency is on the cusp of proposing an entirely new regulatory program for offshore operators.

a. Is the agency going to move forward with a proposed rule before receiving the results of the air modeling studies that are intended to inform the rule for which it has commissioned nearly $4 million? What assurance can you provide today that the agency will issue a draft report of the studies for public review and comment prior to finalizing the report or incorporating its conclusions into any revised regulatory requirements?

Answer. The proposed regulations continue the framework of the current BOEM air quality regulations. The framework, a construct in place since 1980 when the Department of the Interior first issued air quality regulations, was designed to meet the Department's statutory mandate to ensure that offshore oil and gas activities do not exceed onshore national ambient air quality standards (NAAQS).

Given today's landscape, we acknowledge the need to update the 36 year-old regulations to reflect current science and technology and recent determinations about pollutant levels that are potentially harmful to human health and the environment. The existing regulations reflect outdated air quality standards that the Environmental Protection Agency (EPA) has since revised to better reflect current science.

The proposed regulations will more effectively protect public health and the welfare of affected States. In addition, BOEM's current regulations do not take into account air quality impacts over State coastal waters, which BOEM believes would more accurately meet its statutory responsibility. Finally, revisions are also needed to address BOEM's responsibility to assess air quality impacts in the Arctic, as required by The Consolidated Appropriations Act, 2012 (Public Law 112–74).

The proposed regulations are designed to allow advances in science and assessment of air quality impacts to be flexibly and efficiently incorporated into BOEM's air quality rules, including results of the modeling studies currently underway. The modeling studies are intended to inform air quality requirements *within* the framework of the proposed regulations, not the framework itself. Consistent with BOEM's practice for scientific standards, the studies will be peer-reviewed and made public once final. Also, as BOEM's proposed regulation provides, any changes in the current emission exemption thresholds, which the models are designed to inform, would not occur until the studies are completed, and would not occur before BOEM gives notice in the *Federal Register* that it intends to revise the thresholds and provide an opportunity for public comment.

Conclusions about the environmental impact of OCS air emissions depend on the focus of review and the most recent science. Those assessments are determined when BOEM reviews site-specific plans of operations. In that context, it is possible for emissions to exceed significant impact levels or lead to deterioration of State air quality. Accordingly, it is necessary for BOEM to conduct a broad cumulative impact analysis, as well as a site-specific review of plans.

b. What justification does the agency have for moving forward without the results of the studies when your agency, through its environmental impact assessments, has repeatedly concluded that offshore sources do not impact onshore air quality?

Answer. The proposed regulations continue the framework of the current BOEM air quality regulations. The framework, a construct in place since 1980 when the Department of the Interior first issued air quality regulations, was designed to meet the Department's statutory mandate to ensure that offshore oil and gas activities do not exceed onshore national ambient air quality standards (NAAQS).

[4] OMB Memoranda 01–27 (Guidance for Implementing E.O. 13211) (2001).

Given today's landscape, we acknowledge the need to update the 36 year-old regulations to reflect current science and technology and recent determinations about pollutant levels that are potentially harmful to human health and the environment. The existing regulations reflect outdated air quality standards that the Environmental Protection Agency (EPA) has since revised to better reflect current science.

The proposed regulations will more effectively protect public health and the welfare of affected States. In addition, BOEM's current regulations do not take into account air quality impacts over State coastal waters, which BOEM believes would more accurately meet its statutory responsibility. Finally, revisions are also needed to address BOEM's responsibility to assess air quality impacts in the Arctic, as required by The Consolidated Appropriations Act, 2012 (Public Law 112–74).

The proposed regulations are designed to allow advances in science and assessment of air quality impacts to be flexibly and efficiently incorporated into BOEM's air quality rules, including results of the modeling studies currently underway. The modeling studies are intended to inform air quality requirements within the framework of the proposed regulations, not the framework itself. Consistent with BOEM's practice for scientific standards, the studies will be peer-reviewed and made public once final. Also, as BOEM's proposed regulation provides, any changes in the current emission exemption thresholds, which the models are designed to inform, would not occur until the studies are completed, and would not occur before BOEM gives notice in the *Federal Register* that it intends to revise the thresholds and provide an opportunity for public comment.

Conclusions about the environmental impact of OCS air emissions depend on the focus of review and the most recent science. Those assessments are determined when BOEM reviews site-specific plans of operations. In that context, it is possible for emissions to exceed significant impact levels or lead to deterioration of State air quality. Accordingly, it is necessary for BOEM to conduct a broad cumulative impact analysis, as well as a site-specific review of plans.

c. What reassurance can you provide that the agency will not rush, in order to meet an artificial deadline, the regulated community's ability to comment on the proposed rule and allow the agency time to engage with stakeholders as you analyze and digest those comments in order to incorporate any appropriate revisions into the final rule?

Answer. BOEM is proceeding with the rulemaking in a deliberative manner with ample opportunity for public comment. For instance, while drafting the Air Quality proposed rule, BOEM held a number of meetings and listening sessions with other government entities, and environmental and industry stakeholders. The proposed rulemaking provides 60 days for public comment following its publication on April 5, 2016 in the *Federal Register.* Additionally, the proposal was posted on BOEM's Web site on March 17, 2016, providing the public an additional 19 days to review the proposed rule. BOEM will carefully review the comments it receives on the proposed rule as it develops a final rule.

Question (5). BSEE is currently working to finalize its BOP/Well Control Rule which as proposed may actually decrease safety and increase risk. Will the final rule make offshore operations less safe and increase risk like the proposal did?

Answer. The Department announced the final rule on April 14, 2016, and the final rule was published in the *Federal Register* on April 29, 2016. The Bureau's analysis of the administrative record, including the many recommendations associated with the *Deepwater Horizon* blowout and explosion investigations and the public comments indicates that the final rule will reduce the risk of an offshore oil or gas blowout that could result in the loss of life, serious injuries, or substantial harm to the environment. Accordingly, the final rule represents one of the most significant safety and environmental protection reforms the Interior Department has undertaken since *Deepwater Horizon,* and builds upon a number of reforms instituted over the last 6 years to strengthen and modernize offshore energy standards and oversight.

a. Prior to the rule's proposal last year did DOI thoroughly examine all of the safety improvements made since 2010 and identify the existing gaps to determine what this rule needed to address?

Answer. Following the *Deepwater Horizon* tragedy, several immediate actions were taken to address specific offshore safety concerns involving drilling operations. The regulations that were issued in 2010 and 2012 provided new standards for well design, casing and cementing, and third-party certification of designs. These rules represented an important first step in addressing regulatory gaps in the offshore program, but did not address the full cadre of regulatory deficiencies identified after *Deepwater Horizon.*

The Blowout Preventer Systems and Well Control rule represents the next step in the process of creating a robust regulatory program that is responsive to all of

the recommendations received from the several investigations of the *Deepwater Horizon* incident. BSEE employed a number of strategies to ensure that regulatory gaps were identified and addressed, including, but not limited to, involving industry and other stakeholders in the development of the proposed rule and in the final rulemaking process.

b. DOI received significant comments and feedback on a number of safety concerns with the proposed rule. A recent Wall Street Journal article, which may have been written as a result of a DOI leak of the final rule, suggests that changes have been made to the proposal. What changes have been made to enhance safety?

Answer. The Blowout Preventer Systems and Well Control rule codifies many important improvements to offshore drilling. The final rule addresses key recommendations made after the *Deepwater Horizon* tragedy and closes gaps in existing regulations and updates BSEE regulations to reflect industry best practices. Parts of the final rule that were modified after the public comment period on the proposed rule include the safe drilling margin requirement, real-time monitoring, blowout preventer (BOP) inspection requirements, and BOP accumulator capacities.

As to the drilling margin requirement, text was added to clarify the acceptability of risk-based justifications for specifying an alternative drilling margin, which clearly provides the flexibility requested in numerous industry comments. With regards to the real-time monitoring provisions, language was revised to clarify the Bureau's intent and to address misperceptions reflected in the comments. The new provision reflects the Bureau's intent to allow maximum flexibility in complying with real-time monitoring requirements.

In addition to enhancing safety and flexibility, many of the changes reflected in the final rule will result in substantial cost-savings for offshore operators. For example, the final rule modifies the 5-year BOP inspection requirement, allowing inspections to occur in phases, provided every component is inspected once every 5 years. Compliance dates were also extended for several important requirements, including the extension of the requirement to use BSEE-Approved Verification Organizations (BAVOs) to perform certifications from 90 days to no later than 1 year from the date when BSEE publishes the list of BAVOs. In response to industry comments, the requirement to use "hydraulically operated locks" on surface BOPs was modified to allow the use of remote-controlled locks and the effective date of that requirement was extended to 3 years after the date of publication. These are just a few instances where comments and other feedback BSEE received were reflected in changes to the final rule.

c. A number of us in Congress have real concerns with the proposal all centered on safety and as a result the DOI needed to undertake a more robust analysis and engage in real dialogue to make sure the unintended consequences were addressed and the rule actually made offshore operations safer. As a result, the fiscal year 2016 omnibus spending bill expressed the need for more robust analysis and that further examination needed to take place prior to the finalization of the rule. Did DOI heed to the call of the Congress prior to finalizing and sending the rule to OMB? Why or why not?

Answer. Yes. BSEE conducted extensive stakeholder engagement after publication of the proposed rule and during the extended comment period. BSEE participated in numerous meetings with industry and other stakeholders before and after publication of the proposed rule on subject matter related to the Blowout Preventer Systems and Well Control rule, a number of which dealt specifically with clarifying stakeholders' written comments on the rule. BSEE also attended listening sessions arranged by the Office of Management and Budget (OMB) during the E.O. 12866 review period for the draft final rule, most of which were requested by members of industry. BSEE staff carefully considered all stakeholder comments and input.

The Bureau's comprehensive and transparent outreach was critical to the development of the final rule. The final rule does not represent a "one-size-fits-all" approach. Rather, the final rule incorporates sufficient flexibility to allow operators to focus on the ultimate goal of increasing safety and reducing risk offshore. The final rule also allows for the development and deployment of new technologies that lead to safer operations. Additionally, the final rule employs a phased implementation approach for some of its more complex provisions that gives industry sufficient time to come into compliance with new technological requirements.

d. Does the final rule address and fix all of the safety concerns stakeholders and Congress had with the proposal? Does the final rule enhance safety?

Answer. The final Blowout Preventer Systems and Well Control rule combines prescriptive and performance-based approaches to regulation to ensure that oil and

gas companies and offshore rig operators are cultivating a greater culture of safety with a focus on risk reduction. Based on the extensive technical comments received during the rulemaking process, several adjustments were made to provisions of the proposed rule that are reflected in the final rule. The final rule provides a level of flexibility sufficient to ensure that regulatory oversight keeps pace with technological advancement, provided future innovations can meet the rule's standards for safety performance. The key concerns of industry based on the proposed rule are addressed in the final rule including, but not limited to safe drilling margins, accumulator capacity, BOP inspection intervals, and real-time monitoring requirements. The Bureau firmly believes that the regulatory process has resulted in a final rule that will raise the bar for offshore safety, both in United States Federal waters and internationally.

SUBCOMMITTEE RECESS

[Whereupon, at 12:08 p.m., Wednesday, March 2, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

The CRA Wrap-Up To-Date

For weeks, the House has worked on a large-scale regulatory reform project **to protect our people from the abuses of the bureaucracy, rebalance our constitutional system of government, and improve our economy.**

We're doing this through a two-part plan. First, in order to return power to the people we passed the REINS Act and Regulatory Accountability Act to restructure how the bureaucracy makes and the courts litigate regulations. Second, we used the Congressional Review Act to overturn particular harmful Obama-era regulations and send them to the dustbin of history.

We began with regulatory reform first, because we know that if we don't change the structure of Washington and drain the bureaucratic swamp, we'll only get the same results. Not only that, but the Congressional Review Act gives us a limited time to overturn these Obama-regulations. We have a small

window of opportunity, and we're taking it.

Here's What We've Done

Overall, the House has passed 13 CRAs to overturn 13 terrible regulations:

1) **The Stream Buffer Rule** (H.J. Res. 38) would have saddled mines with unnecessary regulations, putting up to 64% of America's coal reserves off limits and threatening between 40,000 to 70,000 mining jobs. – ***Signed by President Trump***

2) **The SEC Disclosure Rule for Resource Extraction** (H.J. Res. 41) would have put an unreasonable compliance burden on publicly traded American energy companies, putting them at a disadvantage to foreign-owned businesses. – ***Signed by President Trump***

3) **The Social Security Service's Second Amendment Restrictions** (H.J. Res. 40) would increase scrutiny on up to 4.2 million law-abiding disabled Americans attempting to purchase firearms, potentially depriving people of their constitutional rights without proper due process protections. – ***Passed by the Senate***

4) **The Federal Contracts Blacklisting Rule** (H.J. Res. 37) would unjustly block many businesses accused of violating labor laws from federal contracts before they've even had a chance to defend themselves in court.

5) **The Bureau of Land Management Venting and Flaring Rule** (H.J. Res. 36) would further cap methane emissions in the oil and gas industry at a time when the industry is already dramatically reducing emissions, potentially wiping out family-owned marginal wells and costing an estimated $1 billion.

6) **The Bureau of Land Management Planning 2.0 Rule** (H.J. Res. 44) would reduce local authority over large swaths of land out west, massively expanding the federal government's control over more than 175 million acres of land—about 4,000 times the size of Washington, D.C.—in 11 western states.

7) **The Teacher Preparation Rule** (H.J. Res. 58) would force states to use Washington's standards to determine whether a teacher preparation program is effective, undermining local control over education and potentially exacerbating the shortage of special education teachers.

8) **The Education Accountability Rule** (H.J. Res. 57) would be an unfunded mandate imposing Washington's standard for how to assess schools on state and local governments.

9) **The Unemployment Insurance Drug Testing Rule** (H.J. Res. 42) would severely restrict states' ability to limit drug abusers from receiving unemployment benefits even if the drug users are not able and available for work, as the law requires.

10) **The State Retirement Plan Rule** (H.J. Res. 66) would treat employees unequally by allowing states to force some workers into second-tier government-run retirement accounts that lack the same protections as private-sector accounts.

11) **The Local Retirement Plan Rule** (H.J. Res. 67) would treat employees unequally by allowing certain localities to force some workers into second-tier government-run retirement accounts that lack the same protections as private-sector accounts.

12) **The National Wildlife Hunting and Fishing Rule** (H.J. Res. 69) would infringe on Alaska's right to sustainably manage fish and wildlife by overregulating hunting—a move that could set the stage for the federal government to undermine local control across the entire U.S.

13) **The Title X Abortion Funding Rule** (H.J. Res. 43) would force states to administer Title X health funding to abortion providers, even if states want to redirect those funds to community health centers and hospitals that offer more comprehensive coverage.

Hard at Work

From defending American workers to protecting our rights to savings children's lives, the House has been extremely productive the beginning of this year. But this is just the beginning. Regulatory reform—part of our 200-day agenda—will continue, and together with our efforts to repeal and replace Obamacare and reform the tax code, Republicans are just getting started.

Overall, the House has passed 13 CRAs to overturn 13 terrible regulations:

1) **The Stream Buffer Rule** (H.J. Res. 38) would have saddled mines with unnecessary regulations, putting up to 64% of America's coal reserves off limits and threatening between 40,000 to 70,000 mining jobs. – ***Signed by President Trump***

2) **The SEC Disclosure Rule for Resource Extraction** (H.J. Res. 41) would have put an unreasonable compliance burden on publicly traded American energy companies, putting them at a disadvantage to foreign-owned businesses. – ***Signed by President Trump***

3) **The Social Security Service's Second Amendment Restrictions** (H.J. Res. 40) would increase scrutiny on up to 4.2 million law-abiding disabled Americans attempting to purchase firearms, potentially depriving people of their constitutional rights without proper due process protections. – ***Passed by the Senate***

4) **The Federal Contracts Blacklisting Rule** (H.J. Res. 37) would unjustly block many businesses accused of violating labor laws from federal contracts before they've even had a chance to defend themselves in court.

5) **The Bureau of Land Management Venting and Flaring Rule** (H.J. Res. 36) would further cap methane emissions in the oil and gas industry at a time when the industry is already dramatically reducing emissions, potentially wiping out family-owned marginal wells and costing an estimated $1 billion.

6) **The Bureau of Land Management Planning 2.0 Rule** (H.J. Res. 44) would reduce local authority over large swaths of land out west, massively expanding the federal government's control over more than 175 million acres of land—about 4,000 times the size of Washington, D.C.—in 11 western states.

7) **The Teacher Preparation Rule** (H.J. Res. 58) would force states to use Washington's standards to determine whether a teacher preparation program is effective, undermining local control over education and potentially exacerbating the shortage of special education teachers.

8) **The Education Accountability Rule** (H.J. Res. 57) would be an unfunded mandate imposing Washington's standard for how to assess schools on state and local governments.

9) **The Unemployment Insurance Drug Testing Rule** (H.J. Res. 42) would severely restrict states' ability to limit drug abusers from receiving unemployment benefits even if the drug users are not able and available for work, as the law requires.

10) **The State Retirement Plan Rule** (H.J. Res. 66) would treat employees unequally by allowing states to force some workers into second-tier government-run retirement accounts that lack the same protections as private-sector accounts.

11) **The Local Retirement Plan Rule** (H.J. Res. 67) would treat employees unequally by allowing certain localities to force some workers into second-tier government-run retirement accounts that lack the same protections as private-sector accounts.

12) **The National Wildlife Hunting and Fishing Rule** (H.J. Res. 69) would infringe on Alaska's right to sustainably manage fish and wildlife by overregulating hunting—a move that could set the stage for the federal government to undermine local control across the entire U.S.

13) **The Title X Abortion Funding Rule** (H.J. Res. 43) would force states to administer Title X health funding to abortion providers, even if states want to redirect those funds to community health centers and hospitals that offer more comprehensive coverage.

Hard at Work

From defending American workers to protecting our rights to savings children's lives, the House has been extremely productive the beginning of this year. But this is just the beginning. Regulatory reform—part of our 200-day agenda—will continue, and together with our efforts to repeal and replace Obamacare and reform the tax code, Republicans are just getting started.

The CRA Wrap-Up To-Date

For weeks, the House has worked on a large-scale regulatory reform project **to protect our people from the abuses of the bureaucracy, rebalance our constitutional system of government, and improve our economy.**

We're doing this through a two-part plan. First, in order to return power to the people we passed the REINS Act and Regulatory Accountability Act to restructure how the bureaucracy makes and the courts litigate regulations. Second, we used the Congressional Review Act to overturn particular harmful Obama-era regulations and send them to the dustbin of history.

We began with regulatory reform first, because we know that if we don't change the structure of Washington and drain the bureaucratic swamp, we'll only get the same results. Not only that, but the Congressional Review Act gives us a limited time to overturn these Obama-regulations. We have a small

window of opportunity, and we're taking it.

Here's What We've Done

Overall, the House has passed 13 CRAs to overturn 13 terrible regulations:

1) **The Stream Buffer Rule** (H.J. Res. 38) would have saddled mines with unnecessary regulations, putting up to 64% of America's coal reserves off limits and threatening between 40,000 to 70,000 mining jobs. – ***Signed by President Trump***

2) **The SEC Disclosure Rule for Resource Extraction** (H.J. Res. 41) would have put an unreasonable compliance burden on publicly traded American energy companies, putting them at a disadvantage to foreign-owned businesses. – ***Signed by President Trump***

3) **The Social Security Service's Second Amendment Restrictions** (H.J. Res. 40) would increase scrutiny on up to 4.2 million law-abiding disabled Americans attempting to purchase firearms, potentially depriving people of their constitutional rights without proper due process protections. – ***Passed by the Senate***

4) **The Federal Contracts Blacklisting Rule** (H.J. Res. 37) would unjustly block many businesses accused of violating labor laws from federal contracts before they've even had a chance to defend themselves in court.

5) **The Bureau of Land Management Venting and Flaring Rule** (H.J. Res. 36) would further cap methane emissions in the oil and gas industry at a time when the industry is already dramatically reducing emissions, potentially wiping out family-owned marginal wells and costing an estimated $1 billion.

6) **The Bureau of Land Management Planning 2.0 Rule** (H.J. Res. 44) would reduce local authority over large swaths of land out west, massively expanding the federal government's control over more than 175 million acres of land—about 4,000 times the size of Washington, D.C.—in 11 western states.

7) **The Teacher Preparation Rule** (H.J. Res. 58) would force states to use Washington's standards to determine whether a teacher preparation program is effective, undermining local control over education and potentially exacerbating the shortage of special education teachers.

8) **The Education Accountability Rule** (H.J. Res. 57) would be an unfunded mandate imposing Washington's standard for how to assess schools on state and local governments.

9) **The Unemployment Insurance Drug Testing Rule** (H.J. Res. 42) would severely restrict states' ability to limit drug abusers from receiving unemployment benefits even if the drug users are not able and available for work, as the law requires.

10) **The State Retirement Plan Rule** (H.J. Res. 66) would treat employees unequally by allowing states to force some workers into second-tier government-run retirement accounts that lack the same protections as private-sector accounts.

11) **The Local Retirement Plan Rule** (H.J. Res. 67) would treat employees unequally by allowing certain localities to force some workers into second-tier government-run retirement accounts that lack the same protections as private-sector accounts.

12) **The National Wildlife Hunting and Fishing Rule** (H.J. Res. 69) would infringe on Alaska's right to sustainably manage fish and wildlife by overregulating hunting—a move that could set the stage for the federal government to undermine local control across the entire U.S.

13) **The Title X Abortion Funding Rule** (H.J. Res. 43) would force states to administer Title X health funding to abortion providers, even if states want to redirect those funds to community health centers and hospitals that offer more comprehensive coverage.

Subject: This Week in ENR
Date: Sunday, February 19, 2017 9:30:11 AM

Good morning, Tracy,

Below is your round-up and look-ahead of ENR committee activities. As always, feel free to reach out with questions, and check out @EnergyDems for up-to-date information and timely news clips.

CATCHING UP

Cantwell introduced a bipartisan volcano monitoring bill, S. 346. Residents of the Pacific Northwest are well aware of the hazards that volcanoes pose to many communities. Sen. Cantwell introduced a new volcano monitoring bill to help keep communities and travelers to our region safe. "*Volcano science, forecasts and warnings are critical to volcano preparedness in the Pacific Northwest. Washington state has five high-threat volcanoes in the Cascade Range, yet there is a gap in monitoring and understanding this volcanic activity. My bill seeks to ensure we have the science and technology needed to help keep communities safe. We need science to guide us,*" Sen. Cantwell said.

Cantwell and others urge Secure Rural Schools (SRS) funding. SRS payments provide critical revenues to more than 775 rural counties and 4,400 schools throughout the country, impacting nine million students across 41 states. Sen. Cantwell joined a bicameral, bipartisan delegation, urging OMB Director Mulvaney to fund the SRS program in the president's budget request. "*Without SRS, existing revenue sharing payments are not sufficient to support the services these counties must provide, and counties are forced to choose between critical services for their citizens*." Counties in Washington most affected include Skamania, Chelan, Yakima, Lewis and Okanogan.

WA Congressional Delegation writes Trump on the Pacific Northwest National Laboratory. Sen. Cantwell and the entire Washington Congressional Delegation wrote to President Trump, highlighting the groundbreaking, scientific contributions of the lab and pledging to work together on advancing policies that support the lab. "*The lab has made significant contributions to the resilience, security and reliability of the electric grid. PNNL also leads nuclear nonproliferation work for DOE's National Nuclear Security Administration, including work to safeguard nuclear materials. … We look forward to working with you and the Department of Energy to advance policies that will continue to support the lab's integral scientific innovation and technology development activities*."

Before Pruitt's confirmation, Cantwell demanded he recuse himself from lawsuits against the EPA. On Friday, February 18, the Republican Senate

confirmed Scott Pruitt as administrator of the U.S. Environmental Protection Agency (EPA). A few days earlier, Sen. Cantwell and 29 other senators requested that Pruitt recuse himself from participating in any matter related to litigation he pursued against the EPA while he was Oklahoma Attorney General: "*It is also impossible for you—or any action you may take as EPA Administrator—to be viewed as impartial if that action consists of the repeal or weakening of environmental protections through regulation that you originally sought to accomplish through litigation*." Sen. Cantwell held down the floor late into the night, speaking at 2:00 a.m. ET against Pruitt; click here for highlights.

Repeal of the Stream Protection Rule is signed into law. On Thursday, President Trump signed a measure to repeal President Obama's Stream Protection Rule. Earlier this month, Sen. Cantwell voted to keep the rule, arguing against the Trump administration's new War on Clean Water: "*There are going to be many attempts by this administration to harm clean water protections. Trump: 1, Clean Water: 0*."

COMING UP

In-state work period: February 20-24. Sen. Cantwell will be in Washington state with her constituents next week.

Once we're back: February 27-March 3

Perry, Zinke. Gov. Perry (Energy) and Rep. Ryan Zinke (Interior) weren't voted on before the Senate left for an in-state work period. On the evening of Monday, February 27, the Senate will vote to invoke cloture on Rep. Zinke—immediately following the vote to confirm Wilbur Ross (Commerce). After Rep. Zinke, the Senate will handle the nominations of Ben Carson (HUD) and Gov. Perry (Energy).

CRAs. The House has continued to vote on Congressional Review Act (CRA) disapproval resolutions, including one on a National Wildlife Hunting and Fishing Rule that affects Alaska. The Senate has not yet voted on this Alaska rule, the BLM Methane Waste Rule or the BLM Planning 2.0 Rule. We suspect the Senate could take up these and other non-ENR CRAs in the coming weeks.

No hearings. We do not have any hearings scheduled for when the Senate returns to DC. Nomination hearings could pick up once we receive names and paperwork for other Senate-confirmed positions in the Energy and Interior Departments, and the Federal Energy Regulatory Commission.

Cheers,

2017-02-21_DOI_Final_Competitive_Leasing_Rule_Attachments.pdf

---

Hi Amanda,

I hope you're settling in over there nicely!

Could you provide a *very* quick update on what DOI might be able to do to help companies like Anschutz who got wrapped into the Competitive Processes, Terms, and Conditions for Leasing Public Lands for Solar and Wind Energy Development regulation? (43 CFR Parts 2800 and 2880)

Thanks,

Jimmy Ward
Senior Legislative Assistant
Rep. Liz Cheney (WY – AL)

From: Roxane Perruso [mailto:Roxane.Perruso@tac-denver.com]

Subject: Meeting follow-up Competitive Leasing Rule

Hi Jimmy,

I hope you had a good holiday weekend. I wanted to follow-up with the materials I mentioned last week on the Department of Interior's final Competitive Leasing Rule. I've attached the Final Rule and our Memorandum regarding the significant financial impact the Final Rule will have on our wind energy project located in Wyoming. Under the Final Rule, we will pay $216 to $275 million over a thirty-year right-of-way grant. The resulting increase in costs is between $47 and $106 million dollars depending on the ultimate power pricing curve.

This Final Rule was issued at the very end of a 10-year permitting process. We believe that as a matter of fundamental fairness, the DOI shouldn't change the rules applicable to projects like ours that have gone through the regular permitting process and thought they had the certainty of the fee structure as it existed prior to this rule being promulgated.
We would love to see a solution to this issue inserted into S. 282/H.R. 825 (PLREDA). We are happy to discuss this further. Please call with any questions or if you need more information.

Thanks again for taking the time to meet with us.

DEPARTMENT OF THE INTERIOR **4310-84P**

Bureau of Land Management

43 CFR Parts 2800 and 2880

[LLWO301000.L13400000]

RIN 1004-AE24

Competitive Processes, Terms, and Conditions for Leasing Public Lands for Solar and Wind Energy Development and Technical Changes and Corrections for 43 CFR Parts 2800 and 2880

AGENCY: Bureau of Land Management.

ACTION: Final rule.

SUMMARY: Through this final rule the Bureau of Land Management (BLM) is amending its regulations governing rights-of-way issued under the Federal Land Policy and Management Act (FLPMA) and the Mineral Leasing Act (MLA). The principal purposes of these amendments are to facilitate responsible solar and wind energy development on BLM-managed public lands and to ensure that the American taxpayer receives fair market value for such development. This final rule includes provisions to promote the use of preferred areas for solar and wind energy development, called "designated leasing areas" (DLAs). It builds upon existing regulations and policies to expand BLM's ability to utilize competitive processes to offer authorizations for development inside or outside of DLAs. It also addresses the appropriate terms and conditions (including payment and bonding requirements) for solar and wind energy development rights-of-way issued under subparts 2804 and 2809. Finally, the rule makes technical changes, corrections, and clarifications to the existing rights-of-way regulations.

Some of these changes affect all rights-of-way, while some provisions affect only specific rights-of-way, such as those for transmission lines with a capacity of 100 kilovolts (kV) or more.

DATES: Effective Date: This final rule is effective [INSERT DATE 30 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER].

FOR FURTHER INFORMATION CONTACT: John Kalish, Bureau of Land Management, at 202-912-7312, for information relating to the BLM's solar and wind renewable energy programs, or the substance of the final rule. For information pertaining to the changes made for any transmission line with a capacity of 100 kV or more you may contact Stephen Fusilier at 202-912-7426. For information on procedural matters or the rulemaking process you may contact Charles Yudson at 202-912-7437. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339, to contact the above individuals.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

II. Background

III. Final Rule as Adopted and Responses to Comments

IV. Section-by-Section Analysis for Part 2800

V. Section-by-Section Analysis for Part 2880

VI. Procedural Matters

I. Executive Summary

The BLM initiated this rulemaking in 2011 through publication of an Advance Notice of Proposed Rulemaking (ANPR) seeking public comment on a potential

regulatory framework for competitive solar and wind energy rights-of-way. A proposed rule was published in the Federal Register on September 30, 2014, summarizing and discussing the comments that the BLM received on the ANPR. The proposed rule set forth a framework for the competitive leasing of solar and wind energy rights-of-way both inside and outside of designated leasing areas. It also proposed codifying existing solar and wind energy policies in 43 CFR part 2800, establishing a new acreage rent for wind energy projects, and updating the methods used to set acreage rents and megawatt (MW) capacity fees for existing and future solar and wind energy projects. In addition to the changes related to solar and wind energy development, the rule also proposed related updates to other provisions of the rights-of-way regulations, including those applicable to transmission lines with a capacity of 100 kV or more and pipelines 10 inches or more in diameter. Based on comments on the proposed rule and consideration of other factors, the BLM prepared this final rule.

Statutory and Regulatory Authority

Facilities for the generation, transmission, and distribution of electric energy are authorized under Title V of the FLPMA (43 U.S.C. 1761 – 1771) and its implementing regulations at 43 CFR part 2800. Section 504(g) requires that the BLM generally receive fair market value for a right-of-way. Under Title V, the BLM can issue easements, leases, licenses, and permits to occupy, use or traverse public lands for particular purposes. The BLM generally refers to all such rights-of-way as "grants." The final rule continues to refer to solar and wind energy development rights-of-way issued noncompetitively or outside a DLA as "grants," but designates solar and wind energy development rights-of-way issued competitively and within a DLA under revised subpart

2809 as "leases," to which specific requirements and benefits are attached, as explained below.

Rights-of-way for oil and gas pipelines are authorized under Section 28 of the MLA (30 U.S.C. 185), Sections 302, 303, and 310 of FLPMA (43 U.S.C. 1732, 1733, and 1740), and the applicable implementing regulations at 43 CFR part 2880. The BLM processes applications for these categories of rights-of-way in accordance with section 2884.11.

Policies

The BLM released a Draft Solar Energy Programmatic Environmental Impact Statement (EIS) on December 17, 2010 and released a Supplement to the Draft EIS on October 28, 2011. The Supplement to the Draft EIS contemplated a process to identify and offer public lands in solar energy zones (SEZs) through a competitive leasing process. The Supplement to the Draft EIS described how the BLM intended to pursue a rulemaking process to implement a competitive leasing program within SEZs. The BLM released the Final Solar EIS on July 27, 2012, and the Secretary of the Interior (Secretary) signed the Record of Decision (ROD) on October 12, 2012. The Solar Programmatic EIS ROD, or Western Solar Plan, likewise described the BLM's intent to establish a competitive leasing program within the SEZs.

The Western Solar Plan provides the foundation for a Bureau-initiated competitive process for offering lands for solar energy development within the SEZs. Similar comprehensive or regional land use planning efforts could be initiated by the BLM in the future to designate additional renewable energy development areas, such as for wind development. For example, the recently completed Desert Renewable Energy

Conservation Plan (DRECP) identified Development Focus Areas (DFAs) in Southern California that were designed to support wind, solar, and geothermal development. As explained elsewhere in this preamble, in the Western Solar Plan and in the DRECP Record of Decision (ROD), SEZs and DFAs, like all DLAs, represent areas that have been prescreened by the BLM and identified as having high energy generation potential, access to transmission (either existing or proposed), and low potential for conflicts with other resources. The rule supports the establishment of these areas through procedures to inform their identification and establishment.

Competitive Leasing Process

Existing regulations authorize the BLM to determine whether competition exists among right-of-way applications filed for the same facility or system; however, they do not allow the BLM to offer such lands competitively absent such a finding. The existing regulations allow the BLM to resolve any such competition using competitive bidding procedures. All such grants are issued subject to valid existing rights in accordance with 43 CFR 2805.14.

Building on recommendations and analysis in the Western Solar Plan, this final rule expands the existing regulations to allow the BLM to offer lands competitively on its own initiative, both inside and outside DLAs, even in the absence of identified competition. Within DLAs, the rule will require competitive leasing procedures except in certain circumstances, when applications could be considered outside the competitive process. Outside DLAs, the BLM will have discretion whether to utilize competitive leasing procedures. This rule identifies what constitutes a DLA, and outlines the competitive process for solar and wind energy leasing inside DLAs, including the

nomination process for areas inside DLAs, the process for reviewing nominations, the competitive bidding procedures to be deployed, and the rules governing administration of solar or wind energy leases issued through the competitive process.

Incentives

This rule includes various provisions to incentivize development inside rather than outside of DLAs. For example, the rule establishes a new $15 per acre application filing fee for right-of-way applications outside of DLAs to discourage speculative applications and encourage development in DLAs. In addition, a winning bidder outside a DLA will be deemed the "preferred applicant" and eligible to apply for a grant, while a winning bidder within a DLA will be offered a lease. A primary reason for this distinction is that the prescreening done by the BLM as part of the identification of DLAs enables it to issue a lease prior to the conclusion of the project-specific reviews (such project-specific reviews would, however, have to be completed prior to the commencement of construction).

Further, this final rule establishes a mechanism whereby bidders inside DLAs may qualify for variable offsets (a form of bidding credit) that will give them a financial advantage in the competitive bidding process. Specifically, a bidder that meets the qualifications set forth in the Notice of Competitive Offer for a particular offset will have an opportunity to pre-qualify for a reduction to their bid amount, up to 20 percent of the bid. Suppose, for example, a bidder pre-qualified for a 20 percent offset and then won the auction with a high bid of $100. The bidder would only be obligated to pay the BLM $80 for the lease. These reductions would be sale-specific and would be based on factors identified in the initial sale notice. The final rule gives the BLM the flexibility to vary

the factors that could enable a bidder to obtain a variable offset from one competitive offer to another, but possible factors include having an approved Power Purchase Agreement (PPA) or Interconnect Agreement, or employing a less water-intensive technology. Each of the factors will be identified in the Notice of Competitive Offer, which will also specify the pre-determined reduction (e.g., 5 percent) associated with any individual factor. The total aggregate reduction across all factors cannot exceed 20 percent.

Additional provisions that incentivize development within DLAs include a reduced nomination fee of $5 per acre, which is electively paid by a potential bidder, compared to $15 per acre non-elective application filing fee for competitive parcels outside of DLAs; a 10-year phase-in of the MW capacity fee inside a DLA as opposed to a 3-year phase-in of the fee outside of a DLA; and more favorable bonding requirements inside DLAs. Specifically, outside DLAs, bonding must be determined based on reclamation cost estimates, whereas inside DLAs, the final rule requires a standard bond in the amount of $10,000 per acre for solar energy development and either $10,000 or $20,000 per wind energy turbine for wind energy development, depending on the nameplate capacity of the turbine.

Finally, successful competitive processes within DLAs will result in the issuance of a 30-year fixed-term lease, whereas a successful competitive process outside of a DLA will result in a preferred applicant status for the winner. The 30-year fixed term lease issued to the high bidder for a parcel offered competitively within a DLA will increase the certainty for developers and, in turn, make it easier to secure financing or reach terms on other agreements. Specifically, the lease will provide developers with evidence of site

control, and they will obtain it much earlier in the review process than they would under existing regulations (notably, before project-specific NEPA reviews have been concluded).

Rents and Fees

The rule updates the payments currently established by BLM policies to ensure that the BLM obtains fair market value for the use of the public lands. Specifically, it updates and codifies the acreage rent for both solar and wind energy authorizations. The acreage rent will be based on the acreage of the authorization, using a 10 percent encumbrance value for wind energy authorizations and a 100 percent encumbrance value for solar energy authorizations. This compares to the 50 percent encumbrance value that is used for determining rent for linear rights-of-way on the public lands.

The acreage rent for linear rights-of-way and solar and wind energy rights-of-way will vary by individual counties and is based on agricultural land values determined from data published by the National Agricultural Statistics Service (NASS). The BLM may also determine on a project-specific or regional basis that a different rate should be utilized. The "acreage rent" component captures the value of unimproved rural land encumbered by a project.

In addition to acreage rent, the rule also updates and codifies the MW capacity fee that the BLM already charges under existing policies. As under existing policy, that fee is designed to capture the difference between a particular project area's unimproved land value and the higher value associated with the area's solar or wind energy development potential. The BLM uses a MW capacity fee as a proxy for the area's electrical generation development potential. That fee is calculated using a formula that includes the

nameplate capacity of the approved project, a capacity factor or efficiency factor that varies based on the average potential electric generation of different solar and wind technologies, the average wholesale prices of electricity, and a Federal rate of return based on a 20-year Treasury bond. In this final rule, the capacity factors used for calculating the MW capacity fee are 20 percent for solar photovoltaic (PV), 25 percent for concentrated solar power (CSP), 30 percent for CSP with storage capacity of 3 hours or more, and 35 percent for wind. Additionally, the final rule allows the BLM to determine, on a project-specific or regional basis, that a different net capacity factor is more appropriate, such as if a project takes advantage of a new technology (e.g., energy storage) or project design considerations (e.g., solar array layout).

The final rule increases the MW capacity fee currently established by BLM policy from $4,155 per MW to $5,010 per MW for wind energy authorizations, and reduces the MW capacity fee from $5,256 to $2,863 per MW for PV solar, from $6,570 to $3,578 per MW for concentrated photovoltaic (CPV) or CSP solar, and from $7,884 to $4,294 per MW for CSP with storage capacity of 3 hours or more. The rule provides for a three-year phase-in of the MW capacity fee for right-of-way grants outside DLAs (25 percent in year one, 50 percent in year two, and 100 percent for subsequent years) and for a longer, ten-year phase-in for right-of-way leases inside DLAs (50 percent for the first 10 years and 100 percent for subsequent years).

As explained elsewhere in this preamble, both the acreage rent and MW capacity fees adjust periodically based on identified factors, including changes in NASS survey values and wholesale power prices. In addition, based on comments received on the proposed rule, this final rule includes provisions that allow grant or lease holders the

option to select fixed, scheduled rate adjustments to the applicable per acre zone rate (or rent) and MW rate over the term of the right-of-way grant or lease. This scheduled rate adjustment method would be used in lieu of the rule's standard rate adjustment method, under which those rates could increase or decrease by irregular amounts depending on changes to NASS survey values or wholesale power prices.

The rule includes requirements to hold preliminary application review meetings after the submission of an application for a solar or wind energy project, including authorizing the BLM to collect cost recovery fees for those meetings. Through this final rule the BLM is also extending the preliminary application review meeting requirement to any transmission line having a capacity of 100 kV or more. This change is appropriate because both solar or wind energy projects and transmission lines with a capacity greater than 100 kV are generally large-scale facilities with greater potential for impacts and resource conflicts. Based on experience with existing solar and wind energy projects, the BLM has found that those preliminary application meetings provide both the applicant and the BLM with an opportunity to identify and discuss resource conflicts early on in the process. In addition, the rule provides for additional cost reimbursement measures, consistent with Sections 304(b) and 504(g) of FLPMA.

Changes to 43 CFR Part 2880

In addition to the changes to 43 CFR Part 2800, this final rule also revises several subparts of part 2880. These revisions are necessary to ensure consistency of policies, processes, and procedures, where possible, between rights-of-way applied for and administered under part 2800 and rights-of-way applied for and administered under part 2880. These changes are discussed in more detail in Section II of this preamble.

However, a proposal to require preliminary application review meetings for right-of-way applications for pipelines exceeding 10 inches in diameter was dropped from this final rule in response to comments.

II. Background

A. Rule Overview

The BLM published the proposed rule in the Federal Register on September 30, 2014 (79 FR 59022) for a 60-day comment period ending on December 1, 2014. In response to public requests for extensions of the public comment period the BLM extended the period for an additional 15 days on November 29, 2014, through December 16, 2014. We received 36 comment letters on the proposed rule. We also received similar feedback through stakeholder engagement meetings held as part of BLM's regular course of business. This final rule addresses the comments received during the comment period and during stakeholder engagement meetings in the section-by-section discussion in section III. of this preamble.

As explained above, the primary purpose of this rule is to facilitate the responsible development of solar and wind energy development on the public lands, with a specific focus on incentivizing development on lands identified as DLAs. To that end, this rule, in an amendment of section 2801.5, defines the term "designated leasing area" as a parcel of land with specific boundaries identified by the BLM land use planning process as being a preferred location for solar or wind energy that can be leased competitively for energy development. In this rule, the BLM amends its regulations implementing FLPMA to provide for two competitive processes for solar and wind energy rights-of-way on

public lands. One of the processes is for lands inside DLAs. The other process is for lands outside of DLAs.

For lands outside DLAs, the BLM amends section 2804.23 to provide for a competitive bidding process designed specifically for solar or wind energy development. Prior to this final rule, section 2804.23 authorized a competitive process to resolve competing right-of-way applications for the same facility or system. Under amended section 2804.23, the BLM can now competitively offer lands on its own initiative. The competitive process for solar and wind energy development on lands outside of DLAs is outlined in new section 2804.30.

The competitive process for lands inside DLAs is outlined in revised 43 CFR subpart 2809, which provides for a parcel nomination and competitive offer, instead of an application process.

This rule includes not only these competitive processes, but also a number of amendments to other provisions of the right-of-way regulations found at 43 CFR parts 2800 and 2880. The BLM determined that it is necessary to first articulate the general requirements for rights-of-way in order to set the solar and wind requirements apart.

For example, the final rule has mandatory bonding requirements for solar and wind energy, including a minimum bond amount. The BLM determined that bonding is necessary for all solar and wind energy rights-of-way because of the intensity and duration of the impacts of such authorizations. For other right-of-way authorizations, the BLM will continue to require bonding at its discretion under this final rule.

Other amendments to the regulations include changes in right-of-way application submission and processing requirements, rents and fees, and alternative requirement

requests. In addition, this final rule makes several technical corrections as explained in the section-by-section analysis below.

B. Statutory and Regulatory Background

FLPMA provides comprehensive authority for the administration and protection of the public lands and their resources and directs that the public lands be managed "on the basis of multiple use and sustained yield" (43 U.S.C. 1701(a)(7) and 1732(a)). As defined by FLPMA, the term "right-of-way" includes an easement, lease, permit, or license to occupy, use, or traverse public lands (43 U.S.C. 1702(f)). Title V of FLPMA (43 U.S.C. 1761 – 1771) authorizes the BLM to issue rights-of-way on the public lands for electric generation systems, including solar and wind energy generation systems. FLPMA also mandates that "the United States receive fair market value for the use of the public lands and their resources unless otherwise provided for by statute" (43 U.S.C. 1701(a)(9) and 1764(g)). Section 28 of the MLA (30 U.S.C. 185) and FLPMA provide similar authority for authorizing rights-of-way for oil and gas pipelines. The BLM has authority to issue regulations under both FLPMA (43 U.S.C. 1732, 1733, and 1740) and the MLA (30 U.S.C. 185 and 189).

The Energy Policy Act of 2005 (codified at 42 U.S.C. 15801 et seq.) (EPAct) includes provisions authorizing and encouraging the Federal Government to develop energy producing facilities. Title II of the EPAct includes a provision encouraging the Secretary to approve non-hydropower renewable energy projects (solar, wind, and geothermal) on public lands with a total combined generation capacity of at least 10,000 MWs of electricity by 2015. See Section 211, Public Law 109-58, 119 Stat. 660 (2005).

Since passage of the EPAct, the Secretary has issued several orders that emphasize the importance of renewable energy development on public lands and the Department of the Interior's (Department's) efforts to achieve the goal that Congress established in Section 211 of the EPAct. Secretarial Order No. 3283, "Enhancing Renewable Energy Development on the Public Lands," signed by Secretary Kempthorne on January 16, 2009, facilitates the Department's efforts to achieve the goal established by Congress in Section 211 of the EPAct. On March 11, 2009, Secretary Salazar signed Secretarial Order No. 3285, "Renewable Energy Development by the Department of the Interior," which describes the need for strategic planning and a balanced approach to domestic resource development. This order was amended by Secretarial Order 3285A1 in February 2010. Amended Order 3285A1 establishes the development of renewable energy on public lands as one of the Department's highest priorities.

While the BLM has already met the goal established by Congress by approving over 12,000 MWs of renewable energy by the end of 2012, the development of renewable energy resources on the public lands remains a national priority. To advance that goal, President Obama included in the administration's Climate Action Plan to reduce carbon pollution, released on June 25, 2013, a new goal for the Department to approve at least 20,000 MWs of new renewable energy capacity on federal lands by 2020. As of the end of fiscal year 2015, the BLM has reviewed and approved 60 projects capable of generating over 15,000 MWs of power.

The BLM has issued several instruction memoranda (IMs) that identify policies and procedures related to processing solar and wind energy right-of-way applications. The BLM is incorporating some of these existing policies and procedures into its right-

of-way regulations. The IMs can be found at: http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

Briefly, the IMs are as follows:

1. IM 2009-043, Wind Energy Development Policy. This IM provides guidance on processing right-of-way applications for wind energy projects on public lands;
2. IM 2011-003, Solar Energy Development Policy. This IM provides guidance on the processing of right-of-way applications and the administration of authorized solar energy projects on public lands;
3. IM 2011-059, National Environmental Policy Act (NEPA) Compliance for Utility-Scale Renewable Energy Right-of-Way Authorizations. This IM clarifies NEPA policy for evaluating solar and wind energy project right-of-way applications;
4. IM 2011-060, Solar and Wind Energy Applications – Due Diligence. This IM provides guidance on the due diligence requirements for solar and wind energy development right-of-way applications; and
5. IM 2011-061, Solar and Wind Energy Applications – Pre-Application and Screening. This IM provides guidance on the review of right-of-way applications for solar and wind energy development projects on public lands; and
6. IM 2016-122, Policy Guidance for Federal Land Policy and Management Act Right-of-Way Rent Exemptions for Electric or Telephone Facilities Financed or Eligible for Financing under the Rural Electrification Act of 1936, as amended (IM 2016-122). This IM provides guidance for processing requests for FLPMA right-of-way rent exemptions for electric and telephone facilities financed or

eligible for financing by the United States Department of Agriculture, Rural Utilities Service (RUS) under the Rural Electrification Act of 1936, as amended (Rural Electrification Act), 7 U.S.C.901 et seq. In particular, this IM makes clear that wind and solar entities that qualify under the Rural Electrification Act pay the MW capacity fees but not acreage rent.

In addition, in 2005 and 2012 the BLM issued landscape-level land use plan amendment decisions supported by programmatic EISs to facilitate wind and solar energy development. These land use plan amendments guide future BLM management actions by identifying desired outcomes and allowable uses on public lands.

On June 24, 2005, the BLM published the Final Programmatic Environmental Impact Statement on Wind Energy Development on BLM-Administered Lands in the Western United States (Wind Programmatic EIS) (70 FR 36651), which analyzed the environmental impact of the development of wind energy projects on public lands in the West and identified approximately 20.6 million acres of public lands with wind energy development potential (http://windeis.anl.gov). Following the publication of the Wind Programmatic EIS, the BLM issued the ROD for Implementation of a Wind Energy Development Program and Associated Land Use Plan Amendments (Wind Programmatic EIS ROD) (71 FR 1768), which amended 48 BLM land use plans. The Wind Programmatic EIS ROD did not identify specific wind energy development leasing areas, but rather identified areas that have potential for the development of wind energy production facilities, along with areas excluded from consideration for wind energy facility development because of other resource values that are incompatible with that use.

On July 27, 2012, the BLM and the Department of Energy published the Notice of Availability of the Final Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States (Solar Programmatic EIS) (77 FR 44267). The Solar Programmatic EIS assessed the environmental, social, and economic impacts associated with utility-scale solar energy development on public lands in Arizona, California, Colorado, Nevada, New Mexico, and Utah (http://solareis.anl.gov). On October 12, 2012, the Department and the BLM issued the Western Solar Plan, which amended 89 BLM land use plans to identify 17 solar energy zones (SEZs) and identify mandatory design features applicable to utility-scale solar development on BLM managed lands. The Western Solar Plan also described the BLM's intent to use a competitive offer process to facilitate solar energy development projects in SEZs. SEZs, including those identified in the Western Solar plan, will be considered DLAs under this final rule.

This final rule is one of the steps being taken by the Department and the BLM to promote renewable energy development on the public lands. It implements one of the Western Solar Plan's key recommendations, namely that the BLM institute a process whereby it can competitively offer lands within DLAs. In addition to addressing recommendations in the Western Solar Plan, the final rule also implements suggestions for improving the renewable energy program made by the Department of the Interior's Office of Inspector General for the Department, initially in a draft report and carried over to the final report (Report No. CR-EV-BLM-0004-2010), and by the Government Accountability Office (GAO) (Audit No. 361373), both of which address the use of competitive leasing for solar and wind development authorizations. The Inspector

General (OIG) reviewed the BLM's renewable energy activities to assess the effectiveness of the BLM's development and management of its renewable energy program. The IG also made recommendations on other aspects of the BLM's right-of-way program.

The OIG report discusses only wind energy projects, as the solar energy program was not at a stage where it had been fully implemented. However, based on experience gained from its authorization of solar projects, the BLM believes that recommendations made for the wind energy program would also benefit the solar energy program. Other OIG recommendations pertained to the amounts and collection procedures for bonds for wind energy projects. These recommendations included:

1. Requiring a bond for all wind energy projects and reassessing the minimum bond requirements;
2. Tracking and managing bond information;
3. Developing and implementing procedures to ensure that when a project is transferred from one entity to another, the BLM would return the first bond to the company that obtained it and request a new bond from the newly assigned company; and
4. Developing and implementing Bureau-wide guidance for using competitive bidding on wind and solar energy rights-of-way.

The BLM concurred with all of the OIG's recommendations. The last recommendation is one of the principal reasons for developing this rule. The other recommendations form the basis for other changes being made as part of the BLM's operating procedures that are also addressed through this rulemaking.

Through this rulemaking, the BLM amends regulations in 43 CFR parts 2800 and 2880, and in particular:

1. Section 2804.12, to establish preliminary application review requirements for solar and wind energy development, and for development of any transmission line with a capacity of 100 kV or more;
2. Section 2804.25, to establish application processing and evaluation requirements for solar and wind energy development;
3. Section 2804.30, to establish a competitive process for public lands outside of DLAs for solar and wind energy development;
4. Section 2804.31, to establish a two-step process for solar or wind energy testing and conversion of testing areas to DLAs;
5. Section 2804.35, to establish screening criteria to prioritize applications for solar or wind energy development;
6. Section 2804.40, to establish a requirement to propose alternative requirements with a showing of good cause;
7. Section 2805.11(b), to establish a term for granting rights-of-way for solar or wind energy development;
8. Section 2805.12(c), to establish terms and conditions for a solar or wind energy development grant or lease;
9. Section 2805.20, to provide more detail on bonding requirements;
10. Sections 2806.50, 2806.52, 2806.54, 2806.56, and 2806.58, to provide information on rents for solar energy development rights-of-way;

11. Sections 2806.60, 2806.62, 2806.64, 2806.66, and 2806.68, to provide information on rents for wind energy development rights-of-way;

12. Subpart 2809, to establish a competitive process for leasing public lands inside DLAs for solar and wind energy development; and

13. Provisions in 43 CFR part 2800 pertaining to transmission lines with a capacity of 100 kV or more.

In addition to these amendments, this rule also makes several technical changes, corrections, and clarifications to the regulations at 43 CFR parts 2800 and 2880. The following table provides a summary of the principal changes made in this final rulemaking. The table shows: a description and CFR reference to the existing rule, a description of the changes in the proposed rule, and a description of the changes made in this final rule. The BLM made minor revisions throughout the final rule to improve its readability, which are not noted in this table but are discussed in the section- by- section analysis of this preamble.

Table 1 - Abbreviated Descriptions of the Major Changes Made to **43 CFR Parts 2800 and 2880 by this Rule**

43 CFR Reference and Description	**Changes between Proposed Rule and Existing Regulations**	**Changes between Final Rule and Proposed Rule**	**Additional Comments**
2801.5(b) – Acronyms and terms	Adds definitions for 10 items and revises definitions for 3 items, mostly pertaining to solar and wind energy development.	This final rule adopts the definitions in the proposed rule, except that under the final rule the definitions allow the BLM to determine a more appropriate Net Capacity Factor for rights-of-way with storage on a case-by-	Changes made in this section were based on comments received from the public to account for the application filing fee, energy storage, and MW rate.

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
		case basis. No other substantive changes were made from the proposed to the final rule.	
2801.6 – Scope	Clarifies that the regulations in this part apply to all systems and facilities identified under section 2801.9(a)	No changes were made from the proposed to the final rule for this section.	
2801.9 – When do I need a grant?	Revises language in paragraph (a)(7) to include solar and wind development facilities. Adds paragraph (d) that references solar and wind energy projects.	The testing provisions at new paragraphs (d)(1) and (d)(2) are revised to include both solar and wind facilities, as opposed to just wind.	Changes made in this section were based on comments received from the public requesting that the testing provisions account for solar facilities as well as wind facilities.
2802.11 – Designation of right-of-way corridors and leasing areas	Adds a process for designating leasing areas for solar and wind energy projects.	No changes were made from the proposed to the final rule.	
2804.10 – Actions to be taken before filing a right-of-way application	Discusses pre-application requirements and specifically addresses solar and wind filing requirements.	Removes all discussion or requirements for pre-application meetings. Now the only change from the existing regulation is to include designated leasing areas in paragraph (a)(2).	Requirements of this section are also applicable to transmission lines with a capacity of 100 kV or more. Based on comments received, the final rule removes the provision in the proposed rule that would have applied certain application

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
			requirements to pipelines greater than 10 inches in diameter.
2804.12 – Right-of-way application requirements	Discusses additional filing fees required for solar and wind energy applications.	This section has been retitled to improve clarity. This section also removes requirements for pre-application meetings and substitutes preliminary application review meetings that will occur after rather than before an application is filed. This section is also revised to clarify how the BLM will use the IPD-GDP to update fees.	Changes made in this section were based on comments received from the public. The paragraphs formerly located in section 2804.10 (b) and (c) are now found in sections 2804.12(b) and (c).
2804.14 – Processing fees for grant applications	Gives the BLM discretion to collect the estimated reasonable costs incurred by other Federal agencies.	No changes were made from the proposed to the final rule for this section.	
2804.18 and 2804.19 – Master agreements and major projects	Adds information on cost reimbursement requirements for work performed by other Federal agencies.	No changes were made from the proposed to the final rule.	
2804.20 – Determining reasonable costs for work on major (Category 6) rights-of-ways	Section title revised for clarity. Adds discussions on right-of-way work performed by other Federal agencies and pre-application requirements for major rights-of-way.	Any reference to "pre-application" requirements was removed to be consistent with other changes made to this final rule to reference preliminary application meetings.	Changes made in this section were based on comments received from the public in regards to collecting cost recovery with the submission of an application.

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
2804.23 – Competitive process for applications	Adds provisions for competition for solar and wind energy rights-of-way, both inside and outside of designated leasing areas.	Minor changes were made from the proposed to the final rule. The latter clarifies that the BLM will not competitively offer lands where a plan of development (POD) has been accepted and cost recovery established. The requirement to publish in a newspaper is now optional instead of required.	Changes made in this section were based on comments received from the public requesting that the BLM provide assurance that it will not competitively offer lands if a developer has committed considerable time and resources to a project, as evidenced by the existence of a complete POD and executed cost recovery agreement.
2804.24 – Use of Standard Form 299 for submitting a right-of-way application	Updates the circumstances when an application is not required to account for competitive offers under both sections 2804.23(c) and subpart 2809.	No changes were made from the proposed to the final rule for this section.	
2804.25 – BLM actions in processing a right-of-way application	Describes POD requirements and adds additional other requirements for solar and wind energy applications. Covers instances where a right-of-way is authorized to resolve a trespass.	Changes were made from the proposed to the final rule to reflect the shift from "pre-application meetings" to "preliminary application review meetings" as described in section 2804.12. The requirement to publish in a newspaper is now optional instead of	Changes were made in the final rule for clarity, especially a description of what constitutes "unpaid debts." Other changes were made to accommodate new requirements for solar and wind rights-of-way and to clarify when the

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
		required.	time clock begins for a due diligence request.
2804.26 – Circumstances when the BLM may deny your application	Adds additional situations where the BLM may deny your application, including specific examples for solar and wind energy applications.	Adds language to correspond to the due diligence requirements found in sections 2804.12 and 2804.25. Additional language added to provide consideration when the BLM may deny an application when circumstances are outside of an applicant's control.	This change was made to be consistent with other changes in this final rule.
2804.27 – What fees are owed if an application is not completed?	Revises this section to include any pre-application costs that must be paid if an application is withdrawn or rejected.	Removes the term pre-application costs and substitutes preliminary application review costs.	This change was made to be consistent with other changes in this final rule with respect to the pre-application meeting identified in the proposed rule.
2804.30 – Description of the competitive process for solar or wind energy development	Adds section 2804.30, which describes the competitive process for solar or wind energy development outside of DLAs.	Several minor changes were made from the proposed to the final rule, including removing a reference to mitigation costs, a statement that filing fees will be refunded to unsuccessful bidders, and that a successful bidder will have site control over applications from other developers (by virtue of being identified as the	The final rule changes were made principally for clarification. The change in notification requirements is consistent with other changes in this final rule.

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
		preferred applicant following completion of the sale process). Additionally, the requirement to publish in a newspaper is now optional instead of required.	
2804.31 – Site testing for solar and wind energy	No section 2804.31 in proposed rule.	Adds section 2804.31.This new section describes how the BLM will inform the public that site-testing applications will be accepted for lands within a DLA.	This new section is a result of public comments on the proposed rule requesting clarification on site testing procedures. This new section does not make any changes to existing policies or procedures.
2804.35 – Prioritizing solar and wind energy applications	Adds section 2804.35 which describes a process for prioritizing solar and wind energy applications.	The rule clarifies that the BLM will generally prioritize the processing of solar and wind energy leases issued under subpart 2809 over applications for solar and wind energy grants issued under subpart 2804. Other minor revisions were made in response to comments and discussed further in the section-by-section analysis.	The changes were made to clarify how the BLM will prioritize leases and applications.
2804.40 – Alternative requirements	No section 2804.40 in proposed rule.	Adds a provision that allows an applicant to submit an alternate requirement if it is	This section was added in response to comments about the BLM need for a

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
		believed that the original requirements cannot be met.	process for applicants to demonstrate, based on a showing of good cause, the reasons for its failure to meet the rule requirements and demonstrate why alternative requirements should be put in place in their stead.
2805.10 – Approving or denying a grant	Includes right-of-way leases in addition to grants, and adds specific items to be included within a solar or wind energy grant or lease.	No changes were made from the proposed to the final rule.	
2805.11– What does a grant contain?	Adds specific terms for solar and wind energy grants and leases.	Removed specific references to "wind" so that section would apply to project testing for either solar or wind.	This change was made to be consistent with other changes in this final rule.
2805.12 – Terms and conditions in a right-of-way authorization	Revises this section in its entirety and adds specific terms and conditions for solar and wind energy grants and leases.	Adds new section 2805.12(e) stating that good cause must be shown for extension of time requests. This section now includes solar in addition to wind energy development processes. Other revisions in this section are discussed in the section-by-section analysis.	Changes made in this section were based on comments received from the public, concerning a holder's inability to meet BLM requirements in some circumstances.
2805.14 – Rights	Adds section	Removed specific	This change was

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
conveyed by a right-of-way grant	2805.14(g) allowing for renewal applications for wind projects and section 2805.14 (h) allowing renewal for site testing grants	references to "wind" so that section would apply to project testing for either solar or wind.	made to be consistent with other changes in this final rule.
2805.15 – Rights retained by the United States	Adds a provision requiring common use of your right-of-way for compatible uses.	No changes were made from the proposed to the final rule.	
2805.16 – Payment of monitoring fees	Adds a provision to allow the BLM to collect monitoring fees for expenses incurred by other Federal agencies.	Adds the word "inspecting" in addition to the existing word "monitoring."	This change was made to be consistent with other changes in this final rule.
2805.20 – Bonding requirements	Adds new section 2805.20 describing bonding requirements.	The final rule adds a requirement to have periodic reviews of project bonds for adequacy. Also, the bond amounts for wind turbines are changed to be based on the nameplate capacity. The final rule also explains that the BLM may consider factors in addition to the reclamation cost estimate (RCE), such as the salvage value of project components, when determining bond amounts.	Changes made in this section were based on comments received from the public.
2806.12 – Payment of rents	Adds provisions for the payment of rents for non-linear rights-of-way, including	No changes were made from the proposed to the final rule for this section.	

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
	solar and wind grants and leases.		
2806.13 – Late payment of rents	Adds penalties for non-payment of rents and removes the $500 limit for late payment fees.	No changes were made from the proposed to the final rule.	
2806.20 – Rents for linear right-of-way grants	Describes where you may obtain a copy of the current rent schedule.	No changes were made from the proposed to the final rule.	
2806.22 – Changes in the Per Acre Rent Schedule	Corrects a reference to the IPD-GDP.	No changes were made from the proposed to the final rule.	
2806.24 – Making payment for a linear grant	Requires making a payment for the initial partial year, along with the first year's rent. Also, provides for multiple year payments.	No changes were made from the proposed to the final rule.	
2806.30 – Communication site rents	The communication site rent schedule is removed. Several other minor changes made for clarification.	No changes were made from the proposed to the final rule.	
2806.34 – Calculation of rent for a multiple-use communication facility	Corrects an existing citation to read section 2806.14(a)(4).	No changes were made from the proposed to the final rule.	
2806.43 – Calculation of rents for passive reflectors and local exchange networks	Changes a former reference to new section 2806.70.	No changes were made from the proposed to the final rule.	
2806.44 – Calculation of rents for a facility	Changes a former reference to new section 2806.70.	No changes were made from the proposed to the final	

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
owners that authorizes communication uses		rule.	
2806.50 – Rents and fees for solar energy rights-of-way.	Existing section 2806.50 (provisions for determining rents where the linear right-of-way schedule or the communication rent schedule do not apply) is redesignated as section 2806.70. New section 2806.50 introduces rents and fees for solar energy rights-of-way.	No substantive changes were made to the final rule.	
2806.51 – Scheduled Rate Adjustment	Not in the proposed rule; added to the final rule in response to comments received.	This section gives solar project proponents the option of selecting scheduled rate adjustments to the per acre zone rate and MW rate for an individual grant or lease, instead of following the process in the rule for periodic adjustments in response to changes in NASS values and wholesale market prices. Parallel revisions were made to 2806.52 for grants and 2806.54 for leases.	These changes were made in response to comments received from the public and were designed to provide project proponents with the option to choose greater payment certainty over the life of a right-of-way grant or lease.
2806.52 through 2806.58 Provide data for rents and	Sections 2806.50, 2806.52, 2806.54, 2806.56, and 2806.58	The rule now allows for solar energy site testing. The	The methodology of determining rents and fees for

fees for solar energy projects	describe rents and fees for solar energy authorizations.	calculation of the acreage rent has been expanded to explain the process more thoroughly. Acreage rent reductions are now adjusted to show greater rent reductions in certain States for solar energy rights-of-way.	wind is the same as solar, except where noted in the preamble. Changes made in this section were based on comments received from the public and to be consistent with other changes in this final rule.
2806.60 through 2806.68 Provide data for rents and fees for wind energy projects	Sections 2806.60, 2806.62, 2806.64, 2806.66 and 2806.68 describe rents and fees for wind energy authorizations.	The changes to these sections parallel the changes in sections 2806.50 through 2806.58.	Changes made in this section were made to be consistent with other changes in this final rule.
2806.61 – Scheduled Rate Adjustment	Not in the proposed rule; added to the final rule in response to comments received.	Similar to the provisions of 2806.51. This section gives wind project proponents the option of selecting scheduled rate adjustments to the per acre zone rate and MW rate for an individual grant or lease, instead of following the process in the rule for periodic adjustments in response to changes in NASS values and wholesale market prices. Parallel revisions were made to 2806.62 for grants and 2806.64 for leases.	These changes were made in response to comments received from the public and were designed to provide project proponents with an option to choose greater payment certainty over the life of a right-of-way grant or lease.

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
2806.70 –Rent determinations for other rights-of-way	Adds redesignated section 2806.70, which contains the text formerly found at section 2806.50, with minor modifications.	No changes were made from the proposed to the final rule.	This section is applicable to all rights-of-way that are not subject to rent schedules.
2807.11 – Contacting the BLM during operations	Specifies requirements when a change in a right-of-way grant is warranted.	No changes were made from the proposed to the final rule.	
2807.17 – Grant suspensions or terminations	This provision contains the regulation formerly located at section 2809.10.	No changes were made from the proposed to the final rule.	
2807.21 – Assigning a grant or lease	Revises the title to include leases and clarifies when an assignment is or is not required.	Adds two events that may require an assignment. Clarifies that changing only a holder's name does not constitute an assignment and explains how the BLM will process a change only to a holder's name for a grant or lease. It also clarifies that ownership changes within the same corporate family do not constitute an assignment.	Changes made in this section were based on comments received from the public requesting clarity on assignments and name changes.
2807.22 – Renewing a grant	Revises the title to include leases and clarifies that if you apply for a renewal before it expires, your grant will not expire until a decision has been made on your renewal request.	No changes were made from the proposed to the final rule.	

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
Subpart 2809 – Grants for Federal agencies	Existing language in this subpart redesignated as new paragraph (d) of section 2807.17. The title is changed to reflect that it now pertains to competitive leasing for solar or wind energy rights-of-way. This subpart is divided into several added sections as described below.	No changes were made from the proposed to the final rule.	
2809.10 Competitive process for leasing public lands for solar and wind energy projects	Section 2809.10 provides for solar and wind energy leasing inside designated leasing areas.	Clarifies that leases under this section generally have processing priority over grant applications to the extent they require the same BLM resources. No other changes were made from the proposed to the final rule.	Changes made in this section were made to be consistent with other changes in this final rule.
2809.11 – Solicitation of nominations	Section 2809.11 describes how the BLM will solicit nominations for solar or wind energy development.	The requirement to publish in a newspaper is now optional instead of required.	This change is consistent with other notification requirements in the final rule.
2809.12 – Parcel selection	Section 2809.12 describes how the BLM will select and prepare parcels.	No changes were made from the proposed to the final rule.	
2809.13 – Competitive offers for solar and wind energy development	Section 2809.13 describes how the BLM will conduct a competitive offer for solar or wind energy development.	A reference to lease mitigation requirements is added. The requirement to publish in a newspaper is now	The reference to mitigation was added in response to comments received from the public. The

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
		optional instead of required.	notification change is consistent with other notification requirements in the final rule.
2809.14 – Acceptable bids	Section 2809.14 describes the types of bids that the BLM will accept.	The words "and mitigation costs" were removed to be consistent with section 2804.30.	Changes made in this section were made to be consistent with other changes in this final rule.
2809.15 – How will BLM select the successful bidder?	Section 2809.15 describes how the BLM will select a successful bidder.	No changes were made from the proposed to the final rule.	
2809.16 – Variable offsets	Section 2809.16 identifies when variable offsets will be applied.	Added a new offset factor for preparing draft biological strategies and plans.	Changes made in this section were based on comments received from the public on variable offset factors.
2809.17 – Rejection of bids	Section 2809.17 describes conditions when the BLM may reject bids or re-conduct a competitive offer.	No changes were made from the proposed to the final rule.	
2809.18 – Lease terms and conditions	Section 2809.18 identifies terms and conditions that will apply to leases.	Paragraph (e)(2) of this section is changed so bond amounts for wind turbines reflect their nameplate capacity. Paragraph (e)(3) is added to this section to account for testing.	These changes are consistent with changes to section 2805.20.
2809.19 – Applications made inside designated leasing areas	Section 2809.19 describes situations when an application may be accepted inside a DLA.	This section is revised to clarify how the BLM will handle applications submitted inside DLAs.	The changes made in the final rule were made in response to comments and are

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
			intended to clarify the final rule.
2884.10 – What needs to be done before filing an application for an oil or gas pipeline right-of-way?	Adds a provision to this section that describes several additional steps, including pre-application meetings, to be taken if an application is for a pipeline 10 inches or more in diameter.	The reference to pre-application meetings and additional requirements for pipelines greater than 10 inches were removed, resulting in no changes being made from the existing regulation.	See the discussion in section 2804.10 of this preamble for additional information on changes made in response to comment.
2884.11 – Information submitted with application	Adds provision to be consistent with POD template development schedule and other requirements.	No changes were made from the proposed to the final rule.	
2884.12 – Processing fees for an application or permit	Adds information on cost reimbursement requirements for work performed by other Federal agencies.	No changes were made from the proposed to the final rule.	
2884.16 – Master Agreements	Adds information on cost reimbursement requirements for work performed by other Federal agencies.	No changes were made from the proposed to the final rule.	
2884.17 – Processing Category 6 right-of-way applications	Adds discussions on right-of-way costs for work performed by other Federal agencies to this section.	No changes were made from the proposed to the final rule.	
2884.18 – Competing applications for the same pipeline	Adds discussions on right-of-way costs for work performed by other Federal agencies to this section.	The requirement to publish in a newspaper is now optional instead of required.	This change is consistent with other notification requirements of this final rule.
2884.20 – Public notification requirements for an application	Adds a provision to this section that we may put a notice on the Internet or use	The requirements to publish in a newspaper are now optional instead of	This change is consistent with other notification requirements of this

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
	other forms of notification as deemed appropriate.	required.	final rule.
2884.21 – Application processing by the BLM	The BLM will not process your application if you are in trespass. Several other minor changes were made to be consistent with other changes made in these regulations.	Changes are made to section 2884.21 consistent with those made to section 2807.21.	Changes made in this section were made to be consistent with other changes in this final rule.
2884.22 – Additional information requirements	No change was proposed for this section.	This section was revised by changing the reference found in paragraph (a) from section 2804.25(b) to 2804.25(c).	This change was not proposed, but is made to be consistent with other changes in this final rule. No other changes were made to this section.
2884.23 – When can my application be denied?	To be consistent with section 2804.27, section 2884.23 was changed to state that the BLM may deny an application if the required POD fails to meet the development schedule and other requirements for oil and gas pipelines.	No changes were made from the proposed to the final rule.	
2884.24 – Fees owed if application is withdrawn or denied.	Changes made to be consistent with section 2804.27, would require an applicant to pay any pre-application costs submitted under section 2884.10(b)(4).	Since pre-application meetings are no longer required in this final rule and additional requirements for pipelines greater than 10 inches were removed, the final rule	The revisions to this section suggested by the proposed rule are not included in the final rule based on comments received from the public on

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
		does not make any changes to this existing provision.	BLM's criteria for large-scale pipeline projects.
2884.30 – Showing of good cause	There was no section 2884.30 in proposed rule.	This section was added to be consistent with section 2804. 40.	This section was added to be consistent with other changes in this final rule.
2885.11 – Terms and conditions	This section makes reference to section 2805.12(b) (bond requirements for FLPMA authorizations) and makes those bonding requirements applicable to MLA rights-of-way. Also, the regulation will be clarified by providing guidance on terms of MLA grants.	No changes were made from the proposed to the final rule.	
2885.15 – Rental charges	Clarifies that there is no reduction in rents for grants or TUPs, except as provided in section 2885.20(b).	No changes were made from the proposed to the final rule.	
2885.16 – When is rent paid?	Requires making a payment for the initial partial year, along with the first years rent. Also, provides for multiple year payments.	No changes were made from the proposed to the final rule.	
2885.17 – Consequences for not paying or paying rent late	New paragraph (e) explains the circumstances under which the BLM would retroactively collect rents or fees.	No changes were made from the proposed to the final rule.	
2885.19 – Rents	Provides information	No changes were	

43 CFR Reference and Description	Changes between Proposed Rule and Existing Regulations	Changes between Final Rule and Proposed Rule	Additional Comments
for linear right-of-way grants	about where you may obtain a copy of the current rental schedule.	made from the proposed to the final rule.	
2885.20 – Per Acre Rent Schedule calculations	Would remove an obsolete provision (existing paragraph (b)(1)) that provided for a 25 percent reduction in rent for calendar year 2009.	No changes were made from the proposed to the final rule.	
2885.24 – Monitoring fees	Provides an updated table describing monitoring categories, but without the cost schedule. Paragraph (b) provides information about where to obtain a copy of the current monitoring cost schedule.	Minor revisions were made consistent with changes to section 2805.16.	Changes made in this section were made to be consistent with other changes in this final rule.
2886.12 – When you must contact the BLM during operations	Adds to this section, contact requirements for when there is a need for changes to a right-of-way grant and to correct discrepancies.	No changes were made from the proposed to the final rule.	
2887.11 – Assigning a right-of-way grant or TUP	Clarifies this section to show when an assignment is or is not required.	Adds two events that may require an assignment. Clarifies that a change in a holder's name only does not constitute an assignment.	These changes are made to be consistent with section 2807.21.
2887.12 – Renewing a grant	Clarifies that if you apply for a renewal before it expires, your grant will not expire until a decision has	No changes were made from the proposed to the final rule.

	been made on your renewal request.		

III. Final Rule as Adopted and Responses to Comments

General Comments by Topic

Competitive Process Comments

A number of comments agreed with the BLM's proposals to create a competitive process for solar and wind development.

One comment stated that the proposed rule, if made final, would be a positive first step in improving the existing processes for solar and wind energy development by incentivizing development in appropriate areas, helping developers estimate costs, and providing a fair return to the taxpayer for the use of public lands. The BLM did not make any changes in response to this comment.

Another comment, on the other hand, recommended that the BLM maintain its current pre-application and application processes rather than adding untested or unproven administrative processes to promote competition inside and outside of DLAs. The BLM notes that it has already successfully used competitive processes when authorizing renewable energy development and it continues to gain experience with competitive auctions. The BLM also intends to continue improving its solar and wind energy policies, including by building upon the provisions codified in this final rule, to reduce administrative timeframes and costs in order to support reasonable and responsible

project development, such as those policies designed to further streamline application review and processing.

Several comments provided statements on the use of a competitive process for issuing grants.

One comment stated that we should clarify that the competitive bid process applies only to renewable energy authorizations. The BLM only agrees with this comment in part. In this final rule, the BLM has codified competitive processes inside of DLAs that relate only to solar and wind energy rights-of-way. However, the final rule modifies existing regulations so that those same competitive processes may also be used outside of DLAs and for other types of rights-of-way in the future, such as when they are necessary to resolve other situations where there are competing right-of-way and other land use authorization requests or when the BLM otherwise determines it is appropriate to initiate a competitive process for a particular use in a given area. Specifically, the final rule expands the BLM's ability to initiate a competitive process for other rights-of-way relative to existing regulations. Should the BLM hold a competitive offer for another type of right-of-way, it would be appropriate for the BLM to use processes similar to those developed for this rule because those policies were developed based on sound competitive principles. Therefore, utilizing them as a model in other areas would promote consistency across the agency.

One comment stated that competitive leasing would both lengthen and complicate project siting, using the recent Dry Lake competitive offering in Nevada as an example, noting that the preparations for competition took years. The BLM believes that much of the work required for competitive leasing has already been completed for solar energy in

the SEZs identified in the Western Solar Plan and other DLAs established by other planning efforts. The upfront work done when identifying these areas provides a basis for them to be offered under the most favorable competitive process provisions of this rule. That analysis also increases the certainty that the BLM will approve a project in those areas, which ultimately reduces the overall project review timeframes. The work done in establishing a DLA through the land use planning process, including completion of a NEPA analysis, provides a framework from which future project-specific analyses can tier, which should save time and money for both the BLM and project developers. Additionally, by expanding the circumstances under which the BLM can utilize competitive procedures the final rules provides a more direct path than was available to the BLM when setting up the Dry Lake SEZ sale in Nevada.

To further support development in these areas, the BLM is also developing regional mitigation strategies for many of the identified SEZs. While the existence of a regional mitigation strategy is not a prerequisite for holding a competitive sale, the BLM believes that such strategies further clarify development requirements in a given area allowing auction participants to more carefully evaluate potential costs and requirements when formulating a project or a bid in advance of competitive sale.

Collectively, these efforts and the provisions of this rule are consistent with existing policies to encourage the timely and responsible development of renewable energy while protecting the public land and its resources.

One comment suggested that competition should be used only where there are multiple applications for use of the same land. While the BLM intends to use competition in those circumstances, it does not believe that is the only circumstances

where such processes are appropriate. The existence of competition is not only indicated by competing application; in some situations competition would be determined where other evidence of competitive interests becomes known through emails, letters, and other contact with the public. As a result, the BLM does not believe it is appropriate to limit the use of competitive leasing regulations to just instances of competing applications. Instead, the provisions of this rule have been designed to provide more flexibility. The BLM is able to hold competitive offers inside DLAs, outside DLA, in response to competing applications, and on its own initiative, in order to encourage development in areas where it determines those processes to be appropriate, such as when it determines that fewer resource conflicts are present. In total, the BLM believes that the competitive processes established by this final rule will enable the BLM to encourage solar and wind energy development on public lands, while also protecting the sensitive resources found on those lands..

Summary of Key Changes Between the Proposed and Final Rule

One comment suggested that we use a table to identify technical changes, corrections, and clarifications being made to the right-of-way regulations by this rule, similar to the table we included in the preamble of the proposed rule. We agree and have included a similar table in this preamble.

Pipeline and Transmission Line Comments

Some comments questioned the BLM's description of pipelines 10 inches or greater in diameter as a measure for large-scale pipeline projects and recommended the removal of additional processes such as mandatory pre-application meetings to facilitate

Federal and State reviews of the project. Alternatives for the description of a large-scale project were suggested, such as using a total acreage of disturbance.

In light of these comments, the BLM has decided to remove the description of large-scale pipelines and additional processes required for such projects from the final rule. While some comments included recommendations for alternative ways of determining a threshold for large-scale pipelines, the BLM decided that it must further analyze how it will identify large-scale pipelines before including requirements for such projects in its regulations. If the BLM were to take such action in the future it would coordinate with other Federal agencies, as appropriate, to identify an appropriate threshold for large-scale pipeline projects and establish consistent, non-duplicative requirements. The removal of the pipeline threshold from the final rule requires deletion of the requirements in the proposed rule that were specifically applicable to large-scale pipeline projects. A more detailed discussion of these revisions can be found in the relevant portions of the section-by-section analysis in this preamble (see sections 2804.10, 2884.10, and 2885.11 of this preamble).

Some comments also questioned the BLM's description of transmission lines with capacities of 100 kV or more as constituting large-scale transmission projects. Those commenters recommended the removal of that threshold and the associated requirements. Some comments suggested that there are no readily identifiable 100 kV transmission projects by which to determine if the proposed threshold is a fair representation of a large-scale project. The BLM does not agree with these comments and believes that the description is appropriate since there is a clear separation between lower voltage transmission lines, generally 69 kV or less, and high voltage transmission lines,

beginning at 115 kV of capacity or more. For example, the North American Electric Reliability Corporation established the 100 kV threshold as a bright line criterion to determine which transmission lines are included in the Bulk Electric System, a system that is used by the Regional Reliability Organization for electric system reliability. The BLM is maintaining the description of transmission lines with capacity of 100 kV or the rule as a suitable description to determine large-scale transmission projects.

Megawatt Capacity Fee Comments

Some comments argued that the BLM lacks authority to collect a MW capacity fee because the Federal Government does not own the sunlight or the wind, which are inexhaustible resources. While the BLM agrees that sunlight and wind are renewable resources present on the public lands, it does not agree that it lacks the authority to collect a fee for the use of such resources.

Under FLPMA, the BLM is generally required to obtain fair market value for the use of the public lands and its resources, including for rights-of-way. In accordance with the BLM's FLPMA authority and existing policies, the BLM has determined that the most appropriate way to obtain fair market value is through the collection of multi-component fee that comprises an acreage rent, a MW capacity fee, and, where applicable, a minimum and a bonus bid for lands offered competitively. The BLM determined that the collection of this multi-component fee will ensure that the BLM obtains fair market value for the BLM-authorized uses of the public lands, including for solar and wind energy generation.

The BLM notes that the MW capacity payments are best characterized as "fees" rather than "rent" because they reflect the commercial utilization value of the public's

resource, above and beyond the rural or agricultural value of the land in its unimproved state. In the BLM's experience, and in accordance with generally accepted appraisal and valuation standards, the value of the public lands for solar or wind energy generation use depends on factors other than the acreage of the occupied land and that land's unimproved value. Other key elements that add value include the solar insolation level, wind speed and density, proximity to demand for electricity, proximity to transmission lines, and the relative degree of resource conflicts that could inhibit solar or wind energy development. To account for these elements of land use value that are not intrinsic to the rural value of the lands in their unimproved state, the solar and wind right-of-way payments in this final rule incorporate "MW capacity fees" in addition to "acreage rent."

The use of a multi-component fee that comprises both an acreage rent and a MW capacity fee, and in some cases also a minimum and a bonus bid, achieves four important BLM objectives. First, the approach allows BLM to ensure that it is capturing the full fair market value of the land being encumbered by these projects. Second, the approach is consistent with the approach employed by the BLM for other uses of the public land (i.e., it ensures that our approach to acreage rent is consistent across various categories of public land uses, while mirroring the multi-component payments received from activities like oil and gas development where both rent and royalties are charged), ensuring consistency across users. Third, the approach encourages the efficient use of the public lands by reducing relative costs for comparable projects that take up less acreage. That is, for a project with a given MW capacity, the overall payments to the BLM will be lower if the project employs a more efficient technology that produces more MW per acre and thus encumbers fewer acres. Fourth, the approach is consistent with existing policies

governing the BLM's renewable energy program, which have been in place since 2008. As explained in the section-by-section analysis in Section IV of this preamble, this final rule refines the calculation of the fee components (e.g., the MW capacity fee for solar is reduced relative to existing policies) but does not alter the basic multi-component fee structure for solar and wind projects on the public lands.

The BLM's multi-component fee structure also bears similarities to one of the more common structures for solar and wind energy development on private lands, where projects pay a rent for the use of an area of land at the outset and, and then a royalty on the power produced once generation commences. (The BLM recognizes that private-land projects use a variety of fee structures. For example, some projects rely solely on an acreage rent – but in those cases, the BLM believes that the increased value of the land due to project development is captured in other ways, such as by charging a higher base rent that reflects more than the land's unimproved value.)

The acreage rent charged by the BLM is analogous to the rent charged in most private land leases. With respect to the MW capacity fee, the BLM uses the approved electrical generation capacity as a component of the value of the use of the public lands for renewable energy development instead of relying on a royalty like private landowners do. On private lands, such royalties are typically assessed after-the-fact, as a percentage of the value of power actually produced, and the rate can range from 2 to 12 percent. The BLM has determined instead to charge a fee based on the installed nameplate MW capacity of an authorized wind or solar project. This approach is consistent with the BLM's legal authority, including the direction in FLPMA that right-of-way holders "pay in advance" the fair market value for the use of the lands. The BLM considered charging

a royalty, assessed as a percentage of power generated, but the FLPMA directive that right-of-way holders must "pay in advance" would require the BLM to collect any such royalty payments in advance of the corresponding power generation and then "true up" at the end of each calendar year. The BLM determined that the MW capacity fee approach in the final rule presents fewer administrative burdens and costs for both the BLM and right-of-way holders than an approach based on in-advance royalty payments followed by annual "true-ups." The BLM worked with the Office of Valuation Services to compare its combined acreage rent and MW capacity fee against the total stream of payments from a similarly situated private land project to ensure the total payments collected by the BLM are comparable to those collected on private land. Finally, the BLM notes that in retaining the multi-component payment structure for solar or wind developments as separate "rent" and "fee" components as established under existing policy, the BLM is retaining its existing interpretation of how that multi-component structure interfaces with the Rural Electrification Act (IM 2016-122). Under the final rule, consistent with existing policy, the acreage payment remains classified as "rent," as it is directly tied to the area of public lands encumbered by the project and the constraints that the project imposes on other uses of the public lands. As noted, however, the MW capacity fee is more properly characterized as a "fee" because it reflects the commercial utilization value of the public's resource, independent of the acreage encumbered. As specified under FLPMA, facilities that qualify for financing under the Rural Electrification Act may be exempt from paying "rental fees." As explained in IM 2016-122, however, the BLM has determined that such facilities are *not* exempt from paying other components of the fair market value of the land, such as the MW capacity fee, minimum bid, bonus bid, or other

administrative costs, as none of those costs are related to the rental value of the unimproved land.

Designated Leasing Areas Comments

Several comments requested clarification about the differences between the competitive processes for lands inside and outside of a DLA. Other comments expressed confusion over whether certain requirements of the proposed rule would apply to both "grants" (authorizations issued under subpart 2804 for solar and wind energy development) and "leases" (authorizations issued under subpart 2809). The BLM has expanded multiple provisions in the final rule to clarify the requirements for solar and wind energy development grants and leases, including those relating to competitive processes, rents and fees, bonding, and due diligence.

Comments Beyond the Scope of the Proposed Rule

In addition to the general comments discussed above and the more specific ones discussed in the section-by-section portion of this preamble below, the BLM received many other comments that suggested revisions to the BLMs right-of-way regulations that were beyond the scope of the proposed rule and/or that are better suited for supplemental policy guidance of the type found in BLM manuals, handbooks, or IMs. The BLM did not make any changes to the proposed rule in light of these comments. However, they are discussed in the relevant portions of the section-by-section analysis of this preamble

Additional Comments on the Rule

During the preparation of this final rule, the BLM received additional comments from various stakeholders and other interested parties following the close of the comment period and participated in additional stakeholder engagement meetings as part of the

BLM's regular course of business. During those meetings and in those comments, stakeholders provided additional information clarifying the concerns, comments, and questions they had previously raised through written comments on the proposed rule. The BLM considered this additional information during the drafting of this final rule. This additional information is addressed in the relevant section-by-section discussion of this preamble.

For example, industry stakeholders provided additional information that was previously unavailable regarding their uncertainty, under the proposed rule, about how both acreage rent and MW capacity fee payments would increase over the life of a lease or grant, and particularly their concern that such rents and fees could increase in an unpredictable manner. These comments and the BLM's responses are discussed further in sections 2806.51 and 2806.61 of this preamble.

Industry stakeholders also raised concern over the factors that the BLM considers when determining a bond amount. This comment and the BLM's response are discussed further under sections 2805.12(e)(1) and 2805.20(a)(3).

Environmental stakeholders also provided additional substantive discussion of their comments. Specifically, they requested additional detail in the final rule explaining the evaluation criteria that the BLM uses when establishing DLAs going forward. The environmental stakeholders' comment and the BLM's response are discussed further in section 2802.11 of this preamble.

IV. Section-by-Section Analysis for Part 2800

This rule makes the following changes in part 2800. The language found at section 2809.10 of the existing regulations is revised and redesignated as section

2807.17(d), while revised subpart 2809 is now devoted to solar and wind energy development in DLAs. This rule also amends parts 2800 and 2880 to clarify the BLM's administrative procedures used to process right-of-way grants and leases. These clarifications ensure uniform application of the BLM's procedures and requirements. A more in-depth discussion of the comments and changes made is provided below.

Subpart 2801— General Information

Section 2801.5 What acronyms and terms are used in these regulations?

This section contains the acronyms and defines the terms that are used in these regulations. Several comments suggested changes to the proposed rule. These suggestions and comments are analyzed under the applicable definition contained in the final rule.

The following terms are added to the definitions in section 2801.5:

"Acreage rent" is a new term that means rent assessed for solar and wind energy development grants and leases that is determined by the number of acres authorized by the grant or lease. The acreage rent is calculated by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the per acre zone rate in effect at the time the authorization is issued. Provisions addressing adjustments in the acreage rent are found in sections 2806.52, 2806.54, 2806.62, and 2806.64. An example of how to calculate acreage rent is discussed in this preamble in the section-by-section analysis of section 2806.52(a). No comments pertaining to this definition were received and no changes are made from the proposed to the final rule.

"Application filing fee" is a new term that means a filing fee specific to solar and wind energy right-of-way applications for the initial reasonable costs for processing,

inspecting, and monitoring a right-of-way. The fee is $15 per acre for solar and wind energy development applications and $2 per acre for energy project-area testing applications. The BLM will adjust the application filing fee once every 10 years to account for inflation. Further discussion of application filing fees can be found in section 2804.12. This definition is revised for consistency with comments received on sections 2804.12 and 2804.30 on application filing fees. See those respective sections of this preamble for further discussion. No other comments were received and no other change is made from the proposed rule to the final rule concerning this definition.

"Assignment" means the transfer, in whole or in part, of any right or interest in a right-of-way grant or lease from the holder (assignor) to a subsequent party (assignee) with the BLM's written approval. The rule adds this definition to section 2801.5 to help clarify regulations. A more detailed explanation of assignments and the changes made is found under section 2807.21. Although some comments were received pertaining to assignments, as discussed later in this preamble, none of them pertain to the definition. No change is made from the proposed to the final rule concerning this definition.

"Designated leasing area" (DLA) is a new term that means a parcel of land with specific boundaries identified by the BLM's land use planning process as being a preferred location for the leasing of public lands for solar or wind energy development via a competitive offer. Examples of DLAs for solar energy include SEZs designated through the Western Solar Plan; Renewable Energy Development Areas (REDAs) designated through the BLM Arizona Restoration Design Energy Project (REDP) planning process; and Development Focus Areas (DFAs) designated through BLM's California's Desert Renewable Energy Conservation Plan (DRECP) planning process.

The competitive offer process is discussed in subpart 2809 of this preamble. Further discussion of DLAs can be found under section 2802.11 of this preamble.

Comments: Some comments recommended that the definition of DLA should indicate criteria that must be met to designate a DLA, in particular, wind energy-specific DLAs. The comment also suggested the final rule include criteria to identify right-of-way exclusion and avoidance areas. Other comments stated a similar concern, and indicated that land use planning varies by BLM State or field office, so DLA standards should be developed.

Response: The BLM considered establishing standard criteria for DLAs as well as for exclusion and avoidance areas, but this approach is not carried forward in the final rule. Doing so could unintentionally limit the BLM's management of such lands when considering the varied landscapes and resources that the BLM manages. However, the BLM intends to establish guidance, as part of the implementation of this rule, to assist the BLM in establishing DLAs, such as wind energy sites, through its land use planning processes. Further discussion on this issue is found under section 2804.31 of this preamble.

Comments: Some comments stated that identifying new DLAs through land use planning was too time consuming, and therefore DLA designation should be a separate process.

Response: Many land use planning efforts take several years to complete and consider many resources and uses in addition to solar or wind energy development. These types of land use planning efforts would not consider a specific project, but instead the effect of such developments in the planning area, and inform the BLM if the lands

should be an exclusion or avoidance area, or identified as a DLA for solar or wind energy development. Although the BLM's land use planning process may be time consuming, it is necessary for the BLM in its orderly administration of the public lands to use this process to properly protect and manage the public lands. When amending a resource management plan, the BLM must be consistent with its planning regulations (see 43 CFR part 1600). Absent a larger planning effort underway for the same planning area, the BLM could use a targeted land use plan amendment to identify a designated leasing area. In such cases, the land use planning process may be less time consuming than suggested by commenters. For further discussion, please see section 2804.31 of this preamble. No specific changes were made in response to this comment.

In addition to the amendments to section 2804.31, the BLM has begun its Planning 2.0 initiative, which is aimed at improving the BLM's planning process. This initiative includes targeted revisions to the planning regulations (see 43 CFR part 1600) and land use planning handbook, in order to improve the BLM's use of Resource Management Plans, which guide the BLM's administration of the public lands. The Planning 2.0 initiative will help the BLM to conduct effective planning across landscapes at multiple scales, create more dynamic and efficient planning processes that are responsive to change, and provide new and enhanced opportunities for collaboration with the public and partners. You can find further information on the BLM's Planning 2.0 initiative at the following website http://www.blm.gov/wo/st/en/prog/planning/planning_overview/planning_2_0.html.

Comment: A comment recommended that the BLM use one consistent definition to ensure that DLAs represent areas of fewer resource conflicts for solar and wind energy development.

Response: Because of the many variables that the BLM must consider when designating a DLA, the definition provided is intentionally broad and identifies a DLA as a preferred location for development that may be offered competitively. This definition allows the BLM to identify such areas in land use planning processes using plan-specific criteria to best identify the area. However, we are modifying the definition by removing the example of solar energy zones that was cited in the proposed rule in order to eliminate potential confusion about the future identification of additional DLAs, which may not be identified in the same manner as the solar energy zones. No other comments were received concerning this definition.

"Designated right-of-way corridor" is a term that is defined in existing regulations. The word "linear" has been added to this definition in the final rule to distinguish between these corridors and DLAs. No comments were received concerning this definition change and no changes are made from the proposed rule to the final rule.

"Management overhead costs" is defined in existing regulations as Federal expenditures associated with the BLM. This definition has been expanded in the final rule to include other Federal agencies. This revision is consistent with Secretarial Order 3327 and will help to promote effective cost reimbursement. Under Sections 304(b) and 504(g) of FLPMA, the Secretary may require payments intended to reimburse the United States for its reasonable costs with respect to applications and other documents relating to public lands. Secretarial Order 3327 delegated the Secretary's authority under FLPMA

to receive reimbursable payments to the bureaus and offices of the Department. No comments were received pertaining to this definition change, and no revisions were made from the proposed rule to the final rule.

"Megawatt capacity fee" is a new term meaning the fee paid in addition to the acreage rent for solar and wind development grants and leases based on the approved MW capacity of the solar or wind authorization. The MW capacity fee is calculated based on the MW capacity for an approved solar or wind energy project authorized by the BLM. Examples of how MW capacity fees are calculated may be found after the discussion of section 2806.56. While the acreage rent reflects the value of the land itself in its unimproved state, the MW capacity fee reflects the value of the industrial use of the property to generate electricity. Specifically, it captures the additional value of public land used for solar and wind energy generation that are not reflected in the NASS land values.

The BLM revised the definition of MW capacity fee from the proposed to final rule to clarify that the MW capacity fee is calculated for staged developments by multiplying the MW rate by the approved MW capacity for each stage of development. The proposed rule stated that the MW rate would be multiplied to the approved stage of development, but did not specify that it was the approved MW capacity for the stage of development. The BLM made this revision to help improve the public's understanding of the MW capacity fee calculation for staged developments.

Comment: One comment acknowledged that fair market value can be determined by using a competitive process and agreed with the proposed rule's approach of using a competitive process to authorize solar and wind energy development on public lands.

The comment went on to express a preference for a system that includes the payment of a royalty fee for the use of commercial power facilities on public lands.

Response: As explained above, the BLM has established through existing policy, and now by this rule, a multi-component structure for obtaining fair market value from renewable energy development. Since FLPMA directs right-of-way holders "to pay *in advance* the fair market value" for the use of the public lands, subject to certain exceptions (43 U.S.C. 1764(g)), the BLM's existing regulations governing the use of public lands, under Title V of FLPMA, generally require the prepayment of annual rent and fees in amounts determined by the BLM. This requirement is carried forward in existing guidance governing acreage rent and MW capacity fees for wind and solar energy projects and was selected in lieu of other means of obtaining fair market value. Consistent with the BLM's authority under FLPMA, its existing policies, and the proposed rule, the BLM has determined that it will continue to charge in advance both an acreage rent and a MW capacity fee for solar and wind energy projects, as a means of obtaining fair market value for those projects. Given that FLPMA requires payment in advance, the BLM has determined it is appropriate to base that the MW capacity fee on rated MW capacity as opposed to actual generation. In instances where competitive processes are utilized, any minimum and bonus bids represent an additional component of fair market value on top of the annual acreage rent and MW capacity. No other comments were received on the proposed definition of MW capacity fee, and no changes to the definition were made in this final rule.

"Megawatt rate" is a new term that means the price of each MW for various solar and wind energy technologies as determined by the MW rate schedule. The MW rate

equals the (1) the net capacity factor multiplied by (2) the MW per hour (MWh) price multiplied by (3) the rate of return multiplied by (4) the total number of hours per year where:

1. The "net capacity factor" means the average operational time divided by the average potential operational time of a solar or wind energy development, multiplied by the current technology efficiency rates. This rule establishes net capacity factors for different technology types, but the BLM may determine a different net capacity factor to be more appropriate, on a case-by-case or regional basis, to reflect changes in technology, such as a solar or wind project that employs energy storage technologies, or if a grant or lease holder or applicant is able to demonstrate that a different net capacity factor is more appropriate for a particular project design, layout, or location.

The default net capacity factor for each technology type is:

a. Photovoltaic (PV) = 20 percent;

b. Concentrated photovoltaic (CVP) and concentrated solar power (CSP) = 25 percent;

c. CSP with storage capacity of 3 hours or more = 30 percent; and

d. Wind energy = 35 percent.

Comments: Several comments were received concerning the definition and description of net capacity factor. One comment stated that the net capacity factors should not be specified in the proposed rule for CSP projects, as they will undoubtedly increase over time with technology improvements and be updated on a regular basis, in a similar manner as rents. CSP can be designed to operate from a range of 10 to 50 percent efficiency depending on the intended use of the facility (e.g., base load or peaker plant).

Another comment recommended using an estimate of the capacity factor identified in the POD and the plant's design as the basis for this calculation.

Response: The BLM recognizes that there may be technology improvements over time, and that there are variables which may affect a specific project's net capacity factor. For example, a CSP project may be designed to operate at lower or higher efficiency rate depending on its intended use. The BLM took this into account in determining the net capacity factor of the technologies for the final rule. Future rulemaking would be required to change the established net capacity factors for each technology. The BLM will not incorporate the recommendation to use the project owner's estimate of the capacity factor in the POD to calculate its MW capacity fee. The estimated net capacity factor in a POD would be specific to a particular project, but would be a subjective value that could be inaccurate or misleading. Incorporating the methodology suggested by the comment could raise questions as to whether the BLM was truly collecting a reasonable return for use of the public lands.

However, the BLM has revised the final rule, consistent with this comment and those comments submitted regarding storage technologies, to allow the BLM to determine another net capacity factor to be more appropriate on a case-by-case basis. The BLM could determine another net capacity factor to be more appropriate when there is a change in technology, such as when a project employs energy storage technologies. Determining another net capacity factor may also be appropriate if a project uses a more current version of a technology.

Comment: Another comment agreed with the BLM's proposal to use an average net capacity factor for wind energy projects. However, the comment recommended using

a net capacity factor of 26 percent as identified in the wind capacity factor for Western States (see the Department of Energy's 2013 Wind Technologies Report) instead of the national average wind capacity factor of 35 percent.

Response: While the BLM acknowledges that most solar and wind projects on public lands will be located in the western United States, it nevertheless elected to use the national averages in calculating the net capacity factors for both solar and wind projects, because the BLM believes those values are more representative of the technology that will be deployed on projects developed in the future. The net capacity factor for a given project is greatly influenced by project design, layout, and location. The national average reflects a larger set of projects than the regional average, and is therefore more representative of the full range of older and newer technologies currently sited on public lands.

With respect to the wind capacity factor in particular, the BLM reviewed data from the Department of Energy's 2014 and 2015 Wind Technology Reports (https://emp.lbl.gov/sites/all/files/lbnl-188167.pdf and https://emp.lbl.gov/sites/all/files/2015-windtechreport.final.pdf, respectively). Based on its review of that data, the BLM determined that its selection of a 35 percent capacity factor for wind was appropriate for several reasons.

First, the geographic scope of the lands included in the "West Region" of the Department of Energy's reports does not adequately capture the full extent of BLM lands. Using the geographic distribution classifications set by the Department of Energy, BLM lands are located in both the "West" and "Interior" regions, with 7 states in the West and 4 states in the Interior (Colorado, Montana, New Mexico, and Wyoming). It should also

be noted that the four BLM states in the Interior region possess significant wind energy development potential. Accordingly, the BLM believes it is reasonable to select a wind capacity factor between the values for the West and Interior. In the Interior Region the Department of Energy reported capacity factors of 41.2 percent and 42.7 percent in 2014 and 2015, respectively. Data from the 2014 report shows that while the average capacity factor in the West was 27 percent, there was considerable spread in the factors by project, from just below 20 percent to over 37 percent. In the Interior, the spread in capacity factors was from 26 percent to 52 percent. Thirty-five percent represents a reasonable average of these very disparate, project-specific capacity factors.

In addition to looking at capacity factors regionally, the Department of Energy's analysis also controlled for wind quality. Notably, the Department of Energy determined that even in low wind quality areas, which predominate in the West, new projects achieve 35 percent capacity factors. As explained in the reports, this analysis was based on wind turbine specific power, which is the ratio of a turbine's nameplate capacity rating to its rotor-swept area. All else being equal, a decline in specific power leads to an increase in capacity factor according to the analysis presented in the report. In general, since the wind industry is shifting towards deploying lower specific power wind turbines at new wind energy projects across the United States, the BLM believes it is reasonable to select 35 percent as the default capacity factor for a wind project in the final rule.

It should also be noted that the BLM considered basing the net capacity factors for these technologies on an average of the annual capacity factors posted by the Energy Information Administration (EIA) on its Web site at:

http://www.eia.gov/electricity/monthly/epm_table_grapher.cfm?t=epmt_6_07_b.

However, the BLM is not carrying this approach forward in the final rule because, as discussed earlier in the preamble regarding net capacity factors, we believe that the 35 percent capacity factor better represents the technologies that will be deployed on projects developed in the future. For this reason, the BLM determined that the EIA annual capacity factors are not appropriate for use in this rule.

Finally, the BLM notes that if an applicant or a grant or lease holder believes that the BLM's net capacity factor is set too high for a particular project, the project proponent can request that the BLM use an alternative net capacity factor when setting the MW capacity rate for the project. Such a request would be made as described under sections 2804.40 for applicants or 2805.12(e) for grant or lease holders. See the section-by-section portion of this preamble for further discussion of requests for alternative requirements.

No other comments were received, and the definition of "net capacity factor" was not changed from the proposed to the final rule as result of this comment.

2. The "MWh price" equals the 5 calendar-year average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States (see sections 2806.52(b) and 2806.62(b)).

Comment: One comment believed that rent and fee calculations may be inaccurate based on inaccurate determinations of the capacity factor and the wholesale price of electricity used in the formula. In the proposed rule, the BLM specified the Intercontinental Exchange (ICE) as the source of data for the wholesale price data.

Response: As discussed under section 2806.52 for MW capacity fee, ICE was removed as the only vendor for the wholesale data. We revised this definition to account

for appropriate wholesale data without limiting it by source. This will allow the BLM to use the best information available, should a company that tracks trading hubs fail to maintain accurate or reliable trade information. No other comments were received concerning this definition.

3. The "rate of return" is the relationship of income to the property owner (or, in this case, the United States) to the revenue generated from authorized solar and wind energy development facilities, based on the 10-year average of the 20-year U.S. Treasury bond yield, rounded to the nearest one-tenth percent.

Comment: One comment believed that the BLM should use a 5-year average, not a 10-year average, eliminate the 4 percent minimum, and consider rounding down or not at all.

Response: The BLM disagrees with the suggestion to use a 5-year average. A 10-year average of the 20-year Treasury bond rate provides a more stable rate of return and will benefit the holder when interest rates rise. Under the same concept, this would benefit the BLM when interest rates decline, as is the case in the current cycle.

The BLM also disagrees that it should eliminate a 4 percent minimum rate of return, considering the risk of energy development projects and the fluctuation of energy commodity prices. It is not uncommon for private parties to insist on a minimum return. The 4 percent minimum rate of return recognizes a grant or lease holder's risk of projects that have other financial safeguards in place, such as performance bonds. The minimum is at the lower end of similar rates in the private sector.

The 4 percent minimum rate of return is established for solar energy in section 2806.52(b)(3)(ii) and for wind energy in section 2806.62(b)(3)(ii). The minimum is not

included in the definitions section of this final rule because setting the minimum is a substantive regulatory provision. This is not a change from the proposed rule. No changes are made in this final rule from the proposed rule regarding the rate of return in the definitions section (section 2801.5) or in the specific solar (section 2806.52(b)(3)(ii)) or wind (section 2806.62(b)(3)(ii)) provisions.

With respect to rounding, the BLM did agree that it should revisit the proposed rule's approach. While it does not agree with the commenter's suggestion that it should always round down, the BLM did determine upon further review that it should round bond yields to the nearest tenth of a percent to avoid a rounding-based surcharge.

4. The number of hours per year is a fixed number (i.e., 8,760 hours, the total number of hours in a 365-day year). No comments were received on the definition of this term and no changes are made to this definition from the proposed rule to the final rule.

"Performance and reclamation bond" is a new term that means the document provided by the holder of a right-of-way grant or lease that provides the appropriate financial guarantees, including cash, to cover potential liabilities or specific requirements identified by the BLM. This term is defined here to clarify the expectations of what a bond accomplishes. The definition also explains which instruments are or are not acceptable. Acceptable bond instruments include cash, cashiers or certified checks, certificate or book entry deposits, negotiable U.S. Treasury securities, surety bonds from the approved list of sureties, and irrevocable letters of credit. The BLM will not accept a corporate guarantee. These provisions codify the BLM's existing procedures and practices.

Comment: A comment suggested adding the words "certificate of insurance or other acceptable security" to each of these paragraphs in appropriate places.

Response: The BLM believes that adding the comment's suggestion to the text of the rule is unnecessary, as the definition of acceptable bond instruments includes insurance policies and does not need to be expanded to include a specific form of insurance. Furthermore, the list of bond instruments that are acceptable is not an all-inclusive list. There may be other forms of bond instruments, but they are not specified in the rule as they are not as common a form of bond as those identified. If we had intended the bond list to be an all-inclusive list we may have unintentionally excluded an acceptable bond instrument. No other comments were received and no changes to this definition were made from the proposed rule to the final rule.

"Reclamation cost estimate (RCE)" is a new term that means the report used by the BLM to estimate the costs to restore the intensive land uses on the right-of-way to a condition that would support pre-disturbance land uses.

The BLM revised this definition from the proposed to final rule to clarify that the reclamation work described must meet the BLM's requirements. This change is important because the BLM is required to protect the public lands and must determine if the reclamation work done by the holder is acceptable.

No comments were received on the definition of this term and no other changes are made from the proposed to the final rule.

"Right-of-way" is defined in existing regulations as the public lands the BLM authorizes a holder to use or occupy under a grant. The revised definition describes the authorizing instrument for use of the public lands as "a particular grant or lease." No

comments were received on the definition of this term and no changes are made from the proposed to the final rule.

"Screening criteria for solar and wind energy development" is a term referring to the policies and procedures that the BLM uses to prioritize how it processes solar and wind energy development right-of-way applications outside of DLAs. Some examples of screening criteria are:

1. Applications filed for areas specifically identified for solar or wind energy development, other than DLAs;
2. Previously disturbed areas or areas located adjacent to previously disturbed areas;
3. Lands currently designated as Visual Resource Management (VRM) Class IV; and
4. Lands identified for disposal in a BLM land use plan.

Screening criteria for solar and wind energy development were previously established by policy through IM 2011-61, and are further discussed in section 2804.25(d)(2) and section 2804.35 of this rule. The IM may be found at: http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html. No changes were made from the proposed rule to the final rule, nor were any comments received pertaining to this definition. However, there are several comments made on the specific screening criteria proposed that are addressed later in the section-by-section analysis of these criteria.

"Short term right-of-way grant" is a new term meaning any grant issued for a term of 3 years or less for such uses as storage sites, construction sites, and short-term site testing and monitoring activities. The holder may find the area unsuitable for development or the BLM may determine that a resource conflict exists in the area. No

comments were received and no changes are made from the proposed rule to the final rule.

Section 2801.6 Scope.

The scope in 43 CFR part 2800 clarifies that the regulations in this part apply to all systems and facilities identified under section 2801.9(a). No comments were received and no changes are made from the proposed rule to the final rule on this provision.

Section 2801.9 When do I need a grant?

Section 2801.9 explains when a grant or lease is required for systems or facilities located on public lands. In section 2801.9(a)(4), the term "systems for generation, transmission, and distribution of electricity" is expanded to include solar and wind energy development facilities and associated short-term authorizations. Language is also added to section 2801.9(a)(7) to allow any temporary or short-term surface-disturbing activities associated with any of the systems described in this section. A new paragraph (d) is added to specifically describe the types of authorizations required for various components of solar and wind energy development projects. These are:

1. Short term authorizations (term to not exceed 3 years);
2. Long term right-of-way grants (up to 30 years); and
3. Solar and wind energy development leases (30 years).

This paragraph also identifies the type of authorizations issued for solar and wind projects depending on whether they are located inside or outside of DLAs. Authorizations for solar or wind energy development outside a DLA, or authorizations issued non-competitively within a DLA, will be issued under subpart 2804 as right-of-

way grants for a term of up to 30 years. Authorizations within a DLA will be issued under subpart 2809 as right-of-way leases for a term of 30 years.

Comments: Some comments were received requesting that the site-specific and project-area testing authorizations be made available for solar energy. A comment further suggested that section 2801.9 be revised so that the authorization types would be listed in the order in which actions are taken to develop a project.

Response: The BLM revised this section, in response to the comment, by removing the specific references to "wind." As a result, the testing provisions apply to both solar and wind energy. The BLM also revised this section to reflect the order in which actions are taken to develop a project. The "other appropriate actions" listed under paragraph (d)(3) of this section in the proposed rule are moved to paragraph (d)(5) of this section in the final rule. Paragraphs (d)(4) and (d)(5) of this section in the proposed rule are now paragraphs (d)(3) and (d)(4) of this section, respectively.

Subpart 2802— Lands Available For FLPMA Grants

Section 2802.11 How does the BLM designate right-of-way corridors and designated leasing areas?

Section 2802.11, which explains how the BLM designates right-of-way corridors, is revised to include DLAs. Under this rule, the BLM will identify DLAs as preferred areas for solar or wind energy development, based on a high potential for energy development and lesser resource impacts. This section provides the factors the BLM considers when determining which lands may be suitable for right-of-way corridors or DLAs. These factors are unchanged from the existing regulations. This final rule

amends paragraphs (a), (b), (b)(3), (b)(4), (b)(6), (b)(7) and (d) of section 2802.11 to include references to DLAs.

Comment: One recommendation was made suggesting that the BLM make it clear that we will not accept applications in areas that are closed to development by means of land use plans or other mechanisms.

Response: The comment's recommendation is addressed in the existing rule at section 2802.10(a). This section clarifies that some lands are not available for a right-of-way grant, which includes those lands that the BLM identifies through the land use planning process as inappropriate for rights-of-way, as well as public land orders, statutes, and regulations that exclude rights-of-way, and lands segregated from application.

Comment: One comment stated that DLAs are created through the BLM's resource management planning process, but that such plans are changed only every 15 to 20 years. Also, many plans are undergoing or have recently undergone such changes, especially in areas having sage-grouse habitat, but those plans do not designate any DLAs.

Response: Due to the timing of the comment submission and the BLM's response, the plans noted in this comment have been finalized and the BLM decisions are issued. The Greater Sage-Grouse Plan Amendments and Revisions did not designate any DLAs. These plans are focused on conservation of the Greater Sage-Grouse and its habitat. The decisions issued in these plans safeguard primary and general habitat from the impacts of development, including solar and wind energy.

However, the BLM may have an opportunity to designate some areas for wind energy development using recent analyses or information that identifies areas suitable for energy development on public lands. Examples of such areas may be those identified as not having significant resource and use siting concerns, as identified in the BLM's wind mapper. The wind mapper is a BLM web-based geographic data viewer, found at http://wwmp.anl.gov, that has up-to-date geographic information representing the BLM's land use planning decisions for administering public lands and other pertinent regulatory information, specific to wind energy resources. Using information on the wind mapper, a targeted land use plan amendment may be completed more expeditiously than the 15 to 20 years discussed in this comment.

Comment: Another comment suggested that we consider developing a generic EIS process suitable to all prospective solar and wind leases, coupled with a specific discussion of variations between areas. Also, the comment suggested that we should automate the EIS process to leverage existing GIS and satellite data whenever possible.

Response: Although worth considering, this concept is outside the scope of this rule, which is focused on the administrative process of solar and wind energy rights-of-way and competitive processes. However, the BLM plans to evaluate its NEPA process and promote automation of the process where possible. Until that time, the BLM will designate such areas through its existing land use planning process.

Comment: Another comment states that the designation of DLAs will waste taxpayers' money and impede development. The cost to the public for the BLM to designate a DLA will not be fully recaptured and the DLA will not provide any additional value to the public through the competitive process.

Response: Costs for the preparation of DLAs will be recaptured at the competitive bidding stage as the administrative costs will be paid by the successful bidder. As demonstrated by the BLM's recent competitive actions for solar energy, there is a monetary return to the public for auctions of parcels within renewable energy development areas.

Comment: During stakeholder engagement meetings, environmental stakeholders expanded on their comment on the definition of "designated leasing area." The stakeholders suggested that the BLM should not only revise the definition of DLA to include additional specific criteria, but also make changes to section 2802.11 to specify that the BLM consider those criteria when designating DLAs. The stakeholders also recommended that the BLM consider sensitive environmental resources when evaluating potential DLAs.

Response: The BLM considered adding additional criteria to section 2802.11 that would be considered when the BLM evaluates an area for inclusion in a DLA, but it ultimately made no changes in the final rule. The existing regulations in section 2802.11(b) already explain in great detail what the BLM considers when making a DLA designation. Adding an undefined term, "sensitive environmental resources," could unintentionally limit the BLM's management of public lands when considering the varied landscapes and resources that are found there. Furthermore, consideration of sensitive resources is already addressed in section 2802.11(b)(2), which requires the BLM to consider "environmental impacts on cultural resources and natural resources, including air, water, soil, fish, wildlife, and vegetation."

While the BLM did not make any changes to the final rule in response to this comment, it should be noted that the BLM intends to establish guidance, as part of the implementation of this rule, to assist the BLM in establishing DLAs through its land use planning processes. The implementing guidance will allow the BLM to be more specific for these areas without unintentionally limiting itself, and maintain the BLM's flexibility to make any necessary adjustments to the process for evaluating potential DLAs across the varied landscapes that it manages.

Subpart 2804— Applying For FLPMA Grants

Section 2804.10 What should I do before I file my application?

Existing section 2804.10 encourages prospective applicants for a right-of-way grant to schedule and hold a pre-application meeting. Under this final rule, section 2804.10 continues to encourage such meetings regarding some right-of-way grants, and under paragraph (a)(2), would now identify DLAs along with right-of-way corridors as a point of discussion for these meetings if held.

Under existing section 2804.10(a)(2), the BLM determines if your application is on BLM land within a right-of-way corridor. This revised paragraph now includes "or a designated leasing area." The BLM generally will not accept applications for grants on lands inside DLAs . The BLM will offer lands inside DLAs competitively through the process described in subpart 2809, which does not involve submitting an application. The BLM will only accept applications on lands inside DLAs in limited circumstances (see sections 2809.19(c) and 2809.19(d)).

The BLM proposed amending paragraphs (a), (a)(2), and (a)(4), and also adding two new paragraphs that would apply to any solar or wind energy project, transmission

line with a capacity of 100 kV or more, or pipeline 10 inches or more in diameter. For these types of projects, the BLM proposed mandatory pre-application meetings. Proposed amendments for paragraph (a) and (a)(4) are not included in the final rule, since pre-application meetings will not be required and specific requirements associated with them are no longer necessary. Paragraph (b) of the existing regulations will not be redesignated and there will be no new paragraphs (b) and (c) in this final rule. The only changes to section 2804.10 in the final rule are found in paragraph (a)(2).

Under this final rule, pre-application meetings will not be required for solar and wind energy developments, or any transmission line with a capacity of 100 kV or more. Instead, the BLM will require what we term "preliminary application review meetings" that will be held after an application for a right-of-way has been filed with the BLM. These meetings will fall under the BLM's cost recovery authority for processing applications and are discussed in greater detail under section 2804.12. Based on comments received, no requirements for pipelines 10 inches or more in diameter are carried forward into the final rule.

Section 2804.12 What must I do when submitting my application?

In this final rule, Section 2804.12 has been retitled from "What information must I submit in my application?" to "What must I do when submitting my application?". Relocation of the early coordination meeting requirements to this section has resulted in revisions to this section that would make the previous title misleading. As revised, section 2804.12 requires that an applicant must provide specific information, and in the case of solar or wind energy development projects and transmission line projects with a

capacity of 100 kV or more, must also complete certain actions when initially submitting an application.

The last sentence in section 2804.12(a) is revised to show that a completed application must include all of the items identified in sections 2804.12(a)(1) through (a)(8). The text of paragraphs (a)(1) through (a)(7) are republished without amendment, and new paragraph (a)(8) is added.

Comments: Several comments were submitted regarding the BLM's proposed pre-application requirements for solar and wind energy development and transmission lines with a capacity of 100 kV or more. Comments suggested that the BLM could not place requirements on a developer prior to an application being submitted to the BLM. This general comment was focused on two aspects of the BLM's proposed requirement for pre-application meetings. The first aspect was that the BLM was requiring that two pre-application meetings be completed prior to a developer submitting an application for a solar or wind energy development project or transmission line with a capacity of 100 kV or more. The second aspect of concern was that the BLM would require the developer to pay cost recovery for the required pre-application meetings. Under the proposed rule, the BLM would have required both of these prior to submission of an application for use of the public lands.

Response: The intent of the pre-meeting requirements is to ensure early coordination with the developer and other Federal, State, and tribal governments to gather information to better inform the developer of different considerations to be made if pursuing their project on BLM-administered lands. Considerations would include existing uses, environmental resources, and cultural or tribal values in the area of the

proposed project. Pre-application meetings are currently required by the BLM's policy. Discussing a proposed project with a developer early on has demonstrated an improvement in project siting and design, avoiding and minimizing impacts the project would have to the public land, and reducing the BLM's processing timeframes. This final rule has been revised and now requires early coordination, not through pre-application meetings, but through preliminary application review meetings, which are to be held after an application is submitted to the BLM. These requirements for early coordination with developer and other Federal, State, and tribal governments are found under section 2804.12(b). Additional discussion of the preliminary application review meetings is found under section 2804.12(b) of this preamble.

Section 2804.12(a)(8) states that if the BLM requires you to submit a POD, you must include a schedule for its submittal in your application. This requirement was in the proposed rule's section 2804.10(c)(4), but is now moved to section 2804.12(a)(8) in the final rule. This provision was proposed in section 2804.10 because the early coordination with BLM was done under pre-application meetings. It is moved to section 2804.12 of this final rule to coincide with the timing of the preliminary application review meetings.

Section 2804.12(b) explains requirements for submitting an application for solar or wind energy development (outside of DLAs), or any transmission line with a capacity of 100 kV or more. Requirements under section 2804.12(b) were found at section 2804.10(b) in the proposed rule, but have been moved to this section instead as application processing requirements. This includes the BLM's requirement for preliminary application review meetings. This provision provides clear instructions to

the public about what they should expect when filing an application for such developments.

The BLM commonly refers to the first filing of an application as an "initial" application due to the BLM's experience with such projects. In most cases, a project POD goes through several iterations during the BLM's application review process and may require additional submissions or revisions of the application to accompany the revised plans. Additional applications are not always necessary when revising a project POD, but could be required.

Section 2804.12(b) also contains provisions from sections 2804.10(b) and 2804.10(c) of the proposed rule. These provisions are moved in the final rule in response to comments. An additional provision is added to paragraph (b) of this section to reiterate that the requirements for submitting a solar or wind application are in addition to those described in paragraph (a) of this section for all rights-of-way.

Comments: Several comments questioned the requirement to hold pre-application meetings, as well as the BLM's authority to require conditions for project processing, prior to the submission of an application to the BLM and collecting cost recovery fees for that time period.

Response: The early coordination that resulted from the pre-application meetings required by existing BLM policy has been essential to the timely review and approval of solar and wind energy projects on the public lands. However, this final rule moves these meetings and requirements so that they occur after the submission of an application in response to comments received. The changes retain BLM's intent to ensure earlier

coordination on such applications with other Federal, State, local, and tribal governments. Under the final rule, such meetings would be subject to cost recovery requirements.

Section 2804.12(b) also states that your application for a solar or wind energy project, or a transmission line project with a capacity of 100 kV or more, must include a general description of the proposed project and a schedule for submittal of a POD, address all known resource conflicts, and initiate early discussions with any grazing permittees that may be affected by the proposed project. Further, section 2804.12(b) requires that you hold two preliminary application review meetings, within 6 months from the date on which the BLM receives the cost recovery fee payment required under section 2804.14.

Section 2804.12(b)(4), as previously described, is relocated from section 2804.10(c) of the proposed rule. Under this paragraph, the BLM will process an application only if the application addresses the following items: 1) Known potential resource conflicts with sensitive resources; 2) Values that are the basis for special designations or protections; and 3) Applicant-proposed measures to avoid, minimize, and compensate for such resource conflicts. For example, some applicant-proposed measures could utilize a landscape-level approach as conceptualized by Secretarial Order 3330 and subsequent reports, and be consistent with the BLM's IM 2013-142, interim policy guidance. Due to the intense use of the land from the projects covered in this section, the BLM will require applicants to identify potential conflicts and how they may be avoided, minimized, or mitigated. The BLM will work with applicants throughout the application process to ensure the most efficient use of public land and to minimize possible resource conflicts. This provision will require an applicant to consider these concerns before

submitting an application and, therefore, provide the BLM with potential plans to minimize and mitigate conflicts.

Comments: Some comments stated that the BLM should ensure that meetings are structured so that participants are provided all the project information necessary so they can meaningfully assist the BLM to make an appropriate determination about the proposed project.

Response: The BLM agrees with these comments and has modified the regulation to have meetings occur after an application is filed, rather than hold the meetings beforehand. The intent of these meetings will be to bring all Federal, State, local, and tribal governments together and provide them with the best available information to have an informed discussion on the right-of-way application. Authorizations for solar and wind energy projects, and transmission lines with a capacity of 100 kV or more, are generally larger and more complex than the average right-of-way authorization, and this extra step will help protect the public lands and make application processing more efficient.

Furthermore, the BLM will not proceed with an application until all appropriate meetings are held and the BLM has notified appropriate grazing permittees (see 43 CFR 4110.4-2(b)). Applicants must pay reasonable or actual costs associated with the requirements identified in section 2804.12(b). Payment for reasonable costs associated with an application must be received by the BLM after the initial filing of the application and prior to the first meeting, consistent with section 2804.14.

After enactment of the Energy Policy Act of 2005, the BLM received an influx of solar and wind energy development applications. Many of these applications were

unlikely to be approved due to issues such as siting, environmental impacts, and lack of involvement with other interested parties. As the BLM gained more experience with these applications, it developed policies and procedures to process applications more efficiently. These policies and procedures required pre-application meetings and use of application screening criteria (see section 2804.35 of this preamble) in order to help BLM and the proponent address siting concerns early on in the process.

Pre-application meetings have helped both the BLM and prospective applicants to identify necessary resource studies, and other interests and concerns associated with a project. Further, the meetings have provided an opportunity to direct development away from lands with high conflict or sensitive resource values. As a result of these meetings, the applications submitted were more appropriately sited and had fewer resource issues than those submitted where no pre-application meetings were held. Holding these meetings early in the application process made the applications more likely to be approved by the BLM. This saved the applicant the time and money spent on doing resource studies and developing projects that may not have been accepted or approved by the BLM.

Some prospective applicants chose not to pursue development after these meetings, once they had a better understanding of the potential issues and resource conflicts with the project as proposed. The BLM found that applicants who participated in these meetings saved money that would have been spent planning a project that the BLM would not have approved. This also saved the BLM time by reducing the number of applications it would need to process and the time spent reviewing resource studies and project plans.

A January 2013 Government Accountability Office report (GAO-13-189) found that the average BLM permitting timeframes have decreased since implementation of BLM's solar and wind energy policies, which include the early inter-agency coordination meeting requirements in this rule. The GAO concluded that applications submitted in 2006 averaged about 4 years to process, while applications submitted in 2009 and later averaged about 1.5 years to process. At the time of the GAO review, these meetings were pre-application meetings. In the final rule, the timing of these early meetings has been changed until after the submission of an application to the BLM. Based on its experience, the BLM believes that holding inter-agency and government coordination meetings early in the review of a proposed large-scale development will continue to save both the BLM and applicant time and money during the BLM's review and processing of the application.

Based on a review of its records, the BLM identified a range of costs and time estimated associated with the processing of each type of application for a use of the public lands. These cost and time estimates varied between the solar and wind energy and transmission line projects. For solar and wind energy rights-of-way a range of costs was identified between $40,000 and $4 million, including up to approximately 40,000 BLM staff labor hours and other non-labor costs per project. For transmission lines 100 kV or larger a range of costs was identified between $260,000 and $2.1 million, including up to approximately 21,000 BLM staff labor hours and other non-labor costs per project. Based on this review, the BLM observed that projects with early coordination generally had lower costs relative to similarly situated projects.

Based on the BLM's experience, two meetings are usually sufficient to address all known potential concerns with a project, which is why the final rule calls for two meetings. However, the BLM understands that additional meetings may be beneficial to a project before an application is submitted. The BLM does not want to limit its ability to hold additional meetings should a project be particularly complex and, therefore, the final rule allows for additional preliminary application review meetings to be held when mutually agreed upon. For example, a project that crosses State lines could require additional coordination with local governments and other interested parties.

Comments: Some comments noted concern over the BLM's existing and proposed pre-application process and its open-ended timeframe. Comments were concerned that this would be a deterrent for pursuing development on the public land, even if the project itself was well sited and designed. A developer would need assurances that a project would proceed expeditiously. Suggested timeframes included 30 days between meetings and application submittal.

Response: New paragraph (b)(4) specifies that within 6 months from the time the BLM receives the cost recovery fee, you must hold at least two preliminary application review meetings. The first meeting will be held with the BLM to discuss the proposal, the right-of-way application process, the status of BLM land use planning for the lands involved, potential siting and environmental issues, and alternative site locations. The second meeting will be held with appropriate Federal and State agencies and tribal and local governments to discuss concerns as identified above. If you do not believe you need to schedule the first or second meeting described above, you can ask the BLM for

an exemption. The process of requesting an exemption is discussed further in section 2804.12(i), under the newly added paragraph labeled "Inter-agency Coordination."

Section 2804.12(c) contains requirements for submitting an application for solar and wind energy development. These requirements, located in sections 2804.10(a)(8) and 2804.10(c)(2) in the proposed rule, have been relocated to sections 2804.12(c)(1) and 2804.12(c)(2) in this final rule. Under section 2804.12(c)(1), the BLM specifies that an application for solar or wind energy development must be submitted for lands outside of DLAs, except as provided for by section 2809.19. Lands inside DLAs will be offered competitively under subpart 2809. See section 2809.19 of this preamble for further discussion. No comments were received and the only changes made to this paragraph are those identified for relocating the requirement to this section and putting it in the context of a requirement for submitting an application.

Section 2804.12(c)(2) requires that an applicant submit an application filing fee with any initial solar or wind energy right-of-way application. Section 304 of FLPMA authorizes the BLM to establish filing and service fees. A per acre application filing fee may discourage applicants from applying for more land than is necessary for a proposed project. Under this final rule, application filing fees will be retained by the BLM as a cost recovery fee, instead of being sent to the General Fund of the Treasury as collected revenue as proposed. A similarly structured nomination fee is established following the same criteria and is described in section 2809.11(b)(1).

Paragraph (c)(2) of this section is revised to replace "by the average annual change in the Implicit Price Deflator, Gross Domestic Product (IPD-GDP)" to read as "using the change in the Implicit Price Deflator, Gross Domestic Product (IPD-GDP)".

As proposed, this provision may have been interpreted as limiting how the BLM would use the IPD-GDP when updating this fee. It is appropriate for adjustments that occur annually, such as acreage rent, to refer to the average annual change in the IPD-GDP. However, the application filing fee may be adjusted once every ten years and this adjustment would be based on the cumulative change to the IPD-GDP over the 10-year period.

The application filing fee is the initial fee paid to the BLM for the reasonable costs of processing, inspecting, and monitoring a right-of-way. The BLM will use these funds towards processing your application. The balance of these funds, if any, will be allocated towards a cost reimbursement agreement that is later established between the BLM and the applicant or refunded if the application is denied or otherwise terminated. A cost reimbursement agreement is established under the authority of FLPMA section 304(b) and 504(g). This change is made in conformance with those changes made under section 2804.30(e)(4) in response to comments.

The application filing fee is based on the appraisal consultation report performed by the Department's Office of Valuation Services. The appraisal consultation report compared similar costs on private lands, and provided a range between $10 and $25 per acre per year. The nominal range or median was reported as between $15 and $17 per acre per year. The appraisal consultation report is available for review by contacting individuals listed under the "FOR FURTHER INFORMATION CONTACT" section of this preamble.

The BLM is adopting a single filing fee at the time of filing an application, as opposed to a yearly payment. Based on the appraisal consultation report, fees are $15 per

acre for solar and wind energy applications and $2 per acre for wind energy project-area and site-specific testing applications.

Comments: Several comments were made concerning the fees identified in the description of requirements for section 2804.12(c)(2). One comment suggested that the $15 per acre filing fee should be made a part of a cost recovery fee and used to reimburse the BLM for its expenses. In addition, the comment suggested that the fee should be refundable if the lands are later made subject to competition.

Response: The BLM has revised this rule, including this section, to make application filing fees part of cost reimbursement paid to the BLM. Payment of cost reimbursement to the BLM is under Sections 304(b) and 504(g) of FLPMA. Application filing fees and other costs associated with the BLM's processing of applications can be recovered because the BLM's application review and other work facilitates, and will generally be essential for, the BLM's processing, inspecting, and monitoring of a right-of-way. Consistent with FLPMA, application filing fees are retained by the BLM as cost reimbursement and will not be sent to the General Fund of the U.S. Treasury as originally proposed. If lands are later subject to a competitive offer for the use for which application filing fees were provided, (e.g., competition for a site development when development application filing fees are paid), then these fees would be refunded to the unsuccessful bidders who had already paid them, except for the reasonable costs incurred.

Comment: One comment opposes the proposed $15 per acre filing fee for wind energy applications and $2 per acre fee for wind energy site-specific testing applications as this would increase processing costs. The comment suggested that fees should be as low as possible to encourage wind energy development on public lands.

Response: The BLM has removed the application filing fee from site-specific testing applications to address concerns of increasing costs for development on the public lands. Site-specific testing generally takes up less than an acre, so it would not be necessary to encourage a smaller area of use. Project area testing and developments can each encompass thousands of acres and a per acre filing fee is appropriate. This final rule retains a $2 per acre filing fee for project area testing applications and a $15 per acre filing fee for development applications to encourage thoughtful development on public lands. Fees for solar and wind energy development applications will be adjusted for inflation once every 10 years, using the Implicit Price Deflator for Gross Domestic Product (IPD-GDP).

Section 2804.12(d) references an applicant's option to request an alternative requirement if the applicant is unable to meet one of the requirements outlined for submitting an application. Requests for an alternative requirement are submitted under section 2804.40. This provision applies to all right-of-way applications submitted to the BLM and is added to the final rule in response to comments submitted on the proposed rule. Further discussion on requesting an alternative requirement is found under section 2804.40.

Comments: Some comments stated that the mandatory pre-application meetings included in the proposed rule would discourage a developer from pursuing public lands for development, since the process and costs associated with development on BLM lands are greater than those on private lands. These comments expressed concern that these requirements are overly burdensome and duplicative of the NEPA process.

Response: Although costs to develop a project may end up being higher on public lands, the BLM has a different scope of authority and responsibility than agencies and offices that administer developments that occur on private land. The BLM is charged with managing the public lands under principles of multiple use and sustained yield. The BLM must take into account resources and use of the public land, and balance those with each additional proposed use and its impacts to resources for current and future generations.

Based on the BLM's experience, these early coordination meetings help reduce the overall time and costs associated with the BLM's application process. The pre-application meetings described in the proposed rule, which are existing policy, are changed in this final rule to "preliminary application review meetings," which take place after an application is submitted. The BLM believes these meetings will facilitate a more efficient application process and will not discourage development on public lands.

The BLM is required, under NEPA, to consider the environmental impacts of a significant action on the public lands. These early coordination meetings help the BLM and proponent determine the best possible approach for developing a proposed project that would avoid, minimize, reduce or otherwise compensate for its environmental impacts. Based on the BLM's experience, these meetings have reduced the overall time of the NEPA analysis necessary for projects on the public lands. The GAO's report (GAO-13-189) found that the average BLM permitting timeframes have decreased since implementation of BLM's solar and wind energy policies, which include the early inter-agency coordination meeting requirements in this rule.

The BLM added section 2804.12(i), "Inter-agency Coordination," in response to these comments. This paragraph provides that an applicant may request an exemption from some of the requirements of this section, should they participate in an inter-agency coordination process with another Federal, State, local, or tribal authority. This final rule allows a developer to formally request an exemption to the requirements under section 2804.12, pertaining to application filings and other requirements that may be duplicative of other activities that a developer is completing. In order for a developer to qualify for an exemption from these requirements, the other activities must meet the same criteria as required by the BLM. An example of such a situation would be if a developer had already met with the Department of Energy for purposes similar to what is required under the BLM's first preliminary application review meeting.

No other comments were received and no additional changes made to this section.

Sections 2804.12(e) through (h) are redesignated in the final rule from paragraphs (b) through (e) of the existing regulations and no other changes were made to these paragraphs.

Section 2804.14 What is the processing fee for a grant application?

Under section 2804.14, applicants must pay for reasonable costs for processing an application as defined by FLPMA. Under section 2804.14(a), the BLM may collect the estimated reasonable costs incurred by other Federal agencies. Applicants may pay those costs to other affected agencies directly instead of paying them to the BLM.

Section 2804.14(b) includes a table of the application processing categories. The specific outdated values for cost recovery categories 1 through 4 have been removed from this table, while the explanations of the categories and the methodology of

calculating the costs remain. These numbers are available in writing upon request or may be found on the BLM's website at http://www.blm.gov/. These cost figures were removed from the regulations because they are outdated after the first year, since the BLM updates these costs annually and has done so since this section of the regulations was originally published. The revision allows the BLM to update these numbers without modifying the CFR and prevents confusion to potential applicants who would see incorrect information. The explanation of how these costs are calculated, formerly found in section 2804.14(c), is moved up to paragraph (b) to provide better context for the amended table. Redundant language is removed from the Category 1 processing fee.

Comments: Some comments were received stating that the BLM does not have authority to collect cost recovery on behalf of other Federal, State, and non-regulatory offices, such as tribal governments and interested public stakeholders. These comments stated that the authority delegated by the Secretarial Order was by the Secretary, and, therefore, delegation of the authority could not apply to any agency or office outside of the Department.

Response: Secretarial Order 3327 delegating cost recovery authority applies only to agencies and offices of the Department of the Interior. Sections 304(b) and 504(g) of FLPMA, however, give the Secretary authority to collect payments intended to reimburse the United States, not just the Department of the Interior. Under Section 304(b) of FLPMA, the Secretary may charge for reasonable costs of the United States concerning "applications and other documents relating to [the public] lands." Section 504(g) of FLPMA provides that the Secretary may charge for "all reasonable administrative and

other costs incurred in processing" a right-of-way application and costs associated with the inspection and monitoring of right-of-way facilities.

The revision under section 2804.14 and other cost recovery provisions of this rule clarify that the BLM's cost recovery authority is consistent with FLPMA, in that it seeks reimbursement to the United States—i.e., it can seek reimbursement of its own costs as well as those of other Federal agencies. This does not include reimbursement of costs for State and non-regulatory offices. The BLM intends that collecting such reasonable costs for other Federal agencies would primarily arise in situations where the BLM's decision to approve or deny a right-of-way application depends on another Federal agency's issuance of a decision or other determination before or in conjunction with the BLM's right-of-way decision. An example of this can been seen in the BLM's May 2013 Memorandum of Understanding with the Fish and Wildlife Service (FWS), where the BLM and FWS have established a protocol for the BLM to collect and then provide cost recovery funds to the FWS for Endangered Species Act and other work that the BLM determines is necessary for it to process right-of-way applications. A copy of the Secretarial Order and Memorandum of Understanding can be found at the following website: http://www.blm.gov/wo/st/en/info/regulations/Instruction_Memos_and_Bulletins/national_information/2013/IB_2013-074.html. No other comments were received, and no changes were made to this section of the final rule.

Section 2804.18 What provisions do Master Agreements contain and what are their limitations?

As defined in section 2804.18, a Master Agreement is a written agreement covering processing and monitoring fees negotiated between the BLM and a right-of-way applicant that involves multiple BLM rights-of-way for projects within a defined geographic area. New section 2804.18(a)(6) requires that a Master Agreement also describe existing agreements between the BLM and other Federal agencies for cost reimbursement. With the recent authority delegated by Secretarial Order 3327 to collect costs for other Federal agencies, it is important for the applicant, the BLM, and other Federal agencies to coordinate and maintain consistency for cost reimbursement. No additional comments were received, except for those discussed under section 2804.14, and no changes were made to this section in the final rule.

Section 2804.19 How will BLM process my Processing Category 6 Application?

Under section 2804.19(a), an applicant for a Category 6 application must enter into a written agreement with the BLM identifying how such applications will be processed. Under this final rule, the final agreement includes a description of any existing agreements the applicant has with other Federal agencies for cost reimbursement associated with the application. No comments were received for this section, and no changes were made from the proposed rule to this section of the final rule.

Under section 2804.19(e), the BLM may collect reimbursement to the United States for its reasonable costs for processing applications and preparation of other documents under this part relating to the public lands. Adding this language to these regulations clarifies the BLM's authority when collecting for other agencies. No additional comments were received, except for those discussed under 2804.14 and no changes were made to this section of the final rule.

Section 2804.20 How does BLM determine reasonable costs for processing Category 6 or monitoring Category 6 applications?

Section 2804.20 is revised to clarify the scope of the BLM's cost recovery and how the BLM will determine reasonable costs of the United States when processing and monitoring Category 6 applications. In paragraph (a)(1) of this section, "BLM" is changed to "the Federal Government," to make it clear that the BLM may collect cost recovery for other Federal agencies as well. Processing costs include reasonable costs for processing a right-of-way application, while monitoring costs include reasonable costs for those actions the Federal Government performs to ensure compliance with the terms, conditions, and stipulations of the right-of-way grant. As pre-application requirements are not included in this final rule, section 2804.20(a)(7) was deleted. No additional comments were received, except for those discussed under 2804.14, and no other changes were made to this section of the final rule.

Section 2804.23 When will the BLM use a competitive process?

Section 2804.23 was previously titled "What if there are two or more competing applications for the same facility or system?" but is revised to read, "When will the BLM use a competitive process?" This change is necessary because, under the final rule, the BLM may use a competitive process even when there are not two competing applications.

Paragraph (a)(1) of this section now requires applicants to reimburse the Federal Government, as opposed to just the BLM, for processing costs, consistent with the cost recovery authority in Sections 304(b) and 504(g) of FLPMA. This means that the BLM could require applicants to reimburse the BLM for the costs incurred by other agencies, such as the U.S. Fish and Wildlife Service, in processing the application.

A new sentence in section 2804.23(c) gives the BLM authority to offer lands through a competitive process on its own initiative. Under the existing regulations, the BLM can use a competitive process only when there were two or more competing applications for a single right-of-way system. This change gives the BLM more flexibility to offer lands competitively, and applies to all potential rights-of-way, not just solar and wind energy development projects.

Throughout the proposed rule, the BLM required publication of a notice in the Federal Register as well as in a newspaper in general circulation in the area affected by the potential right-of-way. Publication in a newspaper is included in the final rule as one of the "other methods" of public notification that the BLM may use, but is no longer a requirement. The potential area affected by a proposed BLM action may not be covered by a single newspaper. As the BLM considers issues at a broader scale, such as multi-state transmission lines, several communities may be affected by a single BLM action. The Federal Register is a national publication that is available to all interested parties. In addition, the BLM will make available a copy of all Federal Register notices on its website at www.blm.gov. The BLM may use a newspaper to notify the public on a case-by-case basis, as appropriate. The public notification methods throughout this final rule are revised consistent with this section.

Comments: Some comments expressed concern that the BLM may determine to hold a competitive offer after an applicant has substantially progressed in the processing of their non-competitive application for a right-of-way grant. These comments argued

that this possibility would discourage developers from submitting a solar or wind energy right-of-way application.

Response: Proposed paragraph (c) of this section has been revised to state that a competitive process will not be held for public lands where a right-of-way application for solar or wind development has been accepted, including the POD and cost recovery agreement. Adding this criterion provides assurances to prospective applicants that the BLM will not competitively offer lands after considerable time and resources have been committed to processing a particular application.

Under section 2804.23(d), lands outside of DLAs are made available for solar or wind energy applications through the competitive process outlined in section 2804.30. This provision directs the reader to new section 2804.30, which explains the competitive process for solar and wind energy development outside of DLAs. This paragraph is necessary to differentiate between development inside and development outside of a DLA. No comments were received on this paragraph, and no changes are made from the proposed rule to the final rule.

Under section 2804.23(e), lands inside a DLA will now be offered competitively through the process described in subpart 2809. This new paragraph directs the reader to revised subpart 2809, which explains the competitive process for solar and wind energy development inside of DLAs. This paragraph is necessary to differentiate between development inside and outside of a DLA. No additional comments were received for this section, except for those discussed under paragraph (c), and no other changes were made from the proposed to the final rule.

Section 2804.24 Do I always have to submit an application for a grant using Standard Form 299?

Section 2804.24, which is unchanged from the proposed rule, explains when you do not have to use Standard Form 299 (SF-299) to apply for a right-of-way. Under the existing rule, you do not have to use SF-299 if the BLM determines competition exists under section 2804.23(c). The BLM only determines competition exists when there are two or more competing applications for the same right-of-way facility or system.

Due to the changes made to section 2804.23, section 2804.24 specifies when an SF-299 is required. Under both the existing regulations and this final rule, the BLM will implement a competitive process if there are two or more competing applications. Under section 2804.24(a), you do not have to submit a SF-299 if the BLM offers lands competitively and you have already submitted an application for that facility or system.

Under paragraph (a) of this section, if you have not submitted an application for that facility or system, you must submit an SF-299, as specified by the BLM. Under the competitive process for solar or wind energy in section 2804.30, for example, the successful bidder becomes the preferred applicant, and may apply for a grant. The preferred applicant will be required to submit an SF-299, but unsuccessful bidders will not.

Paragraph (b) explains that an applicant does not have to use an SF-299 when the BLM is offering lands competitively under subpart 2809. Under subpart 2809, the BLM will offer lands competitively for solar and wind energy development inside DLAs. The successful bidder will be offered a lease if the requirements described in section 2809.15(d) are met. The successful bidder will not have to submit an application using

SF-299. The following chart explains when the filing of an SF-299 is or is not required under this final rule:

When a SF-299 is required

Type of Solar or Wind right-of-way	Would have to submit a SF 299?
Have two or more competing applications for the same area, outside of DLAs	Yes
Lands are offered competitively outside of a DLA and you have already submitted an application for the parcel before the Notice of Competitive Offer	No
Lands are being offered competitively outside of a DLA and you have not submitted an application	Yes
You are the successful bidder in a competitive offer outside of a DLA and have been declared the preferred applicant and may apply for a grant	Yes
Lands are being offered competitively within a DLA under subpart 2809	No

No comments were received and, no were other changes are made to this section of the final rule.

Section 2804.25 How will BLM process my application?

This section of the final rule has been modified from the proposed rule to reflect the shift of early BLM coordination from pre-application meetings, under section 2804.10, to preliminary application review meetings, under section 2804.12. These preliminary application review meetings are now required after the initial filing of a right-of-way application for solar or wind projects, or for electric transmission lines with a capacity of 100 kV or more.

Section 2804.25(a) of this final rule has been modified from the proposed rule to include a provision from current section 2804.25(b) that states the BLM will inform you of any other grant applications that involve any of the lands for which you have applied. This new provision has been added as paragraph (a)(2). Paragraph (a) has been reformatted providing an introductory statement and putting the existing requirement for identifying the processing fee as paragraph (a)(1). This is an existing provision of the regulations and is only added to this paragraph as part of formatting revisions that are made in response to comments submitted concerning confusion with existing requirements of section 2804.25(b).

Comments: Some comments were received noting confusion over the proposed section 2804.25(b) and its requirements.

Response: This paragraph has been reformatted into two new separate paragraphs, 2804.25(b) and 2804.25(c).

New section 2804.25(b) contains existing regulatory requirements that were part of proposed section 2804.25(b). This paragraph helps explain the existing requirements found in section 2808.12 of the regulations. In paragraph (b), the BLM will not process your application if you have any trespass action pending for any activity on BLM-administered lands or have any unpaid debts owed to the Federal Government. If you have an outstanding trespass action, the BLM will only process your application, under part 2800 or part 2920, if it will resolve the underlying trespass. Similarly, if you have any debts outstanding, the BLM will only process your application after those outstanding debts are paid. The requirement in section 2808.12 is often overlooked by potential right-of-way applicants and this addition to the regulations would insert the

requirement into the application process and improve applicant understanding of the BLM's process under subpart 2804.

Comments: Some comments expressed concern with the clarity of this proposed section and were also unsure whether using an application for a right-of-way to resolve trespass was appropriate. Further, concern was raised over what constituted an unpaid debt to the Federal Government.

Response: In response to the comment about clarity, the BLM revised the language in paragraph (b) of this section, by adding paragraphs (b)(1) and (b)(2), discussing when the BLM will not process an application.

Section 2804.25(b)(1) clarifies that the BLM will not process your application if you have an outstanding debt to the Federal Government and then describes what constitutes an outstanding debt to the government. An additional sentence was added to paragraph (b)(1) of this section, explaining that unpaid debts are what are owed to the Federal Government after all administrative collection actions have occurred, including administrative appeal proceedings under applicable Federal regulations and review under the Administrative Procedure Act (APA). Adding this provision to the regulations makes it clear to right-of-way holders and trespassers that the BLM will evaluate applications in this manner.

Paragraph (b)(2) of this section clarifies that if you are in trespass, the BLM will only process an application that would resolve that particular trespass. Reformatting this paragraph in this manner separates the concepts of unpaid debts and existing trespass situations as they pertain to new applications. Under this final rule, the BLM will not always issue a right-of-way to resolve a trespass. The BLM will consider the situation on

a case-by-case basis and will evaluate whether the trespass was knowing and willful. The BLM will also consider whether issuing a right-of-way to resolve the trespass is appropriate. If a right-of-way is not an appropriate way to resolve a trespass, the BLM will consider other options for resolving a trespass, such as requiring its removal from public lands.

Section 2804.25(c) contains the requirements from section 2804.25(b) of the existing regulations, under which the BLM may require the submittal of a POD. The POD or other plans must be submitted to the BLM within the period specified by the BLM.

Under paragraph (c)(1) of this section, the BLM requires an applicant to commence resource surveys or studies within 1 year of receiving a request from the BLM. This requirement was identified in the preamble of the proposed rule and carried forward in this final rule. The requirement to begin the surveys or studies within 1 year of the request establishes a default period, which will apply if the BLM does not specify a different time period within which the survey or study must begin. The BLM may identify a different time period through written correspondence with applicants, or by other means, as appropriate. Generally, these surveys or studies will not require a permit from the BLM or any other agency. Proponents need only coordinate the work with the applicable agencies as appropriate. However, for some surveys or studies, there may be a permit that is necessary, such as when performing pedestrian archaeological surveys. In those instances, the BLM will work with applicants to ensure that the applicable permitting requirements are understood by all parties.

Under paragraph (c)(2) of this section, an applicant could request an alternative requirement to one of the requirements of this section, such as the period of time described in paragraph (c)(1) of this section. However, the applicant must show good cause why it is unable to meet the requirement. This new paragraph directs the reader to new section 2804.40, consistent with revisions made from comments received as discussed under section 2804.40, if the applicant is unable to meet the requirements of this section. Failure to meet the 1 year requirement for application due diligence may result in denial of the application, unless an alternative compliance period has been requested and agreed to by the BLM. Paragraph (c)(2) of this section gives applicants the ability to address circumstances outside of their control with respect to time periods.

Comments: Some comments were received regarding due diligence requirements for applicants to begin resource studies or provide other such survey work to the BLM. Comments recommended varying timeframes for application due diligence ranging from 1 to 3 years after the BLM's approval of survey protocols or other identified study requirements. Comments generally agreed with implementing such requirements for applications.

Response: In consideration of the comments received on application due diligence requirements, the BLM determined that a longer timeframe would not be appropriate. Under this final rule, an applicant would be required to begin surveys or inventories within a year of the BLM's request date, unless otherwise specified by the BLM. The BLM determined that a one year default timeframe was adequate to commence surveys and inventories. This rule does, however, leave the BLM with the discretion to establish a different timeframe where appropriate.

Section 2804.25(c) of the existing regulations is redesignated as paragraph (d) of this section. It remains unchanged and is relocated to make room for the reformatting of this section in response to comments submitted on the proposed rule.

The introductory text of section 2804.25(e), which is redesignated from existing paragraph (d), is revised by replacing the words "before issuing a grant" with "in processing an application." This change is made to account for the situation where the BLM would issue a grant without accepting applications. For example, lands leased inside DLAs will be offered through a competitive bidding process under subpart 2809 in situations where no applications for those lands are received. The provisions in section 2804.25 do not apply to the leases issued under subpart 2809. However, they will apply to all other rights-of-way, including solar and wind energy development grants outside of DLAs. The process for issuing leases inside DLAs is discussed in subpart 2809. This revision clarifies that the requirements of this section apply to applications.

Section 2804.25(e) is further revised to incorporate new provisions for all rights-of-way as well as specific provisions for solar and wind energy development. Existing section 2804.25(d)(5), which provides the requirement to hold a public meeting if there is sufficient public interest, is moved to section 2804.25(e)(1). Revisions are made in this final rule, consistent with those made in section 2804.23(c). Language is added specifying that a public notice may also be provided by other methods, such as publication in a newspaper in the area affected by the potential right-of-way or the Internet.

Section 2804.25(e)(2) contains three separate requirements for solar and wind energy development applications. Under section 2804.25(e)(2)(i), the BLM will hold a

public meeting in the vicinity of the lands affected by the potential right-of-way for all solar or wind energy development applications. Based on the BLM's experience, most solar and wind energy development projects are large-scale projects that draw a high level of public interest. This requirement is added to provide an opportunity for public involvement early in the process. Under paragraph (e)(2)(ii), the BLM will apply screening criteria when processing an application outside of DLAs. These screening criteria are explained further in section 2804.35. The BLM removed the word "priority" from this requirement to improve reader understanding that the screening criteria are used to determine the priority of applications, not "resource priorities."

Under section 2804.25(e)(2)(iii), the BLM will evaluate an application, based on the input it has received from other government and tribal entities, as well as information received in the application, public meetings, and preliminary application review meetings. The BLM may consider information it has received outside of these meetings when evaluating an application. This paragraph is revised in the final rule to remove reference to pre-application meetings and add preliminary application review meeting requirements, consistent with other changes in this final rule. The BLM has also added more detail to this paragraph explaining why it may deny an application at this point in the process. For example, the BLM may deny an application if you fail to address known resource values raised during preliminary application review (see section 2804.12(c)(4)), or during public meetings (see section 2804.25(e)(2)(i)), or if you improperly site the project. The BLM made this revision to help improve the public's understanding of this process.

Based on its evaluation of an application, the BLM will either deny or continue processing it. The BLM's denial of an application will be in writing and is an appealable decision under section 2801.10. The denial or approval of all grant applications is at the BLM's discretion.

As noted previously under section 2804.12, you must submit an application for a solar or wind energy development. Requirements for submitting this application are noted in sections 2804.25(b) and 2804.25(c), and these must be fulfilled before an application is ready to be evaluated by the BLM. Section 2804.25(e)(2)(iii) has been revised to explain what criteria must be met in order for the BLM to continue processing your application. These criteria are: whether the development application is appropriately sited on the public lands (e.g. outside of DLAs – where leasing must proceed under Section 2809 rather than 2804 – and outside of exclusion areas), and whether you address known resource values that were discussed in the preliminary application review meetings. Known resource values must also be addressed in general project descriptions and in further detail in a project's POD.

Under section 2804.25(e)(3), the BLM will determine whether the POD schedule submitted with an application meets the applicable development schedule and other requirements or whether an applicant must provide additional information. This is a necessary step that allows the BLM to evaluate the application requirements under section 2804.12. Those requirements can be found in sections 2804.12(b) and 2804.12(c). The BLM determines if the development schedule and other requirements of the POD templates have been met. The POD templates can be found at http://www.blm.gov.

Under the proposed rule, paragraph (e)(3) of this section applied to applications for solar and wind energy development, transmission lines with a capacity of 100 kV or more, and pipelines 10 inches or greater in diameter. Under this final rule, this paragraph would apply to all applications for which a POD is required. Although a POD is mandatory for some types of projects, the BLM may require an applicant to submit a POD with any type of right-of-way application under section 2804.25(c) of this final rule (section 2804.25(b) of the existing regulations). Should the BLM require an applicant to submit a POD, the application would be evaluated under this paragraph based on the POD schedule submitted with the application.

Section 2804.25(e)(4) of this final rule is revised from the proposed rule to include a cross-reference to the Department's NEPA implementation regulations at 43 CFR part 46. The Departmental regulations reinforce the CEQ's regulations and the requirements to comply with NEPA. This cross-reference is made to increase the public's awareness of these requirements and where they may be found, but does not impose any additional requirements on the public.

Redesignated paragraphs (e)(5), (e)(6), (e)(7), and (e)(8) of this section are existing provisions that were formerly found in paragraph (d) of this section. Former paragraph (e) is redesignated as new paragraph (f). No other comments were received or other changes made to the final rule, except that references to the "U.S." were changed to read "United States."

Section 2804.26 Under what circumstances may BLM deny my application?

Section 2804.26 explains the circumstances in which the BLM may deny an application. The BLM considers the criteria outlined in this section during its decision-

making process, which for right-of-way authorizations ends with the issuance of a decision—either a ROD or a Decision Record (DR), or in the absence of a ROD or DR, the perfection of a right-of-way instrument or the issuance of a written decision denying the right-of-way application. Once the BLM issues a ROD or DR to approve a right-of-way, any subsequent BLM determination that is inconsistent with that ROD or DR, including any decision to suspend or terminate the right-of-way, is a separate action that requires the BLM to complete a separate decision-making process.

Section 2804.26(a)(5) explains one such circumstance. This provision of the existing regulations is revised to include "or operation of facilities" and now reads, "when an applicant does not have or cannot demonstrate the technical or financial capability to construct the project or operate facilities in the proposed right-of-way." The rule adds text to clarify this requirement, which applies to all rights-of-way. The added paragraphs explain how an applicant could provide evidence of the financial and technical capability to be able to construct, operate, maintain, and decommission a solar or wind energy development project. The applicant may provide documented evidence showing prior successful experience in developing similar projects, provide information of sufficient capitalization to carry out development, or provide documentation of loan guarantees, a confirmed PPA, or contracts for the manufacture and/or supply of key components for solar or wind energy project facilities.

Paragraphs (a)(6), (a)(7), and (a)(8) are added to section 2804.26 to reiterate the new requirements of the final rule and explain that the BLM may deny an application should an applicant not comply with these provisions.

Under section 2804.26(a)(6), the BLM may deny your application if you do not meet the POD submittal requirements under sections 2804.12(a)(8), 2804.12(c)(1), and 2804.25(e)(3). The final rule is updated to ensure that the citations match the reformatted rule, after changes were made based upon comments received.

Section 2804.26(a)(7) is a new paragraph added to the final rule that corresponds to the provisions by which the BLM will require surveys under section 2804.25(c). Under section 2804.26(a)(7), the BLM may deny your application if you fail to meet its requirements to commence surveys and studies, or provide plans for permit processing as required by section 2804.25(c). This paragraph is new in the final rule and is added to be consistent with the new requirements in section 2804.25(c), which are added based upon public comment.

Section 2804.26(a)(8) references the possible application denial based on the screening criteria established in section 2804.25(e)(2)(iii).

Comments: Some comments expressed concern regarding the BLM exercising its authority to deny an application without accounting for the fact that some circumstances may be outside an applicant's control.

Response: In response to this generalized concern, the BLM added section 2804.40 to this final rule. Under this new section, an applicant may request an alternative requirement in place of a requirement that they are unable to meet. References are made to this new section in specific parts of the application processing requirements found under subpart 2804.

No other changes were made to this section and no other comments were received.

Section 2804.27 What fees must I pay if BLM denies my application or if I withdraw my application?

The heading of section 2804.27, "What fees do I owe if BLM denies my application or if I withdraw my application?" is revised to read, "What fees must I pay if BLM denies my application or if I withdraw my application?". With the addition of application filing fees, the revised title more clearly describes the requirements of the final rule. A new provision in this paragraph provides that if the BLM denies your application, or if you withdraw it, you must still pay any application filing fees submitted or due under section 2804.12(c)(2), and the processing fee set forth at section 2804.14. Sections 304(b) and 504(g) of FLPMA provide for the deposit of payments to reimburse the United States for reasonable costs with respect to right-of-way applications and other documents relating to the public lands. In the case of preliminary application review meetings, the expense could be considerable, depending on the complexity of the project. The BLM will refund any part of the application filing fees received that is not used for processing the application. This paragraph is revised by removing references to pre-application meetings that were originally proposed for the rule, but not carried forward in the final rule. These revisions are consistent with other changes made in the final rule under section 2804.12 regarding the change from pre-application to preliminary application review meetings. No other comments were received on this section, and no other changes were made to the final rule.

Section 2804.30 What is the competitive process for solar or wind development for lands outside of designated leasing areas?

Section 2804.30 explains the process for the BLM to competitively offer lands outside of DLAs. This bidding process is similar to that established in subpart 2809 (competitive offers inside DLAs), except that the end result of the bidding is different. Under paragraph (f) of this section, the successful bidder will become the preferred right-of-way applicant. Under this section, the high bidder is not guaranteed a grant, but is identified as the "preferred applicant." As explained under paragraph (g) of this section, the preferred applicant is the only party that may submit an application for the parcel identified by the BLM, but the BLM must still review and accept the application. This is different from subpart 2809, which provides that the successful bidder for a lease inside a DLA may be offered a lease upon successfully meeting all requirements of sections 2809.15.

Comments: Three general comments were received on this section. The first comment requested that language be added to encourage additional consultation with members of the public, such as developers, non-governmental organizations, and stakeholders, during the competitive process outside of DLAs.

Response: Many opportunities for public engagement are provided throughout the competitive process for right-of-way applications filed on public lands outside of DLAs. As part of the competitive processes outside of DLAs, the BLM may engage the public through a notice seeking competitive interest in a particular area, which would provide the public and interested stakeholders with an opportunity to comment on the potential development of a particular parcel. If the BLM decides to move forward with a competitive offer for a parcel, a Notice will be published in the Federal Register and may also be announced through other means. Upon the completion of the competitive

process, the BLM will process an application for the solar or wind energy development, following the requirements of this final rule, which include a mandatory public meeting before the BLM determines whether to deny the application or continue processing it. If the BLM continues to review an application, there may be additional opportunities for public involvement through the NEPA process, including during the notice and comment period. As a result of these measures, the BLM believes that there is adequate opportunity for the public to be fully engaged throughout the competitive process, application review, and NEPA processes for projects outside of DLAs.

Comments: The second comment on this section stated that only developers are capable of making a determination of whether development in a particular area will be economically sound and, therefore, a worthwhile pursuit for public land use. The comment contended that developers will not expend the effort necessary to determine the economic suitability for projects before a competitive process is held (either inside or outside areas such as DLAs).

Response: While the BLM agrees that only a developer can determine whether a particular project in a particular area makes sense for them, that determination does not necessarily apply to all developers, nor is it the only consideration relevant to the BLM. Each developer may follow a different business model and may consider different funding, financing, and procurement opportunities when assessing a potential project site. In identifying DLAs, the BLM has to consider the environmental and other resource impacts of a potential development, in addition to the known solar or wind potential for the area. For these reasons, the BLM does not make an economic evaluation when identifying an area for a competitive process. The BLM will rely on developer interest,

among other indications of competitive interest in an area, to determine whether utilization of a competitive process is appropriate. Recognizing that determining economic viability for a particular area may involve site-specific testing information, the final rule contains provisions allowing for such activities. For wind or solar energy projects outside of a DLA, interested developers can apply for testing authorizations as described in section 2804.31 of this rule, or apply for a testing authorization inside DLAs prior to a competitive action as described in section 2809.19(d) of this rule.

Comments: The third comment on this section suggested that the leasing process should be restructured from a local "electric-centric" focus to a macro-level objective to provide the greatest benefit to "We the People." This comment suggests that the BLM should explicitly recognize that the available solar and wind resources could be used to provide most of, and potentially all of, the United States' fuel, electricity, transportation, and natural resource needs.

Response: FLPMA directs the BLM to generally receive fair market value for the use of public lands and to utilize and protect public land resources while balancing the use of the public lands for current and future generations. The BLM intends for this rule to promote the development of solar and wind energy on public lands, while also ensuring a fair return to the Federal Government.

Paragraph (a) of section 2804.30 identifies lands available for competitive lease; paragraph (b) of this section explains the variety of competitive procedure options available; and paragraph (c) explains how the BLM identifies parcels for competitive offers. Under this final rule, the BLM may identify a parcel for competitive offer if competition exists or the BLM elects to offer a parcel on its own initiative. The BLM

may include lands in a competitive offer in response to interest from the public or industry, or to facilitate an individual State's renewable energy goals. This is a change from existing regulations, which only allow the BLM to use a competitive process when there are two competing applications; however, the changes made to section 2804.23(c) in this rule give the BLM more flexibility.

Paragraph (d) of this section, "Notice of competitive offer," establishes the content of the materials of a notice of competitive offer that include the date, time, and location (if any) of the competitive offer, bidding procedures, qualifications of potential bidders, and the minimum bid required. The notice also explains that the successful bidder becomes the preferred applicant, which can then apply for a grant under this subpart. This is different from the competitive offers held under subpart 2809, where the successful bidder is offered a lease.

Paragraph (d)(4) of this section requires that the notice identify the minimum bid amount, explain how the authorized officer determined the minimum bid amount, and describe the administrative costs borne by the Federal agencies involved. As indicated in the general discussion section of this preamble, administrative costs are not a component of fair market value, but instead are a cost reimbursement paid to the Federal Government for its expenses. The BLM will publish a notice containing all of the identified elements in the Federal Register, and may also use other notification methods, including newspapers in the affected area or the internet. Consistent with sections 2804.23(c), this section's public notice requirements were revised, establishing notice through a newspaper or internet as an additional optional form of notice. This change in the final rule is discussed further in section 2804.23(c) of this preamble. No comments

were received on sections 2804.30(a) through (d). However, a cross-reference has been updated in section 2804.30(d)(6) to include section 2804.12, due to revisions made to that section based upon comments received.

Under paragraph (e) of this section, the BLM requires that bid submissions include both the minimum bid amount and at least 20 percent of the bonus bid. The minimum bid consists of administrative costs and an amount determined by the authorized officer. Included in the administrative costs are those expenses pertaining to the development of environmental analyses and those costs to the Federal Government associated with holding the competitive offer.

The authorized officer may specifically identify a second component for the minimum bid(s) submitted for each competitive offer. This amount will be based on the known or potential values of the offered parcel. The authorized officer may consider values that include, but are not limited to, the acreage rent, the MW capacity fee, or other known or potential values of the parcel. For example, the BLM may use a percentage of the acreage rent value for the parcel competitively offered. An explanation of the minimum bid amount and how the BLM derived it will be provided in the notice of competitive offer.

Comments: Several comments were received pertaining to bidding under section 2804.30(e). One comment suggested that the BLM: (1) Establish global objectives to evaluate bids based on the constitutional greater good for the "People" to meet many objectives of the renewable energy bidding process; (2) Ensure that successful bidders use energy to meet public objectives; (3) Ensure that appropriate values are received for the right to develop energy; (4) Ensure that evaluations of electrical supply include the

full costs and benefits to the public; (5) Ensure that effects from manmade impacts on global warming shall be based on transient climate sensitivity; and (6) Focus on "We the People" instead of creating processes that incur higher costs for developments.

Response: The comments submitted are suggesting revisions to the final rule that are outside of the BLM's authority to consider. FLPMA directs the BLM to generally receive fair market value for the use of public lands and to utilize and protect public land resources while balancing the use of the public lands for current and future generations. The provisions of this final rule will ensure that the BLM is receiving fair market value for the uses of the public lands that it authorizes.

The second comment suggested that the BLM direct where or how renewable energy that is generated on public lands is deployed. The BLM could place a requirement on the use of the electricity generated, through a term or condition of a right-of-way, but the BLM expects that it would do so only in limited circumstances, if at all, as it is a land management agency charged with managing the public lands under principles of multiple use and sustained yield.

The BLM evaluates proposed projects before issuing a decision to approve, approve with modifications, or deny a project. In general, the BLM will analyze a project using reasonable scientific or other methods, to understand the impacts to the public lands and other lands, uses, resources and other systems outside of its authority to control. These other lands, uses, resources, and other systems outside of the BLM's authority to control could include electrical transmission systems that may be owned or controlled by an Independent System Operator, or the energy needs of a State or local community as identified by the State government offices, or lands administered by a Federal, State, or

private entity. When evaluating prospective projects, the BLM considers their reasonably foreseeable direct, indirect, and cumulative impact on climate change on a local, regional, and national scale, as appropriate.

Comment: Another comment suggested that administrative costs discussed under section 2804.30(e)(2)(i) should not be included as part of the minimum bid. The initial costs of preparing for and holding a competitive offer are completed at the volition of the BLM, not an applicant. The comment suggested that including administrative costs as part of the minimum bid will discourage development inside and outside of DLAs. The comment suggested that a successful bidder should essentially pay for the same administrative and NEPA costs as noncompetitive applicants for right-of-ways outside of DLAs.

Response: Under the final rule, reimbursement for the reasonable administrative and other costs is generally required from any successful bidder. Consistent with Sections 304(b) and 504(g) of FLPMA, the BLM may recover reasonable administrative and other costs incurred in processing an application for a right-of-way. Administrative and other costs associated with the use of a competitive process to identify a preferred applicant can be recovered because this work facilitates, and will generally be essential to, the BLM's review of a right-of-way application. These costs would be paid only by the preferred applicant. Bidders will be given notice of the administrative costs portion of the minimum bid prior to their bidding at a competitive offer. The BLM believes that it is preferable for a prospective bidder to know these costs, which are required to prepare and hold a competitive auction, before submitting a bid in a competitive offer. Prospective applicants would not otherwise be able to submit an application to the BLM

for development of that area without first being the successful bidder. The BLM considers the competitive process described in subpart 2809 for lands inside a DLA to be even more preferable to prospective developers, as a successful bidder would be issued a lease immediately upon paying the full amount of their winning bid.

Comments: Comments stated that the mitigation costs identified in section 2804.30(e)(2)(ii) should not be factored into the minimum bid because the successful bidder should have to pay separately for mitigation if and when construction commences and not at the time of bidding. A successful bidder cannot pay twice for the same mitigation. Several other comments also addressed what should or should not be included as acceptable factors.

Response: The BLM has removed the reference to mitigation costs found in proposed section 2804.30(e)(2)(ii), as this may be misleading and open to interpretation. However, the BLM has maintained the acreage rent and the megawatt capacity fee as considerations when determining a minimum bid amount. These factors which are used only to determine the amount above the administrative costs where bidding will start (see section 2804.30(e)(2)(ii)). Their inclusion as a potential consideration in the development of the minimum bid does not count towards other obligations. For example, if the BLM arrives at a minimum bid amount using the annual acreage rent for a lease area, a successful bidder will still be required to pay the first year's acreage rent, as identified in this rule, before being awarded a grant or lease. No offset or discount toward future acreage rent will be provided.

Comments: A number of comments expressed concern that requiring unsuccessful bidders to pay application filing fees would discourage prospective

developers. They suggested that application filing fees should be refundable if a bidder is not successful.

Response: New section 2804.30(e)(4) has been revised based on these comments to refund application filing fees for unsuccessful bidders, except for the reasonable costs incurred by the United States. This change is consistent with the revisions under section 2804.12(c)(2) and discussed further under that section of this preamble.

Under section 2804.30(f), the successful bidder is determined by their submission of the highest total bid for a parcel at a competitive offer. The successful bidder must fulfill the payment requirements of the successful bid in order to become the preferred right-of-way applicant. The preferred applicant must submit the balance of the bid to the BLM within 15 calendar days after the end of the competitive offer. No comments were received pertaining to section 2804.30(f), and no other changes are made from the proposed rule to the final rule.

Under section 2804.30(g), a preferred applicant is the only party who may submit an application for the parcel that is offered. Unlike the process under subpart 2809, the approval of a grant under this paragraph is not guaranteed to a successful bidder. Approval of a grant is solely at the BLM's discretion. The preferred applicant may also apply for an energy project-area or site-specific testing grant.

Comments: A comment suggested adding a new provision to the rule stating that upon making a winning bid, the preferred applicant also secures site control. Adding such a condition would provide more certainty to the process for prospective developers, further incentivizing the competitive bidding.

Response: The BLM agrees with this comment and has revised paragraph (g) to make it clear that the BLM will not accept applications on lands where a preferred applicant has been identified, unless submitted or allowed by the preferred applicant in order to provide additional certainty with respect to site control. If ancillary facilities for projects or facilities on adjacent parcels, such as roads or transmission lines, need to be constructed on the parcel where a preferred applicant's project would be sited, the companies constructing the ancillary facilities would need to apply to the BLM for a right-of-way, and the BLM would consult with the preferred applicant before processing any such application. This is intended to provide certainty to the preferred applicant when applying for renewable energy developments on the public lands that applications from other entities will not be accepted for the competitively gained application area unless they are allowed by the preferred applicant.

Section 2804.30(h) describes how the BLM will address certain situations that could arise from a competitive offer. Under paragraph (h)(1) of this section, the BLM retains discretion to reject bids, regardless of the amount offered. For example, the BLM may reject a bid if there is evidence of conflicts of interest or collusion among bidders or if there is new information regarding potential environmental conflicts. The BLM will notify the bidder of the reason for the rejection and what refunds are available. If the BLM rejects a bid, the bidder may administratively appeal that decision (see 43 CFR part 4 for details). Under paragraph (h)(2) of this section, the BLM may make the next highest bidder the preferred applicant if the first successful bidder does not satisfy the requirements under section 2804.30(f). This allows the BLM to determine a preferred

applicant without reoffering the land and could save time and money for the BLM and potential applicants.

The BLM may reoffer lands competitively under section 2804.30(h)(3) if the BLM cannot identify a successful bidder. If there is a tie, this re-offer could either be limited to tied bidders or include all bidders. This provides the BLM with flexibility to resolve ties and other issues that could arise during a competitive offer process.

Under section 2804.30(h)(4), if the BLM receives no bids, the BLM may re-offer the lands through the competitive process provided for in section 2804.30. The BLM may also make the lands available through the non-competitive process described in subparts 2803, 2804, and 2805, if doing so is determined to be in the public interest. No other comments were received, and no additional changes were made to final paragraph (h) of this section, except those discussed above.

Section 2804.31 How will the BLM call for site testing for solar or wind energy applications?

This section, which was not in the proposed rule, is added to this final rule to describe how the BLM will call for site testing for solar and wind energy. This section also explains how the BLM may create a new DLA, through the land use planning process described in new section 2802.11, in response to public interest.

Under new paragraph (a) of this section, the BLM may call for site testing in a DLA by publishing a notice in the Federal Register and may also use other notification methods, such as a local newspaper or the Internet. Paragraph (a) also specifies what information will be included in any public notice issued under the section, including the following information: (1) The date, time, and location where site testing applications

may be sent; (2) The date by which applicants will be notified of the BLM's decision on timely submitted site testing applications; (3) The legal land description of the area for which site testing applications are being requested; and (4) Qualification requirements for applicants. The BLM is limiting the testing authorizations that would be offered under a call for site testing applications under this section to site-specific grants identified under section 2801.9(d)(1). This limitation is established to reduce the potential for multiple interested parties having overlapping applications. The BLM does not intend to use a competitive process for the site testing. Rather, the BLM intends to determine whether there is competitive interest for solar and wind energy development for these public lands. Should there be overlapping testing applications, the BLM will notify those applicants of the overlap and may hold a competitive offer for that site testing location to determine a preferred applicant.

Paragraph (b) of this section explains that any interested parties may request that the BLM hold a call for site testing for certain public lands. However, how the BLM responds to those requests is at its sole discretion. The "call for site testing" may be used as a step in the process for lands either inside or outside of DLAs. A subsequent step would be the competitive offer for an application for a development grant under section 2804.30, or for a development lease under subpart 2809, if the area is designated as a leasing area, as described in section 2804.31(c).

Under paragraph (c) of this section, the BLM may determine that areas receiving interest from the public may be appropriate to establish as a DLA. The BLM may turn an area surrounding the site testing into a DLA as described under section 2802.11. Following the designation of an area for competitive leasing, the rules described under

subpart 2809 would be used for any subsequent competitive processes in the area. Establishing such an area would be performed by following the land use planning process described in the revised section 2802.11. This process would be completed during the time that testing is being undertaken, which is typically a 3 year process. Designating such an area would allow interested developers to benefit from the incentives provided by development in a DLA. This approach also provides a mechanism for public interest to drive the establishment of DLAs.

Comments: Some comments suggested that the BLM retain the discretion to structure the DLA leasing process for wind in accordance with a two-phased development approach. The first phase of this approach would be a competitive process for site testing. The winner of this offer would receive exclusive rights to the parcel offered. The BLM would then create a DLA in the area where this competitive offer was held. The second phase would be a competitive offer for a lease in this newly established DLA.

Response: The BLM recognizes that potential developers should have a clear avenue for helping the BLM identify new DLAs. The BLM added the new section 2804.31 to this final rule in direct response to these comments. This new section provides another way for developers to identify and benefit from the competitive process and DLA incentives established in subpart 2809 of this final rule. Providing a mechanism for site testing while DLA designation is ongoing will allow developers to benefit from the specific data they obtain during testing as they evaluate whether a competitive offer or further development of the lands is in their interest.

Section 2804.35 How will the BLM prioritize my solar or wind energy application?

Section 2804.35 explains how the BLM will prioritize review of an application for a solar or wind energy development right-of-way based on the screening criteria for projects outside of DLAs. The BLM will evaluate such applications based on the screening criteria in that section and categorize the application as high, medium, or low priority.

Through existing guidance, the BLM has established screening criteria (see Instruction Memorandum (IM) 2011-061), which identify and prioritize land use for solar and wind energy development rights-of-way. In order to facilitate environmentally responsible development the IM directs BLM to consider resource conflicts, applicable land use plans, and other statutory and regulatory criteria pertinent to the applications and the lands in question. Applications with lesser resource conflicts are anticipated to be less costly and time-consuming for the BLM to process, and the IM directs that these applications be prioritized over those with greater resource conflicts. IM 2011-061 may be found at http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

This rule includes criteria similar to those in the IM. The codification of these criteria gives certainty to applicants that such criteria will not change, and therefore provides more certainty as to how an application might be categorized. By specifying these criteria, applications could be tailored to fit them in order to streamline the processing of an application.

Comment: One comment indicated that the BLM should clarify the proposed rule's application prioritization concept. This comment indicated that the proposed rule left several questions unanswered, including: (1) How the BLM's staff time will be allocated within field staff among projects based on priority and time of submission; (2)

Whether BLM staff working on a medium-conflict priority project will shift focus if a high-priority application is submitted; and (3) Whether BLM staff workload will be shifted across different field offices if certain field offices have a disproportionate number of high-priority applications as compared to others, which may have more medium- or low-priority applications.

Response: This final rule provides the criteria that the BLM will use to prioritize applications it receives. This allows potential applicants to understand not only how these applications will be prioritized, but also how they can submit an application that is more likely to become a high priority for the BLM. The BLM's internal management and workload processes are not addressed as that is not appropriate for a rulemaking. The criteria for determining how workload priorities are addressed are more appropriately handled by the policy guidance for implementing this final rule. Such guidance will elaborate on these points. It should be noted that the BLM will continue to process all applications received, but will prioritize staff workload based upon these priority categorizations.

Comments: Comments were received requesting clarity over whether leases awarded under subpart 2809 would be given priority over applications made outside of DLAs.

Response: New language has been added to the introductory paragraph of this section to clarify that the BLM generally prioritizes the processing of leases awarded under subpart 2809 over applications submitted under subpart 2804. There are some instances where the BLM may determine that it is in the public interest to prioritize the

processing of an application over the processing of a lease. However, the BLM generally intends to prioritize the processing of leases first.

Comments: Comments were received requesting that the BLM expand on the criteria used in the rule and better define and describe the resource areas and potential conflicts. Some specific recommendations were made by the commenters. Each comment provided a greater level of specificity or detail than the proposed rule regarding how the BLM should prioritize resource conflicts.

Response: The descriptions of the resource conflicts in the final rule are mostly unchanged, except where noted in this section's discussion. The BLM determined that the level of specificity and detail recommended by commenters is not appropriate for this final rule. Screening applications to prioritize them has only been done by the BLM recently. Based upon the BLM's experience, it is better to establish broader criteria in this final rule that can then be further refined in its internal guidance. National priorities change and BLM continues to learn more about the resource conflicts associated with solar and wind energy projects. Therefore, the BLM believes that the specific internal guidance, rather than regulatory criteria, is more appropriate to provide a greater level of specificity and detail as recommended by commenters. This approach gives the BLM flexibility to make changes as workload or conditions on the ground or in the wind and solar industry change. Guidance may need to be updated as national priorities change and the BLM better understands these resource conflicts with solar and wind energy projects. As part of the rule's implementation, the BLM will issue guidance aimed at better describing the BLM's considerations and prioritization of applications. This guidance is expected to be issued after this final rule is published.

Section 2804.35(a) identifies criteria for high-priority applications, which are given processing priority over medium- and low-priority applications. These criteria include:

1. Lands specifically identified as appropriate for solar or wind energy development outside DLAs;
2. Previously disturbed sites or areas adjacent to previously disturbed or developed sites;
3. Lands currently designated as Visual Resource Management (VRM) Class IV; and
4. Lands identified as suitable for disposal in the BLM's land use plans.

The BLM may have identified lands that are appropriate for solar or wind energy development, but are not inside DLAs. These lands may include areas approved for solar or wind area development for which a right-of-way was never issued or an existing right-of-way was relinquished.

The VRM inventory process is a means to determine visual resource values. The VRM inventory consists of a scenic quality evaluation, sensitivity level analysis, and a delineation of distance zones. Based on these three factors, BLM-administered lands are placed into one of four VRM classes, with Classes I and II being the most valued, Class III representing a moderate value, and Class IV being of least value. The BLM assigns VRM classes through the land use planning process, and these values can range from areas having few scenic qualities to areas with exceptional scenic quality.

Section 2804.35(b) identifies criteria for medium-priority applications, which will be considered before low-priority applications. These criteria include:

1. BLM special management areas that provide for limited development or where a project may adversely affect lands having value for conservation purposes, such as historical, cultural, or other similar values;
2. Areas where a project may adversely affect conservation lands to include lands with wilderness characteristics that have been identified in an updated wilderness characteristics inventory;
3. Right-of-way avoidance areas;
4. Areas where a project may adversely affect resources listed nationally;
5. Sensitive plant or animal habitat areas;
6. Lands designated as VRM Class III;
7. Department of Defense (DOD) operating areas with land use or operational mission conflicts; and
8. Projects with proposed groundwater uses within groundwater basins that have been allocated by State water resource agencies.

Comment: One comment suggested for Criterion 5, that BLM's designated priority sage-grouse areas be a low priority and not a medium priority.

Response: The BLM removed the reference to sage-grouse habitat in this final rule. In September, 2015, the BLM issued the Greater Sage-Grouse Plan Amendments and Revisions (80 FR 57633, 80 FR 57639). Those plans generally excluded priority habitat areas from major right-of-way developments, including wind energy. General sage-grouse habitat management areas generally fall into the medium-priority application category under Criterion 5.

With the removal of priority sage-grouse habitat from this final rule in criterion 5, the BLM also revised the specificity of "important eagle use areas" to read as "important species use areas." This revision makes the criterion more broad and applicable to all important species areas, and does not unintentionally exclude other identified important species areas that are not specifically identified for eagles.

Comments: Several comments were made concerning the above factors. For Criterion 2, a comment recommended revising the description of "conservation lands" and excluding Alaska from this requirement.

Response: The final rule does not revise the section 2804.35(b)(2) as recommended in the comment. This final rule does not define "conservation lands," which include areas of critical environmental concern and lands inventoried and managed for wilderness characteristics. These lands are often identified for their unique characteristics by the BLM to protect scenic, historic, cultural, and other natural values. The status of conservation lands is considered by the BLM when processing solar and wind energy applications. When the BLM considers such lands for wind or solar use, it evaluates the impacts and effects to the resources, including those resources for which conservation lands are designated. Depending on the proposed development, the impacts to the resources for which the lands were designated for conservation purposes may be very small. Applications, such as those submitted for lands in Alaska, will be reviewed on a case-by-case basis.

Comment: Another comment suggested that Criterion 7 be moved to low priority and changed to read "Areas where the Department of Defense has testing, training, or operational mission impacts."

Response: The BLM considered the suggestion, but did not revise the rule as suggested. The BLM kept this requirement largely unchanged because the DOD has overlapping interest in some locations with the BLM lands – e.g., withdrawn lands that are transferred to the DOD or have an aerial easement – where solar and wind energy development does not pose significant adverse impacts to the DOD operations. However, we did revise criterion number 7 to read as follows "Department of Defense operating areas with land use or operational mission conflicts." The BLM will coordinate with the DOD on solar and wind energy applications submitted to the BLM that may affect DOD operations.

Section 2804.35(c) identifies criteria for low priority applications, which may not be feasible to authorize due to a high potential for conflict. Examples of applications that may be assigned low priority would involve:

1. Lands near or adjacent to areas specifically designated by the Congress, the President, or the Secretary for the conservation of resource values;
2. Lands near or adjacent to wild, scenic, and recreational river and river segments determined as suitable for wild or scenic river status, if project development may have significant adverse effects on sensitive viewsheds, resources, and values;
3. Lands designated as critical habitat for federally designated threatened or endangered species under the ESA;
4. Lands currently designated as VRM Class I or II;
5. Right-of-way exclusion areas
6. Lands currently designated as no surface occupancy areas; and

Comment: One comment recommended that applications within lands under Criterion 2 not be considered a low priority. This comment further suggested that an additional criterion be added that would read as "Nothing in this section creates a protective perimeter or buffer zone around the special status conservation lands specified in Sections 2804.35(c)(1) and 2804.35(c)(2). The fact that a proposed activity or use on BLM-administered lands outside such special status conservation lands can be seen or heard within such special status conservation lands shall not accord an application low-priority status even if the use or activity is prohibited within the special status conservation lands."

Response: Nothing in this criterion creates a protective perimeter or buffer zone around the areas described in this section and, therefore, precludes the BLM's approval of an application that is near or adjacent to such areas. In the BLM's experience, solar and wind energy development applications are complex and difficult to analyze. If a proposed right-of-way would affect such areas, the BLM will consider effects when processing the application. Potential impacts to these areas and their resources may prove unacceptable, even after mitigation.

The BLM also revised criterion 3 of this section from the proposed to final rule, from "is likely to" to "may" "…result in the destruction or adverse modification of that critical habitat." This revision is necessary because it is difficult to determine based on an application what impacts are "likely." However, it is the BLM's responsibility to protect critical habitat. Therefore, any application that may destroy or adversely affect critical habitat will be a categorized as low priority under this final rule.

The low priority status of applications meeting these criteria relates only to the BLM's management of its workload in processing applications; it is not a proxy for the BLM's final decision. No other comments were received, nor were any changes made to section 2804.35.

Section 2804.40 Alternative Requirements.

Section 2804.40 is added to this final rule in response to comments received on the proposed rule.

Comments: Several comments expressed concern that the BLM's proposed requirements were too strict and would be difficult to meet, resulting in applications being denied or a holder's authorization being terminated. They supported the BLM's reference to a showing of good cause to support why a developer was unable to meet the BLM's requirement.

Response: The BLM has added this section to the final rule due to the number of comments received discussing the BLM's requirements that had no specific provision allowing a developer to show good cause why an alternative to a regulatory requirement should be approved.

Section 2804.40 expands on the BLM's show of good cause provision that was in the proposed rule with several different new requirements. This new provision replaces the specific provisions originally proposed and now applies to all rights-of-way and to all requirements the BLM has established under this subpart. An applicant may request an alternative requirement from the BLM by following the process outlined in this section. A similar provision is added in section 2805.12(e). That provision is discussed in that section's preamble discussion.

Paragraph (a) of this section notes that the requester must show good cause for its inability to meet a particular requirement. An applicant may request an alternative requirement for any requirement in this subpart. Requirements include surveys or studies to be completed, timeframes in which to provide information, development and reclamation plans, fees, and other appropriate requirements.

Paragraph (b) of this section states that you must suggest an alternative requirement to the BLM and explain why the alternative requirement is appropriate. The BLM will not approve an alternative requirement without an explanation from the right-of-way holder as to why the current requirement is inappropriate. When implementing this final rule, the BLM intends to issue guidance on what constitutes an "appropriate" alternative requirement.

Paragraph (c) of this section states that a request for an alternative requirement must be in writing and be received by the BLM in a timely manner. In order for the request to be timely, the BLM must have received it prior to the deadline originally given for the relevant requirement. As explained in the final rule, any such request is not approved until you receive BLM approval in writing. The BLM may provide written approval through a letter, email or other written means.

Subpart 2805— Terms and Conditions of Grants

Section 2805.10 How will I know whether the BLM has approved or denied my application, or if my bid for a solar or wind energy development grant or lease is successful or unsuccessful?

The heading for section 2805.10 is revised to read as stated above. This section is updated to reflect the new competitive process for lands inside DLAs (see subpart 2809)

by stating that a successful bidder for a solar or wind development lease on such lands will not have to submit a SF-299 application. Instead, in these circumstances, the successful bidder will have the option to sign the lease offered by the BLM.

Paragraph (a) of this section contains the language from the existing regulations explaining how the BLM will notify you about your application. This paragraph is revised to add a new provision requiring that the BLM send the successful bidder a written response, including an unsigned lease for review and signature. The BLM will notify unsuccessful bidders, and any unused funds submitted with their bids will be returned. If an application is rejected, the applicant must pay any processing costs (see section 2804.14).

In paragraph (a) of this section of the final rule, the BLM changed "will send you an unsigned lease" to "may send you an unsigned lease," for consistency with revisions to section 2809.15(a). See the preamble for that section for more discussion.

Paragraphs (b), (b)(1), and (b)(2) of this section parallel paragraphs (a)(1) and (a)(2) of the existing regulations, and describe the unsigned grant or lease that the BLM will send to you for approval and signature.

Paragraph (b)(3) of this section specifies that in accordance with section 2805.15(e), the BLM may make changes to any grant or lease, including to leases issued under subpart 2809, as a result of the periodic review required by this section. This provision is necessary because it makes clear why the BLM would amend a lease issued under subpart 2809. The terms and conditions of a right-of-way grant or lease may be changed in accordance with section 2805.15(e) as a result of changes in legislation or regulation, or as otherwise necessary to protect public health or safety or the

environment. Because any changes to the terms and conditions of a right-of-way grant or lease would occur after the completion of the agency action (the BLM's decision to approve the right-of-way), the BLM generally anticipates making the change through a separate action, generally initiated at the BLM's discretion and requiring its own decision-making process.

Sections 2805.10(c), 2805.10(d), 2805.10(d)(1), 2805.10(d)(2), and 2805.20(d)(3) contain the language from existing sections 2805.10(b), 2805.10(c), 2805.10(c)(1), 2805.10(c)(2), and 2805.20(c)(3). These provisions remain unchanged from existing regulations. No comments were received and no changes were made from the proposed rule to the final rule.

Section 2805.11 What does a grant contain?

Existing section 2805.11(b) explains how the duration of each potential right-of-way is determined. This paragraph is revised to include specific terms for solar and wind energy authorizations, because they are unique and different from other right-of-way authorizations. Where the proposed rule discussed only wind energy testing in some portions, the final rule is changed to include both solar and wind for each type of authorization. This revision is made in connection with changes made under section 2801.9(d), where comments requested that site- and project-area testing authorizations include solar energy, and not be exclusive to wind.

Section 2805.11(b)(2)(i) limits the term for a site-specific grant for testing and monitoring of wind energy potential to 3 years. Under this rule, this type of grant will be issued only for a single meteorological tower or study facility and will include any access necessary to reach the site. This authorization cannot be renewed. If a holder of a grant

wishes to keep its site for additional time, it must reapply. These authorizations are intended for testing, not energy generation, and are limited to an area large enough for only a single tower or study facility. If a developer wishes for a larger study area, it can apply for a project-area testing grant under paragraph (b)(2)(ii) of this section.

Section 2805.11(b)(2)(ii) provides for an initial term of 3 years for project-area energy testing. Such grants may include any number of meteorological towers or study facilities inside the right-of-way. Any renewal application must be submitted before the end of the third year if a proponent wishes to continue the grant. For the BLM to be able to renew such an authorization, the project-area testing grant holder must submit two applications, one for renewal of the project-area testing grant and one for a solar or wind energy development grant, plus a POD for the facility covered by the development application. Renewals for project-area testing grants may be authorized for one additional 3-year term.

Section 2805.11(b)(2)(iii) provides for a short-term grant for all other associated actions, such as geotechnical testing and other temporary land-disturbing activities, with a term of 3 years or less. A renewal of this grant may be issued for an additional 3-year term.

Section 2805.11(b)(2)(iv) provides for an initial grant term of up to 30 years for solar and wind energy grants outside of DLAs, with a possibility of renewal in accordance with section 2805.14(g). A holder must apply for renewal before the end of the authorization term.
