with § 2806.11 and prorated consistent with § 2806.12(a). The MW capacity fee will vary depending on the size of the wind energy development project.

§ 2806.61 Scheduled Rate Adjustment.

(a) The BLM will adjust your acreage rent and MW capacity fee over the course of your authorization as described in these regulations. For new grants or leases, you may choose either the standard rate adjustment method (see §§ 2806.52(a)(5) and 2806.52(b)(3) for grants; see §§ 2806.54(a)(4) or 2806.54(c) for leases) or the scheduled rate adjustment method (see § 2806.52(d) for grants; see § 2806.54(d) for leases). Once you select a rate adjustment method, that method will be fixed until you renew your grant or lease (see § 2807.22).

(b) For new grants or leases, if you select the scheduled rate adjustment method you must notify the BLM of your decision in writing. Your decision must be received by the BLM before your grant or lease is issued. If you do not select the scheduled rate adjustment method, the standard rate adjustment method will apply.

(c) If you hold a grant that is in effect prior to [INSERT EFFECTIVE DATE OF THIS FINAL RULE], you may either accept the standard rate adjustment method or request in writing that the BLM apply the scheduled rate adjustment method, as set forth in § 2806.52(d), to your grant. To take advantage of the scheduled rate adjustment option, your request must be received by the BLM before [INSERT DATE TWO YEARS AFTER PUBLICATION IN THE FEDERAL REGISTER]. The BLM will continue to apply the standard rate adjustment method to adjust your rates unless and until it receives your request to use the scheduled rate adjustment method.

§ 2806.62 Rents and fees for wind energy development grants.

You must pay an annual acreage rent and MW capacity fee for your wind energy development grant as follows:

(a) Acreage rent. The BLM will calculate the acreage rent by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the per acre zone rate from the wind energy acreage rent schedule in effect at the time the authorization is issued;

(1) Per acre zone rate. The annual per acre zone rate from the wind energy acreage rent schedule is calculated using the per acre zone value (as assigned in accordance with paragraph (a)(2) of this section), encumbrance factor, rate of return, and the annual adjustment factor. The calculation for determining the annual per acre zone rate is A × B × C × D = E where:

(i) A is the per acre zone value = the same per- acre zone values described in the linear rent schedule in § 2806.20(c);

(ii) B is the encumbrance factor = 10 percent;

(iii) C is the rate of return = 5.27 percent;

(iv) D is the annual adjustment factor = the average annual change in the IPD-GDP for the 10-year period immediately preceding the year that the NASS Census data becomes available (see § 2806.22(a)). The BLM will adjust the per acre rates each year based on the average annual change in the IPD–GDP as determined under § 2806.22(a). Adjusted rates are effective each year on January 1; and

(v) E is the annual per acre zone rate.

(2) Assignment of counties: The BLM will calculate the per acre zone rate in paragraph (a)(1) of this section by using a State-specific factor to assign a county to a zone in the

wind energy acreage rent schedule. The BLM will calculate a State-specific factor and apply it to the NASS data (county average per acre land and building value) to determine the per acre value and assign a county (or other geographical area) to a zone. The State-specific factor represents the percent difference between improved agricultural land and unimproved rangeland values, using NASS data. The calculation per acre for determining the State-specific factor is (A/B) – (C/D) = E where:

(i) A = the NASS Census statewide average per acre value of non-irrigated acres;

(ii) B = the NASS Census statewide average per acre land and building value;

(iii) C = the NASS Census total statewide acres in farmsteads, homes, buildings, livestock facilities, ponds, roads, wasteland, etc.;

(iv) D = the total statewide acres in farms; and

(v) E = the State-specific percent factor or 20 percent, whichever is greater.

(3) The initial assignment of counties to the zones on the wind energy acreage rent schedule will be based upon the most recent NASS Census data (2012) for years 2016 through 2020. The BLM may on its own or in response to requests consider making regional adjustments to those initial assignments, based on evidence that the NASS Census values do not accurately reflect those of the BLM-managed lands. The BLM will update this rent schedule once every 5 years by re-assigning counties to reflect the updated NASS Census values as described in § 2806.21 and recalculate the State-specific percent factor once every 10 years as described in § 2806.22(b).

(4) Acreage rent payment. You must pay the acreage rent regardless of the stage of development or operations on the entire public land acreage described in the right-of-way

authorization. The BLM State Director may approve a rental payment plan consistent with § 2806.15(c); and

(5) Acreage rent adjustments. This paragraph applies unless you selected the scheduled rate adjustment method (see § 2806.61). The BLM will adjust the acreage rent annually to reflect the change in the per acre zone rates as specified in paragraph (a)(1) of this section. The BLM will use the most current per acre zone rates to calculate the acreage rent for each year of the grant term; and(6) The acreage rent must be paid as described in § 2806.62(a) except for the initial implementation of the wind energy acreage rent schedule of section §2806.62(c).

(7) You may obtain a copy of the current per acre zone rates for wind energy development (wind energy acreage rent schedule) from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street, SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. The BLM also posts the current wind energy acreage rent schedule for wind energy development at http://www.blm.gov.

(b) MW capacity fee. The MW capacity fee is calculated by multiplying the approved MW capacity by the MW rate. You must pay the MW capacity fee annually when electricity generation begins or is scheduled to begin in the approved POD, whichever comes first.

(1) MW rate. The MW rate is calculated by multiplying the total hours per year by the net capacity factor, by the MWh price, by the rate of return. For an explanation of each of these terms, see the definition of MW rate in § 2801.5(b).

(2) MW rate schedule. You may obtain a copy of the current MW rate schedule for wind energy development from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street, SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. The BLM also posts the current MW rate schedule for wind energy development at http://www.blm.gov;

(3) Periodic adjustments in the MW rate. This paragraph applies unless you selected the scheduled rate adjustment method (see § 2806.61). We will adjust the MW rate every 5 years, beginning in 2021, by recalculating the following two components of the MW rate formula:

(i) The adjusted MWh price is the average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States for the full 5 calendar-year period preceding the adjustment, rounded to the nearest dollar increment; and

(ii) The adjusted rate of return is the 10-year average of the 20-year U.S. Treasury bond yield for the full 10 calendar-year period preceding the adjustment, rounded to the nearest one-tenth percent, with a minimum rate of return of 4 percent.

(4) MW rate phase-in. This paragraph applies unless you selected the scheduled rate adjustment method (see §2806.61). If you hold a wind energy development grant, the MW rate will be phased in as follows:

(i) There is a 3-year phase-in of the MW rate when electricity generation begins or is scheduled to begin in the approved POD, whichever comes first, at the rates of:

(A) 25 percent for the first year. This rate applies for the first partial calendar year of operations;

(B) 50 percent for the second year; and

(C) 100 percent for the third and subsequent years of operations.

(ii) After generation of electricity starts and an approved POD provides for staged development:

(A) The 3-year phase-in of the MW rate applies to each stage of development; and

(B) The MW capacity fee is calculated using the authorized MW capacity approved for that stage, plus any previously approved stages, multiplied by the MW rate.

(iii) The MW rate may be phased in further, as described in paragraph (c) of this section.

(5) The general payment provisions for rents described in this subpart, except for § 2806.14(a)(4), also apply to the MW capacity fee.

(c) Initial implementation of the acreage rent and MW capacity fee. This paragraph applies unless you selected the scheduled rate adjustment method (see §2806.61).

(1) If you hold a wind energy grant and made payments for billing year 2016, the BLM will reduce by 50 percent the net increase in annual costs between billing year 2017 and billing year 2016. The net increase will be calculated based on a full calendar year.

(2) If the BLM accepted your application for a wind energy development grant, including a plan of development and cost recovery agreement, prior to September 30, 2014, the BLM will phase in your payment of the acreage rent and MW capacity fee by reducing the:

(i) Acreage rent of the grant by 50 percent for the initial partial year of the grant; and

(ii) MW capacity fee by 75 percent for the first (initial partial) and second years and by 50 percent for the third and fourth years for which the BLM requires payment of the MW capacity fee. This reduction to the MW capacity fee applies to each stage of development.

(d) Scheduled rate adjustment. Under the scheduled rate adjustment (see § 2806.61), the BLM will update your per acre zone rate and MW rate as follows:

(1) The BLM will calculate your payments using the per acre zone rate (see § 2806.62(a)(1)) and MW rate (see § 2806.62(b)(1)) in place when your grant is issued, or for existing grants, the per acre zone rate and MW rate in place prior to [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER], as adjusted under paragraph (d)(6) of this section;

(2) The per acre zone rate will increase:

(i) Annually, beginning after the first full year plus the initial partial year, if any, your grant is in effect by the average annual change in the IPD-GDP as described in § 2806.22(b); and

(ii) Every 5 years, beginning after the first 5 years, plus the initial partial year, if any, your grant is in effect, by 20 percent;

(3) The MW rate will increase by 20 percent every 5 years, beginning after the first 5 years, plus the initial partial year, if any, your grant is in effect;

(4) The BLM will not apply the phase-in to your MW rate under § 2806.62(b)(4) or the reduction under § 2806.62(c);

(5) If the approved POD for your project provides for staged development, the BLM will calculate the MW capacity fee using the MW capacity approved for that stage in question

plus any previously approved stages, multiplied by the MW rate as described under this section.

(6) For grants in place prior to [INSERT EFFECTIVE DATE OF FINAL RULE] that select the scheduled rate adjustment method offered under § 2806.61(c), the per acre zone rate and the MW rate in place prior to [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER] will be adjusted for the first year's payment using the scheduled rate adjustment method as follows:

(i) The per acre zone rate will increase by the average annual change in the IPD-GDP as described in § 2806.22(b) plus 20 percent;

(ii) The MW rate will increase by 20 percent; and

(iii) Subsequent increases will be performed as set forth in paragraphs (d)(2) and (d)(3) of this section from the date of the initial adjustment under paragraph (d)(6) of this section.

§ 2806.64 Rents and fees for wind energy development leases.

If you hold a wind energy development lease obtained through competitive bidding under subpart 2809 of this part, you must make annual payments in accordance with this section and subpart, in addition to the one-time, up front bonus bid you paid to obtain the lease. The annual payment includes an acreage rent for the number of acres included within the wind energy lease and an additional MW capacity fee based on the total authorized MW capacity for the approved wind energy project on the public lands.

(a) Acreage rent. The BLM will calculate and bill you an acreage rent that must be paid prior to issuance of your lease as described in § 2806.62(a). This acreage rent will be based on the following:

(1) Per acre zone rate. See § 2806.62(a)(1).

(2) Assignment of counties. See §§ 2806.62(a)(2) and 2806.62(a)(3).

(3) Acreage rent payment. See § 2806.62(a)(4).

(4) Acreage rent adjustments. This paragraph applies unless you selected the scheduled rate adjustment method (see §2806.61). Once the acreage rent is determined under § 2806.62(a), no further adjustments in the annual acreage rent will be made until year 11 of the lease term and each subsequent 10-year period thereafter. We will use the per acre zone rates in effect at the time the acreage rent is due (at the beginning of each 10-year period) to calculate the annual acreage rent for each of the subsequent 10-year periods.

(b) MW capacity fee. See §§ 2806.62 (b), (b)(1), (2), and (3).

(c) MW rate phase-in. This paragraph applies unless you selected the scheduled rate adjustment method (see §2806.61). If you hold a wind energy development lease, the MW capacity fee will be phased in, starting when electricity begins to be generated. The MW capacity fee for years 1-20 will be calculated using the MW rate in effect when the lease is issued. The MW capacity fee for years 21-30 will be calculated using the MW rate in effect in year 21 of the lease. These rates will be phased-in as follows:

(1) For years 1 through 10 of the lease, plus any initial partial year, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 50 percent of the wind energy technology MW rate, as described in § 2806.62(b)(2);

(2) For years 11 through 20 of the lease, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 100 percent of the wind energy technology MW rate described in § 2806.62(b)(2);

(3) For years 21 through 30 of the lease, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 100 percent of the wind energy technology MW rate as described in § 2806.62(b)(2);

(4) If the lease is renewed, the MW capacity fee is calculated using the MW rates at the beginning of the renewed lease period and will remain at that rate through the initial 10 year period of the renewal term. The MW capacity fee will continue to adjust at the beginning of each subsequent 10 year period of the renewed lease term to reflect the then currently applicable MW rates; and

(5) If an approved POD provides for staged development, the MW capacity fee is calculated using the MW capacity approved for that stage plus any previously approved stage, multiplied by the MW rate, as described in this section.

(d) Scheduled rate adjustment. Under the scheduled rate adjustment (see § 2806.61), the BLM will update your per acre zone rate and MW rate as follows:

(1) The BLM will calculate your payments using the per acre zone rate (see § 2806.62(a)(1)) and MW rate (see § 2806.62(b)(1)) in place when your lease is issued;

(2) The per acre zone rate will increase every 10 years, beginning after the first 10 years, plus the initial partial year, if any, your lease is in effect, by the average annual change in the IPD-GDP for the preceding 10-year period as described in § 2806.22(b) plus 40 percent;

(3) The MW rate will increase by 40 percent every 10 years, beginning after the first 10 years, plus the initial partial year, if any, your lease is in effect;

(4) The BLM will not apply the phase-in to your MW rate under § 2806.62(c). Instead, for years 1 through 5, plus any initial partial year, the BLM will calculate the MW

capacity fee by multiplying the project's authorized MW capacity by 50 percent of the applicable solar technology MW rate. This phase-in will not be applied to renewed leases; and

(5) If the approved POD for your project provides for staged development, the BLM will calculate the MW capacity fee using the MW capacity approved for that stage in question plus any previously approved stages, multiplied by the MW rate as described under this section.

§ 2806.66 Rent for support facilities authorized under separate grant(s).

If a wind energy development project includes separate right-of-way authorizations issued for support facilities only (administration building, groundwater wells, construction lay down and staging areas, surface water management, and control structures, etc.) or linear right-of-way facilities (pipelines, roads, power lines, etc.), rent is determined using the Per Acre Rent Schedule for linear facilities (see § 2806.20(c)).

§ 2806.68 Rent for energy development testing grants.

(a) Grant for energy site-specific testing. You must pay $100 per year for each meteorological tower or instrumentation facility location. BLM offices with approved small site rental schedules may use those fee structures if the fees in those schedules charge more than $100 per meteorological tower per year. In lieu of annual payments, you may instead pay for the entire term of the grant (3 years or less).

(b) Grant for energy project-area testing. You must pay $2,000 per year or $2 per acre per year for the lands authorized by the grant, whichever is greater. There is no additional rent for the installation of each meteorological tower or instrumentation facility located within the site testing and monitoring project area.

44. Add an undesignated centered heading between §§ 2806.68 and 2806.70 to read as follows:

Other Rights-of-Way

45. Revise newly redesignated § 2806.70 to read as follows:

§ 2806.70 How will the BLM determine the payment for a grant or lease when the linear, communication use, solar energy, or wind energy payment schedules do not apply?

When we determine that the linear, communication use, solar, or wind energy payment schedules do not apply, we may determine your payment through a process based on comparable commercial practices, appraisals, competitive bids, or other reasonable methods. We will notify you in writing of the payment determination. If you disagree with the payment determination, you may appeal our final determination under § 2801.10.

Subpart 2807—Grant Administration and Operation

46. Amend § 2807.11 by:

a. Revising paragraph (b);

b. Redesignating paragraphs (d) and (e) as paragraphs (f) and (g); and

c. Adding new paragraphs (d) and (e).

The revisions and additions read as follows:

§ 2807.11 When must I contact BLM during operations?

*****

(b) When your use requires a substantial deviation from the grant. You must seek an amendment to your grant under § 2807.20 and obtain the BLM's approval before you begin any activity that is a substantial deviation;

*****

(d) Whenever site-specific circumstances or conditions result in the need for changes to an approved right-of-way grant or lease, POD, site plan, mitigation measures, or construction, operation, or termination procedures that are not substantial deviations in location or use authorized by a right-of-way grant or lease. Changes for authorized actions, project materials, or adopted mitigation measures within the existing, approved right-of-way area must be submitted to us for review and approval.

(e) To identify and correct discrepancies or inconsistencies.

*****

47. Amend § 2807.17 by redesignating existing paragraph (d) as paragraph (e) and adding new paragraph (d) to read as follows:

§ 2807.17 Under what conditions may the BLM suspend or terminate my grant?

*****

(d) The BLM may suspend or terminate another Federal agency's grant only if:

(1) The terms and conditions of the Federal agency's grant allow it; or

(2) The agency head holding the grant consents to it.

*****

48. Revise § 2807.21 to read as follows:

§ 2807.21 May I assign or make other changes to my grant or lease?

(a) With the BLM's approval, you may assign, in whole or in part, any right or interest in a grant or lease. Assignment actions that may require BLM approval include, but are not limited to, the following:

(1) The transfer by the holder (assignor) of any right or interest in the grant or lease to a third party (assignee); and

(2) Changes in ownership or other related change in control transactions involving the BLM right-of-way holder and another business entity (assignee), including corporate mergers or acquisitions, but not transactions within the same corporate family.

(b) The BLM may require a grant or lease holder to file new or revised information in some circumstances that do not constitute an assignment (see subpart 2803 and §§ 2804.12(e) and 2807.11). Circumstances that would not constitute an assignment but may necessitate this filing include, but are not limited to:

(1) Transactions within the same corporate family;

(2) Changes in the holder's name only (see paragraph (i) of this section); and

(3) Changes in the holder's articles of incorporation.

(c) In order to assign a grant or lease, the proposed assignee must file an assignment application and follow the same procedures and standards as for a new grant or lease, including paying application and processing fees, and the grant must be in compliance with the terms and conditions of § 2805.12. The preliminary application review meetings and public meeting under §§ 2804.12 and 2804.25 are not required for an assignment. We will not approve any assignment until the assignor makes any outstanding payments that are due (see § 2806.13(g)).

(d) The assignment application must also include:

(1) Documentation that the assignor agrees to the assignment; and

(2) A signed statement that the proposed assignee agrees to comply with and be bound by the terms and conditions of the grant that is being assigned and all applicable laws and regulations.

(e) Your assignment is not recognized until the BLM approves it in writing. We will approve the assignment if doing so is in the public interest. Except for leases issued under subpart 2809 of this part, we may modify the grant or lease or add bonding and other requirements, including additional terms and conditions, to the grant or lease when approving the assignment, unless a modification to a lease issued under subpart 2809 of this part is required under § 2805.15(e). We may decrease rents if the new holder qualifies for an exemption (see § 2806.14) or waiver or reduction (see § 2806.15) and the previous holder did not. Similarly, we may increase rents if the previous holder qualified for an exemption or waiver or reduction and the new holder does not. If we approve the assignment, the benefits and liabilities of the grant or lease apply to the new grant or lease holder.

(f) The processing time and conditions described at § 2804.25(d) of this part apply to assignment applications.

(g) Only interests in issued right-of-way grants and leases are assignable. Except for applications submitted by a preferred applicant under § 2804.30(g), pending right-of-way applications do not create any property rights or other interest and may not be assigned from one entity to another, except that an entity with a pending application may continue to pursue that application even if that entity becomes a wholly owned subsidiary of a new third party.

(h) To complete a change in name only, (i.e., when the name change in question is not the result of an underlying change in control of the right-of-way grant), the following requirements must be met:

(1) The holder must file an application requesting a name change and follow the same procedures as for a new grant, including paying processing fees. However, the application fees (see subpart 2804 of this part) and the preliminary application review and public meetings (see §§ 2804.12 and 2804.25) are not required. The name change request must include:

(i) If the name change is for an individual, a copy of the court order or other legal document effectuating the name change; or

(ii) If the name change is for a corporation, a copy of the corporate resolution(s) proposing and approving the name change, a copy of the acceptance of the change in name by the State or Territory in which it is incorporated, and a copy of the appropriate resolution, order or other documentation showing the name change.

(2) When reviewing a proposed name change only, we may determine it is necessary to:

(i) Modify a grant issued under subpart 2804 to add bonding and other requirements, including additional terms and conditions to the grant; or

(ii) Modify a lease issued under subpart 2809 in accordance with § 2805.15(e).

(3) Your name change is not recognized until the BLM approves it in writing.

49. Amend § 2807.22 by:

a. Revising the section heading and paragraphs (a), (b), and (d);

b. Redesignating paragraph (f) as paragraph (g); and

c. Adding new paragraph (f).

The revisions and additions read as follows:

§ 2807.22 How do I renew my grant or lease?

(a) If your grant or lease specifies the terms and conditions for its renewal, and you choose to renew it, you must request a renewal from the BLM at least 120 calendar days before your grant or lease expires consistent with the renewal terms and conditions specified in your grant or lease. We will renew the grant or lease if you are in compliance with the renewal terms and conditions; the other terms, conditions, and stipulations of the grant or lease; and other applicable laws and regulations.

(b) If your grant or lease does not specify the terms and conditions for its renewal, you may apply to us to renew the grant or lease. You must send us your application at least 120 calendar days before your grant or lease expires. In your application you must show that you are in compliance with the terms, conditions, and stipulations of the grant or lease and other applicable laws and regulations, and explain why a renewal of your grant or lease is necessary. We may approve or deny your application to renew your grant or lease.

*****

(d) We will review your application and determine the applicable terms and conditions of any renewed grant or lease.

*****

(f) If you make a timely and sufficient application for a renewal of your existing grant or lease, or for a new grant or lease, in accordance with this section, the existing grant does not expire until we have issued a decision to approve or deny the application.

*****

50. Revise subpart 2809 to read as follows:

Subpart 2809—Competitive Process for Leasing Public Lands for Solar and Wind Energy Development Inside Designated Leasing Areas

Sec.

2809.10 General.

2809.11 How will the BLM solicit nominations?

2809.12 How will the BLM select and prepare parcels?

2809.13 How will the BLM conduct competitive offers?

2809.14 What types of bids are acceptable?

2809.15 How will the BLM select the successful bidder?

2809.16 When do variable offsets apply?

2809.17 Will the BLM ever reject bids or re-conduct a competitive offer?

2809.18 What terms and conditions apply to leases?

2809.19 Applications in designated leasing areas or on lands that later become designated leasing areas.

Subpart 2809—Competitive Process for Leasing Public Lands for Solar and Wind Energy Development Inside Designated Leasing Areas

§ **2809.10 General.**

(a) Lands inside designated leasing areas may be made available for solar and wind energy development through a competitive leasing offer process established by the BLM under this subpart.

(b) The BLM may include lands in a competitive offer on its own initiative.

(c) The BLM may solicit nominations by publishing a call for nominations under § 2809.11(a).

(d) The BLM will generally prioritize the processing of "leases" awarded under this subpart over the processing of non-competitive "grant" applications under subpart 2804, including those that are "high priority" under § 2804.35.

§ **2809.11 How will the BLM solicit nominations?**

(a) Call for nominations. The BLM will publish a notice in the Federal Register and may use other notification methods, such as a newspaper of general circulation in the area affected by the potential offer of public land for solar and wind energy development or the Internet; to solicit nominations and expressions of interest for parcels of land inside designated leasing areas for solar or wind energy development.

(b) Nomination submission. A nomination must be in writing and must include the following:

(1) Nomination fee. If you nominate a specific parcel of land under paragraph (a) of this section, you must also include a non-refundable nomination fee of $5 per acre. We will adjust the nomination fee once every 10 years using the change in the IPD-GDP for the preceding 10-year period and round it to the nearest half dollar. This 10 year average will be adjusted at the same time as the per acre rent schedule for linear rights-of-way under § 2806.22;

(2) Nominator's name and personal or business address. The name of only one citizen, association, partnership, corporation, or municipality may appear as the nominator. All communications relating to leasing will be sent to that name and address, which constitutes the nominator's name and address of record; and

(3) The legal land description and a map of the nominated lands.

(c) We may consider informal expressions of interest suggesting lands to be included in a competitive offer. If you submit a written expression of interest, you must provide a description of the suggested lands and rationale for their inclusion in a competitive offer.

(d) In order to submit a nomination, you must be qualified to hold a grant or lease under § 2803.10.

(e) Nomination withdrawals. A nomination cannot be withdrawn, except by the BLM for cause, in which case all nomination monies will be refunded to the nominator.

§ 2809.12 How will the BLM select and prepare parcels?

(a) The BLM will identify parcels for competitive offer based on nominations and expressions of interest or on its own initiative.

(b) The BLM and other Federal agencies, as applicable, will conduct necessary studies and site evaluation work, including applicable environmental reviews and public meetings, before offering lands competitively.

§ 2809.13 How will the BLM conduct competitive offers?

(a) Variety of competitive procedures available. The BLM may use any type of competitive process or procedure to conduct its competitive offer, and any method, including the use of the Internet, to conduct the actual auction or competitive bid procedure. Possible bid procedures could include, but are not limited to: Sealed bidding, oral auctions, modified competitive bidding, electronic bidding, and any combination thereof.

(b) Notice of competitive offer. We will publish a notice in the Federal Register at least 30 days prior to the competitive offer and may use other notification methods, such as a

newspaper of general circulation in the area affected by the potential right-of-way or the Internet. The Federal Register and other notices will include:

(1) The date, time, and location, if any, of the competitive offer;

(2) The legal land description of the parcel to be offered;

(3) The bidding methodology and procedures to be used in conducting the competitive offer, which may include any of the competitive procedures identified in paragraph (a) of this section;

(4) The minimum bid required (see § 2809.14(a)), including an explanation of how we determined this amount;

(5) The qualification requirements for potential bidders (see § 2803.10);

(6) If a variable offset (see § 2809.16) is offered:

(i) The percent of each offset factor;

(ii) How bidders may pre-qualify for each offset factor; and

(iii) The documentation required to pre-qualify for each offset factor; and

(7) The terms and conditions of the lease, including the requirements for the successful bidder to submit a POD for the lands involved in the competitive offer (see § 2809.18) and any lease mitigation requirements, including compensatory mitigation for residual impacts associated with the right-of-way.

(c) We will notify you in writing of our decision to conduct a competitive offer at least 30 days prior to the competitive offer if you nominated lands and paid the nomination fees required by § 2809.11(b)(1).

§ 2809.14 What types of bids are acceptable?

(a) Bid submissions. The BLM will accept your bid only if:

(1) It includes the minimum bid and at least 20 percent of the bonus bid; and

(2) The BLM determines that you are qualified to hold a grant or lease under § 2803.10. You must include documentation of your qualifications with your bid, unless we have previously approved your qualifications under §§ 2809.10(d) or 2809.11(d).

(b) Minimum bid. The minimum bid is not prorated among all bidders, but must be paid entirely by the successful bidder. The minimum bid consists of:

(1) The administrative costs incurred by the BLM and other Federal agencies in preparing for and conducting the competitive offer, including required environmental reviews; and

(2) An amount determined by the authorized officer and disclosed in the notice of competitive offer. This amount will be based on known or potential values of the parcel. In setting this amount, the BLM will consider factors that include, but are not limited to, the acreage rent and megawatt capacity fee.

(c) Bonus bid. The bonus bid consists of any dollar amount that a bidder wishes to bid in addition to the minimum bid.

(d) If you are not the successful bidder, as defined in § 2809.15(a), the BLM will refund your bid.

§ 2809.15 How will the BLM select the successful bidder?

(a) The bidder with the highest total bid, prior to any variable offset, is the successful bidder and may be offered a lease in accordance with § 2805.10.

(b) The BLM will determine the variable offsets for the successful bidder in accordance with § 2809.16 before issuing final payment terms.

(c) Payment terms. If you are the successful bidder, you must:

(1) Make payments by personal check, cashier's check, certified check, bank draft, or money order, or by other means deemed acceptable by the BLM, payable to the Department of the Interior—Bureau of Land Management; and

(2) By the close of official business hours on the day of the offer or such other time as the BLM may have specified in the offer notices, submit for each parcel:

(i) Twenty percent of the bonus bid (before the offsets are applied under paragraph (b) of this section); and

(ii) The total amount of the minimum bid specified in § 2809.14(b);

(3) Within 15 calendar days after the day of the offer, submit the balance of the bonus bid (after the variable offsets are applied under paragraph (b) of this section) to the BLM office conducting the offer; and

(4) Within 15 calendar days after the day of the offer, submit the acreage rent for the first full year of the solar or wind energy development lease as provided in §§ 2806.54(a) or 2806.64(a), respectively. This amount will be applied toward the first 12 months acreage rent, if the successful bidder becomes the lessee.

(d) The BLM will offer you a right-of-way lease if you are the successful bidder and:

(1) Satisfy the qualifications in § 2803.10;

(2) Make the payments required under paragraph (c) of this section; and

(3) Do not have any trespass action pending against you for any activity on BLM-administered lands (see § 2808.12) or have any unpaid debts owed to the Federal Government.

(e) The BLM will not offer a lease to the successful bidder and will keep all money that has been submitted, if the successful bidder does not satisfy the requirements of

paragraph (d) of this section. In this case, the BLM may offer the lease to the next highest bidder under § 2809.17(b) or re-offer the lands under § 2809.17(d).

§ **2809.16 When do variable offsets apply?**

(a) The successful bidder may be eligible for an offset of up to 20 percent of the bonus bid based on the factors identified in the notice of competitive offer.

(b) The BLM may apply a variable offset to the bonus bid of the successful bidder. The notice of competitive offer will identify each factor of the variable offset, the specific percentage for each factor that would be applied to the bonus bid, and the documentation required to be provided to the BLM prior to the day of the offer to qualify for the offset. The total variable offset cannot be greater than 20 percent of the bonus bid.

(c) The variable offset may be based on any of the following factors:

(1) Power purchase agreement;

(2) Large generator interconnect agreement;

(3) Preferred solar or wind energy technologies;

(4) Prior site testing and monitoring inside the designated leasing area;

(5) Pending applications inside the designated leasing area;

(6) Submission of nomination fees;

(7) Submission of biological opinions, strategies, or plans;

(8) Environmental benefits;

(9) Holding a solar or wind energy grant or lease on adjacent or mixed land ownership;

(10) Public benefits; and

(11) Other similar factors.

(d) The BLM will determine your variable offset prior to the competitive offer.

§ **2809.17 Will the BLM ever reject bids or re-conduct a competitive offer?**

(a) The BLM may reject bids regardless of the amount offered. If the BLM rejects your bid under this provision, you will be notified in writing and such notice will include the reason(s) for the rejection and what refunds to which you are entitled. If the BLM rejects a bid, the bidder may appeal that decision under § 2801.10.

(b) We may offer the lease to the next highest qualified bidder if the successful bidder does not execute the lease or is for any reason disqualified from holding the lease.

(c) If we are unable to determine the successful bidder, such as in the case of a tie, we may re-offer the lands competitively (under § 2809.13) to the tied bidders or to all prospective bidders.

(d) If lands offered under § 2809.13 receive no bids, we may:

(1) Re-offer the lands through the competitive process under § 2809.13; or

(2) Make the lands available through the non-competitive application process found in subparts 2803, 2804, and 2805 of this part, if we determine that doing so is in the public interest.

§ **2809.18 What terms and conditions apply to leases?**

The lease will be issued subject to the following terms and conditions:

(a) Lease term. The term of your lease includes the initial partial year in which it is issued, plus 30 additional full years. The lease will terminate on December 31 of the final year of the lease term. You may submit an application for renewal under § 2805.14(g).

(b) Rent. You must pay rent as specified in:

(1) Section 2806.54, if your lease is for solar energy development; or

(2) Section 2806.64, if your lease is for wind energy development.

(c) POD. You must submit, within 2 years of the lease issuance date, a POD that:

(1) Is consistent with the development schedule and other requirements in the POD template posted at http://www.blm.gov; and

(2) Addresses all pre-development and development activities.

(d) Cost recovery. You must pay the reasonable costs for the BLM or other Federal agencies to review and approve your POD and to monitor your lease. To expedite review of your POD and monitoring of your lease, you may notify BLM in writing that you are waiving paying reasonable costs and are electing to pay the full actual costs incurred by the BLM.

(e) Performance and reclamation bond. (1) For Solar Energy Development, you must provide a bond in the amount of $10,000 per acre prior to written approval to proceed with ground disturbing activities.

(2) For Wind Energy Development, you must provide a bond in the amount of $10,000 per authorized turbine less than 1 MW in nameplate capacity or $20,000 per authorized turbine equal or greater than 1 MW in nameplate capacity prior to written approval to proceed with ground disturbing activities.

(3) For testing and monitoring sites authorized under a development lease, you must provide a bond in the amount of $2,000 per site prior to receiving written approval to proceed with ground disturbing activities.

(4) The BLM will adjust the solar and wind energy development bond amounts every 10 years using the change in the IPD-GDP for the preceding 10-year period rounded to the

nearest $100. This 10-year average will be adjusted at the same time as the Per Acre Rent Schedule for linear rights-of-way under § 2806.22.

(f) Assignments. You may assign your lease under § 2807.21, and if an assignment is approved, the BLM will not make any changes to the lease terms or conditions, as provided for by § 2807.21(e) except for modifications required under § 2805.15(e).

(g) Due diligence of operations. You must start construction within 5 years and begin generation of electricity no later than 7 years from the date of lease issuance, as specified in your approved POD. A request for an extension may be granted for up to 3 years with a show of good cause and approval by the BLM.

§ **2809.19 Applications in designated leasing areas or on lands that later become designated leasing areas.**

(a) Applications for solar or wind energy development filed on lands outside of designated leasing areas, which subsequently become designated leasing areas will:

(1) Continue to be processed by the BLM and are not subject to the competitive leasing offer process of this subpart, if such applications are filed prior to the publication of the notice of intent or other public announcement from the BLM of the proposed land use plan amendment to designate the solar or wind leasing area; or

(2) Remain in pending status unless withdrawn by the applicant, denied, or issued a grant by the BLM, or the subject lands become available for application or leasing under this part, if such applications are filed on or after the date of publication of the notice of intent or other public announcement from the BLM of the proposed land use plan amendment to designate the solar or wind leasing area.

(3) Resume being processed by the BLM if your application is pending under paragraph (a)(2) of this section and the lands become available for application under 2809.17(d)(2).

(b) An applicant that submits a bid on a parcel of land for which an application is pending under paragraph (a)(2) of this section may:

(1) Qualify for a variable offset under § 2809.16; and

(2) Receive a refund for any unused application fees or processing costs if the lands identified in the application are subsequently leased to another entity under § 2809.13.

(c) After the effective date of this regulation, the BLM will not accept a new application for solar or wind energy development inside designated leasing areas (see §§ 2804.12(b)(1) and 2804.23(e)), except as provided by § 2809.17(d)(2).

(d) You may file a new application under part 2804 for testing and monitoring purposes inside designated leasing areas. If the BLM approves your application, you will receive a short term grant in accordance with §§ 2805.11(b)(2)(i) or (ii), which may qualify you for an offset under § 2809.16.

PART 2880—RIGHTS-OF-WAY UNDER THE MINERAL LEASING ACT

51. Revise the authority citation for part 2880 to read as follows:

AUTHORITY: 30 U.S.C. 185 and 189, and 43 U.S.C. 1732(b), 1733, and 1740.

Subpart 2884—Applying for MLA Grants or TUPs

52. In § 2884.11, revise paragraph (c)(5) to read as follows:

§ 2884.11 What information must I submit in my application?

*****

(c) ***

(5) The estimated schedule for constructing, operating, maintaining, and terminating the project (a POD). Your POD must be consistent with the development schedule and other requirements as noted on the POD template for oil and gas pipelines at http://www.blm.gov;

*****

53. In § 2884.12, revise paragraphs (a), (b), and (c) to read as follows:

§ 2884.12 What is the processing fee for a grant or TUP application?

(a) You must pay a processing fee with the application to cover the costs to the Federal Government of processing your application before the Federal Government incurs them. Subject to applicable laws and regulations, if processing your application will involve Federal agencies other than the BLM, your fee may also include the reasonable costs estimated to be incurred by those Federal agencies. Instead of paying the BLM a fee for the estimated work of other Federal agencies in processing your application, you may pay other Federal agencies directly for the costs estimated to be incurred by them in processing your application. The fees for Processing Categories 1 through 4 are one-time fees and are not refundable. The fees are categorized based on an estimate of the amount of time that the Federal Government will expend to process your application and issue a decision granting or denying the application.

(b) There is no processing fee if work is estimated to take 1 hour or less. Processing fees are based on categories. We update the processing fees for Categories 1 through 4 in the schedule each calendar year, based on the previous year's change in the IPD-GDP, as measured second quarter to second quarter. We will round these changes to the nearest dollar. We will update Category 5 processing fees as specified in the Master Agreement.

These processing categories and the estimated range of Federal work hours for each category are:

Processing Categories

Processing category	Federal work hours involved
(1) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs	Estimated Federal work hours are >1 ≤8
(2) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs	Estimated Federal work hours are >8 ≤24
(3) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs	Estimated Federal work hours are >24 ≤36
(4) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs	Estimated Federal work hours are >36 ≤50
(5) Master Agreements	Varies
(6) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs	Estimated Federal work hours are >50

(c) You may obtain a copy of the current schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street, SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current schedule at http://www.blm.gov.

*****

54. Amend § 2884.16 by redesignating paragraphs (a)(6), (a)(7), and (a)(8) as paragraphs (a)(7), (a)(8), and (a)(9), and adding new paragraph (a)(6). The addition reads as follows:

§ 2884.16 What provisions do Master Agreements contain and what are their limitations?

(a) ***

(6) Describes existing agreements between the BLM and other Federal agencies for cost reimbursement;

*****

55. Amend § 2884.17 by revising paragraph (a) and adding new paragraph (e) to read as follows:

§ 2884.17 How will BLM process my Processing Category 6 application?

(a) For Processing Category 6 applications, you and the BLM must enter into a written agreement that describes how we will process your application. The final agreement consists of a work plan, a financial plan, and a description of any existing agreements you have with other Federal agencies for cost reimbursement associated with such application.

*****

(e) We may collect funds to reimburse the Federal Government for reasonable costs for processing applications and other documents under this part relating to the Federal lands.

56. In § 2884.18, revise paragraphs (a)(1) and (c) to read as follows:

§ 2884.18 What if there are two or more competing applications for the same pipeline?

(a) ***

(1) Processing Categories 1 through 4. You must reimburse the Federal Government for processing costs as if the other application or applications had not been filed.

*****

(c) If we determine that competition exists, we will describe the procedures for a competitive bid through a bid announcement in the Federal Register and may use other notification methods, such as a newspaper of general circulation or the Internet. We may offer lands through a competitive process on our own initiative.

57. Amend § 2884.20 by revising the introductory text of paragraph (a) and revising paragraph (d) to read as follows:

§ 2884.20 What are the public notification requirements for my application?

(a) When the BLM receives your application, it will publish a notice in the Federal Register and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet. If we determine the pipeline(s) will have only minor environmental impacts, we are not required to publish this notice. The notice will, at a minimum, contain:

*****

(d) We may hold public hearings or meetings on your application if we determine that there is sufficient interest to warrant the time and expense of such hearings or meetings. We will publish a notice in the Federal Register and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet, to announce in advance any public hearings or meetings.

58. Amend § 2884.21 by:

a. Redesignating paragraphs (b) and (c) as paragraphs (c) and (d);

b. Adding new paragraph (b); and

c. Revising redesignated paragraph (d)(4).

The revisions and additions read as follows:

§ 2884.21 How will BLM process my application?

*****

(b) The BLM will not process your application if you have any trespass action pending against you for any activity on BLM-administered lands (see § 2888.11) or have any unpaid debts owed to the Federal Government. The only applications the BLM would process are those to resolve the trespass with a right-of-way as authorized in this part, or a lease or permit under the regulations found at 43 CFR part 2920, but only after outstanding debts are paid. Outstanding debts are those currently unpaid debts owed to the Federal Government after all administrative collection actions have occurred, including any appeal proceedings under applicable Federal regulations and the Administrative Procedure Act.

*****

(d) ***

(4) Hold public meetings, if sufficient public interest exists to warrant their time and expense. The BLM will publish a notice in the Federal Register and may use other methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet, to announce in advance any public hearings or meetings; and

*****

59. Amend § 2884.22 by revising paragraph (a) to read as follows:

§ 2884.22 Can BLM ask me for additional information?

(a) If we ask for additional information, we will follow the procedures in § 2804.25(c) of this chapter.

*****

60. Amend § 2884.23 by revising paragraph (a)(6), redesignating paragraph (b) as paragraph (c), and adding new paragraph (b), to read as follows:

§ 2884.23 Under what circumstances may BLM deny my application?

(a) ***

(6) You do not adequately comply with a deficiency notice (see § 2804.25(c) of this chapter) or with any requests from the BLM for additional information needed to process the application.

(b) If you are unable to meet any of the requirements in this section you may request an alternative from the BLM (see § 2884.30).

(c)***

*****

61. Add new § 2884.30 to read as follows:

§2884.30 Showing of good cause.

If you are unable to meet any of the processing requirements in this subpart, you may request approval for an alternative requirement from the BLM. Any such request is not approved until you receive BLM approval in writing. Your request to the BLM must:

(a) Show good cause for your inability to meet a requirement;

(b) Suggest an alternative requirement and explain why that requirement is appropriate; and

(c) Be received in writing by the BLM in a timely manner, before the deadline to meet a particular requirement has passed.

Subpart 2885—Terms and Conditions of MLA Grants and TUPs

62. Amend § 2885.11 by revising the introductory text of paragraph (a) and revising paragraph (b)(7) to read as follows:

§ 2885.11 What terms and conditions must I comply with?

(a) Duration. All grants, except those issued for a term of 3 years or less, will expire on December 31 of the final year of the grant. The term of a grant may not exceed 30 years, with the initial partial year of the grant considered to be the first year of the term. The term of a TUP may not exceed 3 years. The BLM will consider the following factors in establishing a reasonable term:

*****

(b) ***

(7) The BLM may require that you obtain, or certify that you have obtained, a performance and reclamation bond or other acceptable security to cover any losses, damages, or injury to human health, the environment, and property incurred in connection with your use and occupancy of the right-of-way or TUP area, including terminating the grant or TUP, and to secure all obligations imposed by the grant or TUP and applicable laws and regulations. Your bond must cover liability for damages or injuries resulting from releases or discharges of hazardous materials. We may require a bond, an increase or decrease in the value of an existing bond, or other acceptable security at any time during the term of the grant or TUP. This bond is in addition to any individual lease, statewide, or nationwide oil and gas bonds you may have. All other provisions in§ 2805.12(b) of this chapter regarding bond requirements for grants and leases issued under FLPMA also apply to grants or TUPs for oil and gas pipelines issued under this part;

*****

63. Amend § 2885.15 by revising paragraph (b) to read as follows:

§ 2885.15 How will BLM charge me rent?

*****

(b) There are no reductions or waivers of rent for grants or TUPs, except as provided under § 2885.20(b).

*****

64. Amend § 2885.16 by revising paragraph (a) to read as follows:

§ 2885.16 When do I pay rent?

(a) You must pay rent for the initial rental period before we issue you a grant or TUP. We prorate the initial rental amount based on the number of full months left in the calendar year after the effective date of the grant or TUP. If your grant qualifies for annual payments, the initial rent consists of the remaining partial year plus the next full year. If your grant or TUP allows for multi-year payments, your initial rent payment may be for the full term of the grant or TUP. See § 2885.21 for additional information on payment of rent.

*****

65. Amend § 2885.17 by revising the section heading, redesignating paragraph (e) as paragraph (f), and by adding new paragraph (e) to read as follows:

§ 2885.17 What happens if I do not pay rents and fees or if I pay the rents or fees late?

*****

(e) We will retroactively bill for uncollected or under-collected rent, including late payment and administrative fees, upon discovery if:

(1) A clerical error is identified;

(2) An adjustment to rental schedules is not applied; or

(3) An omission or error in complying with the terms and conditions of the authorized right-of-way is identified.

*****

66. In § 2885.19, revise paragraph (b) to read as follows:

§ 2885.19 What is the rent for a linear right-of-way grant?

*****

(b) You may obtain a copy of the current Per Acre Rent Schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street, SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current rent schedule at http://www.blm.gov.

67. In § 2885.20, revise paragraph (b) to read as follows:

§ 2885.20 How will the BLM calculate my rent for linear rights-of-way the Per Acre Rent Schedule covers?

(a) ***

(b) Phase-in provisions: If, as the result of any revisions made to the Per Acre Rent Schedule under § 2885.19(a)(2), the payment of your new annual rental amount would cause you undue hardship, you may qualify for a 2-year phase-in period if you are a small business entity as that term is defined in Small Business Administration regulations and if it is in the public interest. We will require you to submit information to support your

claim. If approved by the BLM State Director, payment of the amount in excess of the previous year's rent may be phased-in by equal increments over a 2-year period. In addition, the BLM will adjust the total calculated rent for year 2 of the phase-in period by the annual index provided by § 2885.19(a)(1).

*****

68. Revise § 2885.24 to read as follows:

§ 2885.24 If I hold a grant or TUP, what monitoring fees must I pay?

(a) Monitoring fees. Subject to § 2886.11, you must pay a fee to the BLM for any costs the Federal Government incurs in inspecting and monitoring the construction, operation, maintenance, and termination of the pipeline and protection and rehabilitation of the affected public lands your grant or TUP covers. We update the monitoring fees for Categories 1 through 4 in the schedule each calendar year, based on the previous year's change in the IPD-GDP, as measured second quarter to second quarter. We will round these changes to the nearest dollar. We will update Category 5 monitoring fees as specified in the Master Agreement. We categorize the monitoring fees based on the estimated number of work hours necessary to monitor your grant or TUP. Monitoring fees for Categories 1 through 4 are one-time fees and are not refundable. These monitoring categories and the estimated range of Federal work hours for each category are:

Monitoring Categories

Monitoring category	Federal work hours involved
(1) Inspecting and monitoring of new grants and TUPs,	Estimated Federal work

assignments, renewals, and amendments to existing grants and TUPs	hours are >1 ≤8
(2) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs	Estimated Federal work hours are >8 ≤24
(3) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs	Estimated Federal work hours are >24 ≤36
(4) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPS	Estimated Federal work hours are >36 ≤50
(5) Master Agreements	Varies
(6) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs	Estimated Federal work hours >50.

(b) The current monitoring cost schedule is available from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street, SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current schedule at http://www.blm.gov.

69. Amend § 2886.12 by:

a. Revising paragraph (b);

b. Redesignating paragraph (d) as paragraph (g); and

c. Adding new paragraphs (d), (e), and (f).

The revisions and additions read as follows:

§ 2886.12 When must I contact BLM during operations?

*****

(b) When your use requires a substantial deviation from the grant or TUP. You must seek an amendment to your grant or TUP under § 2887.10 and obtain our approval before you begin any activity that is a substantial deviation;

*****

(d) Whenever site-specific circumstances or conditions arise that result in the need for changes to an approved right-of-way grant or TUP, POD, site plan, mitigation measures, or construction, operation, or termination procedures that are not substantial deviations in location or use authorized by a right-of-way grant or TUP. Changes for authorized actions, project materials, or adopted mitigation measures within the existing, approved right-of-way or TUP area must be submitted to the BLM for review and approval;

(e) To identify and correct discrepancies or inconsistencies;

(f) When you submit a certification of construction, if the terms of your grant require it. A certification of construction is a document you submit to the BLM after you have finished constructing a facility, but before you begin operating it, verifying that you have constructed and tested the facility to ensure that it complies with the terms of the grant and with applicable Federal and State laws and regulations; and

*****

Subpart 2887—Amending, Assigning, or Renewing MLA Grants and TUPs

70. Revise § 2887.11 to read as follows:

§ 2887.11 May I assign or make other changes to my grant or TUP?

(a) With the BLM's approval, you may assign, in whole or in part, any right or interest in a grant or TUP. Assignment actions that may require BLM approval include, but are not limited to, the following:

(1) The transfer by the holder (assignor) of any right or interest in the grant or TUP to a third party (assignee); and

(2) Changes in ownership or other related change in control transactions involving the BLM right-of-way grant holder or TUP holder and another business entity (assignee), including corporate mergers or acquisitions, but not transactions within the same corporate family.

(b) The BLM may require a grant or lease holder to file new or revised information in some circumstances that do not constitute an assignment (see subpart 2883 and §§ 2884.11(c) and 2886.12). Circumstances that would not constitute an assignment but may necessitate this filing include, but are not limited to:

(1) Transactions within the same corporate family;

(2) Changes in the holder's name only (see paragraph (h) of this section); and

(3) Changes in the holder's articles of incorporation.

(c) In order to assign a grant or TUP, the proposed assignee, subject to § 2886.11, must file an application and follow the same procedures and standards as for a new grant or TUP, including paying processing fees (see § 2884.12).

(d) The assignment application must also include:

(1) Documentation that the assignor agrees to the assignment; and

(2) A signed statement that the proposed assignee agrees to comply with and to be bound by the terms and conditions of the grant or TUP that is being assigned and all applicable laws and regulations.

(e) Your assignment is not recognized until the BLM approves it in writing. We will approve the assignment if doing so is in the public interest. The BLM may modify the

grant or TUP or add bonding and other requirements, including terms and conditions, to the grant or TUP when approving the assignment. If we approve the assignment, the benefits and liabilities of the grant or TUP apply to the new grant or TUP holder.

(f) The processing time and conditions described at § 2884.21 apply to assignment applications.

(g) Only interests in issued right-of-way grants and TUPs are assignable. Pending right-of-way and TUP applications do not create any property rights or other interest and may not be assigned from one entity to another, except that an entity with a pending application may continue to pursue that application even if that entity becomes a wholly owned subsidiary of a new third party.

(h) Change in name only of holder. Name-only changes are made by individuals, partnerships, corporations, and other right-of-way and TUP holders for a variety of business or legal reasons. To complete a change in name only, (i.e., when the name change in question is not the result of an underlying change in control of the right-of-way grant or TUP), the following requirements must be met:

(1) The holder must file an application requesting a name change and follow the same procedures as for a new grant or TUP, including paying processing fees (see subpart 2884 of this part). The name change request must include:

(i) If the name change is for an individual, a copy of the court order or other legal document effectuating the name change; or

(ii) If the name change is for a corporation, a copy of the corporate resolution(s) proposing and approving the name change, a copy of the filing/acceptance of the change

in name by the State or territory in which it is incorporated, and a copy of the appropriate resolution(s), order(s), or other documentation showing the name change.

(2) In connection with processing of a name change only, the BLM retains the authority under § 2885.13(e) to modify the grant or TUP, or add bonding and other requirements, including additional terms and conditions, to the grant or TUP.

(3) Your name change is not recognized until the BLM approves it in writing.

71. In § 2887.12, add new paragraphs (d) and (e) to read as follows:

§ 2887.12 How do I renew my grant?

*****

(d) If you make a timely and sufficient application for a renewal of your existing grant or for a new grant in accordance with this section, the existing grant does not expire until we have issued a decision to approve or deny the application.

(e) If we deny your application, you may appeal the decision under § 2881.10.

This Week in Congress
February 24, 2017

- **First Veterans Resource Fairs held**
- **Veteran online store coming in November**
- **Do we want a Rota National Park?**

- **CODEL Bishop visits the Marianas**
- **CUC gets $5M for fuel storage repair**
- **Opportunities – Federal grants, jobs for/in the Marianas**
- **Highlights in the legislative program**

We held our first-ever Veterans Resource Fair on Saipan, Tinian, and Rota this week. Thanks to all of the federal and local service providers who were there to help our veterans, service members, and their families access the benefits they have earned. And thanks to those veterans, service members, and families for their sacrifices.

Hundreds turn out for Veterans Resource Fairs

More than 150 veterans, service men and women, and their family members, along with representatives from over 30 service providers, took part in our first-ever Northern Marianas Veterans Resource Fairs this week on Saipan, Tinian, and Rota. I understand how difficult it can be for those who have served our country to access the benefits they have earned. My goal in hosting these fairs was to make it easier by bringing as many federal and local resources that serve vets together in one place. And there will be more such efforts in the coming months. Now that I am a member of the House Veterans Affairs Committee, I look forward to new opportunities to improve services for all our military heroes and their families. They have earned these services, and they deserve better.

Veterans online store coming in November

The Army & Air Force Exchange Service has announced that beginning November 11, 2017, they will be able to serve honorably discharged Veterans online through a lifelong exchange benefit. More information will be posted on **ShopMyExchange.com/veterans**, as it becomes available.

Should we do more to protect the sanctity and beauty of ancient Chamorro sites on Rota? How can future generations be assured of access to medicinal plants and other natural resources? Would a Rota National Park create jobs and be good for the economy? These were some of the questions raised at National Park Service listening sessions on Saipan and Rota this week.

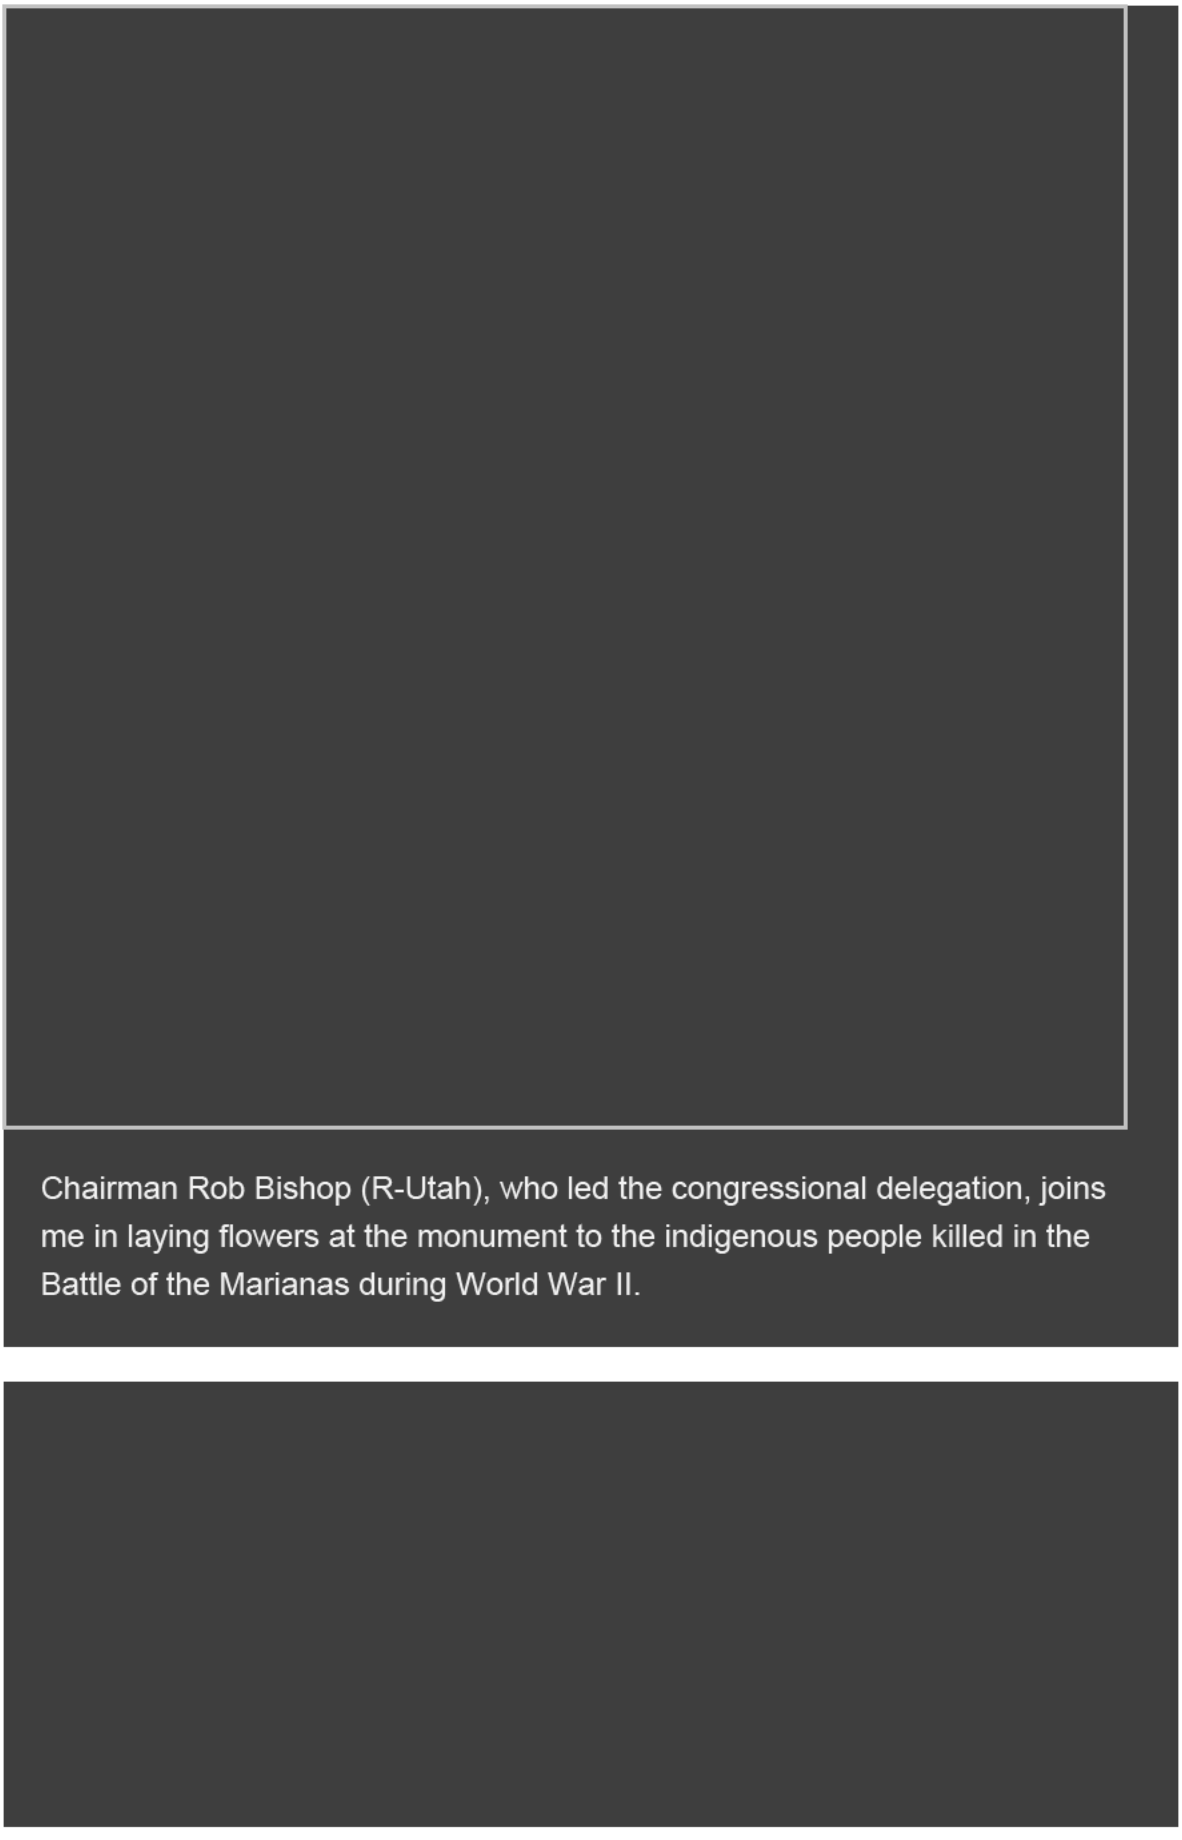
Do we want a Rota National Park?

Following up on the request of the Rota Legislative Delegation to consider the possibility of a Rota National Park to preserve ancient Chamorro sites, the National Park Service held listening sessions on Rota and Saipan this week. About 70 people came to the meetings. A report, authorized by legislation I had enacted in 2015, will make a recommendation on whether a Park is

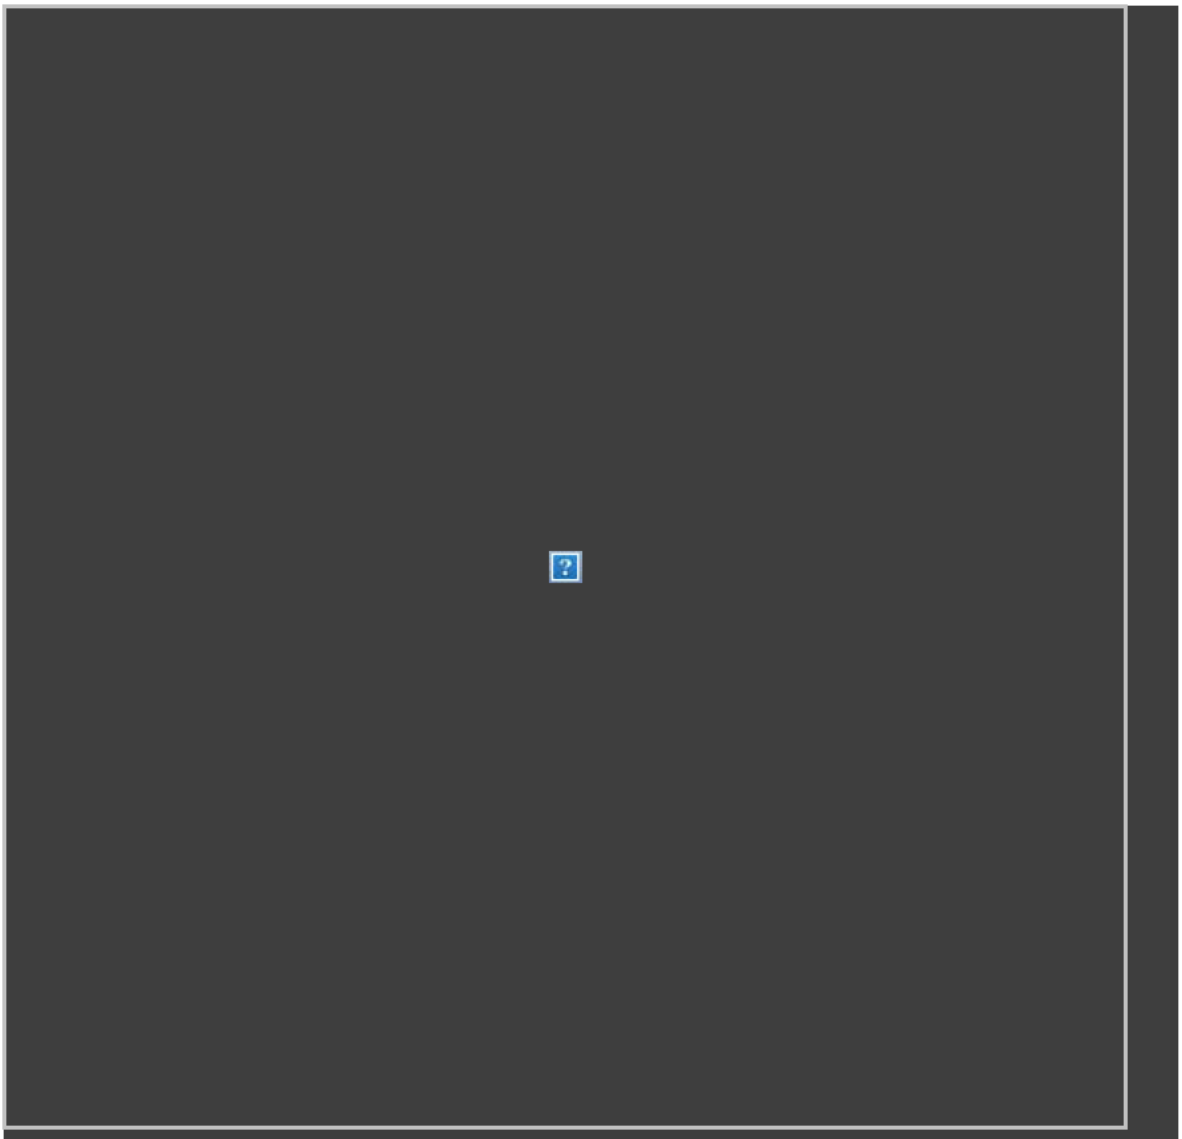
possible by 2020. Congress would then consider further public input from the Marianas. The National Park Service already manages American Memorial Park on Saipan, where the photo above was taken during a listening session on Tuesday. The people of the Marianas leased the American Memorial Park land to the federal government for 50 years in the Covenant. A $2 million lease payment is held in trust and investment earnings from the fund help pay for Park operations. Thanks to all who participated. Written comments may also be sent to study team leader, **jean_boscacci@nps.gov**.

CODEL Bishop visits the Marianas

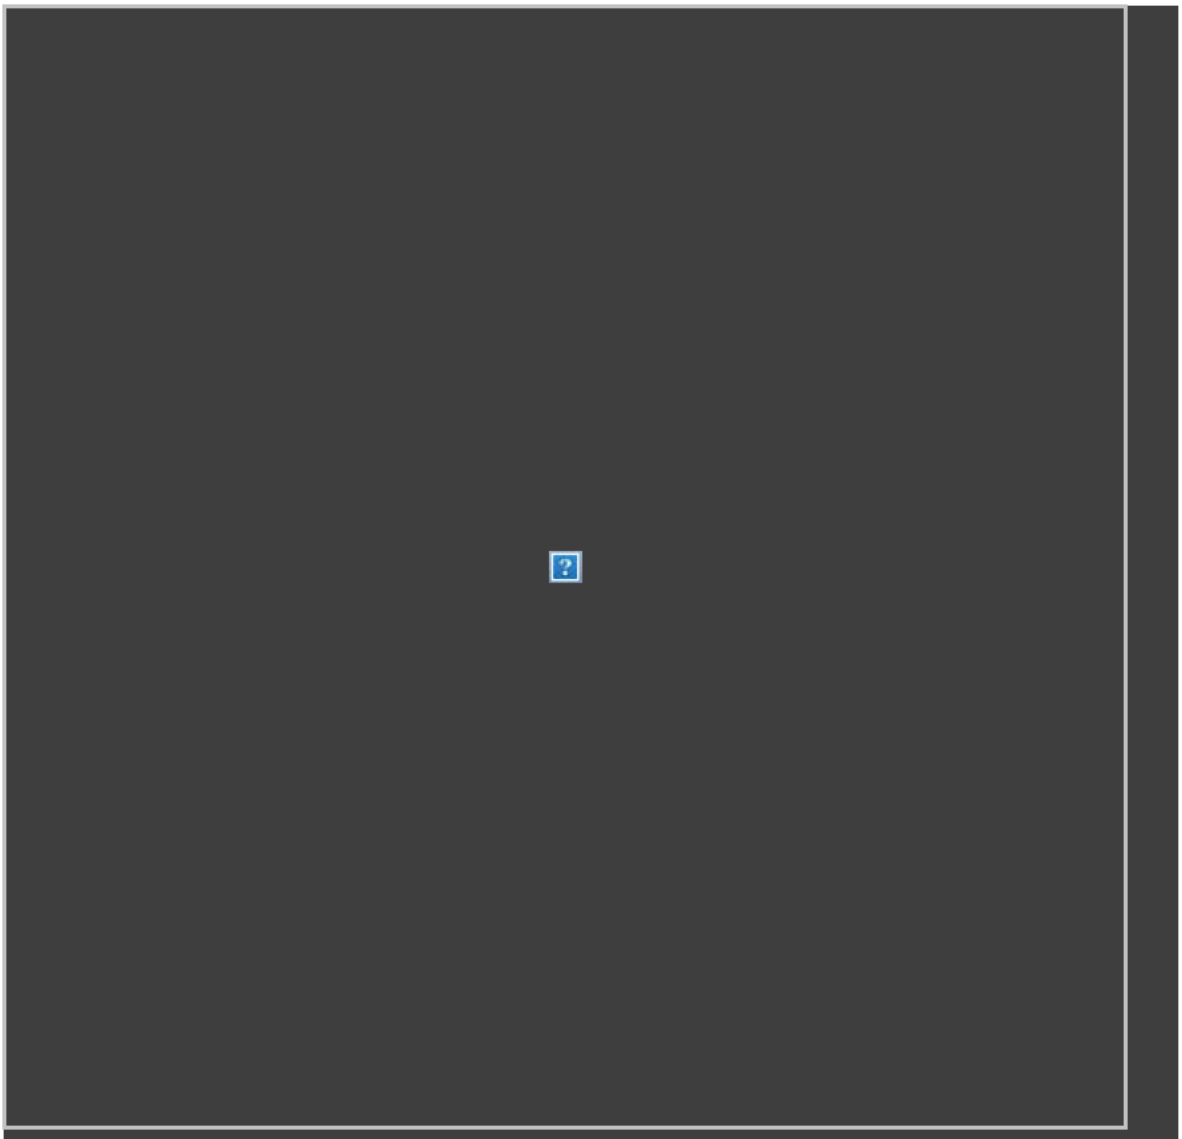
A delegation, led by House Natural Resources Committee Chairman Rob Bishop (R-Utah), included the Marianas as part of our Pacific tour during the congressional recess this week. We have been planning this trip since Mr. Bishop became Chairman two years ago. My thanks to him for accepting the invitation. And my thanks to all the Members, who took time away from their own districts to learn about our area of the world. Below are some photo highlights of the visit.



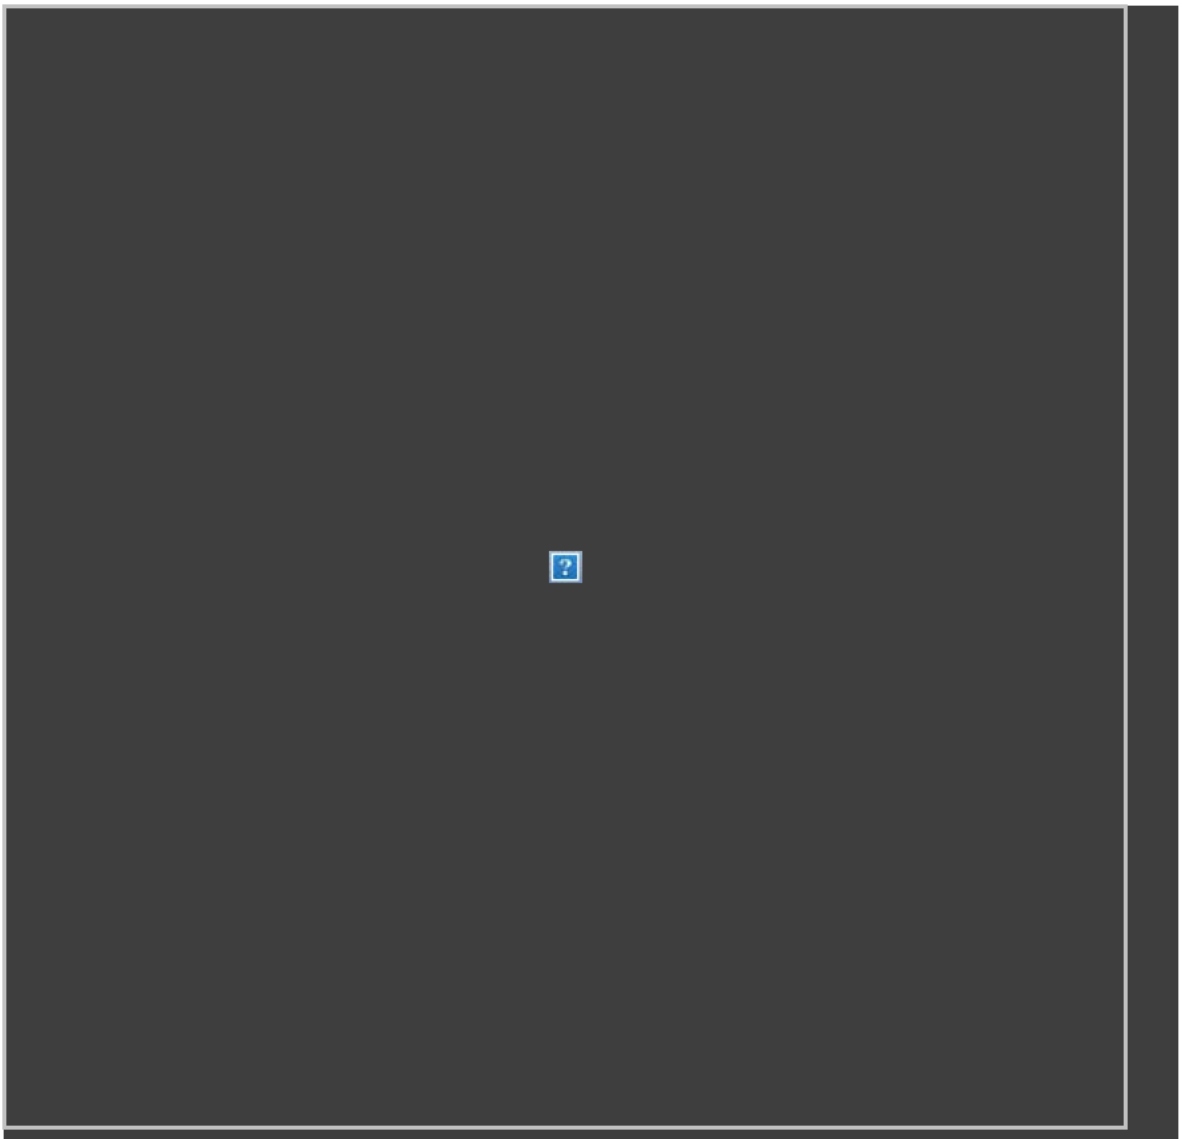
Chairman Rob Bishop (R-Utah), who led the congressional delegation, joins me in laying flowers at the monument to the indigenous people killed in the Battle of the Marianas during World War II.



Ms. Andrea Sablan, Governor and Ms. Ralph DLG. Torres, and Lt. Governor and Ms. Victor Hocog came aboard the military aircraft to welcome CODEL Bishop on arrival Wednesday.



At my request the CODEL stopped in Rota—a first—where Mayor Efraim Atalig hosted lunch and the Members of Congress were shown ancient Chamorro sites by Eloy Ayuyu of the Historic Preservation Office, far left.



On Tinian, the group was briefed on build-up issues by the military and Mayor Joey Patrick San Nicolas. From left to right: Col. Brent Bien, myself, Mrs. Penny Ammerman-Thompson, Rob Bishop (R-Utah), Madeleine Bordallo (D-Guam), Glenn Thompson (R-Pennsylvania), Jenniffer González-Colón (R-Puerto Rico), Bruce Westerman (R-Arkansas), Aumua Amata Coleman Radewagen (R-American Samoa), and Tinian Mayor San Nicolas.

CUC gets $5M for fuel storage repair

An award of $5 million in federal funding this week will help the Commonwealth Utilities Corporation repair fuel storage tanks at the Saipan

power plant and meet health and safety requirements related to oil spill prevention, preparedness and response. The grant is part of the annual capital improvement funds that Congress appropriates every year for the Marianas. This is the third of an expected four consecutive $5 million annual grants to CUC. The Office of Insular Affairs at the Interior Department is responsible for making sure all terms and conditions of the funding are followed.

BACK TO TOP

Federal Opportunities for/in the Marianas

Jobs:

- **Congressional staff assistant** – Congressman Gregorio Kilili Camacho Sablan is seeking a Staff Assistant in the Washington, D.C. congressional office. Responsibilities include answering phones, maintaining the front office, greeting visitors and giving Capitol tours, answering constituent requests for general information, assisting the office manager with scheduling and bookkeeping, and assisting staff with other various administrative and legislative duties in a supportive role. Excellent writing, verbal and organizational skills are essential. High degree of professionalism required, as well as an ability to work a flexible schedule. Ties to the Northern Mariana Islands preferred. Qualified candidates should submit a cover letter, resume and two writing samples to **MP00.Job@mail.house.gov**. No phone calls or drop-ins, please.
- **Chief Medical Officer** – The Veterans Health Administration has an opening for a physician (chief medical officer) on Guam. The chief medical officer exercises overall leadership responsibility for the day-to-day operations at the community-based outpatient clinic on Guam and is responsible for coordinating care consistent with patient-centered medical home or patient aligned care teams. Position is open until March 2, 2017. For more information, go to

https://www.usajobs.gov/GetJob/ViewDetails/464475500/.

- **Aircraft Mechanic** – The Guam Army National Guard has an opening for an aircraft mechanic. The aircraft mechanic (crew chief) will manage the operational readiness of one or more aircraft, and train aviation unit personnel. Guard membership is required. Position is open until March 16, 2017. For more information, go to **https://www.usajobs.gov/GetJob/ViewDetails/464492600/**
- **Management Assistant** – The Air Force Reserve Command has an opening for a management assistant on Guam. The primary purpose of this Air Reserve technician-enlisted position is to accomplish a variety of work involved with the medical phases concerning the technical aspects of aeromedical functions, and to provide training to reservists. Position is open until February 28, 2017. For more information, go to **https://www.usajobs.gov/GetJob/ViewDetails/464580700/**.
- **Supply Technician** – The Guam Army National Guard has an opening for a supply technician. The purpose of this position is to function as the assistant logistics non-commissioned officer for the command. Position is open until March 21, 2017. For more information, go to **https://www.usajobs.gov/GetJob/ViewDetails/464640000/**.

Highlights in the Legislative Program

THIS WEEK

The House is in recess for the District Work Period.

NEXT WEEK

On the Floor

- **S. 442** – National Aeronautics and Space Administration Transition Authorization Act of 2017
- **H.R. 1009** – OIRA Insight, Reform and Accountability Act
- **H.R. 998** – SCRUB Act

- **H.J. Res. 83** – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness"
- **H.R. 1004** – Regulatory Integrity Act of 2017

Committee Hearings
Monday, February 27

- Committee on Veterans' Affairs' Subcommittee on Oversight and Investigations - Assessing VA's Risks for Drug Diversion

Tuesday, February 28

- Senate and House Committees on Veterans' Affairs Joint Hearing - Legislative Presentation of the Disabled American Veterans

Wednesday, March 1

- Committee on Education and the Workforce - Legislative Proposals to Improve Health Care Coverage and Provide Lower Costs for Families
- Committee on Natural Resources Subcommittee on Water, Power and Oceans Modernizing Western Water and Power Infrastructure in the 21st Century
- Senate and House Committees on Veterans' Affairs Joint Hearing - Legislative Presentation of The American Legion
- Senate and House Committees on Veterans' Affairs Joint Hearing - Legislative Presentation of the Veterans of Foreign Wars of the United States

Subject: THE DAILY WHIP: TUESDAY, FEBRUARY 28, 2017
Date: Tuesday, February 28, 2017 10:14:18 AM

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR TUESDAY, FEBRUARY 28, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	4:00 – 5:00 p.m.

Business **Fifteen "One Minutes"**		

Members are advised that the House will recess no later than 5:00 p.m., to allow for a security sweep of the House Chamber and reconvene at approximately 8:35 p.m. for a Joint Session of Congress to receive the President's Address. **Members are requested to be on the Floor and seated no later than 8:25 p.m.

H.Res. 150 – Rule Providing for Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) and H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce) (One hour of debate). The Rules Committee has recommended one Rule which would provide for consideration of two measures.

For H.R. 998, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 12 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

For H.J.Res. 83, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution.

The Rules Committee rejected a motion by Mr. Hastings of Florida to strike the waiver of section of 311 of the Congressional Budget Act for H.J.Res. 83. **Members are urged to VOTE NO.**

Begin Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) (One hour of debate). This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the

expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed H.R. 1155 which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order 12 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

Rep. Beyer Amendment. Provides that a Commission member must not have been a registered lobbyist during the two-year period prior and must file financial disclosure reports in accordance with the Ethics in Government Act.
Rep. DeSaulnier Amendment. Requires the consideration of impacts to public health prior to repealing any federal rules under the bill.
Rep. McSally Amendment. Expands the scope of the nature of the Retrospective Regulatory Review Commission's review to ensure a rule or set of rules is compliant with certain provisions of the Congressional Review Act.

Reps. Plaskett/Courtney Amendment. Provides that no funding will be authorized to carry out the requirements of the underlying legislation.
Rep. McNerney Amendment. Exempts from the bill rules relating to the physical and cyber security of the bulk-power system.
Rep. Krishnamoorthi Amendment #6. Ensures that the underlying legislation will not in any way hinder the safe and legal development and deployment of unmanned aerial systems.
Rep. Krishnamoorthi Amendment #7. Ensures that the underlying legislation will not in any way weaken the protections afforded by noise restriction policies at and around airports.
Reps. Bonamici/Davis (CA)/Polis Amendment #8. Exempts any rule or set of rules prescribed by the Secretary of Education and relating to consumer protections for student loan borrowers from the provisions of the underlying legislation.
Reps. Bonamici/Polis Amendment #9. Exempts any rule or set of rules relating to Title I of the Elementary and Secondary Education Act of 1965 from the provisions of the underlying legislation.
Rep. Raskin Amendment. Exempts rules relating to the enforcement of the Clean Air Act from the provisions of the underlying legislation.
Rep. Moore Amendment. Exempts rules affecting or impacting the special government to government relationship between the federal government and tribal communities or affecting tribal sovereignty or self-determination.
Rep. Cummings Amendment. Exempts any rule relating to protections for whistleblowers or penalties for retaliation against whistleblowers.

House Report (PDF Version)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Wednesday, March 1: The House will meet at 12:00 p.m. for legislative business. The House is expected to complete consideration H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) and H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce). The House is also expected to consider H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell – Oversight and Government Reform) (Subject to a Rule).

THE DAILY QUOTE

"March is shaping up to be the most important month for the Republican Party in more than a decade… The wish list begins with passing a budget, reforming the tax code and repealing and replacing ObamaCare. All three issues are divisive… If Republicans fail to deliver, Trump may follow conservative pundits in directing fire at GOP legislative leaders. Some lawmakers have acknowledged the slow start. During an appearance last week on CBS's 'Face the Nation,' Sen. Lindsey Graham (R-S.C.) said the 'Congress is stumbling' and Republicans 'are tied up in knots.'"

This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the

expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed H.R. 1155 which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order 12 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

Rep. Beyer Amendment. Provides that a Commission member must not have been a registered lobbyist during the two-year period prior and must file financial disclosure reports in accordance with the Ethics in Government Act.
Rep. DeSaulnier Amendment. Requires the consideration of impacts to public health prior to repealing any federal rules under the bill.
Rep. McSally Amendment. Expands the scope of the nature of the Retrospective Regulatory Review Commission's review to ensure a rule or set of rules is compliant with certain provisions of the Congressional Review Act.

Reps. Plaskett/Courtney Amendment. Provides that no funding will be authorized to carry out the requirements of the underlying legislation.
Rep. McNerney Amendment. Exempts from the bill rules relating to the physical and cyber security of the bulk-power system.
Rep. Krishnamoorthi Amendment #6. Ensures that the underlying legislation will not in any way hinder the safe and legal development and deployment of unmanned aerial systems.
Rep. Krishnamoorthi Amendment #7. Ensures that the underlying legislation will not in any way weaken the protections afforded by noise restriction policies at and around airports.
Reps. Bonamici/Davis (CA)/Polis Amendment #8. Exempts any rule or set of rules prescribed by the Secretary of Education and relating to consumer protections for student loan borrowers from the provisions of the underlying legislation.
Reps. Bonamici/Polis Amendment #9. Exempts any rule or set of rules relating to Title I of the Elementary and Secondary Education Act of 1965 from the provisions of the underlying legislation.
Rep. Raskin Amendment. Exempts rules relating to the enforcement of the Clean Air Act from the provisions of the underlying legislation.
Rep. Moore Amendment. Exempts rules affecting or impacting the special government to government relationship between the federal government and tribal communities or affecting tribal sovereignty or self-determination.
Rep. Cummings Amendment. Exempts any rule relating to protections for whistleblowers or penalties for retaliation against whistleblowers.

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Wednesday, March 1: The House will meet at 12:00 p.m. for legislative business. The House is expected to complete consideration H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) and H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce). The House is also expected to consider H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell – Oversight and Government Reform) (Subject to a Rule).

THE DAILY QUOTE

"March is shaping up to be the most important month for the Republican Party in more than a decade… The wish list begins with passing a budget, reforming the tax code and repealing and replacing ObamaCare. All three issues are divisive… If Republicans fail to deliver, Trump may follow conservative pundits in directing fire at GOP legislative leaders. Some lawmakers have acknowledged the slow start. During an appearance last week on CBS's 'Face the Nation,' Sen. Lindsey Graham (R-S.C.) said the 'Congress is stumbling' and Republicans 'are tied up in knots.'"

Office of the Democratic Whip Steny H. Hoyer

DemocraticWhip.gov - (202) 225-3130

FLOOR SCHEDULE FOR TUESDAY, FEBRUARY 28, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	4:00 – 5:00 p.m.

Business **Fifteen "One Minutes"**		

Members are advised that the House will recess no later than 5:00 p.m., to allow for a security sweep of the House Chamber and reconvene at approximately 8:35 p.m. for a Joint Session of Congress to receive the President's Address. **Members are requested to be on the Floor and seated no later than 8:25 p.m.

H.Res. 150 – Rule Providing for Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) and H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce) (One hour of debate). The Rules Committee has recommended one Rule which would provide for consideration of two measures.

For H.R. 998, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 12 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

For H.J.Res. 83, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution.

The Rules Committee rejected a motion by Mr. Hastings of Florida to strike the waiver of section of 311 of the Congressional Budget Act for H.J.Res. 83. **Members are urged to VOTE NO.**

Begin Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) (One hour of debate). This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the

expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed H.R. 1155 which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order 12 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

FLOOR SCHEDULE FOR TUESDAY, FEBRUARY 28, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	1:30 – 2:30 p.m.	4:00 – 5:00 p.m.

Business **Fifteen "One Minutes"**		

Members are advised that the House will recess no later than 5:00 p.m., to allow for a security sweep of the House Chamber and reconvene at approximately 8:35 p.m. for a Joint Session of Congress to receive the President's Address. **Members are requested to be on the Floor and seated no later than 8:25 p.m.

H.Res. 150 – Rule Providing for Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) and H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce) (One hour of debate). The Rules Committee has recommended one Rule which would provide for consideration of two measures.

For H.R. 998, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 12 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

For H.J.Res. 83, the Rules Committee has recommended a closed Rule that provides for one hour of general debate equally divided between the Chair and Ranking Member of the Committee on Education and the Workforce. The Rule allows one motion to recommit and waives all points of order against the resolution.

The Rules Committee rejected a motion by Mr. Hastings of Florida to strike the waiver of section of 311 of the Congressional Budget Act for H.J.Res. 83. **Members are urged to VOTE NO.**

Begin Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) (One hour of debate). This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the

expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed H.R. 1155 which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order 12 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

Rep. Beyer Amendment. Provides that a Commission member must not have been a registered lobbyist during the two-year period prior and must file financial disclosure reports in accordance with the Ethics in Government Act.
Rep. DeSaulnier Amendment. Requires the consideration of impacts to public health prior to repealing any federal rules under the bill.
Rep. McSally Amendment. Expands the scope of the nature of the Retrospective Regulatory Review Commission's review to ensure a rule or set of rules is compliant with certain provisions of the Congressional Review Act.

Reps. Plaskett/Courtney Amendment. Provides that no funding will be authorized to carry out the requirements of the underlying legislation.
Rep. McNerney Amendment. Exempts from the bill rules relating to the physical and cyber security of the bulk-power system.
Rep. Krishnamoorthi Amendment #6. Ensures that the underlying legislation will not in any way hinder the safe and legal development and deployment of unmanned aerial systems.
Rep. Krishnamoorthi Amendment #7. Ensures that the underlying legislation will not in any way weaken the protections afforded by noise restriction policies at and around airports.
Reps. Bonamici/Davis (CA)/Polis Amendment #8. Exempts any rule or set of rules prescribed by the Secretary of Education and relating to consumer protections for student loan borrowers from the provisions of the underlying legislation.
Reps. Bonamici/Polis Amendment #9. Exempts any rule or set of rules relating to Title I of the Elementary and Secondary Education Act of 1965 from the provisions of the underlying legislation.
Rep. Raskin Amendment. Exempts rules relating to the enforcement of the Clean Air Act from the provisions of the underlying legislation.
Rep. Moore Amendment. Exempts rules affecting or impacting the special government to government relationship between the federal government and tribal communities or affecting tribal sovereignty or self-determination.
Rep. Cummings Amendment. Exempts any rule relating to protections for whistleblowers or penalties for retaliation against whistleblowers.

House Report (PDF Version)

TOMORROW'S OUTLOOK

The GOP Leadership has announced the following schedule for Wednesday, March 1: The House will meet at 12:00 p.m. for legislative business. The House is expected to complete consideration H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform) and H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce). The House is also expected to consider H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell – Oversight and Government Reform) (Subject to a Rule).

THE DAILY QUOTE

"March is shaping up to be the most important month for the Republican Party in more than a decade… The wish list begins with passing a budget, reforming the tax code and repealing and replacing ObamaCare. All three issues are divisive… If Republicans fail to deliver, Trump may follow conservative pundits in directing fire at GOP legislative leaders. Some lawmakers have acknowledged the slow start. During an appearance last week on CBS's 'Face the Nation,' Sen. Lindsey Graham (R-S.C.) said the 'Congress is stumbling' and Republicans 'are tied up in knots.'"

Cantwell Details Her Opposition to Zinke's Nomination to be Secretary of the Interior

Cantwell: I am not convinced Zinke will be able to moderate the Trump administration's extreme views on exploiting our public lands.

Download broadcast-quality video of Sen. Cantwell's floor statement here.
Watch Sen. Cantwell's floor statement on YouTube here.

Washington, D.C. – Today, Ranking Member of the Senate Energy and Natural Resources Committee Maria Cantwell (D-Wash.) opposed the nomination of Congressman Ryan Zinke (R-Mont.) to be the Secretary of the Interior.

Explaining her opposition, Sen. Cantwell said: "**Unfortunately, I'm not convinced that Congressman Zinke will be able to moderate the Trump administration's extreme views on exploiting our public lands. I'm not sure he will be able to stand up to the president and protect the public interest … required to manage our public lands for the benefit of all Americans—not just the oil, gas and mining companies and their commercial interests**."

Specifically, Sen. Cantwell took issue with Rep. Zinke's potential support of transferring federal management responsibilities of public lands to the states. She is opposed to Rep. Zinke's openness to weaken or repeal recently designated monuments through the use of the Antiquities Act. She is opposed to lifting the federal coal leasing moratorium, as well as the Trump administration's decision to greenlight the construction of the Dakota Access Pipeline without adequate consultation with the Standing Rock Sioux, Cheyenne River and other affected tribes.

The Trump administration has made it clear that it intends to pursue an

aggressive energy development agenda, undoing reasonable protections put in place on environmentally sensitive federal lands and waters, and that it will renew efforts to reverse protections both onshore and offshore in the Arctic.

"**It is clear to me the [Trump] administration will do everything it can to reverse responsible management of our public lands and instead pursue an aggressive energy development agenda without regard to the environmental and public health consequences**," Sen. Cantwell said. "**We have a nominee who has been all over the map as it relates to public lands. And he has certainly [gone] on the record that he will implement the president's strategy**."

The Secretary of the Interior has one of the most important jobs in the federal government—responsible for managing our nation's public lands, national parks and national wildlife refuges; overseeing mineral and energy development on public lands and in federal waters; managing water resources in Western states; and discharging the nation's trust obligations to Indian tribes and insular areas.

On the issue of tribal responsibilities, Sen. Cantwell noted: "**The Secretary of the Interior must be committed to upholding our trust and treaty obligations for our country's 567 federally recognized tribes. That secretary must be committed to recognizing tribal sovereignty and self-determination; to protecting tribal lands, waters and mineral resources; and to supporting adequate resources for tribal education, social services and infrastructure**."

The Interior Secretary must balance not only the interests of extractive industries seeking to access the nation's mineral wealth, but also the needs of the public for outdoor recreation and conservation. Sen. Cantwell said, "**The [Interior] Secretary must balance the short-term demands of developing resources on our public lands against the need to protect environmentally sensitive areas and preserve that natural heritage for future generations**."

Sen. Cantwell said: "**The jobs from the outdoor economy are just as important—maybe more important—economically [than extractive industries] in the near term and the long term. Nationwide, it's 6.1 million jobs and $646 billion in revenues from outdoor recreation. This is a very valued part of the U.S. economy. It is also a very valued part of the American spirit**."

The Senate will vote on Rep. Zinke's nomination later tonight or early tomorrow; the vote has not yet been scheduled. Sen. Cantwell plans to vote "no" on his nomination.

Senate Opens Next for Business: 10AM

Length of Morning Business: None

First Vote of the Day: Approximately 10:30AM

At approximately 10:30AM tomorrow, the Senate will vote to confirm Ryan Zinke of Montana to be Interior Secretary. After completion of this vote and up to ten minutes of debate, the Senate will conduct a cloture vote on the nomination of Benjamin S. Carson, Sr., to be Secretary of Housing and Urban Development (HUD).

By consent, if cloture is invoked on the Carson nomination, the up to 30 hours of post-cloture debate time will be counted as if it started at 1AM on Wednesday.

Today in the Senate

No roll call votes occurred in today's session of the Senate. However, several items were passed by unanimous consent or voice vote –

<!--[if !supportLists]-->1. <!--[endif]-->S.Res.62 – Committee Funding
<!--[if !supportLists]-->2. <!--[endif]-->S.Res.35 – Venezuela
<!--[if !supportLists]-->3. <!--[endif]-->S.Res.73 – Rare Disease Day

Below are a couple of documents regarding the Waters of the U.S. (WOTUS) rule.

Hard At Work 'Repealing Obama EPA Water Rule'

‘Obama-Era Regulation … Was Just A Blatant Power Grab By The Federal Government To Regulate Every Pothole, Ditch, And Puddle In The Nation’

SEN. MITCH McCONNELL (R-KY): “President Trump should be commended for doing what he can to begin turning back this attack on middle class families in Kentucky and across the country. Although this Obama-era regulation claimed to protect this nation’s waterways, it was just a blatant power grab by the federal government to regulate every pothole, ditch, and puddle in the nation. Based more on ideology than fact, the rule would directly harm the Middle Class.” (Sen. McConnell, Press Release, 2/28/17)

President Trump’s Executive Order ‘The First Step Toward Repealing The 2015 Water Rule’

“President Trump on Tuesday instructed the Environmental Protection Agency and Army Corps of Engineers to review and reconsider a 2015 rule known as the Waters of the United States rule…” (“Trump Directs Rollback Of Obama-Era Water Rule He Calls ‘Destructive And Horrible,’” The Washington Post, 2/28/17)

<!--[if !supportLists]-->● <!--[endif]-->“It’s the first step toward repealing the 2015 water rule, which asserted federal power over small waterways like wetlands and streams…” (“Trump Directs EPA To Reconsider Obama Water Rule,” The Hill, 2/28/17)

“President Trump [signed] an executive order Tuesday scrapping a controversial Environmental Protection Agency rule that expanded the agency's jurisdiction over the nation's waterways during the second term of former President Obama. The regulation, known as the Waters of the U.S. rule, broadened the definition of the type of water body that would fall under EPA's formidable clean water enforcement powers, making everything from streams to ditches and watering holes subject to the EPA's and Army Corps of Engineers' oversight.” (“Trump Executive Order Scraps EPA Water Rule,” Washington Examiner, 2/28/2017)

<!--[if !supportLists]-->● <!--[endif]-->“Speaking to reporters Monday, the senior administration official said the regulation issued in 2015 ‘vastly expands federal jurisdictions over state waters, and we think ... it could potentially violate previous Supreme Court decisions.’” (“Trump To Direct Rollback Of Obama-Era Water Rule Tuesday,” The Washington Post, 2/27/2017)

“The executive order is the first step toward fulfilling one of Trump’s key campaign promises, repealing a regulation ... [T]he order will instruct the EPA and the Army Corps of Engineers to formally reconsider the rule, which could lead to its repeal or a significant rewrite.” (“Trump Moves Toward Repealing Obama EPA Water Rule,” The Hill, 2/28/2017)

‘One Of The [Obama] Administration’s Most High-Profile And Controversial Regulations’

“The water regulation… has become one of the administration’s most high-profile and controversial regulations in recent years. Opponents of the rule, which include a range of agriculture and energy companies and their congressional representatives from rural and energy-intensive states, say the regulation amounts to a federal intrusion into states’ rights.” (“House Votes to Overturn Expanded Waterway Regulations,” The Wall Street Journal, 1/13/2016)

“Barack Obama's water war… a massive power grab by Washington.” (“Barack Obama's Water War,” Politico, 5/27/2015)

<!--[if !supportLists]-->● <!--[endif]-->“…it will give bureaucrats carte blanche to swoop in and penalize landowners every time a cow walks through a ditch.” (“Barack Obama's Water War,” Politico, 5/27/2015)

SEN. HEIDI HEITKAMP (D-ND): “‘There is not one single federal regulation in the entire country that has caused more concern in the state of North Dakota than this Waters of the United States proposed regulation,’ Heitkamp said. ‘There is incredible uncertainty out there.’” (“Senators Target Obama’s Water Rule,” The Hill, 4/30/2015)

<!--[if !supportLists]-->● <!--[endif]-->SEN. HEITKAMP: “Farmers across North Dakota and the nation deserve better than the sweeping federal rules regulating possibly every pothole on their land – they deserve certainty, and they deserve to be heard before any rule goes into effect.” (Sen. Heitkamp, Press Release, 8/27/2015)

SEN. JOE MANCHIN (D-WV): "Today, the EPA is once again dangerously overreaching its boundaries by expanding the definition of water sources it can regulate," Senator Manchin said. "It is completely unreasonable that our country's ditches, puddles and other un-navigable waters be subjected to the same regulations as our greatest lakes and rivers, and implementing this rule will certainly have a significant impact on West Virginia's economy, hindering businesses, manufacturing and energy production. The bottom line is that no federal agency should go around Congress to control what has not been legislated, especially when its actions will harm economic growth. I urge my colleagues to take immediate action on the bipartisan Water Quality Protection Act to rein in this harmful rule." (Sen. Manchin, Press Release, 5/27/2015)

SEN. JOE DONNELLY (D-IN): "That is why it is incredibly important that the EPA rewrite the Waters of the United States rule with input from the people who live and work on the land and alongside these waters every day." (Sen. Donnelly, Press Release, 4/30/2015)

Obama-Era Rule 'A Nightmare For Farmers' And 'For Small Businesses'

American Farm Bureau Federation's Don Parrish: "It's going to cause a nightmare for farmers. ... Our members own the majority of the landscape that's going to be impacted by this. ... It's going to make their land, the most valuable thing they possess, less valuable. It could reduce the value of some farmland by as much as 40 percent." ("Obama Announces New Rule Limiting Water Pollution," The New York Times, 5/27/2015)

NFIB Vice President of Public Policy Amanda Austin: "The Waters of the United States rule would make developing property a nightmare for small businesses. Small businesses simply don't have the resources to pay the fees and hire the consultants to help them navigate the Clean Water Act. The Environmental Protection Agency didn't even bother to consider how this rule would affect small firms with limited ability to cut through the red tape." ("Small Business Calls on House to Stop Waters Rule," NFIB Website, 1/12/2016)

<!--[if !supportLists]-->● <!--[endif]-->"As a result of this new regulation, the Agencies are bringing seasonal streams, ponds, ditches, and depressions in fields into federal jurisdiction. The financial impact of this rule will affect small businesses disproportionately; Clean Water Act permits can cost tens of thousands of dollars and lead to lengthy project delays." (NFIB, Letter to House Members, 1/11/2016)

FLASHBACK
Bipartisan Votes In Both Houses To Overturn The Regulation Last Congress

"President Obama on Tuesday rejected an attempt by congressional Republicans to overturn his landmark regulation asserting federal power over small bodies of water." ("Obama Vetoes GOP Attempt To Block Water Rule," The Hill, 1/19/2016)

"The House voted Wednesday to overturn a contentious rule from the Environmental Protection Agency that asserts federal authority over small waterways. The House passed the resolution 253-166 Wednesday, with 12 Democrats supporting it." ("House Votes To Overturn Obama Water Rule," The Hill, 1/13/2016)

"The Senate approved a bill Wednesday to block the Obama administration's new regulation setting federal authority over small waterways. The Congressional Review Act (CRA) resolution against the Environmental Protection Agency's (EPA) water rule passed on a 53-44 vote. Three Democrats joined every Republican except [one] in advancing the bill." ("Senate Votes To Kill EPA's Water Rule," The Hill, 11/4/2015)

Federal Courts Temporarily Blocked The Controversial Regulation In 2015

"Issued in 2015, the WOTUS rule unleashed a torrent of Federal litigation. Thirty-one states, many local governments, and private industry asserted that the rule unconstitutionally expanded the Clean Water Act's (CWA) reach and misapplied Justice Anthony Kennedy's 'significant nexus' opinion in the 2006 Rapanos case." ("U.S. Supreme Court's 'Waters Of The U.S.' Gift To The Trump Administration," The Hill, 1/20/17)

<!--[if !supportLists]-->● <!--[endif]-->"Various Courts of Appeal challenges had been consolidated before the Sixth Circuit in Cincinnati, which granted a nationwide wide stay in November 2015." ("U.S. Supreme Court's 'Waters Of The U.S.' Gift To The Trump Administration," The Hill, 1/20/17)

<!--[if !supportLists]-->● <!--[endif]-->"The [U.S. District J]udge said the rule appears to be too broad in some cases. He said the definition of tributary, for example, could include many waters that are unlikely to have a significant connection to larger waters downstream. He also said the rules are 'arbitrary and capricious,' and would cover some waters that are 'remote and intermittent.'" ("Judge Rules Obama Administration Water Rule Should Be Halted," The Associated Press, 8/27/2015)

Senator McConnell Comments on President Trump's Executive Order on Waters of the United States Regulation

WASHINGTON, D.C. – U.S Senate Majority Leader Mitch McConnell (R-KY) made the following comments today regarding President Donald Trump's executive order directing the Environmental Protection Agency (EPA) and Army Corps of Engineers to begin a formalized review of the Waters of the United States (WOTUS) regulation:

"President Trump should be commended for doing what he can to begin turning back this attack on middle class families in Kentucky and across the country.

"Although this Obama-era regulation claimed to protect waterways, it was a blatant power grab by the federal government to regulate every pothole, ditch, and puddle in the nation. Based more on ideology than fact, the rule would directly harm the Middle Class.

"The Sixth Circuit Court of Appeals issued a nationwide stay against the rule in 2015. It recognized the serious legal questions about the rule.

"Earlier this year, I sent a letter to then President-Elect Trump, in which I asked him to begin the process of overturning this harmful regulation. I am thrilled to see that President Trump has decided to join our cause to protect Kentucky families and stop the growth of government bureaucracy.

"Together, we can find better ways to protect our environment without a regulatory

assault on the Middle Class. That's why I've previously joined with my colleagues to sponsor common-sense legislation to keep our waterways clean.

"I look forward to continuing to work with the Administration and my colleagues in the Senate to promote safety through reasonable solutions."

FLOOR SCHEDULE FOR WEDNESDAY, MARCH 1, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	2:00 – 3:00 p.m.	6:00 – 7:00 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 156 – Rule Providing for Consideration of H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell – Oversight and Government Reform) and H.R. 1004 – Regulatory Integrity Act of 2017 (Rep. Walberg – Oversight and Government Reform) (One hour of debate). The Rules Committee has recommended one Rule which would provide for consideration of two bills.

For H.R. 1009, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 6 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

For H.R. 1004, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 3 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

The Rules Committee rejected a motion by Ms. Slaughter of New York to consider both H.R. 1004 and H.R. 1009 under open Rules. The Rules Committee also rejected a motion by Mr. McGovern of Massachusetts to strike the waiver of all points of order against consideration of H.R. 1009 which includes waiver of CUTGO, statutory pay-go, and sections 303 and 311 of the Congressional Budget Act. **Members are urged to VOTE NO.**

Complete Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform). This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed **H.R. 1155** which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order no further general debate. As of yesterday, the House completed consideration of amendments through the Krishnamoorthi Amendments. The House will continue consideration of the remaining five amendments. The amendments are:

Reps. Bonamici/Davis (CA)/Polis Amendment #8. Exempts any rule or set of rules prescribed by the Secretary of Education and relating to consumer protections for student loan borrowers from the provisions of the underlying legislation.

Reps. Bonamici/Polis Amendment #9. Exempts any rule or set of rules relating to Title I of the Elementary and Secondary Education Act of 1965 from the provisions of the underlying legislation.

Rep. Raskin Amendment. Exempts rules relating to the enforcement of the Clean Air Act from the provisions of the underlying legislation.
Rep. Moore Amendment. Exempts rules affecting or impacting the special government to government relationship between the federal government and tribal communities or affecting tribal sovereignty or self-determination.
Rep. Cummings Amendment. Exempts any rule relating to protections for whistleblowers or penalties for retaliation against whistleblowers.

House Report (HTML Version)
House Report (PDF Version)

H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce) (One hour of debate). The resolution disapproves of the Rule issued by the Department of Labor (DOL) to standardize the Occupational Safety and Health Administration's (OSHA) record keeping of work-related injuries and illnesses for five years. This Rule was created in order to clarify existing practices and to ensure that employees were being protected, while giving OSHA tools to enforce their continuing obligation to record workplace injuries. In 2012 the D.C. Circuit Court of Appeals held that OSHA did not have the authority to issue a citation for the "occurrence" of a violation that continued beyond a six-month statute of limitations set forth in the Occupational Safety and Health (OSH) Act. This ruling went against forty-years of precedents in reporting workplace-safety violations. Since 1972, every administration has maintained that the five-year retention period for recording work-related injuries, illnesses or deaths is standard practice, and this DOL rule was simply put in place to codify and create some consistency that will benefit both employers and employees.

Under the terms of the Congressional Review Act (CRA) process, H.J.Res. 83, if adopted and signed by President Trump, will not only nullify, in one brief, partisan debate, this rule that helps protect working Americans but it will prevent DOL from considering a "substantially similar" rule in the future.

The Rule, which was adopted yesterday, provides for one hour of debate equally divided and controlled by the Chair and Ranking Member of the Committee on Education and the Workforce.

Bill Text for H.J.Res. 83:
PDF Version

H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell –

Oversight and Government Reform) (One hour of debate). This bill would significantly alter the function of the Office of Information and Regulatory Affairs (OIRA). Currently, OIRA reviews significant draft rules from agencies, other than independent agencies, and can clear the rules with or without changes, or return the rules to agencies for reconsideration, and can encourage the agencies to withdraw them. Additionally, for rules that have a $100 million impact on the economy, OIRA reviews the economic analyses and potential impact of implementation.

While both Democrats and Republicans agree that the oversight role of OIRA needs to be clarified and the review process needs to be improved, especially regarding transparency and reducing regulatory delays, H.R. 1009 is not the answer. H.R. 1009 goes too far in strengthening OIRA at the expense of federal agencies. This legislation could hinder the independence of federal agencies like the Consumer Financial Protection Bureau, the Consumer Product Safety Commission, and the Federal Communications Commission, and subject rules promulgated by those agencies to political review by the White House. Regarding regulatory delays, H.R. 1009 would allow OIRA to conduct a review within ninety days, but it also allows the Administrator or the head of the specific agency any number of additional thirty-day period extensions, which would hamstring the regulatory process.

H.R. 1009 is not a responsible or workable solution for OIRA. During the Obama Administration, Republicans regularly warned against "executive overreach" and "inflated bureaucracy." H.R. 1009 shows the emptiness of these warnings. Less than two months into 2017, with Republicans now controlling the White House, the Senate, and the House of Representatives, they have suddenly changed their tune. Now they are trying to centralize control of independent agencies by subjecting them to review by the White House and creating a process that can ultimately come to a standstill. H.R. 1009 is a reckless and irresponsible effort to hinder the ability of federal agencies to promulgate rules, consistent with the laws that Congress enacts, to protect the health, safety, and financial well-being of the American people.

The Rule makes in order 6 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

Rep. Mitchell Manager's Amendment. Makes technical changes to the underlying legislation to ensure consistency in dates and terms, require OIRA to review significant guidance, and prohibit the authorization of additional funds.
Rep. Buck Amendment. Ensures that federal agencies engage their partners in state, local, and tribal government throughout the regulatory process.
Rep. Young (IA) Amendment. Requires each agency to describe steps taken to determine a new rule or regulation is not duplicative or conflicting with any existing or planned regulatory action and to require agencies to maintain a list of active regulatory actions on website.
Rep. Meadows Amendment. Requires OIRA to keep a log of the "consultation" which is any communication that occurs about a specific regulation before the

regulation is submitted for review - for each regulation and to publish a list of all the consultations when the regulation is published in the Federal Register.
Rep. Chaffetz Amendment. Requires OIRA to maintain records on each significant regulatory action reviewed such that it is easily accessible to provide to Congress upon request.
Rep. Connolly Amendment. Exempts independent agencies from the underlying legislation.

This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed **H.R. 1155** which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order no further general debate. As of yesterday, the House completed consideration of amendments through the Krishnamoorthi Amendments. The House will continue consideration of the remaining five amendments. The amendments are:

Reps. Bonamici/Davis (CA)/Polis Amendment #8. Exempts any rule or set of rules prescribed by the Secretary of Education and relating to consumer protections for student loan borrowers from the provisions of the underlying legislation.

Reps. Bonamici/Polis Amendment #9. Exempts any rule or set of rules relating to Title I of the Elementary and Secondary Education Act of 1965 from the provisions of the underlying legislation.

Rep. Raskin Amendment. Exempts rules relating to the enforcement of the Clean Air Act from the provisions of the underlying legislation.
Rep. Moore Amendment. Exempts rules affecting or impacting the special government to government relationship between the federal government and tribal communities or affecting tribal sovereignty or self-determination.
Rep. Cummings Amendment. Exempts any rule relating to protections for whistleblowers or penalties for retaliation against whistleblowers.

House Report (PDF Version)

H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce) (One hour of debate). The resolution disapproves of the Rule issued by the Department of Labor (DOL) to standardize the Occupational Safety and Health Administration's (OSHA) record keeping of work-related injuries and illnesses for five years. This Rule was created in order to clarify existing practices and to ensure that employees were being protected, while giving OSHA tools to enforce their continuing obligation to record workplace injuries. In 2012 the D.C. Circuit Court of Appeals held that OSHA did not have the authority to issue a citation for the "occurrence" of a violation that continued beyond a six-month statute of limitations set forth in the Occupational Safety and Health (OSH) Act. This ruling went against forty-years of precedents in reporting workplace-safety violations. Since 1972, every administration has maintained that the five-year retention period for recording work-related injuries, illnesses or deaths is standard practice, and this DOL rule was simply put in place to codify and create some consistency that will benefit both employers and employees.

Under the terms of the Congressional Review Act (CRA) process, H.J.Res. 83, if adopted and signed by President Trump, will not only nullify, in one brief, partisan debate, this rule that helps protect working Americans but it will prevent DOL from considering a "substantially similar" rule in the future.

The Rule, which was adopted yesterday, provides for one hour of debate equally divided and controlled by the Chair and Ranking Member of the Committee on Education and the Workforce.

Bill Text for H.J.Res. 83:

H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell –

Oversight and Government Reform) (One hour of debate). This bill would significantly alter the function of the Office of Information and Regulatory Affairs (OIRA). Currently, OIRA reviews significant draft rules from agencies, other than independent agencies, and can clear the rules with or without changes, or return the rules to agencies for reconsideration, and can encourage the agencies to withdraw them. Additionally, for rules that have a $100 million impact on the economy, OIRA reviews the economic analyses and potential impact of implementation.

While both Democrats and Republicans agree that the oversight role of OIRA needs to be clarified and the review process needs to be improved, especially regarding transparency and reducing regulatory delays, H.R. 1009 is not the answer. H.R. 1009 goes too far in strengthening OIRA at the expense of federal agencies. This legislation could hinder the independence of federal agencies like the Consumer Financial Protection Bureau, the Consumer Product Safety Commission, and the Federal Communications Commission, and subject rules promulgated by those agencies to political review by the White House. Regarding regulatory delays, H.R. 1009 would allow OIRA to conduct a review within ninety days, but it also allows the Administrator or the head of the specific agency any number of additional thirty-day period extensions, which would hamstring the regulatory process.

H.R. 1009 is not a responsible or workable solution for OIRA. During the Obama Administration, Republicans regularly warned against "executive overreach" and "inflated bureaucracy." H.R. 1009 shows the emptiness of these warnings. Less than two months into 2017, with Republicans now controlling the White House, the Senate, and the House of Representatives, they have suddenly changed their tune. Now they are trying to centralize control of independent agencies by subjecting them to review by the White House and creating a process that can ultimately come to a standstill. H.R. 1009 is a reckless and irresponsible effort to hinder the ability of federal agencies to promulgate rules, consistent with the laws that Congress enacts, to protect the health, safety, and financial well-being of the American people.

The Rule makes in order 6 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

Rep. Mitchell Manager's Amendment. Makes technical changes to the underlying legislation to ensure consistency in dates and terms, require OIRA to review significant guidance, and prohibit the authorization of additional funds.
Rep. Buck Amendment. Ensures that federal agencies engage their partners in state, local, and tribal government throughout the regulatory process.
Rep. Young (IA) Amendment. Requires each agency to describe steps taken to determine a new rule or regulation is not duplicative or conflicting with any existing or planned regulatory action and to require agencies to maintain a list of active regulatory actions on website.
Rep. Meadows Amendment. Requires OIRA to keep a log of the "consultation" which is any communication that occurs about a specific regulation before the

regulation is submitted for review - for each regulation and to publish a list of all the consultations when the regulation is published in the Federal Register.
Rep. Chaffetz Amendment. Requires OIRA to maintain records on each significant regulatory action reviewed such that it is easily accessible to provide to Congress upon request.
Rep. Connolly Amendment. Exempts independent agencies from the underlying legislation.

FLOOR SCHEDULE FOR WEDNESDAY, MARCH 1, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	2:00 – 3:00 p.m.	6:00 – 7:00 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 156 – Rule Providing for Consideration of H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell – Oversight and Government Reform) and H.R. 1004 – Regulatory Integrity Act of 2017 (Rep. Walberg – Oversight and Government Reform) (One hour of debate). The Rules Committee has recommended one Rule which would provide for consideration of two bills.

For H.R. 1009, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 6 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

For H.R. 1004, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 3 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

The Rules Committee rejected a motion by Ms. Slaughter of New York to consider both H.R. 1004 and H.R. 1009 under open Rules. The Rules Committee also rejected a motion by Mr. McGovern of Massachusetts to strike the waiver of all points of order against consideration of H.R. 1009 which includes waiver of CUTGO, statutory pay-go, and sections 303 and 311 of the Congressional Budget Act. **Members are urged to VOTE NO.**

Complete Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform). This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. FLOOR SCHEDULE FOR WEDNESDAY, MARCH 1, 2017

HOUSE MEETS AT:	FIRST VOTE PREDICTED:	LAST VOTE PREDICTED:
10:00 a.m.: Morning Hour 12:00 p.m.: Legislative	2:00 – 3:00 p.m.	6:00 – 7:00 p.m.

Business **Fifteen "One Minutes"**		

H.Res. 156 – Rule Providing for Consideration of H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell – Oversight and Government Reform) and H.R. 1004 – Regulatory Integrity Act of 2017 (Rep. Walberg – Oversight and Government Reform) (One hour of debate). The Rules Committee has recommended one Rule which would provide for consideration of two bills.

For H.R. 1009, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 6 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

For H.R. 1004, the Rules committee has recommended a structured Rule that provides for one hour of general debate equally divided and controlled by the Chair and Ranking Member of the Committee on Oversight and Government Reform. The Rule allows for 3 amendments, debatable for 10 minutes equally divided between the offeror and an opponent. The Rule allows one motion to recommit, with or without instructions, and waives all points of order against the legislation.

The Rules Committee rejected a motion by Ms. Slaughter of New York to consider both H.R. 1004 and H.R. 1009 under open Rules. The Rules Committee also rejected a motion by Mr. McGovern of Massachusetts to strike the waiver of all points of order against consideration of H.R. 1009 which includes waiver of CUTGO, statutory pay-go, and sections 303 and 311 of the Congressional Budget Act. **Members are urged to VOTE NO.**

Complete Consideration of H.R. 998 – SCRUB Act (Rep. Smith (MO) – Oversight and Government Reform). This bill would establish an un-elected, nine-member commission to review existing federal rules and regulations and identify those they determine should be repealed. H.R, 998 is based on the faulty premises that regulations have an adverse impact on economic growth, job creation, and innovation. In fact, H.R. 998 would make it easier to roll back existing regulations that promote health and safety in communities and at the workplace, protect the environment, and safeguard consumers, and make it harder for every department and agency in the federal government to issue new ones. The unelected commission would have the power to issue subpoenas "requiring the attendance and testimony of witnesses and the production of any evidence relating to the duties of the commission." This broad, unspecified authority will give an unelected panel more power than Inspectors General, while having no oversight or accountability, all at the expense of taxpayers.

In addition, Members of Congress would be unable to debate and vote on each rule recommended for immediate repeal by the unelected commission, and instead would be forced to vote on rule repeals as a package. Any recommended repeal that is approved by Congress would result in the specified agency having to rescind the covered rules within sixty days. H.R. 998 would essentially take the power away from elected representatives and Members of Congress, and give the power to an unelected appointed panel.

Further, H.R. 998 would create a "regulatory cut-go" procedure not dependent on congressional approval that would require any agency issuing a new regulation to repeal an existing regulation of greater or equal value within its jurisdiction that the commission has determined should be abolished. Under "regulatory cut-go," all regulations recommended by the Commission for repeal would be placed into an inventory of regulations which the agencies would be required to repeal over time through a "cut-go" process as agencies promulgate new regulations. The costs of each new agency regulation must be offset by cost-reductions associated with the repeal of regulations in the inventory of regulations, until each agency completes the repeals of its own regulations specified in the inventory. Simply put, no federal agency could issue a new rule, however justified or in the public's immediate interest, unless it cut an existing one that imposes equal "costs" on the economy.

This bill would give enormous power to an appointed commission with virtually no oversight or regulations, while tying the hands of agencies that are knowledgeable and have extensive experience in particular areas. It would put the American people at risk, impede the ability of agencies to issue regulations that protected the public's health and security, while wasting their tax dollars.

This legislation is similar to an Executive Order issued by the Trump Administration that requires two federal regulations to be rescinded for everyone new regulation that is created. In January of 2016 the House passed **H.R. 1155** which is identical legislation to H.R. 998. That vote can be found here.

The Rule makes in order no further general debate. As of yesterday, the House completed consideration of amendments through the Krishnamoorthi Amendments. The House will continue consideration of the remaining five amendments. The amendments are:

Reps. Bonamici/Davis (CA)/Polis Amendment #8. Exempts any rule or set of rules prescribed by the Secretary of Education and relating to consumer protections for student loan borrowers from the provisions of the underlying legislation.

Reps. Bonamici/Polis Amendment #9. Exempts any rule or set of rules relating to Title I of the Elementary and Secondary Education Act of 1965 from the provisions of the underlying legislation.

Rep. Raskin Amendment. Exempts rules relating to the enforcement of the Clean Air Act from the provisions of the underlying legislation.
Rep. Moore Amendment. Exempts rules affecting or impacting the special government to government relationship between the federal government and tribal communities or affecting tribal sovereignty or self-determination.
Rep. Cummings Amendment. Exempts any rule relating to protections for whistleblowers or penalties for retaliation against whistleblowers.

House Report (HTML Version)
House Report (PDF Version)

H.J.Res. 83 – Disapproving the rule submitted by the Department of Labor relating to "Clarification of Employer's Continuing Obligation to Make and Maintain an Accurate Record of Each Recordable Injury and Illness" (Rep. Byrne – Education and the Workforce) (One hour of debate). The resolution disapproves of the Rule issued by the Department of Labor (DOL) to standardize the Occupational Safety and Health Administration's (OSHA) record keeping of work-related injuries and illnesses for five years. This Rule was created in order to clarify existing practices and to ensure that employees were being protected, while giving OSHA tools to enforce their continuing obligation to record workplace injuries. In 2012 the D.C. Circuit Court of Appeals held that OSHA did not have the authority to issue a citation for the "occurrence" of a violation that continued beyond a six-month statute of limitations set forth in the Occupational Safety and Health (OSH) Act. This ruling went against forty-years of precedents in reporting workplace-safety violations. Since 1972, every administration has maintained that the five-year retention period for recording work-related injuries, illnesses or deaths is standard practice, and this DOL rule was simply put in place to codify and create some consistency that will benefit both employers and employees.

Under the terms of the Congressional Review Act (CRA) process, H.J.Res. 83, if adopted and signed by President Trump, will not only nullify, in one brief, partisan debate, this rule that helps protect working Americans but it will prevent DOL from considering a "substantially similar" rule in the future.

The Rule, which was adopted yesterday, provides for one hour of debate equally divided and controlled by the Chair and Ranking Member of the Committee on Education and the Workforce.

Bill Text for H.J.Res. 83:
PDF Version

H.R. 1009 – OIRA Insight, Reform, and Accountability Act (Rep. Mitchell –

Oversight and Government Reform) (One hour of debate). This bill would significantly alter the function of the Office of Information and Regulatory Affairs (OIRA). Currently, OIRA reviews significant draft rules from agencies, other than independent agencies, and can clear the rules with or without changes, or return the rules to agencies for reconsideration, and can encourage the agencies to withdraw them. Additionally, for rules that have a $100 million impact on the economy, OIRA reviews the economic analyses and potential impact of implementation.

While both Democrats and Republicans agree that the oversight role of OIRA needs to be clarified and the review process needs to be improved, especially regarding transparency and reducing regulatory delays, H.R. 1009 is not the answer. H.R. 1009 goes too far in strengthening OIRA at the expense of federal agencies. This legislation could hinder the independence of federal agencies like the Consumer Financial Protection Bureau, the Consumer Product Safety Commission, and the Federal Communications Commission, and subject rules promulgated by those agencies to political review by the White House. Regarding regulatory delays, H.R. 1009 would allow OIRA to conduct a review within ninety days, but it also allows the Administrator or the head of the specific agency any number of additional thirty-day period extensions, which would hamstring the regulatory process.

H.R. 1009 is not a responsible or workable solution for OIRA. During the Obama Administration, Republicans regularly warned against "executive overreach" and "inflated bureaucracy." H.R. 1009 shows the emptiness of these warnings. Less than two months into 2017, with Republicans now controlling the White House, the Senate, and the House of Representatives, they have suddenly changed their tune. Now they are trying to centralize control of independent agencies by subjecting them to review by the White House and creating a process that can ultimately come to a standstill. H.R. 1009 is a reckless and irresponsible effort to hinder the ability of federal agencies to promulgate rules, consistent with the laws that Congress enacts, to protect the health, safety, and financial well-being of the American people.

The Rule makes in order 6 amendments, debatable for 10 minutes each, equally divided between the offeror and an opponent. The amendments are:

Rep. Mitchell Manager's Amendment. Makes technical changes to the underlying legislation to ensure consistency in dates and terms, require OIRA to review significant guidance, and prohibit the authorization of additional funds.
Rep. Buck Amendment. Ensures that federal agencies engage their partners in state, local, and tribal government throughout the regulatory process.
Rep. Young (IA) Amendment. Requires each agency to describe steps taken to determine a new rule or regulation is not duplicative or conflicting with any existing or planned regulatory action and to require agencies to maintain a list of active regulatory actions on website.
Rep. Meadows Amendment. Requires OIRA to keep a log of the "consultation" which is any communication that occurs about a specific regulation before the

regulation is submitted for review - for each regulation and to publish a list of all the consultations when the regulation is published in the Federal Register.
Rep. Chaffetz Amendment. Requires OIRA to maintain records on each significant regulatory action reviewed such that it is easily accessible to provide to Congress upon request.
Rep. Connolly Amendment. Exempts independent agencies from the underlying legislation.

FOR IMMEDIATE RELEASE
March 1, 2017

Senate Western Caucus Applauds Confirmation of Zinke for Interior Secretary

U.S. SENATE —Today, Senate Western Caucus led by Chairman Steve Daines (R-MT) applauded the confirmation of U.S. Representative Ryan Zinke for Secretary of the U.S. Department of the Interior.

U.S. Representative Ryan Zinke (MT-AL) is a fifth generation Montanan, former state senator, and a 23-year U.S. Navy SEAL veteran. In 2014, Ryan became the first Navy SEAL elected to the House.

Senator Steve Daines (R-MT): "I'm thrilled that we have Ryan Zinke, a westerner as Secretary of the Interior who understands Montana values. I have no doubt that Ryan Zinke will aggressively work to grow jobs through responsible development and improve public access through better management of federal lands."

Senator Dean Heller (R-NV): "With over 85 percent of Nevada's public land administered by the federal government, we need a Department of the Interior that will work with, not against us to on important public land priorities. Ryan Zinke, a fellow westerner, will restore common sense to land management and prioritize policies that bolster mining, ranching, hunting, fishing, and energy production in the west. As a sportsman myself, I know firsthand the importance of good stewardship, and I look forward to working with Ryan to benefit our western way of life."

Senator John Boozman (R-AR): "Ryan Zinke's knowledge of public land management and energy issues is important to the responsible use of our natural resources. I'm pleased to support his confirmation as Secretary of the Interior and look forward to working with him."

Senator Jim Risch (R-ID: "I am glad that a Westerner will be at the helm of the Interior Department. I look forward to working with someone who understands and has advocated for the issues most pressing to Western states."

Senator Mike Crapo (R-ID): "Congratulations to Secretary Zinke on his confirmation. We Idahoans have a number of important issues that can be helped tremendously by having the

full attention of Secretary Zinke, a Westerner with common-sense values. I look forward to working with him as we continue our collaborative efforts."

Senator Mike Enzi (R-WY): "Being from a western state, Representative Ryan Zinke understands the incredible importance of public land issues to states like Wyoming. With so much of our land managed by the federal government, it is key that they are open for multiple uses such as recreation, agriculture and energy production. I look forward to working with him on the critical issues that matter to Wyoming and other western states."

Senator Orrin Hatch (R-UT): "As a fellow Westerner who understands our way of life, Ryan Zinke is the right choice to lead the Interior Department. Under his leadership, I am confident that the Department will be committed to an inclusive approach to land management that values the voices of Utahns and respects our role in stewarding the lands we know and love. In particular, he understands the enormous damage inflicted on our communities by the abuse of the Antiquities Act, and I look forward to working with him and the President to undo the harm caused by the unilateral designations of the Bears Ears and Grand Staircase-Escalante National Monuments. I applaud his confirmation and look forward to working closely with him in these endeavors."

Senator Dan Sullivan (R-AK): "I'm excited that we will have an Interior Secretary from a Western state who has been a strong advocate for energy independence. Secretary Zinke has committed to me that he will return the Interior Department to its rightful role, working with my state as a partner in progress, instead of stymying much needed economic and resource development."

Senator Lisa Murkowski (R-AK): "I congratulate Rep. Zinke on his confirmation as Interior Secretary, and am eager to work with him to restore balance to the management of federal areas. This is particularly important for Alaska, which has more at stake and is more deeply affected by this Department than any other part of our country."

Senate Western Caucus Membership

Senator Steve Daines (R-MT), *Chairman*
Senator John Barrasso (R-WY), *Founder & Chairman Emeritus*

Daines: Zinke Confirmed as Interior Secretary

U.S. SENATE —U.S. Senator Steve Daines today released the following statement after the U.S. Senate voted to confirm President Donald J. Trump's nominee for Secretary of the U.S. Department of the Interior, Montana's U.S. Representative Ryan Zinke.

"This is a historic moment for Montana as Congressman Zinke is the first Montanan to ever serve in a President's cabinet," Daines stated. **"Ryan is a Montanan who grew up in America's public lands. He knows that we must strike the right balance between conservation and responsible energy development, and he understands more than most that one-size fits all policies from Washington, D.C., never work for real America."**

On the Senate floor, Daines called for the vote to confirm Zinke. Following Zinke's confirmation Daines spoke on the Senate floor to congratulate the first Montanan to serve in a President's cabinet. Click HERE to download.

Matt Rosendale, Montana State Auditor: "Big congratulations to Ryan Zinke on being confirmed as our new Secretary of Interior. It's great to have a fellow Montanan serving in the cabinet who understands the importance of improving access to our public lands."

Elsie Arntzen, State Superintendent: "Congratulations to Ryan Zinke on becoming our nation's next Interior Secretary. As Vice-Chair of the Montana Land Board, I look forward working with Secretary Zinke in his new capacity to put Montana students first. The Land Board is crucial to school funding and it will be very beneficial to have Montana leadership managing our public lands at the U.S. Department of the Interior."

Senate President Scott Sales, R - Bozeman: "I congratulate Congressman Zinke and look forward to the leadership he will bring as Secretary to the Department of the Interior concerning the management of our lands here in the west. It is also good that the clock will start regarding the selection of his replacement in Congress. It is imperative that Montana's voice is heard in the U.S. House of Representatives."

Senate Majority Leader Fred Thomas, R - Stevensville: "This is truly one of the highlights of my political tenure. To see a Montana Congressman become the Secretary of the Interior is

absolutely a tribute to Montana and its citizens!"

Daines first met Zinke at Boys State in Dillon, Montana in 1979.

On January 17, Daines introduced Zinke at his confirmation before the U.S. Senate Committee on Energy and Natural Resources.

On January 5, Daines met with Zinke in his Washington, D.C. office to discuss Zinke's confirmation and his commitment to Montana's public lands.

Immediately following Zinke's confirmation, Daines sent a letter to Zinke outlining Montana priorities for the Department of Interior.

Daines' letter is available to download HERE and below:

Dear Secretary Zinke:

What an historic day for Montana! Congratulations on your appointment as Secretary of the Department of the Interior (Department). As a fellow Montanan, a member of the Senate Committee on Energy and Natural Resources and the Senate Appropriations Subcommittee on Interior, Environment, and Related Agencies, I look forward to working with you in your new role. Serving at the helm of the Department of the Interior, you will be a strong advocate for our public lands, help uphold the federal trust responsibility to Indian tribes, will help unleash American energy and will strengthen our water infrastructure. As you begin to set priorities and goals for the Department, including informing the President's budget request for Fiscal Year 2018 and the important work of addressing our nation's infrastructure challenges, I would like to highlight several specific policies that demand your immediate and personal attention.

Unleash American Energy

Terminate Secretarial Order 3338. This order imposed a moratorium on federal coal leasing, paused ongoing lease applications and modification reviews, and launched a programmatic review of the federal coal leasing program, including overhauling the leasing process and changing royalty rates. This moratorium and Programmatic Environmental Impact Statement will put nearly 65,000 direct and indirect mining jobs at risk, as well as impact the billions of dollars in revenues to states like Montana, as well as to Indian tribes, used to pay for schools, reclamation, and other infrastructure projects. I urge you to rescind this damaging order.

Utilize coal export terminals. As you are well aware, Powder River Basin coal is lower in sulfur content than Indonesian coal. Currently, Montana coal producers must rely on Canadian ports to bring our coal to market. I urge you to assist other departments in ensuring coal export terminal permits are issued in a timely manner. Doing so will help Montana coal reach international demand, thereby creating more American jobs here at home instead of across our border while keeping global emissions down.

Help approve the Keystone XL pipeline. The Keystone XL pipeline will be a much-needed lifeline to many rural Montana communities, entering the United States through Phillips County, traveling about 284 miles across eastern Montana to South Dakota. After nearly a

decade of environmental review and then ultimate denial by the Obama Administration, thanks to President Trump, Montana and builders across the country stand on the cusp of finally building this pipeline. In Montana, the pipeline would create about 800 jobs, help keep electricity prices affordable for families, and generate more than $80 million in Montana property taxes, more than $16 million of which would be distributed to Montana's schools and university system. While the Keystone XL pipeline project proceeds through the Presidential permitting process, there are several rights-of-way permits under review by the Bureau of Land Management (BLM) in Montana and throughout the proposed route. I urge your attention to those permits to ensure the Keystone XL project can become a reality.

Empower states and tribes to take the lead in natural resource development and protecting the environment. Rules such as the BLM's Methane and Waste Reduction Rule and hydraulic fracturing rule are duplicative and unnecessary, conflict with current state laws, such as those put in place in Montana, and would discourage state-driven solutions to managing emissions. The BLM hydraulic fracturing rule, in particular, would make it harder to do business with Native nations and make them less competitive in energy markets. Furthermore, the BLM Sage-Grouse Conservation Plans are yet another example of federal requirements' dissonance with work states have already done. Whether through regulation of our nation's vast energy resources, or approaches to wildlife management, I believe state and tribal governments are best suited to lead in addressing these issues, not an overreaching and out-of-touch federal bureaucracy.

Strengthen our nation's critical mineral supply. Our foreign mineral dependence is a mounting threat to our economy, national security, and international competitiveness. Despite our nation's abundant resources, including Montana's supply of palladium, platinum, molybdenum, and other minerals, our nation's permitting process for mineral development remains one of the longest in the world. I believe there are ways to streamline our critical mineral production while protecting our environment and urge you to work with Congress toward that end by prioritizing formulating a robust domestic critical mineral strategy.

Consolidated Federal Oil and Gas and Federal and Indian Coal Valuation Reform Rule (81 Fed. Reg. 43338). While we must be committed to protecting the federal taxpayer and our states' fair share of mineral royalties, this rule as finalized will have a detrimental effect to American energy production, could decrease shared revenues and royalties in our states, and place our nation's energy and infrastructure security and good-paying energy jobs at risk. The rule's complexity has caused much uncertainty and has the potential to risk financial ruin to energy operators and mine-mouth electricity generators who are critical to meeting our nation's energy needs and important to our state economies. Although the Department postponed implementation of the rule, I urge you to rescind the rule and implement a common-sense royalty policy that would protect the economic use of our nation's vast energy resources while ensuring our states and the federal taxpayer continue to receive revenue they deserve.

<u>Protect our Sportsmen's Heritage and Increase Access to Public Lands</u>

Address the National Park Service maintenance backlog. As two Montana kids who grew up neighboring two crown jewels of the National Park System, I know we share high regard for the importance of strengthening and sustaining our National Park System for future generations. The Park Service currently has an over $11.9 billion backlog in deferred maintenance projects. As the Chair of the Senate Energy and Natural Resources Subcommittee

on National Parks and a member of the Senate Appropriations Committee, I ask for your cooperation to reexamine prioritization of these projects and work with Congress to address these challenges.

Endangered Species Act and Federal Forest Management. As you know well, federal forest management reform continues to be a major priority in Montana. Too often a handful of fringe groups are able to exploit the flawed Endangered Species Act to obstruct projects through obstructionist litigation. Many of these stymied projects would have widespread benefits, such as creating forest jobs, reducing the threat of wildfire, enhancing wildlife habitat, and increasing outdoor recreation. The Ninth Circuit Court of Appeal's *Cottonwood* decision is a prime example of where smart forest management projects are held hostage to fringe groups litigating on ESA. I urge you to ensure that the U.S. Fish and Wildlife Service stands shoulder-to-shoulder with the U.S. Forest Service and the Department of Justice in support of statutorily reversing the disastrous *Cottonwood* ruling. I also ask that you work with Congress to modernize and strengthen the ESA so that it protects our diverse wildlife without having severe impacts on livelihoods and local communities.

Land and Water Conservation Fund. The Land and Water Conservation Fund is an important tool for protecting, conserving and expanding access to our public lands. Full funding and permanent reauthorization of this program is a critical step toward ensuring that Montanans can continue to enjoy the beauty of our state for generations to come.

Facilitating more local and state input in management of federal lands. Too many land-use decisions, such as Antiquities Act designations and their land-use plans or land planning more broadly, like the BLM's Planning 2.0 Rule, have occurred with the Department's disregard for impacts of these decisions to those who live closest to the land. Farmers, ranchers and other land users have spent generations working and protecting the land they use every day. I ask that you work with them and states to increase their voice when making land management decisions.

Director's Order 219. The Obama Administration's midnight directive ban on the use of lead ammunition and fishing tackle on federal lands is an example of a misguided and rushed directive from the top. I am concerned this directive was motivated by politics, not sound science, and would jeopardize the revenues hunters and anglers generate for conservation purposes. I ask that you rescind the directive and work with the states and Congress to address the use of lead in ammunition and fishing tackle.

<u>Securing Water Infrastructure</u>

Stop the spread of aquatic invasive species. As you know, last year invasive mussel larvae were detected in Montana waters managed by the Bureau of Reclamation (BOR). Should these larvae propagate, it will have detrimental impacts on Montana's ecosystem, obstruct irrigation and hydropower infrastructure, and negatively impact our economy. In your new role, I urge you to work with the Corps of Engineers and other federal, tribal and state agencies to ensure these mussels do not proliferate.

Complete and Fund Rural Water Projects. The Dry-Redwater Regional Water Authority and Musselshell-Judith Rural Water System have spent seven and 11 years, respectfully, in deliberation with BOR, as well as $7 million in combined state, local, and federal funding to date without authorization. Authorizing these projects would help provide access to a dependable and clean water supply to the nearly 25,000 residents in central and eastern

Montana who currently lack access to reliable water supply systems that meet the basic drinking water requirements. Montana is also home to two rural water projects authorized that are in dire need of dedicated funding. We worked together in Congress to advance their authorizations and fund our authorized projects in Montana. I ask for your continued cooperation to reexamine prioritization of these projects and work with Congress to secure authorization and address resource challenges, including consistent and robust funding.

Promoting Prosperity in Indian Country

Fund Implementation of the Blackfeet Water Rights Settlement Act. Together with your leadership in the House of Representatives, we were able to enact an historic water settlement for the Blackfeet people. In order for the settlement to become effective, however, the funding authorized in the settlement, approximately $422 million, must be appropriated no later January 21, 2026. Fully funding this settlement is a crucial step to upholding the commitment made by Congress, the Administration, and the State of Montana to the Blackfeet people and neighboring communities. I urge your assistance in requesting robust funding for this settlement each year, beginning with at least $100 million in the President's Budget request for 2018.

Recognize the Little Shell Tribe. The Little Shell Tribe has been fighting for federal recognition for nearly four decades. While I remain committed to seeing the Little Shell Tribe of Chippewa Indians Restoration Act--which would legislatively grant federal acknowledgement to the tribe--into law, the Department of the Interior is uniquely positioned to grant that recognition unilaterally in a way that has the potential to be more expeditious than the legislative process. I urge you to do so and give them the dignity they deserve.

Facilitate development of tribal energy resources. A good-paying job is the key to a brighter future for Indian tribal communities and for many tribes, development of their natural resources would stimulate economic growth. Unfortunately, Indian tribes face obstacles in tapping into their rich natural resources potential, almost all of which has gone undeveloped. Furthermore, according to a 2014 Department document, Indian energy resources are underdeveloped relative to surrounding non-Indian resources. I ask that you work with me to remedy these troubling statistics by facilitating easier all-of-the-above energy development on Indian lands and helping tribes cut through existing red tape that stands in the way.

Keep Indian Country safer. Over three thousand Native American veterans transition out of the military each year. This pipeline of talent offers a potential pool of highly qualified and civic-minded personnel to fill challenging vacancies in law enforcement positions across Indian Country. I hope that the Department can work constructively with the Office of Personnel Management to reduce the bureaucratic maze that confronts applicants who are willing to fill critical law enforcement vacancies. The talent pool exists to fill these positions, but if the time required to complete the hiring process and finalize background checks remains excessive, prospects may lose interest and look for opportunities elsewhere.

While not an exhaustive list, I believe the above policies reflect important areas to begin your important work leading the Department of the Interior. I look forward to working with you on these issues; and, I extend an invitation for you to join me in Montana to meet face-to-face with our constituents directly impacted by the Department.

Dear Mr. Secretary:

The Committee currently has certain pending requests for documents and information with the Department of the Interior. As the Department transitions to new leadership, I reiterate these requests here. For your ready reference, I have attached them hereto.

The Committee on Oversight and Government Reform is the principal oversight committee of the House of Representatives and may at "any time" investigate "any matter" as set forth in House Rule X.

Please have your staff contact Melissa Beaumont of the Committee staff at (202) 225-5074 with any questions about this request. Thank you for your cooperation in this matter.

Sincerely,

Jason Chaffetz
Chairman

October 16, 2015

The Honorable Neil Kornze
Director
U.S. Bureau of Land Management
1849 C Street NW, Room 5665
Washington, DC 20240

Dear Director Kornze:

The hydraulic fracturing rule finalized by the Bureau of Land Management in March 2015 will impinge on thousands of wells, impose significant costs, and expand federal oversight of hydraulic fracturing operations in the West.[1] As a result, several states, including Utah and Wyoming, Indian tribes and other affected parties, have litigated to prevent the rule from being implemented.[2] On September 30, 2015, a federal judge in Wyoming granted an injunction that blocked the rule on the grounds that BLM exceeded its authority to regulate hydraulic fracturing.[3]

Given the controversy surrounding this rule, and the impact that it will have on the West, the Committee is reviewing the process by which the rule was made. To assist the Committee, please provide the following documents and information:

1. All documents and communications that comprise the full administrative record relating to the hydraulic fracturing rule issued by BLM on or about March 20, 2015.

2. All documents and communications, including, but not limited to, maps, charts, diagrams, photos, logs, illustrations, memoranda, guidelines, orders, instructions, regulations, journals, notes, periodicals, studies, proposals, meeting minutes/agendas, agreements, reports, contracts, matrices, comments, correspondence, lists, and presentations, referring or relating to the hydraulic fracturing rule.

It is our understanding that much of this information has already been gathered as part of the litigation process and we expect that BLM will produce those records promptly. Records that BLM has withheld from plaintiffs as privileged should also be produced pursuant to this request.

Please provide the requested information as soon as possible, but no later than 5:00 p.m. on October 30, 2015. An attachment to this letter provides additional information about responding to the Committee's request. When producing documents to the Committee, please deliver production sets to the OGR Majority staff in room 2157 of the Rayburn House Office Building and the OGR Minority staff in room 2471 of the Rayburn House Office Building. The Committee prefers, if possible, to receive all documents in electronic format.

February 4, 2016

The Honorable Neil Kornze
Director
U.S. Bureau of Land Management
1849 C Street NW, Room 5665
Washington, D.C. 20240

Dear Director Kornze:

The Committee has become aware of increasing complaints about Bureau of Land Management activities in Nevada and Utah. State officials have asserted that BLM law enforcement agents use tactics that amount to "bullying, intimidation and . . . lack of integrity."[1] Those tactics have undermined safety in rural communities and strained local law enforcement budgets. In particular, BLM's officers allegedly harass citizens and tourists, interfere with the work of local law enforcement, operate outside of their jurisdictions, and refuse to cooperate with local officials.[2] The situation has led some local counties to declare the presence of BLM law enforcement in Utah and Nevada "a threat to the health, safety and welfare of their citizens."[3]

Last year, BLM law enforcement terminated long-standing contracts with county sheriffs in Utah. Under those agreements, BLM compensated local law enforcement officers for patrolling public lands, handling emergency and rescue operations, and providing crucial police oversight during busy periods.[4] This decision created a law enforcement vacuum in the area and caused serious financial problems for local governments. As one county official from Utah stated, "BLM's Chief of Law Enforcement cancelled the agreement leaving Garfield County with a significant budget shortfall and staff operating in an area without an agreement."[5]

[4] *Id.*
[5] *Supra*, note 1.

The press reported on allegations that the contracts were cancelled as retribution for state legislation passed in 2013 to limit federal police powers on public lands.[6]

Moreover, during the summer of 2015, BLM law enforcement demanded a more than $1 million increase to the permit price for the annual *Burning Man* event in Nevada's Black Rock Desert to fund amenities for BLM agents.[7] The demands were unrelated to providing safety and security, and instead included having laundry facilities, 24-hour access to ice cream, air conditioning, and vanity mirrors.[8] BLM eventually withdrew its demands and granted the permit,[9] but only after a significant public outcry, including intervention by Senator Harry Reid (D-NV), who criticized these "outlandishly unnecessary facilities."[10]

In order to help the Committee better understand BLM's changing role, please provide the following documents and information:

1. All documents and communications referring or relating to BLM's decision to terminate or not renew contracts with Utah sheriffs;

2. All documents and communications referring or relating to the BLM permit for *Burning Man* in 2015, and demands made by BLM law enforcement relating to the event;

3. All communications between BLM law enforcement personnel and state and local officials in Utah and Nevada, including elected officials, county commissioners and state/local law enforcement, from January 2009 to the present; and

4. All communications between BLM law enforcement personnel referring or relating to state and local officials in Utah and Nevada, including elected officials, county commissioners and state/local law enforcement from January 2009 to the present.

Please provide the requested information as soon as possible, but no later than by 5:00 p.m. on February 18, 2016. An attachment to this letter provides additional information about responding to the Committee's request. When producing documents to the Committee, please deliver production sets to the OGR Majority staff in room 2157 of the Rayburn House Office Building. The Committee prefers, if possible, to receive all documents in electronic format.

The Honorable Sally Jewell
Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, D.C. 20240

Dear Madam Secretary:

On February 12, 2016, the White House designated 1.8 million acres of land in California for conservation under the Antiquities Act of 1906.[1] The designation, which created three new national monuments in the California desert, nearly doubled the total amount of land set aside as national monuments by the President during his time in office.[2] In fact, the President has used the Antiquities Act to unilaterally designate approximately 265 million acres of land and water as national monuments—far more than any previous President.[3]

The broad and frequent application of the Antiquities Act raises questions about the lack of transparency and consultation with local stakeholders leading up to the President's designation of national monuments. To help the Committees understand how and why certain areas are designated for conservation, please provide the following documents:

1. All documents and communications referring or relating to the selection or designation of national monuments under the Antiquities Act of 1906 by the President from January 1, 2015, to the present.

Please provide the requested information as soon as possible, but no later than 5:00 p.m. on April 12, 2016. When producing documents to the Committees, please deliver production sets to the Committee on Oversight and Government Reform Majority staff in Room 2157 of the Rayburn House Office Building and Minority staff in Room 2471 of the Rayburn House Office Building; the Committee on Natural Resources Majority staff in Room 1324 of the Longworth House Office Building and Minority staff in Room 1329 of the Longworth House Office Building; and to the Committee on Appropriations Majority staff in H-305 of the Capitol Building and Minority staff in 1016 Longworth House Office Building. The Committees strongly prefer to receive all documents in electronic format.

The Honorable Sally Jewell
Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, D.C. 20240

Dear Madam Secretary:

In a letter dated March 29, 2016, this Committee, along with the House Committees on Natural Resources and on Appropriations, requested information related to use of the Antiquities Act of 1906.[1] As outlined in that letter, the Committees are interested in the Administration's process for using the Act. Specifically, the Committees requested documents and communications from the Council on Environmental Quality (CEQ) and the Department of the Interior referring or relating to the selection or designation of national monuments under the Antiquities Act of 1906 by the President from January 1, 2015, to the present. The letter requested these materials by April 12, 2016. A similar request was sent to CEQ.

Since the Department received that letter, it has not provided a single responsive document to the Committees, or even an official response stating when the Department intends to do so. In fact, the Committees have only received an official response from CEQ, which vaguely indicated that the Committees should expect the Department to respond on its behalf at some point in the future. If the Department does not produce these documents voluntarily by 5:00 p.m. on May 25, 2016, the Committee will be required to issue a subpoena to obtain them.

Additionally, in order to better understand the Administration's use of the Antiquities Act, the Committee requests a transcribed interview with DOI employee Nikki Buffa not later than May 25, 2016.

The Committee on Oversight and Government Reform is the principal oversight committee of the House of Representatives and has broad authority to investigate "any matter" at "any time" under House Rule X.

August 4, 2016

The Honorable Neil Kornze
Director
U.S. Bureau of Land Management
1849 C Street NW, Room 5665
Washington, D.C. 20240

Dear Director Kornze:

On October 2, 2015, the Bureau of Land Management (BLM) California State Office issued a decision regarding the Cadiz Valley Water Conservation Recovery and Storage Project's use of a right-of-way on BLM land pursuant to the General Railroad Right-of-Way Act of 1875. For years, the Act has been interpreted to allow railroads to extend rights-of-way to third parties on BLM land without prior authorization from the agency,[1] until a November 4, 2011, memorandum from the Department of the Interior Office of the Solicitor changed this interpretation.[2] After the memorandum, in order for a third party to obtain a railroad right-of-way, the proposed use must advance a railroad purpose.[3] In its recent decision concerning the Cadiz project, BLM decided that the project did not "originate from a railroad purpose" despite the fact that the project brought recognizable benefits to the railroad.[4]

The Committee is concerned that the November 4, 2011, memorandum may have been specifically drafted for the purpose of denying a permit to the Cadiz project. Documents obtained by the Committee also raise concerns about the level of coordination between BLM and private interests with respect to the Cadiz decision.

Emails obtained by the Committee show a Realty Specialist in BLM's California State office regularly communicated with an employee at Whetstone Capital Advisors, LLC about the Cadiz Project and the right-of-way authorization process it was unfolding.[5] Cadiz Inc. is a publicly traded company, and the permit decision would affect the company's financial outlook.

[4]Letter from James Kenna, CA State Dir., BLM, to Jason Perry, Genesse & Wyoming Inc. and Scott Slater, Cadiz, Inc. (Oct. 2, 2015).
[5]Email from Mr. Erik Pignata, Realty Specialist, BLM, to Thomas McGannon, Whetstone Capital (Sept. 23, 2014).

Whetstone is a "Kansas City-based value oriented investment manager," according to the fund's website.[6] Specifically, the emails show the BLM Realty Specialist shared information related to the potential approval of the Cadiz project with Whetstone.[7] He also shared information from a meeting of senior BLM officials regarding the Department's evaluation of the project,[8] and his opinions on how the project was progressing.[9]

The emails obtained by the Committee raise questions about BLM's decision-making process with respect to the Cadiz project. The emails also implicate executive branch ethics guidelines, including Executive Order 12731 which states, "Employees shall act impartially and not give preferential treatment to any private organization or individual."[10] E.O. 12731 also states, "Employees shall not engage in financial transactions using nonpublic government information or allow the improper use of such information to further any private interest."[11]

To help the Committee understand the Department's decision on the Cadiz project, please provide the following documents and information:

1. All documents and communications between any Bureau of Land Management employee and any employee of Whetstone Capital, since June 1, 2014.

2. All documents and communications to or from any employee of the Bureau of Land Management, since June 1, 2014, referring or relating to:

    a. Whetstone Capital;

    b. the partial withdrawal of M-36964 by the Department of the Interior Office of the Solicitor;

    c. The Cadiz Valley Water Conservation Recovery and Storage Project; and

    d. The railroad purpose of the Cadiz Valley Water Conservation Recovery and Storage Project.

Please provide the requested information as soon as possible, but no later than by 5:00 p.m. on August 18, 2016.

---

Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, D.C. 20240

Dear Madam Secretary:

The Department of the Interior has failed to respond to a series of requests for documents and information related to the Committee's oversight and investigative initiatives. The same challenges that have thus far prevented the Department from complying with the Committee's requests may also be affecting the Department's ability to fulfill its responsibilities under the Freedom of Information Act (FOIA).

To help the Committee understand how and why the Department is unable to comply with document requests in a timely and complete manner, please provide a briefing for Committee staff and a tour of the Department's resources for responding to document requests from Members of Congress and FOIA requests. The briefing and tour will assist the Committee's effort to identify ways by which the Department can improve the timeliness and completeness of its responses to such document requests.

The Committee on Oversight and Government Reform is the principal oversight committee of the House of Representatives and may at "any time" investigate "any matter" as set forth in House Rule X.

Please have your staff contact Melissa Beaumont of Chairman Chaffetz' staff at (202) 225-5074 to schedule the briefing and tour, or with any questions about this request. Thank you for your cooperation in this matter.

December 29, 2016

The Honorable Sally Jewell
Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, D.C. 20240

Dear Madame Secretary:

On December 28, 2016, President Obama designated the Bears Ears National Monument in Utah and the Gold Butte National Monument in Nevada pursuant to his authority under the Antiquities Act.[1] Advocates for this action touted it as a means to establish a co-management agreement for Bears Ears between the federal government and a group of Native American tribes.[2] In fact, in the press release announcing these new national monuments, the White House recognizes the importance of tribal participation in the management of the land and asserts this action serves as a tool to achieve co-management.[3] Co-management of public lands, however, requires the approval of Congress.[4] Advocacy organizations, federal agencies, and the White House have all put out differing opinions on co-management, and it is important to clarify the bounds of the President's authority. I am writing to obtain more information about how and why the President exercised his authority in this case.

[3] FACT SHEET: President Obama to Designate New National Monuments Protecting Significant Natural and Cultural Resources in Utah and Nevada, , https://www.whitehouse.gov/the-press-office/2016/12/28/fact-sheet-president-obama-designate-new-national-monuments-protecting.

[4] *See U.S. Telecom Ass'n v. FCC*, 359 F.3d 554, 565-66 (D.C. Cir. 2004) ("[S]ubdelegations to outside parties are assumed to be improper absent an affirmative showing of congressional authorization . . . . When an agency delegates authority to its subordinate, responsibility—and thus accountability—clearly remain with the federal agency. But when an agency delegates power to outside parties, lines of accountability may blur, undermining an important democratic check on government decision-making. Also, delegation to outside entities increases the risk that these parties will not share the agency's "national vision and perspective . . . ."). *See also High Country Citizens' Alliance v. Norton*, 448 F. Supp. 2d 1235, 1246-1247 (D. Colo. 2006) (similar, citing U.S. Telecom).

The President has exercised his authority under the Antiquities Act to create or expand at least 25 national monuments—more than any other president in history.[5] His sweeping application of the Antiquities Act raises questions about the Administration's commitment to transparency and consultation with local stakeholders with respect to designating national monuments. It also raises serious questions about whether these designations are limited to the, "smallest area compatible with proper care and management of the objects to be protected."[6] The Antiquities Act "was designed to protect federal lands and resources quickly" in response to concerns about "theft from and destruction of archaeological sites."[7] In most cases, however, the processes outlined by the National Environmental Policy Act (NEPA) and the Federal Land Policy Management Act (FLPMA) are most appropriate because they require environmental studies, a review of the public purpose, and an opportunity for public participation before any federal agency action.[8] The NEPA and the FLPMA processes provide for a more thoughtful determination, whereas the Antiquities Act was meant to be reserved for emergency scenarios.

Until yesterday, the Administration's actions with respect to Bears Ears more closely resembled the NEPA and FLPMA process. In anticipation of the Bears Ears designation, the Department of the Interior took on a large role in gathering input and coordinating planning.[9] You, Secretary Jewell, visited the potential site for a listening session.[10] In fact, during a hearing before the Subcommittee on the Interior, Bureau of Land Management (BLM) Director Neil Kornze testified that BLM and the White House have been coordinating.[11] It is therefore unclear why the President opted to designate a massive national monument in Utah via the Antiquities Act in the waning days of his presidency, and to ignore federal environmental and procedural laws enacted to ensure stakeholders and other affected parties have a meaningful role in determining the outcome.

Similarly, the President's actions with regard to the Gold Butte National Monument designation bypassed Congress and the public. Located in Clark County, Nevada, the Gold Butte National Monument spans nearly 300,000 acres.[12] Such a large designation, made unilaterally, deprives the American people and their elected representatives a collaborative discussion on how best to protect the land for all to enjoy. Large designations such as Gold Butte Monument are the type of major federal agency action envisioned by our federal environmental and procedural laws.

Comm. on Oversight and Gov't Reform,* 114th Cong. 14 (2016) (statement of Neil Kornze, Director, Bureau of Land Management) (Mr. Kornze: "I am talking about looking at the country and figuring out where would this be appropriate, where would it not?" Mr. Gosar: "So there is some conversation going on between the White House and BLM and agencies in regards to antiquities withdrawal?" Mr. Kornze: "Yes.").
[12] *See supra* note 3.

Furthermore, in a letter dated March 29, 2016, this Committee, along with the House Committees on Natural Resources and on Appropriations, requested information related to use of the Antiquities Act of 1906.[13] After receiving an inadequate response, a follow up letter was sent on May 11, 2016.[14] As outlined in both letters, the Committees are interested in the Administration's process for using the Antiquities Act. Specifically, the Committees requested documents and communications from the Council on Environmental Quality and the Department of the Interior (DOI) referring or relating to the selection or designation of national monuments under the Antiquities Act of 1906 by the President from January 1, 2015, to the present.

To date, DOI has only provided a very limited response to the Committee that largely consisted of public statements and news clippings. If the Department does not produce these documents voluntarily, the Committee will be required to obtain them through compulsory measures.

Please immediately provide the documents requested in the Committee's March 29th and May 11th letters. In addition, please produce the following documents as soon as possible, but not later than January 13, 2016:

1. All calendars, including all meetings and attendees, for all DOI employees involved or referenced in any discussions related to any national monument selection or designation.

2. The daily schedules and call logs for Secretary Jewell, Tommy Beaudreau, Nikki Buffa and Neil Kornze from April 21, 2013 to present.

3. All communications between any DOI employee and White House staff, including but not limited to Senior Advisor Brian Deese, between January 2015 and present.

4. All documents and communications referring or related to the selection or designation of national monuments under the Antiquities Act of 1906 by the President from April 21, 2013 to present.

5. All documents and communications related to the reduction in size, limitation, or repeal of a national monument from January 20, 2008 to present.

---

[13] Letter from Hon. Jason Chaffetz, Chairman, H. Comm. on Oversight and Gov't Reform, Hon. Rob Bishop Chairman, H. Comm. on Nat. Resources, and Hon. Harold Rogers, Chairman, H. Comm. on Appropriations, to Hon. Sally Jewell, Secretary, U.S. Department of the Interior (Mar. 29, 2016).

[14] Letter from Hon. Jason Chaffetz, Chairman, H. Comm. on Oversight and Gov't Reform, and Hon. Cynthia Lummis, Chairman, H. Comm. on Oversight and Gov't Reform Subcommittee on the Interior, to Hon. Sally Jewell, Secretary, U.S. Department of the Interior (May 11, 2016).

Additionally, please make available for transcribed interview the following three DOI officials as soon as possible, but not later than January 20, 2016: Bureau of Land Management Director Neil Kornze; your Chief of Staff Tommy Beaudreau; and DOI employee Nikki Buffa.

The Committee on Oversight and Government Reform is the principal oversight committee of the House of Representatives and has broad authority to investigate "any matter" at "any time" under House Rule X.

Please contact Chris Esparza of the Committee staff at (202) 225-5074 to schedule the interviews, or with any questions about this request. Thank you for your prompt attention to this matter.

Sincerely,

Jason Chaffetz
Chairman

DEPARTMENT OF THE INTERIOR, ENVIRONMENT, AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 2017

WEDNESDAY, MARCH 2, 2016

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 10:02 a.m., in room SD–124, Dirksen Senate Office Building, Hon. Lisa Murkowski (chairman) presiding.

Present: Senators Murkowski, Cochran, Blunt, Daines, Cassidy, Udall, Feinstein, Leahy, Reed, Tester, and Merkley.

DEPARTMENT OF THE INTERIOR

OFFICE OF THE SECRETARY

STATEMENT OF HON. SALLY JEWELL, SECRETARY

ACCOMPANIED BY:
MICHAEL CONNOR, DEPUTY SECRETARY
KRISTEN SARRI, PRINCIPAL DEPUTY ASSISTANT SECRETARY

OPENING STATEMENT OF SENATOR LISA MURKOWSKI

Senator MURKOWSKI. Good morning. I would like to welcome everyone to our first hearing of the Interior Appropriations Subcommittee for fiscal year 2017. We are here to review the budget request for the Department of the Interior.

I would like to welcome our witnesses this morning. We have the Honorable Secretary Sally Jewell, who is accompanied by Deputy Secretary Mike Connor as well as Principal Deputy Assistant Secretary Kris Sarri. Welcome to all of you.

Since this is our first hearing this year, I will just remind colleagues that we will follow past practices and adhere to the early bird rule for recognizing members for questions. I will call on members in the order they arrive, going back and forth between majority and the minority. We will do 6-minute rounds of questions.

My expectation this morning is that we will likely do two to three rounds of questions, depending on votes and schedules of the members and the witnesses. I will try to accommodate everyone so that they have an opportunity to address the issues that they wish to raise.

I also want to thank and welcome my ranking member, Senator Udall. We managed to mark up this bill for the first time in 6 years in fiscal year 2016. While we didn't agree on everything that was in the bill, things were never disagreeable. I really appreciate that.

February 15, 2017 (11:14 p.m.)

I think that my friend from New Mexico has an overall good nature and a passion for the issues that are important to this subcommittee and I greatly respect it. So I am looking forward to another productive year for the subcommittee, working with both you and all the members of the subcommittee.

Turning to the budget request for the Department of the Interior, it is $12.25 billion for programs within this subcommittee's jurisdiction. This includes $290 million for a proposal similar to last year, which allows certain firefighting costs to be appropriated as disaster funds. This total is 2 percent above the enacted level.

But I should note for my colleagues that the department's request does not include funds for the Payments in Lieu of Taxes program (PILT) as part of the discretionary budget.

Funding for PILT was provided within our bill last year at the fully authorized level of $452 million. So when you look at an apples-to-apples comparison to fiscal year 2016, my assessment is that the President's request is roughly 5.8 percent above current levels.

Secretary, as I noted when you appeared before the Energy Committee last week, there are a number of aspects of the President's budget proposal that I do find troubling. It includes a number of mandatory spending proposals without providing any offsets.

Mandatory spending for the Land and Water Conservation Fund (LWCF) is at $425 million without an offset. Similarly, for the National Park Service, the budget proposes mandatory spending of $1.5 billion over a 3-year window, again with no offsets.

This administration has engaged in this somewhat questionable practice of proposing mandatory funding for popular programs with no offsets during the last several budget cycles. This approach raises expectations that funding will materialize when we all know that finding payfors—even for the most popular programs—is extremely difficult in this budget environment.

If the authorizing committees are unable to find offsets in their jurisdiction to pay for these proposals, it puts more pressure on this subcommittee to find funds out of our limited resources.

The budget also prioritizes certain programs within this subcommittee's jurisdiction over others, and essentially places them on autopilot at the expense of other dire needs. Some of those needs, and I am sure we will hear about them this morning, are the needs in Indian country, where our schools are failing and suicide rates are so far above the national average that it is just heartbreaking.

I know, Secretary, that you share concerns about what is headed in Indian Country with me.

The healthcare system is strained to its limits, often providing services in facilities that are over 100 years old.

So you have a situation where funding increases, as proposed for LWCF and the National Park Service, are elevated and prioritized each year among all the programs over which this subcommittee has oversight. This budget appears to have done just that.

I don't want to send the wrong impression here. I will work with the administration and my colleagues on a responsible, bipartisan National Park Service centennial bill. I think that is important. But I do think the $1.5 billion proposal put forward is not realistic. I hope we can be creative in the use of public/private partnerships

and other means to stretch our Federal funding further and to reach consensus on a bill that appropriately celebrates the 100th anniversary of our national parks.

I am also concerned that, yet again, when oil prices have fallen dramatically and many companies are on the verge of bankruptcy, the department indicates in its budget request that it will propose a host of new fees and royalty rate increases on energy producers that will exceed $1.7 billion. There are also new fees on grazing and hard-rock mining.

I just don't see how making it more expensive to do business on public lands is sound policy or good for the United States Treasury.

I am pleased that this budget fully funds contract support costs and adopts the approach that I put forward in the Senate mark for fiscal year 2016, which establishes a separate, indefinite appropriation for these costs to ensure that these legal obligations are met and other programs will not be affected.

We have come a long way since a couple years ago when the administration proposed circumventing the tribes' victory in the Ramah decision and sought to cap these costs. I thank all my colleagues both here in the Senate and in the House for their support in this effort.

Finally, Madam Secretary, there remains King Cove, which is still totally unresolved. We once again discussed this issue last week in your testimony before the Energy Committee. But, again, I don't see anything in this budget request to help those whose lives are in needless danger. You did agree last week, Secretary, to publicly release the nonroad, nonsolutions study that Interior commissioned for King Cove during the budget hearing. When we get to the questions time, I do plan to ask you about the timing on this report.

I have talked to virtually all of my colleagues about the need for a lifesaving road to King Cove. I mention it again here, particularly for the information of members who are not on the Energy Committee, so that they remain aware that I remain committed to do everything in my power as the chairman of that committee and as chairman of the Interior Subcommittee to fight for the construction of this critical road.

With that, I want to thank, again, the Secretary and the Deputy Secretaries, and my colleagues for their appearance here this morning.

And I will now turn to Ranking Member Udall for any comments that he would like to make.

STATEMENT OF SENATOR TOM UDALL

Senator UDALL. Good morning. Thank you, Madam Chair, for those very kind comments at the beginning. I will reciprocate here in a minute with some also.

Good morning, also, Secretary Jewell. We are very pleased to have you appear before the subcommittee to discuss the Department of the Interior's fiscal year 2017 budget request. I am also pleased to welcome Deputy Secretary Mike Connor and Deputy Assistant Secretary Kris Sarri before the subcommittee.

Before we turn to the budget, I want to thank Chairman Murkowski for working with me to produce what I think is a very good

budget for the department in 2016. Madam Chairman, we have had some challenging policy issues to work through, so I am very pleased that we were able to pass a bill that included critical increases for national parks, tribal programs, Land and Water Conservation Fund, and many of the programs that we will discuss this morning.

I also want to recognize, Madam Chair, your hard work and your leadership of this subcommittee. I know it will be a pleasure to work with you again this year, and to work with your very fine staff to support our common interests in this bill.

That said, this subcommittee's job is not going to be easy. Under the Budget Control Act, discretionary spending for nondefense programs is essentially flat in 2017. At the same time, we have to fund certain must-do increases across the Government, including firefighting and tribal contract support costs for this subcommittee. So that flat funding level effectively means a cut.

On paper, the department's discretionary request also looks flat compared to fiscal year 2016, in keeping with the budget caps. But if you dig a little deeper, it is clear that the President used savings from a number of proposals to create room for some significant increases. These proposals include funding part of the firefighting budget with a new disaster cap authorization and providing mandatory funding for the Payment in Lieu of Taxes program.

In fact, when you factor in all the sources of funding, this budget is really a 2 percent increase overall for the department. I like many of the increases that this budget proposes. It provides a 9 percent increase for our national parks and a 5 percent increase for the Bureau of Indian Affairs to support tribal education and social service needs.

I could not agree, Chairman Murkowski, with you more, in talking about the dire state and dire situation in Indian country, in terms of education.

This budget also expands on the increases that we provided in the 2016 omnibus to the Land and Water Conservation Fund (LWCF). It proposes $475 million for LWCF programs funded by this bill, and proposes to transition the program to its full authorized level of $900 million in future years.

There are many important increases as well for wildlife refuges, energy development, science and climate change programs—all very important investments. But let's be clear. Since funding is tight, our ability to fund many of these increases depends on getting agreement to reform the wildland firefighting budget and enacting a long-term mandatory funding source for the Payment in Lieu of Taxes program.

Until we are successful in enacting those changes, we will have to prioritize what we fund very carefully, and that means very tough trade-offs.

The budget also includes some important legislative proposals that I expect we will discuss today. In particular, I want to applaud the administration's leadership to reform energy and mining activities on public lands and make sure that taxpayers are getting a fair return from the development of those lands. I am pleased to see that your budget addresses hard-rock mining reforms, including setting a fair royalty for mining operations on public lands and pro-

posing a hard-rock abandoned mine fee to address legacy cleanup issues.

I have also sponsored legislation to take on this issue. We need real mining reform, and we have needed it for a long time. It makes no sense that we still rely on an antiquated law that is nearly 150 years old as the framework for mining in this country.

Events like the Gold King Mine disaster should serve as a wake-up call for all of us. We have to get serious about cleaning up abandoned mines. There are abandoned toxic mine sites throughout the West. These mines are ticking time bombs. They are releasing a slow-motion stream of lead, arsenic, cadmium, and toxins into water supplies, water we need for drinking, irrigation, and recreation.

The cleanup costs are absolutely astronomical. I have seen estimates between $9 billion and $21 billion. In New Mexico alone, the cost is estimated between $385 million and $840 million.

Today's mining industry has much better standards, but this toxic legacy cannot be left unaddressed. The damage has been done, and taxpayers should not be left holding the bag for the mess as well as for future cleanup costs. The cost of inaction on mining reform has been too great already. We cannot afford to wait, and it is time that we act.

You are doing the right thing, Secretary Jewell, and I want to work with you to enact common-sense reforms.

Thank you again for appearing before us. I look forward to hearing your testimony and having a good discussion and dialogue.

Thank you, Madam Chair.

Senator MURKOWSKI. Thank you, Senator Udall.

We have the chairman of the full Appropriations Committee with us this morning.

Mr. Chairman, would you care to make any comments or statements before we hear from the Secretary?

STATEMENT OF SENATOR THAD COCHRAN

Senator COCHRAN. Madam Chair, I appreciate the recognition. I am delighted to be able to announce that, this year, the City of Natchez, Mississippi, is celebrating its tricentennial anniversary, a very rich history. A historically significant area of the Lower Mississippi River Valley will be brought together with local municipalities and counties in helping make sure that tourists know of this destination site where you will learn a lot and meet a lot of fine people. So come to Natchez and help us celebrate. Thank you.

Senator MURKOWSKI. Thank you, Mr. Chair.

I just had to think, tricentennial. As a State, we are about 58 years old in Alaska. So boy, if that does not remind you——

Senator COCHRAN. To be 58 again. [Laughter]

Senator MURKOWSKI. To be 58 again, yes. America is a beautiful place.

With that, let us go to the Secretary of the Interior. Welcome this morning. We appreciate you being here and look forward to your comments and the questions that will follow.

SUMMARY STATEMENT OF HON. SALLY JEWELL

Secretary JEWELL. Thank you. And congratulations on the tricentennial. It would be fun to be there.

Chairman Murkowski, Ranking Member Udall, Chairman Cochran, and members of the subcommittee, thank you so much for the opportunity to discuss the fiscal year 2017 budget request for the Department of the Interior. This is the administration's final budget, and I want to take the opportunity to thank all of you and your capable staffs for working with me over the last 3 years to help the Department meet its mission for the American people.

I would like also to take a moment to mention the incident at the Malheur National Wildlife Refuge in Harney County, Oregon. Through tremendous patience and professionalism, the FBI, with support from State and local law enforcement, ended the occupation on February 11 as quickly and safely as possible after more than 40 days.

It was an incredibly disruptive and distressing time for our employees, their families, and the Harney County community. I am proud of our Department of the Interior law enforcement personnel who supported the response and helped keep our employees safe.

We continue to cooperate with DOJ, the FBI, and others, as the investigations move forward. And we remain committed to working with local communities on the management of public lands.

Interior's overall fiscal year 2017 budget request is $13.4 billion, a lion's share within this subcommittee. Specifically for programs within this subcommittee's jurisdiction, as mentioned, is $12.3 billion.

It builds on the successes we are achieving through partnerships, the application of science and innovation, and balanced stewardship. It gives us the tools to help communities strengthen resilience in the face of climate change, conserve natural and cultural resources, secure clean and sustainable water, engage the next generation with the great outdoors, promote a balanced approach to safe and responsible energy development, and expand opportunities for Native American communities.

These areas are core to our mission and play a vital rule in job creation and economic growth.

The budget invests in our public lands, providing $5 billion to support operations of our national parks, historical and cultural sites, wildlife refuges and habitats, and managing multiple use and sustained yield on our Nation's public lands.

It focuses investment on important working landscapes like the western Sage-Steppe, and the Arctic, and proposes a 10-year, $2 billion coastal climate resilience program to support at-risk coastal States and local governments, including funding for communities in Alaska to prepare for and adapt to climate change.

As the National Park Service begins its second century, the budget provides $3 billion and includes a proposal to dedicate significant funding to reduce the deferred maintenance backlog. It calls for full and permanent funding of the Land and Water Conservation Fund and extends the expired authority for the Historic Preservation Fund.

It reflects the administration's strategy to more effectively budget for catastrophic wildfires, as you pointed out. And in response to drought challenges across the West, it continues to safeguard sustainable and secure water supplies.

We continue to engage the next generation of Americans to play, learn, serve, and work outdoors with $103 million for youth engagement. This includes mentoring and research opportunities at the U.S. Geological Survey; urban community partnerships; scholarships and job corps training for tribal, rural, and urban youth; and work opportunities within our bureaus. There is $20 million for the Every Kid in a Park initiative, which introduces America's fourth graders to their public lands, providing education programs across the country and transportation support for low-income students.

We continue to promote a balanced approach to safe and responsible energy development that maximizes a fair return for taxpayers with $800 million for renewable and conventional energy development, a $42 million increase. We are on track to meet the President's goals of permitting 20,000 megawatts of renewable energy capacity on public lands by 2020, with nearly $100 million for renewable energy development and infrastructure.

Offshore, this budget supports the Bureau of Ocean Energy Management and the Bureau of Safety and Environmental Enforcement with funding to reform and strengthen responsiveness, oversight, and safety for oil and gas development.

Onshore, an increase of $21 million supports the Bureau of Land Management's (BLM's) efforts to develop a landscape-level approach to oil and gas development, modernize and streamline permitting, and strengthen inspection capacity.

We are expanding educational and job opportunities for Native American communities with $3 billion for Indian Affairs, a 5 percent increase, to support native youth education, American Indian and Alaskan Native families, public safety, and building resilience to climate change. The President's budget calls for a $1 billion investment in Indian education as part of Generation Indigenous, and $278 million to fully fund contract support costs, a cornerstone of tribal self determination.

The budget supports our commitment to resolve Indian water right settlements and supports sustainable water management in Indian country with $215 million, a $5 million increase.

The budget includes funding to strengthen cybersecurity controls across all agencies. It also invests in science and innovation with $150 million for natural hazards at the USGS, an $11 million increase. Funding will continue development of Landsat 9, a critical new satellite expected to launch in 2021.

This is a smart budget that builds on our previous successes and strengthens partnerships to ensure we balance the needs of today with opportunity for future generations. So thank you, members of the subcommittee. I look forward to any questions you may have.

[The statement follows:]

PREPARED STATEMENT OF HON. SALLY JEWELL

Madame Chairman, Ranking Member Udall, and members of the subcommittee, I am pleased to present the 2017 President's budget for the Department of the Interior providing $13.4 billion for the Department's programs with $290 million avail-

able in the event of catastrophic fires. Of this amount, $12.3 billion is within the jurisdiction of this subcommittee, an increase of $224.4 million with the fire cap adjustment.

This is a strong budget that builds on our accomplishments. Our request enables us to carry out our important missions—maintain our core capabilities, meet commitments, and invest in key priorities. The investments in this request show the administration remains focused on meeting the Nation's greatest challenges looking forward and ensuring our economy works for all.

Our budget is part of the President's broader strategy to make critical investments in domestic and national security priorities while adhering to the bipartisan budget agreement signed into law last fall, and lifts sequestration in future years to continue investment in the future. This budget recognizes the importance of Interior's programs to the overall strength of the Nation's economy. To put this into perspective, in 2014, Interior-managed lands and activities contributed about $360 billion in national economic output, supporting an estimated 2 million jobs. Of this, energy and mineral development on Interior-managed lands and offshore areas generated more than $241 billion in economic activity and supported nearly 1.1 million jobs.

At the same time, our 2017 proposed investments lay the groundwork for promoting renewable energy development, managing the Nation's lands responsibly, helping to protect communities in the face of climate change, and investing in science to inform natural resource management. Our budget features investments to launch the second century of the national parks and expand public accessibility to and enjoyment of America's public lands. It supports tribal priorities in Indian Country, including a $1.1 billion investment to transform Indian schools and education, and provides full funding for tribal contract support costs. This request addresses significant resource challenges for the Nation, including water availability, particularly in the arid West, and makes important investments in America's water infrastructure.

The 2017 budget includes $1.0 billion for research and development activities throughout the Department, an increase of $84.5 million from the 2016 enacted level. Activities supported include scientific analysis of natural systems and applied field research to address specific problems, such as thawing permafrost, invasive species, and flooding. With multiple science programs across the Department's bureaus and offices, science coordination remains a critical component in the process of effective science application. Interior is well served by the deployment of science advisors in each bureau. These advisors serve critical roles within the organizations and across the Department by sharing information concerning new research efforts, identifying and evaluating emerging science needs, and ensuring effective science delivery and application. The Interior 2017 budget reflects high priority needs identified for scientific research across the Department.

THE 2017 BUDGET ADVANCES A RECORD OF ACHIEVEMENT

This budget builds on a record of achievement across Interior's diverse mission. For the past several years, the Department led an unprecedented proactive strategy to develop land use plans with Federal, State, and local partners to address the deteriorating health of America's sagebrush landscapes and the declining population of the Greater sage-grouse. This landscape scale conservation effort is an extraordinary collaboration to significantly address threats to the Greater sage-grouse across 90 percent of the species' breeding habitat. These efforts enabled the U.S. Fish and Wildlife Service to conclude the charismatic rangeland bird does not warrant protection under the Endangered Species Act. This collaborative, science-based strategy is the largest land conservation effort in U.S. history, and helps to protect the species and its habitat while also providing certainty needed for sustainable economic development across millions of acres of Federal and private lands throughout the western United States. The 2017 budget includes $89.7 million for Sage Steppe conservation, an increase of $22.9 million over 2016 enacted.

This budget continues to advance development of renewable energy. Over the summer of 2015, Interior's offshore wind energy leasing efforts led to beginning construction of the first offshore wind farm. This first of its kind project will provide a model for future development of offshore wind energy. Since 2009, Interior has approved 56 wind, solar, and geothermal utility scale projects on public or tribal lands. When built, these projects could provide about 14,600 megawatts—enough energy to power nearly 4.9 million homes and support more than 24,000 construction jobs. The 2017 budget includes $97.3 million for clean energy programs, an increase of $3.1 million over 2016 enacted.

The 2017 budget sustains President Obama's strong commitment to tribal self-determination, strengthening tribal nations, and investing in the future of Native youth. Interior established the Land Buy Back Program which, in only 2 years of active land purchases, invested more than $730 million in Indian Country to restore nearly 1.5 million acres of land to Indian tribes. The effort to improve and transform the Bureau of Indian Education to better serve American Indian and Alaska Native youth is building the foundation for improved student outcomes and enduring traditions and native cultures. In 2016, work will begin to replace the final 2 of 14 Bureau of Indian Education schools identified in 2004 as requiring the greatest need for replacement construction. Also, in 2016, Interior will finalize the next list of replacement schools determined through a negotiated rulemaking process. This budget includes $138.3 million for education construction and maintains a commitment to continue to invest in improving educational opportunities and quality from the earliest years through college.

Interior continues to engage in innovative efforts to leverage youth engagement and partnerships to advance the Department's extraordinary mission. Interior set the goal to provide 40,000 work and training opportunities during 2014 and 2015 for young adults, toward a goal of 100,000 by 2017. Interior met its priority goal—providing 52,596 work and training opportunities over the past two fiscal years by collaborating across all levels of government and mobilizing the 21st Century Conservation Corps. From Denali to the Everglades, members of the youth conservation corps are gaining work experience, helping improve the visitor experience, and mobilizing entire communities in the stewardship of our parks, refuges, waters and heritage. The 2017 budget includes a total of $102.5 million, an increase of $37.6 million over 2016 enacted, for programs to advance youth engagement.

Partnerships are critical to enhancing our public lands and providing additional recreational opportunities to the public. An example of the significant impact of these efforts is the CityArchRiver project is a public-private partnership building connections that enhance downtown St. Louis, the Gateway Arch grounds at the Jefferson National Expansion Memorial, and the Mississippi riverfront. This partnership includes the National Park Service, Missouri Department of Transportation, Great Rivers Greenway District, City of St. Louis, Bi-State Development Agency, CityArchRiver Foundation, and others. In January, the Foundation completed a $250 million capital campaign which means the Foundation has raised $221 million in private funding for construction of the $380 million CityArchRiver project and an additional $29 million to seed an endowment that will help maintain and operate the park moving forward.

PROMOTES THE CONSERVATION AND PROTECTION OF AMERICA'S NATURAL AND CULTURAL RESOURCES

This year, the National Park Service celebrates 100 years of preserving and sharing America's natural, cultural, and historic treasures. Interior's 2017 budget makes investments to connect a new generation to "America's Best Idea," and to care for and maintain our national parks for the next 100 years. Last year, the National Park Service's 410 units welcomed 307 million visitors—setting a new visitation record. Every tax dollar invested in a park returns more than $10 to the U.S. economy.

The budget includes a discretionary increase of $190.5 million to invest in the next century of the National Park Service. This includes a $20.0 million increase for the *Every Kid in a Park* initiative, a $20.0 million increase to the Centennial Challenge program providing a Federal match to leverage partner donations for projects and programs at national parks, and a $150.5 million increase to address high priority deferred maintenance needs across the national park system.

This current funding is complemented by a legislative proposal to provide new mandatory funding, The National Park Service Centennial Act includes $100.0 million a year, for 3 years, for Centennial Challenge projects to provide the Federal match in support of signature projects at park units; $100.0 million a year for 3 years for the Public Lands Centennial Fund, a competitive opportunity for public lands agencies to support conservation and maintenance projects; and $300.0 million a year, for 3 years, for Second Century Infrastructure Investment projects to make a meaningful and lasting impact on the NPS deferred maintenance backlog. The Act also provides authority to collect and retain additional camping or lodging fees and funds collected from purchases of the lifetime pass for citizens 62 years of age or older. Receipts for this Second Century Fund will be matched by donations to fund visitor enhancement projects.

Together, the discretionary and mandatory funding proposals will allow the National Park Service to make targeted, measurable upgrades over the next 10 years

to all of its highest priority, non-transportation assets, restoring and maintaining them in good condition.

America's public lands and waters offer space to get outside and get active, and provide living classrooms with hands-on opportunities to build skills. The administration launched the *Every Kid in a Park* Initiative to inspire the next generation to discover all America's public lands and waters have to offer. Starting with the 2015–2016 school year, all fourth grade students and their families are able to receive free admission to all national parks and other Federal lands for a full year. The National Park Service budget for 2017 includes $20.0 million for *Every Kid in a Park* to introduce at least one million fourth grade students from elementary schools serving disadvantaged students in urban areas to nearby national parks and provide park programs tailored for young people and their families, especially at high visitation and urban parks.

Investments in America's great outdoors create and sustain millions of jobs and spur billions of dollars in national economic activity through outdoor recreation and tourism. An estimated 423 million recreational visits to Interior lands contributed $42 billion to the economy and supported about 375,000 jobs nationwide. The 2017 budget proposes full funding for Land and Water Conservation Fund (LWCF) programs at Interior and the Department of Agriculture. This innovative, highly successful program reinvests royalties from offshore oil and gas activities into public lands across the Nation. Starting in 2017, the budget will invest $900.0 million annually into conservation and recreation projects, equal to the amount of receipts authorized for deposit into the LWCF each year, through a combination of $475.0 million in current discretionary funding and $425.0 million in mandatory funding. These investments will conserve public lands in or near national parks, refuges, forests and other public lands, and provide grants to States for close-to-home recreation and conservation projects on non-Federal lands.

The budget continues efforts to manage and promote the health and resilience of ecosystems on a landscape scale, including a continued focus in priority landscapes such as the California Bay-Delta, the Everglades, the Great Lakes, Chesapeake Bay, and the Gulf Coast. The request includes a total of $79.2 million for Bureau of Land Management efforts, to protect and restore America's vast sage steppe landscape supporting abundant wildlife and significant economic activity, including recreation, ranching and energy development. This investment reflects Interior's continued support of the unprecedented Federal and State collaboration to conserve the imperiled sage steppe landscape in the face of threats from fire, invasive species, expanding development, and habitat fragmentation. The budget also invests $160.6 million in landscape scale efforts to address the complex natural resource issues facing the Arctic.

IMPLEMENTS THE PRESIDENT'S CLIMATE ACTION PLAN

As manager of roughly 20 percent of the land area of the United States and a partner with tribal, Federal, State, local, and territorial government land managers, the Interior Department works to address the challenges of natural hazards brought on by a changing climate as an integral part of its mission. The budget includes funding to improve the resilience of communities and ecosystems to changing stressors, including flooding, severe storm events, and drought as part of the administration's effort to better understand and prepare for the impacts of a changing climate.

The budget proposes $2.0 billion in mandatory funding for a new Coastal Climate Resilience program, to provide resources over 10 years for at-risk coastal States, local governments, and their communities to prepare for and adapt to climate change. This program would be paid for by redirecting roughly half of the savings that result from the repeal of offshore oil and gas revenue sharing payments that are set to be paid to only four States under current law. A portion of these program funds would be set aside to cover the unique impacts of climate change in Alaska where rising seas, coastal erosion, and storm surges are threatening Native Villages that must prepare for potential relocations.

Population growth near forests and rangelands and a changing climate are increasing wildfire risk and resulting costs. The budget calls for a new funding framework for wildland fire suppression, similar to how other natural disasters are addressed. The budget includes base level funding of 70 percent of the 10-year average for suppression costs and an additional $290.0 million through a cap adjustment, available in the event of the most severe fire activity, which comprises only 2 percent of the fires but 30 percent of the costs. This framework allows for a balanced suppression and fuels management and restoration program, with flexibility to ac-

commodate peak fire seasons, but not at the cost of other Interior and U.S. Department of Agriculture missions.

Healthy communities require secure, sustainable water supplies. This is particularly challenging with record drought conditions and increasing demand taxing watersheds throughout the country, especially in the arid West. To help increase the security and sustainability of Western watersheds, the budget continues investment in the Department's WaterSMART program to promote water reuse, recycling, and conservation, in partnership with States, tribes, and other partners. Funding is also included for research, development, and challenge competitions to find longer term solutions through new water technologies. The budget invests in the Nation's water infrastructure to ensure millions of customers receive the water and power that are the foundation of a healthy economy.

POWERS THE FUTURE THROUGH BALANCED ENERGY DEVELOPMENT

To enhance national energy security and create jobs in new industries, the budget invests in renewable energy development programs to review and permit renewable energy projects on public lands and in offshore waters. Under the President's Climate Action Plan, these funds will allow Interior to continue progress toward its goal of increasing approved capacity authorized for renewable—solar, wind, geothermal, and hydropower—energy resources affecting Interior managed lands, while ensuring full environmental review, to at least 16,600 Megawatts (since the end of fiscal year 2009). The budget includes an increase of $2.0 million for the Office of Insular Affairs to provide assistance to implement energy projects identified by the territories in their comprehensive sustainable energy strategies.

To address the continuing legacy of abandoned mine lands on the health, safety, environment, and economic opportunity of communities, the budget proposes $1.0 billion to States and tribes over 5 years from the unappropriated balance of the AML Trust Fund, administered by the Office of Surface Mining Reclamation and Enforcement. As part of the President's POWER+ Plan, the AML funding will be used to target the reclamation of mine land sites and associated polluted waters in a manner that promotes sustainable redevelopment in economically distressed coalfield communities. The budget includes legislative reforms to strengthen the healthcare and pension plans that provide for the health and retirement security of coal miners and their families.

The budget provides support for onshore energy permitting and oversight on Federal lands, with the Bureau of Land Management's discretionary and permanent oil and gas program receiving a 17 percent increase in funding compared to the 2016 enacted level. The funding increase will enhance BLM's capacity to oversee safe, environmentally-sound development and ensure a fair return to taxpayers, with increases targeted to improve leasing processes, implementation of new regulations and rules, and a modernized automated permitting process. The BLM's costs would be partially offset through new inspection fees totaling $48 million in 2017, requiring the onshore oil and gas industry to share in the cost of managing the program from which it benefits, just as the offshore industry currently does.

The budget also supports reforms to strengthen oversight of offshore industry operations following the 2010 *Deepwater Horizon* oil spill, with an additional emphasis on risk management. The budget includes $175.1 million for the Bureau of Ocean Energy Management and $204.9 million for the Bureau of Safety and Environmental Enforcement, which share responsibility for overseeing development of oil and gas resources on the Outer Continental Shelf.

STRENGTHENING TRIBAL NATIONS

The President's budget maintains the administration's strong support for the principle of tribal self-determination and strengthening tribal communities across Indian Country. This commitment is reflected in a nearly 5 percent increase for the Bureau of Indian Affairs over the 2016 enacted level. The budget calls for full funding for contract support costs that Tribes incur from managing Federal programs, complemented by a proposal to secure mandatory funding in future years. The budget provides significant increases across a wide range of Federal programs that serve tribes; proposes a "one-stop" approach to improve and coordinate access to Federal programs and resources; seeks to improve the quality of data by partnering with the Census Bureau; supports sustainable stewardship of land, water, and other natural resources; provides funds for communities to plan, prepare, and respond to the impacts of climate change; and expands resources to promote tribally based solutions and capacity building to strengthen tribal communities as a whole. The budget continues to address Indian water rights settlement commitments and programs to sup-

port tribes in resolving water rights claims, developing water sharing agreements, and supporting sustainable water management.

The budget includes key investments to support Generation Indigenous, an initiative addressing barriers to success for American Indian and Alaska Native children and teenagers. In addition to Interior, multiple agencies—including the Departments of Education, Housing and Urban Development, Health and Human Services, Agriculture, and Justice—are working collaboratively with tribes on new and increased investments to implement education reforms and address issues facing Native youth. The budget provides over $1 billion for Interior investments in Indian education.

IMPROVES OVERSIGHT AND USE OF FEDERAL DOLLARS

Interior has several multi-year efforts underway to reduce its nationwide facilities footprint, and improve the efficiency and effectiveness of its information technology infrastructure and financial reporting capabilities. The budget includes $6.4 million to consolidate building space and reduce costs to the taxpayer for privately leased space. Interior achieved a 4.6 percent reduction—2.1 million square feet—in office and warehouse space between fiscal year 2012 and fiscal year 2015. This represents a net annual cost avoidance of approximately $8 million. In 2016, the modernization of the sixth and final wing of the Main Interior Building will be completed, including infrastructure upgrades that improve energy efficiency and sustainability and reconfigured space to support higher occupancy.

The budget includes $3.0 million for Interior's Digital Services team to increase the efficiency and effectiveness of the agency's highest impact digital services. The budget continues to optimize the Department-wide Financial and Business Management System with targeted investments to improve reporting and increase data quality and transparency, as envisioned in the DATA Act.

The budget includes an increase of $2.6 million to support implementation of Federal Information Technology Acquisition Reform Act, to improve standardization of information technology investments by strengthening the role of the Department's Chief Information Officer in strategic planning, budget formulation and execution, and acquisition of information management and technology activities. The budget includes $34.7 million in the appropriated working capital fund to continue the Department's remediation of its cybersecurity systems and processes, an increase of $24.7 million above the 2016 enacted level. The additional funding will allow the Department to secure its valuable information on behalf of our employees, customers, partners and the American public.

The United States Treasury received $7.2 billion in 2015 from fees, royalties and other payments related to oil and gas development on public lands and waters. A number of studies by the Government Accountability Office and Interior's Office of Inspector General found taxpayers could earn a better return through policy changes and more rigorous oversight. The budget proposes a package of legislative reforms to bolster administrative actions focused on advancing royalty reforms, encouraging diligent development of oil and gas leases, and improving revenue collection processes. The administration is committed to ensuring American taxpayers receive a fair return from the sale of public resources and benefit from the development of energy resources owned by all Americans.

The budget includes legislative proposals related to Reforms of Hardrock Mining. To increase safety and minimize environmental impacts, the budget proposes a fee on hardrock mining, with receipts to be used by States, tribes and Federal agencies to restore the most hazardous sites—similar to how coal Abandoned Mine Lands funds are used. In addition, to ensure taxpayers receive a fair return from mineral development on public lands, the budget proposes a royalty on select hardrock minerals—such as silver, gold and copper—and terminating unwarranted payments to coal producing States and tribes that no longer need funds to clean up abandoned coal mines.

BUREAU HIGHLIGHTS

Bureau of Land Management.—The 2017 request is $1.3 billion, $7.1 million above 2016. This includes $1.2 billion for BLM operations, an increase of $2.1 million above the 2016 enacted level, with $1.1 billion for Management of Lands and Resources and $107.0 million for Oregon and California Grant Lands programs. The change in total program resources from 2016 and 2017 is larger, as the budget proposes offsetting user fees in the Rangeland Management and Oil and Gas Management programs which reduce the total request by $64.5 million.

The budget also includes $44.0 million in current appropriations for LWCF land acquisition, including $8.0 million to improve access to public lands for hunting,

fishing, and other recreation. BLM's LWCF land acquisition investments promote the conservation of natural landscapes and resources by consolidating public lands through purchase, exchange and donation to increase management efficiency and preserve areas of natural, cultural, and recreational importance. The BLM estimates 23 million acres (or nine percent) of BLM-managed public lands lack public access or have inadequate public access, primarily due to checkerboard land ownership patterns. The BLM's proposed land acquisition project within the Rio Grande del Norte National Monument in New Mexico illustrates the many benefits of land acquisition to BLM's mission. An investment of $1.3 million would allow BLM to acquire 1,186 acres of private inholdings within the monument to preserve traditional uses, secure connectivity to the Rio Grande Wild & Scenic Corridor, preserver avian and wildlife habitat, protect prehistoric human habitation sites, and improve recreation and tourism.

Complementing the second century of the parks, the BLM budget includes investments in the National Conservation Lands, which recently celebrated their 15th anniversary. Thirteen new National Conservation Lands units were designated during the current administration and visitation and visitor expectations and demands have consistently increased for the whole National Conservation Lands system during this period. The 2017 budget features a $13.7 million increase to meet basic operating requirements and support critical and overdue investments to effectively safeguard the cultural, ecological, and scientific values for which they were designated and provide the quality of recreational opportunities intended with the National Conservation Lands designation. A program increase of $1.1 million in Cultural Resources Management will enhance BLM's capacity to preserve and protect the vast treasure of heritage resources on public lands and a program increase of $2.0 million in Recreation Resources Management will further implement a National Recreation Strategy to facilitate access to public lands.

The BLM continues to support the President's broad energy strategy, with significant increases requested in 2017 to strengthen its ability to effectively manage onshore oil and gas development on Federal lands. The 2017 budget for oil and gas management activities, including the request for direct and fee funded appropriations and estimated permanent appropriations totals $186.6 million, an increase of $27.6 million in total program resources over the 2016 enacted level.

For direct appropriations, the oil and gas request is a net program increase of $19.9 million. Within this net total, $13.1 million will support implementation of rules and regulations to ensure oil and gas operations are safe, environmentally responsible, and ensure a fair return to the taxpayer. These include new oil and gas measurement and site security regulations, hydraulic fracturing regulations, and venting and flaring regulations. A $2.1 million increase will complete modernization of the Automated Fluid Minerals Support System. The development work associated with Phase II of AFMSS modernization includes new functionality supporting new proposed rules and those currently expected to be finalized in 2016. Overall, the AFMSS modernization project also will support greater efficiencies in oil and gas permitting and inspection activities.

The Oil and Gas Management request also includes a program increase of $2.6 million for oil and gas special pay costs to improve BLM's ability to recruit and retain high caliber oil and gas program staff to provide effective oversight and meet workload and industry demand. Finally, the BLM budget request includes a program increase of $2.8 million to enhance BLM's capability to address high priority legacy wells in the National Petroleum Reserve-Alaska to supplement permanent funds provided in the Helium Security Act of 2013. The 2017 budget continues to request authority to charge inspection fees similar to those in place for offshore oil and gas inspections. Such authority will reduce the net costs to taxpayers of operating BLM's oil and gas program and allow BLM to be more responsive to industry demand and increased inspection workload in the future. A $48.0 million decrease in requested appropriations reflects shifting the cost of inspection activities to fees.

In 2017, BLM will continue to invest heavily in the Greater Sage Grouse Conservation Strategy and the budget includes a program increase of $14.2 million to protect, improve, or restore sage steppe habitat. Funds will also assist States in implementing GSG conservation plans. The BLM's efforts to implement the Greater Sage Grouse Conservation Strategy are also reliant upon successful execution of the National Seed Strategy, which is also integral to the administration's wildland fire rehabilitation efforts and the success of the Secretary's Integrated Rangeland Fire Management Strategy. The budget includes a $5.0 million program increase within Wildlife Management to more aggressively implement the National Seed Strategy.

Other budget highlights include program increases totaling $16.9 million in the Resource Management Planning, Assessment, and Monitoring subactivity. This includes $4.3 million to expand the BLM Assessment, Inventory, and Monitoring pro-

gram for increased data collection and monitoring central to the success of high priority landscape management efforts such as the Western Solar Energy Plan, as well as implementation of the Department's plan for the National Petroleum Reserve-Alaska, the Greater Sage Grouse Conservation Strategy, and the broader landscape mitigation strategy. The request also includes an increase of $6.9 million to accelerate implementation of the BLM enterprise geographic information system, which aggregates data across boundaries to capture ecological conditions and trends; natural and human influences; and opportunities for resource conservation, restoration, development, and partnering. The remaining $5.7 million increase will support high priority planning efforts that could include the initiation of new plan revisions in 2017, as well as plan evaluations and implementation strategies.

Bureau of Ocean Energy Management.—The 2017 President's budget for BOEM is $175.1 million, including $80.2 million in current appropriations and $94.9 million in offsetting collections. This is a net increase of $4.3 million in current appropriations above the 2016 enacted level.

The total 2017 estimate of $94.9 million for offsetting collections is a net decrease of $1.7 million, including reductions in rental receipts partially offset by a new $2.9 million cost recovery fee for the Risk Management Program. An increase in direct appropriations of $6.0 million makes up for the projected decrease in rental receipts.

The budget provides $23.9 million for offshore renewable energy activities. To date, BOEM has issued 11 commercial wind energy leases offshore; conducted 5 competitive wind energy lease sales for areas offshore Maryland, Massachusetts, New Jersey, Rhode Island, and Virginia; and approved the Construction and Operations Plan for the Cape Wind project offshore Massachusetts. Additionally, BOEM is in the planning stages for wind leasing offshore New York, North Carolina, and South Carolina. In 2015, BOEM executed the first wind energy research lease in U.S. Federal waters with the Commonwealth of Virginia's Department of Mines, Minerals, and Energy.

The 2017 budget provides $64.2 million for conventional energy development, a programmatic increase of $4.2 million above 2016. These funds support high priority offshore oil and gas development activities, including lease sales outlined in BOEM's Five Year OCS Oil and Gas Leasing Program for 2012–2017. Under this program, BOEM's eight sales generated over $2.97 billion in high bids. Five lease sales remain on the lease sale schedule through mid-2017. The next lease sales are Eastern Gulf of Mexico Lease Sale 226, Central Gulf of Mexico Lease Sale 241, and Western Gulf of Mexico Lease Sale 248, all scheduled to be held during 2016.

The 2017 provides $68.4 million for BOEM's Environmental Programs. These funds support world class scientific research to provide critical information informing policy decisions regarding energy and mineral development on the OCS.

Bureau of Safety and Environmental Enforcement.—The 2017 President's budget for the Bureau of Safety and Environmental Enforcement is $204.9 million, including $96.3 million in current appropriations and $108.5 million in offsetting collections. The 2017 budget is a net $196,000 increase above the 2016 enacted level, reflecting an increase of $7.9 million in current appropriations and a $7.7 million decrease in offsetting collections. The total 2017 estimate of $108.5 million in offsetting collections assumes decreases from 2016 of $11.5 million for rental receipts, $2.2 million for cost recoveries, and a $6.0 million increase for inspection fee collections. Funding for Oil Spill Research is maintained at the 2016 enacted level of $14.9 million. The 2017 budget supports continued safe and responsible offshore energy development.

Office of Surface Mining Reclamation and Enforcement.—The 2017 budget request is $157.9 million, $82.6 million below the 2016 enacted level.

The 2017 budget for Regulation and Technology is $127.6 million, $4.3 million above 2016. The request includes $10.5 million, $1.8 million above 2016, to improve implementation of existing laws and support State and tribal programs. The 2017 budget includes $65.5 million for State and tribal regulatory grants, this level of funding supports State requirements.

The budget includes program increases of $2.5 million to advance the Bureau's GeoMine Project; $1.2 million for applied science to conduct studies to advance technologies and practices specific to coal mined sites for more comprehensive ecosystem restoration; $1.0 million to expand the use of reforestation techniques in coal mine reclamation and provide opportunities for youth and community engagement; $2.3 million to support Technical Assistance; and $1.6 million for National Environment Policy Act compliance document preparation, legal review, and program monitoring.

The 2017 budget for the Abandoned Mine Reclamation Fund is $30.4 million, $86.9 million below 2016. The 2016 enacted level included a $90.0 million increase for grants to three States for the reclamation of abandoned mine lands in conjunction with economic and community development activities. The 2017 budget pro-

poses a broader legislative effort to support reclamation and economic and community development as part of the administration's POWER+ Plan. POWER+ would provide $200 million per year to target the cleanup and redevelopment of AML sites and AML coal mine polluted waters in a manner that facilitates sustainable revitalization in economically depressed coalfield communities. The budget includes a $1.5 million program increase for technical assistance to States, tribes, and communities to address AML technological advances and issues for AML site reclamation. The budget also includes program increases of $525,000 for applied science studies pertaining to abandoned mines, $799,000 to enhance and expedite current OSMRE efforts in digitizing underground mine maps, and $287,000 for support within the Office of the Solicitor.

U.S. Geological Survey.—The 2017 budget is $1.2 billion, $106.8 million above 2016, to advance our national commitment to research and development that supports economic growth, balances priorities on resource use, addresses climate change, and ensures the security and well- being of the Nation. The budget improves response to and warning of natural disasters, responds to drought and other water challenges, supports sustainable domestic energy and minerals development, and advances scientific understanding of land use, land change, and the effects of resource decisions to assist communities and land managers in making choices informed by sound science.

The 2017 budget invests in the USGS's capabilities for science and innovation to monitor and respond to natural disasters with increases for priority science to help stabilize and rehabilitate ecosystems after fires and provide geospatial information, monitoring strategies, and other relevant scientific information faster for real-time fire response. Related increases build USGS' capability to respond to landslide crises, and expand the use of flood inundation mapping and rapidly deployable streamgages to meet urgent needs of flood-threatened communities lacking a permanent streamgage.

The budget continues $8.2 million to develop the West Coast Earthquake Early Warning system to complete a production prototype system, expand coverage, and beta-test alerts. The budget continues funding of $3.0 million to repair and upgrade monitoring stations on high-threat volcanoes. The budget includes funding to assume long-term operations of the Central and Eastern United States Seismic Network from the National Science Foundation and allows USGS to continue a 5-year effort to deploy, install and improve the Global Seismic Network, ensuring that the Network continues to provide global earthquake and tsunami monitoring, nuclear treaty research and verification, and earth science research.

The budget provides an increase of $18.4 million for science to support sustainable water management, nearly doubling the investment made in 2016. As climate models forecast increasingly frequent and more intense droughts, improving water management science is a paramount concern for land and water management agencies, States, local governments, and tribes. The budget would improve water use information and research, provide grants to State water resource agencies, and create hydrologic models and databases for better decision support. The budget also includes $3.9 million for drought science and $4.0 million to develop methods to assess regional and national water use trends during drought. Innovation is critical to address the severe threats to water supply posed by drought and climate change.

The budget provides increases across several programs to advance understanding of conventional and unconventional energy, critical minerals such as rare earth elements, and the environmental health effects of resource development. These investments include $3.6 million to provide decision ready information to support safe and prudent unconventional oil and gas development, $2.0 million to study the environmental impacts of uranium mining in the Grand Canyon, and $1.0 million to identify and evaluate new sources of critical minerals and continue criticality analysis for mineral commodities.

The USGS budget increases science investments for changing landscapes, including $9.8 million in the Arctic, $3.0 million for the vulnerable sagebrush habitats of the Intermountain West, and $3.9 to improve coastal science that will help communities build resilient coastal landscapes and improve post-storm contaminant monitoring network along the Atlantic coast. The budget also establishes a Great Lakes Climate Science Center to focus on the many natural resource challenges in the distinct bio-geographic Great Lakes region. As with the eight existing Climate Science Centers, the Great Lakes CSC will help address regional concerns associated with climate change, providing a pathway to resilience and supporting local community priorities.

The budget includes increases of $2.1 million to address research on pollinator health and expand the small group of USGS researchers working on this critical component of agricultural and ecosystem health, $1.4 million for tribal climate

science partnerships, and $2.5 million for better tools to detect and control invasive species, particularly new and emerging invasive species. The budget continues a commitment to priority ecosystems including the Chesapeake Bay, the Everglades, Puget Sound, the Upper Mississippi River, the California Bay-Delta, and the Gulf Coast.

The USGS plays a pivotal role in providing research, analysis, and decision support tools. The budget supports these efforts and includes investments to extend the four-decade long Landsat satellite program with the development of Landsat 9, and provide information to better understand and respond to changes in the environment. The 2017 budget provides an increase of $17.6 million for satellite operations, funding the development of Landsat 9 ground systems and satellite operations and an investment to retrieve and disseminate data from the European Space Agency's Sentinel-2 earth observation satellite. The budget provides an increase of $4.9 million to expand the three-dimensional elevation program and leverage partnerships across the Nation, accelerate Alaskan map modernization, and provide coastal imaging to help communities make infrastructure resilience investments. The budget also provides $3.0 million to develop the computing resources necessary to produce and disseminate Landsat-based information products.

High-quality science depends on a strong science infrastructure. The budget makes necessary investments to continue the USGS legacy of reliable, valuable scientific information and monitoring. These investments fund science support, facilities and equipment, including laboratories, and the administrative support that is the backbone of science production and delivery. The 2017 budget also includes program increases to enhance the Mendenhall post-doctoral program, support tribal science coordination, enhance science education, and engage youth in underserved communities in earth and biological sciences through outreach activities and science camps.

Fish and Wildlife Service.—The 2017 budget for FWS includes current appropriations of $1.6 billion, an increase of $54.5 million compared to the 2016 enacted level.

The 2017 request for FWS includes $1.3 billion for FWS operations, of which $506.6 million supports National Wildlife Refuge System operations and maintenance. A feature of the 2017 FWS budget is support to expand opportunities for all Americans to access public lands and experience the great outdoors, regardless of where they live. With 80 percent of the U.S. population currently residing in urban communities near more than 260 wildlife refuges, Interior is leveraging the National Wildlife Refuge System to encourage urbanites to rediscover the outdoors. The request includes $10.0 million for the Refuge System's Urban Wildlife Conservation Partnerships to expand opportunities for urban populations including an increase of $2.0 million for additional Refuge System law enforcement officers to ensure the safety of visitors, natural and cultural resources, and Federal employees and facilities. The budget includes $40.7 million for general Refuge Law Enforcement operations.

The request also includes funding within Law Enforcement and International Affairs to combat wildlife trafficking. The budget provides $75.1 million for the law enforcement program to investigate wildlife crimes, enforce the laws governing the Nation's wildlife trade, and continue cooperative international efforts to prevent poaching and trade in illegal wildlife products. The request includes $15.8 million for the International Affairs Program, an increase of $1.1 million above 2016. This includes increases of $500,000 to provide technical support for international efforts to reduce illegal wildlife trafficking and develop innovative conservation activities. Also within International Affairs, is $550,000 to support the U.S. Chairmanship of the Arctic Council.

The budget invests in resources for the Refuge System which has lost more than 400 staff positions since 2010. The request for the Refuge System is $506.6 million, an increase of $25.2 million above 2016. This includes increases of $1.0 million for pollinator conservation, $3.7 million for wildlife and habitat inventory and monitoring, $2.0 million to establish management capability across 418 million acres of submerged land and water within the Pacific Marine National Monuments, and $4.4 million to begin rebuilding capacity within the Refuge System to improve the condition of refuge system facilities and resources, improve the visitor experience and manage natural resources.

The budget emphasizes improving the resilience of communities and wild landscapes, enabling them to better adapt to a rapidly changing environment, and uses smart investments in conservation and landscape-level planning to improve the Service's ability to facilitate economic growth, while avoiding and mitigating the impacts on wildlife and habitat.

Within the FWS main operating account, the request provides $252.3 million for Ecological Services to conserve, protect, and enhance listed and at-risk species and

their habitat, an increase of $18.3 million. Since 2008, FWS has downlisted or delisted 15 species, more than in any other administration. The increases within Ecological Services include $5.7 million to support conservation, restoration and economic development across the Gulf Coast region and other parts of the Country.

The budget includes $152.8 million for Fish and Aquatic Conservation, a program increase of $4.6 million. Within this request is $53.8 million for operation of the National Fish Hatchery System and $7.9 million to combat the spread of Asian carp in the Missouri, Ohio, upper Mississippi Rivers, and other high priority watersheds. The request also includes an increase of $1.5 million to support fish passage while improving the resilience of communities to withstand flooding.

The budget funds Cooperative Landscape Conservation at $17.8 million, an increase of $4.8 million above 2016. The approach employed by Landscape Conservation Cooperatives to identify landscape scale conservation solutions fosters collaboration across a wide variety of partners and builds capabilities beyond the scale any single State, tribe, Federal agency, or community could achieve alone. The requested increase will support landscape planning and design, and partner cooperation that will improve the condition of wildlife habitat and enhance the resilience of communities.

The 2017 budget for Science Support is $20.6 million, an increase of $3.6 million above 2016. The request includes an additional $1.0 million to expand application of Strategic Habitat Conservation, an approach to conservation that, in cooperation with stakeholders, identifies priority species and habitat, desired biological outcomes, and develops conservation strategies to achieve these outcomes. This approach supports the design of successful management strategies that deliver measureable improvements to wildlife populations and habitats. The FWS will use a program increase of $2.6 million to obtain high priority data and scientific tools needed by on-the-ground resource managers.

The FWS budget includes $137.6 million for LWCF Federal land acquisition, composed of $58.7 million in current funding and $79.0 million in permanent funding. Within the request for current funding, is $19.9 million for high priority acquisition projects focused on FWS specific needs, including $16.0 million for collaborative projects in coordination with partners and other Federal agencies, and $2.5 million to support increased access to FWS lands for sportsmen and recreationists. The FWS requests $2.5 million in discretionary funding for the Everglades Headwaters National Wildlife Refuge and Conservation Area, one of the great grassland and savanna landscapes of eastern North America, to acquire nearly 1,000 acres to help protect high-quality habitat for 278 Federal and State listed species. Acquisition of this property would protect the headwaters, groundwater recharge, and watershed of the Kissimmee Chain of Lakes, Kissimmee River, and Lake Okeechobee region, and improve water quantity and quality in the Everglades watershed, supporting the Comprehensive Everglades Restoration Plan goals and protecting the water supply for millions of people.

Supporting the administration's America's Great Outdoors initiative objectives is $106.0 million for grant programs administered by FWS. The 2017 budget maintains 2016 funding levels for grants through the Cooperative Endangered Species Conservation Fund, North American Wetlands Conservation Fund, Multinational Species Conservation Fund, and the Neotropical Migratory Bird Conservation Fund. Funding for the State and Tribal Wildlife grant program on which many States and tribes rely to fund non-game animal conservation, is an increase of $6.4 million.

National Park Service.—The 2017 President's current budget request for NPS of $3.1 billion is $250.2 million above the 2016 enacted level. Highlights of the 2017 budget include $190.5 million in increases for the NPS Centennial, as well as a focus on the stewardship of natural and cultural resources, including a $20.0 million increase for the Historic Preservation Fund grant programs to document and preserve stories and sites related to the Civil Rights Movement.

The NPS budget request for operations is $2.5 billion, an increase of $154.8 million from 2016. A $2.2 million programmatic reduction to refocus operations funding partially offsets the following increases: $49.2 million for additional repair and rehabilitation projects, $46.6 million for additional cyclic maintenance projects, $20.0 million for the Every Kid in a Park initiative, $10.7 million for new parks and responsibilities, $8.1 million for healthcare insurance for seasonal employees, $3.0 million for climate change adaptation projects, $2.6 million for increased communications bandwidth at parks, $2.0 million for the Vanishing Treasures program, $1.2 million to address energy development near parks, $1.1 million for Arctic science and monitoring, and $1.0 million for uranium mining studies in the Grand Canyon.

The 2017 budget provides a total of $35.0 million for the Centennial Challenge matching program, an increase of $20.0 million. These funds will provide a Federal match to leverage partner donations for signature projects and programs at national

parks into the NPS' second century. All Federal funds must be matched on at least a 50:50 basis. In 2016, Congress appropriated $15 million for projects which will be matched by almost $33 million from more than 90 park partners. This program is bolstered by the administration's legislative proposal to fund an additional $100.0 million a year for 3 years for this program as a permanent appropriation.

The 2017 request for the Historic Preservation Fund is $87.4 million, an increase of $22.0 million from 2016. Of this total, $46.9 million is requested for grants-in-aid to States and Territories, which is level with 2016. A total of $12.0 million is requested for grants-in-aid to tribes, an increase of $2.0 million. The remaining $20.0 million increase is for grants to document and preserve the sites and stories of the Civil Rights Movement; of which $17.0 million is for competitive grants, and $3.0 million is for grants to Historically Black Colleges and Universities.

The 2017 budget includes $54.4 million for National Recreation and Preservation programs that support local community efforts to preserve natural and cultural resources. This is a decrease of $8.2 million compared to 2016. These changes consist of a program reduction of $10.4 million to Heritage Partnership Programs; and programmatic increases of $0.9 million for modernization and digitization in the National Register program, $0.8 million for the Preservation Technology and Training grants program, $0.3 million for the Federal Lands to Parks program, and fixed costs increases.

Construction funding totals $252.0 million, $59.1 million above 2016. This request provides funding critical to the implementation of the Centennial initiative to make a meaningful impact on the NPS deferred maintenance backlog. The budget includes $153.3 million for line-item construction projects, a $37.1 million increase, which will fund projects such as the $13.2 million rehabilitation of the Paradise Inn Annex and snow bridge connection at Mount Rainier National Park in Washington, and $13.9 million for the final phase of the rehabilitation of the El Portal sanitary sewer to prevent raw sewage spills at Yosemite National Park in California.

The 2017 current funding request for LWCF Land Acquisition and State Assistance is $178.2 million, an increase of $4.6 million from 2016. This includes $110.0 million for State Assistance grants, maintaining the increase provided in 2016. The budget requests $68.2 million for Federal Land Acquisition, an increase of $4.6 million. This provides $26.6 for projects addressing NPS specific needs, $10.8 million for collaborative acquisition projects, $2.0 million for projects to improve recreation access, and $10.0 million for American Battlefield Protection Program acquisition grants. A high priority for NPS, the Hawaii Volcanoes National Park is also part of the Island Forests at Risk collaborative landscape proposal. An investment of $6.0 million would allow NPS to begin acquisition of a parcel which protects the hawksbill and Green turtles, and island monk seal habitat, and contains anchialine pond communities and coastal strands of endangered plants. Significant archaeological sites, cultural landscapes, petroglyphs and ancient trails are also present. Time is a concern as the area faces potential rezoning from conservation to medium density urban and resort development.

Indian Affairs.—The 2017 President's budget for Indian Affairs is $2.9 billion in current appropriations, $137.6 million above the 2016 level. Funding for the main operating account for Indian Affairs, Operation of Indian Programs is $2.4 billion, $127.9 million above 2016. The 2017 request for Construction is $197.0 million, $3.0 million above 2016.

The 2017 budget supports continuing efforts to advance self-governance and self-determination, improve educational outcomes for American Indian children, support human services activities, prudently manage tribal natural resources, build stronger economies and self-sufficiency, and maintain safer Indian communities.

Key to self-governance and self-determination is full funding for Contract Support Costs. The 2017 request includes $278.0 million for Contract Support Costs, $1.0 million above 2016, which will fully fund these costs based on the most recent analysis. As in the 2016 enacted bill, the budget requests funding for Contract Support Costs in a separate dedicated current account. To further stabilize long-term funding, the 2017 budget includes a legislative proposal to reclassify these costs as permanent funding beginning in fiscal year 2018.

The Interior budget proposes a $1.1 billion investment in Indian education and construction to continue to support the transformation of the BIE to support tribes in educating their youth, and deliver an improved and culturally appropriate education across Indian Country. The budget includes $49.3 million in increases across a number of programmatic areas in BIE related to the transformation.

The budget includes $138.3 million for Education Construction, maintaining the $63.7 million increase provided in 2016. The request will provide the funding stability necessary to develop an orderly education construction pipeline and properly pace projects. The 2016 enacted appropriation will replace two remaining BIE school

campuses on the 2004 priority list—Little Singer Community School and Cove Day School, both in Arizona—and support planning for the schools identified on the new school replacement construction list nearing finalization. The 2017 funding will be applied to construction costs for projects chosen from the new list.

To further higher education, the budget includes increases of $9.4 million for scholarships, adult education and tribal colleges and universities; and $3.6 million for Johnson O'Malley education grants to provide additional resources to tribes and organizations to meet the unique and specialized educational needs of American Indian and Alaska Native students.

To foster public-private partnerships to improve the student experience at BIE-funded schools, the 2017 budget again proposes appropriations language enabling the Secretary to reactivate the National Foundation for American Indian Education. The proposed bill language will initiate a foundation focused on fundraising to create opportunities for Indian students in and out of the classroom.

As part of the President's commitment to protect and promote the development of prosperous tribal communities, Indian Affairs proposes to expand the Tiwahe "family" initiative. This effort takes an integrated approach to address the inter-related challenges impacting the lives of youth, families, and communities in Indian Country—including poverty, violence, and substance abuse. The Tiwahe approach seeks to empower individuals and families through health promotion, family stability, and strengthening communities as a whole.

The 2017 budget expands the Tiwahe initiative with increases totaling $21.0 million for programs in social services, Indian Child Welfare Act, housing, tribal courts, and job placement and training. To better focus funding and evaluate outcomes in meeting social service needs in Indian Country, the Department will evaluate social service and community development needs in Indian Country in 2016. The evaluation will inform programmatic design, assessments, management, and budgeting.

The budget contains a number of increases to support tribal nation-building and economic development. The budget includes $4.0 million for a Native One-Stop Support Center to make it easier for tribes to find and access hundreds of services available to tribes across the Federal Government. The 2017 budget includes $1.0 million to help tribes adopt uniform commercial codes which help build the legal infrastructure on reservations to promote credit and other capital transactions. The budget provides $12.0 million to enable Interior to work with American Indian/Alaskan Native communities to improve Federal data quality and availability, to create a reimbursable agreement with the Census Bureau to address data gaps in Indian Country, and to create an Office of Indian Affairs Policy, Program Evaluation, and Data to support effective, data-driven, tribal policy making and program implementation. The budget also proposes $1.3 million increase for the Small and Needy Tribes program to assist eligible tribes in expanding and sustaining tribal governance.

The 2017 budget strongly supports sustainable stewardship of trust lands, natural resources, and the environment in Indian Country. These priorities include the protection and restoration of ecosystems and important landscapes; stewardship of land, water, ocean, and energy resources; resilience in the face of a changing climate; and clean and sustainable energy development.

The budget provides a $15.1 million program increase over 2016 across eight natural resource programs to support tribes in developing science, tools, training, planning, and implementation of actions to build resilience into resource management, infrastructure, and community development activities. Funding will be set-aside to support Alaska Native Villages in the Arctic and other critically vulnerable communities to evaluate options for the long-term resilience of their communities. The budget also includes $2.0 million to address subsistence management in Alaska to better prepare for the impacts of climate change, as part of an ongoing commitment to improve the Nation's resilience. In addition, the budget includes a total increase of $8.7 million for trust real estate service activities to reinforce the stewardship of trust resources. The expanded capacity will address the probate backlog, land title and records processing, geospatial support needs, and database management in addition to providing expanded technical and legal support for authorized settlements involving tribal water rights.

The 2017 budget request for Indian Land and Water Claim Settlements is $55.2 million, a $5.7 million increase over the 2016 enacted level for payments on enacted settlements. The budget includes $25.0 million for the final payment to the Aamodt settlement and $10.0 million in one-time funding to provide the Yurok Tribe, located in Northern California, funds to acquire lands as authorized in the Hoopa-Yurok Settlement Act. This acquisition supports efforts by the Yurok Tribe, State of California, private foundations and individual donors to conserve over 47,000 acres of the Klamath-Siskiyou ecoregion to ensure the long-term health of temperate forests, rare wildlife, and extraordinary runs of wild salmon. The land, to be conserved as

a salmon sanctuary and sustainable community forest, will restore the Yurok Tribe's historic connection to the land, support the Yurok economy through jobs in forestry and restoration, and provide revenue to the tribe through sustainable timber and salmon harvests and the sale of carbon credits. The budget also includes increases totaling $12.9 million in the Operation of Indian Programs account to provide expanded technical and legal support for tribal water rights settlement negotiations and implementation. A reduction of $29.2 million in the settlement account reflects completion of the Taos Pueblos water settlement in 2016.

The 2017 budget request for the Indian Guaranteed Loan Program is $7.8 million, the same as 2016, which will provide loan guarantee and insurance authority for $106.0 million in loan principal to support Indian economic development.

Departmental Offices.—The 2017 budget request for Departmental Operations is $278.4 million, a decrease of $443.4 million below the 2016 enacted level. The decrease reflects a reduction of $452.0 million associated with the Payments in Lieu of Taxes program. In 2017, the budget proposes to fund PILT as permanent funding not subject to appropriation. State and local governments depend on PILT funding to finance such vital services as firefighting and police protection, construction of public schools and roads, and search and rescue operations. Providing a mandatory source of funding will create greater certainty that PILT investments will be available in future years. The budget proposes mandatory PILT funding for 1 year, while a sustainable long-term funding solution is developed for the program.

The budget proposes program increases of $1.5 million for work with the National Invasive Species Council to develop an Early Detection Rapid Response framework. Early detection and rapid response (EDRR) has the potential to result in significant cost savings, as compared to battling invasive species such as Asian carp, cheatgrass, and emerald ash borer once established. The EDRR request support multiple pilot projects to demonstrate early detection and rapid response approaches, as well as conducting assessments to identify current capacities and gaps in capacities to implement EDRR.

The budget includes $1.0 million for Native Hawaiian community development through capacity building and technical assistance. This request will allow the Department to provide support to Native Hawaiians similar to the capacity building and technical assistance the Department provides to other Native Americans, and the Insular areas consistent with the Hawaiian Homes Commission Act and Hawaiian Homes Land Recovery Act. The Department will work with the Native Hawaiian community on a variety of economic, social, and cultural projects.

The 2017 Budget includes critical investments to ensure effectiveness and compliance of Interior information technology investments. The request includes $3.0 million to develop a Digital Service Team responsible for driving the efficiency and effectiveness of the Department's highest-impact digital services. Additional information technology investments are proposed under the Working Capital Fund appropriated account.

Within the request for Departmental Operations is $129.3 million for Office of Natural Resources Revenue's receipts management programs, $3.8 million above 2016. The increase includes $968,000 to fully fund Osage Trust Accounting responsibilities in compliance with the Osage settlement agreement; $1.0 million to expand Geospatial Information Systems; and $1.2 million to strengthen ONRR's audit and compliance mission activities.

The 2017 request for the Office of Insular Affairs is $102.7 million, $12.4 million above the 2016 level excluding Palau Compact Extension funding of $13.1 million. The 2017 budget proposes $149.0 million in permanent funding to support enactment of a new Compact with Palau. The appropriated funding request includes increases of $4.0 million for community, landscape and infrastructure adaptation and resilience initiatives; $3.9 million to improve health and safety conditions in insular school facilities; $2.0 million to implement energy projects; $2.0 million for Coral Reef Initiative and Natural Resources; $1.6 million for direct technical assistance grants; and $1.0 million to support invasive species eradication efforts, including the coconut rhinoceros beetle and little fire ant. Brown Treesnake Control is funded at $3.0 million, a program decrease of $500,000, reflecting completion of an automated aerial bait system in 2015. The budget requests $3.3 million for Compact of Free Association, level with 2016, excluding $13.1 million provided for Palau Compact Extension in 2016.

The budget includes $69.4 million for the Office of the Solicitor, $3.6 million above 2016 to support additional personnel and necessary legal services for delivering the Department's mission. The Office of the Solicitor's ability to provide early and continuous legal counsel in new priority areas to ensure that developing programs are grounded in established legal principles and precedents is absolutely vital. The requested increase will allow the Office of the Solicitor to provide the much needed

preventive assistance that is lost to the demands of non-discretionary litigation. The additional funding will also be used to restart the Honors Program, where recent law graduates are hired at the entry level and trained to assume senior positions. This program will ensure DOI has experienced lawyers as many senior staff becomes eligible for retirement.

The request for the Office of the Inspector General is $55.9 million, $5.9 million above 2016 to support audits concerning Offshore Energy Oversight, Indian Country, and Cybersecurity, and Offshore Energy Investigations.

The Office of the Special Trustee request is $140.4 million, $1.4 million above 2016. The budget includes increases of $1.5 million to provide additional estate planning opportunities to Indian Trust beneficiaries; $1.3 million for an appraiser training program to address the shortage of qualified appraisers and the resulting delays in completing appraisal evaluations; $1.5 million to enhance talent management capabilities and systems automation; and less than $400,000 to modernize and improve business processes and enhance the Trust Funds Accounting System. These increases are partially offset by a $3.4 million reduction in funding for Historical Trust Accounting based on anticipated workload levels.

Department-wide Programs.—The 2017 request for the Department's Wildland Fire Management program is $824.6 million without the proposed fire cap adjustment, and $1.1 billion including the adjustment. The base budget includes $276.3 million for fire suppression, which is 70 percent of the 10 year suppression average spending. The cap adjustment of $290.0 million covers the remaining 30 percent of the 10-year average and provides a contingency. The cap adjustment would only be used for the most severe fires, since it is 2 percent of the fires that cause 30 percent of the costs. The new budget framework for Wildland Fire Management eliminates the need for additional funds through the FLAME Act.

The 2017 budget includes $179.1 million for Fuels Management and Resilient Landscapes subactivities, $9.1 million above 2016 enacted. Of this, $30.0 million is proposed in a new Resilient Landscapes subactivity to build on resilient landscapes activities supported by Congress in 2015 and 2016. This equates to a $20.0 million increase for the program to take better advantage of the shared goals of bureau resource management programs to treat large landscapes to achieve and maintain fire-adapted ecosystems that both reduce the threat of catastrophic wildfire and achieve restoration and other ecological objectives. The increase for Resilient Landscapes is partially offset with a program realignment of $21.7 million in the Fuels Management program from 2016.

Other highlights in the Wildland Fire Management budget include an increase of $6.9 million in Preparedness to maintain or strengthen initial and extended attack capacity. Specific increases include $2.8 million to enhance the initial attack capability of rural fire departments and rural fire protection associations. The budget includes program increases of $1.6 million to purchase replacement vehicles for the BIA fire program and $1.5 million to cover utility costs for the Alaska Fire Service's leased space. The budget includes $20.4 million for Burned Area Rehabilitation, a $1.5 million increase to address greater post-fire rehabilitation needs caused by the 2015 and 2016 fire seasons; and $10.0 million for Facilities Construction and Deferred Maintenance, a $3.6 million increase to address the deferred maintenance backlog.

The 2017 budget request for the Central Hazardous Materials Fund is $13.5 million, $3.5 million above 2016, to fund the remedial design for the Red Devil Mine cleanup in Alaska. The 2017 request for Natural Resource Damage Assessment and Restoration is $9.2 million, $1.5 million above 2016 to increase restoration activities.

The 2017 budget proposes $111.5 million for the appropriated portion of the Department's Working Capital Fund, $44.4 million above 2016. The majority of the increase, $24.7 million, continues cybersecurity remediation in the wake of the serious cyber intrusions experienced during 2015. Other increases include: $10.2 million to support the Department's multi-year effort to implement requirements identified under the Digital Accountability and Transparency Act, known as the DATA Act, and monitor compliance; $5.2 million for the Department's Office Consolidation Strategy; $2.6 million to fund Federal Information Technology Acquisition Reform Act coordination and reporting activities for the Department; $1.0 million for Cultural and Scientific Collections; and $702,000 for Service First activities.

LEGISLATIVE PROPOSALS

The 2017 President's budget includes a suite of legislative and offsetting collection proposals affecting spending, revenues, and available budget authority that require action by the congressional authorizing committees. These mandatory proposals address a range of administration priorities, from investing in high-priority conserva-

tion and recreation programs to achieving a fair return to the American taxpayer from the sale of Federal resources and reducing unnecessary spending. The 2017 budget includes seven spending proposals with an estimated $18.0 billion in outlays over the next decade. This spending is partially offset by revenue and savings proposals to reduce outlays from the Treasury by an estimated $4.5 billion over the next decade.

Gulf of Mexico Energy Security Act and the Coastal Climate Resilience Program.—The administration is committed to ensuring American taxpayers receive a fair return from the sale of public resources and taxpayers throughout the Country benefit from the development of offshore energy resources owned by all Americans. The Gulf of Mexico Energy Security Act of 2006 opened some additional areas in the Gulf of Mexico for offshore oil and gas leasing, while maintaining moratoria on activities east of the Military Mission Line and within certain distances from the coastline of Florida. The Act provides that 37.5 percent of Outer Continental Shelf revenues from certain leases be distributed to just four coastal States—Alabama, Louisiana, Mississippi, and Texas—and their local governments based on a complex allocation formula. The administration proposes to repeal GOMESA revenue-sharing payments to these select States from Gulf of Mexico oil and gas leases, which are set to expand substantially starting in 2018.

More than half of the savings, $2.0 billion, from the repeal of GOMESA revenue sharing payments to States will be redirected to a new Coastal Climate Resilience Program to provide resources for at-risk coastal States, local governments, and their communities to prepare for and adapt to climate change. A portion of these program funds would be set aside to cover the unique impacts of climate change in Alaska where some native villages are so threatened by rising seas, coastal erosion, and storm surges, that they must prepare for potential relocation.

Historic Preservation Fund.—The budget includes a legislative proposal to extend the authority to deposit $150.0 million in receipts from offshore oil and gas revenues annually into the Historic Preservation Fund.

Bureau of Indian Affairs Contract Support Costs.—The budget includes a legislative proposal to reclassify funding for the existing Contract Support Costs program from discretionary to mandatory beginning in fiscal year 2018. The budget proposes to adjust the discretionary budget caps to reflect the reclassification to mandatory funding. New contract support cost estimates will be provided on a 3-year cycle as part of the reauthorization process.

POWER+ Accelerate AML Distribution for Mine Cleanup and Economic Recovery.—The budget proposes to allocate a portion of the remaining unappropriated balance of the Abandoned Mine Lands Fund to target the cleanup and redevelopment of AML sites and AML coal mine polluted waters in a manner that facilitates sustainable revitalization in economically depressed coalfield communities. The proposal will provide $1.0 billion over 5 years to States based on AML program and economic eligibility factors—such as the unemployment rate of coal mining regions—and remaining priority coal problems, including abandoned mine drainage, where reclamation linked to job creating economic development strategies will help revitalize impacted communities.

United Mineworkers of America Pension Reform.—The budget proposes to better provide for retired coal miners and their families by revising the formula for general fund payments to the 1993 UMWA Health Benefit Plan. The new formula will consider all beneficiaries enrolled in the plan as of enactment, as well as those retirees whose health benefits were denied or reduced as the result of a bituminous coal industry bankruptcy proceeding commenced in 2012. Additionally, the proposal will transfer funds through the Pension Benefit Guaranty Corporation to the trustees of the 1974 UMWA Pension Plan to ensure the plan's long-term solvency. The plan, which covers more than 100,000 mineworkers, is underfunded and approaching insolvency. The new formula will provide an additional $375.0 million to the UMWA in 2017 and $4.2 billion over 10 years.

Land and Water Conservation Fund.—The budget proposes $900.0 million in combined current and mandatory funding in 2017, and starting in 2018, the budget proposes permanent authorization of $900.0 million in mandatory funding for LWCF programs in the Departments of the Interior and Agriculture. During a transition to mandatory funding in 2017, the budget proposes $425.0 million for mandatory funding and $475.0 million for current funding, to be shared by Interior and Agriculture.

National Parks Centennial Act.—The budget proposes enactment of legislation, the National Park Service Centennial Act, to honor the Park Service's 100th anniversary. The Act specifically authorizes the following: $100.0 million a year for 3 years for the Centennial Challenge to leverage private donations; $300.0 million a year for 3 years for NPS deferred maintenance; and $100.0 million a year for 3

years for a Public Lands Centennial Fund, which will competitively allocate funds for projects on public lands to enhance visitor services and outdoor recreation opportunities, restore lands, repair facilities, and increase energy and water efficiency. The availability of mandatory funding to address deferred maintenance and other conservation projects will allow NPS to plan ahead more efficiently to achieve significant results. Stable and predictable funding streams will allow projects to be appropriately scheduled and phased for more effective project delivery and completion. The proposal includes the authority to collect additional camping or lodging fees, and funds from purchases of the lifetime pass for citizens 62 years of age or older. Receipts for this Second Century Fund will be matched by donations in order to fund visitor enhancement projects. The impact of this new revenue source is estimated at $40.4 million in 2017. Also included is a proposal to establish a program to allow a Visitor Services Management Authority to award and manage contracts for the operation of commercial visitor services programs and activities.

Federal Land Transaction Facilitation Act.—The budget proposes to reauthorize this Act which expired on July 25, 2011, to allow lands identified as suitable for disposal in recent land use plans to be sold using this authority. The sales revenue will be used to fund the acquisition of environmentally sensitive lands and administrative costs associated with conducting the sales.

Recreation Fee Program.—The budget proposes legislation to permanently authorize the Federal Lands Recreation Enhancement Act, authorized through September 30, 2017. The program currently brings in an estimated $335 million in recreation fees annually under this authority that are used to enhance the visitor experience on Federal land recreation sites.

Federal Oil and Gas Reforms.—The budget includes a package of legislative reforms to bolster administrative actions to reform management of Interior's onshore and offshore oil and gas programs, with a key focus on improving the return to taxpayers from the sale of these Federal resources and on improving transparency and oversight. Proposed statutory and administrative changes fall into three general categories: advancing royalty reforms, encouraging diligent development of oil and gas leases, and improving revenue collection processes. Collectively, these reforms will generate roughly $1.7 billion in revenue to the Treasury over 10 years, of which $1.2 billion will result from statutory changes. Many States also will benefit from higher Federal revenue sharing payments as a result of these reforms.

Palau Compact.—On September 3, 2010, the U.S. and the Republic of Palau successfully concluded the review of the Compact of Free Association and signed a 15-year agreement that includes a package of assistance. The budget assumes authorization of mandatory funding for the Compact in 2017 to strengthen the foundations for economic development in Palau by developing public infrastructure and improving healthcare and education. The cost for this proposal for 2017–2024 is $149.0 million.

Payments in Lieu of Taxes.—The budget proposes to extend PILT mandatory funding for an additional year with the current PILT payment formula based on the amount of Federal land within an eligible unit of local government, its population, and certain other Federal payments the local government may receive. The cost of a 1 year extension of the PILT program is estimated to be $480.0 million in 2017.

Reclamation of Abandoned Hardrock Mines.—The budget proposes to create an Abandoned Mine Lands Program for abandoned hardrock sites financed through a new AML fee on hardrock production on both public and private lands. The fee is estimated to generate $1.8 billion through 2026 to reclaim the highest priority hardrock abandoned sites on Federal, State, tribal, and private lands.

Reform Hardrock Mining on Federal Lands.—The budget proposes to institute a leasing program under the Mineral Leasing Act of 1920 for certain hardrock minerals, including gold, silver, lead, zinc, copper, uranium, and molybdenum, currently covered by the General Mining Law of 1872. Half of the receipts will be distributed to the States in which the leases are located and the remaining half will be deposited in the U.S. Treasury. The proposal is projected to generate revenues to the U.S. Treasury of $80.0 million over 10 years, with larger revenues estimated in following years.

Return Coal Abandoned Mine Land Reclamation Fees to Historic Levels.—The budget proposes legislation to modify the 2006 amendments to the Surface Mining Control and Reclamation Act, which lowered the per-ton coal fee companies pay into the AML Fund. The proposal would return the current fee of 28 cents per ton of surface mined coal to 35 cents a ton, the same level companies paid prior to the 2006 fee reduction. The additional revenue, estimated at $258 million over 10 years, will be used to reclaim high priority abandoned coal mines and reduce a portion of the estimated $6.0 billion needed to address remaining dangerous coal AML sites nationwide.

Termination of AML Payments to Certified States.—The 2017 budget proposes to discontinue unrestricted payments to States and tribes certified for completing their coal reclamation work. This proposal terminates all such payments with estimated savings of $520.0 million over the next 10 years.

Termination of EPAct Geothermal Payments to Counties.—The 2017 budget proposes to repeal Section 224(b) of the Energy Policy Act of 2005 to permanently discontinue payments to counties and restore the disposition of Federal geothermal leasing revenues to the historical formula of 50 percent to the States and 50 percent to the Treasury. This results in estimated savings of $41.0 million over 10 years.

Bureau of Land Management Foundation.—The budget proposes to establish a congressionally chartered National BLM Foundation to leverage private funding to support public lands, achieve shared outcomes, and focus public support on the BLM mission.

National Foundation for American Indian Education.—The budget proposes appropriations language enabling the Secretary to reactivate a foundation created by Congress in 2000 to generate private donations in support of the mission of the Bureau of Indian Education. The proposal will allow the foundation to start anew to obtain nonprofit tax exempt status, with a new Board of Directors focused on making the foundation a successful fund raising entity.

Migratory Bird Hunting and Conservation Stamp Act—Duck Stamp.—The budget includes a legislative proposal to provide limited authority to increase the price of a Duck Stamp, with the approval of the Migratory Bird Conservation Commission, to keep pace with inflation.

Wildland Fire Suppression Disaster Cap Adjustment.—The budget proposes to amend the Balanced Budget and Emergency Deficit Control Act to establish a new framework for funding Fire Suppression Operations to provide stable funding, while minimizing the adverse impacts of fire transfers on the budgets of other programs. Under this new framework, the 2017 budget request covers 70 percent of the 10-year suppression average within the domestic discretionary cap or $276.3 million for the Department of the Interior. This base level ensures the cap adjustment will only be used for the most severe fire activity as 2 percent of the fires incur 30 percent of the costs. Only extreme fires that require emergency response or are near urban areas or activities during abnormally active fire seasons—which rightly should be considered disasters—will be permitted to be funded through the adjustment to the discretionary spending limits. For 2017, the request for the budget cap adjustment for the Department is $290.0 million. The cap adjustment does not increase overall spending, as the ceiling for the existing disaster relief cap will be reduced by the same amount as the increase required for fire suppression.

OFFSETTING COLLECTIONS AND FEES

Bureau of Ocean Energy Management Risk Management Fee.—The budget proposes appropriations language for a new cost recovery fee to recoup funds for services rendered by the Risk Management Program. The program is critical to protecting the American taxpayer from becoming financially responsible for liabilities associated with oil and gas and renewable energy operations on the Outer Continental Shelf. This proposed fee will generate an estimated $2.9 million annually, fully offsetting the requested risk management programmatic increase in 2017.

Bureau of Safety and Environmental Enforcement Inspection Fee.—The budget includes appropriations language modifying and expanding the enacted inspection fee language to clarify that facilities subject to multiple inspections are subject to additional fees for each inspection. The BSEE estimates the inspection fees will generate $65.0 million in 2017.

Fee for Onshore Oil and Gas Inspections.—Through appropriations language, Interior proposes to implement inspection fees in 2017 for onshore oil and gas activities subject to inspection by BLM. The proposed inspection fees are expected to generate $48.0 million in 2017, level with 2016. The fees are similar to those already in place for offshore operations and will support Federal efforts to increase production accountability, safety, and environmental protection.

Grazing Administrative Fee.—The budget proposes a grazing administrative fee to offset costs to administer the program. The budget proposes to implement a fee of $2.50 per animal unit month through appropriations language on a pilot basis. Interior estimates the fee will generate $16.5 million in 2017 to support the Rangeland Management program at the 2016 level. During the period of the pilot, BLM will work to promulgate regulations to continue this cost recovery fee administratively, once the pilot expires.

National Wildlife Refuge Damage Cost Recovery.—The budget includes appropriations language to authorize the Fish and Wildlife Service to retain recoveries for the cost to restore or replace damaged habitat from responsible parties.

CONCLUSION

Thank you for the opportunity to testify on the President's 2017 budget request for the Department of the Interior. This budget is responsible, and proposes to maintain core capabilities with targeted investments to advance the stewardship of lands and resources, renewable energy, oil and gas development and reforms, water conservation, youth employment and engagement, and improvements in the quality of life in Indian communities. I thank you again for your continued support of the Department's mission. I look forward to answering questions about this budget. This concludes my written statement.

Senator MURKOWSKI. Thank you, Secretary.

Mr. Connor or Ms. Sarri, were either of you prepared to provide an opening statement or should we just go to questions?

Secretary JEWELL. Just questions.

Senator MURKOWSKI. Okay, thank you.

KING COVE

Let me start off, Madam Secretary, as I mentioned to you in my opening statement, and as we discussed in the Energy Committee hearing last week, my ongoing concern about the situation in King Cove, the promise that you had made to me and to the committee to do what you could to help the people of King Cove. As I noted, I do not see anything in the President's budget that would help to facilitate that promise.

You have indicated that the report that you had requested has been completed. I asked if that would be released. You indicated that it would be. Can you give me an indication as to when we might expect that?

Secretary JEWELL. I did ask my Chief of Staff, as you know, an Alaskan, to follow up on that, which he is doing. One complication I did not realize last week is it is actually the Army Corps' report, so we will need to work with them on posting it. But Tommy is working through it, and we will make sure we get it to your office as soon as we are able to do that.

Senator MURKOWSKI. We conveniently have a hearing with the Army Corps this afternoon, so perhaps I will have a chance to ask them that question at that point in time.

Are you able to provide me any details of the report at this point in time?

Secretary JEWELL. I am happy to go through just a high-level overview. As I expressed in the letter from July, three alternatives were identified in that report. As we discussed, and I know we differ on this point, I do not support a road through the refuge because of the extraordinary damage we believe——

Senator MURKOWSKI. I understand that. If what you are telling me is that what we will see in this report is what we have seen before, then I would rather not take the subcommittee's time to have you detail that right now, because, as you know, that was unacceptable not only to me before, but it was unacceptable to the people of King Cove.

WILDLIFE MANAGEMENT

So we will continue this discussion, but let me move to another issue that is equally unsettling to the people of Alaska right now. That is the proposed regulations from the Park Service and Fish and Wildlife on the proposal to govern wildlife management and procedures to close areas that are currently open to hunting and fishing in the State.

These are controversial because they call into question State management authority over fish and game, over resources within their borders. This is contrary and inconsistent with the Alaska National Interest Lands Conservation Act (ANILCA), a statute which gives the State of Alaska and the Department of Fish and Game management inside our preserves, our refuges, and our parks. Do you believe that the State of Alaska has the right to manage its wildlife within the borders of the State?

Secretary JEWELL. Certainly, Senator Murkowski, I believe the State has the right to manage its wildlife. I also, though, say that the Fish and Wildlife Service and the Park Service must operate within the congressional mandates they have. What they have struck in this is really around non-subsistence take of predators, things like——

Senator MURKOWSKI. Let me ask about that subsistence take, because I know you have said that these regs do not impact subsistence. But since the amount of game that is available for natives around the State is definitely impacted by the take of wildlife by predators, how can you suggest that somehow the subsistence rights of our native people are not impacted by these new predator control policies?

A bigger question is whether you think it is proper for the Federal Government to effectively reverse the State Board of Game decisions, because that is effectively what we are seeing here. From Alaska's perspective, we have ANILCA that says the State has the right to manage. Now you have the Federal Government, the Park Service, the Fish and Wildlife Service, saying, yes, except for when we think that what we are doing is more appropriate.

It is a violation of what has been set out not only within ANILCA but within the United States Constitution. I hope you appreciate the anxiety that has been created right now in the State because of these proposed regulations.

I know you had a discussion with Congressman Young about this yesterday. You know where he is coming from, clearly. I think you know where myself and Senator Sullivan are coming from on it.

We have a collision going on right now between your Federal agencies with the Park Service and with the Fish and Wildlife Service stepping in and telling a State that, effectively, we do not think that the State can manage what by Constitution and Federal law we have given you that authority to manage.

That is more of a rhetorical question for you, but you need to understand how significant an issue this has become in the State of Alaska. It may be right up there with the fight on the Arctic National Wildlife Refuge (ANWR) and King Cove. It may surpass them all, because this truly does go to a State's rights issue.

I am out of my 6 minutes already, so I am going to turn to my ranking member, but we will have time for multiple rounds here.

Senator Udall.

Senator UDALL. Thank you, Madam Chair.

Several Senators on my side have urgent hearings to actually chair, so I am going to defer my questions and call on Senator Leahy to ask questions at this point. Thank you very much, Madam Chair.

Senator LEAHY. Thank you, Madam Chair.

Thank you, Senator Udall.

Secretary Jewell, as I mentioned to you earlier, it is great to see you here. I was thinking, as we were looking at the picture, when you were in Vermont this time for the Leahy Environmental Summit, I am glad you were able to enjoy a day of snowshoeing in Vermont's Green Mountains, something both my wife and I love to do at our home.

But you know what? Last year, you had about 6 feet of snow in Vermont's backcountry. If you were there today, the grass would be sticking up through the little bit of snow on the ground. At our home, we have not been able to snowshoe or cross-country ski. It has just been strange, so let me ask you a couple questions.

I understand you got an earful on the House side yesterday. Members blamed you and the administration for all sorts of harm to the States, almost suggesting you personally control the price of fossil fuels. Oil just went up, so I am sure they are all going to call you this morning and give you credit for that, too.

But I want to praise you for your foresight and leadership in addressing this problem. We have an obligation not only to current taxpayers, but to future generations to see that all Federal programs deliver a fair return to American taxpayers. That can be coal mining activity, offshore oil exploration, logging, even our Federal grazing permits. The price to extract these natural resources should not be so heavily subsidized that it encourages damage to our Federal lands or wildlife or causes, as it could, permanent damage to the taxpayers of this country.

COAL LEASING PROGRAM REVIEW

My question is, does your proposed fiscal year 2017 budget provide the resources to complete a full evaluation of the coal leasing program? Will it include a cost-benefit analysis to consider, among other things, carbon emissions and medium- and long-term impacts of climate change? Could you do a similar valuation on oil exploration?

Secretary JEWELL. Thank you very much, Senator Leahy. It was a pleasure to be in your State.

I will say, a year ago, when I was in Senator Murkowski's State, the green grass was poking through, because they did not have snow.

We are launching a programmatic environmental impact statement on the coal program. It has not been done for 30 years. It is very evident from a Government Accountability Office (GAO) report and our own Inspector General report, there are not only questions about the adequacy of payment to the taxpayers, but also that it does not take into account the impact of climate change.

The assessment we will launch with this programmatic environmental impact statement (PEIS) will take into account climate change and the impact broadly of the coal program, as well as the returns and the royalties.

I cannot get it done within the time I am here. It is too complicated. It takes too long. We will have an interim report, which will scope out exactly what will be done, with a timeline through which we intend to complete that work.

I have not, at this point, contemplated a similar program on the oil and gas activities. Coal has been criticized, as I mentioned, by our own Inspector General and the GAO, so I am prioritizing that.

WIND ENERGY AND BATS

Senator LEAHY. There are other programs that you have for development of renewable energy projects. You have wind energy on Federal land. I wrote to the department last week on Bat Week. I will point out that I don't talk about fictional Batman. I talk about real bats and what they do helping with our crops, keeping down pests, and other all these other things.

If you have wind energy, you also have this question of bat and bird interaction, migrating birds, bats, and so on. If additional resources are available, what could your department do to, one, make progress on wind energy, but also in a way that would help with flights of birds and flights of bats, all of which are so important to our whole ecosystem.

Secretary JEWELL. Thank you very much for pointing out the importance of bats, in particular, as pollinators, and they are in real trouble right now because of White-Nose Syndrome, which you are well aware of.

I have seen through the USGS the work we are doing with the wind energy industry and others on early warning systems to detect when there are avian species like bats and birds in the area, that will proactively shutdown wind turbines. It is a relatively modest amount, and I would say that if we had more, we could probably accelerate that work. Some of it is being paid for by industry, which is also appropriate, to reduce those impacts. And it is a concern of the Fish and Wildlife Service.

Where we site these wind energy projects on public lands, it does take into account the migration patterns and the potential impact.

But with more resources, we certainly could do more.

Senator LEAHY. Let me and my office help you with that, and also, help you with industry, because people are concerned, as you know. And I know you are.

TEMPORARY EMPLOYEES

One last question. Your department, like others, relies on temporary employees for programs we have funded either through partnership agreements or the discretion of Congress. I worry sometimes these temporary employees are on permanent things.

For example, at the risk of being at all parochial in this committee of all committees, we have the Lake Champlain sea lamprey control. The Fish and Wildlife Service has run this continuously now for 25 years. Some of the employees are classified as temporary. We always have money in there for this program.

I worry these temporary—they have to be experts. If they are temporary, they say, I can get a job somewhere else, and they leave and we lose all the expertise. How do we make these people permanent?

Secretary JEWELL. Madam Chair, do you mind if I respond? I know we are over time.

Senator LEAHY. I am sure she has similar things in Alaska, for that matter.

Secretary JEWELL. Well, quickly, I will say our budget does support an increase for the wildlife refuge system. That would enable us to take some positions that are temporary and make them permanent.

Specific to the sea lamprey, we actually have four positions that are supported by the State Department because of the cross-border issues with Canada. Those, because they are not funded by our department, are term positions, and, are therefore, temporary. We certainly would be willing to look at a more permanent authorization for them.

There is a blend of the Fish and Wildlife budget being lower in the past, and we asked for increases, but also part of it is being supported by the State Department. We appreciate the challenge.

Senator LEAHY. Thank you.

Thank you, Madam Chair.

Senator MURKOWSKI. Senator Cassidy.

Senator CASSIDY. If one of my colleagues has a hearing to chair, they can go ahead.

Senator REED. I have a hearing. Thank you. Very gracious.

Senator MURKOWSKI. Senator Reed.

Senator REED. Thank you, Madam Chairman. Let me begin by commending you and your colleague for your great leadership. Thank you very much.

BLACKSTONE NATIONAL HISTORIC PARK

Madam Secretary, thank you. One of the major developments in Rhode Island, as you know, is the creation of the Blackstone National Historic Park. Thank you, because you were there with us kayaking along the Blackstone River. We thank you for that.

The way it is envisioned, it is a partnership park. The existing Blackstone Valley Heritage Corridor, a federally funded entity, is going to work in partnership with the National Park Service to develop the plan to implement it and to do all those things.

But there is a growing concern, and I would like your comments about how you balance these two entities, so that they have adequate resources to continue their jobs and one does not suffer at the expense of the other as we go forward and coordinate their operations. Could you comment on that, Madam Secretary?

Secretary JEWELL. I will make a quick comment. We have just slightly above the funding recommended for 2017 versus 2016. For 2017, it is $932,000. In 2016, the funding with the National Heritage Areas was $501,000. Once we get the 2017 amount, the Park Service will work closely with the National Heritage Area to figure out what the appropriate split is.

I certainly understand how important that funding is, and I will pass that along to the Park Service.

Senator REED. Thank you. I think both entities now have to continue at an appropriate pace. At some point, there might be a transition point where the Park Service accumulates more support and activities as we go forward. But at this point, I think it is important to keep both those entities empowered, resourced, and working together.

Another issue with respect to the park, because it is such a major undertaking, the first one in our State, and we are all looking forward to its successful implementation, one of the first sites is likely to be Slater Mill, which is really the beginning of the Industrial Revolution in the United States. It is the first real factory in America.

That is likely to be the first component of the park. Do you have any notion about how that transfer will be completed in this fiscal year, the resources available, and sort of anything else you might want to add?

Secretary JEWELL. I have been to the Slater Mill site. It is extraordinary, and compliments to the community on that. I have not spoken with the Park Service specifically about plans for Slater Mill, so let me get back to you on the record for that one.

[The information follows:]

SLATER MILL

The National Park Service (NPS) is working closely with the Old Slater Mill Association to acquire the Historic Slater Mill campus. The board of the non-profit has agreed to the property transfer, which will make this property the anchor and manageable unit of the new park. The estimate for the transfer of the property is spring 2017. Currently, title work is underway.

Once the property is owned by the NPS, it is anticipated that the Old Slater Mill Association will continue to offer high quality programming at Slater Mill and remain an active partner in the management of the national park property. The NPS will use its current budget to support that programming, as well as preserve and maintain the historic structures. Of the $926,000 budget this fiscal year, the park retained $425,000 and transferred $501,000 to the national heritage area. This $425,000 is the core of the resources available for the new park, though it is also anticipated that the NPS will fund one-time projects such as investing in waysides and signs within the next year.

Senator REED. Thank you, Secretary, and your staff.

And I want to thank the chairwoman again, and particularly thank Senator Cassidy for his graciousness. Because I have to get back to another hearing, I will just wish you well.

Thank you.

Senator MURKOWSKI. So, theoretically, that was the majority's turn. We should go to this side, but Senator Cassidy was gracious, so I do not know, we will ask you, Senator Cassidy.

Senator REED. We all vote for Senator Cassidy.

Senator MURKOWSKI. Thank you.

OIL AND GAS RULEMAKING

Senator CASSIDY. Secretary Jewell, when you put out the well control rule and the Bureau of Land Management (BLM) venting rule, I am told that you used $80 oil and $4 natural gas to justify the economics. Is that correct?

Secretary JEWELL. I do not know specifically what was used in the economic assumptions. That probably is correct, given the timing that it was done, but we can get back to you and confirm that.

Senator CASSIDY. Is it fair to say that probably the economics of that are now different because of the lower prices?

Secretary JEWELL. To the extent the economics are dependent on oil prices, it would be, but oil prices, of course, are a commodity and they fluctuate from $100 to below $30 a barrel. So, I do not know how much that specifically impacts the cost of the well control rule. It certainly impacts the industry.

Senator CASSIDY. Now, when it impacts the economics of the industry, it is fair to say that a well that could be economically developed at $80 a barrel probably cannot be at $30. That just goes without saying. There is a marginal cost to compliance with regulation, and if that marginal cost is on $30 as opposed to $80, it is going to make a difference in economics. I think that goes without saying.

Secretary JEWELL. Well, if I can just say there are a lot of things that will impact the economics. The cost of the rig, the cost to drill, the risk, and all of those things are factored in.

Senator CASSIDY. Absolutely.

Secretary JEWELL. I used to do this for a living, so I certainly understand that.

Senator CASSIDY. I get that. But, marginal cost of regulation is a cost.

WELL CONTROL RULE

Now, according to a Wood Mackenzie report, the well control rule, the cost of compliance, could cause a decline of 55 percent in exploratory wells by 2030. I just say that for the record. Others may fuss with that.

But at the same time, it is fair to say that there is some cost associated with the well control rule.

That said, one of the concerns that has been raised with me regarding the well control rule is that the Bureau of Safety and Environmental Enforcement (BSEE) is promulgating this, and they are promulgating it, but it apparently violates a congressional mandate that specifically is the National Technology Transfer and Advancement Act, the NTTAA, which bars the use of government unique technical standards in lieu of voluntary consensus standards. Again, I have a document here that goes through the statement of it.

Any thoughts about that? Because it does seem, what I have heard about the well control rule is being given kind of ex cathedra as opposed to from a voluntary consensus methodology.

Secretary JEWELL. I have never heard of the Act you referenced, but I am confident through our solicitors that everything we are doing in regard to the well control rule is within our rights and consistent with what we believe we must do for the safe and responsible development of offshore resources, particularly in the wake of the *Deepwater Horizon* spill.

Senator CASSIDY. It isn't insofar as—believe me, I care about the *Deepwater Horizon.* It is not insofar as regulations are not required but rather that BSEE is supposed to show that voluntary consensus standards are impractical. I am not sure that it is clear that the voluntary consensus standards are impractical, and I am not sure that it has been shown.

So, it is not so much the regulation should not be promulgated but rather the technique should be first the consensus standards, and then only, again, my term, if you will, is ex cathedra being prescribed without the consensus standards being formed.

Obviously, that might be something a little technical, but if you could address that for the record, I would appreciate that.

Secretary JEWELL. We are happy to follow up.

Senator CASSIDY. Related to that, and again on the well control rule, is that, clearly, if we are going to have an impact upon the ability of oil wells to be drilled, that is going to affect the energy supply in the United States. I am told that under Executive Order 13211, from May 18, 2001, such things require a statement of energy effects.

BSEE has denied that there is an impact upon energy supply from these regulations, which seems a little crazy. But nonetheless, if they do, it means that they have another reporting requirement.

Any thoughts about that? It just seems so self-evident that if you are going to have an impact upon the supply of oil and gas that you are going to have an energy effect. That may be a little technical for this conversation. I do not know if you are prepared to comment on that.

Secretary JEWELL. I will just comment briefly that the well control rule really codifies many of the practices currently in place in the Gulf that were addressed after the *Deepwater Horizon* spill. I do not support the notion that the regulation itself would impact energy supply. I am happy to get back to you for the record.

[The information follows:]

IMPACT OF THE NTTAA ON THE DEVELOPMENT OF THE WELL CONTROL RULE

BSEE's promulgation of the rule is consistent with the NTTAA's requirement that agencies use technical standards that are developed or adopted by voluntary consensus standards bodies rather than government-unique standards, except where inconsistent with law or impractical. BSEE expressly proposed to incorporate the following voluntary consensus technical standards in its rule:

—American Petroleum Institute (API) Standard 53 (Blowout Prevention Equipment Systems for Drilling Wells);
—American National Standards Institute (ANSI)/API Specification (Spec.) 11D1 (Packers and Bridge Plugs);
—ANSI/API Spec. 16A (Drill-through Equipment);
—API Spec. 16C (Choke and Kill Systems);
—API Spec. 16D (Control Systems for Drilling Well Control Equipment and Control Systems for Diverter Equipment);
—ANSI/API Spec. 17D (Design and Operation of Subsea Production Systems—Subsea Wellhead and Tree Equipment); and
—ANSI/API RP 17H (Remotely Operated Vehicle Interfaces on Subsea Production Systems).

The NTTAA and the associated implementing guidance in Office of Management and Budget (OMB) Circular A–119 permit an agency to include in its regulations a voluntary consensus standard "in whole [or] in part . . . ." (OMB Circular A–119, at p. 3). Thus, the NTTAA does not require that BSEE incorporate every provision of each standard. For example, BSEE has excluded from its regulations the API Standard 53 provision that authorizes offshore operators to "opt-out" of the requirement to use dual shear rams for BOPs on floating facilities. BSEE believes that a decision to "opt out" should be based on a risk assessment subject to oversight.

In addition, OMB explains that the NTTAA:

> [D]oes not preempt or restrict agencies' authorities and responsibilities to make regulatory decisions authorized by statute. Such regulatory authorities and responsibilities include determining the level of acceptable risk and risk-management, and due care; setting the level of protection; and bal-

ancing risk, cost, and availability of alternative approaches in establishing regulatory requirements. (OMB Circular A–119, at p. 25).

BSEE's proposed variations from the industry standard do not indicate that the bureau is seeking to use government-unique standards in its regulations. Rather, BSEE's non-incorporation of portions of industry standards is fully consistent with the NTTAA because OMB has clarified that agencies may incorporate consensus standards in whole or in part in their regulations. Additionally, OMB has clarified that the NTTAA does not preempt or restrict an agency's authority to make regulatory determinations about the level of acceptable risk and risk-management, and due care, setting the level of protection, and balancing risk and cost. BSEE's incorporation of less than all of API Standard 53 is based upon these principles and is not inconsistent with the NTTAA.

The potential impacts of the well control rule on oil and gas supplies:

BSEE received comments that the initial Regulatory Impact Analysis did not account for asserted impacts of the proposed regulation on national energy security. These comments appear to assume that this rulemaking will cause a reduction in domestic oil production, thereby implicating the requirements of Executive Order 13211 applicable to agency actions that significantly affect the Nation's energy supply, distribution, or use. These comments suggested that the rule would weaken national energy security by reducing domestic oil production and increasing reliance on foreign oil. BSEE does not agree with this comment. BSEE's own analysis indicates that the net effect of the final rule on the oil and gas industry would be positive (*i.e.,* the potential benefits exceed the potential costs). This does not support the assumption that the rule would precipitate a reduction in domestic oil production. The regulations consist of an envisioned level of safety derived from numerous post-*Deepwater Horizon* studies and existing industry standards. The regulations also allow for alternative methods to achieve the envisioned level of safety. There is no reason to conclude that this approach will adversely affect U.S. energy production. Technological advancements and variable market factors, such as the price of oil, which are unrelated to the requirements of the proposed rule, are likely to be the most important factors to affect future domestic oil production.

Senator CASSIDY. Please. And I will say that, speaking to folks, they actually feel like the initial rules that came out after the Macondo were actually fairly reasonable. It is those that were proposed that would go beyond it that are again being given almost, in effect, by fiat, not with consensus standards.

According to at least one consultant, it is going to have a significant impact upon the drilling of exploratory wells.

So we will fashion these for the record, and look forward to your reply.

Secretary JEWELL. If I could just say briefly, there was a lot of industry input after the draft rule. Those have been taken into account, and I believe you will see significant changes from the draft rule to the final when it is released.

Senator CASSIDY. Sounds great.

LAND BUY-BACK PROGRAM

On the Land Buy-Back Program, what is the cost basis for the sale of the land? Does that include the mineral rights that might be beneath it, the grazing rights, et cetera?

Secretary JEWELL. Mike.

Mr. CONNOR. We are not typically acquiring land through the Land Buy-Back Program with mineral rights on it. We are right now excluding——

Senator CASSIDY. I thought this is where the Indian tribes were allowed—the Native American tribes were allowed to buy land back from the United States. Did I misunderstand that program?

Mr. CONNOR. This is one where resources are provided to acquire these fractionated interests in lands and restore to tribal ownership. So there are significant tracks out there that do not have mineral interests. We are doing appraisals of those lands and restoring those to tribal——

Senator CASSIDY. I see. So, those typically do not have mineral and grazing rights associated with them.

Mr. CONNOR. That is correct.

Secretary JEWELL. Just to clarify, they are not Federal lands. Typically, they are in fractionated private ownership consolidated for the tribes.

Senator CASSIDY. Okay. I yield back. Thank you.

Senator MURKOWSKI. Senator Tester.

Senator TESTER. Thank you, Madam Chair.

LAND AND WATER CONSERVATION FUND

I, too, want to thank Senator Cassidy for his courtesy. That happens seldom around here, so we thank you for that very, very much, even though I was not the beneficiary directly.

Secretary Jewell, thank you for being here. I want to talk about the Land and Water Conservation Fund for a second. We have been over the numbers before. You know the impact it has on Montana's overall economy—$5.8 billion in consumer spending in a State of 1 million people. Seventy percent of Montana businesses list public access as a major reason they do business in our State.

In 1978, this fund was funded at $900 million—1978, the year I graduated from college, a long time ago. Now we are finally back up to $900 million, $475 million discretionary, $425 million mandatory. I appreciate that.

Back in 1978, it was supposed to be funded by offshore oil revenue. When we had this debate on the Senate floor, people said there was lots of money in this account, lots of money in this account. It was my understanding it flows into the general fund.

The question for you is, do we need an offset for the Land and Water Conservation Fund? When it was set up in 1978, it was set up to be at $900 million, and somebody took that money and we never heard a word about offset back in those days.

Secretary JEWELL. There are people here with much more history on this body than I have. It was authorized at $900 million. It has fluctuated wildly, and less than half, I believe, has actually been appropriated, and the rest has been used for other purposes.

Senator TESTER. Was it appropriated at $900 million back then, do you know?

Secretary JEWELL. It was.

Senator TESTER. And it has been appropriated at that level a few times since then.

The reason I bring this up is because in my opinion at least these places are not going to be around forever. They might not be around in 10 or 20 years. When you are looking at proposals, what are you looking at when you utilize this fund money?

Secretary JEWELL. There is a stateside program, which is prioritized by States. That is very, very important. On the Federal programs, we really have a list that is far longer than what we are able to do for things like sportsman's access, critical parcels be-

tween pieces of public land that promote access, inholdings where it is costing us money to provide rights-of-way that would actually reduce our costs. There are a number of different things.

Senator TESTER. Does the $900 million bring you up to a point where you can address all of the requests?

Secretary JEWELL. No.

Senator TESTER. Half the requests?

Secretary JEWELL. No. It would just enable us to make progress. There is a much longer list of requests.

Senator TESTER. I appreciate you trying to get back to the $900 million figure. It actually should have been indexed so it would be more than that now, in my opinion. These are special ecosystems that are not going to be around much longer.

COAL LEASING PROGRAM REVIEW

I want to talk about the Federal coal program for a second. I believe in transparency. I believe in a fair return to the taxpayer. These public lands are owned by every citizen in this country, contrary to what some might say.

I think that it is critical that we get a fair return on those coal dollars. I think, and correct me if I am wrong, the last time there was an assessment done on Federal land, coal leasing was in the early 1980s. Is that correct?

Secretary JEWELL. It was 30 years ago. It was 1986.

Senator TESTER. Nineteen eighty-six, the year that I bought a brand-new Chevy pickup four-wheel drive, three-quarter ton for $12,000. That same pickup would cost around $38,000 now, by the way, because I am looking to trade it off.

But that aside, can you tell me, I think it is a good idea to do the research and it is a good idea to make sure we are getting a fair return, but this cannot go on forever. I mean, it has to be a date certain.

I have heard 3 years. Is 3 years a reasonable amount time to get this survey done? And, if it is, would you support legislation saying that?

Secretary JEWELL. I would support legislation putting a date certain. Three years, we believe, is as fast as we could do it. The program review done in the 1980s was longer than that. The pause on coal leasing extended longer than that, as a result.

I will be putting in place a date certain timeline when I leave, but that could be undone by a successor and I would welcome a clear timeline so we can complete this in a timely way.

GRAZING FEES

Senator TESTER. Okay, Madam Chairman brought up the Federal grazing fee. It was raised up to $2.11 in this budget, correct me if I am wrong, maybe it was not. Maybe it was done before that.

The point I want to make is this. There are some who want to transfer our Federal lands to our States. The amount of grazing fees that are charged by the States are much, much, much higher. And the private grazing fees are much higher than the State fees.

Could you talk about, because I do not know that a lot of people are talking about this—we have more cattle in Montana than we have people, by the way. Can you talk about the impact transfer-

ring these Federal BLM or Forest Service lands to States would have on grazing fees?

Secretary JEWELL. The impact would be dramatic. The Federal Government charges $2.11, which was set by Congress many years ago. While our budget asks for an administrative fee of $2.50, right now we cannot even cover 35 percent of our costs of administering the program.

Just to give you some examples, in your home State, the State charges $19.57 compared to the Federal Government's $2.11. In Colorado, it varies between $9 and $15.25. In Wyoming, it is $6.14. On private lands, it is $21, 10 times what the Federal Government rate is. That is pretty consistent.

I would say that for the grazing interests, people are getting an incredibly good deal on BLM lands right now. The increase we are talking about still would not even fully cover our costs just to administer the program.

Senator TESTER. Thank you very much. I look forward to working with you on this budget.

Thank you, Madam Chair.

Senator MURKOWSKI. Thank you, Senator Tester.

Senator Daines.

Senator DAINES. Thank you, Madam Chair.

Good to see you again, Secretary Jewell.

COAL LEASING PROGRAM REVIEW

Last week in the Energy Committee, I mentioned my concerns about the programmatic review and the pause on coal leasing. It is very troubling for many back home in Montana and for the Crow tribe. I think we need to be careful to not make producing Federal coal completely uneconomical.

That is a reality that is dangerously close under the current administration's moratorium on coal leasing, and if not inevitable, if our States and I think our tribes are left out of the process.

At last week's hearing, I asked about gathering input from the States and the tribes, and you mentioned six listening sessions the department has had, and that there is a very open process. Several tribal members and others who rely on these coal jobs to provide for their families for the revenues, for the general fund, expressed strong concern regarding potential administration actions at the listening session that was actually held in Billings, Montana. In fact, most present there expressed concern.

Yet the administration is moving forward with this programmatic review and a coal leasing moratorium. Quite frankly, I think there needs to be something more formal to allow the States and tribes and other stakeholders a more predictable and impactful seat at the table, like the Royalty Policy Committee, which actually you allowed to lapse in 2014. I think Congresswoman Lummis mentioned that yesterday in a hearing.

ROYALTY POLICY COMMITTEE

The question was, why did the agency allow the proposed rulemaking initiative to move forward when the Royalty Policy Committee, which was important—it has members from the States, from the tribes, from non-governmental organizations (NGOs), from

industry, the committee lapsed in 2014, a very important voice in this process. Why did we go forward with rulemaking initiatives when you allowed that committee to lapse?

COAL PROGRAM

Secretary JEWELL. Let me say a couple things, if I may. First, I will have to look into the committee lapsing, but royalty rates on the Federal coal program have not changed in 30 years, so I am not sure of the function of the committee.

There are minimum royalty rates set, and then a lot of exceptions that actually reduce the royalty rates. We have seen a real decline in revenue coming in from the coal program, and the decline in production is really due to economic factors like the switch to natural gas and a change in the interest in exports of coal, which I know the Crow tribe was interested in.

The bonuses over the last 10 years were about $.875 per ton. And in 2015, $.315 a ton, so the price is collapsing on coal due to market conditions.

ROYALTY POLICY COMMITTEE

Senator DAINES. Right. I understand the dynamic nature certainly of what is going on. I guess, it makes it in my opinion even more important—why wouldn't we want to have the States' voice, the tribes' voice, industries' voice, NGOs' voices there in a more formal process as far as their input goes, which was a key part of this Royalty Policy Committee, which lapsed in 2014?

Secretary JEWELL. I just had some more recent information handed to me.

The Royalty Policy Committee last met in 2008. The charter was renewed in 2010, but did not meet because of other events—*Deepwater Horizon,* after which the Minerals Management Service, was reorganized and created the Office of Natural Resources Revenue was created. The Royalty Policy Committee was set up to expire in 2012.

It was renewed as a potential vehicle for the Extractive Industries Transparency Initiative multi-stakeholder group, but the most recent charter expired in 2014, and our Office of Natural Resources Revenue did not feel it made sense to reestablish it.

But we are happy to look into that more for the record. That is as much information as I have right now.

Senator DAINES. The concern I hear back home is that we want to make sure the States' voices are heard in that process, that the tribes' voices are heard in that process, the industry voices are in that process, as well as NGOs. I think the stakes are perhaps much higher now than they might have been in the past and why it is so important.

I believe this policy needs to be reinstated. And I am concerned why rulemaking is going forward here without having that important body functioning, given I think the dynamics and the stakes are a lot higher today than they might have been in the past.

COAL LEASING PROGRAM REVIEW

Secretary JEWELL. Just to adjust a little bit, rulemaking is not what is happening. It is a programmatic and environmental impact statement, which is a review of the overall program. We absolutely will be listening to industry. We will be listening to tribes. We will be listening States, local stakeholders, local communities. People impacted by this on the ground will be a very robust part of this process, I promise you.

Senator DAINES. I appreciate Senator Tester's concerns voiced a little earlier about trying to get a 3-year date certain, in terms of this programmatic review. I have an amendment that I am trying to work to get bipartisan support on that to, again, deliver some certainty here in what is very much an uncertain process in many regards.

TRIBAL CONSULTATION

I want to pivot over and talk about the meaningful consultation with Indian tribes. The Crow tribe I do not think believes they have had meaningful consultation.

What does meaningful consultation look like to you, Secretary Jewell, because they are saying that they do not really feel like they have had a meaningful consultation.

Secretary JEWELL. I have not met with the Crow for probably 1.5 years, maybe a bit more. But, if they feel the consultation they had is not meaningful, please have them let us know, and we will make sure we are responsive.

I would say meaningful consultation is not necessarily reaching an agreement on a position a tribe necessarily wants, but it is making sure their position is known and heard. We have been committed to that throughout this administration.

Senator DAINES. As you know, their unemployment rate today is about 40 percent. The loss of these jobs takes the unemployment rate to north of 80 percent. It is devastating for the tribe.

Secretary JEWELL. I understand, and I know you understand, too, that the economics of coal are changing dramatically. What we are looking to do is not the cause of that. There is a multifaceted global market for coal that is, in fact, going down dramatically.

Senator DAINES. I would argue that the EPA power plan is having a tremendous impact right now in creating uncertainty there as well.

I understand the economic dynamics. The EPA power plan is probably the single most devastating impact right now on the coal business up there in Montana. Thank you.

Senator MURKOWSKI. Senator Daines, I appreciate you bringing up the issue, though, of tribal consultation. Secretary, I am going to turn to Senator Feinstein, but I would just like to put you on notice.

I have a large delegation of Alaskan Native leaders that are in Washington, DC, this week. Every single one of them is bringing up with me the breakdown that they are seeing with tribal consultation with the agency. So I will put that on your plate as well, and I can speak with you about specifics.

Senator Feinstein.

Senator FEINSTEIN. Thank you very much, Madam Chairman.

I just want to say, it is fortuitous you are also chairman of the Energy Committee, and the subject I want to bring up today is a bill that we have submitted for your consideration, and that is a California water bill, which would hopefully be part of a Western water bill.

I cannot express too strongly how serious this drought is for California. A lot of people have counted on El Niño. It may or may not bear real fruition, but the State has really had dramatic problems. Let me just give you a few.

We have 69 California communities that face significant water supply and water quality issues. In other words, most of them do not have water. We have lost $2.7 billion from the drought in just 2015. More than 1 million acres of California farmland have been fallowed in 2015. The drought has led to a loss of 35,000 permanent jobs in the State.

Land subsidence in the southern Central Valley has caused large areas to begin to sink because of overpumping groundwater, and it is sinking as much as 2 inches per month. As a result, bridges, aqueducts, and roads have begun to crack.

So, I would like to ask a couple questions of the Deputy Secretary on the subject. Deputy Secretary Connor, is it true that we have worked closely with Reclamation and your office in the drafting, redrafting, and amending of this bill?

Mr. CONNOR. It is absolutely true.

Senator FEINSTEIN. Deputy Secretary Connor, is it true that every amendment or suggestion, and there have been many, made by Reclamation and your office has been worked through and incorporated into the bill?

Mr. CONNOR. Senator, a great many. I would hesitate to say all, but I think for the most part, most of the very substantive ones have been addressed. I believe there may be some technical issues that we still are discussing. But yes, in general, I agree with your statement.

Senator FEINSTEIN. Okay, I would like to know, not now, but what those technical issues are.

Do you believe that the bill, if enacted, would increase operational flexibility and increase water supply during this drought?

Mr. CONNOR. I agree, yes, on both counts.

Operational flexibility in the bill incorporates provisions that reflect the flexibility we have tried to maintain in our water operations, and that we have over the past couple years developed, consistent with our drought contingency plan.

It institutionalizes those provisions. It provides greater resources for monitoring activities that greatly help in our operations. It facilitates transfer. I think in the midst of this drought, it does increase flexibility and has the capacity to provide for more water. I would say, in the long-term, it absolutely, unquestionably will provide for more water supply reliability for California.

Senator FEINSTEIN. Thank you very much. I appreciate that.

FUNDING FOR CALIFORNIA MONUMENTS

Madam Secretary, if I may, I want to thank you for your efforts related to the President's designation of three new national monuments in the California desert. The California desert has been a very big deal for me. We have done two desert bills. As a city girl, the California desert is such a wonderful place to visit. At night, the shadows, the dawn, the flora, the fauna, the petroglyphs, it is just an incredible place. So I am very delighted to see these monuments.

If I understand your budget request, it includes $6.5 million for the BLM office in California that is responsible for managing the national monuments. That is an increase of $1.9 million when compared with last year.

While I understand the monuments were designated after submission of the President's fiscal year 2017 budget, do you believe the additional $1.9 million will be enough for BLM to manage the 1.7 million acres of land it is now responsible for?

Secretary JEWELL. I am just going to do a high level answer, and then turn it to Kris for the direct answer.

I want to say a profound thank you for your work on the drought legislation—hard, hard work—and also for your tireless work over many, many years on the protection of the California Desert.

Senator FEINSTEIN. You might be interested to know, Madam Secretary, we have done 26 drafts of that legislation and made 41 amendments to it, as the time has gone on, and as we have talked and consulted with others. So, that has been 2 years of work, and I might say, much harder than the desert bill.

Secretary JEWELL. It was very constructive. And the subsidence you pointed out is something few people know about.

We have increased money in the budget overall for the National Landscape Conservation System in BLM that does include the California deserts. There is not specific money in the budget for them beyond an allocation for that, because of the timing of the monuments. We will be doing a lot of planning associated with that, and future budgets will reflect that.

But, Kris, do you want to jump in?

Ms. SARRI. Sure.

Senator, thank you very much for the question. As the Secretary mentioned, there is an increase for BLM's conservation lands. We are up to $50 million for the request. That does include the $1.9 million increase for the California areas. BLM thinks that will be sufficient if they get the budgetary increase to take care of the new monument.

Senator FEINSTEIN. Thank you. That is very helpful. I appreciate it.

ABANDONED MINES

Just a quickie, one of the prior Senators mentioned the problem with abandoned mines. It is a serious problem in our State. We have some 24,422 abandoned mines. According to BLM, there are 1,672 known mine sites on or near BLM property. BLM estimates that there were an additional 22,730 sites that have yet to be even inventoried.

BLM says that will require $118 million just to complete the inventory. That is an enormous cost just to inventory.

My question is, would you take a look at that cost? I am concerned about these. I know we get $1 million, $2 million a year to deal with these, and some have been boarded up where people can fall into them. But I am very concerned that we could still have some kind of a catastrophic event.

So, if you would take a look, BLM has requested $20 million in discretionary funding for its nationwide Abandoned Mine Lands program. You propose $1.8 billion in mandatory funding from a new fee that most people think will not go anywhere in Congress.

So, if you have some suggestions, Madam Secretary, I would love to hear them.

Secretary JEWELL. I will just say thank you for pointing out this issue, as did Senator Udall. He does have some legislation he is proposing.

This is an enormous problem. We will certainly look into the cost and get back to you on the record for that, because I do not have a great answer, except that I know that just to inventory across landscape is hundreds of millions of dollars. That is because these are remote sites. To inventory them, we have to understand what is happening, and the features within those sites. That is very labor-intensive work.

But we will look into that and be happy to work with this subcommittee and others on bringing a long-term solution.

Senator FEINSTEIN. Let me ask you just quickly this question. To inventory them first, so much money, could there be another criteria for selecting abandoned mines to take care of? It seems to me those would be the mines where you have hikers, visitors, where there is the most jeopardy of an accident. Could it be done on that basis?

Secretary JEWELL. I will talk to the BLM and ask them. I am fairly confident those are the ones they have prioritized within the National Park Service, those that do have closed visitor access. But we will check into that, and I will get back to you on it. Thank you very much.

[The information follows:]

ABANDONED MINE LANDS

The BLM confirms the estimated cost of completing an inventory of abandoned mine lands in the State of California is $118 million. The BLM also confirms for both conducting inventories and reclaiming AML sites, priority is given to areas and sites with high visitation or near population centers.

Senator FEINSTEIN. Thank you, Madam Chairman.

Senator MURKOWSKI. Senator Blunt.

Senator BLUNT. Thank you, Chairman.

ST. LOUIS ARCH

Secretary Jewell, I want to thank you for mentioning the arch in your written testimony. It is one of the very first projects, and maybe in terms of private funding the largest project in terms of local funding that is going into that partnership.

It does seem to me that we have a real opportunity there and in other places to really usher in what I believe is your vision of

the second century of the Park Service. I would say that I hope it would not hurt his reputation in the service, but the new regional director, Cam Sholly, appears to fully understand the importance of setting this model. We are enjoying working with him, as, more importantly, the people locally are enjoying working with him.

We were able to get some language in the omnibus appropriations bill. Chairman Murkowski supported that legislation that just would help attract private dollars.

What that language does is direct the Treasury Department to invest the dollars privately raised in interest-bearing accounts. I know in the case of the arch the goal is to raise $29 million of endowment funding. I would hope the endowment funding and any future funding raised for that and other projects benefits from that new sense of direction to the Park Service and, more importantly, to the Treasury. I do not think the Park Service ever resisted the idea that private money should actually benefit the project it had been raised for as opposed to any interest going into the general treasury.

Secretary JEWELL. We share a common interest in that. I have to compliment the St. Louis community; $250 million of private money raised for the CityArchRiver project, which is extraordinary.

Thank you for your efforts, so that they could use the interest during the interim timeframe as opposed to going to the Treasury. That is very helpful. We will continue to advocate for that, broadly.

STE. GENEVIEVE SPECIAL RESOURCE STUDY

Senator BLUNT. Right. There is another study going on that should be released any time. I will just bring it to your attention to be sure that you spend a little time looking at it. This is on Ste. Genevieve, Missouri, which is just south of St. Louis on the Mississippi River.

It is a French settlement that still actually has a substantial number of 18th-century French buildings in that community, some of which have been under the direction of the State parks system for some time.

But my belief is that both the State parks system and study that the National Park Service is about to do will reach the conclusion that a better place to preserve that unique part of our history is probably as a unit of the National Park Service. I would expect that to come out any day. I hope you have a chance to look at it.

Like I said, these are 18th-century structures west of the Mississippi River. A lot of them are the vertical log structure that was unique to the way the French were building housing compared to the horizontal structure that other people were. I am interested in that and hope you will be, too.

COAL LEASING PROGRAM REVIEW

Just to follow up a little bit on one of Senator Daines' comments, on the 3-year date certain on the coal study, I actually do not know how much there is to figure out about coal that we do not already know. I was going to suggest that I thought 3 years was an excessive amount of time for that study.

So, you hear that point of view, as well as just promise us that you will get it done in 3 years.

I really think you should look at this and determine what you are going to know that takes 3 years as opposed to half that time or 2 years or sometime that is less than 3 years. I think the questions on coal have already been well asked.

I will say that, in Missouri, we are 80 percent coal-dependent for utilities. Ninety percent of that coal comes from the Powder River Basin. The fact that a taxpayer should get a fair return there is important, but it is also important in the other energy resources. While oil and gas on State and private lands have almost doubled between 2010 and 2014, there have been no changes, no appreciable change, on Federal Government lands.

I do think return to taxpayers for what we can minimize the intrusiveness of in terms of oil and gas is an important return.

SOLAR PROJECTS

I also know that on a significant amount of Federal land, over 30 solar projects have been approved since 2010. I am not opposed to solar at all, but if you are worried about impacting the way the landscape should look, or it would look if people were not involved in the landscape, I am sure 30 solar projects have more impact on that topic.

And there is no Federal return, there is no taxpayer return, on solar. I am not objecting to that. I am not opposed to solar. I am not opposed to wind. I am actually truly an all-of-the-above person.

But if we are interested in fair taxpayer return, it would seem to me that we would be looking pretty aggressively at why we have 89 percent more production in State and Federal lands and essentially no more production on Federal lands. I will let you respond to that.

Secretary JEWELL. Let me just clear up one point. We do actually charge solar energy companies when they are leasing Federal land for solar, and for wind. There is a charge to them. Just as we are doing for offshore wind in the Atlantic, we are doing lease sales similar to what we do in the Gulf of Mexico for offshore oil and gas.

Senator BLUNT. Good. Would you provide me or the subcommittee how that works?

Secretary JEWELL. Yes, we are happy to.

[The information follows:]

Solar and wind energy developments are authorized under the authority of the Federal Land Policy and Management Act, which requires that the BLM generally receive fair market value for an authorization. The BLM has established payment requirements for solar and wind energy developments based off of comparable commercial practices from non-Federal lands. The payments to BLM consist of both an acreage rent and megawatt (MW) capacity fee. The acreage rent is required annually each year, regardless of the operational status of the development, and is determined based upon the location of the development on the public lands. A per MW capacity fee is required annually at the start of energy generation of the development, and is determined based upon the development's capacity and efficiency of the technology. The annual payments may differ between solar and wind energy developments based upon the acreage encumbered, efficiency of the technology used, and the generation capacity for that development.

The BLM has received increased payments for solar and wind energy developments since 2010, corresponding with the increasing number of rights-of-way issued. In 2010, the BLM received little more than $3 million in payments, almost all of which was from wind energy developments. In 2015, the BLM received over $15 million in annual payments for solar and wind energy developments, of which over $10.5 million were annual payments for solar developments, compared to $4.5 mil-

lion for wind energy developments. In addition to the annual payments, the BLM may also hold auctions for solar developments in designated areas. Such auctions are held infrequently; the most recent was held in 2014 for lands in Nevada. The BLM received over $5.8 million in bids for the parcels auctioned. Both the bonus bid revenues and the required annual rental payments are returned to the Treasury.

Senator BLUNT. If that is a one-time payment or an ongoing payment, as you would have from production from other facilities. I would like to see that.

Secretary JEWELL. Yes, we are happy to do that. It is an ongoing rental payment. There is a bonus paid upfront, and then there is an ongoing rental payment. I think it is per acre or per tract, but we will get back to you on that.

COAL LEASING PROGRAM REVIEW

Also, just to point out, because I had not said it earlier today, on the programmatic EIS for coal, it actually is complicated. There are a lot of different interests at stake and a number of different States at stake. There is metallurgical coal. There is steam coal.

We do believe, based on how long it takes us, for example, to do a programmatic EIS on an offshore leasing program, that 3 years is a pretty expedited timeframe.

I will be not in this job, clearly. That will change in about 11 months, maybe we're down to 10.5. We do have 20 years of supply of Powder River Basin coal, Federal coal, under lease to companies already. We do have emergency provisions in the pause that we put on the leasing program during the PEIS to allow companies to continue to mine and to get a permit, if their mine is at risk of closing because of the pause or if a coal-fired power plant is at risk of closing because of the pause. We also grandfathered projects that were nearing their completion.

So we do not believe there will be disruption in the supply of coal or to the jobs.

Senator BLUNT. Let me make one point there before the end of my time, and we are at the end of my time, but I noticed last time was little extensive too.

How long the study would take if the study hadn't put long-term Government program in abeyance until the study was over, I think that is two different questions. Patriot Coal in St. Louis just went into bankruptcy. Shortly after they went into bankruptcy, as I understand it, I have not talked to them, but everything I have read about this would indicate that one of the things they thought would bring them out of bankruptcy was that they were right at the end of the permit process to get access to some coal mining area that they hadn't previously had.

That is now postponed until the study is over. I do not know what impact that is going to have on the company, but I assume it is significant. They, as many others would have, would have pursued what they understood to be Government policy, which just suddenly stopped so the Government can figure out what they were doing. It does seem to me the Government can figure out what they are doing without necessarily stopping everything we have been doing for a long time.

Thank you, Chairman.

Senator MURKOWSKI. Senator Merkley.

Senator MERKLEY. Thank you, Madam Chairman.

MALHEUR NATIONAL WILDLIFE REFUGE

And thank you, Madam Secretary, for being here and helping us understand a variety of things.

When you started out your commentary, you mentioned Harney County and Malheur Refuge. That has been a traumatic experience for Oregon. We are hoping to work with the Department of Justice in terms of some compensation back to the completely overstrapped local system of justice that was dealing with that, in partnership with FBI.

But also the Burns Paiute Tribe, and this would be more relevant to Interior, had to incur a lot of increased costs and damage to sacred sites. It is still being evaluated.

Is it possible that the BIA could assist the tribe in some of these expenses that they are going to incur?

Secretary JEWELL. It is certainly something we would be happy to look at. I know that the FBI left recently, and we are just now doing an inventory of the damage. But certainly, we can work with the Bureau of Indian Affairs (BIA) if there are costs incurred by the tribes in addressing that.

I did meet with the tribes on the phone beforehand. I did meet with Judge Grasty from the county recently in my office. I will be making a trip there when the time is right to visit. We will make sure we encompass the tribes and I engage with the BIA as well.

Senator MERKLEY. Thank you. I really appreciate that. I know the tribe appreciates that as well.

One of the ironies is that that particular county where the occupation occurred has had some terrific successes on collaboration, the types of successes that we all say need to happen through dialogue and cooperation and sharing perspectives and so forth, one including sage-grouse conservation, another being the Malheur Refuge itself, management of the refuge.

Judge Grasty, who you mentioned, has thought that, given their successes in Federal-county collaboration, this would be a very good place to have a center that helped advance that type of collaboration, both from the local experiences, but bringing in the issues from throughout the West.

So, I think it is a terrific idea. There are tensions that certainly are natural between a longstanding landlord, the Federal Government, and a longstanding ranching and grazing tenants, and issues over the use of the land. And having a center to facilitate collaboration, it seems like a pretty cool thing.

Any chance we could get some support for that idea from the administration?

Secretary JEWELL. This is a new concept I have not really considered, so we would be happy to consider it.

I will say what happened in advance of the occupation of the refuge and the cooperation that has happened throughout Oregon with not just our own agencies, but also the Natural Resources Conservation Service has been extraordinary. I think there are models there to learn from.

I would hope it will set a model for every office—Fish and Wildlife Service, BLM—working cooperatively across the landscape. But

we are happy to do give that consideration, and I will chat with Judge Grasty the next time we talk.

Senator MERKLEY. Thank you very much. I appreciate that.

KLAMATH

I also appreciate the administration's support for the Klamath settlement efforts. We had substantial development with the process of decommissioning the dams being taken offline and, therefore, removing some of the obstacles. There is still a lot of work to be done to capture through legislation the water certainty for the irrigators, the land for the Klamath Tribes, habitat restoration, and so on and so forth. You have been a great partner.

Can we continue to ask you to assist us?

Secretary JEWELL. We absolutely will be there. We know there is a legislative fix that is needed to move this forward, and we are fully supportive.

Senator MERKLEY. Thank you. I appreciate it.

And there was, by the way, $3 million appropriated in fiscal year 2016 to support the agreements, specifically habitat restoration. Because the agreements were not concluded or the legislation was not concluded, we just want to try to make sure that the $3 million actually does get spent on the habitat restoration efforts, so it would be helpful to keep moving the process forward as much is possible.

Mr. CONNOR. I believe that process will continue with additional funds that were made available from Reclamation with the spending plan. The upper basin agreement with the Klamath Tribes is still in effect, and there is some restoration activity that is contemplated as part of that agreement, and we want to carry forward with that.

Senator MERKLEY. Great. Thank you. Thank you for all your assistance on this, Michael.

COAL LEASING PROGRAM REVIEW

Turning to coal leasing, I think it flies to the top of the chart for questions that you have been asked. It shows how much different Senators care about this from substantially diverse perspectives.

I certainly agreed with Senator Blunt when he was saying that we should be able to figure out the answer in a shorter period of time. To me, the answer is already obvious, but it is probably the opposite of what Senator Blunt might conclude.

Currently, we have, I believe, in terms of leases, already granted about a 20-year supply of coal already leased out for extraction. Am I in the ballpark on that?

Secretary JEWELL. That is correct. It is 20 at current production rates, and production rates are declining, so it is likely more than 20.

Senator MERKLEY. So we have a tremendous supply that already has been leased. And we also know that when you do a new lease, that lease might be exploited for decades thereafter. So if we do a new lease now—there are occasions where a lease has been exploited for 30, 40, even 50 years—we are essentially locking in a contract for many decades in the future. Am I still on track?

Secretary JEWELL. That is correct.

Senator MERKLEY. So here is the thing, we are seeing the impact of burning fossil fuels all over Oregon from the growth of the pine beetle because winters are warmer and so damage to our forest.

We have three of the worst ever droughts in the last 15 years in Klamath Basin, a huge impact on agricultural families.

The winter sports in the Cascades have declined as the snowpack has declined. The trout streams are getting smaller and warmer, which nobody who fishes likes to see smaller, warmer streams.

Our oysters on the coast are having trouble reproducing because the ocean is more acidic, 30 percent more acidic than before the Industrial Revolution. If that is not a canary in the coal mine, I do not know what it is.

So we have the knowledge, not just in some theoretical model in the future, but right now facts on the ground. We know there is extensive damage to our forestry, to our fishing, to our farming, to our natural resources. And therefore, why would we possibly do a new lease locking in more extraction and combustion decades into the future?

So that is the conclusion I would come to. If the administration reaches the same conclusion, as you put it, before your time is up, I would love to see the coal leasing program ended.

Secretary JEWELL. All right. Thank you.

Senator MERKLEY. Thank you.

Senator MURKOWSKI. Senator Udall.

Senator UDALL. Madam Chair, thank you very much.

NATIONAL PARKS DEFERRED MAINTENANCE

Secretary Jewell, I am pleased to see that you have proposed a 9 percent increase for national parks, including major investments in construction and maintenance programs to address the estimated $11.9 billion maintenance backlog at parks nationwide. It is mind-boggling, that number.

CARLSBAD CAVERNS

We have a particular issue with park maintenance in New Mexico I want to briefly raise. The public elevators at Carlsbad Caverns National Park have been out of service since early November, leaving visitors to hike in and out of the caverns if they want to visit.

Obviously, the lack of elevator service creates a problem for visitors who have accessibility issues as well as a problem for the general public.

I have had the chance to raise this issue with you personally. And you know how important it is to me for the Park Service to restore temporary elevator service at the park as possible and to come up with a plan to permanently upgrade the elevators. I appreciate you working with me on this to resolve this issue as quickly as possible and to ensure that the local communities know what to expect.

VALLES CALDERA NATIONAL PRESERVE

I also would like to thank you for your strong support of the Valles Caldera National Preserve during its recent transition to be-

come part of the national park system. I am also pleased to note that you have included $3.3 million in your budget request to continue funding for the preserve into 2017.

Now that you have visited, I know you will agree with me that the preserve is one of the crown jewels of the national park system. What makes it so special is not just a stunning landscape, however. There is recreation, hunting, fishing, and grazing at Valles Caldera. All those make it a vibrant park for New Mexico's community and for our local economies.

That is why I am concerned to hear that the Park Service is still weighing whether to continue traditional grazing permits on the preserve for this upcoming season. The law that transferred the Valles Caldera to the National Park Service allows these longstanding permits to remain in place while the Park Service develops its long-term management policies. These ranchers deserve to know now that they can count on their grazing permits for the season.

Can I have your commitment that you will work with me and other members of the congressional delegation who are also very concerned about this to resolve this issue quickly and avoid any further disruption to these traditional grazing permits?

Secretary JEWELL. Certainly, Senator, we will be happy to engage directly with you. The Park Service is well aware of the need to act fast on this.

I will say there are some complexities, an endangered species, for example, that needs to be incorporated into their planning process, and figuring out the market rates for appropriate grazing fees. But we are very happy to work with your office to keep the priority high for the Park Service.

Senator UDALL. Thank you very much. I think on the endangered species issues, there are areas where there are not endangered species issues, and I think the park superintendent is very aware of those, and the local people on the ground.

Another issue related to the transition of the Valles Caldera is the importance of continuing a multiyear stewardship contract with the Jemez Pueblo. This project supports vital landscape restoration work and jobs for tribal members.

As you know, I worked to include $1.5 million in the 2016 omnibus to support forest restoration projects at new parks like Valles Caldera. Could you tell me what work you expect to accomplish this year with the funding we provided? Is funding included in your fiscal year 2017 budget to continue this effort?

Secretary JEWELL. So the short answer is yes, funding is included. It is going to be used for thinning about 1,200 acres of forest. As we are both aware, they had devastating forest fires, and that is really important. So that will continue.

Senator UDALL. Great. Thank you very much for that response.

VENTING AND FLARING

As you know, I am very supportive of the department's efforts to develop new rules related to methane venting and flaring. New Mexico's natural resources provide jobs and royalty payments that are an important part of our State's economy, but outdated requirements are resulting in over $100 million worth of natural gas being

wasted, which has cost my State $43 million in lost royalties since 2009.

There is also a serious health component to this issue.

I understand that you are now in the public comment period on the methane venting and flaring rule. Could you give us a sense of the timeline for the final rule? What are some of the issues you are hearing from industry that you believe will be addressed in the final rule?

Secretary JEWELL. At this point, the public comment period ends next month on April 8. So far, we have had two public listening sessions, one in Farmington, New Mexico, the other one in Oklahoma City. We will be taking input on all of those comments.

I cannot tell you what all of them are because we have not analyzed them yet. I am sure you are aware of what some of them are, in terms of cost and methodology and the importance of doing this. But once we have all of those comments in, we will be happy to analyze them and factor that into the rulemaking.

Senator UDALL. Great, thank you very much.

COAL

I have a question here on coal, but that one is kind of like beating a dead horse. Senator Wyden and I have a piece of legislation on that, and I think I will submit that one for the record.

INDIAN EDUCATION CONSTRUCTION

I am very pleased that this subcommittee was able to provide an 85 percent increase for Indian school construction and improvements in the 2016 omnibus. That amount includes funds to finish the schools on the 2004 school construction priority list. It also provides a down payment to begin work on new schools that the Bureau of Indian Education (BIE) is in the process of selecting. I am glad that you were able to include another $45 million for replacement school construction in your 2017 budget.

I know that BIE is currently considering applications for schools that want to be considered for the next round of funding. There are four schools in New Mexico that are currently competing for a place on the final list, and they are all very anxious to find out whether they will get selected.

In addition, this subcommittee needs to know how the funds in your budget will be used so that we can support your efforts during the appropriations process.

When do you expect to finalize your new school construction list? And what is your plan for providing the subcommittee with more detail on how year 2017 budget request will align with that list?

Secretary JEWELL. The Indian Affairs team is hard at work, and they are nearing finalizing the list. We narrowed the list down from many, many schools to 10 that submitted additional information, which has been received. It is being analyzed, and I would expect that sometime in the coming weeks to see the final version of the list for the new school construction.

There are also replacement buildings, which would be considered afterwards.

We are very happy to provide you with information on how the funding would be used. We are happy to work with the committee and provide you with an inventory of that.

But as you pointed out, this is a much bigger issue than we have money in the budget to address. We can just begin to chip away at the list and work on stemming the increase in deferred maintenance.

But we need a longer-term solution, as happened with the Department of Defense schools, to really address this long-term systemic problem, which is afflicting fully a third of our schools that are considered in poor condition, including a bunch of them in your State.

Senator UDALL. Thank you. I know you have a real passion for this.

Madam Chair, I see I am well over time here. I do not know whether we are doing another round or not.

Senator MURKOWSKI. I have some more questions. We have given our colleagues some latitude here so they can move on to other things, but if we can continue for a little bit longer, that would be great.

MITIGATION

Madam Secretary, I want to go back to some of the lands issues. Something that has caused a level of concern is where we are in this big discussion about mitigation.

As you know, the President has issued this memorandum on mitigation, and then you have your Secretarial Order Number 3330. I think these two issues are causing more questions than resolving any issues.

Just a couple years ago, as we were dealing with issues within the National Petroleum Reserve, the concern was the metrics that were relied on to arrive at a $8 million cost for mitigation within the National Petroleum Reserve-Alaska (NPRA). BLM, at that time, had discussed a real rigorous understanding of how this impacted subsistence use. It seemed to so many who were observing that this was just kind of divined from different individuals, agencies, and that it had come to a point where it was, how much can we get? That is not a standard that anyone would suggest is reasonable.

But the bigger question is whether or not there is authority to require mitigation for projects on public lands in the first place. When you move forward on natural resource development, responsible natural resource development by definition includes reclamation of disturbed lands and our Federal laws require that reclamation then occur. Laws that govern multiple use on public lands do not have this mitigation requirement.

I led a letter that went out just about a week ago with about 18 other colleagues here in the Senate outlining a series of questions to DOI focusing on we are with developing this program guidance—not only for DOI but for all the relevant agencies that are involved.

So a couple questions on mitigation. Can you provide a status update as to program guidance about the bigger point, which is what is the authority that the department has to require mitigation for projects on public lands in the first place? Additionally, the bigger

problem and the consideration that we face in Alaska is that you have multiple agencies that have seemingly different standards or different approach to mitigation. As a consequence of the lack of certainty, operators are not even able to begin a project, because whose standards are we going to be looking to?

So, a longer question that hopefully has a clear answer. We have not gotten the guidance that we have asked for.

We are going to be having a hearing in the Energy and Natural Resources Committee on this within this month to hopefully gain more clarity. Can give me a little bit of guidance here from your perspective?

Secretary JEWELL. Let me do a high level answer and then I am going to turn it over to Mike Connor, who has worked on the details for me on this.

First, we believe the individual, localized mitigation does not actually address sometimes the bigger issue that development has on the landscape. This is something that I looked at from day one.

When you have the fragmentation of habitat, when you have road networks and so on, there tend to be impacts to the landscape, the animal migration patterns, and so on, that are not necessarily contained within the footprint of that area. We are looking at landscape-level mitigation, understanding what those impacts are.

Good examples of that, I would say, in the National Petroleum Reserve in Alaska, understanding the caribou calving grounds, understanding the oil and gas development potential, understanding that if there is offshore development, how do you move that. All of those things were factored in.

As a project gets done, there is now a greater understanding of what the impact will be. That is the whole concept of mitigation.

Senator MURKOWSKI. Can I interrupt on that? What you are describing is that it is going to be a case-by-case determination. How can you give some level of certainty then to anybody who is looking to develop a project, whether it is oil and gas or whether it is a new runway or whether it is a driveway? How can there be any level of certainty and understanding when everything is done on a case-by-case basis?

Because what you described is going to depend on what is happening with the landscape around it. Every landscape is going to be different.

Secretary JEWELL. The intent is to bring certainty. Another example, the Desert Renewable Energy Conservation Plan, what are the areas that are set aside for development? What are the areas critical to conserve?

So as this gets developed, the mitigation would be used on the area that is highest priority for conservation, not necessarily on that footprint. The overall intent, to bring greater certainty, not less.

I am going to turn it over to Mike for the specifics on what he is working on.

Mr. CONNOR. I think I would just continue along the lines with the view that the President's memo I think gets to the point you are trying to have us do, which is having more consistency across the agencies in developing our mitigation criteria and not doing it project-by-project, by doing these planning efforts, which I think

have demonstrated they do facilitate permitting processes because they add more certainty as we work with companies.

A perfect example is the Western Solar Plan and the Solar Energy Zones we did in Dry Lake in Nevada. We identified the corridors of development, and the appropriate mitigation standards, that should apply there. We worked with companies taking environmental analysis that used to take 18 to 24 months down to 6 months to complete those environmental analyses.

I think the NPRA is a situation I am particularly familiar with having been involved in the discussions with ConocoPhillips. The mitigation was not pie-in-the-sky what can we get. It was very specifically related to the intrusion on the Fish Creek barrier. That was the issue we were discussing with ConocoPhillips. We talked about specific ways to compensate for that. We had a disagreement about methodology.

Quite frankly, we all agreed there was a range of dollar figures we were talking about to compensate for that particular intrusion, and it could best be applied toward developing a regional mitigation plan with the affected communities, including the Alaskan Native communities. That is the process that is ongoing right now, which should add greater clarity to further developments in the NPRA, quite frankly.

Senator MURKOWSKI. I think what you established there is a precedent that basically says, if you want to operate within this area, you are going to pay, not mitigation—it is not being viewed as mitigation by those who are looking—a penalty. We would differ mightily in terms of the specific project with Conoco and whether or not that $8 million that was ultimately arrived at or settled upon was where it was started. We recognize that was not where the conversation started. It was being used more as a bargaining tool for Conoco to be able to move forward.

So, again, we have a letter out there that we are looking for concrete answers on, and we will have an opportunity to have this before us in the Energy Committee to get a better understanding.

This is a concern that, again, we are not talking just about development of oil and gas opportunities in my State or in others. It is the opportunity to advance any kind of a project, whether it might be an area for school or runway or what have you.

I want to recognize that Senator Udall will have more questions, too, but let me follow on to a couple comments that were made by Senator Udall in his opening, and by Senator Feinstein.

ABANDONED WELLS

Senator Feinstein was talking about abandoned mines, developing potential for an inventory. As you all know, legacy wells, which is horribly, horribly misnamed, are abandoned oil and gas wells in Alaska that were drilled by the Government and then just left in varying states of disrepair. We have been making some progress. We have identified the universe there in terms of the cleanup.

To Senator Feinstein's point, when she talks about an inventory, I think we have established that at least in Alaska. You identify what it is that you have, now you have to prioritize how we are

going to be spending the money. We were successful in getting $50 million, with helium funding last year.

I appreciate the fact that we have a path, an action spend plan, for that $50 million. But my concern is that there is still going to be a significant number of wells that will need to be attended to when that fund is exhausted.

You have included $3.8 million in this budget for next year. I understand that this is a budget for this year. But we are still hoping to get an understanding as to how we intend to deal with all of the Federal Government's obligations to clean up these wells up on the North Slope. Because if you are suggesting that it is $3.8 million this year, and perhaps a like amount next year, I am told we are looking at 30, 40 years to clean up these wells, if that is the case.

Do you have an estimate of the likely cost to finish this environmental cleanup project, in both money and time?

Secretary JEWELL. I will give you the information I do have, and we will get back to you on the record for what I do not have.

There are 136 wells, these legacy wells. Fifty were identified in 2013 as requiring remediation.

Senator MURKOWSKI. I want to make sure that we are both clear on that, because I have heard that there is still some disagreement between the State of Alaska and Interior in terms of whether or not some of these wells require that level of remediation. I understand what you are saying, but I want to make sure that we are in alignment between State and the Federal Government on what the level of responsibility is.

Secretary JEWELL. Okay. I am not aware of that dispute, but I will say, because of the work that you did with the Helium Fund, we will have 29 left requiring work at the end of 2016. We will have three to five wells we can do with what is in the budget for 2017, the Wolf Creek cluster. I think because they are together, we will be able to address that.

That still will leave somewhere on the order of the mid-20s that need to be cleaned up. What I do not have is the estimated cost to do that or the amount of time it would take.

Of course, we would welcome the opportunity to work with you on a more permanent funding solution for this, just as we would on abandoned mines, and just as we would on school construction. It is very difficult putting small amounts of money toward a program each year that is much larger than what we can address in the regular budget cycle.

Senator MURKOWSKI. Understood. Absolutely. But I think this is one of those glaring examples where our Federal Government is being absolutely hypocritical when it comes to environmental standards. In this case, it is the Government that has drilled wells, and the Government that has walked away. The Government acknowledges that it left a mess, and yet the budget does not prioritize that.

Part of the problem is, unlike perhaps abandoned mines in California where you have a lot of people who are wandering around and hiking, the North Slope is a long way away, and there are not that many people on that North Slope.

You and I both agree that we have a responsibility to clean up that land. We have a responsibility to those subsistence hunters

and fishers up there who are worried about the contamination. Our Federal Government left a mess, and they have an obligation to clean it up.

I am going to continue my push on this, and we need to be working together.

CONTAMINATED LANDS

I also want to raise the contaminated lands issues. These are lands that have been conveyed to Alaskan Natives under the Alaska Native Claims Settlement Act that are separate from the legacy wells the Federal Government drilled.

Here we have a situation where lands have been conveyed that were already contaminated. These are Native lands, given to Natives as part of a settlement.

We have done an inventory of these lands. We have asked that inventory be updated. At the budget hearing last year, you said the survey was nearing completion, and that it would be soon released.

We are still sitting here a year later. It still is not public. I am told by BLM officials that it will be released soon. But we were told it was going to be released last year.

Assuming that this inventory is completed and will soon be made publicly available, I would like to have an assurance that, along with legacy wells, there is going to be an action plan from the Department of the Interior to accelerate the cleanup of contamination on Native lands that the BIA, the BLM, the Fish and Wildlife Service, the National Park Service, or the Bureau of Mines actually caused.

I also need to know that there is going to be some level of coordination in terms of how we are going to clean this up, because there are other Federal agencies, that have responsibilities, whether it is DOD or FAA.

Understanding how we are going to meet our Federal responsibility for this cleanup is something that we are going to continue to knock on your door, bang on the drum, raise our voices, because it is a responsibility that we have.

Can you give me any updates on when we might see the inventory, the updated inventory?

Secretary JEWELL. The information I have says next month. That is the best I can do. I do not know why it has taken so long, but that is the best information I have at this point.

Senator MURKOWSKI. And that information will be made public?

Secretary JEWELL. I do not know.

Do you know?

Ms. SARRI. I will get back to you on that one after I talk to BLM a little bit more about it.

[The information follows:]

ALASKA CONTAMINATED LANDS

The requested report on Contaminated Lands in Alaska has been drafted and is currently in the review stage. It will be transmitted to the Committee soon. The BLM plans to publicly release the Contaminated Lands Inventory database. With the Committee's permission, BLM would also like to make the report public by posting it on the BLM Web site.

Senator MURKOWSKI. The first inventory was completed at the request of my father in the 1990s. It had a timeline to be renewed

and updated frequently and prioritized. So "frequently" has now turned into almost a decade.

It is not just this administration's fault. If for some reason it is not going to be released next month, I would certainly appreciate a very detailed explanation as to why it is not, because you can count on me to continue to make a big stink about this.

Senator Udall.

Senator UDALL. Thank you, Madam Chair.

REPATRIATION OF SACRED OBJECTS

Secretary Jewell, an issue of serious importance for tribes in New Mexico is the repatriation of sacred objects back to the tribes.

First, I want to applaud your recent efforts to work with French authorities to seek cooperation in these efforts. As you know, these items are not pieces of art to be sold. They are sacred objects that are deeply important for tribal identity. What's more, it is illegal to traffic these items within the United States.

I think we need to be doing more to crack down on the sales of these priceless cultural objects. One idea I have heard from the Pueblo of Acoma is to establish an antiquities unit within the BIA to investigate these kinds of cases.

I want to work with you to ensure that BIA and other bureaus within the department have the ability to put a stop to these illegal trafficking efforts.

Can you elaborate on the work of the department in terms of bringing awareness to this issue and preventing tribal objects from being trafficked? And are there specialized law enforcement resources within the department able to handle these repatriation cases?

Secretary JEWELL. Senator, this is a significant issue. When I was in Paris as part of the climate talks, I met with the Minister of Justice for France, and I also met with the individual that administers the auction houses in France.

They typically produce a catalog with a number of these items that are exactly as you described. They are not works of art. They are critical artifacts that were removed from the tribes for whatever means many, many decades ago and have been circulating in the art market. They do not provide sufficient time for the tribes to even know they are there, let alone take the kind of action the French authorities say they need.

I was met with a very sympathetic voice in the Minister of Justice. Unfortunately, she just quit, so we will have to start over again with the next minister.

I do think there was a path forward that we learned about, about the repatriation of articles taken in Nazi Germany from families at that time. That may be a path we can use.

On the international market, I would say the State Department is a critical ally in this effort. They have the people that work the legal systems there. I would say that to dedicate someone from BIA's law enforcement to this is something that would have to come out of another area of BIA's law enforcement, so it is a tradeoff, given the law enforcement challenges we have in Indian country.

But I do think the BLM has some capabilities in this area. I know the State Department, Interpol, the international organizations do. It is on our agenda to raise awareness internationally to see if we can actually address this.

I will also say we are not without fault. Our auction houses in New York City, for example, do trade in artifacts. And they may be those that are inappropriate to trade, and then we do not find out about it until too late.

This is very, very important. The New Mexico tribes are quite active in this, but so are the Alaska tribes as well. It is important. And thanks for raising visibility.

Senator UDALL. Thank you for your efforts on that.

BUREAU OF INDIAN EDUCATION REORGANIZATION

As you know, we have had extensive discussions, and I know the chairman has also been involved, on this reorganization of the Bureau of Indian Education. And I understand the department is now moving forward with the first phase of proposed reorganization of the BIE, including the establishment of new educational resource centers that your 2017 budget anticipates additional changes to the bureau.

This subcommittee supports your efforts to improve education for Native students, and we recognize that you are tackling some of the very tough issues as you overall the bureau. But I want to make sure that the reorganization is done right and actually leads to concrete improvements in the classroom.

I also want to make sure stakeholders at all levels, from tribal governments to educators and parents, understand clearly what to expect from these changes. As part of the first phase of the reorganization you have proposed a number of staffing changes, including changes to the regional office in Albuquerque to create these new centers to assist BIE and tribally controlled schools.

What is your timeline for staffing up these centers? And what services can schools expect to receive starting in the fall? And what is your plan to ensure that all stakeholders, including BIE employees whose jobs may be affected, know what to expect during the reorganization?

There are other questions there that I will submit for the record, but I want to get an answer from you on those.

Secretary JEWELL. Okay, I am happy to give you a quick update. I will also say that taking on reorganization of something as storied, and not necessarily in a good way, as the BIE is, from a business person's perspective, unbelievably difficult over a multiyear period of time and extraordinarily difficult in the timeframe I have left.

The goal is to set a path forward so we continue to make progress on Indian education reform. It is not all going to be done in 1 year.

We have had multiple meetings with all employees. Those were held in February, and we outlined the whole process. On February 22, so just a week or so ago, we announced 65 vacancy announcements across the BIE. Some of them are vacant. Some are new positions. People will apply. Those positions will close on March 11,

and we will begin filling the jobs in April. So, it is really a fast timeline.

I would say what you will see in terms of near-term improvements, we have been working now for more than a year on professional development of teachers aligned with Common Core. We have been providing training for effective school boards, financial accountability training for school leadership, and then training for certain tribes that have wanted alternative accountability standards like the Miccosukee and Navajo.

There is a lot of work going on. I personally met with leadership of the BIE to see how it is going. We have a lot of work to do, but I would say people understand the importance of this. People are now a bit more reassured all their jobs are not in jeopardy. We are working toward a common end, which is better education for these students and self determination in education by tribal communities that want to take control of the schools.

So we continue to have an open door to any suggestions you have in this regard, but we are well on our way.

Senator UDALL. Thank you very much, and thank you for your hard work on that.

LAND AND WATER CONSERVATION FUND

Since Senator Murkowski mentioned her father, just as a closing comment here, when we were talking about the Land and Water Conservation Fund, and Senator Tester asked a question, as you know, my father worked in the 1960s when he was Secretary of Interior to start the Land and Water Conservation Fund. He worked with Congress. He went down and I believe met with a Congressman by the name of Wilbur Mills from Arkansas, and they came up with idea of taking offshore oil and gas, knowing that these resources are limited, taking some of it and dedicating it to permanent protection of land.

The original idea I think came from a national commission, a blue ribbon panel, an incredible panel headed I think by Lawrence Rockefeller and others that said, what do we need to do in terms of parks? The suggestion was from this commission—these were people outside of politics—you should spend $1 billion a year and everybody should know you are going to spend that and split it up between the State program, as you talked about, and the Federal program. And the reason you do that is everybody can plan. All these city councils and States and Federal Government and its agencies can all plan and look to see that money is there.

As Senator Tester pointed out, we have now reached the point where we have authorized it at that level. The money is over there in the fund. But somehow we do not dedicate the resources there.

So we are all trying to figure out how we got to this place. I know President Obama and you have encouraged us now to move forward.

I thank very much, Senator Murkowski, for working with me on the increase that happened in Land and Water Conservation Fund. That was a good step. But we are not anywhere near where we need to be in terms of the original idea behind the Land and Water Conservation Fund.

But thank you very much. I know she was trying to get out of here. We are running over here a little bit.

Senator MURKOWSKI. Thank you, Senator Udall.

Yet one more reason why this energy bill is a good energy bill that we are going to try to get moved through the Senate, because we do have the LWCF piece in there that allows for permanent reauthorization. It does have some reforms in terms of reminding us of the significance of State-side LWCF at the same time we have Federal.

Secretary, I know that you have to go. I have just a couple more questions and hopefully your answers will be yes and no.

ALASKA LAND CONVEYANCE

I mentioned the land conveyance and reductions that we have seen in the budget, a 20 percent reduction from last year. I have raised the issue of the methodology for the survey. There is a peer-review that is going on. BLM has agreed to that.

Can you commit to me that BLM will not act unilaterally to implement their preferred method of survey, if the State of Alaska formally objects, once that peer-reviewed process is complete? I just want to know that the State has been heard on this.

Secretary JEWELL. We absolutely are working closely with the State. I hope it does not come down to a veto of what we want to do. We are working now with the National Society of Professional Surveyors at the State's request.

Senator MURKOWSKI. Yes.

Secretary JEWELL. We are providing them with all the needed information. I think it is our collective hope they will come to a meeting of the minds, and it does not come down to the State saying this is not acceptable. I hope they can find something that both agree is acceptable.

Senator MURKOWSKI. We are going through that peer review process, so I think that is important.

TRIBAL COURTS

I will submit for the record several questions, one on tribal courts. We were successful in getting funding for Public Law 280 States for the first time last year in the amount of $10 million. The President's request cuts this by $8 million. I am very concerned about that.

EARTHQUAKE HAZARDS

We just sent a letter to you, the Alaska delegation, on the USGS earthquake program. I mentioned that to you. I would like assurances that any future summits or meetings you are conducting regarding earthquake preparedness at least include Alaska. Additionally, the earthquake monitoring cost-benefit study is being formulated, and I would like to see the status of that report. Can you let me know when we might see some of the findings?

BOTTLED WATER BAN

I also want to raise the bottle ban on bottled water in parks, not the ban but giving parks the option to eliminate the sale of bottled

water on a park-by-park-basis. We have asked for a report within the omnibus about the justification for making this determination. The report was due February 16. We have not gotten it. I would hope that you can let us know when you are expecting that report.

I still have some concerns. We can sell bottled sugar water in the parks, but we cannot sell good glacier water. We are actually drinking Alaskan Glacier water here at the committee.

I was contacted by the COO of Alaska Glacier Products. He is worried that he is not going to be able to sell his Alaska product in the Alaska park units. This concerns me.

I do not know whether or not, for instance, Denali National Park is opting not to sell bottled water.

I understand we are trying to eliminate the waste, but you are still allowing the waste from pop in our parks as well. Not every parent is able to bring or remembers to bring water bottles.

ALASKA MAPPING

The last thing that I am going to raise is where we are on Alaskan mapping, the Alaska Mapping Initiative, improving our topographic maps for the State.

I was present at a celebration in Alaska last summer where we celebrated 55 percent completion of mapping the State. Where else in America would you celebrate being just a little over halfway?

We have a way to go on this. I remain concerned that, as we look at our priorities, mapping, both terrestrial mapping and mapping our waters, is something where we are woefully behind.

I have much more that I will submit to you all, and we would hope for timely responses. I appreciate you being here before the subcommittee, and I apologize that the subcommittee has gone over time.

Thank you for your indulgence, and we look forward to your responses. Thank you very much.

Secretary JEWELL. Can I just say that I actually do have a response on the mapping.

Senator MURKOWSKI. Yes, please. Go ahead.

Secretary JEWELL. We were at 63 percent at the end of last year. By the end of 2017, we will be 70 percent complete. We should be fully complete by 2020.

I do have personal vested interest. My son actually is a critical care flight nurse and does medevac flights.

Senator MURKOWSKI. He knows.

Secretary JEWELL. He knows. He does that in Alaska as well. So, we share the concern and also share the urgency of why this is so important for the State of Alaska.

Thank you both very much. This is a little different in terms of tenor and tone than the session that I was at yesterday. I do appreciate the constructive nature and also the flexibility with which you ran the agenda to allow me time to answer after time had expired. So thank you both very much, and we look forward to working with you.

Senator MURKOWSKI. Thank you.

ADDITIONAL COMMITTEE QUESTIONS

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED TO HON. SALLY JEWELL

QUESTIONS SUBMITTED BY SENATOR LISA MURKOWSKI

Question (1). Last year the Alaskan Village of Council Presidents (AVCP) was selected to participate in the Tiwahe d emonstration project and has received approximately $986,000 in base and Tiwahe funding. For those of you not familiar with the AVCP, it is a consortium of 56 Alaska Native villages in western Alaska. The villages are remote and somewhat isolated over a 59,000 square mile area with a population of approximately 25,000. All travel to and from the villages is by small plane or boat. The AVCP administers programs, fund projects, and provides social services to the villages.

The Tiwahe initiative is a 5-year pilot program that aims to help tribes develop a comprehensive approach for the delivery of services to communities through partnerships with the tribe, local communities and the State and Federal Government. The overall goals and objectives are, to improve screening and access to family and social services, to create alternatives to incarceration via solution focused sentencing, improving links to appropriate prevention, intervention and treatment opportunities.

a. I understand this is a 5-year pilot program, but I am interested in hearing more about how the program is structured for each tribe and how the funding for each pilot site is determined. Would you briefly explain how the sites are selected, how the pilot is designed, and how the funding is determined and delivered?

Answer. Tiwahe sites were selected based on geographic diversity, governance structure diversity, unmet need, and capacity. Alaska's geographic diversity from the lower 48 tribes and level of Federal resources to support tribal families, combined with AVCP's administrative capacity and interest in developing wrap-around services, led to BIA's selection of AVCP as a pilot site.

Tribes at the six pilot sites (four in fiscal year 2015 and two in fiscal year 2016) are required to develop plans to address their needs. Each site plan must address goals in the areas of social services, child welfare, employment and training, recidivism and/or tribal courts. BIA provided funding through a 50 percent increase to their Social Services Tribal Priority Allocation (TPA) and Indian Child Welfare Act (ICWA) fiscal year 2014 base level funding, and a pro rata increase in Job Placement and Training Funds. BIA delivered funding through either an Indian Self Determination and Education Assistance Act (ISDEAA) contract or compact. In addition to the funding received by the pilot sites, all tribes and BIA regions operating social services and ICWA programs received increases from their fiscal year 2014 base levels as part of the Initiative.

b. The President's proposal for the initiative is $21 million over fiscal year 2016 enacted levels. What is the plan for this increase? Would you seek to expand the pilot to additional sites in Alaska and elsewhere?

Answer. Of the $21.0 million Tiwahe Initiative increase in the fiscal year 2017 request, $18.4 million is for social/human services programs and $2.6 million is for the Public Safety and Justice's Tribal Courts program. Here is a summary of the funding breakdown:

—+$12.3 million—Social Services (TPA)
  —$5.0 million: Provide expanded social services such as child welfare and family and domestic services at five additional Tiwahe sites;
  —$5.2 million: Focus on capacity building at specific tribal sites, including the hiring of 30 additional social workers in Indian Country;
  —$1.0 million: Support the continuation of the Research and Evaluation contract which will assist tribes with goals and performance measures;
  —$1.1 million: Support the continuation of the Center for Excellence which gives tribes opportunities to continue learning, cross training, and to conduct information sharing in areas related to leadership, best practices, research, support and training.
—+$3.4 million—Indian Child Welfare Act (ICWA) TPA: Increase tribal preventive services efforts in providing family assistance and home improvement serv-

ices, which should build stronger families and decrease instances of child removal from the home.

—+$1.7 million—Housing Improvement Program (HIP): Improve housing conditions, and access to suitable housing, at the Tiwahe sites with a focus on veterans and single family households.

—+$1.0 million—Job Placement &Training Program (JPT): Support employment and training activities at Tiwahe sites.

—+2.6 million—Tribal Courts: Sustain the existing Tiwahe sites and provide targeted base funding to five additional locations under the Tiwahe Initiative. The resources will assist tribes in creating stronger tribal court infrastructure to address issues related to children and family services, as well as develop special projects to reduce the rate of repeat offenders and criminal recidivism.

If funded at the President's request, BIA would add five additional Tiwahe sites in fiscal year 2017. These five would join the original four selected in fiscal year 2015, and the two selected in fiscal year 2016 (bringing the total number of Tiwahe sites to eleven by the end of fiscal year 2017).

Question (2). ANILCA is perhaps the largest conservation contribution in the world's history and certainly the Nation's. Alaska has more Conservation System Units ("CSUs") than the entire Nation combined, yet we continue to see more and more land taken off the table for development. Land planning in Alaska is managed in a tenuous and never-ending process that specifically ignores ANILCA. The process results in outcomes that do not favor development. In addition, few people have the time, energy, and expertise to participate in these plans. For example: Bering Sea/Western Interior RMP contained 56 maps, 1,200 pages, and 63GB of data. Furthermore, this plan and similar plans exclude multiple-use through ACECs, RNAs, and other proposed closures. What is being done to ensure the balance for conservation and economic opportunity intended by ANILCA is considered for future land management plans?

Answer. The land use planning process in Alaska encourages collaboration and partnerships that assist the Bureau of Land Management (BLM) in determining how to balance the needs of adjacent communities with the management of public land resources. Recognizing the challenges associated with the timeliness of long term planning activities, BLM has recently developed the Planning 2.0 initiative that will improve the bureau's ability to respond to environmental, economic and social changes in a timely manner; strengthen opportunities for State and local governments, Indian Tribes, and the public to be involved in initial decisions leading to the development of land use plans; and improve the BLM's ability to address landscape-scale resource issues. In Alaska, the provisions of the Alaska National Interest Lands Conservation Act (ANILCA) and the Alaska Native Claims Settlement Act (ANCSA) are regularly incorporated into the planning process and when considering mitigation, provisions of FLPMA and ANILCA help identify significant resources and Conservation System Units that could be impacted by development. Early and frequent public engagement and a robust planning process that balance both conservation and resource use will continue to be the key to BLM's land use planning.

Question (3). As you know, once covering 160 million acres, the Public Land Orders ("PLOs") were put in place after 1971 to guarantee that Alaska Natives could select their ANCSA selections. The Department's own report in 2004 said there was no need for any more than 6.7 million acres to still be encumbered—and that number has since been further reduced over the past dozen years with the completion of revised Bureau of Land Management plans. Moreover, Natives have now filed all their selections.

a. Please provide specifically what actions your agency is taking to actively lift the remaining Public Land Orders (PLOs) reserving lands throughout the State of Alaska.

Answer. Public Land Orders (PLOs) determine which lands are or are not available for selection by either an Alaska Native Claims Settlement Act (ANCSA) corporation or the State of Alaska. This authorizes the Secretary to classify and reclassify the lands withdrawn and to open the lands to appropriation in accordance with the Secretary's classification. The original PLOs state that any lands not conveyed to an ANCSA corporation would remain reserved for study and review for the purpose of classification or reclassification. The Bureau's land-use planning process satisfies the requirement for such study, review, and classification and is the appropriate mechanism for recommending a withdrawal be lifted. Over the decades, many of these PLOs were amended several times to allow for millions of acres to be made available for State selection and/or entry under the mining laws.

The State currently has an estimated remaining entitlement of 5.2 million acres, but an estimated 14.9 million acres selected. By contrast, the State has 6.5 million acres of "top-filings" (future selections that would "attach" if and when the pertinent withdrawal (PLO) is lifted). It should be noted that the State has a statutory 25 percent limitation on its over selections. Based on its existing remaining entitlement, the State should have only 6.6 million acres of selections. The State is currently 8.3 million acres over its statutory limit on over-selections. Lifting any PLOs to make more lands available for the State to select would further increase its over-selection.

Currently, lands selected by the State are not available for a rural subsistence priority. Accordingly, lifting PLOs to allow a State top-filing to attach and become a selection will reduce the acreage of lands available for rural subsistence priority. This is one of the reasons the BLM feels that the Bureau's land use planning process, which is open to public input and comment (including by the State) is the appropriate mechanism for recommending a withdrawal be lifted.

b. I would like your commitment to lift all the remaining PLOs as soon as possible, and please provide a timeline by which you commit to abide.

Answer. The appropriate mechanism for recommending withdrawals is through the Bureau's land-use planning process. This process is open to public input (including the State of Alaska) and comment. Since 2007 in Alaska, four resource management plans have been completed where recommendations were made to lift withdrawals and currently there are three resource management plans ongoing where recommendations will be made upon completion.

Question (4). On February 4, I sent you a letter with Chairman Cochran, Chairman Rogers, and Subcommittee Chairman Calvert regarding the Office of Surface Mining's Stream Buffer Zone Rule. The letter related to the directive in the fiscal year 2016 omnibus that required the Office of Surface Mining to provide States with information they requested related to the Stream Buffer Zone Rule, as well as to meet with States at their request.

I am extremely concerned about the manner in which this rule has been written—primarily because 9 out of 10 of the States who entered the process as cooperating agencies decided to withdraw from the process because of a lack of meaningful consultation with OSM. This directive was meant to reverse course and ensure that OSM moves forward in a more cooperative manner.

Shortly after my letter was sent, the State of Alaska sent the Department a letter related to the requirement that OSM provide States with relevant reports, data and analyses. As an initial step, the State of Alaska requested that OSM provide a summary of the documents. The letter indicated that Alaska would then request a subset of those documents and eventually, request a meeting with OSM.

a. Have you provided the State of Alaska with the summary of documents they requested? If not, when do you anticipate that such information will be provided?

Answer. OSMRE made these documents available to all of the States on March 24, 2016, by uploading reference materials cited in the proposed rule on the Web site *regulations.gov* with the exception of reference materials protected by copyright law. OSMRE has also offered assistance through its librarian to those States that request such help to obtain copyright protected materials. The materials are available to the public. The Assistant Secretary and OSMRE officials are holding meetings with the State of Alaska on May 18–22, 2016.

b. In a recent budget hearing in the Senate Energy Committee, Deputy Director Connor said the documents specified in the report language would be ready for the States "in a few weeks." What is your plan for meeting with States after they have had time to review the information you are required to provide them?

Answer. OSMRE offered to dedicate its time at the Interstate Mining Compact Commission on April 18, 2016, to meet with the States. During these meetings, the Stream Protection Rule as well as other topics were discussed. In addition, OSMRE scheduled a series of technical meetings to further engage the States. Staff from 6 State regulatory authorities participated in the meeting on April 14, 2016 and 5 State regulatory authorities participated in the meeting on April 21, 2016.

c. Additionally, can you share the timing and process you envision for moving forward with the stream buffer zone rule? Given that the States will presumably be raising a number of new issues based on the information they receive in the technical documents, will you reopen the comment period so that the public has the opportunity to comment on that information as well?

Answer. OSMRE has prepared a summary of the State meetings for the administrative record. No additional public comment period for the rulemaking is currently planned.

Question (5). Within the Fish and Wildlife Service's Ecological Services budget, and specifically within the Endangered Species Listing program, the Department has proposed shifting a sizeable portion of the budget from "critical habitat designations" to "petitions." I am concerned about this shift because I am still hearing concerns from members who opposed the Department's decision to enter into a multi-species settlement agreement in 2011.

I have heard from members that this effort, which required the Service to make listing determinations on more than 250 species was done without consultation of local governments or communities that are impacted by that settlement agreement. With the actions required in that settlement agreement coming to an end in 2016, I am concerned that the Service will see fit to enter into another similar agreement.

How can I be certain that, if we decide to shift money from critical habitat designations to petitions, the Service will not be inclined to enter into a similar, closed-door settlement agreement?

Answer. The Endangered Species Act establishes mandatory duties and timeframes for various listing duties including petition findings, listing determinations, and critical habitat designations. Failure to meet the statutory timeframes can lead to lawsuits. When it is in the best interest of the Government to do so, litigation can be resolved through settlement agreements; this typically occurs when the Service does not have a viable defense and a settlement is expected to achieve more favorable terms through negotiation. To avoid litigation, the Service strives to meet the ESA's deadlines and has requested the funding needed to do so.

The requested amounts in the Listing subactivity reflect the anticipated fiscal year 2017 workload. In fiscal year 2017, the Service will need less funding than in fiscal year 2016 to address critical habitat designation for already listed species because there are fewer such critical habitat designations outstanding. In contrast, the anticipated workload for petition findings will be greater in fiscal year 2017 than in fiscal year 2016; thus, the budget includes funding under the subcap for the functional area to be increased. By having the subcaps reflect the distribution of the workload, the Service hopes to reduce litigation by working on all types of outstanding actions.

Question (6). I have been concerned with the Department's actions related to the polar bear for a number of years. I disagree with the 2008 listing determination and vehemently disagree with the designation of more than 187,000 square miles of land—an area larger than the State of California—as "critical habitat" for polar bears. When combined with the other hostile actions undertaken by the administration when it comes to developing our public lands, the listing and designation has the potential to devastate our State's economy.

My concern has long been that the Department based its listing decision more on the expectation that climate change would decrease polar bear habitat and stocks in the future, than on fact that stocks are currently in decline. I have seen no data to show that polar bear stocks currently are in significant decline across northern Alaska (the issue of potential Russian poaching aside) and thus, the species does not warrant protections under the Endangered Species Act.

Has the Department undertaken any recent efforts to consider new science related to polar bears in an effort to determine whether the species should be listed under the Endangered Species Act? If so, please provide me with the studies that you have considered. If not, please share with me the reason for not moving forward and whether there is a plan for moving forward.

Answer. The Fish and Wildlife Service (Service) initiated a 5-year status review under the Endangered Species Act of 1973, as amended (ESA), for the polar bear (*Ursus maritimus*) on October 13, 2015. The purpose of this 5-year review is to ensure that the polar bear has the appropriate level of protection under the Act. The polar bear's "threatened" status reflects the finding that it is not presently in danger of extinction, but is likely to become endangered in the foreseeable future. A 5-year review affords the opportunity to periodically take a comprehensive look at the full body of information available for a species and assess its progress toward recovery. These reviews assist the Service and its partners in identifying conservation needs, better targeting and prioritizing conservation efforts for the species, and determining whether a species may warrant downlisting, delisting, or uplisting.

As a part of the 5-year review, the Service published its intent to collect the following data regarding the polar bear species: species biology, including but not limited to population trends, distribution, abundance, demographics, and genetics; habitat conditions, including but not limited to amount, distribution, and suitability; conservation measures that have benefited the species; threat status and trends;

and other new information, data, or corrections, including but not limited to changes in taxonomy or nomenclature and identification of erroneous information contained in the List of Endangered and Threatened Wildlife and Plants.

In addition to the 5-year review process, through the Service's participation in co-management arrangements via the U.S.-Russia Bilateral and Inuvialuit-Inupiat Agreements, the Service considers new science on an annual basis as it relates to sustainable harvest levels for the Chukchi and Southern Beaufort Sea subpopulations of the polar bear, which are harvested for subsistence. The Service does not have a recent population estimate for the Chukchi Sea subpopulation, but does have evidence that polar bear body size and condition remains stable despite the declines in habitat (sea ice). In the Southern Beaufort Sea subpopulation, multiple lines of evidence suggest that polar bears may be in decline due to decreased sea ice availability, including reductions in body size, body condition, and recruitment in recent decades (Regehr et al. 2006, Rode et al. 2010, 2014a). A recent publication (Bromaghin et al. 2015) indicates that polar bear numbers in the Southern Beaufort Sea subpopulation significantly declined from 2004 to 2007 and survival of subadult bears declined throughout the entire period of 2001–2010.

Regehr et al. 2006:

Regehr E.V., S.C. Amstrup, and I. Stirling. 2006. Polar bear population status in the southern Beaufort Sea. U.S. Geological Survey Open-File Report 2006–1337, U.S. Geological Survey, Alaska Science Center, Anchorage, AK, USA.

Question (7). The Fish and Wildlife Service has requested the authority to seek compensation from responsible parties who damage or destroy National Wildlife Refuge System or other Service resources. This legislative language has been circulating for a number of years. In 2014, a hearing was held in the Environment and Public Works Committee a bill that was introduced by Senator Cardin. My understanding is that no legislation has been introduced in the current Congress and the Environment and Public Works Committee has not taken action on the matter.

a. Why has the Department only requested this authority for the Fish and Wildlife Service? I understand the National Park Service has similar authority already, but the Bureau of Land Management does not. Is there a reason that the request was made only for the Fish and Wildlife Service?

Answer. The National Park Service (NPS) and Bureau of Land Management both have authorities to allow them to retain collections from damages for repair and restoration.

The NPS authority provided by 54 U.S.C 100721–25 allows NPS to use response costs and damages recovered under the authority or amounts recovered under any statute as a result of damage (destruction, loss of, or injury) to any resource within a unit of the National Park System to be retained and used for response costs, damage assessments, restoration, and replacements.

The Bureau of Land Management's annual appropriations language for Service Charges, Deposits and Forfeitures provides general Federal authority to collect fees for rehabilitation of damaged public lands. The BLM has specific requirements in the BLM Realty Trespass Abatement Handbook on the deposit and use of rehabilitation/stabilization funds. It states that funds received for rehabilitation/stabilization of damaged lands as result of trespass settlement or bond forfeiture are deposited into the Service Charges, Deposits and Forfeitures account and are available for in-State rehabilitation and stabilization work on lands damaged by trespass.

b. I have heard concerns that providing this authority will lead to additional prosecutions of individual because the Service will be incentivized by the prospect of additional revenue. What can you do to assure me that this will not happen?

Answer. The Service has a responsibility to manage public resources for both current and future generations. In order to maintain these resources, the Service expects parties responsible for damaging them, not taxpayers, to pay restoration costs. The intent of this authority is to ensure that the Service, and the American people, will not have to pay for restoration activities and that those causing these impacts pay for their restoration. It is not intended to generate revenue for the Service.

While this authority would be new for the Service, it is not a new authority for government agencies. The National Park Service (NPS), National Oceanic and Atmospheric Administration (NOAA), and the Bureau of Land Management (BLM) have similar authorities and we look to their models to implement this law, if enacted.

Any funds collected to compensate for resource injuries will be used to rectify that specific injury alone. The legislation, if enacted, would deposit the recovered funds into the Department of the Interior Natural Resource Damage Assessment and Restoration Fund, as is done with natural resource damages recovered under the Comprehensive Environmental Response, Compensation, and Liability Act, the Oil Pollution Act, and the Park System Resource Protection Act (16 USC 19jj). These funds would be maintained separately and used solely for cases handled under this authority.

Question (8). The fiscal year 2016 Omnibus Appropriations bill contained a substantial increase for the Land and Water Conservation Fund (LWCF). The total discretionary appropriation was $450 million, an increase of $50 million over the President's fiscal year 2016 discretionary total and $144 million over the fiscal year 2015 enacted level of $306 million. Congress was able to fund the President's proposed discretionary funding lists and increase the NPS State side program to $110 million. Given the funding pressures for the Interior bill this year it will be hard to meet the fiscal year 2016 appropriated level; therefore, we need to carefully look at the projects the President has proposed in his budget submission to make sure they have been fully vetted and are ready to go.

The explanatory statement on the fiscal year 2016 Omnibus stated that many of the projects the administration has proposed over the years lack sufficient information, and that requested projects should have identified properties, willing sellers, updated appraisals or market information, and the support of Federal, State, and local officials.

Have all of the projects submitted in the fiscal year 2017 budget met all of these conditions?

Answer. To the greatest extent possible, LWCF land acquisition projects proposed by the fiscal year 2017 budget meet the conditions laid out by the fiscal year 2016 Omnibus explanatory statement; however, the Department chooses to use discretion when it comes to disclosing certain details on the projects in the Greenbooks for a variety of reasons. Upon request from the Appropriations Committee, the bureaus may provide further details to cover the conditions, and both the bureaus and Department make a point to alert in a timely manner the Interior Appropriations Subcommittees if project details and/or status change.

The bureaus included the following information in the Greenbook project data sheets, as well as briefing materials for Congress, for each proposed acquisition:

—Full page profiles and maps of each acquisition, including estimated cost, acres, and location. Should those details change or be updated, the bureaus and Department relay that information to the Appropriations Committee.

—Contributors known to the bureaus' State and regional offices that are partners or supporters of the proposal acquisition. These identified contributors may include, but are not limited to, the following: State, county or local governments or agencies; national, State or local private non-profit organizations; Federal Government partner agencies; charitable foundations; land and battlefield trusts; and local and regional committees or networks (including those representing ranchers, farmers, hunters, anglers, and other outdoorsmen).

The bureaus did not cite by name in the Greenbook project data sheets individual Federal, State, and local officials who support projects, choosing instead—where applicable—to cite the support of Federal, State, county, or local governments or agencies.

Willing sellers are not identified in the budget for several reasons. Bureaus, working through their field and regional offices, identify land parcels in or adjacent to public lands for purchase, as well as potential willing sellers. Given that acquisition projects may take 2 to 3 years to complete, in the early stage of a budget request,

bureaus may not have concrete willing sellers yet (only potential). Privacy issues may arise when landowners and potentially willing sellers do not want their neighbors to know that they are talking to the government about selling. Additionally, there is the value expectation. If a landowner sees his or her name listed along with a request number, the landowner comes to expect the entire amount, regardless of the actual appraised value.

Details on each land acquisition project also reflect consideration of several additional criteria important to the bureaus and Department, including the ecological, economic, and cultural values the project conserves; contribution of leveraged funds; partner participation and support; and the urgency of project completion to protect natural areas and wildlife species habitats from development or other incompatible uses.

In a continuing effort to provide user friendly data, the Department provides an interactive map of the properties it submitted for consideration to Congress for the 2017 budget at: https://www.doi.gov/sites/doi.gov/files/uploads/LWCF__BIB__map__FY2017.pdf.

Question (9). The explanatory statement also expressed that the agencies should include the feasibility of phasing projects as well as a description of which parcels are being considered for conservation easements or fee simple acquisition.

Discuss compliance with this guidance. What number or percent of the requested projects were identified as able to be accomplished in phases? What number or percent of the projects were identified as acquisitions for conservation easements versus fee simple acquisitions?

Answer. For the BLM, several of the fiscal year 2017 projects could be phased—within discretionary funding 10 of the 14 projects (or 71 percent) could be phased. Within BLM discretionary funding, 68 percent would be invested in fee acquisitions and 32 percent would be invested in easement acquisitions.

The FWS discretionary request for fiscal year 2017 would purchase approximately 16,375 fee acres (39 percent) and 25,670 conservation easement acres (61 percent). Most of the FWS projects have already been phased; however, four of the projects, or 25 percent, can be further phased since they are comprised of multiple tracts.

Of the 33 projects included in the NPS fiscal year 2017 budget for Federal land acquisition, four projects are parts of phased acquisitions:

1. *Grand Teton NP(Discretionary):* The State of Wyoming entered into an agreement with the United States for a phased conveyance of approximately 1,400 acres of State-owned land within Grand Teton National Park. The fiscal year 2017 budget includes $22.5 million which will be obligated to cover the Federal cost of a portion of that phased conveyance.
2. *Hawaii Volcanoes NP (Discretionary):* Funding requested ($6 million) will be used to acquire half of the 16,467-acre Pohue Bay/Kau Coast property at the park.
3. *Hawaii Volcanoes NP (Mandatory):* Funding requested ($6 million), if appropriated, will be used to acquire the second half of the Pohue Bay/Kau Coast property at the park.
4. *Palo Alto NHP (Mandatory):* The requested funds would commence a phased acquisition of a tract containing 1,353.84 acres of land (Total Estimated Value: $9,125,000) located within the national historic site.

Of the 33 projects included in the NPS fiscal year 2017 budget request for Federal land acquisition, three projects are identified as easement or less-than-fee acquisitions (Death Valley NP, Katmai NP and Redwood NP), one project involves both fee and easement acquisitions (Martin Van Buren NHS), and two projects may involve either fee or easement acquisitions (Little River Canyon NPres and Nez Perce NHP). The possibility of acquiring a conservation easement varies, depending on the contemplated Federal use of the property and the willingness of the landowner to sell such easement.

Question (10). The explanatory statement also included language to increase the transparency of the project selection and prioritization processes in the annual budget requests, particularly in regard to collaborative landscape projects. Over the years, there has been concern among many in the community and here in Congress about how the administration picks projects for the discretionary and mandatory lists. It appears that many of the projects have been geared toward the Western US and that geographic distribution of funds has not been a factor in your project selection. Typically Congress has funded the proposed lists in the order requested; however, with questions about the quality of projects and the process used to select projects Congress may need to revisit this approach.

Given these questions about quality and process: What process does the Department use to compile the project lists, including for identifying collaborative areas?

What considerations does the Department take into account when selecting and prioritizing projects? What is the geographic distribution of requested funds?

Answer. The President's fiscal year 2017 budget includes 135 land acquisition projects across the Department of the Interior and the Department of Agriculture's four land management agencies in 41 States. The wide range of projects proposed for funding includes important wildlife habitat and migration corridors in Florida's Everglades, grassland and wetland habitats popular with hunters and anglers in eastern North Dakota and South Dakota, historic structures associated with the Wright brothers and the early development of the airplane at the Dayton Aviation Heritage National Historical Park in Ohio, permanent public access to the South Puget Sound Coastal Forest in Washington State, scenic vistas along the Appalachian Trail, and popular public recreation sites in national monuments in Arizona, Idaho and New Mexico. The attached map shows the location of each proposed land acquisition project, and demonstrates the geographic diversity of projects in fiscal year 2017.

The National Park Service (NPS), Bureau of Land Management (BLM), and Fish and Wildlife Service (FWS) each has its own criteria that are used to evaluate and prioritize proposed land acquisitions.

NPS utilizes a nationwide priority ranking system, the Land Acquisition Ranking System (LARS). The initial information for each project is provided by the park unit and reviewed by regional or field offices of the Land Acquisition Program. Land Acquisition staff in each office assists the Regional staff in ranking the requests received using guidelines provided by the Washington (WASO) Program Office. The LARS incorporates several criteria, including, but not limited to: the threat to and preservation of the resource; a commitment has been made to acquire; involvement of partners, non-profit group support or availability of matching funds; recreational opportunities; existence of legislative authority to acquire; and ability to obligate appropriated dollars.

For BLM, submissions include a completed project narrative, fact sheet, questionnaire, representational map(s) and digital color images—and are limited to no more than 20 projects per State Office (SO). To be eligible projects must be:

1. Within or contiguous to, a unit of the National Landscape Conservation System (NLCS) (with the exception of Wilderness Study Areas), an Area of Critical Environmental Concern or a Special Recreation Management Area;
2. Comply with Section 205 (b) of the Federal Land Policy and Management Act (identified for acquisition within an approved land use plan); and
3. Be available for purchase from a willing seller owner.

Submissions are then reviewed by the National Review Team (NRT). The NRT is a multi-disciplinary team consisting of representatives from different levels of the organization. The NRT recommends a prioritized list of project proposals to the Bureau of Land Management (BLM) leadership. The BLM Land and Water Conservation Fund (LWCF) Land Acquisition list reflects bureau and departmental priorities, potential sources and levels of funding, and the latest information on willing sellers.

FWS's 2014 Strategic Growth Policy directs FWS to focus on acquiring lands and waters in fee, conservation easement, and/or donation that support three conservation priorities:

1. Recovery of threatened and endangered species;
2. Implementing the North American Waterfowl Management Plan; and
3. Conserving migratory birds of conservation concern.

Based on these three priorities to evaluate proposed NWRS land acquisitions, FWS uses the Targeted Resource Acquisition Comparison Tool (TRACT). The TRACT provides a biological, science-based, and transparent process for ranking proposed NWRS land acquisitions.

TRACT biological evaluation plays a role in LWCF budget formulation, but is not the only factor considered when making decisions about where to request LWCF funds for NWRS land acquisition. The LWCF project list submitted by FWS reflects additional considerations, such as bureau operational priorities, partner support, potential non-Federal funding sources, unique land acquisition opportunities, and the latest information on willing sellers. Land acquisition projects proposed for the fiscal year 2017 budget reflect additional important factors, including conservation partner participation, and urgency of project completion to protect natural areas from development or other incompatible uses.

The Service considers the minimum interest necessary to reach management objectives. For example, conservation efforts for the greater sage grouse and central Florida ecosystem are compatible with traditional land use. Therefore the Service may choose to seek conservation easements or, to enhance public access and rec-

reational opportunities, a combination of fee and conservation easements acquisition.

The administration's strategic approach to using LWCF land acquisition funds in fiscal year 2017 includes funding for Collaborative Landscape Planning (CLP) projects. This interagency program brings the Departments of the Interior and Agriculture together with local stakeholders to identify large natural areas where LWCF funds can achieve the most important shared conservation and community goals in the highest priority landscapes. Conserving large-scale natural areas provides multiple resource and economic benefits to the public, including clean drinking water, recreational opportunities, protected habitat for at-risk and game species, and jobs generated on and off these lands. The Secretaries of the Interior and Agriculture follow a rigorous competitive and merit-based based evaluation process to select collaborative landscapes for investment. After evaluating and prioritizing multiple ecosystems, they selected seven landscapes for discretionary and mandatory funding in fiscal year 2017:

—Island Forests at Risk (Hawaii)
—High Divide (Idaho, Montana)
—Rivers of the Chesapeake Collaborative (Maryland, Virginia, West Virginia)
—National Trails System (California, Georgia, Hawaii, Idaho, Montana, New Mexico, Oregon, Pennsylvania, Tennessee)
—Florida-Georgia Longleaf Pine Initiative (Florida)
—Southern Blue Ridge (Georgia, North Carolina, Tennessee, Virginia)
—Pathways to the Pacific (Oregon, Washington).

Qualifying projects are submitted by bureaus which are evaluated and selected for inclusion within available budget resources.

Question (11). According to the EPA, methane emissions from hydraulic fracturing at natural gas wells is down 83 percent since 2011 and total methane emissions from natural gas production are down 38 percent since 2005.

a. Is natural gas a key component of GHG reductions?

Answer. Reducing natural gas emissions reduces waste of America's public resources and provides important greenhouse gas (GHG) emission reductions. Methane, the primary component of natural gas, is an especially powerful GHG. Its climate impact is roughly 25 times that of CO_2, if measured over a 100-year period, or 86 times that of CO_2, if measured over a 20-year period.[1] Thus, measures to conserve such gas, avoid its waste, and reduce unnecessary releases significantly benefit local communities, public health, and the environment.

b. Does the use of natural gas help drive down GHG emissions?

Answer. The effect of use of natural gas on GHG emissions depends on both the energy source that would be used in lieu of the natural gas, and on the quantity of methane lost during the natural gas production process. Assuming limited methane losses, replacing coal or oil with natural gas can help drive down GHG emissions. Where natural gas replaces non-carbon energy sources, such as renewable or nuclear energy, however, the use of natural gas increases GHG emissions. Also, because methane is a far more potent GHG than CO_2, methane lost during the natural gas production process can offset the benefits of using natural gas in place of other fossil fuels.

c. Does the administration want to see U.S. natural gas production continue to help bring down GHG emissions?

Answer. The continued production and use of natural gas are consistent with the administration's goal of achieving a cleaner, more secure energy future, provided that gas losses are minimized. Consistent with this recognition and our overall climate goals, finalization of the recently proposed Methane and Waste Prevention rule will help curb waste of our Nation's natural gas supplies, reduce harmful methane emissions that worsen climate change, and provide a fair return on public resources for Federal taxpayers, tribes and States.

Question (12). Over the course of the U.S. energy boom, according to the Energy Information Administration, marketed natural gas production has increased by 35 percent, over the 9-year period from 2005 to 2013, from about 19 trillion cubic feet of gas per year to about 25 and a half trillion cubic feet of gas per year. Over this same period, EPA data show that methane emissions from hydraulically fractured natural gas wells decreased by about 80 percent, emissions from natural gas produc-

[1] See Intergovernmental Panel on Climate Change, Climate Change 2013: The Physical Science Basis, Chapter 8, *Anthropogenic and Natural Radiative Forcing,* at 714 (Table 8.7), *available at* https://www.ipcc.ch/pdf/assessment-report/ar5/wg1/WG1AR5 Chapter08 FINAL.pdf.

tion decreased by about 38 percent and total methane emissions decreased by about 11 percent.

a. In view of this information, and in view of EPA's continued efforts to reduce methane emissions from industry sources, why has the BLM, under your authority, chosen to promulgate its own methane regulations?

Answer. The proposed Methane and Waste Prevention Rule aims to reduce the waste of natural gas from BLM-administered mineral leases. This gas is lost during oil and gas production activities through flaring or venting of the gas, and equipment leaks. The BLM has an independent statutory responsibility to address this waste. Specifically, the Mineral Leasing Act of 1920 (MLA) requires the BLM to ensure that lessees "use all reasonable precautions to prevent waste of oil or gas . . ." (30 U.S.C. 225). While oil and gas production technology has advanced dramatically in recent years, the BLM's requirements to minimize waste of gas have not been updated in over 30 years. The BLM believes there are economical, cost-effective, and reasonable measures that operators should take to minimize waste, which will enhance our Nation's natural gas supplies, boost royalty receipts for American taxpayers, tribes, and States, and reduce environmental damage from venting and flaring.

EPA has finalized regulations under the Clean Air Act to reduce methane emissions from certain new, reconstructed, and modified oil and gas production activities. While these requirements will have the effect of reducing some losses of gas as well, the EPA requirements are not aimed directly at waste and would not fulfill the BLM's statutory responsibilities. For example, unlike the proposed BLM regulations, the proposed EPA regulations do not address gas losses through flaring, and do not address gas losses from existing sources, unless the existing source is modified or reconstructed (as defined by EPA).

b. Related to this question, can you describe the consultation that the BLM has undertaken with EPA, and with the State regulatory agencies with Clean Air Act authority in the states with operations on BLM lands?

Answer. The BLM has engaged in substantial stakeholder outreach in the course of developing the proposal. In 2014 and 2016, the BLM conducted a series of forums to consult with tribal governments and solicit stakeholder views to inform the development of the proposed rule (2014) and to discuss the proposed rule after publication (2016). The outreach included tribal and public meetings (some of which were livestreamed) in Colorado (2014/2016), New Mexico (2014/2016), North Dakota (2014/2016), Washington, DC (2014), and Oklahoma City (2016).[2] For each forum, BLM held a tribal outreach session in the morning and a public outreach session in the afternoon. The BLM also accepted informal comments generated as a result of the public/tribal outreach sessions (2014).

The BLM also consulted State regulators (both oil and gas regulators and air quality regulators) both while developing the proposal and since its issuance. Specifically, the BLM held discussions with regulators from: North Dakota (2014/2016), Wyoming (2014/2016), Alaska (2014/2016), Colorado (2014/2016), Utah (2014/2016), and New Mexico (2014) to discuss the States' rules and practices, their effectiveness, the States' recommendations with respect to the BLM rulemaking, and their views on the proposal. The BLM is continuing to hold further discussions with States, is looking forward to receiving detailed written comments from State regulators, and will take those comments into careful consideration in developing the final rule.

During the development of the proposed rule, the BLM and the EPA held regular discussions to share data and technical information, identify areas of potential overlap between the two regulatory efforts, consider ways to align the proposed rule requirements as much as practicable, and identify provisions where the BLM could exempt otherwise covered sources or activities because they are or are proposed to be subject to equally effective EPA requirements. Those meetings are continuing during development of the final EPA and BLM rules.

Question (13). Over the last few years the United States has undergone an energy renaissance which has created thousands of new well-paying jobs, made the United States more energy secure and less reliant on evil powers across the globe as well as make U.S. energy more affordable—just look at the cost of gasoline today—all while methane and GHG emissions have dramatically declined. During this same time BLM's permitting process continues to lag which is not only a lost opportunity for the benefits I just described, but also to the detriment of potential revenues to the Federal Treasury and the States. Additionally, the BLM has put out a number of regulations and proposals including the Hydraulic Fracturing, updates to Onshore

[2] Further information can be found at the BLM oil and gas program's outreach–events page: http://www.blm.gov/wo/st/en/prog/energy/public events on oil.html.

Orders 3, 4, and 5, and the proposed venting and flaring rule. Each of these, separately and combined, could have real effects on U.S. energy production, jobs, revenues, etc. If the goal of the Climate Action plan is to decrease GHG emissions, does it make sense to propose a suite of regulations that will shut down U.S. natural gas production?

Answer. The common-sense and cost-effective rules BLM has proposed or finalized in the last 2-plus years are an important component of its efforts to modernize its oil and gas program. These regulations—including the proposed updates to Onshore Orders 3, 4, and 5, the Hydraulic Fracturing Rule, and the proposed Methane and Waste Prevention Rule—are all necessary updates to 30-year old regulatory requirements that no longer reflect modern technology or practices. The BLM expects that these regulatory efforts will increase production and royalty accountability, enhance the safety of operations, and conserve resources, without harming U.S. energy production.

These rules often propose or adopt standards and practices developed by industry that are already being successfully employed by operators. Updating and clarifying the regulations will make them more effective, more transparent, and easier to understand and administer, which will benefit both industry and the public. The proposed and adopted changes will provide modern, effective regulation of oil and gas operations on BLM-administered leases, ensuring such development occurs in an environmentally responsible way that provides a fair return to taxpayers.

Question (14). For several years, the EPA has been working on the development of new requirements for compliance with elements of the Clean Air Act for oil and gas production operations. The process of developing new regulations for emissions from new sources has involved—indeed required—highly technical discussions, and has been characterized by regular opportunities for substantive discussion between EPA and the regulated industry. Why is the BLM undertaking its own separate rulemaking process?

a. Did the BLM work with the EPA to make sure the two packages were not in conflict with one another? If so, why are there many examples of the two rules differing or the BLM requiring something the EPA determined was not necessary or cost prohibitive?

   For example: BLM's inclusion of liquids unloading requirements when EPA has determined there is not a single cost-effective method that can address this source. Additionally, there are differences between survey frequency based on number of leaks (BLM) versus percent of components (EPA).

Answer. The BLM and the EPA have worked closely together throughout the rulemaking processes to ensure that the two regulatory packages are not in conflict with each other, as discussed in more detail in the response to Question 12a. In some cases the two rules are different because they are being adopted under different statutory authorities and they have different primary purposes.

For example, our understanding is that section 111 of the Clean Air Act requires the EPA to base its standards on an identified "best system of emission reduction." The EPA proposed that it could not identify a single best system of emission reduction that should apply in all situations to reduce emissions from liquids unloading. In contrast, the Mineral Leasing Act simply requires the BLM to ensure that lessees "use all reasonable precautions to prevent waste of oil or gas . . ." 30 U.S.C. 225. With respect to liquids unloading, the BLM has determined that there are multiple technologies and practices that would reduce gas losses from liquids unloading, depending upon the particular circumstances of the well. The BLM has not proposed to require operators to use specific technologies. Rather, the BLM has simply proposed a performance-based standard—to prohibit liquids unloading through manual well purging from new wells—allowing operators to choose the technologies or practices to apply to achieve this result.

Question (15). What assurance do we have that the two agencies' efforts can be coordinated such that BLM's rulemaking will be informed by the EPA effort so that regulatory conflict is avoided?

Answer. The BLM and the EPA fully understand the importance of coordinating their approaches, have coordinated closely throughout the rulemaking processes to date, and are committed to continuing to coordinate until both rulemakings are finalized. As a practical matter, the EPA's rulemaking was finalized before the BLM's rulemaking, which allows the BLM to take EPA's final rule fully into account before finalizing the BLM's rule.

Question (16). How do these rules interact with the State's own efforts on methane? What consideration did you give the State programs? Is there a scenario where projects will need to comply with a State methane program and regime, a different

BLM methane program and regime and a different EPA methane program and regime? Is that necessary and reasonable?

Answer. As discussed in the response to Question 12b, the BLM has reached out to many States to gain an understanding of State regulations and the States' experiences with their regulations. In fact, many of the provisions in the proposed rule track elements of effective State programs.

The BLM has also constructed its proposed rule to address concerns about the potential for multiple applicable regulations. To minimize any overlap with EPA regulations, the BLM proposed that sources meeting the EPA requirements would either be exempt from the BLM rules altogether, or be permitted to demonstrate compliance with the EPA requirements in lieu of meeting the BLM requirements, depending on the specific requirement. In addition, the BLM and the EPA proposed to align their requirements to a very significant degree and aim to further align the final rules, to the full extent consistent with legal authorities and with consideration of comments received.

With respect to State rules, the BLM proposed specific provisions to allow variances from one or more BLM requirements where one or more State requirements are equally or more effective.

Question (17). How does the cost-benefit analysis hold up when there are a lot of legacy producing wells that would cost more to comply with these proposals than the energy that is produced which would then result in production being shut-in? Would this mean that DOI loses in royalty revenue?

Answer. The proposed rule includes several exceptions and alternative limits that would apply if implementing provisions of the rule would impose such costs as to cause the operator to cease production and abandon significant recoverable oil reserves under a lease. The Regulatory Impact Analysis for the proposed rule projects that the rule would produce modest increases in both gas production and royalties.

Question (18). In January, a magnitude 7.1 earthquake hit Alaska. Though a handful of families lost their homes, damage was limited because the earthquake occurred away from populated areas. Alaska's history demonstrates clearly, however, that we are not always so fortunate.

a. In 2000, congress authorized the Advanced National Seismic System to "establish and maintain an advanced infrastructure for seismic monitoring throughout the United States that operates with high performance standards . . ." A decade and a half later, many of the baseline performance standards set by this program have not been achieved in Alaska. As other States with high earthquake hazard move on to advanced technologies, such as earthquake early warning, what is the Department doing to make sure Alaska has access to the instrumentation, technology, and funding needed to expand and modernize the seismic infrastructure?

Answer. In the past 15 years, the USGS has invested in earthquake monitoring and reporting, seismic hazard assessment, and other earthquake loss reduction activities in Alaska, and collaborates with several groups in the State. The USGS supports the Alaska Earthquake Center and the University of Alaska—Fairbanks (UAF), our regional seismic network partner in the State, at about $600,000 per year. The USGS also supports the Anchorage Strong Motion Network, a collaborative effort among the USGS National Strong Motion Project, the Alaska Volcano Observatory (a joint center of the USGS, UAF, and Alaska Division of Geological & Geophysical Surveys). The network consists of more than 30 free-field stations, a borehole site, and several instrumented buildings and bridges. USGS monitoring investments in Alaska also include USGS National Network stations, and the services provided by the USGS National Earthquake Information Center.

In recent years, the USGS invested in improvements to the Anchorage and Alaska regional seismic networks. For example, in 2010, USGS made an award to the UAF of $483,000 plus seismic equipment for upgrading these networks. The USGS has also invested in improving the Anchorage monitoring infrastructure. As a result of these improvements, high-quality data on how shaking varied across the Anchorage urban area were successfully collected from the January 2016, magnitude-7.1 earthquake. The USGS has also supported the Delaney Park geotechnical array in Anchorage, operated by the University of California, which provides field observations of earthquake activity and uses these observations as control data for testing models and simulation techniques.

b. Language was included in the fiscal year 2016 omnibus for USGS to conduct a cost benefit study related to earthquake monitoring for Alaska. Please tell me what the status of that report is and when we may be able to expect to see some of the findings?

Answer. A working group has been formed to conduct a cost-benefit study for monitoring improvements in Alaska: the study will be released in the fall of 2016 or before. The working group will evaluate the costs and benefits of seismic station adoptions, earthquake early warning, as well as improvements to existing monitoring operations. USGS will use the results of this study in its planning for future investment in seismic monitoring in Alaska.

c. President Obama's 2013 arctic strategy document emphasizes cooperative efforts with the State of Alaska to respond to natural and man-made disasters. In the last 2 years there have been significant swarms of earthquakes in the Bering Sea, Northwest Alaska and the Arctic National Wildlife Refuge. How does the Department intend to engage with the State of Alaska to develop earthquake mitigation strategies for the Arctic region?

Answer. The USGS is a member of the four-agency National Earthquake Hazards Reduction Program (NEHRP) partnership, but developing earthquake mitigation strategies are primarily the responsibility of the National Institute of Standards and Technology and Federal Emergency Management Agency. As a member of the NEHRP, the USGS conducts and supports targeted geoscience research investigations on earthquake causes and effects; produces seismic hazard maps and assessments; monitors and reports on earthquakes and shaking intensities; works to improve public understanding of earthquake hazards; and coordinates post-earthquake reconnaissance carried out and supported by NEHRP agencies and other organizations.

Question (19). The President's proposal includes an increase of $8.8 million for USGS activities related to the Arctic.

a. Could you provide more detail on the Department's Arctic priorities, particularly as they relate to the administration's "Implementation Plan for its National Strategy for the Arctic Region"?

Answer. On May 10, 2013, the President issued the National Strategy for the Arctic Region (Strategy). The accompanying Implementation Plan set forth the methodology, process, and approach for executing the Strategy. The Implementation Plan follows the structure and objectives of the Strategy's three lines of effort:

—Advance United States Security Interests
—Pursue Responsible Arctic Region Stewardship
—Strengthen International Cooperation

The Implementation Plan reflects the reality of a changing Arctic environment and upholds national interests in safety, security, and environmental protection, and works with international partners to pursue global objectives of addressing climatic changes. The Implementation Plan complements and builds upon existing initiatives by Federal, State, local, and tribal authorities, the private sector, and international partners, and focuses efforts where opportunities exist and action is most needed.

Under the Implementation Plan, the Department's priorities include:

—Ensuring the safe and responsible exploration and development of onshore and offshore Arctic non-renewable energy resources in an environmentally sound manner;
—Implementing Integrated Arctic Management and employing management approaches, such as ecosystem-based management, to enhance good governance to provide for sustainable economies in the region, ensure long-lasting benefits of balanced ecosystems, and preserve cultural activities of the people that depend on the Arctic environment; and,
—Coordinating and integrating terrestrial ecosystem research to increase the understanding of geophysical and ecosystem responses to a changing climate and to inform management decisions and subsistence uses.

The Department continues to study offshore environments, evaluate energy development and spill response capabilities, and to promote safety across all energy development activities. In cooperation with the State of Alaska and Alaska Native organizations, the Department is also encouraging use of Integrated Arctic Management, a science-based, whole-of-government approach for stewardship and planning, that integrates and balances environmental, economic, and cultural needs and objectives.

The Department is also a member of the Interagency Arctic Research Policy Committee (IARPC) to advance research in areas of common interest to member agencies. The IARPC 2013–2017 research plan was drafted with contributions from all IARPC agencies with public involvement. The plan, which is currently being updated, intentionally builds on the strong intellectual accomplishments and ideas of

the research community at the Federal, State, local, and tribal levels as well as inclusion of ideas from the academic community, non-governmental organizations, and industry. As an IARPC member, the Department is engaged in answering key research questions such as determining the impact of diminishing permafrost on Arctic ecosystems and inhabitants.

The 2017 budget request for the Department's activities in the Arctic is $160.6 million, an increase of $15.8 million above the 2016 enacted level. The request for USGS includes increases totaling $9.8 million, which includes $8.8 million in Arctic funding and a net addition of $1 million primarily for Alaska map modernization that will be applied to the Arctic. Across the USGS, these increases will be used to analyze the impacts of a changing climate, including changing distributions of fish and wildlife populations, the melting of glaciers and the resulting impact to fresh water resources; to analyze the risks posed by sea-level rise to coastal communities; and to develop predictive models.

b. Also, can you provide specific details about the type of research and activities that would be conducted if this funding were approved? For example, will these activities improve our understanding of the continental shelf offshore Alaska's north coast?

Answer. With these increases, the USGS will support research and development efforts focused on the Arctic through a multidisciplinary approach designed to both individually understand and holistically evaluate ecosystem processes and interactions in the Arctic to provide the objective science needed for effective management of Arctic resources. Additionally, an increase of $1.5 million within the National Geospatial program for Alaska map modernization will be used in the Arctic region and a proposed decrease in the Mineral Resources program reduces Arctic spending by $500,000. Including the Alaska map modernization funding to be used in the Arctic, the President's budget request includes an increase of $9.8 million for USGS Arctic activities.

The increase of $1.0 million in the Environments Program in the Ecosystems Mission Area will be used to analyze changes in fish and wildlife population distribution and habitats. Additionally, the program will use computer simulations to improve strategies for estimating polar bear populations from data gathered in Western Hudson Bay, the Chukchi Sea, and the Southern Beaufort Sea.

The increase of $500,000 for the DOI Alaska Climate Science Center and other related programs will develop a process to estimate total glacier loss in Alaska and any changes in freshwater input. These and other forecasts will improve understanding of effects on river systems and ecosystem dynamics that affect economically and culturally important species such as salmon and caribou. The funding would build upon other research investments in interior Alaska to better understand the potential for larger scale and more frequent effects of ecological drought in the region.

Additionally, the increase of $1.9 million in the Climate and Land Use Change Mission Area's Land Remote Sensing Program is to develop predictive models for permafrost melt. Using remote sensing data from satellites and airborne systems, in combination with field-based studies, this work will prepare Arctic communities for the effects of the thawing land beneath them and improve global climate modeling.

The increase of $3.5 million in the Coastal and Marine Geology program within the Natural Hazards Mission Area accelerates work for underserved communities dealing with impacts of sea level rise, severe storms and melting permafrost on their coastal communities and economies. The cost of field studies in these large and remote areas, the lack of baseline data, and the poorly understood dynamics of icebound and permafrost coasts limits the availability of coastal change tools to benefit Alaskan communities. The increase will accelerate bringing Artic communities the tools available to open-ocean coastal regions of the coterminous United States. The investment will improve coastal change models for forecasting and assessing vulnerability over the next 10–25 years.

The increase of $2.0 million for the Water Resources Water Availability and Use Science Program will address interactions among water-mediated processes in a warming Arctic and assess system feedbacks (e.g., effects of warming on hydrology and biogeochemical cycling, which subsequently affects climate and hydrology). The program will investigate methods that allow extrapolation from monitored to unmonitored locations and expand monitoring of sentinels of change, including permafrost temperature, streamflow, and materials exported from watersheds.

Within base funding, continued analyses of geologic data resulting from the joint USGS–NOAA–Department of State effort to define the limits of the Extended Continental Shelf will result in enhanced understanding of the continental shelf, slope,

and Arctic Ocean basin. Analyses of these data, and data from surveys supported by USGS–DOE investigations of methane gas hydrates, will enhance our understanding of the stability of the continental shelf and slope and the potential for and consequences of hydrate release in response to changing oceanographic conditions.

c. Will the research improve our understanding of the resource potential for new oil and gas discoveries, as well help us understand how to minimize the risks of utilizing those resources?

Answer. The USGS Energy Resources Program conducts oil and gas resource assessments across the Nation. The program has several active projects in the Arctic, including research on unconventional oil and gas (UOG), which will continue with base program funds. These continued studies of shales and other tight formations on the Alaskan North Slope will help underpin more accurate resource assessments and reduce the uncertainty associated with resource development.

The 2017 President's budget proposes several increases for unconventional oil and gas research across the Nation, including $1.0 million for the USGS Energy Resources Program, a portion of which will support field research in Alaska to assess undiscovered UOG resources on the North Slope of Alaska. This additional funding will provide for field research in Alaska on an annual basis instead of the current research cycle of every other year, allowing more comprehensive data collection and accelerating assessments.

The proposed increase for the program's unconventional oil and gas research will better characterize environmental and operational risks posed by oil and gas development (e.g., the mitigation of produced waters derived by oil and gas production), and the increase supports research and field work activities to lessen the statistical uncertainty associated with resource potential estimates, allowing efficient, environmentally responsible development. The increase for unconventional oil and gas continues leveraging capabilities with the Alaska Department of Natural Resources in support of these field studies.

The USGS Coastal and Marine Geology Program will conduct studies to provide actionable science to respond to changes along the Arctic shoreline, and help inform decisions with respect to infrastructure and development associated with development of energy resources.

Question (20). The Federal Government and the State are joint partners in the Alaska Mapping Initiative, with the goal of improving the topographic maps for the State. Some of the maps are over 50 years old and vital to aviation safety, land use planning, and research. The President's fiscal year 2017 budget proposes to increase funding for this program by $1.5 million.

a. If the President's proposed increase of $1.5 million is included in the fiscal year 2017 appropriations bill, that would bring this initiative to a total program funding level of $6.7 million. At that rate, how long would it take to complete the maps?

Answer. Alaska has many broad mapping needs, including topographic maps. The $1.5 million proposed increase relates to topographic mapping supported/implemented by the USGS National Geospatial Program (NGP). With the proposed increase and continued funding from our Federal partners, we estimate that it would take 5 years (2021) to complete statewide coverage of ifsar elevation data and 6 years (2022) to complete the statewide topographic maps for Alaska.

b. What percentage of the State now has updated maps and what areas pose the most challenges for mapping?

Answer. As of March 2016, 15.6 percent of Alaska has published topographic maps. The NGP's most challenging areas for collecting and assembling high-quality elevation map data for Alaska include low-lying coastal deltas with complex lake and river systems, the Aleutian Islands and other remote islands in the Bering Sea. Other challenges include expensive aircraft mobilization costs, limited time over the acquisition targets, and severe weather conditions.

c. Will these maps be available in digital form and how accurate will they be compared to topographic maps in the Lower 48?

Answer. All Alaska topographic maps are available online in digital format (geoPDF). The data are free and the public can easily use this file type across multiple platforms (desktop, Web, and mobile). Anyone can upload the data into digital mapping/spatial analysis software to build new applications for research, education, or industry.

USGS follows the same procedures used for map production for the lower 48 in compiling new maps for Alaska. The elevation data accuracy for the Alaska topographic maps (produced at a scale of 1:25,000) is the same for topographic maps for the lower 48 States which follow USGS' National Map Accuracy standards for

1:24,000 scale mapping. With current funding, USGS corrects major errors for the majority of Alaska map production and we have updated approximately 10 percent of the State hydrography to meet higher specifications, where State funding contributions have supported these efforts.

Question (21). The United States Geological Survey operates the Alaska Volcano Observatory, a joint entity with the University of Alaska. USGS operates five such observatories in the Western United States. The observatory maintains a series of seismic monitors on volcanoes in Alaska, largely on the Alaska Peninsula and the Aleutian Chain, near the air corridor for flights to America from Asia. Ash from eruptions is particularly dangerous to such flights as shown by the near crash of a jumbo jet years ago.

a. The President's fiscal year 2017 budget proposes a very small increase for the Volcano Hazards Program, $117,000 for fixed costs, even though the entire USGS budget request is an increase of 10 percent. I understand there has been some progress made on the repair and monitoring systems on Alaska Volcanoes and I appreciate the good work that is being done there, but I am afraid we are not doing enough. It was also brought to our attention that the good work we are doing now to repair these systems may not be in compliance with the changing Federal Communications Commission (FCC) regulations over radio frequency spectrum allocations.

Answer. USGS radio telemetry networks fall under the jurisdiction of the National Telecommunications and Information Administration (NTIA) for spectrum allocation. Telemetry networks at most Very High Threat volcanoes in Alaska (Spurr, Redoubt, Augustine, and Makushin) are nearly compliant with NTIA spectrum allocation regulations. The Alaska Volcano Observatory (AVO), operated by the USGS in partnership with the University of Alaska and the Alaska Division of Geological and Geophysical Surveys, is focused on achieving full network compliance at these volcanoes as soon as possible. As part of ongoing maintenance and repairs, the USGS typically converts six to eight stations per year from analog to digital.

To address near-term public safety concerns, the USGS used funding received in 2015 to bring defunct and severely impaired networks back on line. This required maintenance of existing analog telemetry links that USGS cannot use past 2020.

b. Are you familiar with the FCC spectrum allocation issue? Are the systems we are repairing in compliance with the FCC regulations or are we repairing a system that will need to be converted to digital in the next few years?

Answer. USGS radio telemetry networks fall under the jurisdiction of the National Telecommunications and Information Administration (NTIA) for spectrum allocation. Changes to the spectrum guidelines and allocations made USGS analog telemetry networks for volcano monitoring in Alaska non-compliant. NTIA authorization permits USGS to use the deprecated frequencies until 2020, which provides time to bring the system into compliance by transitioning the networks to new digital technology operating on an authorized spectrum.

As part of ongoing repair and maintenance, the USGS makes analog to digital conversions when possible. This typically results in converting six to eight stations per year. To address public safety concerns, the USGS used fiscal year 2015 funding to bring defunct and severely impaired networks back on line. Bringing the networks back on line required maintenance of existing analog telemetry links that the USGS cannot use past 2020.

c. Could you provide this committee with the current gaps in the monitoring infrastructure at the Alaska Volcano Observatory and the estimated costs to complete the monitoring system?

Answer. The USGS has identified five Very High Threat and 27 High Threat volcanoes in Alaska. None of these 32 volcanoes have complete monitoring networks by the USGS standards for the National Volcano Early Warning System (NVEWS) and none of the existing networks are compliant with National Telecommunications and Information Administration (NTIA) regulation and guidelines for spectrum allocation.

The USGS has until 2020 to achieve compliance with the NTIA regulations. Telemetry networks at most Very High Threat volcanoes are nearly compliant. The estimated cost of upgrading to a NTIA-compliant system is $18.5 million over 4 years over current funding levels. Completing the conversion in 3 years, instead of four, would increase the cost to $20.2 million, with the increase necessary to fund additional staff to complete the work at the accelerated pace.

Additionally, to fully reach the USGS standards for NVEWS for the 32 Very High Threat and High Threat volcanoes in Alaska, the USGS estimates 237 additional monitoring instruments (e.g., seismometers, GPS receivers, and remote cameras) are

required. The chart below describes the current monitoring capabilities of the USGS in Alaska. The average cost of deploying an instrument on an Alaskan volcano is approximately $90,000. The total estimated cost to bring Alaska's volcano monitoring networks up to NVEWS standards is $21.3 million ($4.4 million for the five Very High Threat volcanoes and $16.9 million for the 27 High Threat volcanoes). This includes all aspects of installation, including instrument procurement, logistics, power systems, data telemetry, instrument housing, and permitting, but does not include the cost associated with the telemetry upgrades needed for NTIA compliance. The telemetry upgrades are necessary to support the new instrumentation. In most cases, NVEWS-guided augmentation with additional instruments would proceed in tandem with the analog-to-digital conversion work.

Upgrading the monitoring system to NTIA compliance and completing the monitoring system to NVEWS standards would cost an estimated $39.8 to $41.5 million in total.

Current Monitoring Level	Current Monitoring Level Capabilit es	Number of Volcanoes	
		Very High Threat	High Threat
None	Eruptions detected after the fact by satellite or direct observation. Eruption forecasting is not possible. No research potential.	0	4
Minimal	Significant eruptions likely detected, but small events missed. Eruption forecasting is not possible. Little if any research potential.	0	5
Limited	Most eruptions detected. Forecasting possible under ideal circumstances. Sensor data of limited usefulness for research.	1	17
Basic	Nearly all eruptions detected and some successfully forecast. Sensor data have research potential.	4	1
Complete	All eruptions detected and most successfully forecast. Sensor data have excellent research value.	0	0
Totals		5	27

Question (22). In 2014, Congress passed the BLM Permit Processing Improvement Act of 2014.

a. How has the passage of the legislation impacted permit timelines?

Answer. The higher application for permit to drill (APD) fee of $9,500 and associated allocations to the particular BLM offices went into effect on October 1, 2015. The increased fee has the ability to generate additional revenue, and therefore provide increased resources for processing permits, all other things being equal. However, because of market forces beyond the BLM's control, most notably the recent steep drops in the price of natural gas and oil, there has been a significant drop in the number of APDs submitted, which has reduced revenues coming to BLM for APD processing. Based on the past 6 month's observation, the BLM has not seen any overall impacts to the permitting timeline as a result of the Act. That said, over the past 4 years, the BLM has made significant progress in reducing the time to process an APD—permit times have dropped from an average of 307 days in 2011 to an average of 220 days in 2015.

b. The reauthorization also required BLM to report to Congress by February 1 each fiscal year the allocation of funds to each office and the accomplishments of each office. Where is that report?

Answer. The BLM has prepared a draft report for fiscal year 2015. This report is in the Department of the Interior review process and will be submitted as soon as that process has been completed.

Question (23). Over the last several years the Department of the Interior has proposed or finalized a number of offshore and onshore rules and regulations including the BLM hydraulic fracturing rule, updates to BLM Onshore Order 3, 4, and 5, the BLM venting and flaring proposal, the release of BLM Land Use Plan Amendments that limit areas where oil and natural gas development can take place, changes to ONRR's civil penalty regulations, additional regulations to Arctic OCS operations as well as the proposed Well Control Rule, potential changes to onshore royalties, bonus bids, etc. Interior is also expected to propose updates to offshore air regulations and there are also a number of additional items included in the Unified Agenda that have not been proposed. All of this regulatory activity is taking place at a time when investment on Federal land oil and natural gas production continues to fall. Each of these items on their own may have a chilling effect on future invest-

ment and interest in Federal production of oil and gas and taken together, the cumulative impacts could potentially alter not only production on Federal lands but also government revenue as a result.

a. Are you analyzing and considering the cumulative effect of each regulation on an individual basis as well as combined with the entire suite of regulations? How do you ensure that the Department adheres to its multiple-use mandate and continues to place great value on the oil and gas production on Federal lands and the important revenues that come to the Treasury as a result?

Answer. The regulations being updated have not been revised for decades, and it is long past time to modernize them to reflect recent technological advances in oil and gas production, health and safety protection, and waste prevention. Reflecting reasonable and common-sense revisions to existing requirements, these regulatory updates incorporate modern industry practices and technology, and we therefore do not expect them to pose an undue burden on industry.

Consistent with Federal requirements, the Department has conducted analyses of the economic effects of the rules and presented those findings in the Regulatory Impact Analysis for each rule. These analyses evaluate each rule individually, because there is so much geographic and operational variability in where and when the rules will apply, and whether and how they will impact operators. That said, a number of the new standards reflect existing industry best practices, with which many operators are already in partial or full compliance. Moreover, some of the measures will actually save producers money. Finally, many of the rules incorporate grandfathering or other provisions that are specifically designed to take account of operators' concerns about the rules' impacts, including impacts on lower-producing wells.

Question (24). The decision by DOI to pull the Arctic lease sales in the 2012–2017 Five Year Program as well as the denial of lease term extensions was shortsighted and without justification. Access to oil and natural gas resources in the Alaska OCS is essential to the Nation's economy and energy security and predictable leasing and workable regulations are necessary to take advantage of this vast resource. The Arctic contains the world's largest remaining conventional undiscovered oil and natural gas. Given the resource potential and long timelines required to bring Arctic resources to market, decisions made today will have an impact on industry's ability to provide the U.S. oil production of the future.

a. How does the Department view the importance of Arctic resources and our need to continue exploration and development in the Arctic, especially as other nations continue to reap the benefits of Arctic development?

Answer. Alaska continues to be an important part of the Nation's energy strategy. BOEM estimates that there are more than 23 billion barrels of undiscovered technically recoverable oil in the Chukchi Sea and Beaufort Sea planning areas, including multiple geologic plays. This is based on information gathered from over 30 exploration wells drilled in the Arctic, seismic data, and analogous reservoir analysis.

Significant acreage in the Chukchi and Beaufort Seas is already under lease, including some of the best prospects. As of April 2016, there were 434 existing leases in the Chukchi Sea and 77 in the Beaufort Sea. In addition to the Liberty project that is currently under review, should DOI receive any exploration and development proposals from industry, we will review them to ensure safe and careful exploration and development in the Arctic.

Recognizing the significant oil and gas potential in the Arctic OCS region, industry interest, and the views of the State of Alaska, the 2017–2022 Proposed Program, published on March 18, 2016, schedules three potential sales offshore Alaska, one in each of the Beaufort Sea, Chukchi Sea, and Cook Inlet. The Department is soliciting comments on this proposal through June 16, 2016. In March, Director Hopper traveled to the North Slope of Alaska to get input on the proposed Five Year Program and the bureau will continue its outreach to encourage stakeholder and partner feedback from Alaskan communities. Comments received will inform the Proposed Final Program, scheduled to be published in late 2016.

In advance of any potential lease sale offshore Alaska, BOEM will continue to use scientific information and stakeholder and partner feedback to proactively determine which specific areas offer the greatest resource potential while minimizing potential conflicts associated with the environment, subsistence activities, and multiple use concerns.

b. Does the Department's lack of regulatory uncertainty, which only becomes greater with the proposed Arctic rule and the proposed Well Control rule, play a part in the unsuccessful project last year?

Answer. Over the course of two different offshore drilling seasons, the Department has been transparent and consistent about what it will require to ensure drilling operations conducted in the Arctic are conducted in a safe and environmentally responsible manner. On September 28, 2015, Shell announced in a press release that it "found indications of oil and gas. . . . but these were not sufficient to warrant further exploration." This followed the 2015 drilling season, during which BSEE and BOEM approvals were conditioned on requirements consistent with many of the provisions contained in the proposed Arctic Rule. These requirements were similar to a number of the requirements that BSEE and BOEM imposed on Shell during 2012.

Question (25). I am very concerned with the BOEM–BSEE proposed Arctic rule because it imposes prescriptive requirements, including the requirement for a same-season relief well, assuming that one solution universally applies to any given Arctic location. Instead, the rule should look to using performance-based rule which allow an operator to minimize risks by designing a well program specific to the landscape, ecosystem, ice conditions, water depths and weather of that particular well. The rule should focus on prevention and consider fit-for-purpose response planning alternatives to respond to potential loss of well control.

a. What is the likely timing of the final Arctic rule? Do you believe that you have an opportunity to step back and take time to assess the Arctic rules package and examine the NPC report before putting out a final rule since you've closed the door on leasing in this current Five Year program?

Answer. BSEE and BOEM have closely considered the National Petroleum Council (NPC) Arctic Potential Study, as well as many other studies and resources. Representatives from BSEE were involved in the NPC Study and were aware of many of the technical discussions and analysis that occurred prior to publication. The Department is in the process of finalizing its Arctic drilling rule, which would apply to exploratory drilling operations in the U.S. Arctic. The Department is carefully considering all comments received on the Proposed Rule as it works to complete the rulemaking process. We intend to publish a Final Rule later this year.

b. How will this timing match with the BSEE well control rule, which as you know will also apply in the Arctic? Would it make more sense to hold the Arctic rule's final release until after the well control rule is final and allow for comments to inform how both set of rules will affect the Arctic before finalizing and implementing?

Answer. The Department promulgated the Well Control Rule on April 29, 2016 (see 81 FR 25887). BSEE has carefully considered comments on each Rule and the potential overlaps between the two Rules.

c. Has DOI taken a hard look at the NPC report and made agency adjustments or taken counsel from it?

Answer. Yes, the Department has reviewed the NPC Arctic Potential Study carefully, along with many other studies and analyses. Many of the findings are consistent with BOEM and BSEE's assessment of operations in the Arctic.

For example, the NPC study recommends that BSEE "[e]ncourage innovation by providing for the incorporation of technological advancements" (NPC Study, Executive Summary, p. 51). BSEE regulations specifically allow for approval of innovative technologies that provide equal or greater protection to personnel and the environment (30 CFR § 250.141). The proposed Arctic regulations clarify that this provision can be utilized to approve equipment for use in Arctic drilling operations.

Additionally, Chapter 10, entitled "The Human Environment," presents a detailed assessment of the effects of oil and gas activities in the Arctic on human health, economic development, and culture. BSEE agrees with the NPC's recommendations that industry, government, and stakeholders should work to preserve cultural sustainability, ensure food security, optimize consultation and community engagement, develop traditional knowledge studies, standardize socioeconomic impact assessment processes, and evaluate collaboration frameworks.

In some areas, BSEE does not agree with the study. Chapter 8 of the study, entitled "Arctic Offshore Oil Spill Prevention, Control, and Response," stressed the importance of prevention "as the primary defense against loss of well control." The chapter identifies a number of controls and barriers that should be in place to prevent oil spills in the Arctic. BSEE agrees that the identified barriers and controls are crucial to operators' prevention efforts. BSEE does not, however, agree that the implementation of prudent prevention measures should eliminate the need to have available equipment and/or a rig to respond to a loss of well control.

There are many other aspects of the NPC Study—both the findings and the recommendations—that are consistent with both the proposed Arctic offshore drilling

regulations and with BSEE's overall approach to oversight of offshore drilling operations on the Arctic OCS.

Question (26). The increased domestic oil and gas production we have been witnessing is occurring almost entirely on private and State lands where the Federal Government does not have control. This is because it can still take from 240 to as much as 300 days to get a permit to drill on BLM managed lands, and where it can take as much as 10 years to complete an environmental review. The Department has taken steps to expedite the permit process for projects on Federal lands that involve renewables, or the infrastructure for renewables, but in the case of oil and gas resources the Department has increased permitting burdens.

a. Can you explain the apparent discrepancy between how the Department treats permitting for renewable energy projects, and projects for the exploration and production of natural gas and crude oil?

Answer. Since 2008, oil production is up 108 percent on lands where drilling requires a BLM permit. This doubling of production is greater than the 88 percent increase in oil production that occurred on all lands nationwide during the same time period. In fiscal year 2015, the BLM approved over 4,228 Applications for Permit to Drill (APDs) on Federal and Indian lands, yet industry only drilled 1,927 wells. The BLM also continued to make significant progress in reducing the time to process an APD—permit times have dropped from an average of 307 days in 2011 to an average of 220 days in 2015. The BLM also continued to make significant progress in fiscal year 2015 at reducing the number of pending APDs. As of the end of the year, the BLM had roughly 7,500 approved APDs that have not yet been drilled, more than ever before. These APDs are ready for immediate use by industry without further action by the BLM.

To further build upon these improvements, the BLM continues to make strategic investments in technology to streamline the permit review process. Most notably, BLM recently completed the bureau-wide deployment of the update to its permit processing system, AFMSS II. That update will help streamline the review process and will allow BLM and applicants to better track the progress of individual applications. The BLM is committed to building on this progress and continuing to improve the APD review and approval process.

It should also be noted with respect to the BLM's treatment of permitting requests for renewable energy relative to oil and gas that much of the expedited process currently used for renewable energy projects is patterned directly on efficiencies developed in the oil and gas permitting context.

Based on its experience in the oil and gas program, the BLM took the following actions with respect to the Renewable Energy Management program:

—Established special permitting offices (Renewable Energy Coordination Offices),
—Improved early coordination with State and other Federal agencies, and
—Identified important energy zones and then completed comprehensive environmental analyses (i.e. Solar PEIS, Wind PEIS and the Geothermal PEIS), in order to provide additional upfront analysis that could then be used to simplify the project-specific NEPA required for permitting individual development projects.

All of these processes were first developed and utilized for oil and gas. The processes used for both energy sources are largely driven by the same or similar land and environmental laws and procedures. The most expedited solar project approval occurred in the Dry Lake Solar Energy Zone in Nevada; utilizing these steps, the BLM took 300 days from lease sale to project approval.

Question (27). On lands administered by the BLM there are thousands of older wells, many producing less than 15 barrels of oil per day. However, in the aggregate, this so-called "stripper production" represents several percent of America's domestic crude oil production. In the past year, BLM has introduced four rulemakings (site security and commingling, measurement of crude oil, measurement of natural gas, venting and flaring) that taken together could significantly increase costs of operation on these older leases, possibly resulting in shutting in production.

a. Is an agency like BLM that already struggles to issue permits to drill from companies holding BLM leases within 300 days, staffed and equipped to manage the expansion of its regulatory mandate?

Answer. The BLM has an obligation to ensure that operators accurately measure, properly report, and account for all oil and gas production, and reduce waste associated with that production. Yet the BLM's rules governing oil and gas measurements and waste reduction have not been updated in over 25 years. As a result, the Government Accountability Office (GAO), the Office of the Inspector General, and the Department of the Interior Royalty Policy Committee have all concluded that these

existing rules provide no assurance that production is being accurately measured, that all of the royalties due are paid, and that waste is minimized. The proposed rules also address the many new technologies that have been developed and adopted by industry since the current regulations were put in place.

That said, the BLM also recognizes that the royalty risk (i.e., the risk posed by inaccurate measurement from a particular well) at a given well is a function of its overall production level and that low level wells pose less of a risk than higher level wells. It is precisely this recognition that led the BLM to include in the proposed onshore orders thresholds that reduced the requirements applicable to lower volume wells. In some cases these proposed changes reduced the compliance burdens on low volume properties relative to existing requirements. Based on the comments received, the BLM is carefully evaluating those thresholds to see if further refinements are necessary to ensure that the burden imposed on any given facility by the new measurement rules is comparable to the royalty risk presented by that facility.

In addition, the Methane and Waste Prevention Rule includes some provisions to streamline implementation for both industry and the BLM. For example, the flaring provisions would reduce regulatory burden by eliminating the existing requirement to submit a sundry notice for each request to flare gas.

b. Why is the focus of the Department and BLM on adding permit obligations for oil and gas operations when on the contrary the Department's focus is on expediting permitting for renewable energy?

Answer. As part of the administration's All-of-the Above Energy Policy, the BLM manages the public lands for both conventional and renewable energy. The BLM has a statutory obligation to balance this energy development with other use of the public lands and to ensure that the development occurs in an environmentally sound manner and provides a fair return to the taxpayers for use of those lands and mineral resources.

With respect to the permitting requirements for conventional energy development, the BLM is not adding permit obligations, but rather is proposing commonsense updates to its existing rules designed to ensure that operators accurately measure, properly report, and account for all production from Federal and Indian lands. The existing rules do not reflect modern technology or practices, and therefore, in some instances, require the review, submittal, and processing of unwarranted variance requests. These circumstances will be addressed by the final rule.

Question (28). Not long ago, the Social Security Administration engaged in an aggressive program to obtain a new custom designed computer system to deal with disability claims. After spending over $300 million, they had a very little to show for it. They had a program racked with delays and mismanagement, but no new working custom system. Likewise, the U.S. Citizenship and Immigration Services spent more than $1 billion trying to replace its approach to managing immigration documents with digital online forms, and as of this fall it had only a single online form, the form to replace a lost green card online.

You're probably wondering what does this have to do with the Federal land management agencies. But right now, as I understand the situation, those agencies are working to refurbish the Federal Government's campsite booking Web site, Recreation.gov, which hosts virtually all online booking for not only the National Park Service but also the U.S. Fish and Wildlife Service, the Bureau of Reclamation in addition to Forest Service campgrounds, and even many of the Army Corps of Engineers facilities. Many people use this online system every year, and if things go bad it could be a very big black eye for these land management agencies that could have broader impacts to the recreation fee program in general, particularly as we approach the Park Service Centennial.

I am asking for an assurance from you that you are going to do everything possible to make sure that any improvements to the online reservation system doesn't risk ending up with missed deadlines, and rollout delays caused by mismanagement and untested products or custom created software, like I mentioned. I hope you will work to ensure that the system will be dependable, time tested, secure and cost effective for the United States.

a. Will you examine the situation and make sure that we are not headed down a pathway like those I mentioned?

Answer. The Recreation.gov contract is funded entirely by revenues generated from the recreation fees and reservation fees charged to visitors who make reservations. The current contract that provides the reservation and trip planning service for Recreation.gov is nearing the end of the period of performance and will be extended as needed to ensure that there is no disruption of service.

In this digital age, software solutions should be designed not by software engineers writing code but by the people who will be using the system so that the final

product truly serves the needs of the government and the people. It is also critical to ensure that the solution is nimble enough to adapt to emerging technologies throughout the life of the contract. The Recreation One-Stop (R1S) program has been conducting market research for over 2 years in order to identify emerging technologies and additional vendors who can provide the kind of service that meets modern customer expectations.

The R1S program has adopted the tenets laid out in the US Digital Services Playbook in which we will employ 'Agile' software development principles and processes. Agile development is the new norm in the private sector and, by following its best practices, we aim to provide a superior service and pleasant customer experience. This will entail face-to-face meetings with the contractor's program management and software development teams. We intend to work in short 'sprints' to write, test, and deploy usable code that will provide all of the tools for trip planning, reservations, financial processing, reporting, design, and customer service. As sprints are completed, we will test each portion of the code to ensure that it meets the government's needs and public expectations. Code that does not pass testing will be immediately identified for correction. By using this method, the R1S program will be involved at every step to ensure that we do not end up with an unusable product when it is time to transition. The public and many other stakeholders will be involved in the development and testing throughout this process to ensure that we are able to deliver what the public wants. The contract requirements include the highest levels of information security, privacy protection, secure financial processing, and compliance with all applicable laws and regulations pertaining to government IT services.

b. As a way to ensure data security indeed does meet the highest standard, will you be using people who are Payment Card Industry Data Security Standard (PCI) compliant?

Answer. Payment Card Industry Data Security Standard (PCI) compliance is an absolute requirement in the new (and current) contract. With the number of credit card transactions processed, the contractor's system is required to meet the highest level of PCI compliance.

The contractor must also deliver security that ensures compliance with the Federal Risk and Authorization Program (FedRAMP), Federal Information Processing Standards (FIPS), Federal Information Security Management Act (FISMA), and the Privacy Act.

Question (29). While many land management agency units are available as part of Recreation.gov, we know there are additional units that could take benefit from additional exposure. What are you doing to make sure more of your units are able to be part of the recreation.gov system and timeframes for bringing them online?

Answer. Recreation.gov currently hosts reservation services for over 3,200 locations which include campgrounds, picnic shelters, cabins, lookouts, yurts, tour ticketing, event lotteries, and a variety of wilderness permits. More locations continue to be added every year. When the system was launched in 2006, the primary focus was to provide reservations for basic front country campgrounds. Since that time, the R1S program recognized the need to expand the service to cover many different types of facilities and activities. This was one of the driving factors in moving to a more agile approach that affords the agencies the flexibility to use the platform for a wide variety of facilities and activities.

The R1S program expects that, upon launch of a new contract, the service will be able to support many more operations; this should facilitate the incorporation of reservation services more broadly. The new contract also requires that the contractor proactively 'market' the service to all agencies where it is appropriate. This includes offering Web services which can improve the efficiency and effectiveness of local operations.

Question (30). What, if any, human resources planning has OSMRE done in preparation for or in advance of the proposed Stream Protection Rule?

Answer. OSMRE typically makes human resource planning decisions based upon on the overall workload for the entirety of its regulatory and oversight program. The actual staff number may change depending on the program areas, the presence or absence of problems, input from the public, and the terms of the performance agreements in each State. The estimated annual hours for Federal oversight of the proposed Stream Protection Rule does not warrant any additional human resource planning.

Question (31). Which, if any, employment assignments or employee deployments have been made as a consequence of the Stream Protection Rule?

Answer. OSMRE has not found it necessary to make new assignments or employee deployment changes as a consequence of the Stream Protection Rule.

Question (32). Does OSMRE employ any "hydrogeologists"?

Answer. OSMRE currently has about 15 highly qualified technical staff classified under the "hydrologist" title. All have formal education, experience, and technical credentials in the area of surface and groundwater hydrogeology.

Question (33). What, if any, human resources planning has BLM done to satisfy mitigation measures, both those created by the Presidential Memorandum and the Department's own mitigation manual and efforts?

Answer. In the fall of 2013, Secretary Jewell released Secretarial Order 3330, Improving Mitigation Policies and Practices of the Department of the Interior. Secretary Jewell directed the Department and each of its bureaus to follow a common set of principles for its mitigation programs while using a landscape-scale approach building on and expanding concepts pioneered in the BLM's 2013 interim mitigation policy. Consistent with Secretarial Order 3330 and incorporating key lessons learned since release of the interim mitigation policy, the BLM is working to revise and finalize its mitigation policy to ensure it is responsive to emerging best practices and compatible with similar policies being developed by sister agencies and States.

Secretarial Order 3330 and the BLM's interim mitigation policy address concepts that broadly apply to mitigation—including principles of additionality, durability, and transparency—without prescribing the amount of mitigation that might be required for any given project. In general, the BLM will continue to identify appropriate mitigation measures by evaluating the specific impacts of each project proposal, in light of applicable BLM land use plans and in compliance with the National Environmental Policy Act (NEPA).

Mitigation broadly refers to a set of tools that allows the BLM to permit projects while responding to the concerns of local communities and meeting our mission of multiple use and sustained yield. For many years, the BLM has recognized a need to bring greater consistency to the use of these tools and to increase their availability to solve resource challenges like supporting development while planning for the recovery of the Greater sage grouse. Accordingly, the BLM has sought to better plan and train staff to help support the implementation of mitigation policies that will allow for more streamlined permitting, more consistent application of mitigation across offices, and better outcomes for resources. This includes identifying a national mitigation lead in the Washington Office as part of the agency's resource planning and decision support staff to ensure greater consistency and identifying State mitigation leads in each State Office to provide expertise as well as a consistent point of contact for State governments seeking to coordinate with the BLM on mitigation efforts. Already, State governments across the West are working with the BLM and our Federal partner agencies to establish and deploy some of these innovative tools. The BLM seeks to further support these collaborative efforts.

Question (34). Which, if any, employment assignments or employee deployments have been made as a consequence of the new mitigation efforts? If the answer is that mitigation efforts have had no human resource planning or employment consequences, please explain why that is the case.

Answer. As noted above, the BLM has identified a national mitigation lead to bring greater consistency to our efforts and has identified State mitigation leads to provide stronger State-level expertise and coordination with State governments. The BLM has long considered mitigation through the agency's routine resource management planning process and through individual project reviews as appropriate, and that will continue to be the case.

Question (35). What vacancies does the Department currently have, and what are the Department's plans or intentions to fill those vacancies?

Answer. The BLM has not increased staffing levels to address mitigation efforts. However, staffing has been reorganized to meet the requirements of the Presidential Memorandum and the Department's mitigation work. This reorganization includes identifying one position on the Washington Office staff for the role of national mitigation lead. This position is currently being advertised on USAJOBS. At the State level, mitigation leads are assigned as a collateral duty and these are not new positions. At the field level, mitigation functions are generally performed by BLM's existing planning or project management specialists.

Question (36). The BLM's draft updated planning rule, known as Planning 2.0, seeks to updated the agency's planning process.

a. One of the frustrations frequently expressed by public lands communities regarding the planning process is that the BLM takes their comments, but does not truly consider the needs of the area, particularly when it comes to projects that potentially provide opportunities for economic development. How will the new rule improve BLM's coordination with State, county, and local govern-

ments? Will there be certainty for the manner in which BLM will consider the needs of State, county, and local governments.

Answer. The proposed rule would improve coordination with State, county, and local governments by requiring communication and coordination early in the planning process. Two new steps would include (1) input into the development of the planning assessment and (2) review of the preliminary alternatives, rationale for alternatives and basis for analysis prior to issuance of the draft plan.

During the planning assessment the BLM would coordinate with State and local governments to identify the best available data for the planning area. BLM frequently hears from our State and local partners that they often have the best data for a resource and they want to ensure that BLM uses this data. This proposed step would respond to these requests and ensure early coordination on data and information sharing. During this step the BLM would also coordinate with State and local governments to identify existing State and local land use plans to begin to seek consistency between local land use plans and BLM's Resource Management Plans (RMPs).

Once BLM has developed a preliminary range of alternatives, the BLM will make these preliminary alternatives and rationale available to State and local partners for review. This new coordination step will allow State and local governments to provide early feedback to the BLM on the alternatives and whether the range of alternatives adequately considers the needs of State and local governments. The BLM will use this feedback to revise the alternatives and develop a draft resource management plan that is more responsive to the needs of State, county, and local governments.

Question (37). One of the goals of Planning 2.0 is to "improve the BLM's adaptability to respond to social and environmental changes." What types of social change does the BLM need a new rule in order to adapt to? Also, what types of environmental change require the new rule?

Answer. The proposed rule would provide the BLM the tools necessary to respond to both social and environmental change in an efficient and effective manner. Examples of social change that affect the public lands include the increased demand for recreation on public lands, changes in the composition and needs of local communities, or new emerging markets such as the increasing demand for renewable energy development on public lands. Examples of environmental change that affect the public lands include severe drought, catastrophic wildfire, or changes in plant community composition due to invasive species or pest infestations.

Question (38). I've made no secret about my concerns with this administration's practices relating to mitigation. The President's Memorandum entitled, Mitigating Impacts on Natural Resources from Development and Encouraging Related Private Investment, coupled with your Secretarial Order 3330 on mitigation have only served to further my initial apprehension.

The President's Memorandum mandated that, "[w]ithin 1 year of the date of this memorandum, the Department of the Interior will develop program guidance regarding the use of mitigation projects and measures on lands administered by bureaus or offices of the Department through a land-use authorization, cooperative agreement, or other appropriate mechanism that would authorize a project proponent to conduct actions, or otherwise secure conservation benefits, for the purpose of mitigating impacts elsewhere."

a. Is there a status update as to where the DOI and its relevant agencies are in the development of program guidance?

Answer. The Department is working diligently on the policies required by the Presidential Memorandum (PM), including the guidance document identified above. The primary work by the Bureau of Land Management (BLM) and the Department since the publication of the PM has been to finalize BLM's forthcoming mitigation handbook and manual.

Question (39). I understand mitigation can be a great tool for land managers, but what authority does the Department have to require mitigation for projects on public lands under the Department's jurisdiction? And, to that end, what authority is there to require that mitigation meet a standard of benefit for natural resource damage?

Answer. The Department's authority to seek a net benefit in recommended or required mitigation actions is derived from the underlying statutory authority mandating the management of the impacted resource. Under these authorizations, the bureaus and offices of the Department are responsible for managing different resources and for different purposes.

For example, the Federal Land Policy and Management Act (FLMPA) mandates management of resources in accordance with the principle of sustained yield, which

is defined as the "maintenance in perpetuity of a high annual or regular periodic output" of such resources. Where, for example, past practices have degraded resources so as to reduce their annual or regular periodic output to low levels, requiring that mitigation achieve a net benefit is consistent with the statutory mandate to achieve and maintain a high periodic output by restoring such resources to predegradation levels.

Question (40). Along the same lines, given that much of the framework from the Presidential Memorandum reflects your own mitigation efforts stemming from your Secretarial Order 3330, please explain in detail what you hoped to achieve through your own mitigation efforts?

a. How will those efforts would be implemented across your Department and with other Department sub-agencies and among sister agencies where mitigation efforts and/or natural resource impacts straddle multiple jurisdictions.

Answer. A stated goal of the Council on Environmental Quality and the Department in establishing new mitigation policies is the transparency, efficiency, and consistency such guidance will bring to permitting processes. Although a multitude of factors play a role in successful permitting and project development, mitigation principles espoused by these policies, such as efforts to produce better avoidance and the consideration of mitigation measures early in the permitting process, are intended to reduce permit times and create better outcomes for impacted resources.

To ensure the Department's ability to achieve these objectives consistently, bureaus and offices of the Department have established common frameworks to apply the mitigation hierarchy in the development of mitigation recommendations and requirements. The frameworks create consistency in how bureaus and offices implement mitigation in a number of important ways, including the use of a compensatory mitigation goal; a clear and stated preference when selecting between compensatory mitigation providers; use of standardized definitions and terms; and adherence to a consistent set of standards to ensure equivalency among compensatory mitigation providers, among others.

Question (41). The Bureau of Land Management briefed the Senate on the Presidential Memorandum, and admitted to not having a rigorous understanding of impacts to subsistence use. Nevertheless, the Department assigned an $8 million impact in the National Petroleum Reserve—Alaska (NPR–A). What metrics are used generally to determine dollar values associated with anticipated natural resource damage(s), and specifically, what metrics were relied upon to arrive at the $8 million dollar cost in the NPR–A?

Answer. The Record of Decision for the Greater Mooses Tooth One Project included a voluntary contribution by ConocoPhillips Alaska, Inc. (CPAI) of $8 million to a compensatory mitigation fund to address impacts to subsistence uses that were not sufficiently avoided or minimized in the decision—in particular, encroachment of the project footprint into the established setbacks for Fish Creek and the Ublutuoch River. The Alaska National Interest Lands Conservation Act directs the BLM to specifically consider subsistence uses when reviewing projects and prohibits the BLM from approving projects with significant impacts that have not been adequately addressed (16 USC 3120 section 810). This contribution represents less than 1 percent of the cost estimate cited by CPAI for development of the project.

Question (42). The Department's Budget Brief for 2017 notes "(r)esource management plans provide the basis for every BLM management action and are *necessitated* by changes in resource use and demands . . ." (emphasis added)

a. What, specifically, are the changes in resource uses and demands that necessitate potential management of:

—715,000 acres of the Fortymile and Mosquito Flats Area of Critical Environmental Concern (ACECs) in the Eastern Interior Management Plan;

Answer. Based on public comment on the Eastern Interior Draft Resource Management Plan (EIRMP)/Environmental Impact Statement (EIS), the BLM considered changing the boundary of the proposed Fortymile Area of Critical Environmental Concern (ACEC) and designating a new ACEC on the Mosquito Flats, also in the Fortymile region.

The Fortymile ACEC (685,000 acres) is proposed for the purpose of protecting caribou calving and post calving habitat for the Fortymile caribou herd, and Dall sheep habitat. The Fortymile caribou herd is both a highly important subsistence resource in east central Alaska and an international resource, with a considerable portion of its historic range occurring in Canada. BLM-managed lands in the Fortymile region are used by Fortymile caribou for calving, post-calving, and winter range. The population and range of the herd is currently depressed compared to its historical extent. The herd was estimated at more than 500,000 animals in 1920, but currently numbers 50,000 animals. A cooperative planning effort, involving diverse interests in

Canada and the United States, focuses on the recovery of the herd in numbers and into historic range. Calving and post-calving habitats were identified as the most sensitive habitats by the Fortymile Recovery Planning Team. Additionally, the planning area is predicted to become warmer and drier with a likely rise in tree line. These changes will increase the importance of alpine and subalpine habitats for calving and year-round habitat. Focusing on limiting impacts to the most critical habitat areas is the most efficient strategy for maintaining this important resource.

The Mosquito Flats ACEC (30,000 acres) was proposed to protect a unique high elevation wetland. This wetland is atypical; the Mosquito Fork River flows over continuous sand beds that are uncharacteristically clean, light colored, well-sorted, and low in organics, suggesting the origin of the sand is likely from a past depositional environment, possibly related to eolian deposits of Pleistocene or later age. These wetlands are an important moose calving area and support BLM sensitive species, including nesting trumpeter swans and short-eared owls.

—Nearly 700,000 acres in the Sheefish Bering Sea-Western Interior Plan;

Answer. While developing the Bering Sea-Western Interior (BSWI) RMP, the BLM received a number of public comments and nominations from tribes, advisory councils, and individuals regarding the increased importance of non-Salmon species due to the crash of the salmon population. Sheefish is one of the species specifically mentioned.

Sheefish were mentioned as being a culturally significant fish species along the Kuskokwim River. They are harvested for subsistence use by many, especially in the middle and upper river. Sheefish are often caught before salmon in the spring, and offer an opportunity for fresh fish early in the season. In recent years, salmon have been in decline and there has been an even greater shift in harvest patterns away from salmon and more toward whitefish and other salmon species. Sheefish spawning grounds have very specific needs and occur in small numbers on the Kuskokwim River. Sheefish spawn in relatively small and specific locations, and a section of the Big River located south of McGrath has been identified as a well-known spawning area for sheefish. Local residents depend on the fish and wildlife resources of this drainage. The local Athabascan name for the river is "Zidlaghe Zighashno" which translates as "Sheefish Spearing (Harvest) River" and the river has been expressed as very important to local people.

A November 2012 ADF&G report on sheefish spawning grounds on the Kuskokwim River provides detailed information about documented spawning areas. The report shows three spawning locations on the Kuskokwim River for sheefish, located on the Tonzona, Middle Fork and Big River, all located in the upper Kuskokwim River area. Of these locations, there are BLM-managed lands near the Big River. The sheefish that populate the entire Kuskokwim River spawn in very discrete areas or, smaller tributaries of the main Kuskokwim River. Eighty percent of the sheefish spawning in the Kuskokwim River spawn in a 15.5 mile section of the Big River (Stuby, 2012, Alaska Department of Fish & Game (ADF&G) Report).

As a result of the local importance expressed in public comment and after review of the ADF&G studies, the BLM found there were relevant and important values and proposed the Sheefish ACEC to protect the sheefish spawning areas.

—Any of the over 6 million proposed acres in the Central Yukon Management Plan; and

Answer. The BLM is in the early stages of planning for the Central Yukon RMP and does not anticipate a final decision until 2019. There are approximately 1.8 million acres of existing ACECs in the Central Yukon Planning Area. These were designated in 1986 by the Central Yukon RMP and in 1991 by the Utility Corridor RMP. During scoping and public outreach in 2013–2014, the BLM received numerous nominations for new ACECs (approximately 3.7 million acres) and expansions of existing ACECs (approximately 1 million acres). Many of the nominations identify habitats of important subsistence species such as caribou, Dall sheep, and salmon. The Central Yukon interdisciplinary team members reviewed all ACEC nominations and BLM-managed lands in the planning area to determine whether any areas should be considered for designation as an ACEC. Team members also reviewed all existing ACECs and research natural areas (RNAs) to determine if the designations were still relevant. The interdisciplinary team determined that approximately 5.2 million acres met the relevance and importance criteria. These findings are published in the Central Yukon RMP Web site at: http://www.blm.gov/ak/cyrmp.

To date, the BLM has only made determinations on relevance and importance criteria and not special management attention. If needed, the special management approach is determined by the resource at risk and the BLM implements the least restrictive management needed to protect the resource. These restrictions could be seasonal restrictions on an activity, or additional stipulations on permitted activi-

ties, or limiting off highway vehicle use to designated trails. While the special management needed could be a recommendation to close the area to mineral entry, this would only be the recommendation if a closure is necessary to protect the relevant and important resource at risk.

The BLM will further analyze potential ACECs during development of draft alternatives and in the Draft RMP/EIS. The BLM will allow for public comment on both the preliminary alternatives and the Draft RMP/EIS when reaching those stages of the planning process.

—Some of the proposed ACECs would result in the closure of the public lands to mining or other activities. Please articulate how the Department would satisfy its multiple-use, sustained yield mandate in the Federal Land Policy and Management Act if any of the ACECs proposals that contemplate a form of closure are finalized.

Answer. Areas of Critical Environmental Concern (ACECs) are specifically defined in the Federal Land Policy and Management Act (FLPMA) as "areas within the public lands where special management attention is required . . . to protect and prevent irreparable damage to important historic, cultural, or scenic values, fish and wildlife resources or other natural systems or processes, or to protect life and safety from natural hazards." In FLPMA, Congress also directed that, "In the development and revision of land use plans, the Secretary shall . . . give priority to the designation and protection of areas of critical environmental concern . . ." in addition to the broader considerations of multiple use and sustained yield.

In addition to the specific discussion of ACECs, FLPMA sets a policy that the public lands be managed "in a manner that will protect the quality of scientific, scenic, historical, ecological, environmental, air and atmospheric, water resource, and archeological values; that, where appropriate, will preserve and protect certain public lands in their natural condition; that will provide food and habitat for fish and wildlife and domestic animals; and that will provide for outdoor public recreation and human occupancy and use. . . ."

FLPMA defines the term multiple use as "making the most judicious use of the land for some or all of these resources or related services over areas large enough to provide sufficient latitude for periodic adjustments in use to conform to changing needs and conditions; the use of some land for less than all of the resources; a combination of balanced and diverse resource uses that takes into account the long-term needs of future generations for renewable and nonrenewable resources, including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and natural scenic, scientific and historical values; and harmonious and coordinated management of the various resources without permanent impairment of the productivity of the land and the quality of the environment with consideration being given to the relative values of the resources and not necessarily to the combination of uses that will give the greatest economic return or the greatest unit output."

FLPMA defines sustained yield as "achievement and maintenance in perpetuity of a high-level annual or regular periodic output of the various renewable resources of the public lands consistent with multiple use."

In the event that some ACECs are closed to the mining laws, the BLM will meet FLPMA's multiple use mandate by allowing mining on lands outside of the those ACECs. For example, in the Eastern Interior RMP Fortymile Subunit, the agency preferred alternative recommends mining be allowed on more than half (70 percent) of the BLM-managed lands in the planning subunit. Should this alternative become the final decision, the BLM will meet the sustained yield mandate for caribou by designating ACECs for calving and post calving habitat.

b. Please tell me what efforts the Department has made to apprise Alaskans, and specifically Fortymile placer miners, of developing management plans, individual obligations and new enforcement approaches?

Answer. The BLM uses a variety of methods to notify and engage the public in planning efforts and changes to policy and practices, depending on the issue and the scope of the impact. For many planning efforts, the BLM is required to publish notices to the *Federal Register.* However, the BLM generally creates many more opportunities for public outreach than the *Federal Register* and is currently revising its planning regulations to include more robust public outreach and collaboration.

Other types of BLM actions require different levels of public involvement. Of recent concern was the development and implementation of the "mining IMs" in Alaska. These Instructional Memoranda (IMs) on mining reclamation and bonding are direction to staff on how to interpret the current mining regulations in 43 CFR 3809 in a consistent way. These IMs provide consistency in how the BLM evaluates reclamation performance and will provide miners with consistent methods for meas-

uring reclamation success. The regulations that define reclamation standards have been in place since 2001.

In 2013 and 2014, BLM staff began discussions with miners and mining organizations on current practices that were not meeting reclamation performance standards. There have been many advances in the last 15 years since the regulations were developed and many of the past practices for rehabilitating fish, wildlife, and riparian habitat after placer mining have, in many cases, failed to meet a number of reclamation performance standards required by regulation. The BLM was also concerned about whether there were adequate financial guarantees to cover all of the Federal mining operations in the State.

After the issuing IMs, the BLM sent a letter with associated information to every Federal miner in Alaska and met with individual miners to go over the regulations and how BLM would be measuring reclamation. The BLM also provided presentations on reclamation and a short course on revegetation with the Alaska Miner Association (AMA) and Alaska Minerals Commission in the Fall of 2015. In the summer 2015, the BLM implemented the Jack Wade Demonstration project in the Fortymile Wild and Scenic River Corridor to test new reclamation techniques for placer mined streams in Alaska. The project is designed to accelerate the recovery of in-stream and riparian habitats in a historically mined area. The ultimate goal was to find new approaches to reclamation and to help miners meet the reclamation standards more quickly. If the techniques are successful it will help miners to plan and implement their own reclamation work and assist them in meeting the reclamation performance standards required by regulation. Several Fortymile miners attended a workshop in Chicken to discuss reclamation evaluations and view the demonstration project. One of the successes from the workshop is that one of the area miners has asked BLM to help develop another demonstration project in 2016 on his mine site.

In April 2016, the BLM plans to give presentations on reclamation and a short course on revegetation at the AMA conference in Fairbanks. The BLM will also organize field workshops and demonstrations for miners in Chicken, Central and Coldfoot in the summer of 2016 and develop booklets and videos describing reclamation techniques.

c. And please elaborate on what the Department's policy is in the interim while new policies, enforcement approaches, management plans and the like are being developed. For example, is it the Department's position to continue operating under existing policies while a new policy is being drafted?

Answer. Existing operations are not affected until new policy, plans or regulations are finalized. In some instances, operations are "grandfathered in" and follow the old regulations. For example, some mining operations are covered by the 1980 version of the CFR while others are covered by the 2001 version. However both versions require revegetation and the rehabilitation of fisheries and wildlife habitat. The mining IMs outline ways to measure the effectiveness of the reclamation and assure that it meets either version of the regulations.

When the new Resource Management Plan is completed, the stipulations in the plan will only affect new or modified mining plans of operation. Existing plans of operation, or those with only minor modifications, are not affected.

Question (43). The administration has been vague on the details surrounding your proposed $10.25/barrel "fee," as you call it.

a. Has the Interior Department performed any analysis of how a $10.25/barrel fee would impact energy production on Federal lands? If not, why not?

Answer. The proposed oil fee, which would be gradually phased in over 5 years, is an important part of the administration's effort to address the challenges of our outdated transportation system. The fee would raise the funding necessary to make these new investments, while also providing for the long-term solvency of the Highway Trust Fund to ensure we maintain the infrastructure we have. By placing a fee on oil, the President's plan creates a clear incentive for private sector innovation to reduce our reliance on oil and at the same time invest in clean energy technologies that will power our future.

The proposed fee is not a wellhead tax and is not specific to oil production from Federal lands. Therefore, BLM has no reason to believe that energy production from Federal lands would be disproportionately impacted—either positively or negatively—by the fee and has not performed an analysis on its impact. The Department understands that the administration has indicated a desire to work with Congress on how to optimize collection of the fee. However, the Department would not have a direct role in developing or implementing the details of this fee proposal. Further questions about this proposal should be directed to the Department of the Treasury.

b. In 2013, a report commissioned by the Department of the Interior concluded that raising royalty rates on onshore oil and gas production on public lands would discourage investment and bring less money to the treasury, and consequently was not warranted. With oil prices drastically lower than in 2013 and the literally thousands of pages of new regulations that have come out of your Department to regulate industry over the last few months, has your Department analyzed what the cumulative impact of all of these actions will be on production on Federal lands and revenue to the treasury?

Answer. Consistent with Federal requirements, the Department has analyzed the economic effects of each rule. These analyses evaluate the rules individually, because there is so much geographic and operational variability in where and when the rules will apply and whether and how they will impact operators. That said, a number of the new standards reflect existing industry best practices, with which many operators are already in partial or full compliance, and some of the measures will actually save producers money. Additionally, many of the rules incorporate grandfathering or other provisions that are specifically designed to take account of operators' concerns about the rules' impacts, including impacts on lower-producing wells.

c. In light of these news regulations and fees, can you tell me that your actions are designed to increase production on public lands, or are you ready to concede that we have different policy objectives when it comes to energy development on Federal lands?

Answer. With respect to onshore production, the Department has a unique and broad mission to manage public lands on behalf of the American people under the dual framework of multiple use and sustained yield. This means we manage these lands for a broad range of uses including renewable and conventional energy development, livestock grazing, timber production, hunting, fishing, recreation, and conservation. These rules are part of a broad regulatory framework designed to balance oil and gas production on the public lands with the many other uses of those lands and assure development of the public's oil and gas resources occurs safely, responsibly, and in the right places.

Question (44). The fiscal year 2015 Omnibus included a requirement for a comprehensive inventory of contaminated sites conveyed through ANCSA and a detailed plan on how the Department intends to complete cleanup of each contaminated site within 180 days of enactment.

a. When will the report be completed and made public?

Answer. The report is complete and in the midst of a final review. It should be available this summer.

b. Does the Department have any plans to accelerate the cleanup of contamination on Native lands, either the lands that BIA, BLM, FWS, NPS, or Bureau of Mines actually caused, and do you have any plans to coordinate a cleanup among the other Federal agencies: DOD, FAA, the National Weather Service and the Forest Service since as Secretary you do have a trust responsibility to Alaska Natives?

Answer. The BLM developed a database with the most comprehensive inventory to date of known contaminated sites on lands conveyed to Alaska Native Corporations through the Alaska Native Claims Settlement Act (ANCSA). The database contains current information about each site's land and regulatory status, including (1) the entity to which the BLM conveyed the property; (2) the precise coordinates, if known, for where the contaminated site is located; (3) the current understanding of the site's type and amount of contaminants, if known; and (4) any data gaps. Before it can be considered final, the inventory needs to be refined with further regulatory and site characteristics, when that information is identified. Additionally, further outreach needs to be completed to those Alaska Native Corporations that did not respond during the BLM's facilitated meetings with stakeholder groups. Once finalized, the inventory will provide Alaska Native entities and the appropriate Federal and State regulators with a powerful tool to help address these contaminated sites.

It is important to stress that, once non-Department of Defense lands pass from Federal ownership, former land-managing agencies no longer have authority under CERCLA and Executive Order 12580 (Superfund) to compel or conduct clean up, although the United States may remain liable for pre-conveyance contamination. The Department of Defense is the only Federal agency besides the Environmental Protection Agency (EPA) authorized to execute or compel cleanup of contaminated lands no longer under its ownership per 10 USC 2701(c)(1)(B). The BLM and DOI have no authority over other entities that may be identified as parties responsible for existing contamination on lands conveyed to ANCSA corporations. With the comple-

tion of this comprehensive database, the BLM has worked to the full extent of its authority in fulfilling its responsibilities under the Consolidated and Further Continuing Appropriations Act, 2014 (Public Law 113–235).

Among the sites known to be in need of cleanup, the Alaska Department of Environmental Conservation (ADEC) has identified a responsible party or parties for almost all sites. For the vast majority of parcels, the BLM was not managing the lands when they became contaminated and ADEC has identified other agencies as the responsible party. Once responsible parties have been documented for the sites identified in the completed inventory, the final phase of work will be directed by the appropriate regulatory agency. Within Alaska, this authority lies with ADEC and EPA for sites not on federally managed lands. For sites where a Federal agency has been identified as the responsible party, funds for cleanup will require budgetary planning and prioritization.

c. Does the Department have any estimates or intend to develop estimates for exactly what it will cost to clean up the lands so they are usable by Natives to generate the benefits that were intended when the Native Claims Settlement Act passed 45 years ago?

Answer. The sites not currently in a clean-up program vary in levels of confirmation with regard to the extent of the contamination. Without the details related to a verification of a release, extent of hazardous material, and other site characteristics that would support estimates for cleanup, it is difficult to predict cleanup costs.

QUESTIONS SUBMITTED BY SENATOR TOM UDALL

Question (1). I'm very pleased that this subcommittee was able to provide an 85 percent increase for Indian school construction and improvements in the 2016 omnibus. That amount includes funds to finish the schools on the 2004 school construction priority list. It also provides a down payment for to begin work on new schools—that BIE is in the process of selecting.

Selecting five new schools for priority construction is only the beginning of the investment we need to make in tribal schools—and I believe we won't get there unless we develop some kind of "Marshall Plan" for Native youth that fully funds infrastructure needs. We included language in the 2016 omnibus urging the Department to follow the lead of the Defense Department—and develop a comprehensive plan to modernize and improve all BIE schools. DOD produced a plan to modernize its education facilities needs in 2009—and has been able to make significant progress towards fixing its schools as a result. There's no reason that the administration and Congress can't work together to do the same for tribal schools.

a. Secretary Jewell, can you share what steps the Department is taking to develop a comprehensive plan to improve all Indian schools?

Answer. Indian Affairs and the Department have directed the Office of Facilities, Property, and Safety Management, through its Division of Facilities Management and Construction to work with a contractor to develop a "Poor-to-Good" 5-year plan to identify the approach and resource requirements necessary to modernize our school facilities. The results of the assessment will be ready for internal review and further strategic planning development in May 2016.

b. Is there any reason that the Department can't move forward with preparing a comprehensive needs assessment—and plan to address the needs identified by such an assessment—this fiscal year?

Answer. As described above, the Office of Facilities, Property, and Safety Management, through its Division of Facilities Management and Constructions is engaged in developing such a plan. The results of the assessment will be ready for internal review and further strategic planning development in May 2016.

Question (2). I understand that the Department is now moving forward with the first phase of the proposed reorganization of the Bureau of Indian Education—including the establishment of new Educational Resource Centers—and that your 2017 budget anticipates additional changes to the Bureau. As part of the first phase of the reorganization, you have proposed a number of staffing changes, including changes to the regional office in Albuquerque, to create these new centers to assist BIE and tribally controlled schools.

a. What is your timeline for staffing up these centers, and what services can schools expect to receive starting in the fall?

Answer. Staff hiring is planned to be completed by the end of June 2016 in time for the new school year 2016–2017.

The Education Resource Centers are geographically positioned close to schools and will be staffed with School Solutions Teams. These Teams will ensure that principals and teachers have the resources and support they need to operate high achieving schools. These Teams will assist schools in their improvement efforts by providing data-supported best practice models in such areas as school management and climate, professional development, curriculum, and instruction. These Teams will not micromanage or direct reforms in schools; rather, they will listen to principals and teachers and then provide the support that is requested.

b. I am still hearing from tribes in New Mexico that they don't feel fully informed about changes to expect from the reorganization. What is your plan to ensure that all stakeholders—including BIE employees whose jobs may be affected—know what to expect during the reorganization?

Answer. The BIE has sought to inform Tribes about the expected changes to the BIE reorganization through consultation and outreach. In 2015, the BIE held 12 regional and individual consultations along with six national consultations. The BIE welcomes further questions or comments.

In terms of informing BIE employees, the BIE Office of Human Resources (HR) has held an open house, as well as encouraged BIE employees to stop by the office to discuss the reorganization and positions. All employees were notified by email that HR was available for private meetings to discuss the reorganization and the potential impact on them individually; approximately 110 individual counseling sessions were held in person or via telephone. Since February 22, 2016, the BIE has issued vacancy announcements for available positions under the new structure. The Acting HR Director and his staff have sent email updates as the vacancy announcements have been made and provided letters to all staff affected by the reorganization. In addition, information is posted on the HR Web site and distributed by the BIE newsletter and flyers. HR has also provided Webinars that can be accessed at any time by staff explaining how to access USAJobs and how to apply for jobs using USAJobs.

c. Your budget request provides $8 million dollars in new funds to implement more changes to the Bureau to "increase capacity" and provide additional services to BIE-funded schools, but it doesn't provide much more detail. What specific changes are you proposing to make, and what additional capacity will BIE build with these funds? Will these funds be used to address shortfalls in facilities management, contracting and other services provided to schools, as identified by the Governmental Accountability Office?

Answer. The additional $8 million is required to stand up the new Schools Operations Division within the Bureau of Indian Education. The School Operations Division will include the following functions: Facilities (school construction, repair and maintenance, school safety and school property); Human Resources; Educational Technology; Acquisitions; Budget and Finance; and Communications. The redesign and restructuring of the Schools Operations Division will address the Government Accountability Office recommendations related to accountability and management of funds, school safety issues, shortfalls in facilities management, and the planning and execution of acquisitions. These issues are addressed in several ways under the restructuring of the BIE as follows: (1) dedicated, additional staffing; (2) establishment of new offices with new responsibilities (e.g., auditing, technical assistance, policy development); (3) new reporting chains to ensure oversight of functional experts; (4) new business processes that support school needs, and (5) consolidation of functions to eliminate duplication.

Question (3). Secretary Jewell, I am pleased to see your 2017 budget includes a $350,000 increase to expand the Manhattan Project National Historical Park, for a total budget of $691,000. I know that the Park Service is still working with the Department of Energy to develop its plan for the park.

Could you please provide an update on what we can expect to happen with the park in 2016, particularly in Los Alamos? What activities do you plan to fund with your requested increase?

Answer. If appropriated, funding would provide for adequate initial staffing of all three park locations, including Los Alamos. A Superintendent, a site manager at each location, and some interpretive staff are planned based on the proposed budget for fiscal year 2017.

If funding is appropriated, the Los Alamos site will hire a site manager in 2017 and will expand interpretive staff. The Department of Energy is working to have the first buildings open to the public in late calendar year 2017.

In the meantime, the park has developed a brochure showing the Manhattan Project resources visitors can see in town, and will be hosting regular ranger talks and tours by summer 2016. NPS anticipates expanding the interpretive presence in

2017 with the additional funding as well as continuing to develop partnerships with the local community.

Question (4). Secretary Jewell, I am very pleased that my colleagues and I were able to provide the BLM National Conservation Lands line item with its first increase since fiscal year 2012. As you know, we recently established two new national monuments in New Mexico—the Organ Mountains-Desert Peaks National Monument in the southern border area of the State, and the Rio Grande del Norte National Monument in the north near Taos. Tourism at these monuments creates critical economic opportunities for the people in surrounding communities—and they are also places that New Mexicans enjoy visiting ourselves. The President's budget once again proposes a significant increase of $13.8 million dollars for monuments throughout the country.

a. Can you tell us what BLM's plans are for utilizing the new funds we provided in fiscal year 2016— particularly to support the monuments in New Mexico?

Answer. The BLM's National Monuments and National Conservation Areas (NM&NCA) program received a $5.0 million increase in fiscal year 2016. The increase brings the program's total appropriation to $36.8 million, which is used to administer 46 areas covering about 12.2 million acres (as of April 1, 2016). New Mexico has received $1.3 million, or 26 percent, of the increase because of several new NM&NCA designations. This brings the State's total NM&NCA program funding to $2.5 million—a 110 percent increase from fiscal year 2015.

These funds will support all NM&NCAs in New Mexico, including newer national monuments. Specific direction includes funding managers, critical staff, signage, and educational materials, among other things. Funding is also directed for New Mexico's critical maintenance needs, to inventory and protect the resources, objects, and values for which units were designated, to reduce staffing vacancies, provide education and interpretation to the public, hire youth and veterans, and provide safe and legal public access.

b. With the increased funding included in the 2017 Budget for national monuments, what will you be working on? What are the needs that should be addressed?

Answer. The BLM plans to use the proposed $13.8 million increase to the NM&NCA program as described in the fiscal year 2017 President's budget. Specifically, the program will use the increase to fill critical management and staff vacancies, conduct vital inventories, provide safe and legal public access, perform basic maintenance on infrastructure, protect wildlife habitat and irreplaceable historical resources, and provide opportunities for recreation, volunteering, youth and veteran engagement, and scientific research.

c. Since the budget was delivered, the President has designated new monuments in California, and I understand there is still the potential for additional designations. Will the funding needs for those areas be covered by the increases you've proposed? If not, how will you fund them without impacting other states like New Mexico?

Answer. The 2017 budget was formulated prior to these most recent designations. BLM base funding has been used to manage these acres prior to their designation as national monuments. Decisions on allocation of the requested increase have yet to be made. The BLM will have a better idea of 2017 funding needs for the new monuments in the coming months, and will be able to reprioritize estimated NM/NCA State allocations at that time.

Question (5). The budget proposes $1.7 million dollars to implement a Departmental Southwest Border Radio Initiative—in partnership with the Forest Service—to improve communications infrastructure amongst the various land management agencies, based on some issues the Inspector General uncovered.

a. Can you talk about how this funding specifically addresses the concerns raised by the Inspector General? Will this initiative improve Interior's ability to communicate with Border Patrol and State and local law enforcement as well?

Answer. The funding proposed for the fiscal year 2017 Bureau of Land Management Deferred Maintenance budget will allow the Department of the Interior to complete the first pilot projects aimed at resolving deficiencies in the land mobile radio program in an area with a critical need for improved communications. Projects to be completed with these funds will focus on resolving concerns over safety of DOI personnel using and maintaining land mobile radio facilities. In addition, land mobile radio infrastructure will be consolidated, removing redundant facilities and upgrading equipment on remaining sites. The priorities for work will be accomplished in collaboration with other DOI Bureaus in the region including the National Park Service (NPS), Fish and Wildlife Service, Bureau of Indian Affairs, the Bureau of

Reclamation and the U.S. Forest Service. There may be as many as 32 sites in the region which could be eliminated through this consolidation.

When completed this project will lead to reduced infrastructure costs since there will be fewer sites to maintain and the condition of the remaining sites will be much improved. A key aspect of this project is the cross Bureau cooperation within DOI and the inclusion of the USFS as a full partner. Safety and effectiveness will also be enhanced with upgraded replacement communication hardware and operational support for the infrastructure will be shared.

Radio coverage and reliability will be enhanced which should lead to better communications with other partners including the U.S. Border Patrol. The work to be done is not focused on correcting interoperability issues. These issues have been addressed through MOUs and exchange of radio frequencies and encryption keys. On the Southwest Border, the DOI and USFS Law Enforcement have been successfully interoperable with the Department of Homeland Security since 2008, in some cases much earlier. Our Officers communicate on these shared frequencies and infrastructure every day.

b. Can you tell us why BLM was chosen as the lead agency and why the Park Service and Fish and Wildlife Service do not have similar increases proposed for this project?

Answer. BLM currently administers and operates a regional interagency dispatch center in Phoenix and has been a leader in managing land mobile radio communications in the region. The Arizona BLM State Directors Office and staff have collaborated with other DOI Bureaus and the USFS to identify priority actions needed to address field communications issues and has entered into a partnership with the NPS, FWS, and the USFS in the border region of New Mexico and Arizona. Radio communications are a common operational activity and BLM has agreed to manage the requested funds to address needs across all Bureaus and the USFS. The funding will be used to consolidate existing infrastructure, removing towers that provide overlapping service and upgrading the towers that will remain and serve all the participating agencies. The specific sites to be worked on will be identified based on technical information gathered through a collaborative effort with the partners involved.

c. What are the tangible impacts we will see on the ground in New Mexico if this program is funded?

Answer. When project work is completed there should be fewer land mobile radio communication sites in New Mexico since sites that provide overlapping service will be removed. This will reduce environmental impacts and maintenance costs for unneeded sites. Maintenance visits to the sites will no longer be required reducing disturbance to sensitive species and removal of equipment and associated infrastructure will allow for restoration of previously impacted sites.

Improvements at remaining communication sites will increase radio coverage and reliability for DOI Bureaus and the USFS and should make these sites viable for colocation use by the New Mexico FirstNet Public Safety Broadband Network, counties, cities, and other Federal agencies.

Question (6). I am the lead cosponsor of legislation with Senator Wyden that would require the Department to collect royalties for coal mined on Federal lands based on the actual market value of coal. The bill also increases transparency within the Federal coal program by making it a requirement to calculate and publish the going market rate for coal and coal transportation.

I know that you have called for a comprehensive review of the coal program. What is the status of that review, and the expected timetable for completion? Will the reforms proposed in our bill be evaluated as part of your review? Please provide a comprehensive list of the issues that you expect to investigate or address as part of the review.

Answer. On January 15, 2016, the Secretary of the Interior issued Order No. 3338 directing the BLM to conduct a broad, programmatic review of the Federal coal program it administers through preparation of a Programmatic EIS under NEPA. The Order was issued in response to a range of concerns raised about the Federal coal program, including, in particular, concerns about whether American taxpayers are receiving a fair return from the development of these publicly owned resources; concerns about market conditions, which have resulted in dramatic drops in coal demand and production in recent years, with consequences for coal-dependent communities; and concerns about whether the leasing and production of large quantities of coal under the Federal coal program is consistent with the Nation's goals to reduce greenhouse gas emissions to mitigate climate change. In light of these issues, the coal Programmatic EIS will identify and evaluate a full range of potential re-

forms to the Federal coal program, including those related to ensuring a fair return to the taxpayer.

On March, 30, 2016, the Department of the Interior published a Notice of Intent (NOI) to prepare a programmatic EIS to review the Federal coal program and conduct public scoping meetings [Pages 17720–17728 [FR DOC # 2016–07138]]. Scoping meetings are scheduled for May and June 2016. The BLM will invite interested agencies, States, American Indian tribes, local governments, industry, organizations and members of the public to submit comments or suggestions to assist in identifying significant issues and in determining the scope of this Programmatic EIS. All comments and recommendations submitted during the scoping process will be collected for consideration. The estimated completion time for the program review is 3 years.

Question (7). Secretary Jewell, the demand for ivory and rhino horns has skyrocketed. The Congressional Research Service reports that a rhino horn is worth more than $50,000 per kilogram—more than even gold and platinum. The profit incentive is just staggering—so it's no surprise that terrorist networks such as al-Shabab and the Lord's Resistance Army are turning to poaching to support their operations.

The fiscal year 2016 Omnibus included $8 million dollars, a 12 percent boost, to the Fish and Wildlife Service's efforts to combat wildlife trafficking. The budget request for fiscal year 2017 would maintain that increased effort.

What progress is the Service making on hiring the planned 45 new specialists and agents, and how quickly will they get into the field? What other steps is the Service planning to take with the new funds, both in 2016 and 2017?

Answer. The fiscal year 2016 Omnibus included an $8 million dollar increase for the U.S. Fish and Wildlife Service's Office of Law Enforcement to combat wildlife trafficking. These funds are being used to strengthen the Service's capacity to combat trafficking by hiring additional international special agent attachés, digital forensic specialists, intelligence analysts, and special agents.

International attachés are experts on investigating wildlife trafficking and breaking up smuggling networks. They are stationed around the world in strategic international locations to strengthen ongoing international partnerships to protect the world's wildlife from poaching and illegal trade. In August 2015, three additional attachés were stationed at U.S. embassies in Dar es Salaam, Tanzania; Gaborone, Botswana; and Lima, Peru. The Service continues to work with the State Department to place a fifth attaché in Beijing, China in May 2016. In 2016, the Service plans to deploy an additional four international attachés in areas of the world that have been determined to be strategically important in the fight to combat illegal wildlife trafficking. The Service is in final discussions with the State Department concerning the placement of four additional attachés. The Service anticipates advertising the positions before July 2016, with selections for the positions to be made in August 2016.

Digital forensic specialists support agents in case development and execution by providing forensic results concerning computers, cell phones, and other digital technologies. The Service is currently reviewing applications for the five new special agent positions funded in the fiscal year 2016 budget. The Service aims to place the new agents at the Digital Evidence and Recovery Computer Forensics Lab by June 2016.

Intelligence analysts support special agents and wildlife inspectors working in the field in numerous ways, including providing information concerning trends in wildlife trafficking, researching information on smuggling syndicates, performing criminal history checks, and producing and distributing intelligence bulletins. The Service is on track to select a new Special Agent in Charge of the expanded Intelligence Unit in June 2016, with plans to bring the remaining agents on board shortly thereafter.

The Service has also hired 43 special agents to ensure its ability to enforce the Nation's wildlife laws and safeguard protected species. The additional special agents will address the current staffing level shortfall that has limited the Service's ability to perform ongoing investigations. A portion of the new agents have completed initial training and are already working at field locations. Final training will take place in June 2016 at the Federal Law Enforcement Training Center in Glynco, Georgia. After completion of all training, new agents will be deployed to the field for direct interdiction of illegal commercial exploitation by organized crime elements.

Through increased staff in these vital areas of expertise, the Service will strengthen our own and our global partners' capacity to prosecute and deter criminals that engage in the poaching and smuggling of wildlife and plants.

Question (8). Secretary Jewell, the Fish and Wildlife Service's efforts to reintroduce the Mexican gray wolf in New Mexico and Arizona has had a promising start. They were virtually eliminated from the wild by the 1970s, but thanks to the program, the population reached 110 wolves in 2014.

Unfortunately, the 2015 count brought some troubling news—the Mexican gray wolf population dropped to 97. I also understand that two wolves passed away during or right after being darted and tagged by the Fish and Wildlife Service. Wild populations can naturally ebb and flow, but we know that these wolves are at risk for a number of factors. It's critical that we investigate closely.

a. Do your scientists have a theory for why the population is trending downward? Are there plans underway to help support a rebound?

Answer. The drop in numbers from 2014 to 2015 represents 1 year and does not yet indicate a trend. The population decline in 2015 was due to a combination of factors. There were 13 Mexican wolf mortalities (5 illegal, 2 natural, 1 capture complication, 5 awaiting necropsy) compared to 11 in 2014. Ten additional wolves are considered fate unknown compared to three in 2014. Finally, a significantly lower proportion of pups survived to December, relative to last year: 55 percent survival in 2015 compared to 86 percent in 2014. In the 2014 Environmental Impact Statement for the revised regulations for the Mexican wolf experimental population, the Service anticipated an average annual population growth of 10 percent. In 2014, Mexican wolves had higher than usual pup survival and a population growth of 30 percent. The Service maintains that the strategy for the experimental population continues to be viable. The Service and its partners remain focused and committed to making this population genetically healthy and robust so that it can contribute to the recovery of the Mexican wolf.

b. Why did the two wolves die during the count and capture operation? Has the Fish & Wildlife Service done a full review of their policies and procedures to prevent similar accidents?

Answer. The Service conducted preliminary investigations immediately following the two deaths during the 2015 count and capture operation. Both wolves are undergoing necropsies at the Service's Forensics Laboratory in Ashland, Oregon, to determine cause of death. We have requested that the lab specifically determine if either wolf experienced capture myopathy and if there was any other contributing underlying health issue. The techniques, protocol, and drugs used were the same as those used throughout this year's and last year's count and capture operations. This year, 13 additional wolves were successfully darted, processed, collared, and released back into the wild. Based on the outcome of the necropsies, the Service will determine if any changes to protocol are needed.

QUESTIONS SUBMITTED BY SENATOR ROY BLUNT

Question (1). Could you please provide a comparison of the revenues returned in the last several fiscal years from oil, gas, and coal leases, versus any revenue brought in from solar energy. Please include in the report what the revenue is generated from, such as rents. Further, please identify where there this money is accounted for in the Interior budget. It does not appear to be documented in Interior's Office of Natural Resources Revenue which lists revenues from other sources.

Answer. A comparison of the revenues generated for oil, gas, coal and solar energy are provided in the tables below.

Revenues from oil, gas, and coal leases: Data with respect to revenue generated by the production of Federal oil, gas, and coal is maintained by ONRR on its Statistical Information Web page (http://statistics.onrr.gov/ReportTool.aspx). Information made available is broken down into information on Revenue Type (reported royalties, rents, bonus, and other revenues), Commodity (leased solid and fluid minerals), and the total Revenue collected. Definitions for these categories are provided by ONRR on its Web site.

The tables below present the total revenue collected from Federal oil, gas, and coal production on both an annual and aggregate basis from fiscal year 2010 through fiscal year 2015.

OIL AND GAS REVENUE

Fiscal Year 2010–2015

Type	Fiscal Year 2010	Fiscal Year 2011	Fiscal Year 2012	Fiscal Year 2013	Fiscal Year 2014	Fiscal Year 2015
Gas (mcf)	$1,444,790,640	$1,360,191,600	$976,195,024	$1,008,066,360	$1,161,006,314	$915,071,846
NGL (gal)	$210,688,138	$253,774,439	$298,372,582	$284,957,168	$279,379,284	$154,241,725
Oil (bbl)	$870,739,500	$1,110,883,193	$1,275,117,598	$1,459,973,589	$1,634,903,295	$1,269,596,134
Total Royalt es	$2,526,218,278	$2,724,849,233	$2,549,685,203	$2,752,997,117	$3,075,288,892	$2,338,909,704
Oil & Gas Rents	$48,800,065	$45,002,896	$43,758,281	$41,036,833	$36,684,823	$30,886,105
Oil & Gas Bonuses	$201,872,509	$233,467,555	$283,051,994	$188,982,219	$161,936,505	$112,651,284
Total Royalty, Rent and Bonus	$2,776,890,852	$3,003,319,684	$2,876,495,478	$2,983,016,170	$3,273,910,220	$2,482,447,094

COAL LEASE REVENUE

Fiscal Year 2010–2015

Fiscal Year 2010	Fiscal Year 2011	Fiscal Year 2012	Fiscal Year 2013	Fiscal Year 2014	Fiscal Year 2015	Total Fiscal Year 2010–2015
$856,793,241	$956,018,290	$1,364,744,116	$1,165,066,525	$1,161,706,509	$1,137,450,911	$6,641,809,592

Revenues from Solar Energy: ONRR does not collect renewable resource revenue information. Renewable energy revenue is reported by the BLM in the Public Land Statistics. Since 2010, the BLM has authorized 35 solar projects. As of April 2016, there are 6 projects that have been built and are providing power to the grid. The following table summarizes renewable energy revenues that BLM has collected over the past several years.

The table below reflects annual payments that the BLM collects for solar and wind energy development. It does not include revenues collected through competitive bidding for development parcels at an auction since there has only been one auction held to date, in 2014, which resulted in over $5.8 million in bids. This is an amount that the BLM collected in addition to the amounts reported in the table below. All revenues, including bid monies, are sent to the General Fund at the Treasury.

SOLAR AND WIND ENERGY REVENUE

Fiscal Year 2010–2015

Year	Solar	Wind	Fiscal Year Total
Fiscal Year 2010	$3,911.76	$3,115,480.25	$3,119,392.01
Fiscal Year 2011	$6,230,982.09	$3,713,338.16	$9,944,320.25
Fiscal Year 2012	$5,199,338.42	$4,354,260.32	$9,553,598.74
Fiscal Year 2013	$6,343,817.72	$4,315,856.99	$10,659,674.71
Fiscal Year 2014	$7,307,687.93	$5,402,276.42	$12,709,964.35
Fiscal Year 2015	$10,686,757.63	$4,538,337.65	$15,225,095.28
Totals	$35,772,495.55	$25,439,549.79	$61,212,045.34

Question (2). Given that your department has concluded that a PEIS for the coal leasing program is necessary, will you commit to refraining from other major modifications to the coal program while this analysis is being conducted?

Answer. The intent of the discretionary Programmatic EIS is to analyze potential leasing and management reforms to the current Federal coal program in response to concerns raised by the Government Accountability Office, the Interior Department's Office of Inspector General, Members of Congress, interested stakeholders and the public. Any potential reforms or changes to the Federal coal program will be identified in the scoping process.

Question (3). You have indicated that a number of coal leases that have received record of decisions will be grandfathered. Are you firmly committed to allowing those lease sales to move forward as planned?

Answer. The Secretarial Order states that applications having records of decisions or decision records issued by either the surface management agency or the bureau at the time of the order will be processed and not affected by the pause.

QUESTIONS SUBMITTED BY SENATOR MITCH MCCONNELL

Question (1). The Consolidated Appropriations Act of 2016 (Public Law 114–113) included a directive to require the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide States with technical reports, data, analyses, comments received, and documents related to the environmental review and environmental impact statements for the agency's proposed stream buffer zone regulation. To date, what has OSMRE done in conjunction with the Department of Interior to comply with Congress' directive?

Answer. OSMRE made these documents available to all of the States on March 24, 2016. Reference materials cited in the proposed rule were uploaded on the Web site *regulations.gov* with the exception of reference materials protected by copyright law.

Question (2). The Office of Surface Mining and Enforcement (OSMRE) claims that States have been reluctant to work with the agency despite their outreach efforts on the proposed stream buffer zone regulation. The Energy and Environment Cabinet in Kentucky sent a letter to your agency on February 8, 2016, indicating that the State agency would be interested in receiving the information directed by Congress in the Consolidated Appropriations Act of 2016 (Public Law 114–113) to see how those studies and assessment documents compare with their own findings and reviews. Where is your agency in the process of responding to this request? What steps will your agency take to ensure that the newly elected and appointed officials in the commonwealth of Kentucky are brought up to speed with the proposed rule and reviews and findings associated with it? What sort of engagement can the Kentucky Energy and Environment Cabinet expect from your agency before the stream buffer zone rule is finalized?

Answer. OSMRE has and will continue to honor its commitment to provide the State of Kentucky as well as all other States the information directed by Congress. In this regard, OSMRE scheduled a series of technical meetings to provide answers to questions the States might have with any of the documents provided. The State of Kentucky was invited to participate in these meetings held on April 14, 2016 and on April 21, 2016.

QUESTIONS SUBMITTED BY SENATOR BILL CASSIDY

Question (1). In 1996 Congress passed the National Technology Transfer and Advancement Act (NTTAA). The law prohibits the use of technical standards unique to the Federal government in lieu of voluntary consensus standards as they relate to agency rule making. However, the Blowout Preventer Systems and Well Control final rule, RIN 1014–AA11 violates the NTTAA by using government unique technical standards. This violation makes it impossible to implement numerous portions of the rule while remaining compliant with existing law. In its formulation of the rule BSEE also infringes upon OMB Circular A–119. The circular requires the publishing of a NTTAA "statement" in its Notice of Proposed Rulemaking (NPRM) detailing why government unique technical standards were necessary in lieu of consensus standards if exceptional reasons existed.

a. Why did BSEE not include a NTTAA statement in its original NPRM?

Answer. BSEE's Blowout Preventer Systems and Well Control final rule is consistent with the NTTAA's requirement that agencies use technical standards that are developed or adopted by voluntary consensus standards bodies rather than government-unique standards. The final rule expressly incorporates the following voluntary consensus technical standards as required by the NTTAA:

—American Petroleum Institute (API) Standard 53 ("Blowout Prevention Equipment Systems for Drilling Wells");
—ANSI/API Specification (Spec.) 11D1 (Packers and Bridge Plugs,
—ANSI/API Spec. 16A (Drill-through Equipment);
—API Spec. 16C (Choke and Kill Systems);
—API Spec. 16D (Control Systems for Drilling Well Control Equipment and Control Systems for Diverter Equipment);
—ANSI/API Spec. 17D (Design and Operation of Subsea Production Systems—Subsea Wellhead and Tree Equipment); and

—ANSI/API RP 17H (Remotely Operated Vehicle Interfaces on Subsea Production Systems).

The final rule does not use government-unique standards in lieu of voluntary consensus standards. As a result, BSEE is not required to provide a statement that identifies government-unique standards and explain why using voluntary consensus standards would be inconsistent with law or otherwise impractical.

b. How does BSEE plan to implement all of rule RIN1014–AA11 if key provisions violate existing statues?

Answer. BSEE does not believe that any provisions of the rule violate existing statutes. As BSEE described in the preamble to the proposed rule, pursuant to the Outer Continental Shelf Lands Act (OCSLA), Congress authorized BSEE to promulgate regulations concerning natural resources of the Outer Continental Shelf.[3] BSEE relied on this legal authority as its basis for developing and issuing the final Blowout Preventer Systems and Well Control rule. The final rule is consistent with OCSLA and other existing statutes described in the rulemaking record.

c. Does the Department plan to publish a NTTAA statement and reopen the public comment period?

Answer. As the Blowout Preventer Systems and Well control rule complies with the requirements of the NTTAA and the guidance in OMB Circular A–119 concerning the Bureau's identification of voluntary consensus standards used in the rule, the Department does not plan to reopen the public comment period.

Question (2). The NTTAA does allow for exceptions from the voluntary consensus standards mandate when their use "is inconsistent with applicable law or otherwise impractical" and requires agencies to "transmits to the Office of Management and Budget an explanation of the reasons for using such standards." In accordance with 15 U.S.C. § 272.

a. Please explain the Department's process for justifying a NTTAA exemption when BSEE was actively involved in creating and approving the consensus standards at issue.

Answer. BSEE's promulgation of the final Blowout Preventer Systems and Well Control rule is consistent with the NTTAA's requirement that agencies use technical standards that are developed or adopted by voluntary consensus standards bodies, rather than government–unique standards, when such technical standards are consistent with the law and practical (e.g., when the technical standards would serve the agency's program needs and would not be ineffectual, inefficient or inconsistent with the agency's mission). The final rule does not rely on an exemption from the NTTAA.

b. Please explain the justification that voluntary consensus standards are "impractical", especially taking into account that government-unique standards lack a technical basis and create potential safety risks.

Answer. Each departure from voluntary consensus standards is founded on a sound technical basis, generally accepted engineering best practices, and BSEE's determination that the relevant consensus standard, or a specific provision of the standard, does not provide an acceptable level of risk, risk management, or due care. For example, API Standard 53 contains a provision that allows an operator to opt out of a requirement to have dual shear rams on a subsea blowout preventer. The final version of the Blowout Preventer Systems and Well Control rule incorporates API Standard 53, but does not incorporate the "opt-out" provision as the Bureau determined that full incorporation of Standard 53 cannot provide the same level of safety as an absolute requirement to have dual shear rams. In instances such as this, where the Bureau decided that a departure from consensus standards was appropriate, BSEE exercised its authority carefully with an eye toward establishing an acceptable level of protection while also balancing risks, costs, and the availability of alternative approaches in establishing regulatory requirements.

Question (3). In its NPRM BSEE claims the proposed rule is not a "significant energy action" triggering the need for a Statement of Energy Effects under the Outer Continental Shelf Lands Act ("OCSLA") and procedural requirements under Executive Order 13211 (May 18, 2001) requiring a "Statement of Energy Effects." However, based on comments received from the public it is unreasonable for BSEE and the Department to continue this claim. BSEE has acknowledged that the proposed rule in total "represents one of the most substantial rulemakings in the history of the BSEE and its predecessor organizations." While simultaneously and inconsistently claiming that the proposed rule is not a significant energy action under E.O.

[3] 80 Fed. Reg. 21505 (April 17, 2015); 43 U.S.C. 1334.

13211, BSEE has not met the mandate under OCSLA for a reasoned analysis of the rule.

Given the obvious and BSEE acknowledged impact this rule will have; will the Department renew its analysis and prepare the requisite Statement of Energy Effects and submit the Statement for public comment, as required by law?

Answer. The rule represents one of the most substantial rulemakings in BSEE history because it codifies significant improvements to the safety of well control operations, not because of any possible energy effects. The Bureau's analysis of the final rule indicates that it will not have a significant adverse effect on energy supply, distribution, or use because its estimated impacts will not exceed the thresholds established by OMB.[4]

Question (4). BOEM has stated that offshore sources have not been demonstrated to impact onshore air quality. At the same time, BOEM is currently undergoing air modeling studies to inform its air quality rulemaking and these studies are not expected to conclude until 2017. However it appears the agency is on the cusp of proposing an entirely new regulatory program for offshore operators.

a. Is the agency going to move forward with a proposed rule before receiving the results of the air modeling studies that are intended to inform the rule for which it has commissioned nearly $4 million? What assurance can you provide today that the agency will issue a draft report of the studies for public review and comment prior to finalizing the report or incorporating its conclusions into any revised regulatory requirements?

Answer. The proposed regulations continue the framework of the current BOEM air quality regulations. The framework, a construct in place since 1980 when the Department of the Interior first issued air quality regulations, was designed to meet the Department's statutory mandate to ensure that offshore oil and gas activities do not exceed onshore national ambient air quality standards (NAAQS).

Given today's landscape, we acknowledge the need to update the 36 year-old regulations to reflect current science and technology and recent determinations about pollutant levels that are potentially harmful to human health and the environment. The existing regulations reflect outdated air quality standards that the Environmental Protection Agency (EPA) has since revised to better reflect current science.

The proposed regulations will more effectively protect public health and the welfare of affected States. In addition, BOEM's current regulations do not take into account air quality impacts over State coastal waters, which BOEM believes would more accurately meet its statutory responsibility. Finally, revisions are also needed to address BOEM's responsibility to assess air quality impacts in the Arctic, as required by The Consolidated Appropriations Act, 2012 (Public Law 112–74).

The proposed regulations are designed to allow advances in science and assessment of air quality impacts to be flexibly and efficiently incorporated into BOEM's air quality rules, including results of the modeling studies currently underway. The modeling studies are intended to inform air quality requirements *within* the framework of the proposed regulations, not the framework itself. Consistent with BOEM's practice for scientific standards, the studies will be peer-reviewed and made public once final. Also, as BOEM's proposed regulation provides, any changes in the current emission exemption thresholds, which the models are designed to inform, would not occur until the studies are completed, and would not occur before BOEM gives notice in the *Federal Register* that it intends to revise the thresholds and provide an opportunity for public comment.

Conclusions about the environmental impact of OCS air emissions depend on the focus of review and the most recent science. Those assessments are determined when BOEM reviews site-specific plans of operations. In that context, it is possible for emissions to exceed significant impact levels or lead to deterioration of State air quality. Accordingly, it is necessary for BOEM to conduct a broad cumulative impact analysis, as well as a site-specific review of plans.

b. What justification does the agency have for moving forward without the results of the studies when your agency, through its environmental impact assessments, has repeatedly concluded that offshore sources do not impact onshore air quality?

Answer. The proposed regulations continue the framework of the current BOEM air quality regulations. The framework, a construct in place since 1980 when the Department of the Interior first issued air quality regulations, was designed to meet the Department's statutory mandate to ensure that offshore oil and gas activities do not exceed onshore national ambient air quality standards (NAAQS).

[4] OMB Memoranda 01–27 (Guidance for Implementing E.O. 13211) (2001).

Given today's landscape, we acknowledge the need to update the 36 year-old regulations to reflect current science and technology and recent determinations about pollutant levels that are potentially harmful to human health and the environment. The existing regulations reflect outdated air quality standards that the Environmental Protection Agency (EPA) has since revised to better reflect current science.

The proposed regulations will more effectively protect public health and the welfare of affected States. In addition, BOEM's current regulations do not take into account air quality impacts over State coastal waters, which BOEM believes would more accurately meet its statutory responsibility. Finally, revisions are also needed to address BOEM's responsibility to assess air quality impacts in the Arctic, as required by The Consolidated Appropriations Act, 2012 (Public Law 112–74).

The proposed regulations are designed to allow advances in science and assessment of air quality impacts to be flexibly and efficiently incorporated into BOEM's air quality rules, including results of the modeling studies currently underway. The modeling studies are intended to inform air quality requirements within the framework of the proposed regulations, not the framework itself. Consistent with BOEM's practice for scientific standards, the studies will be peer-reviewed and made public once final. Also, as BOEM's proposed regulation provides, any changes in the current emission exemption thresholds, which the models are designed to inform, would not occur until the studies are completed, and would not occur before BOEM gives notice in the *Federal Register* that it intends to revise the thresholds and provide an opportunity for public comment.

Conclusions about the environmental impact of OCS air emissions depend on the focus of review and the most recent science. Those assessments are determined when BOEM reviews site-specific plans of operations. In that context, it is possible for emissions to exceed significant impact levels or lead to deterioration of State air quality. Accordingly, it is necessary for BOEM to conduct a broad cumulative impact analysis, as well as a site-specific review of plans.

c. What reassurance can you provide that the agency will not rush, in order to meet an artificial deadline, the regulated community's ability to comment on the proposed rule and allow the agency time to engage with stakeholders as you analyze and digest those comments in order to incorporate any appropriate revisions into the final rule?

Answer. BOEM is proceeding with the rulemaking in a deliberative manner with ample opportunity for public comment. For instance, while drafting the Air Quality proposed rule, BOEM held a number of meetings and listening sessions with other government entities, and environmental and industry stakeholders. The proposed rulemaking provides 60 days for public comment following its publication on April 5, 2016 in the *Federal Register.* Additionally, the proposal was posted on BOEM's Web site on March 17, 2016, providing the public an additional 19 days to review the proposed rule. BOEM will carefully review the comments it receives on the proposed rule as it develops a final rule.

Question (5). BSEE is currently working to finalize its BOP/Well Control Rule which as proposed may actually decrease safety and increase risk. Will the final rule make offshore operations less safe and increase risk like the proposal did?

Answer. The Department announced the final rule on April 14, 2016, and the final rule was published in the *Federal Register* on April 29, 2016. The Bureau's analysis of the administrative record, including the many recommendations associated with the *Deepwater Horizon* blowout and explosion investigations and the public comments indicates that the final rule will reduce the risk of an offshore oil or gas blowout that could result in the loss of life, serious injuries, or substantial harm to the environment. Accordingly, the final rule represents one of the most significant safety and environmental protection reforms the Interior Department has undertaken since *Deepwater Horizon,* and builds upon a number of reforms instituted over the last 6 years to strengthen and modernize offshore energy standards and oversight.

a. Prior to the rule's proposal last year did DOI thoroughly examine all of the safety improvements made since 2010 and identify the existing gaps to determine what this rule needed to address?

Answer. Following the *Deepwater Horizon* tragedy, several immediate actions were taken to address specific offshore safety concerns involving drilling operations. The regulations that were issued in 2010 and 2012 provided new standards for well design, casing and cementing, and third-party certification of designs. These rules represented an important first step in addressing regulatory gaps in the offshore program, but did not address the full cadre of regulatory deficiencies identified after *Deepwater Horizon.*

The Blowout Preventer Systems and Well Control rule represents the next step in the process of creating a robust regulatory program that is responsive to all of

the recommendations received from the several investigations of the *Deepwater Horizon* incident. BSEE employed a number of strategies to ensure that regulatory gaps were identified and addressed, including, but not limited to, involving industry and other stakeholders in the development of the proposed rule and in the final rulemaking process.

b. DOI received significant comments and feedback on a number of safety concerns with the proposed rule. A recent Wall Street Journal article, which may have been written as a result of a DOI leak of the final rule, suggests that changes have been made to the proposal. What changes have been made to enhance safety?

Answer. The Blowout Preventer Systems and Well Control rule codifies many important improvements to offshore drilling. The final rule addresses key recommendations made after the *Deepwater Horizon* tragedy and closes gaps in existing regulations and updates BSEE regulations to reflect industry best practices. Parts of the final rule that were modified after the public comment period on the proposed rule include the safe drilling margin requirement, real-time monitoring, blowout preventer (BOP) inspection requirements, and BOP accumulator capacities.

As to the drilling margin requirement, text was added to clarify the acceptability of risk-based justifications for specifying an alternative drilling margin, which clearly provides the flexibility requested in numerous industry comments. With regards to the real-time monitoring provisions, language was revised to clarify the Bureau's intent and to address misperceptions reflected in the comments. The new provision reflects the Bureau's intent to allow maximum flexibility in complying with real-time monitoring requirements.

In addition to enhancing safety and flexibility, many of the changes reflected in the final rule will result in substantial cost-savings for offshore operators. For example, the final rule modifies the 5-year BOP inspection requirement, allowing inspections to occur in phases, provided every component is inspected once every 5 years. Compliance dates were also extended for several important requirements, including the extension of the requirement to use BSEE-Approved Verification Organizations (BAVOs) to perform certifications from 90 days to no later than 1 year from the date when BSEE publishes the list of BAVOs. In response to industry comments, the requirement to use "hydraulically operated locks" on surface BOPs was modified to allow the use of remote-controlled locks and the effective date of that requirement was extended to 3 years after the date of publication. These are just a few instances where comments and other feedback BSEE received were reflected in changes to the final rule.

c. A number of us in Congress have real concerns with the proposal all centered on safety and as a result the DOI needed to undertake a more robust analysis and engage in real dialogue to make sure the unintended consequences were addressed and the rule actually made offshore operations safer. As a result, the fiscal year 2016 omnibus spending bill expressed the need for more robust analysis and that further examination needed to take place prior to the finalization of the rule. Did DOI heed to the call of the Congress prior to finalizing and sending the rule to OMB? Why or why not?

Answer. Yes. BSEE conducted extensive stakeholder engagement after publication of the proposed rule and during the extended comment period. BSEE participated in numerous meetings with industry and other stakeholders before and after publication of the proposed rule on subject matter related to the Blowout Preventer Systems and Well Control rule, a number of which dealt specifically with clarifying stakeholders' written comments on the rule. BSEE also attended listening sessions arranged by the Office of Management and Budget (OMB) during the E.O. 12866 review period for the draft final rule, most of which were requested by members of industry. BSEE staff carefully considered all stakeholder comments and input.

The Bureau's comprehensive and transparent outreach was critical to the development of the final rule. The final rule does not represent a "one-size-fits-all" approach. Rather, the final rule incorporates sufficient flexibility to allow operators to focus on the ultimate goal of increasing safety and reducing risk offshore. The final rule also allows for the development and deployment of new technologies that lead to safer operations. Additionally, the final rule employs a phased implementation approach for some of its more complex provisions that gives industry sufficient time to come into compliance with new technological requirements.

d. Does the final rule address and fix all of the safety concerns stakeholders and Congress had with the proposal? Does the final rule enhance safety?

Answer. The final Blowout Preventer Systems and Well Control rule combines prescriptive and performance-based approaches to regulation to ensure that oil and

gas companies and offshore rig operators are cultivating a greater culture of safety with a focus on risk reduction. Based on the extensive technical comments received during the rulemaking process, several adjustments were made to provisions of the proposed rule that are reflected in the final rule. The final rule provides a level of flexibility sufficient to ensure that regulatory oversight keeps pace with technological advancement, provided future innovations can meet the rule's standards for safety performance. The key concerns of industry based on the proposed rule are addressed in the final rule including, but not limited to safe drilling margins, accumulator capacity, BOP inspection intervals, and real-time monitoring requirements. The Bureau firmly believes that the regulatory process has resulted in a final rule that will raise the bar for offshore safety, both in United States Federal waters and internationally.

SUBCOMMITTEE RECESS

[Whereupon, at 12:08 p.m., Wednesday, March 2, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

From: Office of Senator Ted Cruz
To: Lara_Levison@ios.doi.gov
Subject: Cruz News: March 3, 2017
Date: Saturday, March 04, 2017 4:16:39 AM

March 3, 2017

Greetings,

For years, Obamacare has failed millions of hardworking Texas families. It is a proven disaster. This week, I outlined a path forward for repealing and replacing Obamacare. We have tremendous opportunities before us to repeal this disastrous law, and replace it with free-market, patient centered reforms, which will expand access to health care for every American. I look forward to working with my colleagues in both the House and the Senate to honor our promise to the American people.

This week, we celebrated our great state's Independence Day. I had the honor of reading Lieutenant Colonel William Barret Travis' 1836 letter from the Alamo on the Senate floor, commemorating those who with their bravery, courage and sacrifice, helped secure the free Republic of Texas.

Please read below for an update from this last week.

Keep Texas Strong,

Ted Cruz

Sen. Cruz Op-Ed in Politico: 'The Right Way to Repeal Obamacare'

Sen. Cruz penned an op-ed for Politico, outlining a plan for repealing and replacing Obamacare. Among Sen. Cruz's prescriptions for healthcare reform, he calls for the repeal of Obamacare's insurance regulations and makes clear that the vice president or Senate majority has the statutory and constitutional authority to ensure the regulations are repealed, regardless of the advice of the Senate parliamentarian.

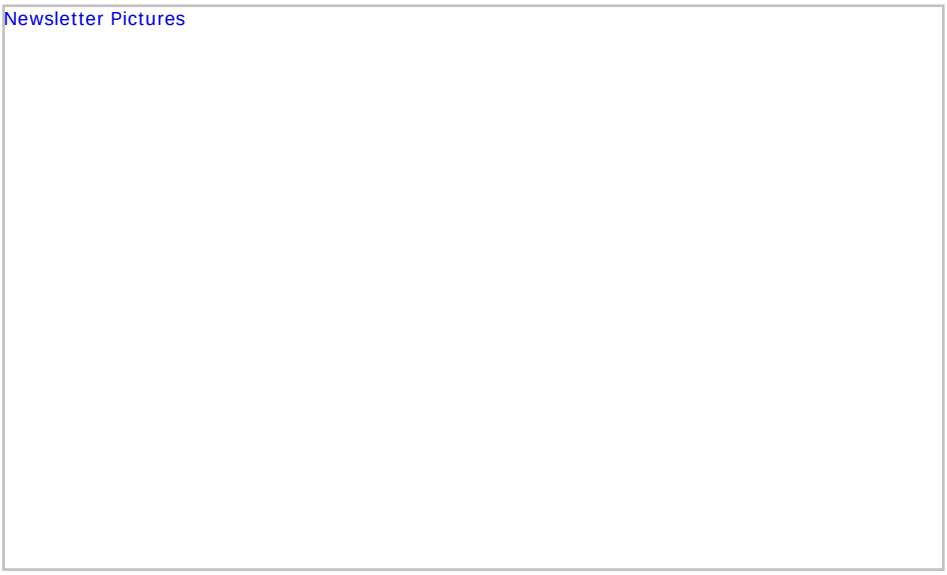
Sen. Cruz: The President's Speech Laid Out a Vision Americans Have Been Hungry For – Bringing Back Jobs and Economic Growth



Sen. Cruz appeared on Fox News with Bret Baier and Martha MacCallum and MSNBC's Morning Joe to discuss President Trump's remarks to the joint session of Congress.

"I thought it was a bold, positive speech. It laid out a vision for America that I think millions of Americans have been hungry for. Bringing back jobs and economic growth - that is what I hear from Texans all across our great state and across the country." Sen. Cruz said. "There's no doubt we have to be serious about the national debt. The most potent tool for dealing with the national debt and deficit is not cost cutting - it's economic growth. That is why my number one priority in the Senate is and always has been jobs and economic growth. That is why I'm so encouraged by President Trump's speech tonight. He focused on regulatory reform, building the Keystone Pipeline, on tax reform, Obamacare repeal which will produce enormous economic growth, and millions of new jobs. That's how we pay down our debt and that's how we solve our fiscal crisis."

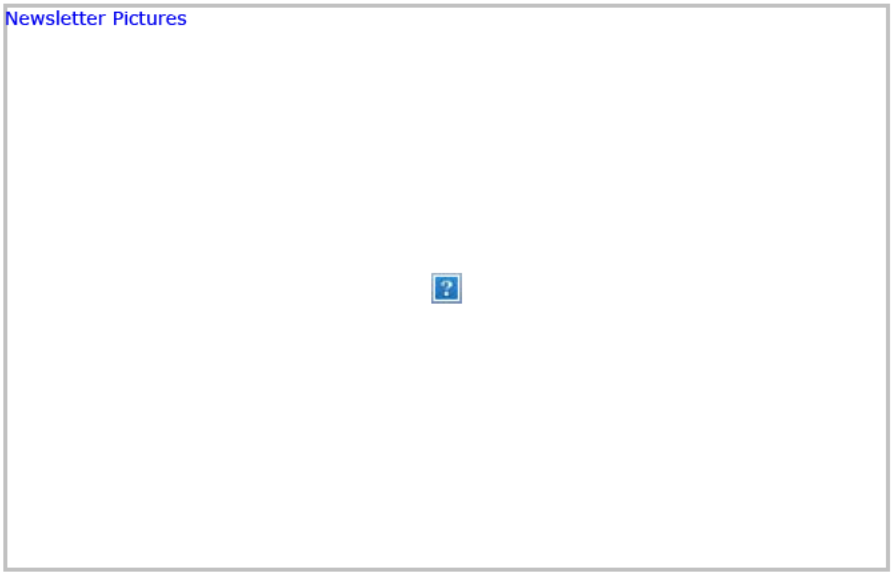
Sen. Cruz Visits With Texas Military Leaders and Job Creators

Last Friday, Sen. Cruz made stops in Fort Worth and Dallas to visit with Texas military leaders and job creators.

At the first stop, Sen. Cruz received a briefing and base update from the leadership of Naval Air Station Joint Reserve Base (NAS JRB) Fort Worth, which was recently selected by the U.S. Air Force to receive the first Air Force Reserve F-35 Joint Strike Fighters.

“I was delighted to have the opportunity to visit the new home of the first Reserve F-35’s and meet the extraordinary leaders here at NAS JRB Fort Worth,” said Sen. Cruz. “The men and women of NAS JRB are true professionals, and today I witnessed firsthand the tremendous value that this base and the local community offer to our nation’s defense.”



Later in the day, Sen. Cruz attended a roundtable conversation in Dallas with the Best Southwest Partnership, a group of Southwest Dallas County business owners and executives. At the roundtable, Sen. Cruz discussed opportunities to expand economic growth and job creation in Dallas County with tax reform and regulatory reform that reduces the federal burden on job creators.

Cruz continued: “The business leaders and executives from the Best Southwest Partnership are working hard to expand economic opportunities in their communities, and I intend to keep working to ensure the federal government gets out of their way. I am

greatly encouraged by the work the new administration has undertaken, along with Congress, to roll back harmful regulations that will allow us to ignite economic growth. There is even more we can do with tax reform that will finally get government off the backs of job creators and working people in Texas. I was grateful for the valuable time these business leaders shared with me today and I will continue to fight for opportunities for upward mobility for hardworking Texans."

Sen. Cruz Addresses Texas State Rifle Association Annual Meeting

On Saturday, Sen. Cruz delivered remarks at the Texas State Rifle Association (TSRA) Annual Meeting. He discussed his efforts to ensure the protection of the Second Amendment, and other federal and state legislative issues important to the members of the TSRA.

"The Second Amendment, it's not about hunting, it's not about target shooting – it is about protecting your home and your family and your life. The rights secured under the Second Amendment make us more safe, secure and free." Sen. Cruz said. "When citizens cease to have the right to defend ourselves, we cease to be free. Under the previous administration, we saw an unprecedented attack on our constitutional rights. I am optimistic about the direction of the new Administration and will continue to fight for the Second Amendment rights of every American and every Texan."

Sen. Cruz: New WOTUS Rule Reflects Reality That We Can Have Both Clean Water and Economic Growth

Sen. Cruz issued the following statement regarding President Trump's executive order on the Waters of the United States (WOTUS) rule:

"Today's executive order on the Waters of the United States rule reflects what many Americans already believe: that we can have both clean water and regulations that don't stifle economic growth and job creation. The new staff at the EPA will have the opportunity to ensure that the phrase 'navigable waters' maintains its actual, common-

sense meaning, and not include puddles and drainage ditches like the regulation-happy bureaucrats at the Obama EPA tried to impose on hard-working farmers and ranchers. I am encouraged by the President's action to further roll back the administrative state that exploded over the past eight years – action that puts us another step closer to stopping the federal government from controlling what families, farmers, and ranchers in Texas and across the country can and cannot do with their private property."

Sen. Cruz and Rep. McCaul Op-Ed in USA Today: Hold Iran Accountable for Terrorism

Sen. Cruz and Rep. Michael McCaul penned an op-ed for USA Today advocating that the United States stand up to Iran and hold America's enemy accountable for acts of terrorism.

"When news from Iran flashes across television screens in the United States, Americans have grown accustomed to seeing belligerence, including ballistic missile tests, harassment of U.S. forces, the kidnapping of our sailors and the unlawful imprisonment of U.S. citizens," Sen. Cruz and Rep. McCaul wrote. "These are not the actions of a rational or friendly regime. They are the actions of autocratic thugs. The Obama administration appeased Iran for eight years. Now the Trump Administration is ensuring America finally — and rightfully — stands up against Iranian hostility. We believe they should also start pushing back against the regime's disturbing and unabashed support for our terrorist enemies."

Sen. Cruz Joins Colleagues to Reintroduce Bill to Halt Palestinian Authority Funding Until Terror Rewards Stop

Sen. Cruz joined Sens. Lindsey Graham (R-S.C.), Roy Blunt (R-Mo.), and Tom Cotton (R-Ark.), along with U.S. Reps. Doug Lamborn (R-Colo.) and Lee Zeldin (R-N.Y.) to reintroduce The Taylor Force Act, which would cut off funding to the Palestinian Authority if it continues its policy of paying monetary rewards to terrorists and their surviving family members.

Taylor Force was a former U.S. Army officer who was part of a Vanderbilt University tour group visiting Israel when he was brutally stabbed and killed by a Palestinian terrorist. Palestinian Authority Mahmoud Abbas' Fatah faction praised the terrorist as a "heroic martyr" and the Palestinian Authority has yet to condemn the terrorist attack.

"This bill delivers a message that should be heard loud and clear: The United States must not fund a Palestinian leadership that engages in incitement and supports acts of terrorism against both American and Israeli citizens," said Sen. Cruz. "I'm proud to work with Sen. Graham and my colleagues on this legislation, named in honor of Taylor Force, a Texas native and Iraq and Afghanistan war veteran who served multiple tours in defense of our country before being murdered by a Palestinian terrorist in Tel Aviv last year. The US must hold the Palestinian leadership accountable for continuing this heinous practice of incentivizing and rewarding terrorism by providing monthly salaries and benefits to terrorists, their families, and the families of those who died committing acts of terrorism. We must ensure US taxpayer dollars are not being used to fund and enable Palestinian terrorism and stand with Israel against radical Islamic terrorism that targets citizens from both of our countries."

Subject: This Week in ENR
Date: Sunday, March 05, 2017 9:30:24 AM

Good morning, Fain,

It was a busy week on Capitol Hill for Ranking Member Maria Cantwell, with the Senate confirming two cabinet-level, ENR-related nominees—Congressman Ryan Zinke to be Interior Secretary and former Gov. Rick Perry to be Energy Secretary. Check out what you missed and what's to come below.

As always, don't hesitate to reach out with questions.

CATCHING UP

Zinke

- Sen. Cantwell opposed now-Secretary Zinke because of her uncertainty that he "will be able to moderate the Trump administration's extreme views on exploiting our public lands."
- *The Washington Post's* Darryl Fears reported on Sen. Cantwell's concerns: "**We need someone who's going to stand up and say the outdoor economy is worth it**."
- Secretary Zinke was confirmed by a vote of 68 to 31.

Perry

- Sen. Cantwell opposed now-Secretary Perry for his unwillingness to commit to funding critical programs at the Department of Energy, including the Office of Electricity and the Office of Energy Efficiency and Renewable Energy.
- *The Tri-City Herald's* Annette Cary reported on Sen. Cantwell's rationale for her vote: "**We need an energy secretary for the 21st century** — one that will help us by fighting for an (efficient) electricity grid and cybersecurity that will make our entire internet economy safer and more reliable," said Sen. Maria Cantwell, D-Wash. "**We need one who will invest in an energy efficiency strategy that will save our businesses money, that will help make them competitive**."
- *The Associated Press's* Nicholas Geranios highlighted that Sen. Cantwell hopes to work with Secretary Perry on cleaning up the nuclear weapons production complex: "**I take the governor at his word that he will come to Hanford and that he will look for funding to make sure that cleanup**

happens."

- Secretary Perry was confirmed by a vote of 62 to 37.

COMING UP

Senate schedule relatively unknown. At least two ENR-related Congressional Review Act (CRA) resolutions are still floating out there—the BLM Methane Waste Rule and the BLM Planning 2.0 Rule (which could come up as early as Tuesday). The only known action for next week's Senate floor schedule is Monday's debate and vote on a non-ENR CRA—H.J. Res. 37. We'll keep you posted on any ENR-related floor action as it's scheduled.

Thanks for your interest in Sen. Cantwell's work. Don't hesitate to reach out with any questions or comments.

Best,

At least two ENR-related Congressional Review Act (CRA) resolutions are still floating out there—the BLM Methane Waste Rule and the BLM Planning 2.0 Rule (which could come up as early as Tuesday). The only known action for next week's Senate floor schedule is Monday's debate and vote on a non-ENR CRA—H.J. Res. 37. We'll keep you posted on any ENR-related floor action as it's scheduled.

Thanks for your interest in Sen. Cantwell's work. Don't hesitate to reach out with any questions or comments.

Best,

BLM Venting Flaring Rule Myth vs Fact.pdf

Micah,

Below is a generic text body I've been using to craft messages to the Hill on this CRA. It links to all of the data and studies I've mention in the body. I've also attached the charts we put together along with a "Myth vs. Fact" document.

We don't have a meeting scheduled with Portman for our fly-in as the schedules did not work out and Portman's LD is out of the office tomorrow. What I will do is see that IPAA schedules a meeting with Portman's office following the fly-in, perhaps early next week.

Thanks Micah.
Ryan

Additionally, we did a point by point rebuttal to the justification of the v/f rule https://energyindepth.org/mtn-states/debunking-obama-administrations-justification-midnight-methane-rules-on-fracking-on-federal-lands/ with citations. This hits on all the points from cost/benefit to emissions and addresses each of them. Again, with citations.

This link is to our Energy In Depth brief breakdown on the methane rule and what it would mean to small producers. It's not nearly as technical as the attached analysis.
https://energyindepth.org/national/obama-administration-sides-with-activists-on-methane-rule-moves-to-put-small-producers-out-of-business/

The short of it is that my guys, particularly in ND, have been playing catch up for years to build the infrastructure (gathering lines) to capture nat gas at the well site and then move that product to larger pipes for transportation to market. In terms of emissions reductions, we have made significant progress on this front. To that end I've included some data below for your review.

1. Data from EIA shows a dramatic decrease in the use of flaring in ND over the past 2 years while natural gas production went to a record level in March of 2016. From EIA
    a. "The volume of North Dakota's natural gas production that is flared has fallen sharply in both absolute and percentage terms since 2014. In March 2016, 10% of North Dakota's total natural gas production was flared, less than one-third of the January 2014 flaring rate, which was at 36%. Flaring rates and volumes have significantly decreased as North Dakota's total natural gas production has continued to grow, setting a monthly total natural gas production record of 1.71 billion cubic feet per day in March 2016. The North Dakota Industrial Commission established targets in September 2015 to reduce natural gas flaring."
2. Studies continue to find very low emissions – well below the threshold (2.7 percent) which scientists say must be maintained for natural gas to have climate advantages. Most studies have found leakage rates ranging from 1.2% to 1.6%, well below the threshold mentioned

above.

3. With respect to emissions reductions, a recent NOAA study found that microbial sources such as rice paddies and wetlands are the cause of global methane emissions increases. And while that study found that methane emissions from fossil fuels have been underestimated, global increases in methane since 2007 are "not responsible for the increase in total methane emissions observed since 2007" according to leader author Stefan Schwietzke of NOAA.
4. Another study by researchers at the University of London corroborated this point stating that the global increase had been largely driven by tropical wetlands and agriculture.
5. Another NOAA study, in conjunction with the National Institute of Water and Atmospheric Research in New Zealand, identified wetlands and ag as the driver for increased global emissions. *Climatewire* reported, "Greenhouse gas inventories from U.S. EPA show that emissions from fossil fuel extraction have increased in recent years. But this has apparently not registered on the global scale. This is possibly because the U.S. energy industry contributes little to the overall burden of global fossil fuel emissions, Schaever said."

Do you have a request to Portman's office though? Cause I can mention that and kindly remind them to make a meeting happen.

>
> 1. Data from EIA shows a dramatic decrease in the use of flaring in ND over the past 2 years while natural gas production went to a record level in March of 2016. From EIA

a. "The volume of North Dakota's natural gas production that is flared has fallen sharply in both absolute and percentage terms since 2014. In March 2016, 10% of North Dakota's total natural gas production was flared, less than one-third of the January 2014 flaring rate, which was at 36%. Flaring rates and volumes have significantly decreased as North Dakota's total natural gas production has continued to grow, setting a monthly total natural gas production record of 1.71 billion cubic feet per day in March 2016. The North Dakota Industrial Commission established targets in September 2015 to reduce natural gas flaring."

2. Studies continue to find very low emissions – well below the threshold (2.7 percent) which scientists say must be maintained for natural gas to have climate advantages. Most studies have found leakage rates ranging from 1.2% to 1.6%, well below the threshold mentioned above.

3. With respect to emissions reductions, a recent NOAA study found that microbial sources such as rice paddies and wetlands are the cause of global methane emissions increases. And while that study found that methane emissions from fossil fuels have been underestimated, global increases in methane since 2007 are "not responsible for the increase in total methane emissions observed since 2007" according to leader author Stefan Schwietzke of NOAA.

4. Another study by researchers at the University of London corroborated this point stating that the global increase had been largely driven by tropical wetlands and agriculture.

5. Another NOAA study, in conjunction with the National Institute of Water and Atmospheric Research in New Zealand, identified wetlands and ag as the driver for increased global emissions. *Climatewire* reported, "Greenhouse gas inventories from U.S. EPA show that emissions from fossil fuel extraction have increased in recent years. But this has apparently not registered on the global scale. This is possibly because the U.S. energy industry contributes little to the overall burden of global fossil fuel emissions, Schaever said."

Secretary Zinke Announces Proposed 73-Million Acre Oil and Natural Gas Lease Sale for Gulf of Mexico

All available areas in federal waters will be offered in first region-wide sale under new Five Year Program

WASHINGTON -- U.S. Secretary of the Interior Ryan Zinke today announced that the Department will offer 73 million acres offshore Texas, Louisiana, Mississippi, Alabama and Florida for oil and gas exploration and development. The proposed region-wide lease sale scheduled for August 16, 2017 would include all available unleased areas in federal waters of the Gulf of Mexico.

"Opening more federal lands and waters to oil and gas drilling is a pillar of President Trump's plan to make the United States energy independent," Secretary Zinke said. "The Gulf is a vital part of that strategy to spur economic opportunities for industry, states and local communities, to create jobs and home-grown energy and to reduce our dependence on foreign oil."

Proposed Lease Sale 249, scheduled to be livestreamed from New Orleans, will be the first offshore sale under the new Outer Continental Shelf Oil and Gas Leasing Program for 2017-2022 (Five Year Program). Under this new program, ten region-wide lease sales are scheduled for the Gulf, where the resource potential and industry interest are high, and oil and gas infrastructure is well established. Two Gulf lease sales will be held each year and include

all available blocks in the combined Western, Central, and Eastern Gulf of Mexico Planning Areas.

The estimated amount of resources projected to be developed as a result of the proposed region-wide lease sale ranges from 0.211 to 1.118 billion barrels of oil and from 0.547 to 4.424 trillion cubic feet of gas. The sale could potentially result in 1.2 to 4.2 percent of the forecasted cumulative OCS oil and gas activity in the Gulf of Mexico. Most of the activity (up to 83% of future production) of the proposed lease sale is expected to occur in the Central Planning Area.

Lease Sale 249 will include about 13,725 unleased blocks, located from three to 230 miles offshore, in the Gulf's Western, Central and Eastern planning areas in water depths ranging from nine to more than 11,115 feet (three to 3,400 meters). Excluded from the lease sale are blocks subject to the Congressional moratorium established by the Gulf of Mexico Energy Security Act of 2006; blocks that are adjacent to or beyond the U.S. Exclusive Economic Zone in the area known as the northern portion of the Eastern Gap; and whole blocks and partial blocks within the current boundary of the Flower Garden Banks National Marine Sanctuary.

"To promote responsible domestic energy production, the proposed terms of this sale have been carefully developed through extensive environmental analysis, public comment and consideration of the best scientific information available," said Walter Cruickshank, the acting director of Interior's Bureau of Ocean Energy Management (BOEM). "This will ensure both orderly resource development and protection of the environment."

The lease sale terms include stipulations to protect biologically sensitive resources, mitigate potential adverse effects on protected species and avoid potential conflicts associated with oil and gas development in the region. BOEM's proposed economic terms include a range of incentives to encourage diligent development and ensure a fair return to taxpayers. The terms and conditions for Sale 249 in the Proposed Notice of Sale are not final. Different terms and conditions may be employed in the Final Notice of Sale, which will be published at least 30 days before the sale.

BOEM estimates that the U.S. Outer Continental Shelf (OCS) contains about 90 billion barrels of undiscovered technically recoverable oil and 327 trillion cubic feet of undiscovered technically recoverable gas. The Gulf of Mexico OCS, covering about 160 million acres, has technically recoverable resources of 48.46 billion barrels of oil and 141.76 trillion cubic feet of gas.

Production from all OCS leases provided 550 million barrels of oil and 1.25 trillion cubic feet of natural gas in FY2016, accounting for 72 percent of the oil and 27 percent of the natural gas produced on federal lands. Energy production and development of new projects on the U.S. OCS supported an estimated 492,000 direct, indirect, and induced jobs in FY2015 and generated $5.1 billion in total revenue that was distributed to the Federal Treasury, state governments, Land and Water Conservation Fund, and Historic Preservation Fund.

As of March 1, 2017, about 16.9 million acres on the U.S. OCS are under lease for oil and gas development (3,194 active leases) and 4.6 million of those acres (929 leases) are producing oil and natural gas. More than 97 percent of these leases are in the Gulf of Mexico; about 3 percent are on the OCS off California and Alaska.

The current Five Year Program [2012-2017] has one final Gulf lease sale scheduled on March 22, 2017 for Central Planning Area Sale 247. The 2012-2017 Five Year Program has offered about 73 million acres, netted more than $3 billion in high bids for American taxpayers and awarded more than 2,000 leases.)

All terms and conditions for Gulf of Mexico Region-wide Sale 249 are detailed in the Proposed Notice of Sale (PNOS) information package, which is available at: http://www.boem.gov/Sale-249/. Copies of the PNOS maps can be requested from the Gulf of Mexico Region's Public Information Unit at 1201 Elmwood Park Boulevard, New Orleans, LA 70123, or at 800-200-GULF (4853).

The Notice of Availability of the PNOS will be available today for inspection in the Federal Register at: http://www.archives.gov/federal-register/public-inspection/index.html and will be published in the March 7, 2017 *Federal Register*.

Secretary Zinke Announces Proposed 73-Million Acre Oil and Natural Gas Lease Sale for Gulf of Mexico

All available areas in federal waters will be offered in first region-wide sale under new Five Year Program

WASHINGTON -- U.S. Secretary of the Interior Ryan Zinke today announced that the Department will offer 73 million acres offshore Texas, Louisiana, Mississippi, Alabama and Florida for oil and gas exploration and development. The proposed region-wide lease sale scheduled for August 16, 2017 would include all available unleased areas in federal waters of the Gulf of Mexico.

"Opening more federal lands and waters to oil and gas drilling is a pillar of President Trump's plan to make the United States energy independent," Secretary Zinke said. "The Gulf is a vital part of that strategy to spur economic opportunities for industry, states and local communities, to create jobs and home-grown energy and to reduce our dependence on foreign oil."

Proposed Lease Sale 249, scheduled to be livestreamed from New Orleans, will be the first offshore sale under the new Outer Continental Shelf Oil and Gas Leasing Program for 2017-2022 (Five Year Program). Under this new program, ten region-wide lease sales are scheduled for the Gulf, where the resource potential and industry interest are high, and oil and gas infrastructure is well established. Two Gulf lease sales will be held each year and include all available blocks in the combined Western, Central, and Eastern Gulf of Mexico Planning Areas.

The estimated amount of resources projected to be developed as a result of the proposed

region-wide lease sale ranges from 0.211 to 1.118 billion barrels of oil and from 0.547 to 4.424 trillion cubic feet of gas. The sale could potentially result in 1.2 to 4.2 percent of the forecasted cumulative OCS oil and gas activity in the Gulf of Mexico. Most of the activity (up to 83% of future production) of the proposed lease sale is expected to occur in the Central Planning Area.

Lease Sale 249 will include about 13,725 unleased blocks, located from three to 230 miles offshore, in the Gulf's Western, Central and Eastern planning areas in water depths ranging from nine to more than 11,115 feet (three to 3,400 meters). Excluded from the lease sale are blocks subject to the Congressional moratorium established by the Gulf of Mexico Energy Security Act of 2006; blocks that are adjacent to or beyond the U.S. Exclusive Economic Zone in the area known as the northern portion of the Eastern Gap; and whole blocks and partial blocks within the current boundary of the Flower Garden Banks National Marine Sanctuary.

"To promote responsible domestic energy production, the proposed terms of this sale have been carefully developed through extensive environmental analysis, public comment and consideration of the best scientific information available," said Walter Cruickshank, the acting director of Interior's Bureau of Ocean Energy Management (BOEM). "This will ensure both orderly resource development and protection of the environment."

The lease sale terms include stipulations to protect biologically sensitive resources, mitigate potential adverse effects on protected species and avoid potential conflicts associated with oil and gas development in the region. BOEM's proposed economic terms include a range of incentives to encourage diligent development and ensure a fair return to taxpayers. The terms and conditions for Sale 249 in the Proposed Notice of Sale are not final. Different terms and conditions may be employed in the Final Notice of Sale, which will be published at least 30 days before the sale.

BOEM estimates that the U.S. Outer Continental Shelf (OCS) contains about 90 billion barrels of undiscovered technically recoverable oil and 327 trillion cubic feet of undiscovered technically recoverable gas. The Gulf of Mexico OCS, covering about 160 million acres, has technically recoverable resources of 48.46 billion barrels of oil and 141.76 trillion cubic feet of gas.

Production from all OCS leases provided 550 million barrels of oil and 1.25 trillion cubic feet of natural gas in FY2016, accounting for 72 percent of the oil and 27 percent of the natural gas produced on federal lands. Energy production and development of new projects on the U.S. OCS supported an estimated 492,000 direct, indirect, and induced jobs in FY2015 and generated $5.1 billion in total revenue that was distributed to the Federal Treasury, state governments, Land and Water Conservation Fund, and Historic Preservation Fund.

As of March 1, 2017, about 16.9 million acres on the U.S. OCS are under lease for oil and gas development (3,194 active leases) and 4.6 million of those acres (929 leases) are producing oil and natural gas. More than 97 percent of these leases are in the Gulf of Mexico; about 3 percent are on the OCS off California and Alaska.

The current Five Year Program [2012-2017] has one final Gulf lease sale scheduled on March 22, 2017 for Central Planning Area Sale 247. The 2012-2017 Five Year Program has offered about 73 million acres, netted more than $3 billion in high bids for American taxpayers and awarded more than 2,000 leases.)

All terms and conditions for Gulf of Mexico Region-wide Sale 249 are detailed in the Proposed Notice of Sale (PNOS) information package, which is available at: http://www.boem.gov/Sale-249/. Copies of the PNOS maps can be requested from the Gulf of Mexico Region's Public Information Unit at 1201 Elmwood Park Boulevard, New Orleans, LA 70123, or at 800-200-GULF (4853).

The Notice of Availability of the PNOS will be available today for inspection in the Federal Register at: http://www.archives.gov/federal-register/public-inspection/index.html and will be published in the March 7, 2017 *Federal Register*.

Amanda and Micah,
We will be sending this out to the committee staff. I wanted you to take a look first. I also need help with the endorsements from his confirmation if you have them. If not, I will take them out.

Thanks…

This is for a quick turnaround.

T. Michael Andrews
United States Senate Committee on Indian Affairs
Majority Staff Director and Chief Counsel
Senator John Hoeven, Chairman
(202)224-1191

MEMORANDUM

TO **CHAIRMAN HOEVEN VICE CHAIRMAN UDALL AND MEMBERS OF THE COMMITTEE ON INDIAN AFFAIRS**

FROM **T. MICHAEL ANDREWS MA ORITY STAFF DIRECTOR AND CHIEF COUNSEL**

DATE **MONDAY MARCH 6 01**

RE **OVERSIGHT HEARING ON IDENTIFYING INDIAN AFFAIRS PRIORITIES FOR THE TRUMP ADMINISTRATION**

On **Wednesda March 01 at 30 p.m.** in Room 628 of the Senate Dirksen Office Building, the Committee will hold an oversight hearing on, Identifying Indian Affairs Priorities for the Trump Administration.

This hearing will be the first Congressional hearing for Secretary Zinke. The purpose of the hearing is to focus on priorities related only to Indian affairs for the new Administration.

Witnesses

The following witnesses have been invited to testify:

- **HONORABLE RYAN ZIN E**, Secretary, United States Department of the Interior, Washington, DC
- **HONORABLE ALVIN NOT AFRAID R.**, Chairman, Crow Nation, Crow Agency, MT
- **HONORABLE EFFERSON EEL**, Lt. Governor, Chickasaw Nation, Ada, OK
- **HONORABLE EITH ANDERSON**, Vice Chairman, Shakopee Mdewakanton Sioux Community, Prior Lake, MN
- **HONORABLE PAUL TORRES**, Chairman, All Pueblo Council of Governors, Albuquerque, NM

- **HONORABLE □AMI AZURE**, Councilman, Turtle Mountain Band of Chippewa Indians, Belcourt, ND

Biograph□ of Secretar□ R□an Zin□e

Secretary Ryan Zinke was nominated by President Donald Trump and confirmed by the Senate on March 1, 2017, by a vote of 68-31. Mr. Zinke is a fifth generation Montanan, former Congressman in the United States House of Representatives, and a former state senator. He also served the United States for 23 years in the Navy in which time he was a Navy SEAL veteran. He is an adopted member of the Fort Peck Assiniboine and Sioux Tribes.

Committee on Energ□ and Natural Resources Confirmation Hearing

On January 17, 2017, then-Congressman Zinke testified before the Senate Committee on Energy and Natural Resources. During his confirmation hearing, he indicated the need to work with and involve Indian tribes as he carried out his responsibilities as Secretary.

On January 31, 2017, the Committee on Energy and Natural Resources held a business meeting to consider the nomination of Ryan Zinke to be Secretary of the Interior. The Committee favorably reported his nomination by a vote of 16-6.

Department of the Interior

As Secretary of the Interior, Secretary Zinke will oversee the Department of the Interior. The Department was created in 1849 and is responsible for managing the nation□s natural resources.

While the entire federal government has a special government-to-government relationship and trust responsibility for Indian tribes, the Secretary of the Interior (Secretary) carries out the primary authorities for those responsibilities. That authority includes managing approximately 500 million acres of federal lands, including over 52 million acres belonging to Indian tribes.

That authority is administered principally through the following agencies:

- Bureau of Indian Affairs (BIA),
- National Indian Gaming Commission, and
- Office of the Special Trustee for American Indians.

The positions overseeing these agencies are nominated by the President and confirmed by the Senate (as recommended by the Committee). The Assistant Secretary for Indian Affairs manages both the BIA and the BIE. These nominations go through the Senate Committee on Indian Affairs.

The position of Under Secretary for Indian Affairs was authorized by the *Indian Trust Asset Reform Act* in 2016. This Under Secretary would report directly to the Secretary of the Interior. To the maximum extent practicable, the Under Secretary would, among other things, supervise and coordinate activities and policies of the BIA with activities and policies of the Bureau of Reclamation, Bureau of Land Management, Office of Natural Resources Revenue, National Park Service, and United States Fish and Wildlife Service.

Additionally, the Secretary oversees the following agencies, several of which also carry out responsibilities or activities which affect Indian tribes and their lands:

- National Park Service,
- U.S. Fish and Wildlife Service, the Bureau of Land Management,
- Bureau of Ocean Energy Management,
- Bureau of Safety and Environmental Enforcement,
- Office of Surface Mining, Reclamation and Enforcement,
- Bureau of Reclamation,
- U.S. Geological Survey, and
- Office of Insular Affairs.

The Department of the Interior receives approximately $13.3 billion in appropriations. The Bureau of Indian Affairs receives approximately $2.79 billion in appropriations. The Bureau of Indian Education (BIE) receives approximately $829.6 million, plus an additional $49.3 million for BIE Transformation.

Zin□e□s Legislative Histor□

In 2014, Mr. Zinke became the first Navy SEAL elected to the House. He served on the House Armed Services Committee and the House Natural Resources Committee. As a Member of Congress, he introduced 19 bills, 3 resolutions, and 4 amendments in the 114th Congress.

- The first bill Indian-related bill introduced by then-Congressman Zinke introduced in the 114th Congress was H.R. 286, the *Little Shell Tribe of Chippewa Indians Restoration Act of 2015*. This bill would have extended federal recognition to the Little Shell Tribe of Chippewa Indians of Montana. The House Committee on Natural Resources subcommittee on Indian, Insular and Alaska Native Affairs held a legislative hearing on the bill. The bill was then incorporated into H.R. 3764, the *Tribal Recognition Act of 2016*. On September 8, 2016, the House Committee on Natural Resources met to consider the bill. The bill, as amended, was agreed to by a vote of 23-13. No further action was taken on H.R. 3764.

- A second Indian-related bill introduced by then-Congressman Zinke was H.R. 1522, a bill to permanently extend the Indian Coal Production Tax Credit. This bill would have continued an expired tax credit that was designed to incentivize investment of coal production on Indian lands. The bill was referred to House Committee on Ways and Means, but no further action was taken.

- On May 7, 2016, then-Congressman Zinke introduced H.R. 5259, the *Certainty for States and Tribes Act*. This bill would have ensured that states and Indian tribes have a certain considerations when any changes to federal coal, oil, and gas royalties or leasing policies. The subcommittee on Energy and Mineral Resources held a hearing on the bill. On September 8, 2016, the House Committee on Natural Resources met to consider the measure. The bill, as amended, was agreed to by a vote of 22-13. No further action was taken on the bill.

- On July 7, 2016, then-Congressman Zinke introduced H.R. 5633, the *Blackfeet Water Rights Settlement Act*. This bill authorizes, ratifies, and confirms the Blackfeet-Montana water rights compact. Similar legislation was introduced by Senators Tester and Daines. The *Blackfeet Water Righst Settlement Act* was incorporated into S. 612, the Water Infrastructure Improvements for the Nation Act. It was signed into law on December 16, 2016.

- On July 5, 2016, then-Congressman Zinke introduced H.Res. 553, a resolution "Expressing support for designation of May 5, 2017, as "National Day of Awareness for Missing and Murdered Native Woman and Girls."

MEMORANDUM

TO **CHAIRMAN HOEVEN VICE CHAIRMAN UDALL AND MEMBERS OF THE COMMITTEE ON INDIAN AFFAIRS**

FROM **T. MICHAEL ANDREWS MA ORITY STAFF DIRECTOR AND CHIEF COUNSEL**

DATE **MONDAY MARCH 6 01**

RE **OVERSIGHT HEARING ON IDENTIFYING INDIAN AFFAIRS PRIORITIES FOR THE TRUMP ADMINISTRATION**

On **Wednesda March 01 at 30 p.m.** in Room 628 of the Senate Dirksen Office Building, the Committee will hold an oversight hearing on, Identifying Indian Affairs Priorities for the Trump Administration.

This hearing will be the first Congressional hearing for Secretary Zinke. The purpose of the hearing is to focus on priorities related only to Indian affairs for the new Administration.

Witnesses

The following witnesses have been invited to testify:

- **HONORABLE RYAN ZIN E**, Secretary, United States Department of the Interior, Washington, DC
- **HONORABLE ALVIN NOT AFRAID R.**, Chairman, Crow Nation, Crow Agency, MT
- **HONORABLE EFFERSON EEL**, Lt. Governor, Chickasaw Nation, Ada, OK
- **HONORABLE EITH ANDERSON**, Vice Chairman, Shakopee Mdewakanton Sioux Community, Prior Lake, MN
- **HONORABLE PAUL TORRES**, Chairman, All Pueblo Council of Governors, Albuquerque, NM

- **HONORABLE □AMI AZURE**, Councilman, Turtle Mountain Band of Chippewa Indians, Belcourt, ND

Biograph□ of Secretar□ R□an Zin□e

Secretary Ryan Zinke was nominated by President Donald Trump and confirmed by the Senate on March 1, 2017, by a vote of 68-31. Mr. Zinke is a fifth generation Montanan, former Congressman in the United States House of Representatives, and a former state senator. He also served the United States for 23 years in the Navy in which time he was a Navy SEAL veteran. He is an adopted member of the Fort Peck Assiniboine and Sioux Tribes.

Committee on Energ□ and Natural Resources Confirmation Hearing

On January 17, 2017, then-Congressman Zinke testified before the Senate Committee on Energy and Natural Resources. During his confirmation hearing, he indicated the need to work with and involve Indian tribes as he carried out his responsibilities as Secretary.

On January 31, 2017, the Committee on Energy and Natural Resources held a business meeting to consider the nomination of Ryan Zinke to be Secretary of the Interior. The Committee favorably reported his nomination by a vote of 16-6.

Department of the Interior

As Secretary of the Interior, Secretary Zinke will oversee the Department of the Interior. The Department was created in 1849 and is responsible for managing the nation□s natural resources.

While the entire federal government has a special government-to-government relationship and trust responsibility for Indian tribes, the Secretary of the Interior (Secretary) carries out the primary authorities for those responsibilities. That authority includes managing approximately 500 million acres of federal lands, including over 52 million acres belonging to Indian tribes.

That authority is administered principally through the following agencies:

- Bureau of Indian Affairs (BIA),
- National Indian Gaming Commission, and
- Office of the Special Trustee for American Indians.

The positions overseeing these agencies are nominated by the President and confirmed by the Senate (as recommended by the Committee). The Assistant Secretary for Indian Affairs manages both the BIA and the BIE. These nominations go through the Senate Committee on Indian Affairs.

The position of Under Secretary for Indian Affairs was authorized by the *Indian Trust Asset Reform Act* in 2016. This Under Secretary would report directly to the Secretary of the Interior. To the maximum extent practicable, the Under Secretary would, among other things, supervise and coordinate activities and policies of the BIA with activities and policies of the Bureau of Reclamation, Bureau of Land Management, Office of Natural Resources Revenue, National Park Service, and United States Fish and Wildlife Service.

Additionally, the Secretary oversees the following agencies, several of which also carry out responsibilities or activities which affect Indian tribes and their lands:

- National Park Service,
- U.S. Fish and Wildlife Service, the Bureau of Land Management,
- Bureau of Ocean Energy Management,
- Bureau of Safety and Environmental Enforcement,
- Office of Surface Mining, Reclamation and Enforcement,
- Bureau of Reclamation,
- U.S. Geological Survey, and
- Office of Insular Affairs.

The Department of the Interior receives approximately $13.3 billion in appropriations. The Bureau of Indian Affairs receives approximately $2.79 billion in appropriations. The Bureau of Indian Education (BIE) receives approximately $829.6 million, plus an additional $49.3 million for BIE Transformation.

Zin□e□s Legislative Histor□

In 2014, Mr. Zinke became the first Navy SEAL elected to the House. He served on the House Armed Services Committee and the House Natural Resources Committee. As a Member of Congress, he introduced 19 bills, 3 resolutions, and 4 amendments in the 114th Congress.

- The first bill Indian-related bill introduced by then-Congressman Zinke introduced in the 114th Congress was H.R. 286, the *Little Shell Tribe of Chippewa Indians Restoration Act of 2015*. This bill would have extended federal recognition to the Little Shell Tribe of Chippewa Indians of Montana. The House Committee on Natural Resources subcommittee on Indian, Insular and Alaska Native Affairs held a legislative hearing on the bill. The bill was then incorporated into H.R. 3764, the *Tribal Recognition Act of 2016*. On September 8, 2016, the House Committee on Natural Resources met to consider the bill. The bill, as amended, was agreed to by a vote of 23-13. No further action was taken on H.R. 3764.

- A second Indian-related bill introduced by then-Congressman Zinke was H.R. 1522, a bill to permanently extend the Indian Coal Production Tax Credit. This bill would have continued an expired tax credit that was designed to incentivize investment of coal production on Indian lands. The bill was referred to House Committee on Ways and Means, but no further action was taken.

- On May 7, 2016, then-Congressman Zinke introduced H.R. 5259, the *Certainty for States and Tribes Act*. This bill would have ensured that states and Indian tribes have a certain considerations when any changes to federal coal, oil, and gas royalties or leasing policies. The subcommittee on Energy and Mineral Resources held a hearing on the bill. On September 8, 2016, the House Committee on Natural Resources met to consider the measure. The bill, as amended, was agreed to by a vote of 22-13. No further action was taken on the bill.

- On July 7, 2016, then-Congressman Zinke introduced H.R. 5633, the *Blackfeet Water Rights Settlement Act*. This bill authorizes, ratifies, and confirms the Blackfeet-Montana water rights compact. Similar legislation was introduced by Senators Tester and Daines. The *Blackfeet Water Righst Settlement Act* was incorporated into S. 612, the Water Infrastructure Improvements for the Nation Act. It was signed into law on December 16, 2016.

- On July 5, 2016, then-Congressman Zinke introduced H.Res. 553, a resolution "Expressing support for designation of May 5, 2017, as "National Day of Awareness for Missing and Murdered Native Woman and Girls."

Endorsements

- National Congress of American Indians

This hits on all the points from cost/benefit to emissions and addresses each of them. Again, with citations.
> >
> > This link is to our Energy In Depth brief breakdown on the methane rule and

what it would mean to small producers. It's not nearly as technical as the attached analysis. https://energyindepth.org/national/obama-administration-sides-with-activists-on-methane-rule-moves-to-put-small-producers-out-of-business/

The short of it is that my guys, particularly in ND, have been playing catch up for years to build the infrastructure (gathering lines) to capture nat gas at the well site and then move that product to larger pipes for transportation to market. In terms of emissions reductions, we have made significant progress on this front. To that end I've included some data below for your review.

1. Data from EIA shows a dramatic decrease in the use of flaring in ND over the past 2 years while natural gas production went to a record level in March of 2016. From EIA

> a. "The volume of North Dakota's natural gas production that is flared has fallen sharply in both absolute and percentage terms since 2014. In March 2016, 10% of North Dakota's total natural gas production was flared, less than one-third of the January 2014 flaring rate, which was at 36%. Flaring rates and volumes have significantly decreased as North Dakota's total natural gas production has continued to grow, setting a monthly total natural gas production record of 1.71 billion cubic feet per day in March 2016. The North Dakota Industrial Commission established targets in September 2015 to reduce natural gas flaring."

2. Studies continue to find very low emissions – well below the threshold (2.7 percent) which scientists say must be maintained for natural gas to have climate advantages. Most studies have found leakage rates ranging from 1.2% to 1.6%, well below the threshold mentioned above.

3. With respect to emissions reductions, a recent NOAA study found that microbial sources such as rice paddies and wetlands are the cause of global methane emissions increases. And while that study found that methane emissions from fossil fuels have been underestimated, global increases in methane since 2007 are "not responsible for the increase in total methane emissions observed since 2007" according to leader author Stefan Schwietzke of NOAA.

4. Another study by researchers at the University of London corroborated this point stating that the global increase had been largely driven by tropical wetlands and agriculture.

5. Another NOAA study, in conjunction with the National Institute of Water and Atmospheric Research in New Zealand, identified wetlands and ag as the driver for increased global emissions. *Climatewire* reported, "Greenhouse gas inventories from U.S. EPA show that emissions from fossil fuel extraction have increased in recent years. But this has apparently not registered on the global scale. This is possibly because the U.S. energy industry contributes little to the

overall burden of global fossil fuel emissions, Schaever said."

Cantwell: Interior Department's Postponement of Coal Royalty Valuation Rule Is 'Unlawful'

Rule Would Have Ensured Taxpayers Get Fair Value for Resources Extracted from Public Lands

Download a PDF of Sen. Cantwell's letter to Secretary Zinke here. Share this news on Twitter.

Washington, D.C. – Today, Ranking Member of the Senate Energy and Natural Resources Committee Maria Cantwell (D-Wash.) asked Interior Secretary Ryan Zinke to lift the stay on a coal royalty valuation rule so that taxpayers can get fair value from coal mined on public lands.

"**Postponing the effective date of the new rule in this manner was plainly contrary to law**," Sen. Cantwell wrote. "**You[, Secretary Zinke,] testified at your confirmation hearing that you 'will follow the law.' This may be a good place to start. You should lift the stay and let the royalty valuation rule go back into effect**."

Last July, the U.S. Department of the Interior amended its regulations governing the valuation of oil and gas produced from federal onshore and offshore leases and coal produced from federal and Indian leases. One of the objectives of the rule is to ensure that mining "companies have paid every dollar due" to the American people.

The new valuation rule went into effect more than two months ago on January 1, 2017. On February 22, 2017, the director of the Interior Department's Office of Natural Resources Revenue "postponed the effectiveness" of the new rule, even though it had been effect for 53 days, citing section 705 of the Administrative

Procedure Act as authority.

Sen. Cantwell believes that section 705 does not give the department the authority claimed by the ONRR director; in fact, she believes his attempt to postpone the effectiveness of the rule is unlawful.

Section 705 "permits an agency to postpone the effective date of a not yet effective rule, pending judicial review." The department cannot "postpone" on February 22 the effectiveness of a rule that went into effect more than seven weeks before—on January 1.

Additionally, courts have made it clear that section 705 does not allow agencies to grant stays based on their own notions of what constitutes "justice;" the department may only grant stays under section 705 using a four-part test to determine whether to grant preliminary injunctions.

Sen. Cantwell argues that the administration has failed to show sufficient grounds for staying the effective date of the valuation rule under the four-part test. First, by acknowledging that "the 2017 Valuation Rule was properly promulgated," the department hasn't "made a strong showing" that they are "likely to prevail on the merits." Secondly, purely economic harm is not considered sufficiently grave to meet the threshold of "likely to suffer irreparable harm." Third, the department must consider whether postponing the effective date of the rule will "substantially harm other parties," but the department fails to address the $78 million in royalties that will be lost without the valuation rule in place. Lastly, Sen. Cantwell argues that the department did not explain how staying the rule is in the public interest.

"**In sum, the department's action in postponing the effective date of the new royalty valuation rule, which had already taken effect, exceeded the department's authority under section 705 of the Administrative Procedure Act and does not meet the standards the courts have long required to apply when they seek to use their authority under the section**," Sen. Cantwell writes.

Sen. Cantwell concludes the letter by urging Secretary Zinke to lift the stay and let the royalty valuation rule go back into effect.

Since becoming ranking member of the committee in 2015, Sen. Cantwell has pushed for reforms to the federal coal program, including a letter to then-Secretary Jewell detailing the senator's reform priorities. Visit here for more details of Sen. Cantwell's work on coal issues.

Secretary Zinke Announces Proposed 73-Million Acre Oil and Natural Gas Lease Sale for Gulf of Mexico

All available areas in federal waters will be offered in first region-wide sale under new Five Year Program

WASHINGTON -- U.S. Secretary of the Interior Ryan Zinke today announced that the Department will offer 73 million acres offshore Texas, Louisiana, Mississippi, Alabama and Florida for oil and gas exploration and development. The proposed region-wide lease sale scheduled for August 16, 2017 would include all available unleased areas in federal waters of the Gulf of Mexico.

“Opening more federal lands and waters to oil and gas drilling is a pillar of President Trump’s plan to make the United States energy independent,” Secretary

Zinke said. “The Gulf is a vital part of that strategy to spur economic opportunities for industry, states and local communities, to create jobs and home-grown energy and to reduce our dependence on foreign oil.”

Proposed Lease Sale 249, scheduled to be livestreamed from New Orleans, will be the first offshore sale under the new Outer Continental Shelf Oil and Gas Leasing Program for 2017-2022 (Five Year Program). Under this new program, ten region-wide lease sales are scheduled for the Gulf, where the resource potential and industry interest are high, and oil and gas infrastructure is well established. Two Gulf lease sales will be held each year and include all available blocks in the combined Western, Central, and Eastern Gulf of Mexico Planning Areas.

The estimated amount of resources projected to be developed as a result of the proposed region-wide lease sale ranges from 0.211 to 1.118 billion barrels of oil and from 0.547 to 4.424 trillion cubic feet of gas. The sale could potentially result in 1.2 to 4.2 percent of the forecasted cumulative OCS oil and gas activity in the Gulf of Mexico. Most of the activity (up to 83% of future production) of the proposed lease sale is expected to occur in the Central Planning Area.

Lease Sale 249 will include about 13,725 unleased blocks, located from three to 230 miles offshore, in the Gulf’s Western, Central and Eastern planning areas in water depths ranging from nine to more than 11,115 feet (three to 3,400 meters). Excluded from the lease sale are blocks subject to the Congressional moratorium established by the Gulf of Mexico Energy Security Act of 2006; blocks that are adjacent to or beyond the U.S. Exclusive Economic Zone in the area known as the northern portion of the Eastern Gap; and whole blocks and partial blocks within the current boundary of the Flower Garden Banks National Marine Sanctuary.

“To promote responsible domestic energy production, the proposed terms of this sale have been carefully developed through extensive environmental analysis, public comment and consideration of the best scientific information available,” said Walter Cruickshank, the acting director of Interior’s Bureau of Ocean Energy Management (BOEM). “This will ensure both orderly resource development and protection of the environment.”

The lease sale terms include stipulations to protect biologically sensitive resources, mitigate potential adverse effects on protected species and avoid potential conflicts associated with oil and gas development in the region. BOEM’s proposed economic terms include a range of incentives to encourage diligent development and ensure a fair return to taxpayers. The terms and conditions for Sale 249 in the Proposed Notice of Sale are not final. Different terms and conditions may be employed in the Final Notice of Sale, which will be published at least 30 days before the sale.

BOEM estimates that the U.S. Outer Continental Shelf (OCS) contains about 90 billion barrels of undiscovered technically recoverable oil and 327 trillion cubic feet of undiscovered technically recoverable gas. The Gulf of Mexico OCS, covering about 160 million acres, has technically recoverable resources of 48.46 billion barrels of oil and 141.76 trillion cubic feet of gas.

Production from all OCS leases provided 550 million barrels of oil and 1.25 trillion cubic feet of natural gas in FY2016, accounting for 72 percent of the oil and 27 percent of the natural gas produced on federal lands. Energy production and development of new projects on the U.S. OCS supported an estimated 492,000 direct, indirect, and induced jobs in FY2015 and generated $5.1 billion in total revenue that was distributed to the Federal Treasury, state governments, Land and Water Conservation Fund, and Historic Preservation Fund.

As of March 1, 2017, about 16.9 million acres on the U.S. OCS are under lease for oil and gas development (3,194 active leases) and 4.6 million of those acres (929 leases) are producing oil and natural gas. More than 97 percent of these leases are in the Gulf of Mexico; about 3 percent are on the OCS off California and Alaska.

The current Five Year Program [2012-2017] has one final Gulf lease sale scheduled on March 22, 2017 for Central Planning Area Sale 247. The 2012-2017 Five Year Program has offered about 73 million acres, netted more than $3 billion in high bids for American taxpayers and awarded more than 2,000 leases.)

All terms and conditions for Gulf of Mexico Region-wide Sale 249 are detailed in the Proposed Notice of Sale (PNOS) information package, which is available at: http://www.boem.gov/Sale-249/. Copies of the PNOS maps can be requested from the Gulf of Mexico Region's Public Information Unit at 1201 Elmwood Park Boulevard, New Orleans, LA 70123, or at 800-200-GULF (4853).

The Notice of Availability of the PNOS will be available today for inspection in the Federal Register at: http://www.archives.gov/federal-register/public-inspection/index.html and will be published in the March 7, 2017 *Federal Register*.

Subject: Fwd: Graham opposes CRA to block methane rule

Really, the night before the Secretary is calling the Senator in the morning? For what it's worth, there's definitely a different legal opinion than your boss's since there's zero precedent for defining what "substantially the same" means. Either way, more to follow I'm sure. Have a good one.

Micah

By Nick Juliano

03/09/2017 03:43 PM EDT

Sen. Lindsey Graham says he will not vote to kill an Obama-era rule aimed at reducing methane emissions from oil and gas drilling, putting Republicans another vote short of the majority they need to pass the Congressional Review Act resolution.

"I think the CRA approach to this particular issue is heavy-handed because if you do away with this regulation, you can't have a similar one," the South Carolina Republican told POLITICO today.

The law, which had been used only once before this year, allows lawmakers to overturn regulations without having to overcome a Senate filibuster, and it prevents federal agencies from enacting new rules that are "substantially the same" in the future. So far, Congress has used the CRA to block seven Obama-era rules.

The Bureau of Land Management's rule to reduce the venting and flaring of methane has proved to be a more difficult target.

At least five GOP senators are on the fence or outright against the resolution to block it. With a 52-seat majority, Republicans can afford to lose just three of

their members, if no Democrats cross the aisle.

In addition to Graham, Sen. Susan Collins (R-Maine) told Bloomberg earlier this week that she does not support the resolution.

Graham said today that he would be open to narrower changes to BLM's methane rule but would not vote for the CRA resolution.

"I believe you can do a better regulation," he said. "This area of methane gas emissions I think can be dealt with without driving up major costs to business, but from a CO2 point of view is pretty toxic."

Subject: Bill we're planning to drop next week

Hi Amanda,

We're planning to drop the attached bill next week.

We checked extensively with non-Indian stakeholders and the Independent Petroleum Association of America (IPAA), Montana Petroleum Association, Avista, NorthWestern Energy, Senate Committee on Indian Affairs, Lake County Attorney Wally Congdon, Lake County Commissioner Gale Decker, Flathead County Commissioners Phil Mitchell ad Gary Kreuger, Northern Cheyenne Tribe all provided neutral-to-positive feedback. Crow Tribe, CSKT, Fort Belknap Indian Community, Chippewa Cree Tribe, Blackfeet Tribe, Property and Environment Research Center (PERC), and Navajo Nation all support. Currently working out a kink with Fort Peck.

By way of brief background, the Helping Expedite and Advance Responsible Tribal Home Ownership (HEARTH) Act of 2012 created a voluntary, alternative land leasing process available to tribes by amending the Indian Long-Term Leasing Act of 1955. Under that statute, once a tribe has tribal leasing regulations approved by the Secretary of the Interior, the tribe is authorized to negotiate and enter into leases without further approvals by the Secretary. This authority currently exists only for business, residential, agricultural, wind, and solar leases.

The Energizing Tribal Economies Act would amend the Indian Long- Term Leasing Act to extend that leasing authority to subsurface minerals, oil, gas, geothermal, biomass, and hydrologic resources. This policy would help tribes with the obstacles and delays experienced by many tribes to have leases approved by the BIA as outlined in this GAO report.

The bill also extends the maximum initial terms of leasing to 75 years to give tribes more latitude for business and other leases.

Let me know if you have any questions. Would love your general thoughts.

Yeah. It's bush league stuff. Industry is going to have to come to terms with either pushing this to the floor with 50 and risking the loss or not having a vote at all. At least the vote smokes Heitkamp out on the issue.

To: Kaster, Amanda (amanda_kaster@ios.doi.gov) <amanda_kaster@ios.doi.gov>
Subject: Bill we're planning to drop next week

Hi Amanda,

We're planning to drop the attached bill next week.

We checked extensively with non-Indian stakeholders and the Independent Petroleum Association of America (IPAA), Montana Petroleum Association, Avista, NorthWestern Energy, Senate Committee on Indian Affairs, Lake County Attorney Wally Congdon, Lake County Commissioner Gale Decker, Flathead County Commissioners Phil Mitchell ad Gary Kreuger, Northern Cheyenne Tribe all provided neutral-to-positive feedback. Crow Tribe, CSKT, Fort Belknap Indian Community, Chippewa Cree Tribe, Blackfeet Tribe, Property and Environment Research Center (PERC), and Navajo Nation all support. Currently working out a kink with Fort Peck.

By way of brief background, the Helping Expedite and Advance Responsible Tribal Home Ownership (HEARTH) Act of 2012 created a voluntary, alternative land leasing process available to tribes by amending the Indian Long-Term Leasing Act of 1955. Under that statute, once a tribe has tribal leasing regulations approved by the Secretary of the Interior, the tribe is authorized to negotiate and enter into leases without further approvals by the Secretary. This authority currently exists only for business, residential, agricultural, wind, and solar leases.

The Energizing Tribal Economies Act would amend the Indian Long- Term Leasing Act to extend that leasing authority to subsurface minerals, oil, gas, geothermal, biomass, and hydrologic resources. This policy would help tribes with the obstacles and delays experienced by many tribes to have leases approved by the BIA as outlined in this<http://www.gao.gov/assets/680/670701.pdf> GAO report.

The bill also extends the maximum initial terms of leasing to 75 years to give tribes more latitude for business and other leases.

Let me know if you have any questions. Would love your general thoughts.

-Sophie

Subject: Bill we're planning to drop next week

Hi Amanda,

We're planning to drop the attached bill next week.

We checked extensively with non-Indian stakeholders and the Independent Petroleum Association of America (IPAA), Montana Petroleum Association, Avista, NorthWestern Energy, Senate Committee on Indian Affairs, Lake County Attorney Wally Congdon, Lake County Commissioner Gale Decker, Flathead County Commissioners Phil Mitchell ad Gary Kreuger, Northern Cheyenne Tribe all provided neutral-to-positive feedback. Crow Tribe, CSKT, Fort Belknap Indian Community, Chippewa Cree Tribe, Blackfeet Tribe, Property and Environment Research Center (PERC), and Navajo Nation all support. Currently working out a kink with Fort Peck.

By way of brief background, the Helping Expedite and Advance Responsible Tribal Home Ownership (HEARTH) Act of 2012 created a voluntary, alternative land leasing process available to tribes by amending the Indian Long-Term Leasing Act of 1955. Under that statute, once a tribe has tribal leasing regulations approved by the Secretary of the Interior, the tribe is authorized to negotiate and enter into leases without further approvals by the Secretary. This authority currently exists only for business, residential, agricultural, wind, and solar leases.

The Energizing Tribal Economies Act would amend the Indian Long- Term Leasing Act to extend that leasing authority to subsurface minerals, oil, gas, geothermal, biomass, and hydrologic resources. This policy would help tribes with the obstacles and delays experienced by many tribes to have leases approved by the BIA as outlined in this<http://www.gao.gov/assets/680/670701.pdf> GAO report.

The bill also extends the maximum initial terms of leasing to 75 years to give tribes more latitude for business and other leases.

Let me know if you have any questions. Would love your general thoughts.

-Sophie

March 10, 2017

Greetings,

My continued prayers are with the farmers, ranchers, families, and communities across the Texas Panhandle who have suffered losses this week from the devastating wildfires. I commend our first responders for rushing to help all of those who have been in harm's way. Congressman Mac Thornberry has helpfully provided several links to resources for individuals who have been impacted by the fires. My staff and I stand ready to assist Congressman Thornberry and Panhandle communities in any way that would be helpful.

Texas communities from Midland to Houston have made substantial economic investment in the space industry, creating new manufacturing facilities and high-tech jobs. The importance of NASA and space exploration to Houston and the state of Texas cannot be underestimated, which is why I was gratified that this week the U.S. House of Represenatives passed the bi-partisan Cruz-Nelson NASA Transition Authorization Act of 2017. This legislation makes a serious commitment to the manned exploration of space and ensures that the Johnson Space Center remains the crown jewel of NASA's human spaceflight missions. I look forward to the President signing this legislation, which lays the groundwork for the mission to Mars and enables commercial space ventures to flourish, which will foster extraordinary economic growth and job creation throughout Texas.

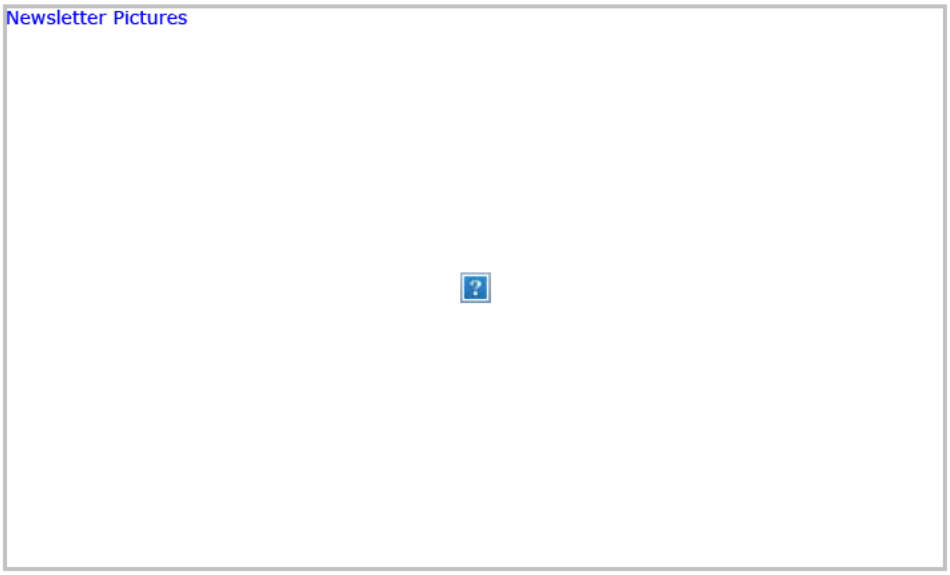
Early this week the House released its plan for health care reform. While I have serious concerns with the legislation in its existing form, I am working closely with members of the House, members of the Senate and the Administration to make the required fixes so we can pass a repeal bill that lowers health premium costs, that expands insurance choices and empowers patients.

Please read below for an update from this last week.

Keep Texas Strong,

TC Sig

Ted Cruz



Congress Sends Bipartisan Cruz-Nelson NASA Transition Authorization Act to the President's Desk

This week, Congress passed S. 442, The National Aeronautics and Space Administration (NASA) Transition Authorization Act of 2017, a bill originally introduced in the U.S. Senate by U.S. Sen. Ted Cruz (R-Texas), along with Sens. Bill Nelson (D-Fla.), Marco Rubio (R-Fla.), Gary Peters (D-Mich.), John Thune (R-S.D.), Tom Udall (D-N.M.), Patty Murray (D-Wash.), and John Cornyn (R-Texas). In the House, the chairmen with committees of jurisdiction for the bill are U.S. Rep. Lamar Smith (R-Texas), chairman of the House Science, Space, and Technology Committee, and Rep. Brian Babin (R-Texas), chairman of the House Space Subcommittee. The legislation provides stability for NASA to sustain and build upon existing national space investments designed to advance space exploration and science with an overall authorization level of $19.508 billion for fiscal year 2017. With the House's passage of the bill, the legislation now heads to the White House to await President Donald Trump's signature.

"The importance of NASA and space exploration to Houston and the state of Texas cannot be underestimated," said Sen. Cruz. "With the passage of this bipartisan legislation, the future of the U.S. space program is now more secure and stable, and we have provided much-needed certainty to the missions of the International Space Station and Johnson Space Center. We are also making a serious commitment to the manned exploration of space, laying the groundwork for the mission to Mars, and enabling commercial space ventures to flourish, all of which will foster extraordinary economic growth and job creation throughout Texas. I'm grateful for the hard work and collaboration of Senators Bill Nelson, John Thune, and Gary Peters, Congressmen Lamar Smith and Brian Babin, and organizations like the Bay Area Houston Economic Partnership, all of whom all helped forge this legislation to help ensure America continues to lead the way in space exploration."

Highlights of S. 442, The NASA Transition Authorization Act of 2017:

- Sustaining National Space Commitments and Utilizing the International Space Station
- Advancing Human Deep Space Exploration
- Medical Monitoring of Astronauts

Read the full details of the bill here.

ICYMI: Sen. Cruz and Reps. Smith and Babin Op-Ed in Houston Chronicle: 'A strong step for Texas, and one giant leap for space exploration'

Sen. Cruz and Reps. Lamar Smith (R-Texas) and Brian Babin (R-Texas) penned the following op-ed for the Houston Chronicle celebrating the passage of the bi-partisan Cruz-Nelson NASA Transition Authorization Act. This legislation ensures that the Johnson Space Center remains the crown jewel of NASA's human spaceflight missions. The Houston Chronicle also featured an article detailing the legislative ambitions of the bill, including exploration of the moon, Mars and beyond.

" Space exploration is also critical to the global competitiveness of the United States as our nation seeks to remain the leader in space. Unfortunately, in recent years, uncertainty and cancellations of core missions have clouded the future of NASA and the broader space industry. Cancellations to programs such as Constellation, which sought to return astronauts to the moon and beyond, have had lasting negative consequences not only on NASA but on the economy.

…

This legislation, supported broadly by Republicans and Democrats, advances the deep exploration of space by humans, ensures full utilization of the International Space Station and fosters the commercialization and economic development of low Earth orbit. In Texas, this legislation will ensure that the Johnson Space Center remains the crown jewel when it comes to providing mission support to NASA's human spaceflight missions."

Sen. Cruz Re-Introduces Bill Naming Cuban Embassy's D.C. Address After Dissident Oswaldo Payá

Sen. Cruz reintroduced bipartisan legislation with Sens.Rubio and Menendez to rename the street in front of the Cuban Embassy in Washington, D.C. as "Oswaldo Payá Way," in honor of Cuba's late and celebrated dissident leader. The bill, S. 539, serves as a tribute to those who have contested the cruelty and oppression of the Castro regime and has been reintroduced following Cuba's recent attempt to stifle efforts to honor those who stand up for human rights across the globe.

Sen. Cruz denounced the regime for denying entry visas to recipients of an award ceremony organized in Havana by Payá's daughter, Rosa María. The ceremony was intended to honor her father's legacy and celebrate like-minded activists who have fought for democracy and human rights against authoritarian regimes.

"The Cuban Embassy stands as a testament to the prior Administration's relentless capitulation to oppressive dictatorships across the globe. Though Fidel Castro has died, his repressive legacy has not followed him to the grave," Sen. Cruz said. "Raúl is not a 'different' Castro; he shared Fidel's tyrannical reign, brutally imprisoning and torturing the people of Cuba. It is my hope and belief that President Trump's Administration will operate from a posture of strength to reassure those fighting for freedom in Cuba that America stands with them. I commend Rosa María Payá for her brave efforts to honor her father's fight for freedom by bestowing an award in his name. The Castro regime's cowardly actions to stifle the first awards ceremony only shines a brighter light on Oswaldo Payá's legacy and serves as an example for younger generations who seek change among brutal dictatorships."

Sen. Cruz Issues Statement Regarding President Trump's Executive Order to Facilitate Stronger Vetting Procedures for Refugees

Sen. Cruz issued the following statement regarding President Trump's recent executive order to facilitate stronger vetting procedures for refugees:

"As I stated when President Trump's administration previously took the responsible step of acting to prevent terrorists from infiltrating our refugee programs, we live in a dangerous world. For eight long years the Obama administration remained willfully blind to the threat of radical Islamic terrorism, admitting tens of thousands of refugees whom the FBI expressly told Congress they could not be certain were not terrorists. That Obama policy made no sense, and it made America less safe. If we are serious about combating the threat of radical Islam, we must reform and strengthen our refugee programs to ensure proper vetting of those entering our country—especially when they are coming from nations that are hotbeds of terror. This is crucial to our national security and to protecting American lives, and it is a priority for which I have long advocated.

"I commend President Trump for rejecting Obama's willful blindness. In contrast to the hysteria and mistruths that are still being pushed by the media, President Trump's executive order implements a four-month pause in refugee admissions so that stronger vetting procedures can be put in place. This is a commonsense step that the American people overwhelmingly support. I am also pleased to see that lawful permanent residents will not be impacted by this order.

"I will continue to call on Congress to pass legislation to further assist in these efforts. For example, the executive order calls for greater influence from the states in this process, and the State Refugee Security Act that I introduced with Rep. Ted Poe (R-Texas) would do just that. This is a commonsense step to help keep us safe, and should be something that all senators and representatives, regardless of political party, can unite behind."

Sen. Cruz Releases Statement Regarding Recent Threats Against Jewish Institutions

Sen. Cruz released the following statement regarding the recent rise in threats against Jewish Community Centers:

"Today, law enforcement arrested a man in St. Louis, charging him for at least eight bomb threats against Jewish institutions in recent weeks. I commend our law enforcement for their diligent investigative work.

"I categorically condemn all recent threats against Jewish Community Centers (JCCs), Jewish Day Schools, and Jewish institutions across the country. These along with other attacks including the desecration and vandalism of Jewish cemeteries in St. Louis, Philadelphia, and Rochester are reprehensible. There is no place in our society for such vicious hatred and anti-Semitism.

"More than 100 JCCs from California to Texas and New York have been the target of this deliberate and repeated effort to harass, intimidate, and instill fear within our communities. I stand with the American Jewish Community, and with all Texans who have been impacted by the specific threats targeting the Aaron Family Jewish Community Center of Dallas and the Evelyn Rubenstein Jewish Community Center in my hometown

of Houston that provide enormous contributions for our communities, friends, and families. We must put an end to these threats and attacks, ensure our Jewish institutions are secure and protected, and all of the perpetrators are brought to justice."

Sen. Cruz Praises Nomination of Noel Francisco as U.S. Solicitor General

Sen. Ted Cruz praised the nomination of Noel Francisco as U.S. Solicitor General. Sen. Cruz and Francisco worked together as young lawyers at what is now the Cooper & Kirk law firm in Washington, D.C., and also on the legal team supporting former President George W. Bush during the 2000 Florida recount. Francisco also served as a law clerk to Judge J. Michael Luttig of the U.S. Court of Appeals for the Fourth Circuit, the same judge for whom Cruz clerked the previous year.

"I enthusiastically applaud President Trump's nomination of Noel Francisco to be Solicitor General of the United States," Sen. Cruz said. "Noel and I have been close friends for over two decades, and I know him personally to be a brilliant lawyer and a principled conservative. He has cemented his reputation as one of the best appellate advocates of our generation, including arguing and winning the landmark case of National Labor Relations Board v. Noel Canning, in which the U.S. Supreme Court unanimously rebuked President Obama's unlawful abuse of the President's recess appointments power. I am confident that Noel will be a tireless champion for the rule of law, and I look forward to his strong leadership at the Department of Justice and skilled advocacy for the United States before the Supreme Court."

Happy Sunday! Sen. Cantwell was busy this week—leading on oversight letters, introducing bills and defending environmental regulations. Catch up on anything you may have missed, and check out what's to come.

CATCHING UP

Cantwell calls Interior's actions on coal 'unlawful.' Sen. Cantwell asked Interior Secretary Ryan Zinke to lift the stay on a coal royalty valuation rule so that taxpayers get fair value from coal mined on public lands. "Postponing the effective date of the new rule in this manner was plainly contrary to law," Sen. Cantwell wrote to Secretary Zinke. "You testified at your confirmation hearing that you 'will follow the law.' This may be a good place to start. You should lift the stay and let the royalty valuation rule go back into effect." In the letter, Sen. Cantwell lays out the legal argument for why the stay was unlawful and should be reversed. Read *The Seattle Times's* coverage of it here.

New bipartisan bill to fully fund, permanently reauthorize the Land and Water Conservation Fund (LWCF) is introduced. Sen. Cantwell introduced similar legislation last Congress, but with Sen. Burr joining as an original sponsor, this year's effort is also bipartisan. "In Washington state, we are hikers, bikers, anglers, climbers, skiers and so much more. The LWCF lets us continue to explore our beautiful state by setting aside some of its most precious lands, while helping keep our economy humming and providing 227,000 Washingtonians with good jobs," Sen. Cantwell said.

Cantwell, Murray fight for Hanford workers' safety. The senators wrote to the U.S. Department of Energy's Acting Inspector General, urging implementation of safety recommendations for Hanford workers. The senators write: "We have been informed of multiple accounts of claims being dismissed on arbitrary grounds, tactics bordering on intimidation and actions taken to discredit worker claims. The seriousness of these allegations demands action." Read KING5's coverage of it here.

Democrats urge Trump to restore the quorum at FERC by nominating both Republican and Democrats. Sen. Cantwell and 15 other Democratic senators sent President Trump a letter, asking him to consider nominees who respect the bipartisan traditions of the commission, as well as its missions: "We write to request that you restore the quorum by nominating individuals that will honor the commission's statutory missions to ensure that jurisdictional rates are just and reasonable, to prohibit market manipulation, to protect electric grid reliability, to oversee energy infrastructure development in a balanced manner and to provide for the licensing and safe operation of many of our nation's hydroelectric dams." Read *The Washington Examiner's* coverage of it here.

Senators introduce legislation to protect the Methow Valley from mining. Sens. Cantwell and Murray introduced S. 566, the Methow Headwaters Protection Act of 2017, to protect 340,000 acres of National Forest in the Methow Valley from potential development of a large-scale mine. "Water is the lifeblood of the economy in the Methow Valley. With so many salmon, farmers and outdoor recreationists dependent on clean water, we can't risk opening the area to copper mining," Sen. Cantwell said. "I urge my colleagues to respect the local community's wishes and protect this area." Read *The Wenatchee World's* coverage of it here.

New bicameral, bipartisan legislation on timber innovation introduced. Sen. Cantwell is a co-sponsor of S. 538 to accelerate the research and development of wood for use in construction projects – such as cross-laminated timber – focusing on the construction of buildings more than 85 feet in height. "Devastating fires across Washington state have cost billions to fight. Innovative timber products and long-term timber contracts could help us achieve better forest health while bolstering local economies," Sen. Cantwell said. Read *The Daily World's* coverage of it here.

Cantwell defends the BLM Planning 2.0 Rule. "When it comes to public lands, we want transparency, we want sunshine, we want a bottom-up approach when it comes to land management—and we certainly want collaboration," Sen. Cantwell said. Unfortunately, Senate Republicans successfully overturned the rule, making it harder for the public to provide input on land use plans.

COMING UP

Tuesday hearing on energy infrastructure. For the first time since nominations, the committee is holding a hearing on opportunities to improve U.S. energy infrastructure. The hearing begins at 10:00 a.m. ET, with testimony from seven (yes, seven!) witnesses: Stefan Bird (Pacific Power), Carl Imhoff (Pacific Northwest National Laboratory), Clay Koplin (Cordova Electric Cooperative), Jeffrey Leahy (National Hydropower Association), Diane Leopold (Dominion Energy), Terry O'Sullivan (Laborers' International Union of North America) and Ethan Zindler (Bloomberg New Energy Finance). Expect Sen. Cantwell to discuss the economic and jobs opportunities that come with updating our energy infrastructure, as well as the need to protect our electricity grid from the growing threat of cyberattacks from foreign actors.

The "skinny" budget could be released this week. Although nothing specific is confirmed yet, we are expecting a slimmed down budget of top-line priorities to be released sometime this week. Details have been hard to come by, so stay tuned for those numbers and Sen. Cantwell's reactions to those.

Congressional Review Act disapproval resolutions. No word on when the BLM Methane Waste Rule could come up, although POLITICO is reporting that a second Republican has stated they won't support it—Sen. Lindsay Graham. This

week, there could be activity on a disapproval resolution to overturn the National Wildlife Refuge Hunting and Fishing Rule—aka the Alaska Hunting Rule. Sen. Cantwell will oppose this effort, and we'll keep you posted on timing.

Other items outside our control. The Trump administration could issue executive orders on the federal coal program or the Climate Action Plan, and they could officially announce a new batch of nominees to DOE, DOI or FERC.

As always, feel free to reach out with questions, and check out @EnergyDems for up-to-date information and timely news clips.

Subject: This Week in ENR
Date: Sunday, March 12, 2017 9:30:32 AM

Happy Sunday! Sen. Cantwell was busy this week—leading on oversight letters, introducing bills and defending environmental regulations. Catch up on anything you may have missed, and check out what's to come.

CATCHING UP

Cantwell calls Interior's actions on coal 'unlawful.' Sen. Cantwell asked Interior Secretary Ryan Zinke to lift the stay on a coal royalty valuation rule so that taxpayers get fair value from coal mined on public lands. "Postponing the effective date of the new rule in this manner was plainly contrary to law," Sen. Cantwell wrote to Secretary Zinke. "You testified at your confirmation hearing that you 'will follow the law.' This may be a good place to start. You should lift the stay and let the royalty valuation rule go back into effect." In the letter, Sen. Cantwell lays out the legal argument for why the stay was unlawful and should be reversed. Read *The Seattle Times's* coverage of it here.

New bipartisan bill to fully fund, permanently reauthorize the Land and Water Conservation Fund (LWCF) is introduced. Sen. Cantwell introduced similar legislation last Congress, but with Sen. Burr joining as an original sponsor, this year's effort is also bipartisan. "In Washington state, we are hikers, bikers, anglers, climbers, skiers and so much more. The LWCF lets us continue to explore our beautiful state by setting aside some of its most precious lands, while helping keep our economy humming and providing 227,000 Washingtonians with good jobs," Sen. Cantwell said.

Cantwell, Murray fight for Hanford workers' safety. The senators wrote to the U.S. Department of Energy's Acting Inspector General, urging implementation of safety recommendations for Hanford workers. The senators write: "We have been informed of multiple accounts of claims being dismissed on arbitrary grounds, tactics bordering on intimidation and actions taken to discredit worker claims. The seriousness of these allegations demands action." Read KING5's coverage of it here.

Democrats urge Trump to restore the quorum at FERC by nominating both Republican and Democrats. Sen. Cantwell and 15 other Democratic senators sent President Trump a letter, asking him to consider nominees who respect the bipartisan traditions of the commission, as well as its missions: "We write to request that you restore the quorum by nominating individuals that will honor the commission's statutory missions to ensure that jurisdictional rates are just and reasonable, to prohibit market manipulation, to protect electric grid reliability, to oversee energy infrastructure development in a balanced manner and to provide for the licensing and safe operation of many of our nation's hydroelectric dams." Read *The Washington Examiner's* coverage of it here.

Senators introduce legislation to protect the Methow Valley from mining. Sens. Cantwell and Murray introduced S. 566, the Methow Headwaters Protection Act of 2017, to protect 340,000 acres of National Forest in the Methow Valley from potential development of a large-scale mine. "Water is the lifeblood of the economy in the Methow Valley. With so many salmon, farmers and outdoor recreationists dependent on clean water, we can't risk opening the area to copper mining," Sen. Cantwell said. "I urge my colleagues to respect the local community's wishes and protect this area." Read *The Wenatchee World's* coverage of it here.

New bicameral, bipartisan legislation on timber innovation introduced. Sen. Cantwell is a co-sponsor of S. 538 to accelerate the research and development of wood for use in construction projects – such as cross-laminated timber – focusing on the construction of buildings more than 85 feet in height. "Devastating fires across Washington state have cost billions to fight. Innovative timber products and long-term timber contracts could help us achieve better forest health while bolstering local economies," Sen. Cantwell said. Read *The Daily World's* coverage of it here.

Cantwell defends the BLM Planning 2.0 Rule. "When it comes to public lands, we want transparency, we want sunshine, we want a bottom-up approach when it comes to land management—and we certainly want collaboration," Sen. Cantwell said. Unfortunately, Senate Republicans successfully overturned the rule, making it harder for the public to provide input on land use plans.

COMING UP

Tuesday hearing on energy infrastructure. For the first time since nominations, the committee is holding a hearing on opportunities to improve U.S. energy infrastructure. The hearing begins at 10:00 a.m. ET, with testimony from seven (yes, seven!) witnesses: Stefan Bird (Pacific Power), Carl Imhoff (Pacific Northwest National Laboratory), Clay Koplin (Cordova Electric Cooperative), Jeffrey Leahy (National Hydropower Association), Diane Leopold (Dominion Energy), Terry O'Sullivan (Laborers' International Union of North America) and Ethan Zindler (Bloomberg New Energy Finance). Expect Sen. Cantwell to discuss the economic and jobs opportunities that come with updating our energy infrastructure, as well as the need to protect our electricity grid from the growing threat of cyberattacks from foreign actors.

The "skinny" budget could be released this week. Although nothing specific is confirmed yet, we are expecting a slimmed down budget of top-line priorities to be released sometime this week. Details have been hard to come by, so stay tuned for those numbers and Sen. Cantwell's reactions to those.

Congressional Review Act disapproval resolutions. No word on when the BLM Methane Waste Rule could come up, although POLITICO is reporting that a second Republican has stated they won't support it—Sen. Lindsay Graham. This

week, there could be activity on a disapproval resolution to overturn the National Wildlife Refuge Hunting and Fishing Rule—aka the Alaska Hunting Rule. Sen. Cantwell will oppose this effort, and we'll keep you posted on timing.

Other items outside our control. The Trump administration could issue executive orders on the federal coal program or the Climate Action Plan, and they could officially announce a new batch of nominees to DOE, DOI or FERC.

As always, feel free to reach out with questions, and check out @EnergyDems for up-to-date information and timely news clips.

Enjoy the rest of your weekend,

Subject: FW: Interior meetings request
Date: Monday, March 13, 2017 8:41:59 AM
Attachments: Artesia-Roswell Fly-in 2017 Attendees.pdf

Melissa,

Congressman Pearce has a fly-in group from Roswell/Artesia, NM region coming to DC on May 1st. They have been able to get in the last few years with FWS and BLM. Unfortunately, those meetings have not been very successful.

For this year's visit, the Congressman seeks the Secretary's assistance in confirming this year's group to meet with FWS, BLM and Department leadership, preferably the Secretary, on May 1st. Below is the request from their coordinator and attached is the attendee list.

We appreciate the Secretary and the Department's consideration of this request.

Todd D. Willens

To: Willens, Todd
Subject: Interior meetings request

Good morning, Todd,
As you know, Artesia and Roswell are planning our annual Washington Fly-in. Usually, we meet with FWS and BLM in separate meetings, but have had some difficulties in the last two years with BLM. This year, I am asking for assistance in setting up meetings that would be appropriate for the following issues, which are primarily focused on BLM and FWS, but may include others:

- APD processing and permitting for oil & gas production – the new computerized system was not ready for roll-out, which is causing confusion and delays; moreoever, we would like to discuss the unpredictable timelines for APDs which cause delays in production and tie up significant funding.
- State BLM sale – we would like to see the BLM return to quarterly sales in New Mexico.
- The Resource Management Plan, which is delayed
- Venting & Flaring rule – the rule is not ready for implementation; we hope for reconsideration of the rule altogether
- The anticipated decision on the Texas Horned Shell Mussel and the associated CCAs
- Other ESA listings that may be in the works

We will be in Washington May 1-3. We respectfully request a meeting or meetings at Interior on Monday, May 1. I have attached a list of our attendees. Please let me know if

you have questions or need additional information.

Thank you for your assistance and direction,
Hayley

Under that statute, once a tribe has tribal leasing regulations approved by the Secretary

of the Interior, the tribe is authorized to negotiate and enter into leases without further approvals by the Secretary. This authority currently exists only for business, residential, agricultural, wind, and solar leases.

The Energizing Tribal Economies Act would amend the Indian Long- Term Leasing Act to extend that leasing authority to subsurface minerals, oil, gas, geothermal, biomass, and hydrologic resources. This policy would help tribes with the obstacles and delays experienced by many tribes to have leases approved by the BIA as outlined in this<http://www.gao.gov/assets/680/670701.pdf> GAO report.

The bill also extends the maximum initial terms of leasing to 75 years to give tribes more latitude for business and other leases.

Let me know if you have any questions. Would love your general thoughts.

BILLS-114s2938is.pdf

Amanda, Daines/Enzi/Barrasso bill text is attached. And a rundown of all the options below.

Salazar Charter:
5-states with mineral royalties
5-Indian tribes
7-industry
3- public interest groups

Daines/WY delegation bill:
5-states producing more than $10 million in mineral royalties
5-mineral producing Indian Tribes
Silent on other aspects of original charter so it defaults to:
7-industry
3-NGOs.

Tester bill:

> NON-FEDERAL MEMBERS- In appointing non-Federal members of the Committee, the Secretary shall appoint up to--
>
> (A) 5 members who represent States that receive over $10,000,000 annually in royalty revenues from Federal leases;
> (B) 5 members who represent Indian tribes;
> (C) 5 members who represent various mineral or energy interests, including at least 1 member who represents labor interests; and
> (D) 5 members who represent public interest groups, including groups representing taxpayers and groups with academic expertise.

Daines/Tester Appropriations Amendment (just reinstates original charter so membership stays the same):

royalty policy committee

> Sec. 126. (a) As soon as practicable after the date of enactment of this Act, the Secretary shall reestablish the Royalty Policy Committee in accordance with the charter of the Secretary dated March 26, 2010.
> (b) Not later than 180 days after the issuance of any proposed regulations or policy relating to royalty management issues or other mineral-related policies, the Royalty Policy Committee shall advise the Secretary of the

Interior on those issues or policies.

(c) The Royalty Policy Committee shall--

(1) meet not less frequently than once per year; and

(2) provide for robust participation of State Governors and Indian tribes (as defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b)).

Yes, 10am works great.

I'll give you a call then.

<amanda_kaster@ios.doi.gov>
Subject: Bill we're planning to drop next week

Hi Amanda,

We're planning to drop the attached bill next week.

We checked extensively with non-Indian stakeholders and the Independent Petroleum Association of America (IPAA), Montana Petroleum Association, Avista, NorthWestern Energy, Senate Committee on Indian Affairs, Lake County Attorney Wally Congdon, Lake County Commissioner Gale Decker, Flathead County Commissioners Phil Mitchell ad Gary Kreuger, Northern Cheyenne Tribe all provided neutral-to-positive feedback. Crow Tribe, CSKT, Fort Belknap Indian Community, Chippewa Cree Tribe, Blackfeet Tribe, Property and Environment Research Center (PERC), and Navajo Nation all support. Currently working out a kink with Fort Peck.

By way of brief background, the Helping Expedite and Advance Responsible Tribal Home Ownership (HEARTH) Act of 2012 created a voluntary, alternative land leasing process available to tribes by amending the Indian Long-Term Leasing Act of 1955. Under that statute, once a tribe has tribal leasing regulations approved by the Secretary of the Interior, the tribe is authorized to negotiate and enter into leases without further approvals by the Secretary. This authority currently exists only for business, residential, agricultural, wind, and solar leases.

The Energizing Tribal Economies Act would amend the Indian Long-Term Leasing Act to extend that leasing authority to subsurface minerals, oil, gas, geothermal, biomass, and hydrologic resources. This policy would help tribes with the obstacles and delays experienced by many tribes to have leases approved by the BIA as outlined in this<http://www.gao.gov/assets/680/670701.pdf> GAO report.

The bill also extends the maximum initial terms of leasing to 75 years to give tribes more latitude for business and other leases.

Let me know if you have any questions. Would love your general thoughts.

-Sophie

Subject: Q about the budget
Date: Thursday, March 16, 2017 9:14:31 AM

Happy Skinny Budget Day! I noticed in the bullet regarding energy it says “Combined with administrative reforms already in progress…”, and I was wondering if there was a list of those reforms. I can think of the delay of the valuation rule, the decision on the fracking rule, and the withdrawal of the BOEM bonding NTL. Anything else that you guys consider to be an administrative reform already in progress?

Thanks,

--Feldgus

Hi, Micah –

Attached is a letter addressed to Secretary Zinke from some constituents and state officials regarding a bridge in our district under the authority of Fish and Wildlife. They have asked us to pass it along. Their views do not necessarily reflect those of Rep. Crawford.

Are you who I should be sending this to? If not, can you point me to the right person?

Please let me know if you have questions.

Thank you,
Ashley

FRIENDS OF THE HISTORIC WHITE RIVER BRIDGE AT CLARENDON
PO Box 141 ~ Clarendon, AR 72029 ~ info@whiteriverbridge.org ~ www.whiteriverbridge.org

February 22, 2017

The Honorable Ryan Zinke
1419 Longworth House Office Building
Washington, DC 20515

Dear Mr. Zinke:

The Friends of the White River Bridge at Clarendon is a local 501(c)3 non-profit working to preserve and adapt the historic White River Bridge at Clarendon (Arkansas) – all of which is listed on the National Register of Historic Places – into the longest elevated bicycling, pedestrian, and nature-watching platform in the world. Once adapted, the bridge will serve as the centerpiece of an effort to revitalize eastern Arkansas – which includes some of the poorest counties in the United States – through the development of outdoors-related tourism. Our efforts fit squarely into the statewide initiative being led by Governor Asa Hutchinson and supported by the Walton Family Foundation to establish Arkansas as the "Cycling Hub of the South" and will leverage substantial investments in cycling infrastructure in eastern Arkansas, including the recent development of the Harahan Bridge between Memphis and West Memphis (see enclosed articles).

Our efforts enjoy the support of a wide variety of public officials and advocacy organizations. Governor Hutchinson in particular has been an avid supporter of this project, having met last spring with the director of the U.S. Fish & Wildlife Service (USFWS), Dan Ashe, in his office in Washington for the sole purpose of advocating for the preservation of the bridge. Likewise, the commitment of one of Little Rock's major law firms, Gill Ragon Owen, PA, to provide all legal services associated with our ongoing litigation to save the bridge on a *pro bono* basis is a testament to the support this project enjoys.

In addition, a growing groundswell of public support for preserving the bridge has emerged in the past few months. On September 24, a rally was held at the foot of the historic White River Bridge in Clarendon that had robust attendance. An online petition launched a week prior has gathered signatures representing 40 states and 28 countries, and an online fundraising campaign launched in early October has raised almost $20,000 in small donations from local citizens invested in seeing the project to completion. We have also already secured pledges totaling $200,000 for a bridge maintenance endowment to provide funds in perpetuity to ensure responsible ongoing maintenance at no cost to the public.

Finally, our efforts to save the bridge have garnered substantial media coverage in the past few months alone, including being featured once on television, twice on the radio, and more than a half-dozen times in print, including an endorsement by the editorial board of the statewide paper of record (the Arkansas Democrat-Gazette) on September 30 and a multi-page feature on the cover of the "Perspectives" section on November 6. Samples of relevant media coverage are enclosed for your consideration.

FRIENDS OF THE HISTORIC WHITE RIVER BRIDGE AT CLARENDON
PO Box 141 ~ Clarendon, AR 72029 ~ info@whiteriverbridge.org ~ www.whiteriverbridge.org

We are pleased to report that the Arkansas Highway and Transportation Department (AHTD) and the Federal Highway Administration (FHWA) have recently initiated a series of productive conversations with us to explore a win-win resolution, including a due diligence process to ensure that we can fulfill all requirements of the Arkansas Historic Bridge program.

The primary obstacle preventing AHTD and FHWA from working with us to save the bridge **is an agreement made with USFWS** to demolish the historic bridge in order to secure the right-of-way through the adjoining national wildlife refuges for the replacement bridge (which opened this summer). If AHTD was relieved of this obligation to USFWS, we believe the matter would be settled in a manner satisfactory to all parties. Unfortunately, despite several efforts at outreach – including the high-profile effort by Governor Hutchinson – **USFWS has thus far been unwilling to explore <u>any</u> compromise** that might resolve the matter in a mutually beneficial manner.

We are writing to ask for your help on this matter. Specifically, we ask that once confirmed as Secretary of the Interior that you **urge USFWS to explore any and all means within the bounds of the law and their own regulations to release AHTD of their obligation to demolish the White River Bridge at Clarendon**, so that AHTD and FHWA may transfer responsibility for the bridge to us under the terms of the Arkansas Historic Bridge program. As the Compatibility Determination on the basis of which the historic bridge was obligated to be demolished is up for *mandatory* review in 2017 and FHWA has already undertaken an update of the NEPA review surrounding the bridge, **USFWS has a golden opportunity to revisit this issue at little to no additional cost to the agency or taxpayers**. In fact, as an amicable resolution **will save as much as $10 million-$15 million**, the estimated cost for demolition and remediation of the bridge. This is in addition to the savings that will come from resolving the matter outside of federal court.

If USFWS cannot find a way to preserve the bridge within the bounds of their regulations (which in actuality give substantial latitude and discretion to local refuge managers), **we ask for your assistance in getting USFWS to sit down in earnest with all involved parties to seek a reasonable compromise** through which the interests of all parties may be served. There are many options – including ones that USFWS proposed several years ago – that we have explicitly expressed a willingness to explore with them.

Thank you for your consideration of our request for assistance. If there is any further information we can provide, please contact us at 870.816.8421 or doug@whiteriverbridge.org.

Sincerely yours,

Doug Friedlander, Executive Director
Friends of the Historic White River Bridge at Clarendon

James Stinson III, Mayor
City of Clarendon

ADDENDUM

As an indication of the widespread support this project has garnered within the state of Arkansas, we have included the signatures of the following leaders that co-signed a related letter sent to members of our congressional delegation in December 2016.

United States Senator

Dear Senators:

Please accept this letter in support of the Friends of the Historic White River Bridge at Clarendon, which is working to preserve the White River Bridge and adapt it into a bicycling, pedestrian and nature-watching platform that would attract tourism to the region. I understand the Friends of the White River Bridge has contacted you to request assistance in working with the U.S. Fish and Wildlife Service regarding this goal.

Respectfully, I would ask you to give this organization's proposal every possible consideration. The White River Bridge project is a wonderful opportunity to create an outdoors attraction for cyclists, hikers and wildlife enthusiasts. Thank you for your time and attention in this matter. If I can be of further assistance in any way, please do not hesitate to contact me.

Sincerely,

Jonathan Dismang

The Honorable Tom Cotton
United States Senator

Dear Senators:

I am writing to express my support for the Friends of the Historic White River Bridge at Clarendon, as it endeavors to preserve the White River Bridge and adapt it into a bicycling, pedestrian and nature-watching platform. Once modified, the bridge will serve as the centerpiece of an effort to revitalize the region through the development of outdoors-related tourism in eastern Arkansas. I understand the organization has contacted you to request assistance in working with the United States Fish and Wildlife Service regarding this goal, and I hope you can offer your support.

Respectfully, I would ask you to give the Friends of the Historic White River Bridge's proposal every possible consideration. The success of this project could present a unique opportunity to facilitate economic development through tourism that is much needed in the eastern region of the state. Thank you for your time and attention in this matter. Please do not hesitate to contact me if I can be of further assistance in any way.

Sincerely,

Ronald Caldwell

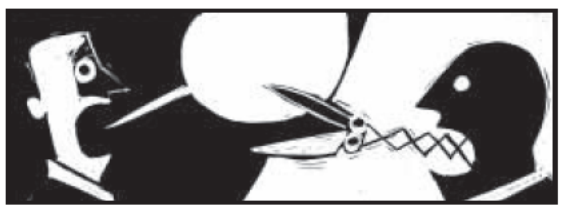
EDITORIALS



Jeez it, the cops!

Word police have us surrounded

THE OTHER DAY a headline in your friendly statewide paper used the word "gypped" and the Internet fainted. Or at least one overly pure word cop called out the Paddy wagon. Such things happen when Internet critics spaz out.

Great Scott. So some honest-Injun headline writer Jerry-rigged a headline to fit a story about drillers and royalty money, and now all the natives are restless?

It reminds us of all the fuss when a certain coach for a certain football team in another state (the state rhymes with Salabama) used the word coonass—and it was caught on tape. After all, he was telling a coonass joke. Which are the best kind. This coach, whom we won't name but whose initials are Nick Saban, found himself in a real controversy when ESPN ran the tape, but bleeped the "coonass" part. As if it were a cuss word! We know nobody in South Louisiana who feels that way.

Now there's a Mexican standoff between those of us who'd like to use language to paint a certain picture, or many certain pictures, and those who'd rather reduce language to a series of colorless and unexciting phrases, like the ones you'd find in a modern boardroom. Complete with Language Coaches who'd like to integrate the company into the new normal and streamline survival strategy to sustain synergy by actioning a paradigm shift. And, at the end of the day, empower proactive associates to leverage key learnings with a holistic approach. (Trigger warning: Next sentence isn't meant to be literal.) Somebody shoot us.

So now gypped is supposedly forbidden. What next, Irish coffee? Indian giver?

The forces of political correctness will try to nibble away at the language, eliminating verve at every opportunity, however small. Until the language has been cleansed—of all meaning, and life. But then what will we have left? How long before all color is drained from the American language (close relative: English) and how long before that wild tapestry and ever-changing poem, that natural masterpiece, becomes reduced to Newspeak used by the kinds of politicians who live in mortal fear of offending anybody who might accidentally be listening?

Like the poor, we'll always have those with us who are just dying to be offended. And highly offended at that. (What, not just medium-offended?)

We'll not have it. Not as long as aging fingers can type. Long live our language! Long live the coonasses who tell their kids to raise dat window down, New Joisey Tough Guy-ese, Tex-Mex, California Laid Back-ery, and Boston Brahmin. And all the ways they use their words—and experiences—to convey their thoughts. We promise not to be offended the next time we hear the word redneck. In fact, it would be a promotion for some of us all too genteel types.

Let's make a deal: The word police allow us to use gyp on occasion, and we won't get upset when somebody mentions fish wrapper.

Deal? We promise we won't Welsh on it.

Save this bridge

AS THE week came to a close, all was set to go for the rally last Saturday at the base of the historic White River Bridge in Clarendon, and just about every dignitary in the state had signed on to support the fast-growing movement. And why not? What's not to like? For this ambitious project combines the attractions of history, nature and state and local pride.

To quote Mayor Jim Stimson III of Clarendon, "There is tremendous enthusiasm among our citizens to save this bridge." It had been scheduled for demolition, but even the state's highway department had the good sense to change its mind.

The 85-year-old bridge may get a whole new lease on life—and the prospect has drawn cheers from people around the state and the world, including Governor Asa Hutchinson and the state's Department of Arkansas Heritage. The result should be the longest pedestrian and bicycle bridge in the world over some of the most interesting bottomlands in the world.

"The world is watching," to quote Connie DePriest of the Friends of the Historic White River Bridge.

The western approaches to the bridge extend over the Cache River National Wildlife Refuge. The refuge includes some 56,000 acres spread over Jackson, Woodruff, Monroe and Prairie Counties, and is one of the few places in the Mississippi Flyway unchanged by canalization and drainage projects. Ducks galore!

This small, wonderful state has benefited by following through on visions before. This time they won't be dreams of industrialization but its opposite: a return to primeval times when the Indian tribes celebrated Arkansas' happy hunting grounds. And white explorers looked with wonder at the future state that awaited them in history. Lewis and Clark—and the president who dispatched them, Thomas Jefferson—would surely be pleased.

What a blessing it is once again to not just watch history being made but to make it. And without besmirching the natural environment. As with the economy, there's nothing like a good leaving-alone to benefit all, and not just in this generation but for generations to come. Or what used to be called posterity. As in the Preamble to the U.S. Constitution:

"We the People of the United States, in order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America."

Just as today, by working with nature instead of exploiting it, Arkansas can proceed to save not just a bridge but an old vision of the state restored and refreshed. This used to be called conserving nature—as in conservation—and once again it can be practiced with a good conscience instead of a bad one.

OTHERS SAY

Put 'em up

PITTSBURGH POST-GAZETTE

For years, the U.S. Military Academy at West Point has required its male cadets to box in their first year. But women weren't allowed to join them. Now West Point has changed its rule: Plebe women, too, must box.

As long as boxing is a requirement for cadet men, that is what equality requires.

Some may argue that the risk of concussion outweighs the benefits. According to a *New York Times* story last year, nearly 1 in 5 West Point concussions came from boxing. But West Point's students, women as well as men, have chosen to enter a dangerous profession. Exempting women cadets was coddling, not a word anyone would expect in the same sentence as "West Point."

The U.S. Armed Forces have opened all combat roles to women, and five women from this year's West Point graduating class chose to pursue the responsibilities of infantry officers. In the U.S. Military Academy, too, women deserve to be treated equally. This boxing requirement is part of that equality.

The Clinton calendar

David Brooks

Hillary Clinton made a very pertinent comment last week: "'Why aren't I 50 points ahead?' you might ask." Indeed we might!

Clinton is running against a man whose approval ratings are under 40 percent and his disapproval rating is the highest of any candidate in American history. Only 38 percent of Americans think Donald Trump is even qualified to be president, according to a Quinnipiac survey.

Trump has practically no campaign to speak of while Clinton has a very professional one. Clinton is swamping Trump on the airwaves. Estimates vary by source, but according to *Advertising Age,* $145 million has been spent on pro-Clinton TV and radio ads while only $4 million has been spent on pro-Trump ads.

Meanwhile, the Trump scandals blow through like hurricanes in the tropics. Thanks to reporting by the *Washington Post,* we've learned that the Trump Foundation makes Trump University look like a model of moral rectitude. Donations Trump raised through that foundation went to pay his company's legal bills and to buy two portraits of himself.

Every week he manages to stain his character a deeper shade of black.

And still he is within 2 or 3 points of Clinton nationally and leading in a bunch of the key swing states. When you look at the secondary questions in the polls, Trump is doing miserably, but in the top-line "Who are you going to vote for?" question, he's doing decently.

What is going on here?

Tyler Cowen recently gathered some of the more interesting theories on his blog Marginal Revolution: America is not ready for a female president. The Democrats have a lot of policy proposals, but the Republicans are running on big ideas. A more diverse country is a more fractious and polarized country, and over the past few weeks white Republicans have been coming home to their candidate.

I see some truth in those theories, especially the last one. But my single explanation would be this: Clintonworld is a semi-closed system that operates according to its own calendar. Donald Trump is egregious, but at least he's living in the 21st century, as was Bernie Sanders. Clintonworld operates according to its own time-space continuum that is slightly akilter from our own.

In the 21st century, politics operates around a different axis. It's not left/right, big government/small government. It's openness and dynamism versus closedness and security. It's between those who see opportunity and excitement in the emerging globalized, multi-ethnic meritocracy against those who see their lives and communities threatened by it.

Clintonworld is a decades-old interlocking network of donors and friends that hasn't quite caught up to these fundamental shifts. That's because Clintonworld, in the Hillary iteration, is often defensive, distrusting and oriented around avoiding errors. In each of her national campaigns, Clinton has run against in-touch-with-the-times men who were more charismatic and generated more passion than she did. She's always been the duller, unfashionable foil.

Her donor base and fundraising style is out of another era. Obama and Sanders tapped into the energized populist base, but Clinton has Barbra Streisand, Cher and a cast of Wall Street plutocrats.

Her out-of-time style costs her big with millennials. If she loses this election it will be because younger voters just don't relate to her and flock to Gary Johnson instead.

We have an emerging global system, with relatively open trade, immigration, multilateral institutions and ethnic diversity. The critics of that system are screaming at full roar. The champions of that system—and Hillary Clinton is naturally one—are off in another world.

There is a strong case to be made for an open world order, and a huge majority coalition to be built in support of it. But she is disengaged.

Don't get me wrong. I still think she'll eke out a win. I just hope her administration is less fogyish than her campaign.

David Brooks is a columnist for the New York Times.

Two against one

JAY AMBROSE
TRIBUNE NEWS SERVICE

It was two against one in the Monday night presidential debate. We had moderator Lester Holt, who apparently assumed he was a candidate, too, and Hillary Clinton, well-equipped with policy malformations, against Donald Trump. Trump wasn't nearly as bad as I anticipated—much closer to reality on the economy, police, guns and Iran, for instance, if issues still count in this contest.

Again and again, the ill-informed, biased Holt asked Trump tough, personal questions and, when he didn't like the answers, interrupted him in a way that should have been left up to Clinton, who was spared an equivalent assault. They call it fact-checking, but this was a debate, not a reporter's interview, and he had some facts utterly confused.

The economy was issue number one, and Clinton espoused the usual, worsening federal interventions, the most absurd being President Barack Obama's global warming plan. Now before the Supreme Court, the clearly unconstitutional plan could cost all kinds of fossil fuel jobs, as Trump pointed out.

Trump had it right when he talked about a hefty reduction of the highest corporate tax rate in the developed world and otherwise arranging a means to bring home billions earned abroad. Clinton said he had no plan to do either, which is either a lie or ignorance. Holt, ever alert on Trumpian mishaps, said nary a word.

Trump went overboard as usual on his trade attacks, although reviewing some provisions in some treaties could make sense. Both are wrong on the Trans-Pacific Partnership deal that could be important economically as well as diplomatically. The difference is that Trump comes at it sincerely, while Clinton, who helped formulate it and praised it to the skies, is now against it as a matter of political convenience. In other words, deviousness remains her middle name.

Clinton was also wrong on thinking background checks are the answer to too many guns in criminal hands. Go ahead and expand them, but there is no evidence that they work, whereas there is plenty of evidence about the effectiveness of stop-and-frisk as recommended by Trump to save thousands of lives in Chicago. Both Clinton and Holt made it sound as if stop-and-frisk was now illegal, at least in New York City, when what we have had instead is an officially condemned ruling by a federal judge that it had been unconstitutionally applied in the city.

There was lots more to the debate, of course, and Trump repeated old stupidities along with too much self-defensive focus on himself. But that was caused in no small part by Holt hitting him with questions on such things as not turning over his tax returns, his long-term refusal to give his birther theory a funeral and his saying Clinton did not look like a president. If Holt thought that was a service to the American people, why didn't he think it a service to bring up the Clinton Foundation, the FBI's condemnation of how she handled classified material as secretary of state or her own ways of being hurtful to women?

Clinton, at the end, smashed Trump with things he should never have said about individual women, and—showing signs of needed self-control—he was gentlemanly enough not to bring up the way her husband ruined the lives of multiple women and she colluded in their defamation.

Just as Trump decided not to invite Gennifer Flowers to the debate, it's now his job to correct himself sufficiently to keep Clinton out of the White House. Impossible? We will see.

COLUMN ONE

PAUL **GREENBERG**

At the end of the day

The light shines bright on my old Arkansas home. It's been another brilliant October, something else we in Arkansas tend to take for granted about this small, wonderfully interwoven state. Let Texans brag about how big their state once was in comparison to all the others—before Alaska became an empire of its own based on the same claims Texans once made about their state: oil and sheer size. Size may make indeed make an empire but never a home.

It's all enough to give this old-timer a severe case of nostalgia, which someone once defined as homesickness for the past. Oh, for the glory that was Greece, the grandeur that was ... Grady. Yes, Texans might once have gloried in the oil derricks that sprouted from Midland in the west to Kilgore in the eastern part of their vast domain, but Arkies can take pride in simpler, better things, like our close ties. For if nobody you know may have gone to the same college or law school you did, then it's a safe bet he—or she—went to the same barber or beautician. ("Remember old Speed at the Town & Country shopping center? He could always squeeze you in at the last minute and throw in a good story on top of it as an extra added bonus. And that old .38 caliber Smith & Wesson he kept handy testified to his firm belief in the Second Amendment and all rights and privileges pertaining thereto.")

Me, the best I can do is carry my concealed weapon permit with me and prepare to wave it menacingly at anybody who dares confront me. Fat lot of good that should do. It's been better than half a century since I qualified with a .45 at Fort Sill and walked away with relief, my poncho draped over my fatigues. Serving in the U.S. Army may have been the second most educational experience of my life, the first being helping to rear teenagers, which doubtless hasn't become any easier since.

Even back then, helping to rear a teenager was enough to send me for a consultation with my friend, neighbor and spiritual counselor, the Venerable Reverend Richard Milwee. He just smiled understandingly. For he doubtless had heard the same sad story about the travails of what was then considered modern-day parenting from many of his congregants. They had no way of anticipating what concerns awaited today's post-modern, post-manners moms and dads. For each generation seems to operate under the delusion that theirs is the first to encounter such an experience.

I can still remember the only time my own father laid a hand on me, just as I remember the only time I gave my own son a firm kick to the backside for taunting his sister one too many times. The more things change, as the French say, the more they remain the same. From generation unto generation.

So hold on for still another trip on this carousel. The faster it goes, reducing time itself to just another blur, the sooner it will be before we all leap off into eternity. Even now I can see the assemblage of ghosts there awaiting for a happy reunion. As I'm sure you can, too, as you grow older. Everybody has his own favorite vision of the bucolic, beatific last day. And what a happy day that will be! See you there. You can count on me, if for nothing but memories and everlasting hopes.

Bicyclists join together in a ride across the White River Bridge.

DOUG FRIEDLANDER AND TERRY EASTIN
SPECIAL TO THE DEMOCRAT-GAZETTE

WEST MEMPHIS—It was a dramatic moment as delegations from Arkansas and Tennessee set out at high noon on Oct. 22 from the West Memphis and Memphis ends of the newly christened Big River Crossing—otherwise known as the Harahan Bridge—to meet in the middle, shake hands, and dedicate one of the longest bike-pedestrian bridges in the world.

Thanks to visionary leadership, this project has put Memphis and east Arkansas squarely on the map of a rapidly growing national passion for bicycling, walking, and other forms of outdoor recreation, eco-tourism, and physical fitness.

The development of this attraction was the impetus for the St. Francis Levee Board, which manages the levee from Mississippi County to Lee County, to approve the development of a bike trail atop the Mississippi River levee from the bridge's western terminus in West Memphis all the way to Marianna.

With the possibility of paving a road from Marianna to Helena through Mississippi River State Park being explored and the ongoing development of Delta Heritage Trail State Park—a rails-to-trails conversion that when completed will provide an 84.5-mile bicycle path from Helena to Arkansas City—Arkansas will be able to boast an extraordinary route that would allow avid bicyclists to traverse nearly the entire length of the Natural State on dedicated bicycle paths, an astonishing jewel of an attraction.

But what about a route connecting Memphis to Little Rock, which thanks to an array of developments of its own over the past decade has emerged as a favorite destination for bicyclists? The Arkansas Department of Parks and Tourism website lists as one of its Grand Tours a Little Rock-to-Memphis Tour which

Rectify: reeling through the wilderness

B.3

PHILIP MARTIN

I remember hearing a story about a man who was released from prison after more than 20 years. One of the hardest adjustments he had to an outside world that had attained an Internet and cell phones while he was inside was simply walking on the various uneven surfaces—broken sidewalks and sloping lawns—he encountered in the free world. Inside everything was smooth, flat-planed and predictable. His legs had gotten used to the rhythms of walking and standing a certain regular way; they went rubbery compensating for the variety of experience available in the streets. His equilibrium suffered and he staggered like a sailor trying to recover his sea legs.

That lasted only a few days at most. But it was what he remembered most about his release: the way the free world rocked and gave and unbalanced him.

This is the sort of thing most of us would have a hard time imagining, but it's the kind of detail that feels true. Most of us are familiar with the sense of dislocation that often accompanies a change in environment, even if it's only emerging into the daylight after spending a summer afternoon in a movie theater. If you're taken out of the world for a while, whether by your own design or by some compelling authority, it takes a little while to adjust. It takes a little while for our dreams to release us.

I've got the sense I'm doing this wrong. What I want to do is say something about a television series that is coming to an end, one that most of you haven't seen and that some of you probably haven't heard about. One that might not appeal to some of you. It is called *Rectify* and I believe that it deserves to be considered among the very finest shows that have ever played on television, mostly because it is not the sort of thing that we have been conditioned to expect of television.

Instead, *Rectify* has about it the feel of timeless fiction, an investigative interest in the way human beings court affection and seek to protect themselves in the clinches. It has a kind of moral integrity, an insistence on the primacy of private life; on first and final relationships. It is about a man released from prison and his struggle to re-integrate into the everydayness of grocery stores and coffee bars.

It is about a man who, having been trained to consider every breath, is suddenly thrust into an inconsiderate universe. It's about the ways we look for meaning in a violently random world. It's about figuring out how to live.

All that is vague on purpose. I don't want to review the show, to critique the actors' performances or encapsulate the arc. Either you know the show or you don't, and I don't imagine that my writing about it is likely to make anyone want to hunt down its previous seasons on DVD or tune into the Sundance Channel to watch the show's final few episodes. I hear from people all the time who tell me that they use movies and books and TV as entertainment, as a means to escape from the imperatives they feel pressing in on them from all sides. They contend they use stories as a kind of narcotic, a way of forgetting themselves.

And I don't guess there's anything wrong with that. I'm going to read the new Jack Reacher book. I kind of like James Bond.

Still, it's rare to find good art, and when you do it's worth spending a little time thinking about it. It's worth asking yourself why you think it affects you the way it does, why the words spoken by two actors pretending to be two characters sitting in a room surrounded by dozens of technicians working outside the frame can still somehow move you to the very brink of tears. It's worth thinking about what that means. Why do we buy the illusion? Why do these other-manufactured dreams have the same power—maybe more—than the ones that come to us unbidden?

I know how the trick is done. But I can't explain the magic.

Courtesy and convention require that I disclose that *Rectify* is the product of a friend of mine named Ray McKinnon, who is credited as the creator of the show. (It was maybe seven Christmas Days ago that we ran into Ray on the corner of Kavanaugh Boulevard and Ozark Street in Hillcrest and he spent the better part of an hour describing the series—he even had the title. I told him my story about the man who had trouble walking after he was released from prison; he listened but didn't incorporate it into the series. He had his own ideas.)

But the truth is television shows and movies are collaborations between people who may have competing interests and certainly have different ideas about what they feel is important to communicate. To say it is Ray's show is a shorthand way of suggesting its sensibilities—when I hear the characters speak I sometimes hear Ray's voice. But in this sort of art-making, everybody's talents and obsessions are comingled; with different actors, different folks in the writers' room, it would be a different show.

And maybe not as vital to our time as the present version, which has acquired a kind of soft-footed grace. *Rectify* seems like an antidote to some of the more toxic currents of our culture, to the thoughtless and nihilistic streak that consumes our politics and provides us with fit targets for snark.

It is the duty of the artist to be empathetic, to somehow make what is peculiar and personal resonate and universal. Our default is to tribalism, to taking up with others with whom we share certain attributes, less a skin color or a faith than a story about how we have arrived in the moment. We take comfort in a common history, we are reassured by our agreement with the consensus.

It is the artist's job to make us understand that we are all prisoners of our own experience, and that it's sometimes necessary to feel bereft and confused, staggering across unfamiliar terrain. For that is what it is like to be set free.

Bridge

• Continued from Page 1H

consists of a series of byways that roughly parallel Interstate 40 and passes through Des Arc and Forrest City on its way to West Memphis, where it crosses the Harahan Bridge.

But with all these developments, an excellent alternative with some of the state's best natural and cultural attractions suggests itself: a route that crosses the bridge from Memphis to West Memphis, then heads immediately south through Marianna, continuing through Mississippi River State Park to Helena, a path nestled between the mighty Mississippi on one side and Crowley's Ridge on the other.

From there, the route takes a turn toward agri-tourism as it heads west through some of the most fertile and productive land on the planet. With all manner of row crops (cotton, soy, corn, and—uniquely Arkansas—rice) on display, riders will get a veritable chef's tour of an industry that is central to the identity of the eastern half of the state.

If the dreams of an ever-growing number of grass-roots and statewide leaders are realized, the trail would then cross the historic White River Bridge at Clarendon, which at almost 2.5 miles in length will have been converted into the longest elevated bicycling, pedestrian, and nature-watching platform in the world.

After crossing the handsome steel span over the White River, the route is surrounded on both sides by a magnificent canopy of the Big Woods as the remaining elevated segments (adorned in classic 1930s-era stylized concrete barriers) follow the dividing line between the White River and Cache River National Wildlife Refuges.

From there it's on to Little Rock via the byways that snake through the classic hamlets and small towns of the Grand Prairie. Just imagine it: A river, ridge, row crops and refuges route—a snappy brand for marketing which does not even account for the historical and cultural heritage attractions it includes—connecting Memphis and Little Rock that would call out to visitors with a wide variety of interests, including eco-tourism (birding, wildlife watching, and those passionate about the state's diverse geography including hills, rivers, bayous, sloughs, and oxbow lakes), agri-tourism, music (blues, gospel, rockabilly, and rock 'n' roll), Civil War, and civil rights (especially a route that connects Memphis, Helena/Elaine/Lake View, and Little Rock). This would be an epic Great American Route that would attract visitors from all over the world.

Most of the elements of the aforementioned Great American River, Ridge, Row Crop, and Refuges Route (if you fancy the title) are already in the works. There's just one part that's in the wind: The historic White River Bridge at Clarendon has been on the demolishing block for some time. Only a lawsuit by the nonprofit Friends of the Historic White River Bridge at Clarendon and the cooperation of the Arkansas Highway and Transportation Department in temporarily delaying the letting of bids to demolish it stand in the way of a mistake that will long be rued if the demolition is allowed to proceed.

Aside from the loss of what could be the centerpiece of a world-class bicycle route between Memphis and Little Rock, there are ecological and fiscal arguments in favor of preserving rather than demolishing the historic bridge. Among these is the estimated $10 million-$15 million price tag for demolition and remediation, which will come out of state and federal highway coffers. At a time of substantial federal deficits and with our state exploring ways to increase highway revenues, it is hard to countenance an expenditure that would remove something that has a recipient willing to take ownership and which stands to provide significant tourism and quality-of-life benefits to the state.

Fortunately, the Friends of the Historic White River Bridge at Clarendon are not the only ones compelled by these arguments. Both Arkansas Governor Asa Hutchinson and Department of Arkansas Heritage Director Stacy Hurst have been avid supporters of the project, going so far as to advocate aggressively for the preservation of the bridge as far away as the halls of Washington, D.C.

In addition, numerous bicycle and outdoors advocacy organizations have added their voices in support of the project. On top of that, a growing groundswell of public support for preserving the bridge has emerged in the past few months. On Sept. 24, a rally was held at the foot of the historic White River Bridge in Clarendon that had robust attendance including bicycling enthusiasts from Little Rock and Helena. An online petition launched a week before that has already gathered more than 1,350 signatures representing 39 states and 28 countries (94.5 percent of all signatures were from the United States and 77 percent of all signatures were from Arkansans), while an online fundraising campaign launched in early October has raised over $15,000 to help cover legal and other costs associated with saving the bridge.

Finally, since the lawsuit to save the bridge was first filed in federal court in June, the effort to save the bridge has garnered substantial media coverage, including being featured once on television, twice on the radio, and more than a half-dozen times in print, including a Sept. 30 editorial in the *Arkansas Democrat-Gazette* titled "Save this bridge."

This brings us back to the recent grand dedication held in West Memphis and Memphis. The similarities between the celebrated efforts to preserve and adapt the Harahan Bridge for bicycle/pedestrian use and those to do the same for the historic White River Bridge at Clarendon are hard to miss.

Just like the Harahan Bridge development caused a cavalcade of dominoes (new developments like the bicycle path connecting West Memphis to Marianna) to fall, imagine the future developments that will make sense once the historic White River Bridge is established as the crowning jewel of the River, Ridge, Row Crop and Refuges trail.

We're not just talking about other tourism attractions that could be developed later because they're on the route, but also the cascade of economic development for the struggling communities of rural eastern Arkansas in the form of restaurants, convenience stores, bicycle repair services, and places for overnight accommodation both formal (like hotels and bed & breakfasts) and informal (like Airbnbs).

As we all start coming back down to earth after the thrill of dedicating the Harahan Bridge, some part of us naturally says, "That was amazing. When do we get to do something like this again?" The answer is right in front of us if we have the eyes to see it. If the White River Bridge is saved from demolition and successfully adapted for bicycling, pedestrian, and wildlife watching, it will surpass the Harahan Bridge and take its place among the longest dedicated bicycling-pedestrian bridges in the world. This, in many ways, will be the realization of a larger dream to make our region a national and international leader in outdoors and adventure tourism, of which the Harahan Bridge was simply the first part.

On that day, the celebration will surely rival the one that took place in 1931 when the bridge was first opened for vehicles.

A decade or so ago when conversations about the Harahan Bridge began, there were a few brave souls who had the foresight to see past the reasons why it wasn't a good idea or the safe thing in which to invest private funds. In boldly going forward, these people created something extraordinary in which many delight and of which everyone is proud.

It makes me think of the saying about how a success has many fathers, while a failure always seems to be an orphan. A success like the Harahan Bridge did indeed have many fathers by the time the ribbon was cut, but in its early days and in the many difficult days in between it probably had far fewer courageous supporters that claimed it, to whom we all owe a great debt of gratitude.

Likewise, as a small but determined group of people attempt to follow up the Harahan Bridge with a "Miracle on the White River," every one of us has the opportunity to decide whether we'll be one of those that step forward with vision and courage to be a father to the dream long before success is evident, or whether we'll remain on the sidelines and leave it an orphan. The choice is ours.

To learn more about how you can support the efforts to preserve and adapt the historic White River Bridge at Clarendon, visit whiteriverbridge.org.

Doug Friedlander is with Friends of the Historic White River Bridge at Clarendon. Terry Eastin is Executive Director of the Big River Strategic Initiative, a collection of projects including the Big River Crossing, the Delta Regional River Park and the Big River Trail designed to activate and celebrate the Mississippi River and its surrounding landscape.

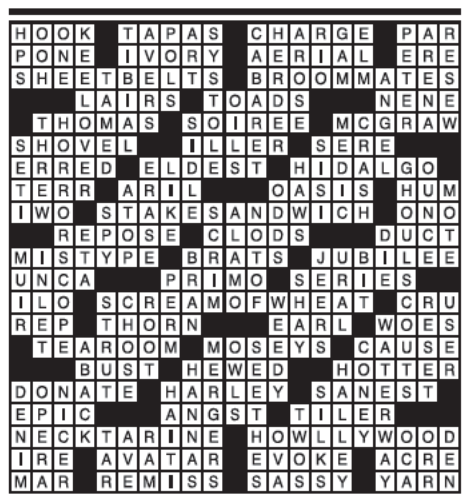
Answers to last week's puzzle



10/30/2016

The election's over!

Reality check

BRENDA LOOPER
ARKANSAS DEMOCRAT-GAZETTE

I apologize in advance: I won't be funny today, at least not intentionally. Instead, very seriously, I make this plea: Cut it out, and get a grip.

It's now a week later, and it seems the campaign is still going on. Some of us would really like to move on, thank you very much.

For everyone: Stop taking offense at everything that doesn't fall in line with your beliefs, and recognize the differences between emotion-backed opinion and facts. Differences of opinion are inevitable, and unless you live in a cave, you are among people with different beliefs than you every day. Respect those differences, don't paint all your opponents with the same brush, and try—just *try*—to get along without expecting everyone to give you a safe space from things that might possibly offend you.

For those who voted for Hillary Clinton, sorry. Spit out any sour grapes and don't let yourself get too down or be baited by those who can't let rationality or civility get in the way of some deserved gloating. When you respond in kind, it just perpetuates the cycle.

For those who voted for Donald Trump, congratulations, your guy won. However, realize that not everyone is happy with the results of the election, nor have they been happy with the entire campaign season that spent most of its time in the mud. People will protest what they don't like, and as long as they stay peaceful, they're well within their rights. If you don't like it, you don't have to pay attention to it; there is no right not to be offended. And don't forget history: There were indeed protests when Barack Obama was elected and re-elected, and the Tea Party movement is just one enduring example.

Accept that a large portion of the population is rightfully frightened of what the future has to hold, considering all the documented incidences of verbal and sometimes physical assaults on opponents, and the expressed views that place women, minorities, the LGBT community, immigrants and others in the cross-hairs of hateful rhetoric. This is what your candidate has advocated, and it has emboldened far too many people to continue the abuse past Election Day.

Reports of immigrant children being bullied, Muslim women's hijabs ripped from their heads and the like are not what we should be hearing in a civilized society. If someone is attacked primarily because of ethnicity, religious beliefs, or gender, it's discrimination. Pointing that out is not.

The media reports; that's what it's *supposed* to do. Reporting something you perceive as negative about your guy, or something positive about the opposition, isn't proof of bias. If you look for bias, that's all you will find. Objectively, most reputable news sources have little to no slant in overall content, and are not there to enable your confirmation bias.

For pollsters: Fix your antiquated polling techniques immediately or do as Gallup did and cease predictions on the presidential race.

For President-elect Trump: Please, please, *please* control yourself, and lay off Twitter. Seek the advice of wise counsel, especially in regards to the costs and constitutionality of much of what you have proposed. Understand that when you wind people up with the sort of rhetoric you've used, there will be ramifications that can be felt for years. Take responsibility for your actions. Most of all, surprise us by not being who you were on the campaign trail. Oh, and hire a fact-checker, please, for all our sanity; too many people believe everything you say, even when it's not the least bit true.

For Secretary Clinton: Sorry you lost, but keep fighting for women and children, because they need the help. Understand that even though you lost, some people can't let it go and will continue to attack you. Rise above.

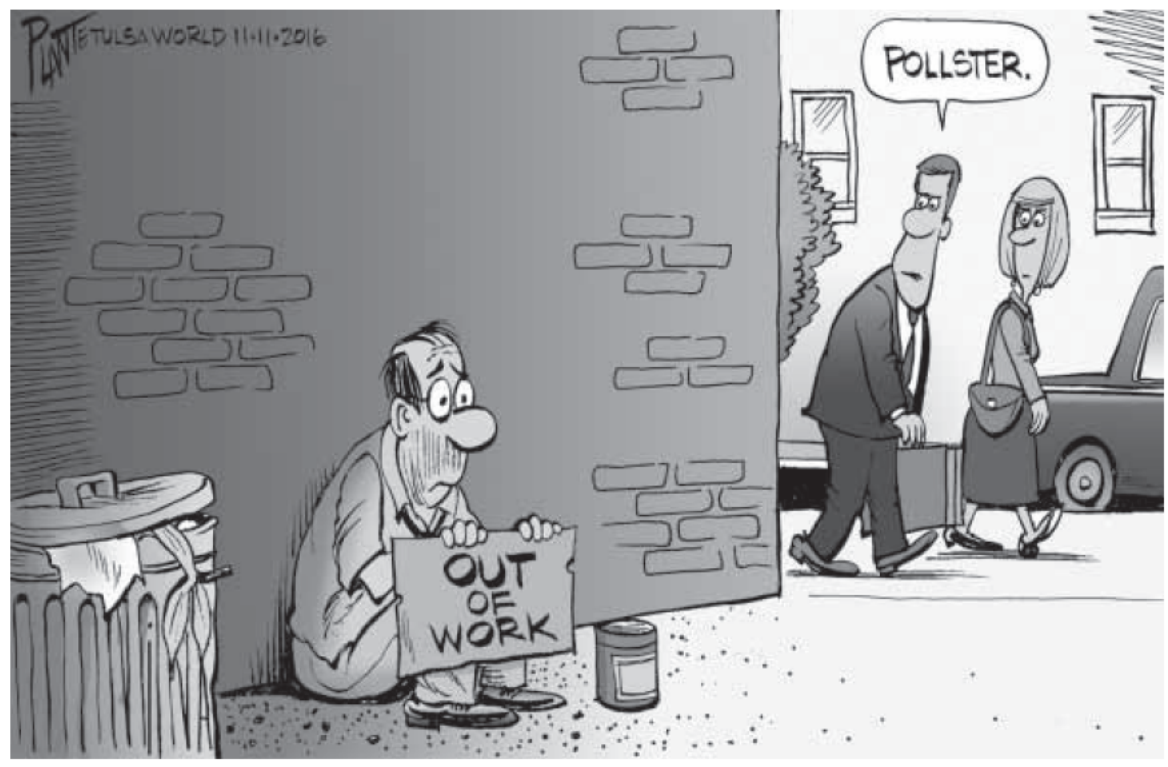
For all of us: Breathe. Keep calm. Be civil. Laugh. Pet a cat or a dog. Enjoy life, because it goes on.

I'm proud to work for a newspaper that takes its role seriously and keeps news and opinion separated. If only most of the cable news outlets were more interested in news than what accusations are being flung, especially when there's little to no evidence. (No, stories from hyperpartisan networks and websites with single sources and/or satire taken as truth don't count.) Having spent the bulk of my career on the news side of this newspaper, I know how hard it can be to create what you hold in your hands right now.

I'm also grateful, in the more than five years I've been on the opinion side, that we manage most of the time to keep an overall balance of opinions between the two pages. Yes, I'm tough on fact-checking, but wise readers have figured out that the way to get a letter in is to be factual and/or make opinion clear. It also helps to keep it clean, give proper attribution, refrain from convicting people in print, and not harass staff or other letter-writers.

I really shouldn't have to say that.

Assistant Editor Brenda Looper is editor of the Voices page. Read her blog at blooper0223.wordpress.com. Email her at blooper@arkansasonline.com.



Bridging the White River

Rex Nelson

French hunters and trappers constructed cabins on the White River at the mouth of Cache River in the late 1700s. By the 1820s, what was known as the Military Road between Memphis and Little Rock crossed the White River at Clarendon.

"By 1828, a ferry crossing and post office were established, likely attracting more settlers," W.R. Mayo writes for the Encyclopedia of Arkansas History & Culture. "Monroe County was created on Nov. 2, 1829, by the Territorial Legislature from portions of Arkansas and Phillips counties with Clarendon becoming its county seat. It remains so to this day. ... The White River served as an important byway for Union forces during the Civil War and was heavy with gunboat traffic, with Clarendon serving as a skirmish point. After the war, the town resumed its role as a port for cotton and other commodities."

The St. Louis Southwestern Railway (commonly known as the Cotton Belt) built a bridge at Clarendon in 1883. Meanwhile, highway traffic continued to use a ferry until 1931, when a bridge was constructed. That bridge has been the subject of a battle dating back several years. A nonprofit organization known as the Friends of the Historic White River Bridge at Clarendon was formed in 2014 to advocate saving the span (a new one recently opened for traffic on U.S. 79) for use by cyclists, hikers and wildlife watchers.

"Only a lawsuit by the Friends of the Historic White River Bridge at Clarendon and the cooperation of the Arkansas State Highway and Transportation Department in temporarily delaying the letting of bids to demolish it stand in the way of a mistake that will long be rued if the demolition is allowed to proceed," says Doug Friedlander of Helena, who's leading an Arkansas Delta tourism initiative. "Aside from the loss of what could be the centerpiece of a world-class bicycle route between Memphis and Little Rock, there are numerous ecological and fiscal arguments in favor of preserving rather than demolishing the historic bridge. Among these is the estimated $10 million to $15 million price tag for demolition and remediation, which will come out of both state and federal highway coffers. At a time of substantial federal deficits and with our state now exploring ways to increase highway revenues, it's hard to countenance this type of expenditure just to remove something that has a recipient willing to take ownership."

Friedlander left his job at a software company in the Research Triangle of North Carolina to come to the Arkansas Delta in 2004 to teach high school science as part of the Teach for America program. He says he wanted to make more of a difference in the world. A *New York Times* story from Helena in July 2013 began this way: "If you are from around here, you know Doug Friedlander is not. Born in New York City and reared on Long Island, Mr. Friedlander is Jewish and vegetarian and has a physics degree from Duke. But here he is, at 37, living in a roomy white house in this hard-luck Delta town of 12,000. Mr. Friedlander and his wife, Anna Skorupa, are part of a gradual flow of young, university-trained outsiders into the Delta's shrinking communities, many of whom arrived through Teach for America and stayed beyond their two-year commitment. Mr. Friedlander is now the ambitious director of the county's chamber of commerce. He frets over the kudzu that is devouring abandoned buildings. He attends Rotary Club meetings, where he sidesteps the lunch offerings for carnivores. He organizes workshops to modernize small businesses and pushes tourism and the development of a decimated downtown along the banks of the Mississippi. The mechanization of agriculture, lost manufacturing and a legacy of poverty and racism have taken their toll on the Delta, but Mr. Friedlander is thrilled to be here."

Across the Arkansas Delta, it sometimes takes those raised in other states to force natives to recognize assets such as the old bridge at Clarendon; assets that could be the building blocks for the region's future. A group of Delta natives has now joined forces with Friedlander to develop a regional plan centered on things such as bicycling, paddling, hiking, birdwatching, agricultural-based tourism and cultural heritage initiatives.

In a 2014 interview, Friedlander was asked to give advice to Delta newcomers. He said the first rule is to "have an attitude of respect and humility, not coming in like a superstar." He said the second rule is to "volunteer constantly and show up religiously. In any community, there's only a small subset of people who show up and do things, and when they see you showing up, they'll start to see you as a brother or sister." The third rule is to "share credit. Make other people look good." Though the young, talented newcomers are quick to share credit with the natives, they're the ones who have forced Delta residents to look at things in a new way. The fight to save the Clarendon bridge is an example of that. A decade ago, people would never have given the destruction of the bridge a second thought.

"The Arkansas Delta has fantastic assets for tourism that are largely unknown and underutilized," Friedlander says. "Like a keen investor, the trick is to identify an undervalued resource and invest in it before its value is obvious to everyone else."

Something has to give

I have been struck by the call of unity, to come together and give Donald Trump a chance. I am more than willing to give him a chance, just as I gave Reagan and Bush a chance. However, I find this request disingenuous as I think back to when Barack Obama was elected and the Republicans' mission statement was to make Obama fail, not come together for the good of the country.

Where was the request to come together when the extreme right of the Republican Party refused to consider compromising with anyone from the other side of the aisle or even members of their own party?

Where was the protest and call to come together when John McCain stated that the Republicans were willing to filibuster *any* Supreme Court nomination that Hillary Clinton would put forth if she was elected?

For the good of the country, please tell Trump supporters to stop accosting women merely because they aren't white or are wearing a hijab. Tell the man who drove up to a black woman not to yell the n-word and declare that, "We just took back the country."

Please give us a reason to come together when the predicted acts of hate, as a result of a Trump win, are running rampant and so many Americans are living in genuine fear of their lives—not of their guns being taken away. Show your unity against these home-borne acts of terror and then, maybe, we will think about giving Trump a chance.

Conversing with kids

Recently, *Good Morning America* had a segment with a child psychologist concerning how to talk to your children now that Donald Trump is president-elect.

After trying to set a good example for my grandchildren, teaching them right from wrong—cheating, not acceptable; lying, not acceptable, and so on—if Mrs. Clinton had won, I believe I would have to have the "talk" with them. Go ahead, lie, cheat, and rules won't apply to you. You are entitled.

Thank God we won't need to have that conversation.

SHARON DERDEN

System needs update

Once again we have been shown that our system, which made sense at our country's beginnings, needs some tweaking to catch up with 2016.

The Electoral College is archaic. Hillary Clinton won the popular vote. The Electoral College says Trump won.

When you wonder why people don't vote and others who know their vote doesn't matter, all you have to do is look at the system that was set up when people used horseback for transportation. It made sense then to have representatives who could take the citizens' voices and make them heard through their vote. It no longer makes any sense at all.

If the governor can be given powers to run the state while he is out of state, which he should be able to do, then the citizens of our country should be able to vote directly for the presidency. And the person who gets the most votes should be the person who leads us. That is democracy. If Arkansas can catch up to current day, then surely our country can.

Test for Republicans

I am a life-long Republican, traitor to a family tradition of voting Democrat. My first campaign work was done while in college for Winthrop Rockefeller. Years later I was proud to help put George W. Bush in the White House.

But in recent years I have become increasingly unhappy with the Republicans I helped elect. Probably the beginning of my disillusionment began with Bush for his slap-happy way of throwing money at any problem. Then, many more Republicans seemed unable to ever say "no" to spending, while we went deeper into debt.

What has galled me the most has been the Republican leadership in both houses of Congress, which could not stand up to the first black president. I have been furious that they would campaign as great defenders of conservative ideals, but then cave time after time.

Now we have a new president who is Republican, but not in the sense I have always been. But he understands the concerns of people like me, such as terrorism coming to the U.S., God-knows-what coming across our practically undefended southern border, our catastrophic debt, the lack of justice from the Justice Department, and the unbelievable Supreme Court justices who believe the Constitution should be interpreted by the laws of the United Nations or current conditions.

We now have the power to control Washington. At least with Donald Trump, we have a little hope that what we hold dear about America has found a new champion.

I don't know what's going to happen to the Republican Party and that makes me sad. But I am one of the ones who wants elected Republicans to go out and fight. If the Republican establishment does not stand with Trump in this new era, then I am one who will be standing with Republicans no longer.

GERI ALLEN
Mountain Home

It was the candidate

I believe anyone claiming that Hillary Clinton lost because Americans would not vote for woman are wrong. I think the vast majority of Americans would vote for a woman ... just not *that* woman.

If the sex of the candidate is the only reason you support that candidate, then you should not be voting.

FRANK LATIMER
Sherwood

Fit for the deserving

True meanings lost

Ill-defined words

BRENDA LOOPER
ARKANSAS DEMOCRAT-GAZETTE

Like me, former U.S. Rep. Vic Snyder is concerned that some words have been shunted from their primary meanings. Regarding "elite" or "elites," Snyder said in an email, "I fear we've taken a word that used to mean top-notch, like an elite military unit, and turned it into a term of denigration."

He's not wrong; considering his Marine Corps past, I think he knows just what the word *should* mean.

It hasn't been just on one side, either. As Snyder told me, "It was a word clearly abused in a bipartisan manner."

"Elite" since the 18th century meant "the best," or as Oxford defines it, "a select part of a group that is superior to the rest in terms of ability or qualities." Now, however, a mid-20th century secondary meaning has crowded out the first definition in favor of one that more accurately describes "elitist" (one who believes he is superior to others and thus entitled, or who believes in government by the few), not the "elite." "Elite" is a status, "elitism" is an attitude, and someone can be a member of the elite without being an elitist.

"Elite" is far from the only word that, in the political realm, has become a dirty word. "Fact," especially as it relates to fact-checking, has come to mean whatever you believe to be true ... whether it actually is or not. "Mainstream," once thought of as being the prevailing current of thought, has now come to mean liberal and biased. "Liberal," of course, now means just about anything bad rather than "tending in favor of freedom and democracy," per the Online Etymology Dictionary. "Patriot" no longer means "fellow countryman," but someone who single-mindedly wants to defend his rights, especially against a government that he believes abandoned him.

And yep, even "moderate"—which describes most people, considering the growth of those identifying as independent—has devolved to mean "wishy-washy." Most moderates I know would say no, a moderate considers both sides and deliberates carefully before choosing the path to follow. Being cautious and open-minded about serious matters isn't a bad thing. Well, unless ideologues say it is.

Roger Baker wrote in Salt Lake City's *Deseret News* in 1994: "It may be that every word really has two meanings. One meaning is the denotation and carries no emotion. The other meaning is the connotation and carries the feeling. It is the connotation that charges a perfectly good word with invective, or spite, or envy, or affection and romance. This is why GM, Ford, and Chrysler don't just sell 'cars.' They use names that carry emotion and sell Cougars, Cadillacs and Stealths. These words are labels designed to make us feel."

That's sort of the point. We've taken to ignoring the denotation and placing all faith in the connotation; emotion thus carries the most weight. "Politician," for example, primarily means "one actively engaged in conducting the business of a government," according to Webster—a non-emotional definition. It's more often used now to mean a scheming someone more interested in his own well-being over others, and who delights in the machinations of modern politics. Not exactly unemotional there ... and also quite broad if you think about it.

One of the saddest examples I see far too often is "compromise." Back in 1850, Sen. Henry Clay said that life itself is a compromise, noting: "All legislation, all government, all society is formed upon the principle of mutual concession, politeness, comity, courtesy; upon these, everything is based. I bow to you today because you bow to me. You are respectful to me because I am respectful to you."

But now, giving any ground is seen as sacrilege by the hyper-partisan; it must be all or nothing. Except that's not how life works—at least not when you want society to work—and there's that whole "tyranny of the majority" thing to consider.

And mutual respect? Overrated. It's far more fun to treat everyone like dirt, then expect them to respect you for it. So I guess my mama was wrong in saying I should treat people as I want to be treated. Dang it.

Compromise is not a dirty word, nor is elite or many of the other words that have become so ingrained in our hurled political epithets (and "epithet" is another word that has morphed into a pejorative). So what can we do?

Stop being so prone to taking offense at every little thing. Read only what's in front of you rather than what your biases (we all have them) tell you is there. Be inquisitive and seek voices outside your bubble. Be skeptical and seek actual truth (not just what your favorite source tells you is true ... it might not be).

And please, calm down. I'm pretty sure the sun will come up tomorrow if you take words like "elite" at face value.

The cycling hub

Rex Nelson

On a Saturday in late October, dignitaries from Arkansas and Tennessee gathered on the Harahan Bridge over the Mississippi River at Memphis to celebrate the opening of the Big River Crossing. The pedestrian boardwalk allows cyclists and walkers to cross the river. The $18 million boardwalk, the longest of its kind in the country, was funded by federal, state and local government grants along with private contributions. Cyclists and walkers will share the bridge with Union Pacific freight trains.

"Unless you've been a train conductor, it's a view that you've not seen of downtown Memphis since 1949," Memphis Mayor Jim Strickland said. "It's such a civic and cultural amenity for our current residents. I think it will draw tourists from all over the world."

"Thanks to visionary leadership, this project has put Memphis and east Arkansas squarely on the map of a rapidly growing national passion for bicycling, walking and other forms of outdoor recreation, ecotourism and physical fitness," says Doug Friedlander of Helena, who's leading a regional tourism initiative. "This unprecedented attraction was the impetus for the St. Francis Levee Board, which manages the levee from Mississippi County to Lee County, to approve the development of a bike trail atop the Mississippi River levee from the bridge's western terminus in West Memphis all the way to Marianna."

Three weeks after the event at Memphis, some of the world's best mountain bikers gathered on the other side of the state for the International Mountain Bicycling Association (IMBA) World Summit at Bentonville. The four-day summit, held every other year, began in 2004 and previous host cities include Whistler, British Columbia; and Steamboat Springs, Colo. With five mountain bike trails designated as "epic rides" by the IMBA, Arkansas and Colorado are tied behind only California in the number of trails. IMBA has listed Bentonville, Fayetteville and Hot Springs as "ride centers" and Northwest Arkansas has become the IMBA's first "regional ride center."

As one Arkansas cycling enthusiast put it, mountain biking and road cycling are "the new golf." Consider what Alabama did in creating the Robert Trent Jones Golf Trail, a collection of world-class courses, many of which have adjacent resort hotels. That effort put Alabama on the tourism map for thousands of wealthy Americans who never would have considered visiting the state otherwise. Arkansas wants to do that in the area of cycling. Gov. Asa Hutchinson and the Arkansas Department of Parks and Tourism are promoting the state as the "Cycling Hub of the South." Hutchinson created a Governor's Advisory Council on Cycling, and the Walton Family Foundation provided a $309,000 grant to IMBA to maintain the state's five "epic rides," which contain almost 200 miles of mountain biking trails. Arkansas is the only state to have full-time professional crews maintain such trails.

While the mountain biking focus is on areas in the Ozark and Ouachita Mountains, the Delta provides some of the greatest potential. There are ongoing efforts to pave a route through the St. Francis National Forest from where the levee route ends at Marianna all the way to Helena. Several years ago, the state entered into an agreement with the U.S. Forest Service to develop Mississippi River State Park in the St. Francis National Forest. The St. Francis is the only national forest that touches the Mississippi River.

There's also the ongoing development of Delta Heritage Trail State Park, which is being built in phases along 73 miles of right-of-way donated by Union Pacific to the state in 1992. This once was the route of the Missouri Pacific's Delta Eagle and passes through the most scenic areas of the Big Woods. This part of the state has the largest remaining segments of the Big Woods, a bottomland hardwood forest that once extended down both sides of the Mississippi River from Cairo, Ill., to New Orleans.

The Delta Heritage Trail starts one mile south of Lexa in Phillips County and extends to Cypress Bend in Desha County. The first hiking and biking segment opened in 2002 from Helena Junction near Lexa to Barton. Just more than 20 miles of the trail have been developed. Hutchinson and Kane Webb, the new director of the Department of Parks and Tourism, have ridden bikes on the trail and made its completion a priority. The southern terminus of the railroad right-of-way will connect with the Mississippi River levee, and the trail then will extend another 11 miles to historic Arkansas City.

Cyclists eventually should be able to cross the Mississippi River at Memphis and go all the way to Arkansas City. "Arkansas will be able to boast an extraordinary route that would allow the avid bicyclist to traverse nearly the entire length of Arkansas entirely on dedicated bicycle paths," says Friedlander. "It would be an astonishing jewel of an attraction truly worthy of the Natural State." Friedlander, who's also spearheading efforts to save the old U.S. 79 bridge over the White River at Clarendon for use by cyclists and hikers, envisions a "cascade of economic development for the struggling communities of rural eastern Arkansas in the form of restaurants, convenience stores, bicycle repair services and places for overnight accommodation."

With a popular governor and the Walton family on board, the effort to make Arkansas the "Cycling Hub of the South" just might succeed.

Milk's words relevant

Harvey Milk, civil rights leader and the first openly gay man elected to public office in the U.S., was assassinated 38 years ago this past Sunday.

I wasn't alive when the Briggs Initiative was proposed—a California law that would have facilitated the widespread banning of gay teachers (or anyone who supported LGBTQ rights). I know that the residents of California came together and firmly rejected it.

I am alive in 2016, a time where there are over 100 active anti-LGBTQ bills in 22 state legislatures. And soon, there will likely be a nationwide anti-LGBTQ law proposed with the words "religious freedom" slapped on the front to try to conceal the reality of its violent nature.

Harvey Milk always spoke on the importance of hope. It is my hope that Arkansans will recognize that these "religious freedom" bills contain the opposite of the promise of freedom. I believe they provide another avenue for discrimination against our neighbors. I suggest rereading Milk's words because they are just as relevant today as they were 40 years ago.

CAMILLE RICHOUX
Little Rock

An attempt to divide

After eight years of divisive and segregated policies, I believe the presidential recounts are not intended to flip the election; it's to undermine the Donald Trump administration and his attempt to unite it.

I think the people who call themselves Democrats today are not real Democrats. The old real Democrats loved this country and elections were battles on how to make it greater. It seems those who call themselves Democrats are out to destroy the Constitution of the United States and the rights within.

The Republican Party should monitor very close any recount because I believe these Democrats have earned no trust. I believe President-elect Trump is demonstrating the ability to select good people with hope of uniting our country and to truly make it great again.

FLOYD HOPSON
Hazen

Cost-effective at UA

The highest-paid state employee in Arkansas is our football coach, Bret Bielema, at $4 million-plus per year. We just struggled through another mediocre season, including a 56-3 thumping by Auburn and an embarrassing loss to Missouri, the worst team in the SEC this year.

In his four-year tenure, we have an overall record of 25 wins, 25 losses; conference record of 10 wins, 22 losses. These include losing the first 13 conference games we played under his leadership.

Recently they closed the printing office at the U of A, costing people their jobs and paychecks. The reason given was that it was not "cost-effective." Perhaps they should apply the same standard to our football program.

Agreed on that point

Congratulations, Arkansas. You have voted to elect a narcissistic windbag.

Donald Trump said one thing during the campaign that I agree with: The election was rigged. Over and over on the campaign trail, he said it was rigged. So I must conclude that his election is not legitimate.

The combination of the words "Trump" and "president" will never cross my lips.

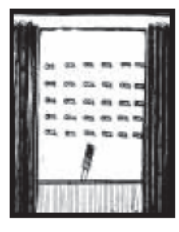
K.E. POLLOCK
Little Rock

System secures votes

Following the recent election there has been some criticism of the electoral college system of electing our president. Many of the complaints center around the fact that one candidate won the popular vote but lost the electoral college.

I would first point out that *neither* candidate got a majority of the votes, so a win based upon a plurality of the votes would also be subject to criticism, possibly requiring a costly runoff (the instant-runoff procedure advocated by some could solve that problem)

Second, I agree with those who say that the electoral college system preserves a say in the process for the states with lesser populations. Just by way of example, there was some speculation on election day that New Hampshire's four electoral votes might be the key to winning the election. Without the electoral college, candidates would campaign only in the most populous states, and probably only in the most populous metropolitan areas.



Third, consider the following admittedly extreme but not so far-fetched scenario: Candidate for president A is from the state of Wyoming, and candidate B is from California. Both candidates are popular nationwide, but because she is more popular, candidate A carries the other 48 states by an average of 50,000 votes per state. She carries her home state of Wyoming by an 80-20 percentage, giving her around 120,000 of that state's votes. At that point, not counting California, candidate A leads candidate B by 2,520,000 votes. Candidate B gets two-thirds of California's nine million votes, beating A in that state by three million votes. Candidate B therefore wins the popular vote by 480,000 votes, even though he carried only one state. I love my fellow citizens from California, but I would not want the wishes of 49 states to be subordinate to the wishes of any one state.

OLD NEWS

Paper led dictatorial campaign to aid kids

CELIA STOREY
ARKANSAS DEMOCRAT-GAZETTE

A hundred years ago, the *Arkansas Gazette* counted down the days of December by badgering readers to buy gifts for poor children and deliver those gifts in person.

The newspaper exhorted readers to call its Goodfellows editor at phone number Main 4001 to sponsor one of the children listed in something called the Goodfellows Club of Little Rock's "kiddie book."

These weren't tiny stories tucked tidily into a bottom corner of Page 9 or 10. December 1916's *Gazettes* also made a daily march through the titles of 300 "Christmas books" to buy for boys ... uhhh ... and girls, as recommended by the public library, and that was slipped in wherever it fit, but the Goodfellows campaign appeared up front and center above the fold of the front page, every day.

And it didn't suggest. It grabbed heartstrings and yanked. Imagine that Pet of the Week were intended to make the reader feel guilty for not adopting the weekly cat.

Although no names were printed, the paper described pitiful children and their miserable families in privacy-threatening detail. Witness the kiddies of Dec. 12, 1916:

"The family is desperately poor, so poor that the little five-year-old girl is now wearing boy's clothing because her brother had more than he needed and she had none."

After the "club investigator" inspected their poverty and informed their mother the newspaper intended to publish their story in hope of inspiring a Samaritan to bring them gifts, the children followed him down the street for five blocks.

"The little girl went, too, unashamed of her boyish garb, and her mother's worn-out shoes that covered her feet. She was not ashamed because she did not know that little girls in her station of life may hope for anything better. Ragged shoes and makeshift clothes are a matter of course for her."

1916 was the newspaper's fifth year of Goodfellows appeals, and marketing lessons had been learned during the earlier efforts. Pity the blind man's family:

"Goodfellows, have you seen the little red-headed, cheery, bright-faced boy who leads the

Traveling the levee

Hike or bike scenic Big River Trail stretching from West Memphis to Marianna

BOB ROBINSON
SPECIAL TO THE DEMOCRAT-GAZETTE

WEST MEMPHIS — The Natural State has a spiffy new bicycle-tourist attraction, and I'm not talking about the refurbished Harahan Bridge, although that's attractive, new and part of it.

I'm talking about a 73-mile walking-and-biking trail on riverside levees from West Memphis to Marianna.

The Big River Trail was "five years in the making," as the press was reporting when a group of friends and I decided it was high time to check it out. So we loaded up the bicycles to set out on our "Big River Adventure."

The origin of the trail can be traced back even further, to 2009 in Memphis, when Charles McVean began manufacturing hybrid bicycles. McVean is chairman and chief executive officer of McVean Trading & Investment LLC and owner of Aerobic Cruisers Hybrid Cycles LC. Realizing that the Memphis area offered very little infrastructure to ride the bikes he was building, he came up with the idea of converting the Harahan Bridge, a 100-year-old railroad bridge over the Mississippi River, into a bicycle/pedestrian crossing.

SOURCE: bigrivertrail.com Arkansas Democrat-Gazette

The bridge conversion developed scope-creep when McVean began to consider where people would ride once they crossed the river and reached the Arkansas shore.

Not wanting it to be known as "the bridge to nowhere," he gave this issue much consideration before arriving at the obvious solution. Create the Big River Trail, a bicycle or walking path on top of the Mississippi River levee, which stands just a short distance from the west access for the bridge (off Interstate 55) and extends all the way to Marianna.

Obtaining permission to allow bicycles and pedestrians on top of the levee was no easy task. Sections of the levee in the St. Francis District had not been open to public use since 1893.

After five years of working with various associations in charge of the levee, he still lacked approval for a trail. Then McVean hired Terry Eastin of Fayetteville and formed the Big River Strategic Initiative to execute his vision.

Eastin, Arkansas Delta Byways' Delta Tourism Person of the Year for 2015, has been chief fundraiser and coordinator of the National Geographic Geotourism Initiative, executive director of the Mississippi River Trail Inc. and a core team member for the Walton Family Foundation-backed advocacy group Mississippi River Cities and Towns Initiative.

See LEVEE on Page 6E

Bollywood sitcom telecast in TriBeCa

WATCH YOUR LANGUAGE!

BERNADETTE KINLAW

A portmanteau is the smashing together of two words. The word "portmanteau" started as the name for a suitcase that opens into halves. George Bailey probably would have used a portmanteau on his trip around the world, had he ever made it out of Bedford Falls.

English writer Lewis Carroll seized it in *Through the Looking Glass*. His ovoid oracle, Humpty Dumpty, educated Alice on the meaning:

"Well, 'slithy' means 'lithe and slimy'... You see it's like a portmanteau — there are two meanings packed up into one word."

Some portmanteaus have been in the language for so long that you might not think of them as smashed. The words "smog" and "brunch" have been in use since the late 1800s. "Motel" has been used since the 1920s.

smoke + **fog** = smog
motor + **hotel** = motel
telephone + **marathon** = telethon
breakfast + **lunch** = brunch
parachute + **troops** = paratrooper
squeeze + **crunch** = scrunch
dumb + **confound** = dumbfound
television + **broadcast** = telecast
squirm + **wriggle** = squiggle
snort + **chuckle** = chortle (Another Lewis Carroll creation, from "Jabberwocky.")

Arkansas Democrat-Gazette/NIKKI DAWES

I never knew this was where "internet" was from:

international + **network** = internet

Manhattan is big on portmanteaus:

North of + **Little Italy** = NoLiTa
South of + **Houston** = SoHo
Triangle + **Below** + **Canal** = TriBeCa

The entertainment world has some examples:

situation + **comedy** = sitcom
Bombay + **Hollywood** = Bollywood
Brad Pitt + **Angelina Jolie** = Brangelina

I was relieved this week to see that "Brangelina" had not invaded the Merriam-Webster online dictionary. It may be even less likely to make it now. But "Bollywood" is in there.

Other smashed words are used casually:

channel + **tunnel** = chunnel. That train tube that runs from England to France.

bro + **romance** = bromance. A close friendship between men. Wow, this is in Merriam-Webster.

work + (a variation on) **alcoholic** = workaholic. A person who works compulsively.

gigantic + **enormous** = ginormous

email + **invitation** = evite. I need to see what Miss Manners thinks of evites.

I use the word "evite" in Scrabble all the time, and I thought it was an emailed invitation. Silly me. It's an archaic word for "avoid."

I wish I could fast forward a century or so to see whether these words have survived.

DESSERTS VS. DESERTS

If I were ever to open a restaurant, I would call it Just Desserts and serve only sweets. In other uses of the phrase, though, the proper spelling is "just deserts."

He had played Smashing Pumpkins, Nine Inch Nails and Nirvana CDs for 12 hours straight. He got his just deserts when she played just one song for 12 hours: "Call Me Maybe."

The phrase means one gets what one deserves. That's how you can remember the spelling. "Deserve" has one s, and, in this context, "deserts" also has one s.

And I am repeating myself from an earlier column, but to remember the spelling of "desserts," the way you end a proper dinner, think, "Desserts are super sweet." The "s" is in there twice.

Correcting 'anterior imbalance' easily achieved

MATT PARROTT
SPECIAL TO THE DEMOCRAT-GAZETTE

Arkansas Democrat-Gazette/CELIA STOREY

Beverly Lindberg makes the rather challenging Archer Row look easy at Little Rock Racquet Club.

In the 1980s and '90s, many fitness programs were developed with the specific purpose of improving the "mirror muscles" — that is, the muscles an individual is able to see when looking at a mirror. The biceps, chest, quadriceps and abdominals are among them.

As millions of exercisers spent hour after hour working solely on these muscle groups, they developed imbalances and as a result, musculoskeletal pain and dysfunction.

If you work mostly on what you see in the mirror and pain and dysfunction sound familiar, this week's column is for you. I'll present a few tips for addressing what I refer to as "anterior imbalance" and will also introduce an exercise that's designed to correct it.

"Anterior" refers to the front, as opposed to "posterior," the back. In general, a smoothly functioning human frame has balanced tension, strength and endurance between muscle sets on its anterior and posterior sides. If the mirror muscles become stronger and tighter than they need to be to cooperate well with posterior muscles, that's anterior imbalance.

For example, overemphasizing the biceps and chest in one's workout program will, over time, result in shoulders that roll forward slightly. This creates a very unstable environment for the rotator cuff muscle group and, eventually, can result in chronic pain or outright injury.

What to do? Begin working the muscles you can't see in the mirror.

Rotator cuff exercises should be an element of every strength program.

These small but supportive muscles provide the foundation from which the shoulder is able to function normally. I do rotator cuff exercises in nearly every workout, even if it's just as a short warmup.

Frequent, faithful efforts will help the rotator cuff develop better balance and better function.

The other key part of the body affected by anterior imbalance is the lower back. Too many leg presses and leg extensions can result in very strong quadriceps and hip flexors, but that lack of attention to the gluteals and hamstrings leaves them weak and tight, which will lead to lower back problems.

There are hundreds of exercises designed to address each of these muscle groups, so I won't spend time going through the list. However, stretching these muscle groups is as important as strengthening them (and potentially more important). Because so many of us sit most of the day, the hamstrings in particular are prone to becoming tight and short over time.

This week's exercise is fantastic because it addresses the posterior shoulder as well as the lower back and core. The Archer Row is a simple way to challenge these muscle groups in almost any setting and requires minimal equipment. Simple but not easy.

1. Select a light/medium-weight dumbbell and get into the "up" position of a pushup. Grasp the dumbbell with your right hand.

2. Perform a normal one-arm row while maintaining balance in the plank position. This will require balance, core strength and extreme focus.

3. Perform two sets of 12 with each arm while keeping the abdominals and lower back very firm.

For beginners, it makes sense to master the normal plank exercise before attempting this one. The core muscles need to be strong enough to provide a foundation from which you're able to balance on three points of contact.

When you lift the dumbbell off the floor, it will become evident whether more plank work is needed.

This is a great exercise for creating better balance and a stronger foundation.

Matt Parrott has a doctorate in education (sport studies) and a master's in kinesiology and is certified by the American College of Sports Medicine.

Levee

• Continued from Page 1E

We decided that our adventure should begin with bicycling across the Harahan railroad/bicycle/pedestrian bridge, which is now called Big River Crossing. The bridge serves as the connection point in a 10-mile, multi-modal Main Street to Main Street project linking Memphis to West Memphis.

At almost a mile, Big River Crossing is the longest pedestrian bridge across the great river. The bikeway piggybacks off the 1916 Harahan Bridge. This century-old bridge was constructed with two rail lines in the center and roadways cantilevered off each side to accommodate vehicles, which at that time consisted mainly of horse-drawn wagons. (The roadway was used until 1949.)

Big River Crossing gives pedestrians use of the former vehicle lane on the north side of the still active railway, for the great upriver views it offers. At the opening ceremony Oct. 22, a steady stream of pedestrians and bicyclists flooded the walkway all day and into the night, marveling at the Memphis skyline and the mighty river.

Special to the Democrat-Gazette/NANCY RANEY

The Big River Trail passes scenic oxbows including Horseshoe and Midway lakes as it travels the Mississippi River levee from West Memphis to Marianna.

SPEAKING OF TOURIST DOLLARS

Arriving in West Memphis the afternoon before our long ride, we decided to go ahead and bike the Big River Crossing. We were staying at Tom Sawyer Campground beside the levee and so had just a five-mile ride — on the trail — to reach the bridge.

Even weeks after the grand opening, when our group bicycled across, the bridge was still drawing a crowd. It appeared to be the most popular attraction along the riverfront.

At the Memphis entrance and before riding under the archway and onto the bridge, we hopped onto the adjoining Riverwalk Bike Path. A picturesque two miles beside the river later, we veered off the path onto Beale Street to sample some of Blues City Cafe's "world famous" juicy ribs and crispy catfish.

We then topped off the meal with a stroll along the street where music legends including Elvis and B.B. King once walked. A distinctive mix of blues and rock 'n' roll drifted from music venues' open doorways.

BIG VIEW

It is difficult to appreciate just how long the bridge is until you're on it.

When we reached the Arkansas shore, we looked down from our elevated position on the bridge at a grand prospect — the site of the planned Delta Regional River Park. Construction of the park is scheduled to begin in the spring or early summer. When finished, it will feature a serene natural setting for visitors to bicycle on a seven-mile paved path or just relax and enjoy closeup views of the Mississippi topped by the Memphis skyline.

Special to the Democrat-Gazette/NANCY RANEY

Bob Robinson (from left), Michelle Jackson and Randy Jackson take a snack break along the Big River Trail.

We exited via Big River Crossing's western access, and after coasting down a fun, corkscrew-banked turn that quickly descends from the bridge's elevation, our group pedaled along the paved path about a mile. Then we took a sharp left to reach the top of the levee.

As I mentioned, McVean had worked five years, to no avail, to open the levee. Just six weeks after Eastin's hiring, after meeting with the U.S. Army Corps of Engineers and receiving their endorsement, the Big River Strategic Initiative signed and presented to the St. Francis Levee District board a memorandum of understanding detailing the responsibilities of all the parties involved in the trail. The board then unanimously approved and signed it, thus opening the levee top to bicycles and pedestrians.

McVean calls her "Bulldog." But Eastin says that once she explained his vision of the economic development opportunities a Big River Trail would offer and how it could foster new enterprises compatible with the Delta's agriculture industry, opening the levee was an easy sell.

FAT TIRES

The levee is topped with fairly large gravel. Although we found it very ridable, I recommend using 2-inch or wider tires, such as those on a mountain bike.

According to Eastin, the Corps of Engineers has agreed to limit the size of gravel used in future maintenance projects to half an inch or smaller, which will make the surface suitable for bicycles sporting thinner tires.

One of the first things I noticed while biking atop the levee was how much higher we were than the vehicles on the highway that at times parallels the trail. I had picturesque views of either the Mississippi or the densely wooded ecosystem of its floodplains, whereas a motorist gets a fine view of a grass-covered hillside.

My vantage of more than 20 feet above the surrounding flat river bottoms afforded unobstructed infinite views, and I felt as though I had been granted a super power.

MEANDERING

During the first miles we encountered 36-inch-wide metal cattle guards through which cyclists and pedestrians can pass but cows can't. Here was the physical realization of a simple solution to one of the final obstacles that had blocked public access to the levee: ranchers' concerns that their livestock would escape if someone left a gate open. These cattle guards were funded by a grant from the Arkansas Economic Development Commission.

If you follow the trail on a map, you notice that the Mississippi River doesn't pay attention to human borders. Without crossing the river, you pass from Arkansas into Tennessee and back to Arkansas, then into and out of Mississippi.

Nowhere is the river's meander more evident than about 33 miles into the ride, where the water at one time made a 90-degree right turn and traveled approximately five miles northwest only to circle around and return to the main channel less than two miles down from where it exited. Over time, the river cut a direct route across these two points, thus sidelining the landlocked, U-shaped body of water now known as Horseshoe Lake. We passed several such oxbows.

During the first half of our tour from Memphis to Marianna, we were flanked by rich, dark soil to the right and thick, dense forest on our left. Isolated by the levee, these wooded environments offer great opportunities while bicycling for spotting deer, bobcats, armadillos and other wildlife, along with the waterfowl that follow the river on their annual migrations.

Through the middle section of the 73-mile ride, as we worked our way around Midway Lake, on the river-side of the levee we enjoyed enchanting views of ancient cypress trees protruding from the dark, motionless waters of the bordering wetlands.

With the later section of the levee trail open to motor vehicles, we saw camouflaged duck blinds and trotline jugs afloat on the water's surface — evidence of hunters and fishermen taking advantage of the easy access.

Having divided our Big River Adventure over two days, after a cumulative six hours in the saddle — and an equal amount of time off the saddle, checking out scenery and munching tasty snacks — we arrived at our destination, Marianna.

LONG-RANGE PLAN

Eastin describes the Big River Trail as a work in progress. The grand plan is a trail along the 2,500 miles from the Mississippi headwaters at Lake Itasca in Minnesota to the Gulf Coast, including 1,607 miles atop levees along the lower Mississippi.

Big River Strategic Initiative partners are already at work to extend the route to Arkansas' southern border.

Twenty miles south of Marianna, in the town of Lexa, is the trailhead for the Delta Heritage Trail. When completed, this former Union Pacific Railroad rail bed will contribute another 84 miles to the vision. En route to Arkansas City, the Delta Heritage Trail will cross long trestles through vast wetlands as well as the expansive White River.

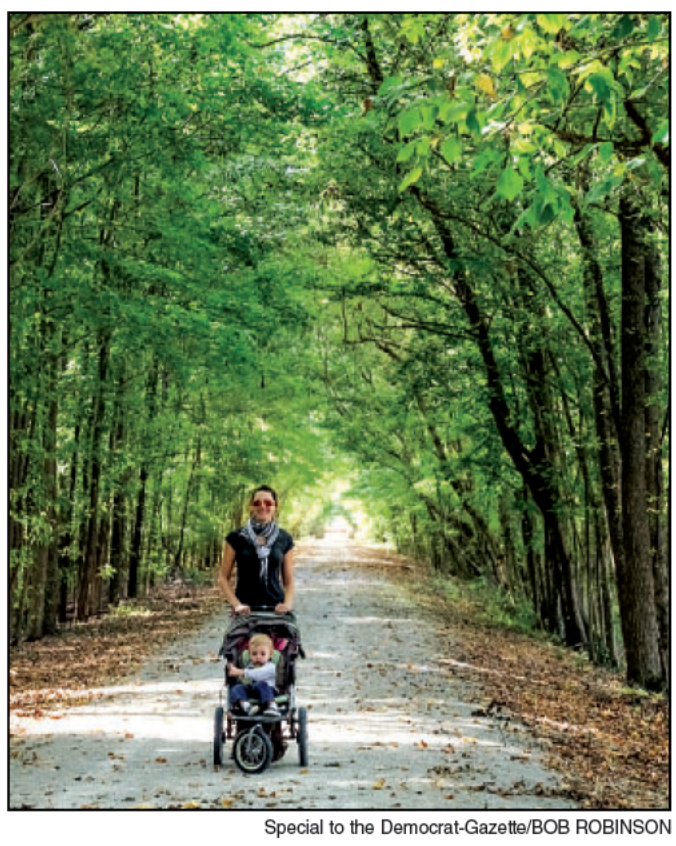
This historic rail-to-trail conversion is being developed in phases by Arkansas Department of Parks and Tourism, with work progressing inward from each end. Currently, at the northernmost extremity, they have completed 21 miles of compacted, crushed rock trail offering a smooth ride through Delta farm regions.

From the southernmost point in Arkansas City, 14 miles of paved surface paths head north.

Eastin's enthusiasm for these projects is monumental. The Mississippi River does not stop at Arkansas' southern border, and neither does she. Already she is working on plans to open the levee all the way to New Orleans.

Special to the Democrat-Gazette/BOB ROBINSON

Nancy Raney (left), Michelle Jackson and Randy Jackson take a leisurely tour of open countryside Nov. 26 between West Memphis and Marianna via the Big River Trail.



Special to the Democrat-Gazette/BOB ROBINSON

Maci Edwards strolls with son William on the Delta Heritage Trail on Oct. 23.

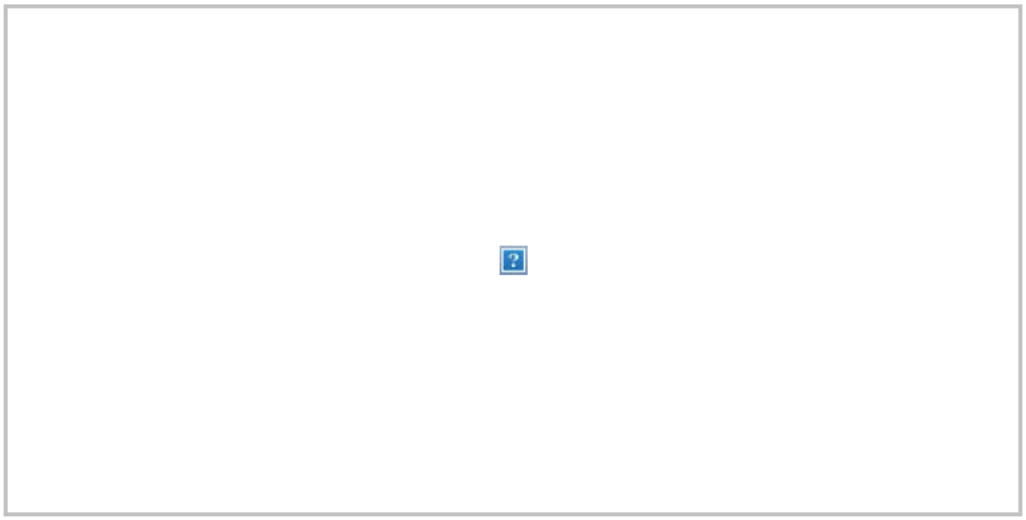
Western Caucus Members Applaud Administration's Intent to Scrap Duplicative BLM Fracking Rule



WASHINGTON, D.C. – Today, Congressional Western Caucus **Chairman Paul A. Gosar D.D.S. (AZ-04), Executive Vice-Chairman Rep. Scott Tipton (CO-03), Chairman Emeritus Rep. Steve Pearce (NM-02),** and Western Caucus member **Rep. Doug Lamborn (CO-05)** released the following statements after the Trump Administration said in a legal filing this week that it is taking action to rescind the Obama Administration's Bureau of Land Management (BLM) rule for hydraulic fracturing:

Chairman Gosar said, "Time and again the Obama Administration belittled and silenced the voices of local stakeholders, hampering responsible energy development, in favor of scoring cheap political points. I am pleased to see President Trump and Secretary Zinke's commitment to empowering states by taking action to roll back BLM's duplicative fracking rule. This unconstitutional regulation attempts to seize authority from states, would exasperate permitting delays and would add yet another layer of bureaucracy to an already well-oiled process."

"Western states, including Colorado, have done a good job of regulating and monitoring hydraulic fracturing and those efforts should be able to continue without heavy-handed federal bureaucratic regulations that prevent responsible energy development from moving forward. I welcome the Administration's action to encourage responsible energy development by removing unnecessary regulatory red tape," said **Congressman Tipton**.

"The increase in hydraulic fracturing regulations was just another attempt by the Obama Administration to choke out responsible domestic energy production that provides good-paying jobs across the nation. This regulation was blocked by multiple federal courts, which ruled that BLM lacked the authority to regulate hydraulic fracturing," said **Congressman Pearce**. "States understand what is needed for their lands and should be able to develop their resources responsibly without a 'one-size-fits-all' regulation from Washington. I am glad to see that the Trump Administration is taking action to cut the government red tape that is weakening our economy in New Mexico."

Congressman Lamborn remarked, "I am very pleased that the Trump Administration recognizes the wisdom of letting individual states manage and regulate the energy production taking place in their own backyards. Hydraulic fracturing, often used in combination with horizontal drilling, has unlocked vast new American energy resources, and it has allowed the United States to increase its

oil and gas production faster than at any time in our history. Restoring local control over energy production will allow the current energy renaissance to continue ensuring a stable supply of affordable, reliable energy, and driving down prices for gasoline, electricity, and home heating. This means more jobs and economic growth for Colorado and the rest of the country."

Background:

On March 26, 2015, the Obama Administration published new regulations for hydraulic fracturing on federal and Indian lands. The text of the final rule can be found HERE.

On June 24, 2015, U.S. District Judge Scott Skavdahl granted a stay of BLM's rule citing the fact that Congress never granted authority to the Department of Interior to regulate hydraulic fracturing.

On March 15, 2017, the Department of the Interior and the Department of Justice requested the 10th United States Circuit Court of Appeals delay oral arguments scheduled for Wednesday after a legal filing this week that indicated the Trump Administration is beginning work to rescind the 2015 rule.

The Obama Administration rule would create new burdensome requirements for well construction, wastewater management and chemical disclosure.

The Obama rule is also duplicative and extremely costly. It would increase regulatory burdens without yielding significant benefits to the environment.

State rules are specifically tailored to each state's unique geologic and hydrologic conditions to better protect the environment and groundwater than a one-size-fits-all federal rule. Companies must already obtain a state permit and comply with all state regulations when operating on federal lands, and state regulators continue to develop new rules collaboratively with the public.

This rule would impose an entirely redundant regulatory process that will only intensify existing permitting delays at the federal level. Most states process permits in 30 days or less. In December of 2016, the BLM reported that the agency's average processing time for permits was 220 days.

Hydraulic fracturing has played an important role in the development of America's oil and natural gas resources for more than 60 years. In the United States, it is estimated that over one million wells have been fracked since the 1940s. Studies estimate that up to 80 percent of natural gas wells drilled in the next decade will require hydraulic fracturing to properly complete well setup.

(Courtesy of the American Action Forum's Regulation Rodeo)

The rule is estimated to cost $49.9 million dollars to implement and creates more than 50,000 hours of paperwork for compliance.

Cassidy, Tillis, Kennedy Introduce Unleashing American Energy Act of 2017

WASHINGTON—Yesterday, US Senators Bill Cassidy, MD (R-LA), Thom Tillis (R-NC) and John Kennedy (R-LA) introduced the *Unleashing American Energy Act of 2017.* After 8 years of significant restrictions on energy exploration and development, American workers and industry are eager to pursue American energy independence.

This legislation empowers the Secretary of the Interior to add additional lease sales to an existing 5-year leasing plan, allowing for more American energy investments that would pay dividends for decades to come. President Trump pledged to add millions of American jobs and make America energy dominant. The *Unleashing American Energy Act of 2017* would provide his administration the flexibility to do just that.

"This legislation creates better paying energy jobs with better benefits for working families," **said Dr. Cassidy**. "It unleashes domestic energy production which creates these jobs, generates revenue to balance our budget, and increases America's energy independence."

"This legislation is an important first step to cutting several layers of bureaucratic red tape that will allow for the responsible exploration of offshore energy," **said Senator Tillis.** I look forward to working with my colleagues to pursue a national energy policy that will put America on the path to energy independence and help lower utility bills for hardworking families in North Carolina."

"The energy sector is the lifeblood of the American and Louisiana economies," said **Senator Kennedy**. "The restrictions that have been placed on our energy sector from the previous administration have stunted our economy and cost us thousands of good paying jobs. This bill will provide more job opportunities for hardworking Americans and will help our country realize our goal of energy independence."

To read the full legislative text, click here.

Background:

Our nation's offshore areas hold at least 480 Trillion cubic feet of natural gas and 101 Billion barrels of oil. Currently only 6% of the Outer Continental Shelf is available for energy production. The former administration reversed plans to offer lease sales in the Atlantic and additional lease areas off of Alaska, which cost American jobs and denied potentially billions of dollars of investment in the U.S economy. A Quest Offshore Resources report projects that development in the Atlantic alone could create 279,562 jobs and trigger $194 billion of investments by 2035.

The arrival of the new administration has many in the offshore economy optimistic about the future. However, the administration faces a long process to create a new 5-year leasing plan, which typically takes 24-36 months to finalize. Americans should not need to wait to develop our own resources and delay job and economic growth. The *Unleashing American Energy Act of 2017* seeks to remedy this issue by empowering the Secretary of the Interior to add additional lease sales to an existing 5-year plan.

What this legislation achieves:

- Permits the Secretary of the Interior to add additional Outer Continental Shelf oil and gas lease sales to an existing 5-year plan
- Allows for new acreage to be made available years earlier than current process would allow
- Allows the Secretary to reverse the former administrations shortsighted decisions to remove Artic and Atlantic lease sales from the current 5-year plan
- Stimulate thousands of good paying jobs along with billions of dollars of investment
- Adds billions of revenue for federal, state and local governments
- Ensures continued considerations for: state preferences, environmental sensitivity, industry interest, fisheries, marine navigation and national energy markets.

06182015 HDR report prepared for Army Corps Assessment of Non-Road Alternatives.pdf

---

Hi Casey –

Attached is the report HDR (a contractor) prepared for the Army Corps of Engineers, Alaska District on the non-road alternatives. Below is Senator Murkowski's release about the contracted report. We can talk further about this report and why non-road alternatives are not really alternatives to the road and how the Corps became involved. I am providing a link to our website that includes additional information on the road including relevant documents. https://www.energy.senate.gov/public/index.cfm/king-cove-road-information

Murkowski Slams Interior for Wasting Time, Money on King Cove Study

Days After 40th Medevac Since December 2013, Chairman Announces Oversight Hearing

Washington, D.C. – U.S. Sen. Lisa Murkowski, R-Alaska, today criticized the Department of the Interior for wasting more than $100,000 on a study of "non-road alternatives" that will not adequately provide emergency medical transportation for the residents of King Cove, Alaska. Murkowski posted the study after Interior, despite a recent public commitment from Secretary Sally Jewell, only provided it to a small handful of King Cove officials.

“Interior has again made clear that help for King Cove is not on the way,” Murkowski said. “It is stunning the Department wasted taxpayer dollars on a narrow study while continuing to ignore the best way to protect the health and safety of local residents – a short, non-commercial, gravel road. I am also shocked that despite repeated promises, and despite this study being completed last summer, there is nothing in Interior’s $13.3 billion budget request to help King Cove. This is what you do, if your goal is to run out the clock without making the right decision.”

The Interior-commissioned, Army Corps-contracted study evaluates the potential for a marine vessel, a helicopter, and a new airport for King Cove – options that have previously been rejected, or that have been tried and failed. The study’s authors describe it as a “high-level overview” and note that its artificially limited scope “did not include local stakeholder input.”

“It is offensive that Interior would design a study that deliberately excludes the very people whose lives are at stake,” Murkowski said. “But I want to thank the company that undertook this study, which did its professional duty within the imposed constraints and highlighted the very serious challenges that the people of King Cove face. Anyone reading the study objectively can only wonder: why, again, did Interior ever take a life-saving road off the table?”

A 27-page appendix details the substantial risks and anticipated hurdles, ranging from potential impacts on wildlife to the likelihood that sufficient financing could be secured, associated with non-road alternatives. The study also confirms that non-road options are either more expensive or less reliable (or both) than a life-saving road, which Interior did not allow as a basis for comparison.

“While Interior’s current leadership may be content to study this problem until their time in office runs out, local residents are left to endure more pain and suffering,” Murkowski said. “I cannot allow that to continue, and I will redouble my efforts to secure a road by bringing this travesty to the attention of every member of our committee at a hearing next month.”

Last week, the U.S. Coast Guard was called in after a woman in her 50s was found unconscious in King Cove. The Coast Guard transported her to a Guardian flight waiting in nearby Cold Bay after its pilots were unable to land in King Cove, which faced winds that were gusting well above 50 miles per hour.

King Cove has now endured a total of 40 medevacs since Secretary Jewell’s decision of December 23, 2013 to reject a life-saving road. The U.S. Coast Guard has carried out 15 of those medevacs – risking additional lives, diverting vital resources from the service’s core mission, and incurring significant costs for U.S. taxpayers.

Murkowski has twice asked Jewell if she is aware of how many medevacs have occurred in King Cove since her decision. In 2015, Jewell was completely unaware; this year, she replied that she was “sure that it is dozens.”

Among the other recent medevacs were a man who dislocated both hips and fractured his pelvis after a 600-pound cod pot fell on him; an infant boy with RSV; a man in his 80s with sepsis; and multiple patients with heart problems or gastrointestinal bleeding. Many had to wait hours – if not overnight – before a medevac could safely arrive.

In 2009, Murkowski successfully legislated a nearly 300:1 land exchange to facilitate an 11-mile road corridor through a tiny sliver of the Izembek National Wildlife Refuge. The road corridor would cover a maximum of 206 acres in the 315,000-acre refuge (0.065%). The road – required by law to be one-lane, gravel, and used only for non-commercial purposes – would connect the roughly 1,000 residents of King Cove to the all-weather airport in neighboring Cold Bay. Jewell rejected the exchange, and the life-saving road.

For an excellent account of the peril that continues to face King Cove as a result of federal intransigence, please see "Deadly Environmentalism" by National Review's Ian Tuttle.

King Cove-Cold Bay
Assessment of Non-Road Alternatives

June 2015

Executive Summary

King Cove, Alaska, population 800, is located in the Aleutians East Borough (AEB) in southwest Alaska. The area is remote and located where the North Pacific Ocean meets the Bering Sea. The area is known for harsh weather; high winds, rough seas, and fog or persistent clouds occur frequently. These conditions are not necessarily unusual for other small, rural communities in Alaska, but King Cove is different in one key respect: it lies 18 miles from the Cold Bay Airport, which has a 10,000-foot jet-capable runway originally built by the military and now maintained as an emergency landing location on the great circle routes between North America and Asia. Several plane crashes, many harrowing tales, and near misses trying to get patients evacuated to Anchorage for medical emergencies by small plane or by boat from King Cove to Cold Bay have highlighted the difficulty of travel in the area, particularly under emergency circumstances. The Cold Bay Airport is close, but sometimes inaccessible. King Cove, the borough, and Alaska's Congressional delegation have pushed Congress for a road connection through the Izembek National Wildlife Refuge and Izembek Wilderness along a narrow isthmus that separates the rich tidal marshes of the Bering Sea and Pacific Ocean water. It is an area that is critical habitat for wildlife, including almost the entire global population of black brant. The U.S. Department of the Interior (DOI) has decided against the road option. This document reviewed past studies and the latest thinking on potential non-road alternatives. It is designed to filter past work on non-road-access alternatives and present the most promising in each of three non-road transportation modes: marine vessel, fixed-wing aircraft, and helicopter.

This *Assessment of Non-Road Alternatives* for medical evacuation (medevac) from King Cove to Cold Bay and on to Anchorage examines three modes of transportation as selected by DOI: (1) ice-capable marine vessel, (2) fixed-wing aircraft/new airport, and (3) helicopter/heliport. Variations within each alternative address the location of the facilities and, to a lesser extent, type of equipment and facilities. This assessment provides a high-level overview of the three non-road-access options and does not provide a recommendation, but presents conceptual information on the locations, costs, risks, and dependability of each. This report does not identify the actual steps needed for implementing a selected alternative such as additional analysis under the National Environmental Policy Act or similar regulation.

The proposed marine vessel is a 150-foot ferry capable of carrying vehicles and passengers year-round in expected seas (based on wave records over a 5-year time period), including capability of moving through bay ice 12 inches thick (OASIS Environmental, Inc. 2003). The vessel would require modifications at the Cold Bay dock and a new dock on the King Cove side, where it would reside. The vessel port could include a rock breakwater, depending on the location chosen. It is assumed the ferry would operate for general use, not just medevac use, and would transport passengers, cargo, and vehicles to and from Cold Bay but would be available for medevac trips to Cold Bay,

where patients would transfer to a medevac flight or commercial flight to Anchorage. This would be necessary when flights were not possible in and out of the King Cove Airport.

The identified airport location is north of King Cove and north of mountainous terrain in an area with few obstructions, at the end of the existing King Cove road system. It could be designed for service by small jet (longer, paved runway) or turbo-prop aircraft (shorter, gravel runway). Implementation of this alternative is assumed to mean closure of the existing King Cove Airport, which is located in mountainous area where turbulence is common and terrain hazards compound weather issues. Medevac flights would respond when called from Unalaska (190 miles away) or Anchorage (620 miles), and take patients from the new airport directly to Anchorage.

The helicopter option assumes a helicopter would be leased by a government entity and based at a new heliport, with hangar and lighting, located at King Cove, on the King Cove road system, or at a new location on the southern edge of Cold Bay (the water body). The helicopter would transport patients to the Cold Bay Airport, where they would transfer to a medevac flight or commercial flight to Anchorage.

The table below summarizes life-cycle costs and operating factors, such as medevac time, risks to the project, and dependability, for the alternatives addressed in this document. Capital and operations and maintenance costs assume a 75-year life cycle. The net present value (NPV) for each alternative incorporated conceptual-level construction cost estimates and 75-year operating costs in 2015 dollars. The document provides greater detail.

Annual Dependability	99.9%	99.9%	99.6%	94.9%	94.9%	82.6%	67.5%	67.5%	70%

Notes:
All costs are shown in 2015 dollars. See main document for explanation of cost estimates.
Medevac time is the elapsed travel time between the City of King Cove and Ted Stevens Anchorage International Airport. See main document for further explanation.
Risk score compiles multiple risk factors on a 1–4 scale (1=low, 2=moderate, 3=serious, 4=high) and averages them. Risk assessment is qualitative. Scoring allows for deriving the average and is not meant to imply precision in quantifying risk. See main document for explanation of methods.
Dependability shown is based largely on wind data thresholds. Other factors affect dependability and may differ between modes of travel. See main document for explanation.

1 Introduction

1.1 Background

The cities of King Cove and Cold Bay in southwestern Alaska lie 18 miles apart; see Figure 1. King Cove's population is about 800 year-round and expands to approximately 1,300 when the Peter Pan Seafoods processing plant is operating at full capacity.[1] While King Cove has the larger population, Cold Bay has the larger airport—an instrument-capable airport with a paved runway more than 10,000 feet long (one of the longest in the state) and a crosswind runway. It is a former military airport kept in service primarily as an emergency landing location on the long-haul great circle route between North American airport hubs and Asian airport hubs.

The communities of King Cove and Cold Bay are separated not only by miles. They are also separated:

- By the water body of Cold Bay, which is more protected than the open ocean, but still known for severe winds and waves, and infrequently for ice.
- By mountainous terrain, particularly near the City of King Cove and its small airport.
- By an isthmus 3 miles wide separating the head of Cold Bay, which opens to the Pacific Ocean, from the Bering Sea.
- By protected lands of the Izembek National Wildlife Refuge (NWR) and Izembek Wilderness on the isthmus and by the Alaska Peninsula NWR along the shoreline, as established by Congress.

King Cove, the Aleutians East Borough (AEB), and Alaska's Congressional delegation have worked since the 1980s to convince Congress, the U.S. Department of the Interior, and USFWS to allow and fund a road between the communities, principally for medical evacuation (medevac).

Congress, in the Omnibus Land Management Act of 2009, directed that the Department of the Interior should examine a road in an Environmental Impact Statement (EIS) and use the EIS to determine whether a land exchange to allow road access would be in the public interest of the people of the United States. A December 23, 2013, Record of Decision signed by Secretary of the Interior Sally Jewell found it would not be in the overall public interest because "construction of a road through the Izembek National Wildlife Refuge would lead to significant degradation of irreplaceable ecological resources that would not be offset by the protection of other land to be received under an exchange…(and)… because reasonable and viable transportation alternatives exist to meet the important health and safety needs of the people of King Cove."[2] Secretary Jewell received a request for reconsideration of the decision. After further consultation and visiting the site, Secretary Jewell signed a letter dated August 13, 2014, stating the Department of Interior would stand by its decision and would not re-open the record of decision. At the same time, she reiterated commitment to continuing to work with Alaskans "to evaluate and develop other

This page intentionally left blank.

Secretary Jewell requested assistance from the United States Army Corps of Engineers, Alaska District, to examine three non-road access alternatives in 2015. This document is the result of that request. It is designed to filter past work on non-road access alternatives and present the most promising in each of three non-road transportation modes:

- Marine vessel
- Fixed-wing aircraft
- Helicopter

1.2 Transportation Challenges

King Cove is an ocean-oriented community. However, there is no dependable and publicly available marine connection between King Cove and Cold Bay. The state-operated Alaska Marine Highway System ferry stops twice a month at King Cove and Cold Bay, May to October, with the only other marine connection consisting of fishing vessels that can sometimes be chartered between King Cove and Cold Bay. Fishing vessels can make the trip in most weather conditions but are not equipped to handle passengers, especially medevac passengers. Fishing vessels often are out of port on the fishing grounds or undergoing maintenance while in port. They must travel approximately 27 nautical miles from King Cove to Cold Bay, with roughly half that distance in open seas.

Another shortcoming in the marine connection between King Cove and Cold Bay is the inadequate infrastructure in place for passengers to disembark from vessels at the existing Cold Bay Dock. Passengers or medical evacuees must travel up a 20-foot ladder from the boat to reach the wharf deck. This can be dangerous, particularly for those who are not in good physical shape, especially when sea conditions cause the vessel to move with respect to the ladder used for disembarking. The state ferry that occasionally uses the dock during the summer has provisions for a ramp to allow vehicle and passenger transfer between the ferry and the dock. Sea and wind conditions at any time of year could preclude safe operation without a ramp similar to the state ferry at the Cold Bay Dock in its current configuration.

Regarding air transportation, the existing King Cove Airport lies north of town in a mountainous area. It has a single gravel runway 3,500 feet long. Terrain limits the available approaches and, in many wind conditions, creates turbulence that can cause unsafe flying conditions. Clouds also may form over or adjacent to the mountains, obscuring the runway. Scheduled air service to and from Cold Bay and other communities exists, but because of delays and cancellations due to wind, cloud cover, or snow and icing conditions compounded by winter darkness and mountainous terrain, scheduled air service is not considered to be as reliable as most air service elsewhere in the Lower 48. The scope of this assessment did not allow for analysis of other Alaska airports that have constraints similar to those attributed to King Cove.

Regarding the safety, reliability, and convenience of air travel, the Alaska Department of Transportation and Public Facilities (DOT&PF) published the 1994 *Alaska Intermodal Transportation Plan*, which noted:

1. A significant portion of the scheduled flights in and out of King Cove were cancelled due to unsafe flying conditions.
2. In addition to documented air crashes in King Cove, numerous incidents and near-misses occurred during operations around the airport, associated principally with weather.
3. Canceled flights due to unsafe flying conditions caused medical complications and fatalities for patients awaiting evacuation from King Cove.

Improvements to navigation aids installed at the airport or to the configuration of the existing airport would not adequately address these problems.

The AEB was the recipient of a $37.5 million federal appropriation for improving transportation between King Cove and Cold Bay and for improving medical care in King Cove. AEB purchased a $9 million hovercraft and constructed a landing for the hovercraft along the northeastern shore of Cold Bay. The vessel, the 93-foot *Suna-X*, operated from a landing site in Lenard Harbor while a road was under construction to the intended northeast landing site, and it had a landing site across the bay just south of the existing Cold Bay Dock. This allowed for a 14-mile hovercraft trip that could be completed in 17 minutes under favorable conditions. The hovercraft functioned as the primary marine connection between King Cove and Cold Bay and successfully evacuated 30 medical patients out of King Cove to the Cold Bay Airport from 2007 to 2010. Ultimately, however, local officials determined it was too costly to operate and could not operate in waves above 6 feet or winds above 30 miles per hour. The hovercraft was inoperable 30 percent of the time due to a combination of maintenance down-time and weather conditions beyond its operational capabilities.

The AEB moved the hovercraft to Akutan Island, where it ferried mail and seafood processing workers to a new airport on Akun Island about 6 miles away; however, the operation still required a large annual subsidy and was shut down in February 2014 to be replaced with helicopter service. In an April 2, 2014, article published by KUCB (Unalaska Community Broadcasting), AEB Administrator Rick Gifford was quoted as saying that the hovercraft service was unsustainable, costing about $3 million per year to operate. Further, he said that the helicopter service was cheaper, costing about $2 million per year, but not cheap enough. Gifford indicated that the AEB continues to look for access to the Akutan/Akun airport that it can support for the long term—perhaps via a ferry—but the capital costs of such an alternative are a major obstacle.

This document examines options for using the new road for access to a new marine terminal, a new airport, or a new heliport north of Mount Dutton, at the end of the road. Variations on these alternatives also are considered as ways to solve the long-standing problem of unreliable access across the bay or to Anchorage, primarily for medevac purposes.

2 Objectives, Scope of Work, and Methods

The U.S. Department of the Interior, through the U.S. Fish and Wildlife Service, has requested the U.S. Army Corps of Engineers, Alaska District, to assess three transportation modes that would not include a road through Izembek NWR. For each alternative, the assessment includes:

- **Description:** A narrative description of each alternative assessed, built off of multiple past studies but configured uniquely based on current conditions and understanding of the need, including a road that has been extended northward to a favorable airport and vessel launching area on the northeast side of the bay near the southern boundary of Izembek NWR.
- **Costs:** Costs of construction in projected 2015 dollars, and costs of maintaining the alternative over 75 years (standard annual operations and maintenance [O&M]). Replacement costs including major overhauls and replacement of system components are not included.
- **Risks:** Risks related to permitting, funding, and operating each alternative. Although each is given a numerical score, this is considered a qualitative risk assessment, a tool to help examine risks but not a determinant of which alternative is best overall.
- **Dependability:** The dependability of each alternative, defined as "the average percentage of time a minimum of four King Cove residents can successfully be transported to Cold Bay on a monthly basis for a one-year period." The document presents the amount of time in each month of a typical year that each alternative would be expected to operate as required, based primarily on monthly weather records.

Methods for assessing costs, risks, and dependability are further described below.

This document provides up-to-date information about marine, fixed- wing, and helicopter aircraft transportation modes. It specifically makes no recommendation regarding which mode might be most favorable, but presents high-level data to further the discussion.

2.1 Method Used to Assess Costs

Estimates of probable cost were developed for each alternative discussed in this document, assuming a 75-year life. These costs are considered Class 4 as defined by ASTM International (E2516-11), an organization that sets technical standards used globally. Class 4 costs, by definition, typically use stochastic methods and are used for projects that are in the conceptual phase of development. The alternatives herein fit into this conceptual category.

Many of the alternatives presented in this document use concepts (e.g., boats, helicopters) that have been evaluated in previous reports for transportation alternatives between King Cove and Cold Bay or in the region (e.g., Akutan). These earlier reports are more fully discussed below in Section 3. This report uses an analogous approach, which provides high-level estimates—not detailed estimates—by comparing costs for historical projects with similar features (e.g., Akutan Airport) to the project being estimated. Historical costs were brought forward to 2015 dollars using standard

cost indices. This technique, which is also known as top-down estimating, is often used to estimate costs when only conceptual details about the project are available.

Capital and operations (including maintenance) costs are provided. For purposes of this document, construction of any alternative is assumed to occur in 2020, although some alternatives likely would take more than one construction season to complete. To allow comparison between alternatives, net present values for capital and operating costs are provided using a discount rate of 5 percent and an inflation rate of 2.7 percent. All costs are reported as 2015 dollars.

2.2 Method Used to Assess Risk

Risks for marine and aviation alternatives were assessed qualitatively using a risk assessment method developed by the Federal Aviation Administration (FAA) and incorporated into a risk assessment workbook published by the U.S. Forest Service and Department of the Interior, Bureau of Land Management. This method uses a matrix to relate the likelihood of an outcome with its consequences to determine the level of risk it represents. The matrix, along with definitions, appears in Appendix A.

The matrix combines the likelihood of an event (frequent, probable, occasional, remote, improbable) with the anticipated severity of the outcome or event (catastrophic, critical, marginal, negligible). These result in a combined level of risk, each assigned a score:

1. Low
2. Medium
3. Serious
4. High

Scoring multiple risks for each alternative this way enables the calculation of an average score, allowing for easy comparison among alternatives. However, the process is necessarily subjective, and the risks are not weighted for relative importance. This can be misleading if the exercise is viewed as being more than mostly qualitative. The exercise is meant as a tool for evaluating alternatives but is not meant to produce a final, definitive answer about which alternative is best. Further, the scope of this assessment did not allow for additional evaluations of risk, such as weighting various risks, assessing risk by season, or creating separate risk assessments for different types of risk. Appendix A presents lists of key risks associated with the alternatives—both the risks of implementing each alternative and the risks of operating them once the project is complete.

2.3 Method Used to Assess Dependability

The definition of dependability presented near the beginning of this section calls for an assessment by month. Dependability of any of the alternatives was determined to be primarily a function of wind and weather in any given month. Wind speed and direction were identified as most critical to the dependability of both the marine and fixed-wing aviation alternatives. Wind and other weather information drove dependability for the helicopter alternative.

The alternatives presented were conceptually designed with the area's weather in mind, so dependability of many of the alternatives is relatively high, based primarily on weather. The following sections on each alternative indicate annual dependability ranging from about 70 percent to virtually 100 percent. Many other factors may contribute to dependability, including maintenance issues with the equipment used, human factors such as illness of a pilot or how quickly a vessel operator can reach the vessel, and snow and ice on the road between the clinic in King Cove and the vessel port, airport, or heliport.

Several of the marine and aviation alternatives make use of the existing road between King Cove and the northeast shore of Cold Bay. Anecdotal evidence suggests that there are snow and avalanche hazards that could make portions of the road impassable at times. While this has been identified as a potential risk and could impact dependability, further investigation would be necessary to more accurately quantify the impacts on road travel. This study assumes that regular maintenance of the road, together with an appropriate level of staffing and equipment, would reduce the risk of an impassable road on dependability of medevac access. Thus, these hazards, when compared to wind, are not assumed to be a primary driver of the dependability of the alternatives considered.

Appendix B presents wind data used for all of the marine, airport, and helicopter alternatives.

2.4 Method Used to Assess Medevac Travel Time

The calculation of travel time was based solely on travel for medevac purposes. It was assumed that most medical evacuations would start from the King Cove clinic or from the population center at King Cove. However, the alternatives would operate differently from each other. The marine and helicopter alternatives would cross the water body of Cold Bay to meet a medevac aircraft at the Cold Bay Airport, and the airport alternatives would provide for the medevac aircraft to meet a vehicle on the eastern shore of Cold Bay, without a need to cross the bay. Because the alternatives would operate in different ways, the travel time was calculated for all from the City of King Cove to Ted Stevens Anchorage International Airport (ANC). From ANC, a patient could be delivered to any of three hospitals, all approximately equidistant from the airport. This analysis did not try to determine travel time from ANC to an Anchorage hospital.

Travel time was calculated by adding together each leg of the journey. The calculations assumed average speeds for automobile, ferry, aircraft, and helicopter transportation, and multiplied those speeds by the distance to be traveled under each mode. No time was included for transfers; the calculations are based solely on the times needed for each mode once underway. For the airport alternatives, it is assumed that the time on the road (estimated at 1 hour) would be equal to or greater than the time required for the medevac aircraft to arrive from its home base.

Appendix C presents the estimated medevac times from the City of King Cove to ANC for each alternative.

This page intentionally left blank.

3 Existing Information and Past Studies

This document is built upon existing information and past studies, and presents updates to previous studies. Most of the critical engineering research regarding airport and docking locations, marine vessel types, and weather issues was completed previously.

The annotated bibliography at the end of this document (see Section 7) is a list of past studies completed on the topic of transportation alternatives between King Cove and Cold Bay. Most of these were examined in preparation of the current document, but a few studies provided key information. The primary documents referenced were the following:

- "King Cove-Cold Bay Transportation Improvement Assessment: Available Marine Technologies Technical Memorandum" (Glosten Associates 1998) provided important background for the marine ferry alternative.
- "Technical Memorandum, King Cove-Cold Bay Transportation Improvement Assessment: Two Selected Marine Options" (Glosten Associates 1998) provided important design information about the marine ferry alternative.
- "Cold Bay Ferry Study" (Glosten Associates 1999) provided additional information specific to the ferry alternative.
- "King Cove-Cold Bay Transportation Improvement Assessment: Facilities Concept Report" (HDR and Parson Brinckerhoff 2000) provided extensive information on air and marine alternatives, including five appendices listed separately in the bibliography for this *Assessment of Non-Road Alternatives*.
- *King Cove Access Project Final Environmental Impact Statement* (U.S. Army Corps of Engineers and U.S. Fish and Wildlife Service 2003) provided extensive information regarding both air and marine alternatives.

Existing planning studies also inform the current effort. According to the 1994 *Alaska Intermodal Transportation Plan*, DOT&PF, the AEB, and the Cities of King Cove and Cold Bay identified the need for improved access between King Cove and Cold Bay to increase the safety, reliability, and convenience of travel to and from King Cove by eliminating dependence on the city's inadequate air facilities; to reduce redundant infrastructure and associated costs; and to strengthen the regional economy. Since that time, the focus has narrowed somewhat to safety and medevac capabilities for King Cove. The Omnibus Public Land Management Act of 2009 (Public Law 111-11), as well as the 2003 EIS related to this issue, focused on a road to be "used primarily for health and safety purposes… and only for noncommercial purposes."

Past Marine Vessel Work. Some of the critical selection criteria established by the AEB for the marine route alternative were identified in the *Project Description for the King Cove Access Project, 7th Revision* (OASIS Environmental, Inc. 2003), and are summarized as follows:

- Reliability 95 percent of the year
- Capability of travel year-round, during all anticipated weather conditions. This includes significant wind and wave heights.

- Ability to travel through up to 12 inches of solid bay ice.
- Suitable for carrying passengers, as well as vehicles with "roll-on/roll-off" capability.
- Cost-effective and sustainable acquisition, operation, and maintenance.

Previous studies identified several potential marine vessel alternatives, including hydrofoils, high-speed catamarans, and ground-effect-type crafts. Many of them offered advantages and quick traverse times in fair weather and calm, ice-free seas. However, the ability to operate year-round and under adverse weather conditions common in this area eliminated many of the marine alternatives under consideration. The studies provided to the AEB identified two viable marine alternatives based on the above criteria:

1. Large purpose-built hovercraft capable of transporting passengers and vehicles
2. Ice-capable monohull ferry suitable for all expected weather and sea conditions

As discussed in Section 1.2, the AEB purchased a purpose-built hovercraft. It operated successfully for approximately 3 years between Lenard Harbor, near King Cove (see Figure 1), and the City of Cold Bay. But ultimately it was taken out of operation because it was too costly to maintain and, in part, because it could not operate about 30 percent of the time. This document reexamines primarily Option 2, the ice-capable monohull ferry.

An ice-capable monohull ferry of sufficient size has been identified as a viable alternative that could meet the marine transportation criteria developed by the AEB. The "Cold Bay Ferry Study" (Glosten Associates 1999) identified a concept vessel that could meet these criteria with a stated 100 percent operability in the weather and ocean conditions of Cold Bay. It is further described in Section 4.

Past Aviation Work. DOT&PF's *King Cove – Cold Bay Facilities Concept Report and Assessment of Transportation Need*, published in 2000, found that flight operations by Pen Air, the only commercial air carrier serving King Cove at that time, were restricted to operating in daylight hours under Visual Flight Rules (VFR). Due to the frequency of bad weather (i.e., non-VFR conditions), flights in and out of King Cove were often delayed or canceled. The report cited a letter written by Pen Air President Orin Seybert which stated that "Due to terrain there will never be other than VFR daylight-only operations possible, with better than average weather necessary."

The 2000 DOT&PF report determined that the best available alternative site for a new airport was located on the northeastern shore of Cold Bay, northwest of Mount Dutton.

4 Marine Alternative

4.1 Introduction to Ferry Concept

The ferry concept includes a vessel capable of transporting people and vehicles in virtually all weather conditions and the terminal (dock) facilities needed on both ends of its route. Although the ferry has a longer traverse time than the hovercraft, it appears to be more reliable based on anecdotal information about the approximate 30 percent downtime experienced by the hovercraft during its operation in Cold Bay. Ferries are used widely as a primary means of marine transportation in Alaska, as evidenced by the 3,500 miles of ferry routes and more than 30 communities serviced that make up the Alaska Marine Highway System. Three alternative ferry routes have been identified as viable for marine travel between King Cove and Cold Bay:

- Alternative 1a, Northeast Ferry (with a terminal on the northeast shore of Cold Bay)
- Alternative 1b, Lenard Harbor Ferry (with a terminal on the northern shore of Lenard Harbor)
- Alternative 1c, Direct Ferry (with a terminal in the City of King Cove)

See Figure 2 for the locations of the ferry terminals.

Each alternative would have a dedicated terminal built onto the existing Cold Bay Dock. Each would include a similar ferry terminal, built new, on the King Cove side of the bay. It is assumed that the ferry would be typically moored at the ferry landing on the King Cove side, as this would be most expedient in the event of a medevac situation. These alternatives are described further below.

The three routes provide different combinations of ferry travel time versus driving time to reach the ferry, and exposure to different risks. For example, Alternative 1c has a longer overall travel time and higher exposure to rough sea conditions, but eliminates the risks associated with impassable roads due to heavy snow or avalanches.

All alternatives use the existing Cold Bay Dock. Based on preliminary analysis, there does not appear to be a site within practical distance of the Cold Bay Airport that provides significant advantages or more protection from wind and wave action than the existing dock location. Further investigation is warranted to validate the preliminary assumptions used in this document.

While the primary purpose of the ferry under consideration is medevac, the vessel likely would be used to establish a regular, year-round ferry service between King Cove and Cold Bay. While it is unlikely that the ferry would be used to its full capability, it could make up to three daily round trips between King Cove and Cold Bay. The fares collected from an established ferry schedule would help offset the annual operating expenses associated with the ferry transportation alternative. It is also worth noting that the King Cove Airport is assumed to continue to function under this alternative. This means that, under many conditions, a medevac flight could occur from the King Cove Airport. The ferry would be particularly useful in conditions that were too turbulent, too cloudy, or at night, when use of the King Cove Airport would not be recommended.

4.2 Detailed Descriptions—Marine Alternatives

4.2.1 Facilities Common to all Marine Alternatives

The three alternative ferry routes are summarized in the following sections. Most components, including the vessel itself, Cold Bay dock modifications, and the basic mooring and terminal facilities on the King Cove side, would be the same.

The Vessel. The ferry vessel under consideration would have an approximate length of 150 feet, a beam of roughly 42 feet, and a draft of 12 to 14 feet. Sea conditions are the main driver in specifying a vessel of this size. The beam and length of the vessel were optimized based on the wave characteristics in Cold Bay to provide year-round capability and minimize passenger discomfort. The ferry could carry up to 150 passengers, in addition to 19 passenger vehicles and two large trucks. The hull would be strengthened to American Bureau of Shipping ice class A0 classification, capable of travelling through first-year sea ice up to 12 inches thick, and would be capable of operating in virtually all anticipated weather conditions within the waters of Cold Bay. It would likely have a dual-rudder/twin-screw configuration with engines producing approximately 1,200 horsepower. It would be an open deck design with a centrally located island to accommodate passengers and the pilothouse, as opposed to an enclosed ferry with overhead pilothouse. This would allow for ferrying over-height vehicles. Freeboard and bulwark height would be large to maintain the vessel's safe seakeeping capability in the expected sea conditions throughout the year, as well as to minimize shipping of green water and spray ice accumulation on the deck. This is the vessel described in the "Cold Bay Ferry Study" (Glosten Associates 1999).

Cold Bay Ferry Terminal. Figure 3 illustrates a concept for the Cold Bay ferry terminal. The Cold Bay terminal would make use of the first 1,200 feet of the existing Cold Bay Dock to access a new transfer ramp that would branch off the existing trestle and provide access to a floating barge (transfer platform). The barge would function as the landing area for the ferry ramp. The ferry would breast against new dolphins (piling structures bedded in the sea floor, either monopole dolphins with floating donut fenders or five-pile breasting dolphins), and would power in to wingwalls near the moored transfer barge during loading and offloading operations. The mooring site would be located far enough offshore to take advantage of existing bathymetry and eliminate the need for dredging. A breakwater would be required to minimize wave exposure, and would be approximately 900 feet long with a crest elevation +15 feet. The side slopes of the breakwater would range between 1.5H:1V and 2H:1V. The ferry would have ramps off both the bow and stern that could be set down on the transfer platform to allow for vehicle and passenger transfer. This configuration would allow for forward drive-on and drive-off of transported vehicles. Although not currently the case, this analysis assumes that the Cold Bay terminal would have vessel refueling capabilities for the ferry. This would most likely consist of a mobile tanker truck that could drive aboard the ferry to fill the tanks. It is assumed that a tanker truck with refueling capabilities can be made available in Cold Bay.

Ferry Terminal near King Cove. A configuration similar to the one described above for Cold Bay would be used for all three marine alternatives for the ferry terminal providing access from King Cove, although a new trestle would also be required at these locations. In all cases, power would be

required for navigation and facility lights. It is assumed that power would be provided at outlying sites using a battery with light-emitting diode lights and provisions for small-scale solar and/or wind charging. Specifications and photographs of these systems are available online; see, for example, www.sealite.com.

It is also possible that a power line could be buried along the road from the existing King Cove Airport, but it is not included in the cost estimate due to the relatively high cost. For Alternative 1c, located at the City of King Cove, power is assumed to be readily available.

The following sections provide more detail on the terminal locations near King Cove, including figures showing conceptual layouts of marine terminal configurations.

4.2.2 Northeast Ferry (Alternative 1a)

The Northeast Ferry alternative would include a ferry terminal on the northeast shore of Cold Bay, just south of the Izembek NWR boundary, and would include modifications to the existing dock at Cold Bay. The new dock/trestle is anticipated to be about 1,000 feet long to suit existing bathymetry and prevent the need for dredging. A breakwater would be required to minimize wave exposure, and would be approximately 850 feet long with a crest elevation +15 feet. The side slopes of the breakwater would range between 1.5H:1V and 2H:1V. See Figure 4.

Access to the Northeast Ferry terminal would be via the recently constructed road that provides access to the unused hovercraft landing site on the northeast shore of Cold Bay. The route would consist of approximately 21 miles of travel by road, followed by 6 miles of ferry travel to the Cold Bay ferry terminal.

This alternative has a longer road and more exposure to avalanche hazards and hazardous road conditions than the Lenard Harbor Ferry alternative, but it provides the shortest ferry travel time and slightly less severe wind and wave exposure than the other ferry alternatives.

Total travel time from King Cove to ANC Airport for medevac purposes is estimated to be 3.5 hours. Appendix C provides a complete look at medevac travel times for the marine, airport, and helicopter alternatives.

4.2.3 Lenard Harbor Ferry (Alternative 1b)

The Lenard Harbor alternative would include a ferry terminal at Lenard Harbor and modifications to the dock at Cold Bay. The terminal at Lenard Harbor would be relatively protected from wind and wave exposure, and it is assumed it would not require a breakwater. The existing bathymetry is such that the new trestle would need to be approximately 300 feet long to eliminate the need for dredging. See Figure 5.

Access to the Lenard Harbor ferry terminal would be via the existing road between King Cove and Lenard Harbor. Travel from King Cove would include 11 miles on the road and a 14-mile ferry trip to Cold Bay.

Avalanche hazards and the potential for snow-covered roads exist along the road route between King Cove and Lenard Harbor, which could make the route impassable at times. However, it is assumed that the occurrence of avalanches is very infrequent. Most of the road is the same road used to access the existing King Cove Airport.

Total travel time from King Cove to ANC for medevac purposes is estimated to be 3.7 hours. Appendix C provides a complete look at medevac travel times for the marine, airport, and helicopter alternatives.

4.2.4 Direct Ferry (Alternative 1c)

The Direct Ferry alternative would include a ferry terminal on the north shore of King Cove and modifications to the dock at Cold Bay. The existing bathymetry is such that the new trestle would need to be approximately 400 feet long to eliminate the need for dredging. A breakwater would be required to minimize wave exposure, and would be approximately 950 feet long with a crest elevation +15 feet. The side slopes of the breakwater would range between 1.5H:1V and 2H:1V. See Figure 6.

The terminal would be linked closely to existing King Cove infrastructure and would use existing roads, with virtually no road construction or road-based transportation time required. It would have immediate access to the existing electrical power supply in King Cove. The ferry route would include a stretch of approximately 13 miles in waters open to the Pacific Ocean between King Cove and Cold Bay, and it would have a the longest total transit time with more susceptibility to harsh sea conditions and passenger discomfort. The route would consist of approximately 27 miles total of ferry travel. The advantage to this alternative is the elimination of exposure to snow and ice, as well as to the avalanche risk for the road portion of the route that may be experienced in the other alternatives.

Total travel time from King Cove to ANC for medevac purposes is estimated to be 5 hours. Appendix C provides a complete look at medevac travel times for the marine, airport, and helicopter alternatives.

4.2.5 Comparison of Mode Options

Table 1 provides a comparative summary of the relative pros and cons of the three marine alternatives. This is meant to summarize the material above and to include relative information on the costs presented later in this document, but is not necessarily a complete list of criteria that should be used for selection of ferry terminal locations. Rather, it is a tool to present a quick snapshot of some relative advantages and disadvantages.

4.3 Construction and 75-Year Life-Cycle Costs

Notes on methods used to determine costs for this document appear in Section 2. The capital costs are similar for all marine options, based on the assumption that the Direct (King Cove) and Northeast Ferry terminals would require a breakwater, while the Lenard Harbor Ferry terminal would be sufficiently protected to eliminate the need for a breakwater. The vessel type and modifications to the Cold Bay Dock are identical for all three options. It is assumed that existing roads would provide sufficient access without upgrades. Capital costs for the marine facilities and ferry vessel were based on the unit costs and quantities provided in the "King Cove Facilities Concept Report."

Table 2 summarizes the costs of the marine alternatives. The table reports capital costs in 2015 dollars and—for simplicity—uses the assumption that the ferry and docks would be built in 1 year, although vessel construction in reality would take longer. O&M costs shown are the costs projected for the first year of operations, in 2015 dollars. The O&M costs were bundled with the capital costs and applied over 75 years, accounting for inflation, and then brought back to 2015 dollars using a discount rate to provide a net present value (cost) of each alternative. Note that it is assumed the vessel life would be at least 75 years. The 75-year costs do not include provisions for periodic major replacements, such as engine replacement, as that level of analysis is beyond the scope of this study.

Table 2. Marine Alternatives Summary

Description	Alt 1a	Alt 1b	Alt 1c
Capital Costs (millions)	$41.8	$29.9	$39.0
Annual Operations and Maintenance Costs	$872,300	$925,600	$1.14 M
75-Year Life-Cycle Costs (2015 Net Present Value, millions)	$65.7	$56.7	$71.9

Notes:
All costs are presented in 2015 dollars. 75-year costs are escalated to 2095 and then brought back to 2015 dollars.
Capital costs include the ferry vessel and all dock/terminal components on both shores of Cold Bay, including provisions for electricity and (where applicable) a breakwater.
Vessel operating costs are based on an annual average of 1.5 round trips per day using a four-person crew. O&M costs also include (where applicable) road maintenance for any road dedicated to ferry access.

Annual O&M costs are based on the cost breakdowns provided in the "King Cove Facilities Concept Report" for the ice-strengthened ferry vessel, as well as maintenance costs for shoreside facilities. The additional wear and tear on the vessel associated with the Direct Alternative (Alternative 1c) has been captured by scaling up the hull and machinery maintenance costs based on the additional travel distance. Below is a list of items captured in the ongoing annual operating costs.

- Vessel hull maintenance costs, based on vessel weight
- Vessel machinery costs, based on propulsion and generator power output
- Crew costs to operate the vessel
- Fuel/lube oil costs as a function of travel distance and propulsion power
- Longshore/berthing costs
- Shoreside facilities maintenance

- Road maintenance (based on DOT&PF guidance and includes annual cost associated with grading, plowing, dust control, minor repairs, and similar activities necessary to keep the roads safe and operational).

4.4 Risks

Appendix A details key risks associated with the marine alternatives, including risks to implementing the alternative and risks of operating it once the project was complete.

Methods for assessing risk for all marine, airport, and helicopter alternatives are explained in Section 2. Multiple types of risks were identified and ranked using a matrix (shown in Appendix A). An average risk score was calculated. For the marine alternatives, the average risk scores were:

- Northeast Ferry (Alternative 1a): 2.4—medium-serious
- Lenard Harbor Ferry (Alternative 1b): 2.4—medium-serious
- Direct Ferry (Alternative 1c): 2.4—medium-serious

For all marine alternatives, the most important risks identified were related to operations at night and in extreme weather, permitting, and delays in getting the project built in an area with known important wildlife resources both on land and in the ocean. In addition, acquisition of the funding needed for construction and ability to financially sustain the operation in perpetuity are also important risks.

The principal risks to the marine alternatives are:

- Capital funding: This is critical to implementation of any of the marine alternatives.
- Operational funding: Annual O&M costs of the ferry system are unlikely to be offset by passenger fares. Inability to adequately fund annual operations was a primary factor in the AEB halt of the hovercraft marine connection in 2010.
- Regulatory permitting implications of installing a breakwater and construction of the ferry terminals: Effects to marine mammals and seabirds are an issue for the marine alternatives.
- No redundancy in the ferry system in the event of unplanned maintenance.

The most important risk *differences* among the marine alternatives are related to whether the ferry will be required to cross open water. Alternative 1c (Direct Ferry) has higher risk in a few key areas:

- Long travel time, which would put certain critical patients at greater risk of death or long-term complications. Recovering stroke victims, for example, have much better outcomes with prompt medical intervention at a hospital.
- Rough seas/open water travel, which could mean the vessel would not travel or could be at risk of capsizing if it did.

4.5 Dependability

Dependability of the marine alternatives would be based on:

- Wind speed (and related wave conditions) on the ferry route.
- Snow conditions, including snow and ice on the road and potential avalanche closure of the road (for Alternatives 1a and 1b).
- Downtime for maintenance of the ferry vessel, including maintenance of its ramps, and the trestles that allow vehicles and passengers to board.
- Unplanned maintenance and repair work that could take the ferry out of service

It is assumed the ferry would not operate in wind speeds exceeding 40 knots (46 MPH), based on operational restrictions and landing limitations in place at other ferry terminals in the region. Historic instantaneous wind data (see Appendix B) were examined to determine how often winds would exceed 40 knots (46 MPH). It is assumed that the vessel would be able to operate in any weather up to that speed, and this is the primary determinant of dependability. Table 3 indicates dependability by month based on wind speed.

□□□□ 3□M□r □□□ □ □□□r□□□□□□□, D□□□□d□□□□□□ □□M□□□ (□)

Alt	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Avg
1a	99.9	99.5	99.6	100	99.9	99.7	100	100	99.9	99.6	99.9	99.7	99.9
1b	99.9	99.5	99.6	100	99.9	99.7	100	100	99.9	99.6	99.9	99.7	99.9
1c	99.8	99	99.2	100	99.8	99.4	100	100	99.8	99.2	99.8	99.4	99.6

Note: No wind data were obtained for the open water portion of Alternative 1c. However, it is assumed that the impact of more wind and wave exposure would increase the inoperable time period by a factor of 2 in comparison with Alternatives 1a and 1b.

Based on 3 years of historical wind data available (see Appendix B), the percentage of time during an average year that wind speeds exceed 40 knots (46 MPH) is 0.128 percent. On that basis, the ferry has 99.6 percent to 99.9 percent dependability based on historic wind data and the proposed ferry route. However, for medevac purposes, the dependability of all transportation modes in the medevac chain should be considered for total dependability. For example, there may be rare times when winds are below the operating threshold for ferry travel, but exceed the safe air travel threshold at Cold Bay Airport based on combined wind direction and speed.

For purposes of this conceptual document, based on 40-knot (46-MPH) wind speed, it is assumed that dependability for Alternative 1c (Direct Ferry) would be slightly less than dependability for the other two marine alternatives. While Glosten Associates' *Marine Alternative Study* indicated the proposed ferry vessel should provide 100 percent weather capability in the waters of Cold Bay, this may not be the case in the open water stretch. The potential for more severe sea conditions with the seafaring capability of the monohull ferry vessel should be investigated in more detail should this alternative be carried forth into a full feasibility study.

Alternatives 1a and 1b (Northeast Ferry and Lenard Harbor Ferry) have a slightly higher weather dependability for the ferry route portion, but the risk of heavy snow on the road and of avalanches reduces the dependability of the road portion of these alternatives. The Direct Ferry from King Cove (Alternative 1c) would not require driving out of the community. Although the scope of this study did not include local stakeholder input, further investigation into the expected frequency of

impassable road conditions on the access road from King Cove to the northeast shore of Cold Bay is recommended during more detailed studies to validate the assumptions used in this analysis and to determine with greater precision which route has the highest overall dependability. This could include gathering information from and possibly interviewing local residents based on their historical observations.

4.6 Other Marine Considerations

Ferry Revenue. It is likely that the ferry would not operate at capacity most of the time, and thus revenues would not cover the operating expenses. The "King Cove-Cold Bay Transportation Improvement Assessment: Facilities Concept Report" indicates that the ferry may be loaded to 16 percent of capacity on average, based on several trips per day and operating 5 days per week.

Smaller Landing Craft. There have been recent discussions about the possibility of using a much smaller landing craft to provide a marine link between King Cove and Cold Bay. This type of craft can land directly on the shore with minimal infrastructure needed, and can carry a vehicle as well as passengers. However, shore landings for this type of craft can often be carried out only in ideal conditions. Given the prevailing wind and sea conditions within Cold Bay, it is questionable how often the landing craft could be used in this fashion.

These smaller vessels typically are not ice-capable and thus would not be able to perform shore landings in ice conditions. While the vessel could be fitted with a deeper and heavier hull to accommodate light ice and heavier seas, it would then have a draft that prevented it from shore landings and would require some type of infrastructure on both ends of the route.

The landing craft would not meet the design criteria developed by AEB for the marine route alternative. At this time it appears that it would not be suitable for year-round medevac use. Further study of this option may be warranted, however, as a limited-purpose marine vessel for medevacs.

Special Purpose Medevac Boat. Another possible alternative that warrants further study is the use of a smaller, special purpose severe-duty rescue boat for the sole purpose of medevac. These rescue boats can come in a variety of configurations, such as self-righting or shore-landing-capable vessels. A vessel of this type would require significantly less capital investment in both the vessel and the terminal requirements, and lower maintenance costs.

There are, however, a few drawbacks to this alternative. The first is that these vessels are typically not ice-capable and thus not able to reach the shore in the event of bay ice. Another drawback to a smaller, special-purpose rescue boat is that passengers would be subjected to significantly more pitch and roll of the vessel and overall discomfort during inclement weather than with the larger monohull ferry vessel. Lastly, this alternative would have the sole purpose of medical evacuation. It would not be suitable for customary passenger travel and could not transport roll-on/roll-off cargo. Some rescue vessels have a bow ramp that could allow for transfer from the boat to a shore-based, ice-capable vehicle such as a small hovercraft or snowmobile in the event of significant bay ice. Specifications and photographs of this kind of boat and other specialty boats are available online; see, for example, www.safeboats.com or www.kvichak.com.

5 Airport Alternatives

5.1 Introduction to Airport Concept

The airport concept includes a new airport built for the City of King Cove that would function better in poor weather conditions, including instrument capability, than the existing airport. The one technically feasible site for a new airport that is away from mountain hazards and wind-channeling terrain and does not physically encroach into the Izembek NWR is located northwest of Mount Dutton and just east of the existing (abandoned) hovercraft landing. This site affords airspace with few obstructions on approaches from the north, west, or east. An approach from the south would be high over a mountain ridge west of Mount Dutton. Two airport alternatives, designed to accommodate two different medevac aircraft, are considered:

- Alternative 2a (5,000-foot paved runway)
- Alternative 2b (3,500-foot gravel runway)

These alternatives are further described below. See Figure 7.

The two airport alternative designs give specific consideration to accommodating aircraft used in the Aleutian Region for medevac operations. The typical destination for medevac flights from the Aleutian region is Anchorage. The primary medevac provider for the Aleutians, Guardian Flight, maintains a remote base at Unalaska. Guardian Flight would probably prefer to respond to medevac needs at King Cove from Unalaska. Guardian Flight uses both Learjet 35 aircraft (a small jet) and Beechcraft King Air aircraft (a twin-engine turboprop airplane), but because of the limited length of the runway at Unalaska (4,100 feet), Guardian Flight bases only the King Air there. A response with the Learjet 35 would come from Anchorage, possibly increasing costs for the medevac provider. Airport Alternative 2a is designed with the Learjet 35 in mind. Alternative 2b is designed for the Beechcraft King Air.

The Learjet 35 is a multi-role business jet that can carry eight passengers. It has a cruise speed of 480 mph. The Beechcraft King Air has two turboprop engines and can carry up to 13 passengers. It has a cruise speed of 330 mph. Each of the aircraft can be configured for use as an air ambulance.

This page intentionally left blank.

The new airport would be close enough to the Cold Bay Airport that aircraft movement patterns could be coordinated between the two airports by the Cold Bay FAA Flight Service Station. Local reports are that wind and cloud conditions would still be severe at the proposed airport site, but—much like the Cold Bay Airport—there would be fewer obstructions to compound weather and visibility problems, and instrument-based flights would be more practical than at the existing King Cove Airport.

In accordance with the Statement of Work for this project, both airport alternatives include a Category 1 Instrument Landing System (ILS). However, the FAA is no longer installing ILSs; their preferred system is now RNAV (aRea NAVigation), a method of instrument flight rules (IFR) navigation based on a satellite-based Global Positioning System. Regardless, for design and estimating purposes for this project, ILS approach dimensional and clearance standards also apply to RNAV approaches.

The new airport would include a runway, an apron, and a connecting taxiway. The runway alignment is assumed to be the same as for Cold Bay Airport's primary runway, located approximately 9 miles directly west across the bay from that location. A site-specific wind study could alter this assumption or require the addition of a crosswind runway.

Power for the runway lighting system and navigation aids is assumed to be generated on-site. Snow removal for the road would be provided from King Cove. Snow Removal Equipment (SRE) dedicated for airport maintenance would be housed in an SRE Building located on the apron.

The airport site would be accessed by an existing gravel road extending 21 miles from the City of King Cove. Between King Cove and the existing airport, a distance of about 5 miles, the road is two lanes wide with a gravel surface. From the existing airport to the proposed airport site, a distance of about 16 miles, the road is a single-lane gravel road with inter-visible turnouts for passing. As described in this document, the road would not be widened. Given the low level of traffic expected on this route, one driving lane with turnouts is appropriate. It would also minimize maintenance costs.

5.2 Detailed Descriptions—Airport Alternatives

Both airport alternatives would be designed to the same FAA A/B II standard. The “Critical Aircraft” is defined by the FAA as the most demanding aircraft anticipated to operate at the airport more than 500 times per year—in this case, a Cessna 208, as defined by the DOT&PF *Alaska Transportation Plan* (2004). The Cessna 208 and Beechcraft King Air (the primary medevac aircraft serving the region) have similar runway requirements. For Alternative 2a, however, the runway is extended and paved to support occasional use by the more demanding Learjet 35. Figure 8 illustrates the standard airport layout and the relative length of the 3,500-foot runway versus the 5,000-foot runway.

□□□□r□ 8□□□r□□□r□□ □ □□□□□□□

This page intentionally left blank.

Either alternative would include Object Free Areas around the runway (300 feet on the sides, 500 feet at each end) and Runway Safety Areas (150 feet on the sides, and 300 feet at each end of the runway), per FAA standards. The airport would be fenced.

The following sections detail the differences between the two alternatives.

5.2.1 Alternative 2a (5,000-foot runway/Learjet 35)

Alternative 2a would provide a runway 75 feet wide and 5,000 feet long, to accommodate occasional service by the Learjet 35. The difference between the "standard" length for an A/B II airport (3,500 feet) and the desired length would have to be approved by the FAA if federal Airport Improvement Program (AIP) funds were to be used to construct the airport.

The Learjet does not operate on a gravel surface, because gravel can cause catastrophic damage to jet engines. The runway therefore would be paved. In addition, to maintain adequate friction on the runway surface to permit safe operations in winter conditions, the runway would require a higher level of maintenance than is common at gravel surface airports. At minimum, this would require a grader, a mechanical broom, a broom truck, and a sand spreader. This equipment would be stored in a heated, three-bay snow removal equipment (SRE) building, and the airport would probably be staffed by an airport maintenance staff of three in the winter, and possibly fewer in summer.

Total medevac travel time from King Cove to ANC using the Learjet 35, inclusive of traveling the road between King Cove and the new airport, is estimated to be 2.4 hours.

5.2.2 Alternative 2b (3,500-foot runway/King Air)

Alternative 2b would provide a runway 75 feet wide and approximately 3,500 feet long. The runway surface would be gravel. This runway length, width, and surfacing are very similar to conditions at the existing King Cove Airport and are standard for the aircraft typically serving community airports in the region from the Unalaska Airport regional hub. The Beechcraft King Air is an appropriate aircraft to operate at the small gravel-surfaced community airports typical of the Aleutian Region. Airport-dedicated snow removal equipment typical for unpaved remote airports—a bulldozer, a grader, or both—would be sufficient for surface maintenance. Maintenance equipment would be stored in a heated, single-bay SRE building. Maintenance staff for the access road would share airport maintenance duties, but additional staff would be required.

The runway length proposed for this alternative (3,500 feet) is slightly longer than the 3,300-foot runway proposed for King Cove by the *Southwest Alaska Transportation Plan Revised* (DOT&PF 2004), but matches the runway length of the existing King Cove Airport.

Total travel time from King Cove to ANC using the King Air, inclusive of traveling the road between King Cove and the new airport, is estimated to be 3 hours.

5.2.3 Comparison of Airport Options

Table 4 provides a comparative summary of the relative pros and cons of the two airport alternatives. This is meant to summarize the material above and include relative information on costs presented later in this document, and is not necessarily a complete list of criteria that should

be used for alternative selection. Rather, it is a tool to present a snapshot of some relative advantages and disadvantages.

□□□□□ 4□□□□ □ □r□ □ □□ □□r□□□□ □□□□r□□r□□ □□r□□□□□□

Alt	Description	Medevac Travel Time	Operations and Maintenance Cost	Appropriate for Critical Aircraft	Sum

2b	3,500-ft. Runway/Beechcraft King Air	-1	1	1	1

1=Favorable; 0=Neutral; -1=Unfavorable

5.3 Construction and 75-Year Life-Cycle Cost

Capital costs used in this document for construction of a new airport are based on recent construction of the Akutan Airport, on Akun Island. The lump sum total for the airport is the basis for figures used here, with adjustments for runway length and surface type, with allowance for inflation.

The capital costs would be higher for Alternative 1a because it would have a longer runway, it would be paved, and the runway would require a larger building to house SRE. The paved runway for jet service would require more maintenance at higher cost. Both would require maintenance of an additional 16 miles of road to reach the airport. Table 5 shows capital costs and O&M costs. This document presents the full costs of the alternatives. If the existing King Cove Airport were to be closed upon completion of the new airport, which is likely, the existing operating and maintenance costs accruing to the DOT&PF operating budget for the existing airport would be replaced by the costs of the new airport.

Table 5 reports capital costs in 2015 dollars and assumes that all airport alternatives would be built in 1 year. O&M costs shown are the costs projected for the first year of operations, in 2015 dollars. The O&M costs were bundled with the capital costs and applied over 75 years, accounting for inflation, and then brought back to 2015 dollars using a discount rate to provide a net present value (cost) of each alternative. Note that this does not include provisions for periodic replacement of snow removal equipment, the navigation system, or recurring tasks such as repaving (Alternative 2a only) the runway .

□□□□□ 5□□ □□□□ □□□□□ □□r□□r□□□□r□□□□□□

Description	Alt 2a	Alt 2b
Capital Cost	$84 M	$47 M
Annual Operations and Maintenance Cost	$674,700	$223,300
75-Year Life-Cycle Cost (Net Present Value)	$97.0 M	$49.3 M

Notes:
All costs are in 2015 dollars. M = million.
Capital costs include a complete airport. Assumes no road construction necessary.
O&M costs include airport O&M and road O&M for the road segment dedicated to airport use.
The 75-year total cost is escalated to account for inflation over time and brought back to 2015 dollars.
This table presents the full costs of the alternative. Potential savings to the DOT&PF operating budget resulting from closure of the existing King Cove Airport are not included.

5.4 Risks

Methods for assessing risk for all marine, airport, and helicopter alternatives are explained in Section 2. Risk assessment tables for all of the alternatives appear in Appendix A. Multiple types of risks were identified and ranked using a matrix (shown in Appendix A). This qualitative assessment resulted in an average risk score. For the airport alternatives, the average risk scores were:

- Alternative 2a (5,000-foot runway): 2.4—medium-serious
- Alternative 2b (3,500-foot runway): 2.5—medium-serious

The risks identified in the assessment tables for each of the two airport alternatives are nearly identical. Those considered to be of the greatest concern are discussed below.

The risks of night operations and air travel in general for the King Cove-Cold Bay area, as well as for the Aleutian Island region, are significant. Various sources describe the Aleutian Islands as the windiest and rainiest region in the United States. The mountainous terrain can cause dangerous turbulence, increased wind speeds due to venturi effects, and accumulation of clouds. These factors, together with the remoteness of both communities, place a premium on the appropriate implementation and use of technology, pilot training for good decision-making, and timely weather data collection and reporting, particularly when night operations compound the regional weather effects.

The road between King Cove and the identified airport site passes through three possible avalanche areas, based upon a preliminary examination of aerial photography. Two of these areas are located along the road to the existing King Cove Airport. The third is located about 5 miles west of the existing airport. Further information on the frequency of avalanches should be collected, but anecdotal accounts indicate that avalanches are not annual occurrences. In addition to representing a risk to travelers on the road, an avalanche would effectively close the new airport until the avalanche debris could be cleared from the road.

Animal behaviors are a concern for the safe operation of the airport, due mainly to the potential for conflicts with animals on the runway and birds in the runway approach airspace. Fencing would

mitigate the danger from animals but not guarantee removal of all danger. Snow drifts, failure to close gates, and poor maintenance can facilitate animal passage over or through fences. Avoiding the creation of additional water bodies through the use of best management practices during construction and the revegetation of disturbed terrain near the airport would help reduce the concentration of birds near the airport.

The ability to secure construction funding would be critical to the success of either alternative. The most likely source of funding would be a grant from the FAA Airport Improvement Program (AIP). Acceptance of an AIP grant carries with it many obligations, including the ability to ensure the long-term support of the facility, which would include the maintenance of any associated single-purpose airport access road. In Alaska, DOT&PF is most often the owner/operator of rural public airports. In assuming responsibility for the cost of the proposed airport, DOT&PF could minimize the impact to their maintenance budget by closing the existing King Cove Airport. However, DOT&PF also would assume the cost of maintaining approximately 16 miles of roadway past the existing airport that they are not currently maintaining. Given recent reductions to the state operating budget, this could be problematic. In theory, these same ownership and maintenance responsibilities could be assumed by the AEB or the City of King Cove, but the cost and administrative burdens may be beyond the abilities of either entity to support.

5.5 Dependability

Weather is the chief determinant of dependability of access in the Aleutian Islands region. How weather affects the safety and operability of airports within the region is highly site-specific. On-site weather data were not collected for the proposed airport site, but data collected at Cold Bay Airport were evaluated as a reasonable proxy. It should be noted, however, that the topography differs at the two sites. About 5 miles to the southeast of the proposed airport site is a ridge (elevations less than 3,000 feet) off Mount Dutton. For the Cold Bay Airport, Mount Frosty is somewhat higher (6,300 feet) and lies about 9 miles to the southwest. Winds coming from the southeast at the proposed airport site likely would generate more turbulence than might be expected at Cold Bay Airport from that direction. The mountains may also tend to affect the accumulation or departure of cloud cover differently.

Cold Bay Airport has an ILS but, according to information compiled by the Medallion Foundation,[3] is not able to support safe operations 100 percent of the time.

Guidance provided by the Medallion Foundation also indicates that, at wind speeds above 35 knots (40 MPH), commercial pilots should consider not operating at Cold Bay Airport. Wind conditions are expected to be similar at the proposed site. An examination of monthly average wind speeds at the airport (see Appendix B) shows that higher wind speeds occur most often in the winter—October through March. There is not a strong seasonal trend in wind direction on an annual basis at Cold Bay (Weatherspark.com 2015). For this document, a wind speed of 40 knots (46 MPH) was used as a cutoff. Appendix B shows that wind speeds of 40 knots (46 MPH) are exceeded about

[3] The Medallion Foundation is an Alaska-based non-profit organization that promotes aviation safety. Medallion guidance, compiled from information submitted by its member commercial air carriers, identifies thresholds for safe wind speeds at Alaska's commercial airports, beyond which aircraft operations are not advised.

0.128 percent of the time on an annual basis. Note that the data set for June is probably an anomaly, possibly an issue with the data collection equipment.

Finally, the snow events and avalanche-prone areas on the 21-mile access road may reduce dependability an additional 5 percent, but only in the winter.

Wind data used for all marine, airport, and helicopter alternatives appear in Appendix B. Table 6 indicates dependability of Alternatives 2a and 2b by month based on wind speed.

[illegible] 6[illegible]r[illegible] 2[illegible]d 2[illegible], D[illegible]d[illegible] [illegible] M[illegible] ([illegible])

6 Helicopter Alternative

6.1 Introduction to Helicopter Concept and Common Design Features

The helicopter concept is modeled on the helicopter service AEB currently employs between the community of Akutan and the community's airport on Akun Island. This service would feature the following elements:

- A leased helicopter (Bell 212 or similar on floats) and crew. Minimum on-station crew would consist of one pilot and one mechanic.
- A lighted heliport facility with a pad of 100 feet by 100 feet.
- A hangar of 40 feet by 80 feet for sheltering the helicopter when not in use, providing space for performing helicopter maintenance, and storing spare parts and fuel. The hangar would accommodate a B 212 helicopter with the main rotor blades folded.
- Road access from King Cove.

This document examines four possible alternative locations on the King Cove side of the bay:

- Alternative 3a: Northeast Heliport (located on the northeast shore of Cold Bay)
- Alternative 3b: Lenard Harbor Heliport (located at the north shore of Lenard Harbor)
- Alternative 3c: Peninsula Heliport (located on the peninsula at the western end of Lenard Harbor)
- Alternative 3d: King Cove Heliport (located at the City of King Cove)

The features above would be common to all locations. See Figure 9 for heliport locations.

The Cold Bay Airport does not have a designated heliport, but it is assumed the helicopter would follow normal landing procedures and hover-taxi to and from an existing aircraft parking apron. It is assumed the helicopter and crew would be located on the King Cove side of the bay; however, see "Other Considerations" at the end of Section 6.

6.2 Detailed Descriptions—Helicopter Alternatives

The new heliport would be designed in accordance with FAA Advisory Circular No. 150/5390-2C, *Heliport Design*, with lighting and navigation aids appropriate for operation in Visual Flight Rules (VFR) conditions. Figure 10 illustrates the basic layout. The dimensions of the heliport would be based on a Design Helicopter; i.e., the most demanding helicopter anticipated to use the facility. In this case, the Design Helicopter would be the U.S. Coast Guard (USCG) HH-60 (currently based in Kodiak). Although the Bell 212 (or similar) helicopter would provide routine service between King Cove and Cold Bay, it is anticipated that the USCG HH-60 would operate occasionally at King Cove in conjunction with search and rescue missions or if the Bell 212 (or similar) was out of service. The hangar to support helicopter service would be sized to accommodate the Bell 212, because there should be no need to shelter the USCG helicopter in King Cove.

The following sections describe the four alternative sites and outline the advantages and disadvantages of each.

□□□□r□ 10□□ □□□□□r□D□□ □□□□□□□

This page intentionally left blank.

6.2.1 Alternative 3a (Northeast Heliport)

This alternative provides a heliport at the existing (abandoned) hovercraft ramp on the northeast shore of Cold Bay. Passengers and crew would access the heliport via the existing 21-mile road from King Cove. Electricity for lighting and navigation aids is assumed to be generated on site.

This alternative may be able to incorporate the existing concrete hovercraft ramp into the design of the heliport, which could reduce construction costs. The cost estimate in this document does not reflect this potential cost reduction. A detailed verification of the usability of the existing concrete ramp for use in this alternative was beyond the scope of this assessment. However, this activity should be considered if this alternative is carried forward to a feasibility study. The approaches to this location are unobstructed. This site is accessible by an existing road.

Potential disadvantages of this site include its distance from King Cove. Access to this site requires maintenance of 16 miles of road beyond the existing King Cove Airport that are not currently maintained. The heliport owner would be required to ensure maintenance of the road if federal funds were used to construct the heliport.

Medevac travel time from King Cove to ANC from this location would require 3.1 hours, the longest time required for any heliport alternative. Appendix C provides a complete overview of medevac travel time for the marine, airport, and helicopter alternatives.

6.2.2 Alternative 3b (Lenard Harbor Heliport)

This alternative provides a heliport about 6 miles west of the existing King Cove Airport at an existing materials site near the head of Lenard Harbor. This is the heliport site identified in the *King Cove Access Project FEIS* (2003). Passengers and crew would access the heliport via an 11-mile road from King Cove, about half of which is currently maintained. Electricity for lighting and navigation aids is assumed to be generated on site.

This alternative would incorporate a cleared/filled area produced during construction of the existing road, possibly reducing construction costs. This site is accessible via the existing road.

Potential disadvantages of his site include a constrained location. The approaches to this location are partially obstructed. It is in terrain that could channel winds and trap clouds. Turbulence is likely to occur at this location whenever the prevailing north wind cascades over the mountainous terrain to the north. Access to this site would require the airport owner to ensure maintenance of about 6 additional miles of road if federal funds were used to construct the heliport.

Medevac travel time from King Cove to ANC from this location would require 2.6 hours. Appendix C provides a complete overview of medevac travel time for the marine, airport, and helicopter alternatives.

6.2.3 Alternative 3c (Peninsula Heliport)

This alternative provides a heliport on the west end of a peninsula directly east of Mortensen's Lagoon. Passengers and crew would access the heliport via a 22.5-mile drive from King Cove. Approximately 14 miles of the road currently exists. An additional 8.5 miles of new road would be

constructed through mountainous terrain. Electricity for lighting and navigation aids is assumed to be generated on site.

The approaches to this location are unobstructed. It is also free of terrain that could channel winds and trap clouds.

One disadvantage of this alternative is that access to the site would require construction of 8.5 miles of new road, which also would need to be maintained. The airport owner would be required to ensure maintenance of the road if federal funds were used to construct the heliport.

Medevac travel time from King Cove to ANC from this location would require 2.7 hours. Appendix C provides a complete overview of medevac travel time for the marine, airport, and helicopter alternatives.

6.2.4 Alternative 3d (King Cove Heliport)

This alternative provides a heliport in or adjacent to the community of King Cove. A site selection study would be necessary to determine the most appropriate location for the heliport. Passengers and crew would access the heliport by a relatively short access road of undetermined length.

Access to this location primarily would be via existing roads. Minimal road maintenance would be required to ensure access. Electricity is presumed available nearby.

Disadvantages of this site relate primarily to terrain. Approaches to this location are not unobstructed. It is located in terrain that could channel winds and trap clouds.

Medevac travel time from King Cove to ANC from this location would require 2.1 to 2.2 hours, depending upon whether the helicopter took a straight line route over the mountains or followed the coast west and then north to Cold Bay Airport. This is the least time required by any alternative, because there would be no road travel component. Appendix C provides a complete overview of medevac travel time for the marine, airport, and helicopter alternatives.

6.2.5 Comparison of Heliport Options

Table 7 provides a comparative summary of the relative pros and cons of the four heliport alternatives. This is meant to summarize the material above and include relative information on costs presented later in this document, but is not necessarily a complete list of criteria that should be used for selection of heliport locations. Rather, it is a tool to present a quick snapshot of some relative advantages and disadvantages.

1=Favorable; 0=Neutral; -1=Unfavorable

6.3 Construction Cost and 75-Year Life-Cycle Cost

The construction cost at each alternative location, with hangar, would be approximately the same, at $2.5 million ($1.5 million for the heliport and $1 million for the hangar). There may be small savings for Alternatives 3a and 3b, because they would use existing developments (former hovercraft terminal and former gravel extraction area).

Construction of the heliport would cost about $150 per square foot. Construction of the hangar is estimated at $300 per square foot.

The cost of Alternative 3c (Peninsula Heliport) would include a substantial additional expense, the construction of approximately 8.5 miles of single-lane roadway with turnouts at $3,000,000 per mile, or $25 million.

Table 8 summarizes the costs of the heliport alternatives. The table reports capital costs in 2015 dollars and uses the assumption that any of the heliport alternatives would be built in 1 year. O&M costs shown are the costs projected for the first year of operations, in 2015 dollars. The O&M costs were bundled with the capital costs and applied over 75 years, accounting for inflation, and then brought back to 2015 dollars using a discount rate to provide a net present value (cost) of each alternative. Note that this does not include provisions for periodic maintenance tasks such as replacement of the hangar or navigation system or repaving the heliport.

□□□□ 8□□ □□□□ □□□□□ □ □□□□r□□ □□r□□□□□□ (□ □□□□□□)

Description	Alt 3a	Alt 3b	Alt 3c	Alt 3d
Capital Cost	$2.8	$2.8	$28.3	$2.8
Annual Operations and Maintenance Cost	$2.34	$2.25	$2.28	$2.19
75-Year Life-Cycle Cost (Net Present Value)	$78.3	$75.3	$99.1	$73.5

Notes:
All costs are in 2015 dollars.
Capital costs include a complete heliport. Assumes no road construction necessary except under Alternative 3c; road construction accounts for the cost difference for Alternative 3c. Assumes electricity is generated on site.
O&M costs include heliport O&M (at 5% of heliport capital cost each year) and road O&M for the road segment dedicated to airport use.
The 75-year total cost is escalated to account for inflation over time and brought back to 2015 dollars.
This table presents the full costs of the alternative. It does not account for cost reductions that might be possible by using partially developed sites under Alternatives 3a and 3b.

Annual heliport operating and maintenance costs are based primarily on the assumption that the heliport owner would contract with a helicopter company for the helicopter, its pilot, and its mechanic at about $2 million per year. The cost of maintaining the access roads to Alternatives 3a, 3b, and 3c are assumed to be a separate cost (not part of the helicopter contract) at about $8,700 per lane mile per year.

6.4 Risks

Methods for assessing risk for all marine, airport, and helicopter alternatives are explained in Section 2. Risk assessment tables for all of the alternatives appear in Appendix A. Multiple types of risks were identified and ranked using a matrix (shown in Appendix A). This qualitative assessment resulted in an average risk level for each alternative. For the heliport alternatives, the average risk scores were:

- Alternative 3a (Northeast Heliport): 2.6—medium-serious
- Alternative 3b (Lenard Harbor Heliport): 2.5—medium-serious
- Alternative 3c (Peninsula Heliport): 2.6—medium-serious
- Alternative 3d (King Cove Heliport): 2.3—medium (+)

The risks identified in the assessment tables for each of the four heliport alternatives are nearly identical. Those considered to be of the greatest concern are discussed below.

As with the airport alternatives, the risks of night operations and air travel in general for the King Cove-Cold Bay area, as well as for the Aleutian Island region, are significant. Various sources describe the Aleutian Islands as the windiest and rainiest region in the United States. The mountainous terrain can cause dangerous turbulence, increased wind speeds due to venturi effects, and accumulation of clouds. These factors, together with the remoteness of both communities, place a premium on the appropriate implementation and use of technology, pilot training for good decision-making, and timely weather data collection and reporting.

The road between the City of King Cove and the heliport sites for Alternatives 3a and 3b passes through three possible avalanche areas, based upon a preliminary examination of aerial photography. Two of these areas are located along the road to the existing King Cove Airport. A possible third area is located about 5 miles west of the existing airport. Further information on the frequency of avalanches should be collected, but anecdotal accounts indicate that avalanches may not be annual occurrences. In addition to representing a risk to travelers on the road, an avalanche would effectively close the heliports until the debris could be cleared from the road. In addition to the two avalanche areas on the road to the existing King Cove Airport, about 8 miles of the unconstructed portion of the road needed for access to Alternative 3c would be susceptible to avalanches. Alternative 3d would be in or immediately adjacent to the community of King Cove and would be free of road risk and avalanche danger.

Animal behaviors are a concern for the safe operation of the heliports mainly due to the potential for conflicts with birds in the approach and departure airspace. Avoiding the creation of additional

water bodies through the use of best management practices during construction and the revegetation of disturbed terrain near the heliport would help reduce the concentration of birds near the heliport. In the case of Alternative 3d, care should be taken to locate the heliport in King Cove at least 10,000 feet from landfills, sewer lagoons, or waste from fish processing facilities (FAA AC 150/5200-33B).

Securing construction funding would be critical to the success of any alternative. The most likely source of funding for the heliport would be a grant from the FAA AIP. Eligible grant recipients would include DOT&PF, AEB, or the City of King Cove. Acceptance of an AIP grant carries with it many obligations, such as ensuring the long-term support of the facility, which would include the maintenance of any associated single-purpose heliport access roads. For Alternatives 3a, 3b, and 3c, this would include the cost of maintaining approximately 16, 6, and 9 miles, respectively, of roadway beyond the existing airport. Given recent reductions to the state operating budget, this could be problematic.

Although the distances from the heliports to Cold Bay Airport vary, the duration of the helicopter flight would be relatively brief. The time required for a passenger to travel from King Cove to Cold Bay Airport and on to Anchorage is determined in large part by the amount of road travel required. At an assumed speed of 20 miles per hour, the trip by road from King Cove to Alternative 3a would take about 1 hour. Road travel to Alternatives 3b and 3c would require traveling 30 and 40 minutes, respectively. Because Alternative 3d is in or very near the community of King Cove (exact location to be determined), road travel would be almost eliminated, and the length of time required to reach Anchorage would be the lowest of any alternative. The elimination of the road segment, including the time needed to drive it and the potential risk of avalanche, ice, or snow on it, is the primary reason for the slightly lower average risk determined for Alternative 3d when compared to other alternatives.

6.5 Dependability

As with the airport alternatives, weather is the chief determinant of dependability of helicopter access in the Aleutian Islands region. How weather affects the safety and operability of heliports within the region is highly site-specific. Because King Cove Airport does not have automated weather data collection equipment, weather data for Cold Bay Airport were used as a proxy for this project. As with the airport alternatives, wind speeds are an important consideration in determining dependability. Unlike the airport alternatives, however, the heliport alternatives and the leased helicopter service are assumed to operate under VFR only, as is the case with the existing helicopter contract AEB holds for access to the Akutan/Akun Island airport. It would not incorporate navigation aids to allow the helicopters to function in low- or “no”-visibility conditions. Cloud cover increases and visibility decreases in the Aleutian region in summer. Poor visibility is expected to have an adverse effect on dependability in both the winter (10 percent) and the summer (15 percent) at each of the alternative heliport sites. Further investigation may determine that appropriate electronic navigation aids are available and compatible with helicopters offered as part of a leased helicopter service.

Conditions at the Alternative 3a site are anticipated to be somewhat similar to those at Cold Bay, except that topography south and southeast of the new site may contribute to turbulence and wind gusts. Snow events and avalanche-prone areas on the 21-mile access road may reduce dependability an additional 5 percent, but only in winter. Average dependability of access via the Alternative 3a heliport throughout the year is expected to be about 82.6 percent, varying from a high of 85 percent in the summer to a low of about 79 percent in some of the winter months. These percentages are based on wind data, adjusted for summer cloud cover and winter avalanche or snow events.

The topography adjacent to heliport sites 3b, 3c, and 3d is mountainous, unlike the terrain near Cold Bay Airport. Wind in these locations is likely to be accelerated by venturi effects and generate considerably more turbulence than might be expected at Cold Bay Airport. The mountains may also affect the accumulation or departure of cloud cover differently. The chief executive officer for PenAir has been quoted as saying that, on an annual basis, up to 30 percent of scheduled PenAir flights have been cancelled due to weather considerations. PenAir provided the Medallion Foundation with guidance to help identify wind regimes that represent hazardous conditions at King Cove Airport. Given that Alternatives 3b and 3c have similar settings and are reached by traveling access roads of significant length, the dependability assessments for each are similar. The annual average dependability is estimated to be about 67.5 percent varying from a high of 75 percent in the summer to a low of about 60 percent in some of the winter months. Dependability for Alternative 3d is somewhat better, because the access road to the heliport is assumed to be very short. Estimates are based on the PenAir assessment of 70 percent, minus summer clouds and winter avalanche or snow events as appropriate. Dependability and wind data for all marine, airport, and helicopter alternatives appear in Appendix B.

Table 9 shows dependability of the heliport alternatives, by month.

6.6 Other Considerations

While this document generally assumes the new hangar, the helicopter, and the crew would be based on the King Cove side of the bay, it would be possible to locate them at the Cold Bay Airport. The location of the hangar would not affect the time required to medevac a patient to Anchorage unless the heliport and hangar were co-located in King Cove. For the other heliport locations, travel by the patient from King Cove to the heliport and the helicopter's flight from the hangar to the

heliport would occur at about the same time. The following sections present brief consideration of the pros and cons of the hangar location.

6.6.1 Helicopter Hangar on the King Cove Side of the Bay

This alternative does not require the helicopter to cross the open water of Cold Bay from Cold Bay Airport to pick up passengers/patients departing King Cove. The helicopter flight and maintenance crew would likely lodge in King Cove, regardless of whether the heliport were in King Cove or at one of the remote sites. This leads to the pros and cons of this option:

Pro: If the both the King Cove heliport and the hangar were located in King Cove, this alternative would achieve the lowest overall travel time required for medevac and would somewhat facilitate logistical considerations for the helicopter flight and maintenance crew, who would lodge in King Cove.

Con: If the hangar were located at one of the more remote sites on the King Cove side of the bay (i.e., not in King Cove), the helicopter flight and maintenance crew would need to travel to the heliport for flight preparations and helicopter maintenance, which would be more time-consuming overall and could delay medevac flights slightly.

6.6.2 Helicopter Hangar at Cold Bay Airport

Pro: If an existing hangar facility at Cold Bay Airport were available for the helicopter, capital costs could be reduced.

Con: Medevac flights would have to transit to King Cove before picking up a patient, increasing response time. If the King Cove heliport were located at one of the more remote sites, this disadvantage would be negated—the helicopter could easily cross the waterbody of Cold Bay in the time required for the patient to reach one of the remote heliport sites—but the response time still would be greater than if the hangar were in King Cove.

Table 10 summarizes the positive and negative aspects of the hangar locations of the heliport alternatives.

King Cove-Cold Bay Assessment of Non-Road Alternatives

Appendix A

Risk Matrix and Risk Assessment Tables

This page intentionally left blank.

Risk Assessment Matrix				
	Severity			
Likelihood	Negligible IV	Marginal III	Critical II	Catastrophic I
Frequent A				
Probable B				*High 4*
Occasional C			*Serious 3*	
Remote D		*Medium 2*		
Improbable E	*Low 1*			

Severity Scale Definitions	
Catastrophic	Results in fatalities and/or loss of the system.
Critical	Severe injury and/or major system damage.
Marginal	Minor injury and/or minor system damage.
Negligible	Less that minor injury and/or less than minor system damage.

Likelihood Scale Definitions		
Frequent	Individual Fleet	Likely to occur often. Continuously experienced.
Probable	Individual Fleet	Will occur several times. Will occur often.
Occasional	Individual Fleet	Likely to occur sometime. Will occur several times.
Remote	Individual Fleet	Unlikely to occur, but possible. Unlikely but can reasonably be expected to occur.
Improbable	Individual Fleet	So unlikely, it can be assumed it will not occur. Unlikely to occur, but possible.

Aviation Risk Management Workbook.

Qualitative Risk Assessment Alternative 1a - Northeast Ferry									
					Post-mitigation				
	Risk	Categories *	Hazards	Mitigation	Likelihood	Severity	Outcome	Score	Comments
1	Night Ops - Environmental risks	Life-Safety, Operations	Missing / damaged or power loss to navaids and dock lights	Emergency response plan; use of electronic chart plotting systems and GPS with hazards identified	Remote	Marginal	Medium	2	
2	Night Ops - Physiological hazards	Life-Safety, Operations	Incidents or errors caused by physiological challenges (circadian rhythm deviations, impaired vision, fatigue)	Education and training, implement crew management procedures and relief crew members	Occasional	Critical	Serious	3	Costs and availability of relief crew members questionable for this region.
3	Weather - Ferry travel	Life-Safety, Operations	High winds or extreme wave conditions that could blow the vessel off course or capsize the vessel	Restrict operations based on weather conditions	Remote	Catastrophic	Serious	3	Assume ferry can operate 99% of the time based on weather limitations.
4	Weather - Road travel	Life-Safety, Operations	Heavy snow and avalanches could make the road impassable or extremely hazardous between King Cove and the ferry terminal	Staffing, equipment, and operational funding for road maintenance	Occasional	Critical	Serious	3	Assume road is passable 95% of the time, with 5% downtime due to avalanches or heavy snow.
5	Sea Ice	Operations		Requires Ice Class A0 vessel to safely navigate Lenard Harbor	Occasional	Negligible	Low	1	

Qualitative Risk Assessment Alternative 1a - Northeast Ferry									
					Post-mitigation				
	Risk	Categories *	Hazards	Mitigation	Likelihood	Severity	Outcome	Score	Comments
6	Long-Term Operational Funding	Financial	Annual maintenance and operations expenses could exceed available funding	Annual ferry operating costs can be partially offset by passenger fares with scheduled ferry service, as well as usage fees for medevac	Probable	Catastrophic	High	4	Based on assumption that AEB would be responsible for subsidies needed and on recent AEB experience with hovercraft and helicopter.
7	Standard Permitting Process Required	Development/Permitting	Standard permitting process required	Keep in mind BMPs and construction techniques / design approaches with least amount of environmental impact	Probable	Negligible	Medium	2	Permitting for marine structures could take up to a year depending on permit requirements and regulatory hurdles.
8	Vessel Maintenance	Operations	Dry dock required every 2 years, 40-day planned downtime; no vessel redundancy for unplanned maintenance	Contract a backup vessel and plan dry dock and maintenance during mild weather seasons with no sea ice risk	Occasional	Negligible	Low	1	
9	Faunal Response to Construction and Operations	Environmental	Disruption and displacement of wildlife during construction and ferry operations	Marine mammal monitoring during construction; construction mitigation methods to reduce environmental impact such as bubble curtains for pile driving	Probable	Marginal	Serious	3	Presence of certain marine species present in construction area during in-water work period could cause construction delays. Ferry service could disrupt certain migratory patterns.

Qualitative Risk Assessment Alternative 1a - Northeast Ferry									
					Post-mitigation				
	Risk	Categories *	Hazards	Mitigation	Likelihood	Severity	Outcome	Score	Comments
10	Uncontrolled Use by Non-Medical Evac	Operations	Uncontrolled use by non-medical evac	Ferry terminals at each end of route likely to have security fencing; use of ferry terminals by unauthorized vessels is low	Remote	Negligible	Low	1	
11	Capital Funding	Financial	Lack of project sponsor; competing federal, State, or local priorities	In-kind contributions of surface and sub-surface holdings from stakeholders	Remote	Catastrophic	Serious	3	
12	Total Travel Time Required (King Cove to Anchorage Hospital)	Life-Safety, Operations	Time-sensitive medical conditions	Efficient transfer between modes; use of best medical technologies en route	Frequent	Marginal	Serious	3	
13	Liability	Other	Lapses in facility maintenance; delays in reporting conditions	Sufficient operational funding for staffing and equipment	Remote	Marginal	Medium	2	Could lead to unplanned maintenance and additional vessel downtime.
				Average Risk Score				2.4

Subject: Venting and Flaring ideas

Micah - thanks for taking the time today.

Below is a matrix of some of the ideas I offered this afternoon. I've been told that these changes could be made quickly by means of a "Notice to Lessees" that supersedes the 1974-era NTL-4A.

Here is a link to the EIA blog post on how North Dakota's flaring rules using flaring targets. EIA describes how flaring rules have helped to sharply curtail the practice of flaring gas in North Dakota: https://www.eia.gov/todayinenergy/detail.php?id=26632

Here's an article about Colorado that has EDF praising their regulations as a standard for the country: https://www.scientificamerican.com/article/colorado-first-state-to-limit-methane-pollution-from-oil-and-gas-wells/

Here's a factsheet about the regulation: https://www.colorado.gov/pacific/sites/default/files/AP_Regulation-3-6-7-FactSheet.pdf Page 3 has a table that shows the tiered inspection schedules for existing marginal wells that I was talking about. As you'll see LDAR surveys are only required for the first inspection and then depending on the leakage they are not required to do LDAR surveys again. If BLM is willing to keep any of the rule on existing wells I think this would be a change that industry and EDF could support.

Finally, attached is slide deck that the BLM used in their initial public outreach on Venting & Flaring back in May 2014. As you will see, their initial proposals are basically what I suggested as 'rational middle ground' solutions.

Let me know if you have any questions and thanks again.

Pat

Well Development Phase	Current Practice under NTL-4a	Practice Under November 2016 BLM Rule	Middle Ground
Venting & Flaring during Well Completion (Casing & Cementing, Perforation, Fracturing – usually 7-10 days)	Venting & Flaring is royalty-free with BLM approval.	If there is no pipeline in place, flared volumes are subject caps stated below.	Royalty could be charged in order to incentivize waste-reduction.
Venting & Flaring during Initial Production Test (1st 30 days or 1st 50,000 mcf of production)	Vented/flared gas is royalty-free for 1st 30 days or 1st 50 MMCF of production – whichever comes first.	If there is no pipeline in place, flared volumes are subject caps stated below.	Require operator to be on site during all tests; limit performance tests to the time needed to validate performance. Charge royalty to incentivize waste-reduction.
Flaring with Gas Conservation Plan (BLM allowed operators to flare gas for up to 1 year if they had a Gas Conservation Plan –typically a plan to build a gas pipeline—that would be active after 1 year.	BLM required permit applications to explain the specific economic and technical reasons for the flaring, including estimates of total flared volumes and ultimate production expected from wells	Total "flaring allowable" volumes are imposed. These phase down from 2018-2025 from 5,400 Mcf/per well to 750 Mcf/per well, on average across operations in a state.	Flaring is authorized only during the time it takes to construct a pipeline. –Restrict number of extensions allowed for approval of flaring.
Flaring during "Force Majeure" Events (Pipeline maintenance, pressure relief, safety)	Royalty is not charged for vented/flared volumes during	Royalty is charged during Force Majeure events BLM deems should have been	Royalty may be charged for flared volumes associated with

	Force Majeure events.	predictable. Also certain flared volumes contribute to the cap above.	maintenance events, but these events would not contribute to a ‘cap’ on flared volumes.

Venting & Flaring Public Outreach

Reasons for Considering the Various Options

- NTL-4A doesn't reflect current best management practices.
- Recent OIG/GAO Reports suggest progress can be made to minimize waste and promote conservation of produced gas through better management of venting and flaring.
- EPA New Source Performance Standards (NSPS) require new actions to minimize venting and flaring.

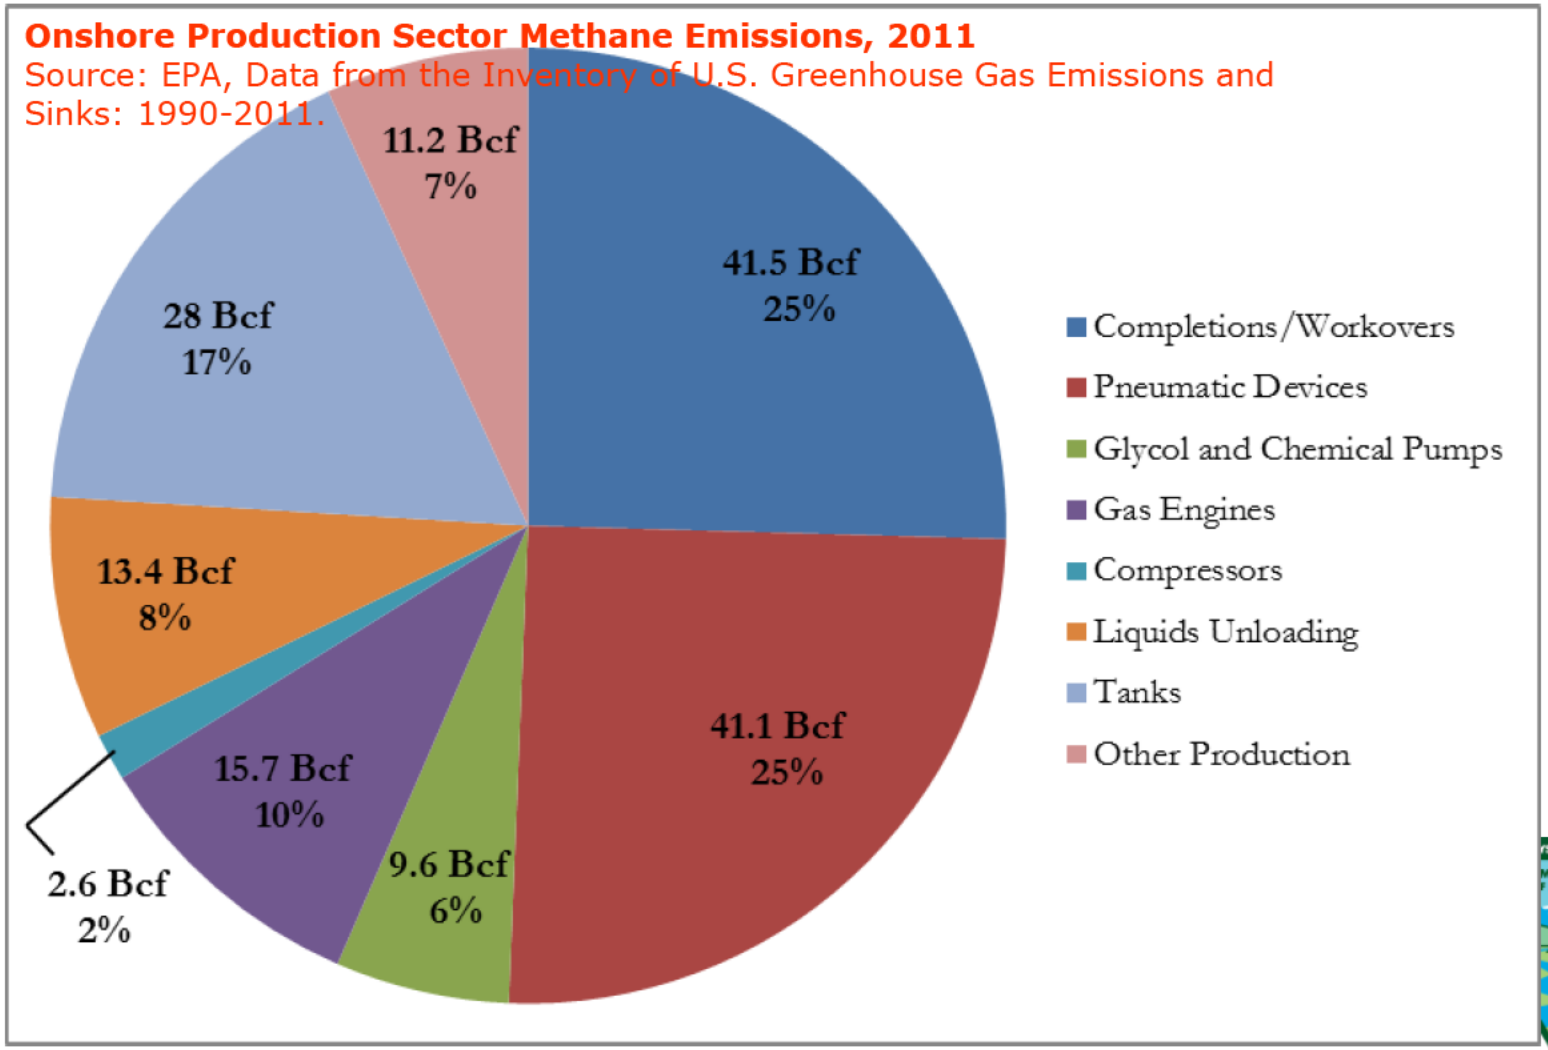
Venting & Flaring Public Outreach

Process and Application

1. Public Outreach designed to begin the dialog with interested parties.
2. More public sessions planned for this month in North Dakota, New Mexico and Washington, DC.
3. The BLM will consider existing Federal, tribal, and state rules and industry best practices.

Venting & Flaring Public Outreach

EPA Analysis of Emissions (from all onshore production--not limited to Federal leases)



Venting & Flaring Public Outreach

Major Topics

- Well completions
- Production tests
- Liquids unloading – Well Purging
- Casing head and associated gases
- Gas conservation plans
- Storage vessel/tank emissions
- Pneumatic devices
- Leak detection and repair

Venting & Flaring Tribal Outreach
Ground Rules

- Purpose of the Outreach
  - Solicit views on how to address major topics
  - Not intended to be complete list
  - Keep in mind:
    - Are there others that should be considered?
    - Are some of these unrealistic?
  - We welcome your input (comment period)

Venting & Flaring Public Outreach
Well Completions

- Defined as:
  - The process to establish production from a well after the production-casing string has been set, cemented, and pressure-tested until the permanent wellhead is installed for production.
- Current BLM policy:
  - "No royalty obligation shall accrue on any produced gas which … is vented or flared with the [Area Oil and Gas] Supervisor's prior authorization or approval during drilling, completing, or producing operations …"

Venting & Flaring Public Outreach
Well Completions

- Potential options:
  - Place no new requirements on well completions.
  - In certain situations in addition to HF gas wells, consider requirement to:
    - Capture
    - Inject
    - Use
    - Combust
    - Flare

Venting & Flaring Public Outreach
Production Tests

- Defined as:
  - Tests on an oil or gas well to determine its flow capacity at specific conditions of reservoir and flowing pressures.
- Current BLM policy:
  - Initial Production Test: Venting & flaring authorized up to 30 days or 50 million cubic feet (MMcf) of gas.
  - Evaluation test: Not to exceed 24 hours.

Venting & Flaring Public Outreach
Production Tests

- Potential options:
  - Extend well completion requirements to production tests.
  - Gas wells: Limit initial well evaluation tests to XX (30) days or XX (20) MMcf of gas and require the use of Best Available Control Technology (BACT).
  - Oil wells: Limit initial well evaluation tests to XX (30) days or XX (10) MMcf of gas.
  - Require operator to be on site during all tests; limit performance tests to the time needed to validate performance.

Venting & Flaring Public Outreach
Liquids Unloading – Well Purging

- Defined as:
  - Process of opening the well bore to the atmosphere and allowing the reservoir pressure to push the accumulated liquids out of the well bore.
- Current BLM policy:
  - Limits events to 24 hours but does not set cumulative duration limits, i.e., monthly.

Venting & Flaring Public Outreach
Liquids Unloading – Well Purging

- Potential options:
  - Operator must first attempt to unload liquids without venting.
  - Requiring operator to be on site during the treatment.
  - Must record cause, date, time and duration of the event.
  - Opening well bore to atmosphere as a last resort.
  - For new wells, if and when liquids unloading is necessary, a method other than well purging must be employed.
  - Establish lower cumulative duration limits.

Venting & Flaring Public Outreach
Casinghead and Associated Gases

- Defined as:
  - The natural gas that is produced from an oil well and is either sold, re-injected, used for production purposes, vented (rarely), or flared, depending on whether the well is connected to a gathering line.
- Current BLM policy:
  - Require operators to receive approval to flare casinghead gas.
  - The BLM considers the total leasehold production (including both oil and gas) as well as the economics of the field-wide plan.

Venting & Flaring Public Outreach
Casinghead and Associated Gases (1 of 2)

- Potential options:
  - Establish a clear and rigorous economic test that *may* include:
    - Specific rate of return and/or discount rate;
    - Define specific pay-out criteria;
    - Field-wide economics for gas capture and transportation regardless of operator;
  - Consider gas combustion efficiency standard.

Venting & Flaring Public Outreach
Casinghead and Associated Gases (2 of 2)

- Potential options:
  - If gas conservation is not economic:
    - An operator may only flare with an approved Application to Flare
    - Consider whether the approvals should be valid for a fixed time period and/or consider limitations to the approval term.
    - If valid for a fixed time, subsequent Applications to Flare must have a revised economic analysis that reflects any changes in conditions.
    - When new wells are added to a field that the economics are re-evaluated.

Venting & Flaring Public Outreach
Gas Conservation Plan

- Defined as:
  - An action plan that eliminates or minimizes venting or flaring of the gas from oil wells.
- Current BLM policy:
  - An action plan that will eliminate venting or flaring of the gas within one year from the date of application.
  - Royalty free during implementation of plan

Venting & Flaring Public Outreach
Gas Conservation Plan (1 of 2)

- Potential options:
  - With an operator's commitment to install gas gathering infrastructure, then flaring is authorized during the construction time.
  - Restrict number of extensions allowed for approval of flaring.
  - If gas conservation is economic and the infrastructure is not in place, an operator may only flare under an approved Gas Conservation Plan.

Venting & Flaring Public Outreach
Gas Conservation Plan (2 of 2)

- Potential options:
  - In cases where gas recovery is clearly economic, refine definition of unavoidably lost gas to a fixed time period (causing gas to become royalty bearing thereafter).
  - Conditionally approve APDs if it is clear there will be gas, but infrastructure will be ready 'soon' (i.e. 90 days, 180 days, one year).

Venting & Flaring Public Outreach
Storage Vessel/Tank Emissions

- Defined as:
  - Gas vapors lost from storage tanks on lease.
- Current BLM policy:
  - Gas vapors released from storage tanks to be unavoidably lost and not royalty-bearing unless the Authorized Officer requires recovery.

Venting & Flaring Public Outreach
Storage Vessel/Tank Emissions

- Potential options:
  - New wells: Require the capture or combustion of gas vapors from certain tanks.
  - Existing wells: Install combustors or equivalent device for storage vessels with emissions potential greater than X(?) tons per year of volatile organic compounds.
  - Is there another threshold or throughput equivalent that might work better? Safety-related threshold?

Venting & Flaring Public Outreach
Pneumatic Devices

- Defined as:
  - Devices powered by pressurized natural gas as liquid level controllers, pressure regulators, and valve controllers and other similar devices.
- Current BLM policy:
  - Gas used to power pneumatic devices (regardless of bleed rate) is considered used on lease and not royalty-bearing.

Venting & Flaring Public Outreach
Pneumatic Devices

- Potential options:
  - New (or replacement) devices: NSPS controls.
  - Existing devices: Requiring replacement of existing pneumatic devices if the cost of replacement, when considering the following, is consistent with economic operation:
    - (a) the reduction in bleed rate,
    - (b) cost of replacement equipment/installation
    - (c) the price of natural gas and
    - (d) the rate and extent of recovery of cost through additional gas capture.
  - How would this be administered?

Venting & Flaring Public Outreach
Leak Detection and Repair

- Defined as:
  - Programs to identify and repair leaks to reduce gas loss from lease operations.
- Current BLM policy:
  - Does not have a leak detection/monitoring standard.

Venting & Flaring Public Outreach
Leak Detection and Repair

- Potential options:
  - Operators' periodic inspection of facilities to identify and repair leaks.
  - What threshold might be used to determine which leaks require repair?

Venting & Flaring Public Outreach
Next Steps

- Comments from Session accepted until May 30
  - Email comments to: BLM_WO_OG_Comments@blm.gov
- Additional Outreach Sessions
  - Three planned
    - Albuquerque, NM on May 7 (complete)
    - Dickinson, ND on May 9 (complete)
    - Washington, DC on May 15 (Live streamed)
- See website: *Public Events on Oil and Gas*
  - Under the **Energy** or **Oil & Gas** tabs
  - www.blm.gov/wo/st/en/prog/energy/public_events_on_oil.html

Subject: OGR Hearing Tomorrow
Date: Monday, March 20, 2017 7:26:30 PM
Attachments: image001.png
image002.png
image003.png

Amanda, Kate and Josh,

Wanted to connect you all.

Kate and Amanda are former House staffers who now work for DOI. They are wonderful.

Josh Ronk is our Legislative Assistant who is handling the OGR hearing tomorrow and handles OGR Committee work. He is great too. We have had a lot going on but he is finishing up questions now.

Josh, Amanda and Kate both reached out. Please send them our draft questions for Richard Cardinale when you have them.

Josh, here are some possible questions for Frank Rusco:

1. Director Rusco, how does your agency determine what it studies?

   1a. In GAO report 16-607, entitled "Interior Could Do More to Account for and Manage Natural Gas Emissions, you state "GAO was asked to review Interior's management of natural gas emissions onshore?"

   2a. Who specifically asked you to review Interior's management of natural gas emissions onshore?

   3a. Are you at all concerned that this report led to a very political rule that was rejected by the House with bipartisan support?

   4a. I am normally a big fan of GAO, but this report had some conclusions that encouraged the terrible BLM Venting and Flaring rule implemented by the Obama Administration. This new mandate seeks to allow BLM the ability to exceed its statutory authority and regulate air quality. Given that methane emissions from oil and natural gas have significantly declined in recent decades and that the final rule would destroy responsible energy production, I am still trying to understand your contribution here and why you all decided to spend taxpayer money commissioning this report that contributed to this extremely political rule?

2. Director Rusco. Here's another example. GAO report 15-39 from April of 2015 entitled "Interior's Production Verification Efforts and Royalty Data Have Improved, but Further Actions Needed." Again this reported contributed to another very political rule from the Obama Administration in the form of ONRR's Valuation Rule. This flawed rule is essentially a new tax that will stifle oil, gas, and coal production on federal and Indian lands.

   2a. You stated in the report "GAO was asked to review Interior's efforts to improve verification of oil and gas produced from federal leases and the accuracy of royalty data."

   2b. Again, who specifically asked you to commission this report?

3b. Does it cause you any heartburn that the Obama Administration would twist your words and then put out very political, job-killing rules and claim they did so in part because GAO recommended it?

Thanks all!

Subject: RE: Interior meetings request

On second thought, to avoid the extra forms, lets keep it at staff level. Secretary not critical at this point. His staff is though. Can you get someone from his wing to do that then?

Thanks Todd. There is a meeting request form that the Secretary's scheduler requires. I will send that to you. I'm the next email. Please cc me when you send it to her.

Meanwhile, I will tee this up with Kathy.

Melissa,

Congressman Pearce has a fly-in group from Roswell/Artesia, NM region coming to DC on May 1st. They have been able to get in the last few years with FWS and BLM. Unfortunately, those meetings have not been very successful.

For this year's visit, the Congressman seeks the Secretary's assistance in confirming this year's group to meet with FWS, BLM and Department leadership, preferably the Secretary, on May 1st. Below is the request from their coordinator and attached is the attendee list.

We appreciate the Secretary and the Department's consideration of this request.

Subject: Interior meetings request

Good morning, Todd,
As you know, Artesia and Roswell are planning our annual Washington Fly-in. Usually, we meet with FWS and BLM in separate meetings, but have had some difficulties in the last two years with BLM. This year, I am asking for assistance in setting up meetings that would be appropriate for the following issues, which are primarily focused on BLM and FWS, but may include others:

APD processing and permitting for oil & gas production – the new computerized system was not ready for roll-out, which is causing confusion and delays; moreoever, we would like to discuss the unpredictable timelines for APDs which cause delays in production and tie up significant funding.
State BLM sale – we would like to see the BLM return to quarterly sales in New Mexico.
The Resource Management Plan, which is delayed
Venting & Flaring rule – the rule is not ready for implementation; we hope for reconsideration of the

rule altogether
The anticipated decision on the Texas Horned Shell Mussel and the associated CCAs
Other ESA listings that may be in the works

We will be in Washington May 1-3. We respectfully request a meeting or meetings at Interior on Monday, May 1. I have attached a list of our attendees. Please let me know if you have questions or need additional information.

Thank you for your assistance and direction,
Hayley

Subject:	FW: H.J. Res 69, Resolution of disapproval regarding FWS Alaska fish and wildlife management rule
Date:	Tuesday, March 21, 2017 10:18:47 AM

FYI –

From: Bolen, Brittany (RPC)
Sent: Monday, March 20, 2017 4:42 PM
Subject: H.J. Res 69, Resolution of disapproval regarding FWS Alaska fish and wildlife management rule

The Senate is expected to consider H.J. Res. 69, a resolution of disapproval under the Congressional Review Act to overturn the Fish and Wildlife Service rule regarding Alaska fish and wildlife management in national wildlife refuges.

H.J. Res. 69, Resolution of disapproval regarding FWS AK fish and wildlife management rule

Summary

The resolution provides for congressional disapproval under the Congressional Review Act of the U.S. Department of the Interior Fish and Wildlife Service final rule relating to "Non-Subsistence Take of Wildlife, and Public Participation and Closure Procedures, on National Wildlife Refuges in Alaska."

On February 16, the House passed H.J. Res. 69 by a bipartisan vote of 225 to 193. Senate consideration is expected to follow.

Text of the resolution is available here.

Background

FWS' proposed Alaska wildlife management rule was published on January 8, 2016. On August 3, 2016, FWS issued its final rule, which was published in the Federal Register on August 5 and went into effect on September 6.

On February 1, 2017, Sen. Dan Sullivan introduced S.J. Res. 18, and on February 7, Rep. Don Young introduced H.J. Res. 69, which provide for congressional disapproval of the rule under the Congressional Review Act.

Considerations

Congress granted management authority over fish and wildlife on all lands in Alaska, including refuges, to the state. Specifically, fish and wildlife management in Alaska is governed by the following statutes: the 1958 Alaska Statehood Act; the 1964 Wilderness Act; the 1980 Alaska National Interest Lands Conservation Act (ANILCA); and the 1997 National Wildlife Refuge System Improvement Act (amending the 1966 National Wildlife Refuge System Administration Act). If there is a conflict between the statutes, ANILCA takes precedence.

ANILCA provides the primary direction for management of wildlife refuges in Alaska, yet the FWS cites the other statues as its authority to issue the final rule and amend regulations regarding the management of fish, wildlife and habitats within Alaska's 16 National Wildlife Refuges. Alaska's NWRs contain more than 76 million acres of land, which is roughly 20 percent of the state's land.

According to the FWS, "the rule defines the process that will be used for considering predator control, prohibits certain methods and means for non-subsistence harvest of predators, and updates the procedures for closing an area or restricting an activity on refuges in Alaska." However, Alaska does not practice predator control in NWRs.

These provisions also usurp Alaska's authority to manage its fish and wildlife and further deprive the state of its ability to provide Alaskans certain social and economic opportunities, such as sustainable harvest of subsistence resources for food, which is critically important for residents of a state with some of the highest prices for commercial food goods in the nation. The rule also significantly limits opportunities for the public to participate in refuge management decisions.

The final rule unilaterally gives the federal government tighter control over managing animal populations in NWRs. Alaska regulates wildlife harvest on all lands, including in NWRs, to ensure stable populations and healthy ecosystems. Yet, the FWS in the final rule imposed unjustified, value-based restrictions to preempt those state regulations, which were enacted by the state, based on sound science, conservation needs, and a robust public process. More than that, it reserves an unaccountable veto power over future state regulations. While state regulation must follow an open and accessible public process, the final rule completely upends the process that must be followed for refuge management, closing out the public, especially those most impacted by FWS decision-making.

The rule illustrates another example of Washington, D.C., preempting state authority and circumventing federalism requirements. All states have the authority to manage fish and wildlife within their borders. Thus, while the final rule only applies to Alaska, the FWS' flawed interpretation of its authority could be unilaterally applied in other states or subsequently imposed on other states as a result of litigation. Overall, the rule sets a dangerous precedent for the FWS to commandeer state authority to manage fish and

wildlife populations, without any accountability to science, conservation, or the public.

Repealing this rule through the CRA is a necessary oversight tool for Congress to hold the FWS accountable to its prescribed statutory function. Not only does the rule violate ANILCA and principles of cooperative federalism, litigation over the rule has argued that it also contravenes the Administrative Procedure Act, the National Environmental Policy Act, and due process under the U.S. Constitution.

Congressional efforts to repeal the final rule through the CRA have received overwhelming support from dozens of sportsmen's groups, as well as the state of Alaska, Native Alaskans, hunting and angling communities, and wildlife associations. A list of support letters can be accessed on the House Natural Resources Committee website here.

THE CHAMBER
www.bismarckmandan.com
P.O. Box 1675 • Bismarck, North Dakota 58502-1675

March 21, 2017

Dear Senators Hoeven and Heitkamp:

On behalf of the Bismarck-Mandan Chamber of Commerce, I am writing to ask that you vote in support of the Congressional Review Act that will repeal the Obama administration's BLM Venting and Flaring Rule.

The development of the Bakken resource has benefited all businesses in our State, not just those directly associated with oil and gas development. The industry is consistently ranked across all data sources as the top employer in North Dakota, the most recently release numbers showing that the industry employs 73,000 North Dakotans, a figure representing 20 percent of private sector jobs and 30 percent of private sector wages.

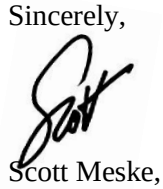
The impact of these jobs flows throughout our communities and rules negatively affecting the oil and gas industry will cause a continuation of the impact of the industry's slowdown, just as a recovery has begun. Likewise, the tax base created by the industry has benefited the State of North Dakota, and its people and small businesses. Despite the downturn, the industry will pay $3.2 billion in severance taxes in the 2017-2019 biennium:

- More than $500 million and nearly $240 million will be shared with local and tribal governments, respectively. These funds are vital for these entities; for instance, the taxes paid to the MHA nation total nearly $44,000 per resident in the biennium
- $300 million will be used in the state's general fund for current priorities
- $2.1 billion will be saved to the state's many long-term funds, including nearly $900 million in the Legacy Fund and $132 million to each the Foundation Aid Stabilization Fund and the Common Schools Trust Fund, ensuring education funding for education through any future economic climate

As the voice of more than 1,400 local businesses, we continue to support the primary sector industries that funnel dollars into our community, and contribute to the success of our other residents such as main street businesses, builders, and other local entrepreneurs. We want a healthy environment and support reasonable regulations that protect it. However, this rule answers a problem already solved by the state government, does not create any meaningful benefit to the environment, and hinders energy development.

Thus, we strongly urge you to support the North Dakota energy industry, its workers, and our local businesses with a vote to repeal the Obama administration's BLM Venting and Flaring Rule.

Sincerely,



Scott Meske, President
Bismarck Mandan Chamber of Commerce

---

Micah, Amanda and Kate,

We wanted to reach out as House Interior Appropriations requests are due on March 30th. There haven't been a lot of requests circulated by our members to date or Republicans in general so we are trying to get them going. We sent the below email this morning along with the second attachment that includes a bunch of ideas.

We held a briefing with Interior Appropriations staff last week. In the meeting staff made the comment that because of all the executive actions you all are taking, their negotiations and bills are going to be a lot easier, implying they are going to take a lot of our riders out of last year's bill.

My boss and several of our members have concerns with this approach. We are thrilled with all the actions the Administration is taking. However, our members believe we still need to submit a lot of these big ticket requests as litigation and/or future administrations could undermine these executive actions.

For instance, the WOTUS review could take a while to resolve. Further, while we know something is likely coming, there has been no action yet on the Social Cost of Carbon, Clean Power Plan, Coal Moratorium, ONRR Valuation rule etc.

Accordingly, many of our members believe we should seek to include these requests in the base appropriations bill, especially if they were in the bill last year.

Having said that, we wanted to coordinate with you all to ensure that by putting in/retaining some of these riders we don't mess things up on your end and prevent you from being able to do a rulemaking or rescind a bad Obama rule.

Anyway, the first attachment has most of the actual language that was in last year's Interior bill. Can you all review and let us know if the agency would recommend any tweaks to any of these provisions or if we should definitely not submit any of these again this year.

Your timely review and general feedback would be appreciated as we need to get the rest of these circulating so we can gather signatures and submit by the Appropriations deadline next Thursday.

Sincerely,

Jeff Small
Executive Director | Congressional Western Caucus
Senior Advisor | Congressman Paul A. Gosar, D.D.S.

Western Caucus Staff —

Attached are lots of member request ideas for the fiscal year 2018 Interior and Environment Appropriations bill.

The deadline for submissions for this bill is **3/30/17 COB**. Western Caucus recommends that you email your boss's final signed letters for this bill to other cosigning offices no later than **3/29/17 COB** to ensure all these offices submit them.

If your boss would like to lead any of the member request ideas, let Kelly or me know. We are happy to help write letters and short dear colleagues (See third attachment for a good example from last year). Please give deference to members that have led on issues previously. Members are encouraged to have any language requests drafted by leg. counsel. This is not necessary for programmatic requests.

Thank you to all of you that attended our Appropriations meeting last week with Darren Benjamin from the Interior Subcommittee Appropriations Staff. Darren referenced a CRS report which has a lot of good info about the Appropriations process (See second attachment). Darren's big take away was that if you are working on a member request or amendment and have questions, please call or email Appropriations staff. Please also call or email us if you have questions or if we can be helpful. Instructions for submitting these requests can be found HERE.

Please also send us any Interior and Environment or Energy and Water member request letters your boss is circulating so we can help get cosigners. We will have several appropriations items blasts going out over the next couple weeks.

We will be sending a similar Energy and Water Member Request Ideas email in the near future.

Jeff Small
Executive Director | Congressional Western Caucus

Actual language from fiscal □ear □01□Interior bill on □e□polic□matters

SEC. 114. GREATER SAGE-GROUSE. (a) None of the funds made available by this or any other Act may be used□

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533), or to issue a regulation with respect thereto that applies to any State with a State management plan;

(2) to make, modify, or extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.), in a manner inconsistent with a State management plan; or

(3) to implement, amend, or otherwise modify any Federal resource management plan applicable to Federal land in a State with a State management plan, in a manner inconsistent with such State management plan.

(b) For the purposes of this section□

(1) the term □Federal resource management plan□means□

(A) a land use plan prepared by the Bureau of Land Management for public lands pursuant to section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712); or

(B) a land and resource management plan prepared by the Forest Service for National Forest System lands pursuant to section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604);

(2) the term □greater sage-grouse□means the species Centrocercus urophasianus or the Columbia Basin distinct population segment of greater sage-grouse; and

(3) the term □State management plan□means a State-wide plan for the protection and recovery of greater sage-grouse that has been approved by the Governor of such State.

SEC. 115. WATER CONVEYANCES. None of the funds made available by this or any other Act may be used by the Secretary of the Interior to review, require approval of, or withhold approval for use of a right-of-way granted pursuant to the General Railroad Right-of-Way Act of 1875 (43 U.S.C. 934-939) if authorization of the use would have been considered under Department policy to be within the scope of a railroad□s authority as of the day before the effective date of the Department□s Solicitor□s Opinion M-37025, issued on November 4, 2011.

SEC. 4□□. WATERS OF THE UNITED STATES. None of the funds made available in this Act or any other Act for any fiscal year may be used to develop, adopt, implement, administer, or enforce any change to the regulations and guidance in effect on October 1, 2012, pertaining to the definition of waters under the jurisdiction of the Federal Water Pollution Control Act (33

Actual language from fiscal □ear □01□Interior bill on □e□polic□matters

U.S.C. 1251, et seq.), including the provisions of the rules dated November 13, 1986, and August 25, 1993, relating to said jurisdiction, and the guidance documents dated January 15, 2003, and December 2, 2008, relating to said jurisdiction.

SEC. 430. FINANCIAL ASSURANCE. None of the funds made available by this Act may be used to develop, propose, finalize, implement, enforce, or administer any regulation that would establish new financial responsibility requirements pursuant to section 108(b) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. 9608(b)).

SEC. 431. GHG NSPS. None of the funds made available by this Act shall be used to propose, finalize, implement, or enforce□

(1) any standard of performance under section 111(b) of the Clean Air Act (42 U.S.C. 7411(b)) for any new fossil fuel-fired electricity utility generating unit if the Administrator of the Environmental Protection Agency□s determination that a technology is adequately demonstrated includes consideration of one or more facilities for which assistance is provided (including any tax credit) under subtitle A of title IV of the Energy Policy Act of 2005 (42 U.S.C. 15961 et seq.) or section 48A of the Internal Revenue Code of 1986;

(2) any regulation or guidance under section 111(b) of the Clean Air Act (42 U.S.C. 7411(b)) establishing any standard of performance for emissions of any greenhouse gas from any modified or reconstructed source that is a fossil fuel-fired electric utility generating unit; or

(3) any regulation or guidance under section 111(d) of the Clean Air Act (42 U.S.C. 7411(d)) that applies to the emission of any greenhouse gas by an existing source that is a fossil fuel-fired electric utility generating unit.

SEC. 436. SOCIAL COST OF CARBON.
None of the funds made available by this or any other Act shall be used for the social cost of carbon (SCC) to be incorporated into any rulemaking or guidance document until a new Interagency Working Group (IWG) revises the estimates using the discount rates and the domestic-only limitation on benefits estimates in accordance with Executive Order No. 12866 and OMB Circular A-4 as of January 1, 2015: *Provided, That such IWG shall provide to the public all documents, models, and assumptions used in developing the SCC and solicit public comment prior to finalizing any revised estimates.*

SEC. 43□ METHANE EMISSIONS. None of the funds made available by this Act shall be used to develop, propose, finalize, implement or enforce□

(1) any rule or guideline to address methane emissions from sources in the oil and natural gas sector under Sections 111(b) or (d) of the Clean Air Act (42 U.S.C. 7411(b), 7411(d));

Actual language from fiscal □ear □01□Interior bill on □e□polic□matters

(2) any rule changing the term □adjacent□for purposes of defining □stationary source□ and □major source□as applied to the oil and gas sector under the Clean Air Act; and

(3) proposed Draft Control Techniques Guidelines for the Oil and Natural Gas Industry released September 18, 2015 (80 Fed. Reg. 56577).

SEC. 440. ROYALTY RATES.
None of the funds made available by this Act may be used to implement any changes to royalty rates or product valuation regulations under Federal coal, oil, and gas leasing programs.

SEC. 441. PROGRAM REVIEW. (a) Termination.□ Secretarial Order 3338, issued by the Secretary of the Interior on January 15, 2016, shall have no force or effect on and after the earlier of□

(1) September 30, 2017; or

(2) the date of publication of notice under subsection (b).

(b) PUBLICATION OF NOTICE.□ The Secretary of the Interior shall promptly publish notice of the completion of the Programmatic Environmental Impact Statement directed to be prepared under that order.

SEC. 453. None of the funds made available by this Act may be used to make a Presidential declaration by public proclamation of a national monument under chapter 3203 of title 54, United States Code in the counties of Coconino, Maricopa, Mohave and Yavapai in the State of Arizona, in the counties of Modoc and Siskiyou in the State of California, in the counties of Chaffee, Conejos, Dolores, Moffat, Montezuma, and Park in the State of Colorado, in the counties of Carson City, Churchill, Clark, Douglas, Elko, Eureka, Humboldt, Lander, Lincoln, Lyon, Nye, Pershing, Storey and Washoe in the State of Nevada, in the county of Otero in the State of New Mexico, in the counties of Jackson, Josephine and, Malheur in the State of Oregon, in the counties of Beaver, Carbon, Duchesne, Emery, Garfield, Iron, Juab, Kane, Millard, Piute, San Juan, Sanpete, Sevier, Tooele, Uintah, Washington, and Wayne in the State of Utah, or in the county of Penobscot in the State of Maine.

SEC. 464. None of the funds made available by this Act may be used to implement, administer, or enforce the draft technical report entitled □Protecting Aquatic Life from Effects of Hydrologic Alteration□published by the Environmental Protection Agency and the United States Geological Survey on March 1, 2016 (81 Fed. Reg. 10620).

SEC. 466. None of the funds made available by this Act may be used to implement, administer, or enforce the final rule entitled □Hydraulic Fracturing on Federal and Indian Lands□as published in the Federal Register on March 26, 2015 and March 30, 2015 (80 Fed. Reg. 16127 and 16577, respectively).

Actual language from fiscal □ear □01□Interior bill on □e□polic□matters

SEC. 46□. None of the funds made available by this Act may be used to finalize, implement, administer, or enforce the proposed rule entitled □Health and Environmental Protection Standards for Uranium and Thorium Mill Tailings□published by the Environmental Protection Agency in the Federal Register on January 26, 2015 (80 Fed. Reg. 4156 et seq.), or any rule of the same substance.

SEC. 4□0. None of the funds made available by this Act may be used by the Administrator of the Environmental Protection Agency to issue any regulation under the Solid Waste Disposal Act (42 U.S.C. 6901 et seq.) that applies to an animal feeding operation, including a concentrated animal feeding operation and a large concentrated animal feeding operation, as such terms are defined in section 122.23 of title 40, Code of Federal Regulations.

SEC. 4□□. None of the funds made available by this Act may used by the Secretary of the Interior to implement, administer, or enforce any rule of the same substance as the proposed rule entitled □Oil and Gas and Sulphur Operations in the Outer Continental Shelf-Blowout Preventer Systems and Well Control□and published April 17, 2015 (80 Fed. Reg. 21504), the final rule issued by the Bureau of Safety and Environmental Enforcement with that title (Docket ID: BSEE-2015-0002; 15XE1700DX EEEE500000 EX1SF0000.DAQ000), or any rule of the same substance as such proposed or final rule.

SEC. 4□5. None of the funds made available by this Act may be used to implement or enforce the threatened species or endangered species listing of any plant or wildlife that has not undergone a review as required by section 4(c)(2) of the Endangered Species Act of 1973 (16 U.S.C. 1533(c)(2) et seq.).

SEC. 4□6. None of the funds made available by this Act may be used to implement or enforce the threatened species listing of the Preble□s meadow jumping mouse under the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.).

SEC. 4□□. None of the funds made available by this Act may be used to treat the New Mexico Meadow Jumping Mouse as an endangered species under the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.).

SEC. 4□0. None of the funds made available by this Act may be used to finalize, implement, administer, or enforce the proposed rule entitled □Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act□published by the Environmental Protection Agency in the Federal Register on March 14, 2016 (81 Fed. Reg. 13638 et seq.).

SEC. 4□□. None of the funds made available by this Act may be used to finalize, implement, or enforce the proposed rule entitled □Oil and Gas and Sulphur Operations on the Outer Continental Shelf-Requirements for Exploratory Drilling on the Arctic Outer Continental Shelf□as published February 24, 2015 (80 Fed. Reg. 9916).

SEC. 4□4. None of the funds made available by this Act may be used to treat the Mexican wolf (Canis lupus baileyi) as an endangered species or threatened species under the Endangered

Actual language from fiscal □ear □01 □Interior bill on □e□polic□matters

Species Act of 1973 (16 U.S.C. 1531 et seq.) or to implement a recovery plan for such species that applies in any area outside the historic range of such species.

SEC. 4□6. None of the funds made available by this Act may be used to pay legal fees pursuant to a settlement in any case, in which the Federal Government is a party, that arises under□

(1) the Clean Air Act (42 U.S.C. 7401 et seq.);

(2) the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.); or

(3) the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.).

SEC. 4□□. None of the funds made available by this Act may be used to declare a national monument under section 320301 of title 54, United States Code, in the exclusive economic zone of the United States established by Proclamation Numbered 5030, dated March 10, 1983.

Fiscal Year □01□ Interior□Environment□and Related Agencies Appropriations Bill

Member Request Ideas

The bill will provide appropriations for the Department of Interior (including the Fish and Wildlife Service, the Bureau of Land Management, the National Park Service, the Indian Health Service, the Office of Surface Mining Reclamation and Enforcement, and the Bureau of Ocean Energy Management), the Environmental Protection Agency (EPA), the Forest Service, and a number of independent agencies such as the Smithsonian Institution, the Council on Environmental Quality, the Woodrow Wilson International Center for Scholars, the Eisenhower Commission, the Kennedy Center, the National Gallery of Art, and the National Endowments of the Arts and Humanities. Previous bills have also included significant levels of funding for the Payments In Lieu of Taxes (PILT) program and the Land and Water Conservation Fund.

Potential Re□uest Opportunities that □ere Included in Base Bill for FY□01□

- **Reissue litigation-bloc□ed rules delisting the gra□□olf in W□oming and the Western Great La□es.** A U.S. Appeals Court recently issued a favorable ruling but this delisting has been pending for more than a decade. (An appropriations letter was submitted last year by former Chairman Lummis.)

- **Protect private □ater rights in the federal permitting processes.** (An appropriations letter was submitted last year by Congressman Scott Tipton and 16 other members.) Congressman Scott Tipton is circulating the letter again this year.

- **Prohibit funds for an□federal coal lease moratorium.** While an executive order to unwind could occur, Congress still needs to take action to provide certainty. (An appropriations letter was submitted last year by Congressman Ryan Zinke and 12 other members.) Section 441

- **Prohibit funds for ne□ methane regulations from the EPA and BLM.** As the BLM Venting and Flaring CRA is still pending in the Senate, Congress still needs to take action. (An appropriations letter was submitted last year by Congressman Kevin Cramer and 41 other members to block both these regulations.) Section 439

- **Prohibit funds for the implementation of the Clean Po□er Plan.** While an executive order to unwind could occur and there is a temporary stay, Congress still needs to take action to provide certainty. (An appropriations letter was submitted last year by Congressman John Ratcliffe and 84 other members.) Section 431

- **Prohibit funds for implementing the Social Cost of Carbon rule.** While an executive order to unwind could occur, Congress still needs to take action to provide certainty. (An appropriations letter was submitted last year by Chairman Paul Gosar and 11 other members. Gosar also passed an amendment.) Section 436

- **Prohibit funds for e□pansion of the Clean Water Act□effectivel□bloc□ing EPA□s Waters of the United States (WOTUS) rule.** While an executive order to unwind has been issued and there is a temporary stay, Congress still needs to take action to provide certainty as the executive order review will take time and could be litigated. (An appropriations letter was submitted last year by Chairman Paul Gosar and 119 other bipartisan members.) Section 427

- **Re□uest full-funding for the Pa□ment In Lieu of Ta□es (PILT) program.** (An appropriations letter was submitted last year by Chairman Paul Gosar and 79 other members.)

- **Prohibit funds for the Secretar□of the Interior to revie□ □re□uire approval of□or □ithhold approval for use of a railroad right-of-□a□.** (An appropriations letter was submitted last year by Congressman Tom McClintock and 22 other members.) Section 115

- **Prohibit funds for the ONRR Valuation rule that □ould increase the ro□alt□rates for coal□oil and gas on federal and tribal lands.** (An appropriations letter was submitted last year by Congressmen Steve Pearce, Ryan Zinke and seven other members.) While executive action is being pursued, Congress still needs to take action to provide certainty. Section 440

- **Prohibit funds to finali□e the CERCLA rule.** While executive action is being pursued, Congress still needs to take action to provide certainty. Section 430

- **Re□uest dela□of the Obama Administration□s EPA O□one Rule.** (An appropriations letter was submitted last year by Rep. Olson and 27 members.) Congressman Pete Olson is circulating the letter again this year.

- **Include hunting□fishing□and recreational shooting access provision.** NRA request.

- **Include ste□ardship contract authori□ation provision.**

- **Include gra□ing permits e□tension provision.**

- **Prohibit funds to implement the Obama Administration□s Arctic Rule.** Similar to Congressman Don Young□s CRA bill, H.J. Res. 70. Section 487

- **Prohibit funds to implement to designate a National Marine Monument in federal □aters through presidential proclamation. Section 4□□**

- **Re□uest and redirect resources to□ard more effective □ildland fire prevention and the Forest Service Ha□ardous Fuels Account.**

- **Re□uest funds for State and Local Wildlife Conservation Programs** Congressmen Mike Thompson and Don Young are already circulating this letter again. More than 100 signers. Current deadline is March 24th.

Trump Priorities in S□inn□Budget

- **Re□uest □11.6 billion for DOI□a □1.5 billion cut from the □01□annuali□ed CR level.**
- **Prohibit funds for the Green Climate Fund and other UN climate programs.**
- **Prohibit funds for the Clean Po□er Plan and other EPA climate programs.**
- **Cut EPA□s enforcement budget b□ □0□ .**
- **Prohibit funds for National Heritage Areas.**
- **Prohibit duplicative National Wildlife Refuge pa□ments.**
- **Cut land ac□uisition funding b□more than □1□0 million from the □01□annuali□ed CR level.**
- **Redirect funding to the National Par□Service□s deferred maintenance pro□ects.**
- **Re□uest funding for the Pa□ments in Lieu of Ta□es program.**
- **Re□uest □1 billion for □safe□reliable□and efficient management of □ater resources throughout the Western United States.□**

Potential Re□uest Opportunities that Passed as an Amendment in FY□01□

- **Provision similar to Congressmen Gosar and Pearce□s amendment for the Me□ican □olf.** (An appropriations letter was submitted last year by Chairman Gosar and five other members.) Section 494
- **Provision similar to Congressman Ste□art amendment on national monuments. Section 453**
- **Provision similar to Congressman Amodei□s sage grouse management amendment. Section 114**

- **Provision similar to Congressmen Ste□art□Israel amendment for □ild horse and burro management.**

- **Provision similar to Chairman Gosar□s amendment limiting funds for enforcing the EPA□s □Protecting A□uatic Life from Effects of H□drologic Alteration□report. Section 464**

- **Provision similar to Congressman Ne□house□s amendment limiting funds b□the EPA to issue or e□pand ne□ regulations under the Resource Conservation and Recover□Act as it pertains to Animal Feeding Operations. Section 4□0**

- **Provision similar to Congressman Lamborn□s amendment prohibiting funds to enforce the listing of the Preble meado□ □umping mouse. Section 4□6**

- **Provision similar to Forman Chairman Lummis□amendment prohibiting funds to implement the EPA rule regarding in situ uranium production. Section 46□**

- **Provision similar to Congressman Lamborn□s amendment prohibiting funds to list an□ species as endangered that has not undergone a full revie□ as re□uired b□section 4(c)(□) of the Endangered Species Act. 4□5**

- **Provision similar to Congressman Lamborn□s amendment prohibiting funds to implement the □H□draulic Fracturing on Federal and Indian Lands□.** While the court case is being litigated, Congress still needs to take action to provide certainty. (An appropriations letter was submitted last year by former Chairman Cynthia Lummis and seven other members.) Section 466

- **Provision similar to Congressman Weber□s amendment re□uiring the EPA to evaluate the economic impact of regulations on American □obs.**

- **Provision similar to Congressman Pompeo□s amendment prohibiting funds from being used to enforce the EPA□s proposed rule on Accidental Release Prevention Re□uirements□Ris□ Management Program under the Clean Air Act.** Similar to Congressman Markwayne Mullin□s CRA bill, H.J. Res. 59. While executive action is being pursued, Congress still needs to take action to provide certainty. Section 480

- **Provision similar to Rep. □ason Smith□s amendment restricting federal agenc□funds from being used to pa□legal fees from an□la□suit that arises under the Clean Air Act□ Clean Water Act□and the Endangered Species Act. Section 4□6**

- **Provision similar to Rep. Lummis and Pearce's amendment removing protections for the New Mexico Meadow Jumping Mouse. Section 4**

- **Provision similar to Rep. Boustany's amendment prohibiting funds from being used to implement the Well Control Rule.** (An appropriations letter was also submitted last year by Rep. Graves and 25 members.) Section 472

Other Ideas

- **Prohibit funds for BLM Onshore Orders 3, 4, and 5.** (An appropriations letter was submitted last year by Congressmen Steve Pearce and Doug Lamborn as well as four other members.)

- **Request funds for the Bureau of Indian Education.** (An appropriations letter was submitted last year by Congressman Jeff Denham and 17 other members.)

- **Prohibit funds for the EPA to regulate the lead content of ammunition, ammunition components, or fishing tackle under the Toxic Substances Control Act.** NRA request.

- **Prohibit funds for ONRR's Amendment to Civil Penalty Regulations.** Similar to Congressman Chris Stewart's CRA bill, H.J. Res. 55.

- **Prohibit funds for USFWS Compensatory Mitigation Policy.** Similar to Congressman Newhouse's CRA bill, H.J. Res. 60.

- **Prohibit funds for data utilized in ESA decisions that is not made publicly available.**

- **Prohibit funds for CEQ guidance on factoring climate into NEPA reviews.** While an executive order to unwind could occur, Congress still needs to take action to provide certainty.

- **Prohibit funds for the Greenhouse Gas Reporting Program.**

- **Prohibit funds for the Climate Resilience Fund.**

- **Prohibit funds for the Energy Star Program.**

- **Prohibit funds to pay attorney's fees under sue and settle actions.**

- **Prohibit funds appropriated under the ESA from being used for designations of critical habitat.**

- **Re□uest or redirect funding for recover□planning in order to secure firm recover□ goals for species in order to trigger ESA delistings.**

- **Prohibit funds for the UN Intergovernmental Panel on Climate Change.**

- **Prohibit funds for surveillance cameras in national par□s.**

- **Prohibit funds for EPA Environmental Education grants li□e □Crafting the Landscape.□This program s□uandered ta□pa□er mone□having □ids pla□the video game Minecraft in order to become better ste□ards of the environment.**

- **Prohibit funds for EPA grants that □provide green □ob training in Puerto Rico.□**

- **Prohibit funds for EPA Beach Act grants.**

- **Re□uire reporting on climate impacts of catastrophic □ildfires.**

- **Re□uire reporting on bird deaths caused b□□ind po□er.**

- **Re□uire responsible state management of the Northern Spotted O□l.**

- **Reduce funds for the National Landscape Conservation S□stem.**

- **Reduce funds for Public Lands La□ Enforcement Agencies.**

- **Reduce funds for the National Galler□of Art.**

- **Reduce funds for the Diesel Emissions Reduction Act (DERA) grants.**

- **Reduce funds for the National Endo□ment for the Humanities.**

Here is the skinny:

Simpson wants the sage grouse language to reflect state plans with tangible targets if there is (and they'd like) a Secretarial order to rewrite the sage grouse plan. The thinking there is the new Secretary would have to show the birds are not recovering to rewrite the plans in the future.

Approps would like to have the order before the omni to insert the highlighted language below protect Interior from lawsuits.

Let me know how we can be helpful. We have been trying to highlight the need for language to Speaker/Leader as a leader in the West. We don't actually have sage grouse in the district so we are pretty unbiased. We just want the best fix so I never have to hear sage grouse again.

SECTION 1. SHORT TITLE.

This Act may be cited as the `Greater Sage Grouse Protection and Recovery Act of 2017'.

SEC. 2. PROTECTION AND RECOVERY OF GREATER SAGE GROUSE.

(a) Definitions- In this section:

(1) The term `Federal resource management plan' means--

(A) a land use plan prepared by the Bureau of Land Management for public lands pursuant to section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712); or

(B) a land and resource management plan prepared by the Forest Service for National Forest System lands pursuant to section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604).

(2) The term `Greater Sage Grouse' means a sage grouse of the species Centrocercus urophasianus.

(3) The term `State management plan' means a State-approved plan for the protection and recovery of the Greater Sage Grouse.

(b) Purpose- The purpose of this section is--

(1) to facilitate implementation of State management plans over a period of multiple, consecutive sage grouse life cycles; and

(2) to demonstrate the efficacy of the State management plans for the protection and recovery of the Greater Sage Grouse.

(c) Endangered Species Act of 1973 Findings-

(1) DELAY REQUIRED- During the period beginning on the date of the enactment of this Act and ending on September 30, 2027, the Secretary of the Interior may not alter or invalidate the finding made by United States Fish and Wildlife Service on October 2, 2015, under section 4(b)(3)(B) of the Endangered Species Act of 1973 (16 U.S.C. 1533(b)(3)(B)) with respect to the Greater Sage Grouse (80 Fed. Reg. 59857 et seq.).

(2) EFFECT ON OTHER LAWS- Paragraph (1) shall apply without regard to any other statute, regulation, court order, legal settlement, or any other

provision of law or in equity.

(3) EFFECT ON CONSERVATION STATUS- Until September 30, 2027, the conservation status of the Greater Sage Grouse under the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.) shall remain not warranted for listing under such Act.

(d) Coordination of Federal Land Management and State Conservation and Management Plans-

(1) PROHIBITION ON WITHDRAWALS AND MODIFICATION OF FEDERAL RESOURCE MANAGEMENT PLANS- Effective upon notification by the Governor of a State with a State management plan, neither the Secretary of the Interior nor the Secretary of Agriculture may exercise authority under section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) to make, modify, or extend any withdrawal of, nor amend, revise, or otherwise modify any Federal resource management plan applicable to, Federal lands in the State in a manner inconsistent with the State management plan for a period, to be specified by the Governor in the notification, of at least five years beginning on the date of the notification.

(2) RETROACTIVE EFFECT- In the case of any State that provides notification under paragraph (1), if any amendment, revision, or modification of a Federal resource management plan applicable to Federal lands in the State was issued after June 1, 2014, and the amendment, revision, or modification altered management of the Greater Sage Grouse or its habitat, implementation and operation of the amendment, revision, or modification shall be stayed to the extent that the amendment, revision, or modification is inconsistent with the State management plan. The Federal resource management plan, as in effect immediately before the withdrawal, amendment, revision, or modification, shall apply instead with respect to management of the Greater Sage Grouse and its habitat, to the extent consistent with the State management plan.

(3) DETERMINATION OF INCONSISTENCY- Any disagreement regarding whether an amendment, revision, or other modification of a Federal resource management plan is inconsistent with a State management plan shall be resolved by the Governor of the affected State.

(e) Relation to National Environmental Policy Act of 1969- With regard to any Federal action consistent with a State management plan, any findings, analyses, or conclusions regarding the Greater Sage Grouse or its habitat under the National Environmental Policy Act of 1969 (42 U.S.C. 4331 et seq.) shall not have a preclusive effect on the approval or implementation of the Federal action in that State.

(f) Reporting Requirement- Not later than one year after the date of the enactment of this Act and annually thereafter through 2027, the Secretary of the Interior and the Secretary of Agriculture shall jointly submit to the Committee on Energy and Natural Resources of the Senate and the Committee on Natural Resources of the House of Representatives a report on the Secretaries' implementation and effectiveness of systems to monitor the status of Greater Sage Grouse on Federal lands under their jurisdiction.

(g) Judicial Review- Notwithstanding any other provision of statute or regulation, this section, including determinations made under this section, shall not be subject to judicial review.

115TH CONGRESS
1ST SESSION

H. R.

To modify the boundaries of the Morley Nelson Snake River Birds of Prey National Conservation Area, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

Mr. SIMPSON introduced the following bill; which was referred to the Committee on

---

A BILL

To modify the boundaries of the Morley Nelson Snake River Birds of Prey National Conservation Area, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. BOUNDARY MODIFICATION, MORLEY NELSON SNAKE RIVER BIRDS OF PREY NATIONAL CONSERVATION AREA, IDAHO.

(a) DEFINITIONS.—In this section:

(1) CONSERVATION AREA.—The term ''Conservation Area'' means the Morley Nelson Snake River Birds of Prey National Conservation Area.

(2) GATEWAY WEST.—The term ''Gateway West'' means the high-voltage transmission line project in Idaho and Wyoming jointly proposed by the entities Idaho Power Company, incorporated in the State of Idaho, and Rocky Mountain Power, a division of PacifiCorp, an Oregon Corporation.

(3) MAP.—The term ''map'' means the map titled ''Proposed Snake River Birds of Prey NCA Boundary Adjustment'' and dated October 13, 2016.

(4) SAGE-GROUSE SPECIES.—The term ''sage-grouse species'' means the greater sage-grouse (Centrocercus urophasianus) (including all distinct population segments).

(5) SECRETARY.—The term ''Secretary'' means the Secretary of the Interior.

(b) AREAS TO BE ADDED TO AND REMOVED FROM MORLEY NELSON SNAKE RIVER BIRDS OF PREY NATIONAL CONSERVATION AREA.—The boundary of the Conservation Area is hereby modified—

(1) to include—

(A) the approximately 4726 acres of land generally depicted as ''BLM Administered

Lands'' on the map, to the extent such lands are part of the Lower Saylor Creek Allotment those lands would continue to be managed by the BLM Jarbidge Field Office until terms of the No. CV–04–181–S–BLW Stipulated Settlement Agreement are fully met, after which the lands would be managed by the Morley Nelson Snake River Birds of Prey National Conservation Area office; and

(B) the approximately 86 acres of land generally depicted as ''BOR Administered Lands'' on the map; and

(2) to exclude—

(A) the approximately 761 acres land generally depicted as ''Segment 8 Revised Proposed Route'' on the map, including 125 feet on either side of the center line of the Gateway West Transmission line, the Gateway West Transmission Line shall be sited so that the center line of Segment 8 is no more than 500 feet from the center line of the existing Summer Lake Transmission Line as described in the Summer Lake Transmission Line Right of Way Grant per FLPMA, IDI–008875; and

(B) the approximately 1,845 acres land generally depicted as ''Segment 9 Revised Proposed Route'' on the map including 125 feet on either side of the center line of the Gateway West Transmission line.

(c) RIGHT-OF -WAY AND CONDITIONS.—

(1) RIGHT-OF-WAY.—Notwithstanding any other provision of law, not later than 90 days after the date of the enactment of this section, the Secretary shall issue to Gateway West a right-of-way for the lands described in subsection (b)(2) to be used for the construction and maintenance of transmission lines, including access roads and activities related to fire prevention and suppression. The right-of-way issued under this paragraph shall contain the conditions described in subsection (c)(2)), and be in alignment with the revised proposed routes for segments 8 and 9 identified as Alternative 1 in the Supplementary Final Environmental Impact Analysis released October 5, 2016.

(2) CONDITIONS.—The conditions that the Secretary shall include in the right-of-way described in paragraph (1) shall be in accordance with section 505 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1765) and are as follows:

(A) MITIGATION.—During the time of construction of each respective line segment, Gateway West shall mitigate for the impacts related to the transmission lines in accordance with the Compensatory Mitigation and Enhancement framework described in the final Supplemental Environmental Impact Statement with the stipulation that Compensatory Mitigation and Enhancement costs shall not exceed $8,543,440.

(B) CONSERVATION.—Gateway West shall contribute $2,000 per acre of right-of-way in the Conservation Area during the time of construction of Segment 8 Revised Proposed Route (comprising 761 acres) and during the construction of Segment 9 Revised Proposed Route (comprising 1,845 acres) to the Bureau of Land Management Foundation that shall be used for the purpose of conservation, including enhancing National Landscape Conservation System Units in Idaho, also known as National Conservation Lands.

(C) COSTS.—Gateway West shall pay all costs associated with the boundary modification, including the costs of any surveys, recording costs, and other reasonable costs.

(D) OTHER.—Standard terms and conditions in accordance with section 505 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1765).

(d) ADMINISTRATION.—The Secretary shall—

(1) administer the lands described in subsection (b)(1) as part of the Conservation Area in accordance with Public Law 103–64 and as part of the National Landscape Conservation System; and

(2) continue to administer lands described in subsection (b)(2), but as lands that are not included in a Conservation Area or subject to Public Law 103–64.

(e) TRANSFER OF ADMINISTRATIVE JURISDICTION.—Administrative jurisdiction over the approximately 86 acres of land depicted as ''BOR Administered Lands'' on the map is hereby transferred from the Bureau of Reclamation to the Bureau of Land Management.

(f) AVAILABILITY OF MAP.—The map shall be on file and available for public inspection in the appropriate offices of the Bureau of Land Management.

(g) MANAGEMENT PLAN AMENDMENT.—Not later than 18 months after the date of the enactment of this Act, the Secretary shall amend the management plan for the Conservation Area to address the long-term manage-

ment of the lands described in subsection (b)(1) in order to—

(1) determine appropriate management activities and uses of the lands described in subsection (b)(1) consistent with Public Law 103–64 and this section;

(2) continue managing the grazing of livestock on the lands described in subsection (b)(1) in which grazing is established as of the date of the enactment of this section such that the grazing shall be allowed to continue, subject to such reasonable regulations, policies, and practices that the Secretary considers necessary;

(3) allow motorized access on roads existing on the lands described in subsection (b)(1) on the date of the enactment of this section, subject to such reasonable regulations, policies, and practices that the Secretary considers necessary; and

(4) allow hunting and fishing on the lands described in subsection (b)(1) consistent with applicable laws and regulations.

SEC. 2. COTTEREL WIND POWER PROJECT.

The approximately 203 acres of Federal land identified as ''Project Area'' on the map titled ''Cotterel Wind

Power Project'' and dated March 1, 2006, may not be used for the production of electricity from wind.

SEC. 3. BUREAU OF LAND MANAGEMENT FOUNDATION.

The Secretary of the Interior shall—

(1) establish a Bureau of Land Management Foundation as a charitable and non-profit corporation under section 501(c)(3) of the Internal Revenue Code of 1986; and

(2) grant to such Foundation the same authorities granted to the National Park Foundation for its activities to benefit the National Park Service under subchapter II of chapter 1011 of title 54, United States Code, for the purpose of providing opportunities for the Bureau of Land Management to address a variety of specific challenges that could be better addressed with the support of a foundation, including—

(A) reclamation of legacy wells, contaminated native lands, and abandoned mine land sites;

(B) sustainable management of wild horses and burros;

(C) expanded scientific understanding of responsible development techniques;

(D) voluntary conservation activities; and

(E) proper identification and cataloging of cultural and historical treasure on public lands.

March 24, 2017

Greetings,

Justice Antonin Scalia, who passed away last year, was one of the greatest justices to ever sit on the Court. He was a trailblazing advocate for the original meaning of the Constitution, and a shining example of judicial humility.

This week the Senate Judiciary Committee, of which I am a member, convened the confirmation hearing for President Trump's Supreme Court nominee Judge Neil Gorsuch. Like the renowned justice he is set to replace, Judge Gorsuch is brilliant and immensely talented. His record demonstrates a faithful commitment to the Constitution and the rule of law. He has refused to legislate his own policy preferences from the bench, while recognizing the pivotal role the judiciary plays in defending the fundamental liberties recognized in the Bill of Rights. I have every confidence that Judge Gorsuch will be confirmed as the next associate justice of the Supreme Court.

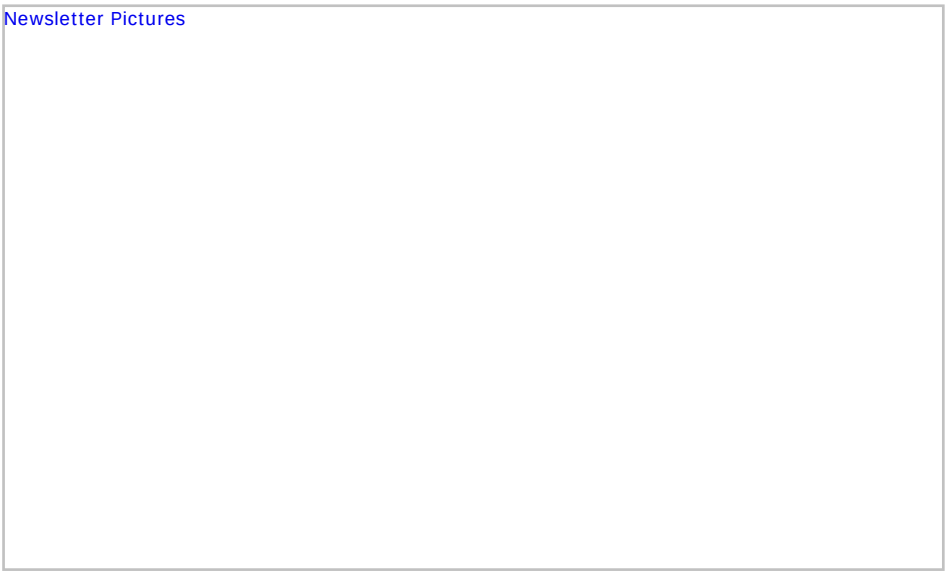
Also this week, we saw a major victory for Houston and the entire space community in Texas. Space exploration has fostered extraordinary economic growth and job creation for the State of Texas and the entire nation. This week the President signed the Cruz-Nelson NASA Transition Authorization Act of 2017, which enables commercial space ventures to flourish and ensures NASA has the clarity of purpose and confidence it needs to continue to grow and improve upon what it does best: lead the world in space exploration. I am grateful for the President's action which will restore stability and certainty to NASA and the U.S. space program, and continue to create jobs in Texas.

Please read below for an update from this last week.

Keep Texas Strong,

TC Sig

Ted Cruz



Sen. Cruz: Just a Decade Ago, Not a Single Democrat Spoke a Word of Opposition to Judge Gorsuch When Confirmed as Federal Judge

This week, Sen. Cruz spoke in support of the nomination of Judge Neil Gorsuch to replace Justice Antonin Scalia on the Supreme Court. In the first day of confirmation hearings before the Senate Judiciary Committee, of which Sen. Cruz is a member, the senator praised Judge Gorsuch's experience and commitment to the rule of law. He also noted that in Gorsuch's confirmation hearings to be a federal judge ten years ago, not one Democrat spoke against him, indicating the bipartisan respect and support of his record and experience.

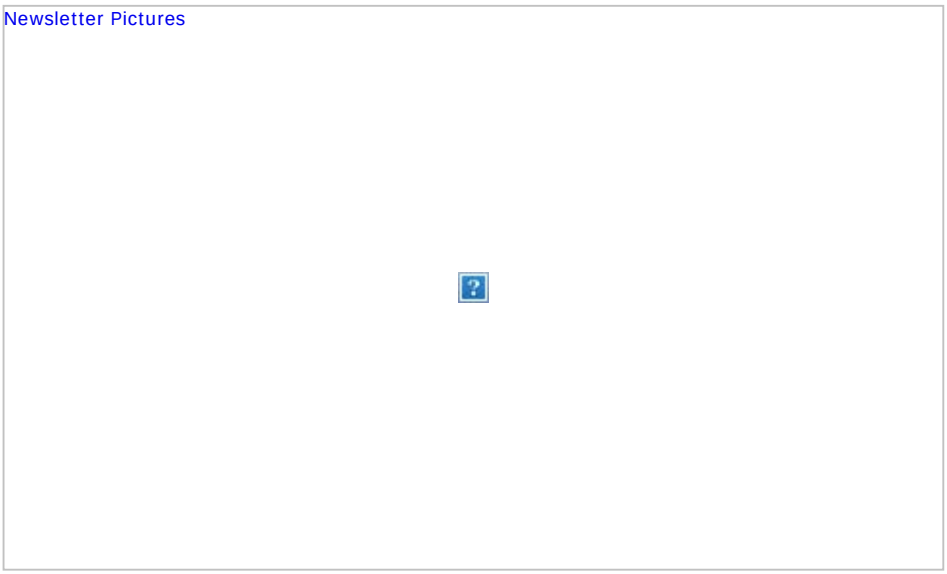
Sen. Cruz: The Future of American Leadership and Exploration in Space is Secure

On Tuesday, Sen.Cruz joined President Donald Trump and Sen. Bill Nelson (D-Fla.) at a White House ceremony where the president signed the bipartisan Cruz-Nelson NASA Transition Authorization Act of 2017 into law.

“I am grateful for the President’s action today which will restore stability and certainty to NASA and the future of the U.S. space program,” Sen. Cruz said. “Space exploration has fostered extraordinary economic growth and job creation for the State of Texas and the entire nation. Drafted and passed in a bipartisan manner, this legislation enables commercial space ventures to flourish and ensures NASA has the clarity of purpose and confidence it needs to continue to grow and improve upon what it does best: lead the world in space exploration. By charting an ambitious course for the manned exploration of the moon, Mars and beyond, this legislation champions America’s leadership in space, and ensures the Johnson Space Center remains the crown jewel of NASA’s human spaceflight missions. I am grateful for my colleagues’ dedication to the future of our nation’s leadership in space, and commend the President for signing this legislation into law.”

Video of the bill signing ceremony may be viewed here.



U.S. Chamber of Commerce Recognizes Sen. Cruz with ‘Spirit of Enterprise’ Award

This week, Sen. Cruz attended a reception hosted by the U.S. Chamber of Commerce. There, Sen. Cruz received the “Spirit of Enterprise” award in recognition of the pro-growth, pro-jobs policies he has advanced during his time in the Senate.

“Businesses of all shapes and sizes need sound, commonsense policy in place in order to get off the ground, grow, and succeed,” said Thomas J. Donohue, president and CEO of the U.S. Chamber of Commerce. “The Spirit of Enterprise Award recognizes those members of Congress who have done what’s right for our friends, family, and neighbors running businesses across the country. We applaud Sen. Cruz for his commitment to free enterprise and economic growth.”

Sen. Cruz Introduces Secretary of Labor Nominee Alex Acosta: 'A Champion for Working Men and Women Who Want Jobs, Higher Wages and More Opportunity'

On Wednesday, Sen. Cruz introduced Secretary of Labor nominee Alexander Acosta at his confirmation hearing before the Senate Committee on Health, Education, Labor and Pensions.

"Alex is a man of character. A man who take very seriously fidelity to the law, fidelity to the Constitution and a man who has a passion for justice," said Sen. Cruz. "I've known Alex for 25 years. He and I went to law school together. We've been friends a long time. There's a lot you can know about Alex from looking at his resume, looking at his bio. You could know that he's smart, that he's academically accomplished, that he's led a life of public service, making a difference in the lives of others."

Sen. Cruz: 'We Now Have the Chance to Think Bigger and Bolder'

Sen. Cruz delivered remarks at a breakfast forum hosted by the Commercial Spaceflight Federation. He discussed his legislative efforts including the Cruz-Nelson NASA Transition Authorization Act and the U.S. Commercial Space Launch Competitiveness Act to ensure America's continued leadership in space.

"Commercial space is a new frontier," Sen. Cruz said. "Space as we famously know is the final frontier but commercial space - using commercial capital to access space, to explore space, to leverage our abilities that is an even newer frontier and it is one where the men and women in this room are at the bleeding edge so I thank you for your vision and commitment to the country. Yesterday's bill signing was an important victory for the men and women here and demonstrated clear bipartisan support for American leadership in space. In a new year, we now have the chance to think bigger and bolder. In this coming Congress, I hope to take up another commercial space launch piece of legislation and a longer term NASA Authorization bill. We are going to have, hopefully soon, a new NASA administrator. When that happens, I look forward to working closely with the administration to laying out a long term authorization for NASA, long term goals, long term structures. From my perspective, I want to see the commercial space sector flourishing with robust competition, with innovation, and with NASA as an active and invested partner. I think the potentials are endless."

Sen. Cruz Issues Statement on Attacks in London and Antwerp

Yesterday's terror attack in London – committed by a radical Islamic terrorist and claimed by ISIS – was an act of barbarism. Our thoughts and prayers are with the victims, their families and the brave law enforcement members who brought the terrorist down – particularly with the family of Kurt Cochran, a fellow American from Utah who was killed, and his wife, Melissa, who was seriously injured. The British people and the British government should know that America stands shoulder to shoulder with them.

This week, a man in the Belgian port city of Antwerp was arrested after driving his car at high speed through a busy pedestrian shopping street. Fortunately, there are no reports of injuries, despite police reportedly having found rifles, knives and a gas can in his car. Had local authorities not acted swiftly and decisively to stop the suspected attacker, countless innocent people could have been killed or injured.

It is past time for us to get serious, smart, and decisive in dealing with the global threat of radical Islamic terrorism. Fortunately, we no longer have an administration in the White House that refuses to call these terrorists by their name and make clear that, rather than acting in the name of an amorphous violent extremism, they are setting off bombs, stabbing people with knives, shooting people in cafes and concert halls and running people down on promenades and shopping streets in the name of their Islamist ideology.

This is why I reintroduced the Expatriate Terrorist Act last month, so that American citizens who join foreign terrorist organizations like ISIS and commit acts of terror against the United States forfeit their citizenship. I have also supported the Trump administration's executive order to suspend immigration from at risk countries until we have an improved vetting system in place to check for Islamist terrorists attempting to enter the United States. We know that ISIS is using migrant routes to smuggle its fighters into Europe and the United States. What is equally disturbing from the murderous attack in London is that the terrorist appears to have been a homegrown jihadist who was known to authorities. Beyond executing a strategy to utterly destroy ISIS and closing pathways for Islamist terrorists to enter our free societies, we need a comprehensive, bold and effective strategy to address radicalism here at home and I am committed to working with my colleagues and the administration to continue making this a priority.

> Good morning, Todd,
> As you know, Artesia and Roswell are

planning our annual Washington Fly-in. Usually, we meet with FWS and BLM in separate meetings, but have had some difficulties in the last two years with BLM. This year, I am asking for assistance in setting up meetings that would be appropriate for the following issues, which are primarily focused on BLM and FWS, but may include others:

- APD processing and permitting for oil & gas production – the new computerized system was not ready for roll-out, which is causing confusion and delays; moreoever, we would like to discuss the unpredictable timelines for APDs which cause delays in production and tie up significant funding.
- State BLM sale – we would like to see the BLM return to quarterly sales

in New Mexico.
The Resource Management Plan, which is delayed
Venting & Flaring rule – the rule is not ready for implementation; we hope for reconsideration of the rule altogether
The anticipated decision on the Texas Horned Shell Mussel and the associated CCAs
Other ESA listings that may be in the works

We will be in Washington May 1-3. We respectfully request a meeting or meetings at Interior on Monday, May 1. I have attached a list of our attendees. Please let me know if you have questions or need additional information.

Thank you for your assistance and direction,
Hayley

W□oming Wilderness Stud□Areas and
Historic Winter Motori□ed Recreation

January 10, 2017

Bill Language

Sec._____. Notwithstanding any other provision of law, motorized recreational winter uses, including commercial uses, shall be authorized or permitted immediately in the area designated by section 301(a)(1) of P.L. 98-550 at no less than the level of permitted use in 2000-2001. Such uses and use levels are consistent with the duties set forth in section 301(c) of P.L. 98-550.

Report Language

The Committee recognizes that Congress intended the Forest Service to ensure that existing and historic motorized recreational uses were to continue in wilderness study areas designated in the 1984 Wyoming Wilderness Act. The Committee further recognizes that winter motorized uses including snowmobiles and commercial helisking have short term ephemeral effects that do not adversely affect the maintenance of wilderness character and do not preclude Congress from designating these areas as Wilderness. Recent decisions have misconstrued this intent, and the policy regarding ephemeral effects, and severely limited previously established winter motorized uses. This provision clarifies and reiterates Congressional intent and ensures that important historic and existing uses be allowed to continue on Wilderness Study Areas at commercially sustainable levels of use.

Subject: Fwd: Wednesday Morning Secretarial Orders

Kaitlynn. Thanks for chatting. We'd be looking at a Sec. Orders Signing Wednesday morning at 10-1030 am. We're focusing on reestablishing the Royalty Policy Committee, Federal Coal Moratorium, Fracking rule and other Oil/Gas on Federal Land issues along with Compensatory Mitigation for pipelines.

If he can attend, we'd appreciate it. We'd ask for the Senator and two staff max. Let me know you got this pls

Absolutely – the Congressman will be there. I have copied in the Congressman's DC scheduler for logistics.

Thanks Micah!

Mark. Just left you a voicemail about an event Wednesday. We'd be looking at a Sec. Orders Signing Wednesday morning at 10-1030 am. We're focusing on reestablishing the Royalty Policy Committee, Federal Coal Moratorium, Fracking rule and other Oil/Gas on Federal Land issues along with Compensatory Mitigation for pipelines.

If your boss can attend, we'd appreciate it. We'd ask for the Senator and two staff max. My apologies it's last minute, but we can't pull the trigger til the WH moves forward.

My understanding is that CRA is still in play. It was just mentioned in the call that venting/flaring was on the table in the EO. That would be new as of this morning, so we certainly still prefer a CRA and it's not in our list of Secretarial orders for tomorrow.

Subject: Energy Independence Executive Order
Date: Tuesday, March 28, 2017 11:13:22 AM

Good Morning:

Can you please tell me if the Energy Independence Executive Order will have any impact on the following provisions:

House Sec. 122—Oil and Gas Royalties
House Sec. 436—Social Cost of Carbon
House Sec. 440—Royalty Rates on Coal, Oil, Gas Leases (Interior has already informed coal, oil and gas companies they do not have to comply with new ONRR method of calculating royalties for mineral extraction on federal land, delaying the rule's effective date to allow the administration to conduct a detailed review. Does the E.O. just memorialize this action?)
House Sec. 441—Coal PEIS
House Sec. 460—Management Non-Federal Oil and Gas
House Sec. 466—BLM Hydraulic Fracturing Rule

Any additional information you can provide on the E.O., lifting the coal leasing moratorium, the impact of the rescission of the Climate Action Plan on your current operating procedures and conservation management decisions, timeline for Interior revision of rules (in accordance with APA), etc. would be helpful.

Thank you,

Hi Kristen. We'll make it work for the Senator. We'll most likely ask people to show up at 945 for a prompt 10 am start time. We have space for two staffers, so we'll plan on Colin and Brian being here, unless you all meant someone different.

Thanks again.

Colin. Thanks for chatting. We'd be looking at a Sec. Orders Signing Wednesday morning at 10-1030 am. We're focusing on reestablishing the Royalty Policy Committee, Federal Coal Moratorium, Fracking rule and other Oil/Gas on Federal Land issues along with Compensatory Mitigation for pipelines.

If she can attend, we'd appreciate it. We'd ask for the Senator and two staff max.

My understanding is that CRA is still in play. It was just mentioned in the call that venting/flaring was on the table in the EO. That would be new as of this morning, so we certainly still prefer a CRA and it's not in our list of Secretarial orders for tomorrow.

Parking will be an issue. Half our garage is under construction right now and it requires extra coordination to get it through security. If it's a necessity to being on time though, let us know and we'll sort it out.

Location: 1849 C St, NW

Timing--
Arrive NLT 9:45AM - Members/Senators arrive at the C Street Entrance

Greeted by: Wadi, Caroline (TBD), Micah or Amanda

10:00AM Hard Start - Signing Ceremony Begins

Reminder: we must have the list of all staff by COB today for Security. And for the schedule.

Garage parking isn't available except under certain circumstances.

Environmental Protection and Economic Growth Should go Together

Washington, D.C. – House Majority Leader Kevin McCarthy (CA-23) released the following statement on President Trump's executive order to rewrite the Clean Power rule:

"President Trump is taking action to keep the lights on in our homes, our factories, and throughout our economy's supply chain. America will have a stronger future by developing, not neglecting, the abundant energy resources our land offers. The rationale behind this action is what Republicans have been arguing for years: environmental protections and economic growth are not mutually exclusive. Innovation and technological changes have proven our ability to advance energy development in a cleaner and safer way. We are a resilient people who power a resilient economy. Unleashing our energy potential will strongly support jobs and healthier lives for everyone."

Michael H. Simon, District Judge.

Intervenor-Plaintiff State of Oregon ("Oregon") and Plaintiffs (collectively, "Spill Plaintiffs") move under the Endangered Species Act ("ESA") for an injunction requiring the Federal Defendants to provide spring spill beginning in 2017 for each remaining year of the remand period at the maximum spill level that meets, but does not exceed, total dissolved gas ("TDG") criteria allowed under state law ("spill cap") as follows: (1) from April 3 through June 20 at Ice Harbor, Lower Monumental, Little Goose, and Lower Granite dams; and (2) from April 10 through June 15 at Bonneville, The Dalles, John Day, and McNary dams. The Spill Plaintiffs request this spill be on a 24-hour basis using the most advantageous pattern to reduce TDG. The requested injunction, however, would allow for reductions in spill below the spill cap by the Army Corps of Engineers ("Corps") under certain involuntary spill conditions or to address specific biological constraints, provided there is no objection from any member of the Fish Passage Advisory Committee ("FPAC"). The Spill Plaintiffs also move for an injunction requiring the Federal Defendants to operate the juvenile bypass and related Passive Integrated Transponder ("PIT") tag detection system beginning March 1 of each year, commencing in 2017. Currently, this system begins in mid- to late March. The Nez Perce Tribe supports both motions.

Plaintiffs also move under the National Environmental Procedure Act ("NEPA") for an injunction prohibiting the Corps from expending any additional funds on: (1) two planned projects at Ice Harbor Dam, expected to cost approximately $37 million; and (2) any new capital improvement projects or expansion of existing projects at any of the four Lower Snake River dams that would cost more than one million dollars, in the absence of prior approval from the Court. Oregon and the Nez Perce Tribe also support this motion. For the following reasons, both motions are granted in part and denied in part.

STANDARDS

A. Permanent or Preliminary Injunction

Plaintiffs and Oregon explain that they seek "permanent" injunctions until the Federal Defendants comply with the ESA and NEPA. The Federal Defendants, Intervenor-Defendants, and the *Amici Curiae* who oppose the requested injunctions (collectively, "Defendants") variously discuss both preliminary and permanent injunction standards.

A plaintiff seeking a permanent injunction must show:

> "(1) that it has suffered an irreparable injury; (2) that remedies available at law, such as monetary damages, are inadequate to compensate for that injury; (3) that considering the balance of hardships between the plaintiff and defendant, a remedy in equity is warranted; and (4) that the public interest would not be disserved by a permanent injunction."

Cottonwood Envt'l Law Ctr v. U.S. Forest Svc., 789 F.3d 1075, 1088 (9th Cir. 2015) (quoting *eBay Inc. v. MercExchange, L.L.C.*, 547 U.S. 388, 391 (2006)).

When seeking a preliminary injunction, a plaintiff must show that: (1) he or she is likely to succeed on the merits; (2) he or she is likely to suffer irreparable harm in the absence of preliminary relief; (3) the balance of equities tips in his or her favor; and (4) that an injunction is in the public interest. *Winter v. Nat. Res. Defense Council, Inc.*, 555 U.S. 7, 20 (2008). In the Ninth Circuit, a plaintiff seeking a preliminary injunction alternatively may show "'serious questions going to the merits' and a hardship balance that tips sharply toward the plaintiff, assuming the other two elements of the *Winter* test are also met." *All. for the Wild Rockies v. Cottrell*, 632 F.3d 1127, 1132 (9th Cir. 2011). The standard for a permanent injunction is similar, but not identical, to the standard required for a preliminary injunction. *See Amoco Prod. Co. v. Vill. of Gambell*, 480 U.S. 531, 546 n. 12 (1987) ("The standard for a preliminary injunction is

essentially the same as for a permanent injunction with the exception that the plaintiff must show a likelihood of success on the merits rather than actual success.").

Injunctions, such as those sought by Plaintiffs and Oregon, are not preliminary in the conventional sense because the Court has already decided the merits of this case. The relief now being sought, however, also is not permanent in the conventional sense because it may be lifted after the Federal Defendants comply with the Court's remand order by preparing a new biological opinion and following NEPA. *See S. Yuba River Citizens League v. Nat'l Marine Fisheries Serv.*, 804 F. Supp. 2d 1045, 1052 (E.D. Cal. 2011). Thus, in practical effect, Plaintiffs seek "interim injunctive measures." *Id.* Because the Court has already decided the merits of the ESA and NEPA claims in this case, the Court finds the factors for granting permanent injunctive relief to be more appropriate in considering the pending motions, but notes that the requested injunctions will be in place only for a limited duration.[1]

B. Injunction Under the ESA

When considering a motion for an injunction under the ESA, "the ESA strips courts of at least some of their equitable discretion in determining whether injunctive relief is warranted." *Cottonwood*, 789 F.3d at 1090. In *Cottonwood*, the Ninth Circuit discussed the Supreme Court's decision in *Tennessee Valley Authority v. Hill*, 437 U.S. 153 (1978), and explained how Congress in that case "remove[d] several factors in the four-factor test from a court's equitable jurisdiction." The Ninth Circuit stated:

[1] Many Defendants also argue that the Court should apply the heightened standard for a "mandatory" injunction because the Spill Plaintiffs request the Corps to take affirmative action that is different from the "status quo." The states of Idaho and Montana, however, concede that the "law of the case" requires application of the regular, or "prohibitory," injunction standard because that is the standard that Judge Redden and the Ninth Circuit previously used in this case. In addition, it is the "status quo" that is alleged to be harming the listed species, which is the harm to be mitigated. *See Wash. Toxics Coal. v. Envtl. Prot. Agency*, 413 F.3d 1024, 1035 (9th Cir. 2005).

> *Hill* held that courts do not have discretion to balance the parties' competing interests in ESA cases because Congress "afford[ed] first priority to the declared national policy of saving endangered species." 437 U.S. at 185. *Hill* also held that Congress established an unparalleled public interest in the "incalculable" value of preserving endangered species. *Id.* at 187-88. It is the incalculability of the injury that renders the "remedies available at law, such as monetary damages . . . inadequate." *See eBay*, 547 U.S. at 391.

Cottonwood, 789 F.3d at 1090 (alterations in original). The Ninth Circuit concluded that although three of the four injunction factors are presumed in an ESA case, "there is no presumption of irreparable injury where there has been a procedural violation in ESA cases." *Id.* at 1091. The Ninth Circuit noted, however, that "in light of the stated purposes of the ESA in conserving endangered and threatened species and the ecosystems that support them, establishing irreparable injury should not be an onerous task for plaintiffs." *Id.*

If a court determines that injunctive relief is warranted, such relief must be tailored to remedy the specific harm. *Melendres v. Arpaio*, 784 F.3d 1254, 1265 (9th Cir. 2015) ("We have long held that injunctive relief must be tailored to remedy the specific harm alleged." (quotation marks omitted)). "Nevertheless, the district court has broad discretion in fashioning a remedy." *Id.* Further, an "enjoined party's history of noncompliance with prior orders can justify greater court involvement than is ordinarily permitted." *Id*. (quotation marks omitted).

C. Injunction Under NEPA

In considering injunctions under NEPA, a court applies the normal four-factor test. The Supreme Court has clarified, however, that courts may not put their "thumb on the scales" in considering injunctive relief under NEPA and may not presume any factor as being met or that an injunction is the proper remedy. *Monsanto Co. v. Geertson Seed Farms*, 561 U.S. 139, 157 (2010).

BACKGROUND

This case has a long history.[2] Its background is well known to the parties and was discussed in the Court's most recent Opinion and Order, which resolved the parties' cross-motions for summary judgment ("2016 Opinion"). *See NMFS V*, 184 F. Supp. 3d at 869-72, 879-83. Six biological opinions and supplemental biological opinions[3] relating to the operation of the Federal Columbia River Power System ("FCRPS") have been invalidated in this case by three different federal district judges. Throughout the history of this litigation, the Court has expressed significant concern regarding the harm caused to ESA-listed species of salmonids by the operation of the dams on the lower Columbia and Snake rivers.

As relevant here, in its 2016 Opinion, the Court concluded that NOAA Fisheries violated the ESA by adopting the 2014 Biological Opinion ("2014 BiOp"), in part because the 2014 BiOp: (1) relied on an unsound methodology for evaluating whether operations of the FCRPS would jeopardize the continued existence of the listed species; (2) did not adequately take into account ongoing low abundance levels; (3) did not rationally address recovery; (4) did not adequately consider declining recruits-per-spawner (or returns-per-spawner); (5) relied on immediate, specific numeric survival improvements from uncertain habitat improvement actions with uncertain benefits, without allowing any "cushion" in case all of the actions or their

[2] Several previous court opinions from this case will be discussed in this Opinion and Order. They are: *Nat'l Wildlife Fed. v. Nat'l Marine Fisheries Serv.*, 2005 WL 1398223, at *3 (D. Or. June 10, 2005) (granting in part preliminary injunction regarding spill) ("*NMFS I*"), *aff'd in part by* 422 F.3d 782, 788-93 (9th Cir. 2005) ("*NMFS II*"); *Nat'l Wildlife Fed. v. Nat'l Marine Fisheries Serv.*, 524 F.3d 917, 924 (9th Cir. 2007) (invalidating 2004 BiOp) ("*NMFS III*"); *Nat'l Wildlife Fed. v. Nat'l Marine Fisheries Serv.*, 839 F. Supp. 2d 1117 (D. Or. 2011) (invalidating 2008 and 2010 BiOps) ("*NMFS IV*"); *Nat'l Wildlife Fed. v. Nat'l Marine Fisheries Serv.*, 184 F. Supp. 3d 861, 869-72, 879-83 (D. Or. 2016) (invaliding 2014 BiOp) ("*NMFS V*").

[3] These biological and supplemental biological opinions were issued in 1993, 2000, 2004, 2008, 2010, and 2014.

expected benefits were not realized during the BiOp period; and (6) did not adequately consider the effects of climate change. *Id.* at 898-923. The Court also concluded that the Corps and the Bureau of Reclamation ("BOR") violated NEPA by failing to prepare a single (or comprehensive) environmental impact statement ("EIS"). The Court sought further briefing on the appropriate timing for NEPA compliance and ultimately ordered a five-year schedule, as requested by the Federal Defendants.

DISCUSSION

A. Federal Rule of Civil Procedure 60(b)

Defendants argue that Plaintiffs' and Oregon's motions must be denied because they fail to meet the requirements of Federal Rule of Civil Procedure Rule 60(b). Plaintiffs and Oregon dispute that Rule 60(b) even applies. The Court need not determine whether Rule 60(b) applies because even if it does, the Court would allow Plaintiffs and Oregon to proceed with their motions under Rule 60(b)(6).

In the 2016 Opinion, the Court invited supplemental briefing on "proposed timing for a reasonable NEPA process and other arguments regarding the scope of appropriate injunctive relief relating to NEPA." *NMFS V*, 184 F. Supp. 3d at 948. Although the Court was aware that in the past there had been allegations that the Federal Defendants had not complied with agreed-upon spill, no issue related to spill was before the Court, and to the Court's knowledge no such problems had occurred in recent years. Thus, the Court was not immediately concerned with crafting an injunction relating to spill, but was instead focused on an appropriate NEPA injunction and its timing.

In responding to the Federal Defendants' proposal regarding the timing of NEPA compliance, Plaintiffs and Oregon (in a joint brief) raised the possibility of requesting the

injunctions they seek in the pending motions. ECF 2074 at 23-26. In response, the Federal Defendants stated:

> Plaintiffs devote over three pages to pondering whether injunctive relief may be appropriate. *Plaintiffs are free to move the Court for relief if at some future point they deem it necessary.* But they have not done so now, and the Court should not delay entering an order providing a deadline for completing the NEPA process so that the parties and region can move forward in addressing the Court's May 4, 2016 Opinion.

ECF 2078 at 34-35 (emphasis added).

The Court and the parties then focused their immediate efforts on finalizing a remand order that established the timing for NEPA compliance, instead of briefing the additional injunctions now sought by Plaintiffs and Oregon. The Federal Defendants expressly acknowledged that Plaintiffs and Oregon could move the Court at a later time for such injunctions rather than slowing down the process of completing the Court's order establishing the NEPA deadlines.

Additionally, the Court expressly retained jurisdiction over this case to ensure that the Federal Defendants: (1) develop appropriate mitigation measures to avoid jeopardy (which could potentially include additional spill); (2) produce and file a biological opinion that complies with the ESA and APA; and (3) prepare an EIS that complies with NEPA (which could potentially include requiring that the agencies avoid limiting the choice of reasonable alternatives and committing resources that prejudice the selection of alternatives). *NMFS V*, 184 F. Supp. 3d at 950. Accordingly, assuming without deciding that Rule 60(b) applies, the Court finds that these reasons constitute "other reason[s] that justif[y] relief." Fed. R. Civ. P. 60(b)(6).

B. Whether the Corps and BOR violated the ESA

In the 2016 Opinion, the Court did not expressly address Plaintiffs' Second Claim for Relief in their Seventh Amended Complaint, which alleges that the Corps and BOR violated

Section 7 of the ESA by relying on the 2008, 2010, and 2014 BiOps without conducting an independent analysis to ensure that their activities did not jeopardize the listed species. Defendants argue that this means that Plaintiffs did not prevail on this claim.[4] Plaintiffs argue that it can be implied that they did prevail because these BiOps have been invalidated by the Court, and if it cannot be so implied, the Court should now so find.

In the conclusion of the 2016 Opinion, the Court stated that Defendants' "motions are granted with respect to the claims that NOAA Fisheries did not violate the ESA and the APA in determining in the 2014 BiOp that the RPA does not adversely modify critical habitat and is not likely adversely to affect endangered Southern Resident Killer Whales, *and are denied in all other respects*." *NMFS V*, 184 F. Supp. 3d at 950 (emphasis added). Thus, it cannot reasonably be interpreted that in the 2016 Opinion, the Court ruled for the Federal Defendants on this claim and found that the Corps and BOR did not violate the ESA.

In the 2016 Opinion, the Court invalidated the 2014 BiOp, on which the Corps and BOR relied in issuing their 2014 Records of Decision. Notably, in granting Plaintiffs' motions for summary judgment, the Court did not include any similar limitation as it did in granting the Defendants' motions. The Court described the motions it was granting without denying Plaintiffs' motions in all other respects. Thus, even though the Court did not expressly grant Plaintiffs' motion that the Corps and BOR violated the ESA, that conclusion is reasonably implied from the 2016 Opinion.

To the extent it cannot reasonably be implied from the 2016 Opinion, the Court now so finds. The evidence shows that in reaching their 2014 Records of Decision, the Corps and BOR did not conduct any independent analysis but solely relied on the now-invalidated 2014 BiOp.

[4] The Court focused on the arguments emphasized by the parties in their summary judgment briefs. Any failure specifically to address this claim was inadvertent.

This is a violation of the ESA, for the same reasons previously described by Judge Redden regarding an earlier biological opinion:

> In my May 2005 opinion, I found the 2004 BiOp violates the ESA. I now conclude that, in light of their reliance on the 2004 BiOp, the Record of Consultation and Statement of Decision (ROD) issued by the Corps on January 3, 2005, and the ROD issued by the BOR on January 12, 2005, also violate the ESA . . . . The RODs provide no specific analysis nor point to any record evidence to support the assertion that the action agencies conducted independent assessments and reached independent and rational conclusions in adopting them. The RODs reveal that these agencies embraced the same fundamental legal flaws that NOAA attempted to use to justify its circumscription of the action subject to jeopardy analysis. I find, therefore, that in substance the RODs relied on the no-jeopardy finding of the 2004 BiOp without an independent rational basis for doing so.

NMFS I, 2005 WL 1398223, at *3.

C. Spill Injunction

1. Irreparable Harm

The Federal Defendants repeatedly have concluded that the operations of the FCRPS jeopardize the listed species—thus the need for reasonable and prudent alternatives ("RPA") in the biological opinions. In the 2016 Opinion, the Court emphasized that despite the 73 RPAs from the 2008 and 2014 BiOps, the most recent data shows that the listed species remain in a "precarious," "imperiled," and "perilous" state. *See NMFS V*, 184 F. Supp. 3d at 872, 876, 879, 890, 892, 918, 947 (citing relevant data); *see also NMFS III*, 524 F.3d at 933 (emphasizing the "highly precarious status" of the species at issue in this case).

In light of the ongoing imperiled status of the listed species, the Court does not find any reason to disturb the following finding of Judge Redden in his 2011 Opinion and Order:

> As I have previously found, there is ample evidence in the record that indicates that the operation of the FCRPS causes substantial harm to listed salmonids. . . . NOAA Fisheries acknowledges that the existence and operation of the dams accounts for most of the

> mortality of juveniles migrating through the FCRPS. As in the past, I find that irreparable harm will result to listed species as a result of the operation of the FCRPS.

NMFS IV, 839 F. Supp. 2d at 1131. Accordingly, continuation of the status quo is likely to result in irreparable harm to the listed species.[5]

The Federal Defendants and some intervenors argue that the Spill Plaintiffs must prove that operating with Court-ordered spill during the next two years will pose an imminent threat at the species level. This is not the appropriate standard. As the Ninth Circuit discussed in affirming Judge Redden's previous spill order, after the Court has found that the operation of the FCRPS causes irreparable harm to the species and has invalidated the governing biological opinion, the Court is faced with the choice of either allowing an operation that violates the ESA to continue or ordering modifications. *NMFS II*, 422 F.3d at 796. The Ninth Circuit gave no indication that to order modifications would require a separate finding that during the time remaining in the remand period the species is in imminent danger of becoming extinct or that only the operations relating to the proposed modification (*e.g.*, spill) must be causing the irreparable harm.[6] To do so runs contrary to the ESA. *See Nat'l Wildlife Fed. v. Burlington N. R.R.*, 23 F.3d 1508, 1512 n. 8

[5] Defendant-Intervenor RiverPartners argues that the Spill Plaintiffs must connect any harm to the species to themselves and that they have failed to do so. RiverPartners cites in their brief, and relied on at oral argument, *Idaho Rivers United v. United States Army Corps of Engineers*, 156 F. Supp. 3d 1252 (W.D. Wash. 2015), for this proposition. *Idaho Rivers*, however, is inapposite. In that case, the court found that the plaintiffs had adequately shown that harm to the species, the lamprey, would affect the Nez Perce Tribe. *Id.* at 1260-61. What the plaintiffs did not show was that the lamprey was at risk of irreparable harm. *Id.* at 1261-62. Thus, because the plaintiffs' harm was derivative of the lamprey's harm, and harm to the lamprey was not shown, harm to the plaintiffs was not shown. *Id.* Here, the Court has found harm to the listed species. Thus, *Idaho Rivers* is distinguishable. The Court also finds that the Spill Plaintiffs have adequately shown how harm to the listed species will affect the Spill Plaintiffs.

[6] To the contrary, even though the injunction at issue involved only spill, Judge Redden and the Ninth Circuit considered the harm caused by the full operation of the FCRPS, not just spill or lack thereof.

(9th Cir. 1994) ("We are not saying that a threat of extinction to the species is required before an injunction may issue under the ESA. This would be contrary to the spirit of the statute, whose goal of preserving threatened and endangered species can be achieved through incremental steps."). Additionally, as the Court has already found, operation of the FCRPS jeopardizes the listed species at a species level—the dams are the largest source of mortality of juveniles. Moreover, even if the operation of the FCRPS did not jeopardize the species, proving harm to the entire species is not necessary for an injunction under ESA Section 7, rather "[e]vidence that the [listed] salmon will suffer imminent harm of any magnitude is sufficient to warrant injunctive relief." *Yurok Tribe v. United States Bureau of Reclamation*, 2017 WL 512845, at *24 (N.D. Cal. Feb. 8, 2017) (citing *Big Country Foods, Inc. v. Bd. of Educ.*, 868 F.2d 1085, 1088 (9th Cir. 1989); *Nat'l Wildlife Fed. v. Burlington N. R.R.*, 23 F.3d 1508, 1512 n.8 (9th Cir. 1994); *Marbled Murrelet v. Babbitt*, 83 F.3d 1060, 1066 (9th Cir. 1996)). This is not a case where the court is considering the loss of only a small number of animals within the listed species. *See, e.g.*, *Defenders of Wildlife v. Salazar*, 812 F. Supp. 2d 1205, 1209-10 (D. Mont. 2009) (concluding that the loss of a few individual wolves did not constitute irreparable harm when there was no evidence that the loss "would be significant for the species as a whole").

2. Other Injunction Factors

The ESA "strips" the Court of the equitable discretion to weigh the other traditional factors relating to injunctive relief. *Cottonwood*, 789 F.3d at 1090. The Court does, however, consider Defendants' arguments relating to the potential harm to the listed species and to human life versus the benefits asserted by the Spill Plaintiffs in evaluating the appropriate injunctive relief. As instructed by the Supreme Court and the Ninth Circuit, however, the Court does not weigh the public interest or balance the equities, for example by weighing any potential

implications on the power system or costs to the Federal Defendants. *Id.* And the Court presumes that monetary damages are insufficient. *Id.*

3. Whether Injunctive Relief is Appropriate

The current situation is similar to the situation that was before the Ninth Circuit when it affirmed in part Judge Redden's previous injunction in this case relating to spill. *See NMFS II*, 422 F.3d at 795-99. The Court has invalidated the 2014 BiOp, found that the listed species remain in an imperiled state, and concluded that continued operation of the FCRPS is likely to result in irreparable harm to the listed species. The question now before the Court is "what interim remedy [is] appropriate to redress the ESA violations." *Id.* at 795. As before, one of the "primary complications of this case is that the operations in question are, by necessity, ongoing." *Id.* This means that the Court is

> faced with a continuing operation that it had concluded would cause irreparable harm to threatened species. Thus, the district court [is] confronted with two choices: (1) continue the status quo, the foundation of which the court had rejected as violative of the ESA and the continuation of which it had concluded [is likely to] irreparably harm listed species, or (2) order modifications.

Id. at 796.

The Court intends to order modifications. As discussed in the 2016 Opinion, the listed species are highly vulnerable for many reasons, including because they have precariously remained at low abundance for some time, are susceptible to devastating effects from climactic events, such as occurred in 2015, and are without any survival "cushion" in the 2014 BiOp and its RPAs.

4. Whether Additional Spill is Supported

All parties agree that previously-ordered spill has generated survival benefits and has been good for salmonid survival. The current dispute lies in whether the benefits of *additional*

spill has undergone sufficient study and is sufficiently supported. The parties, intervenors, and *amici* provide competing expert declarations discussing the purported benefits and potential downsides of additional spill. Additionally, the Spill Plaintiffs primarily rely on the Comparative Survival Study ("CSS") annual reports, workshops, and other analyses that study and hypothesize that additional spill will provide significant increased juvenile survival and adult returns, and Defendants primarily rely on the Independent Scientific Advisory Board's ("ISAB")[7] February 20, 2014, review of a spill experiment proposal based on a 2013 CSS study.

The spill experiment proposal reviewed by ISAB involved spill at higher levels than requested in the current injunction—125 percent of TDG in the tailrace of each dam. The current request is for 115 percent in the forebay and 120 percent in the tailrace. As the Spill Plaintiffs point out, the Corps itself has explained that spill at this level is safe:

> The GBT monitoring program has consistently shown over the years of implementation that signs of GBT are minimal when TDG is managed to the criteria levels of 115/120 percent TDG. Historically signs of GBT do not approach the action criteria until TDG levels are near 130 percent supersaturation levels in the tailraces, or forebays, of dams. The 2013 TDG was managed close to the 115/120 percent criteria, and the low incidence of signs of GBT observed this year reflects that management.

ECF 2165-4 at 14 (Bowles Reply Decl. Ex. 8 at 14).

Additionally, a close review of ISAB's critique shows that ISAB's primary concern was that the spill experiment proposal was not a detailed study with a hypothesis, study design, consideration of various approaches, updated data, monitoring, and adaptive management. *See* ECF 2146 (ISAB report). ISAB concluded that it lacked sufficient information to answer basic questions regarding the study, such as whether it had an adequately researched hypothesis. *Id.*

[7] ISAB serves NOAA Fisheries and others by providing independent scientific advice and recommendations regarding relevant scientific issues.

at 97 (report at 4). The underlying concept that increased spill may well benefit salmonids, however, was not rejected. To the contrary, ISAB noted:

> Despite these concerns with the statistical analyses used to support implementation of the spill test, it appears that the increased spill hypothesis stands as a possible candidate for testing. Other changes to hydrosystem operations have so far been inadequate to meet SAR targets required to conserve endangered salmon populations, even with structural changes that have been made at the dams such as surface spill weirs. It appears that increasing the amount of water spilled at lower Columbia and Snake River dams has merit as a hypothesis to test, but additional review of literature and analysis of data would be worthwhile.
>
> Increasing spill is expected to allow a greater proportion of migrants to avoid the powerhouse intakes and speed their migration through forebays.

Id. at 98 (ISAB report at 5). ISAB also stressed the importance of monitoring and adaptive management in this type of experiment. *Id.* at 100-101 (ISAB report at 7-8).

Thus, ISAB concluded that additional spill appears to have merit and is worth testing. ISAB is not alone in this conclusion. Others, in addition to the CSS, have similarly called for increasing spill, or at least for testing increased spill. *See* Howard A. Schaller, *et al.*, *Evaluating River Management During Seaward Migration to Recover Columbia River Stream-type Chinook Salmon Considering the Variation in Marine Conditions*, Can. J. Fish. Aquat. Sci. Vol. 71 (2014) ("Our study highlights the importance of considering river management options in face of variable ocean conditions for Snake River Chinook salmon. In particular, our retrospective SRI [survival rate index] regression results, and those of Petrosky and Schaller (2010) and Haeseker et al. (2012) suggest that hydrosystem-related direct and delayed mortality may be reduced substantially through actions (e.g. spill, surface passage, increases in water velocity through drawdown, or dam removal) that reduce the number of powerhouse passages, speed water velocity, and juvenile migrations, as well as reduce reliance on juvenile collection and

transportation. . . . A practical management experiment would be to evaluate increasing managed spill levels at the dams during the spring migration period and evaluate the population responses on the results of empirical survival estimates (Haeseker et al. 2012).") (NMFS037802); Steven L. Haeseker, *et al*., *Assessing Freshwater and Marine Environmental Influences on Life-Stage-Specific Survival Rates of Snake River Spring-Summer Chinook Salmon and Steelhead*, Transactions of the American Fisheries Society, 141:1, 121-38 (2012) ("In conclusion, the models that were developed for characterizing variation in overall life cycle morality rates indicate that increases in spill levels and reductions in water transit times are expected to increase stage-specific survival rates . . . as well as cumulative smolt-to-adult survival rates. Across a range of ocean conditions, higher spill levels and reductions in water transit time are expected to result in higher SARs than would occur with lower spill levels and higher water transit times. . . . These predictions would provide quantitative, testable hypotheses on the predicted survival responses that could occur under a true adaptive management experiment conducted within the FCRPS, where spill and water transit times are extended beyond the range of available data and the resulting survival rates are monitored to determine whether the expected increases are realized.") (NMFS012460); C.E. Petrosky and H.A. Schaller, *Influence of River Conditions During Seaward Migration and Ocean Conditions on Survival Rates of Snake River Chinook Salmon and Steelhead*, Ecology of Freshwater Fish 19:520-36 (2010) ("Given projections for degrading ocean conditions (i.e., global warming), our analysis suggests that a precautionary management approach would focus on improving in-river migration conditions by reducing WTT [water travel time], relying on increased spill to reduce passage through powerhouse turbines and collection/bypass systems, or other actions that would increase water

velocity, reduce delay at dams and substantially reduce FTT [fish travel time] through the FCRPS.") (NMFS035961).

Despite these widespread calls for testing increased spill, the Federal Defendants do not appear to have crafted any such experiment. At oral argument, counsel for the Federal Defendants indicated that in response to the 2016 Opinion, they "heard the Court," are moving forward to "solve these issues," have been "prodded" in the direction of additional spill, and thus additional spill may be considered as an action for the next biological opinion. But, as the Court has repeatedly found over the last 20 years, the listed species are in need of additional survival protections now. "Kicking the can down the road" after invalidating each of the FCRPS biological opinions, although necessary under the circumstances of this case, provides little protection to the listed species that are in an ongoing state of peril. As Judge Redden found in 2005, however,—over the Federal Defendants, intervenors, and *amici's* vigorous objections—spill is something that can offer immediate survival benefit and is worth trying. That conclusion by Judge Redden has proven accurate, as all parties now agree. The Court finds it similarly applicable today, if implemented appropriately.

The Court also finds particularly instructive the Declaration of Bill Tweit, submitted in support of the State of Washington's *opposition* to the requested injunction. Mr. Tweit states that "there is a growing scientific body of evidence from the decades of data on the beneficial value of spill at the higher levels seen in recent in years in promoting juvenile survivals and subsequent adult returns." ECF 2137 at 2 (Decl. ¶ 2). He continues, noting that "[c]onducting effective scientific investigations, while also allowing operators and fish managers the latitude to make in-season modifications as necessary to protect out-migrating and returning salmonids from unforeseen circumstances, is complex and requires flexibility." *Id.* (Decl. ¶ 3). Mr. Tweit

recognizes the "increasing consensus among federal, state, and tribal researchers and fish managers that increased spill has the *potential* to appreciably increase the probability that Snake River spring/summer Chinook and steelhead" will attain significant survival improvement. *Id.* at 10 (Decl. ¶ 15). He notes that Oregon's proposal of additional spring spill "is credible, and deserving of further scientific investigation." *Id.* at 10 (Decl. ¶ 16). He adds, however, that it is problematic in "that it treats spill as a uniform variable at each of the FCRPS dams, but it is well known that each dam must also be considered individually in designing spill operations, particularly at the higher levels of spill proposed by Oregon." *Id.* He concludes by stating that "[i]t is prudent to take the time necessary to craft a spill experiment . . . to maximize benefits [and] minimize costs and impacts" and that "[i]deally, the work to develop a new spill regime would be scheduled with a goal to implement by the 2018 migration season and carried forward into a the new bridge biological opinion beginning in 2019[.]" *Id.* at 13 (Decl. ¶ 23). Thus, Mr. Tweit (and the State of Washington) did not dispute the science behind the Spill Plaintiffs' request, only the timing and specific method of implementation.

The concerns expressed by Mr. Tweit are not unique to him. In reviewing the voluminous record relating to this motion, the Court notes that much of the opposition to the injunction is not based on a concern that increased spill at the requested level will necessarily harm salmonids, but instead on "rushing" the process, treating spill at all eight dams the same, and changing the adaptive management process to one that allows Oregon an operational "veto." As Ritchie J. Graves, Chief of the Columbia Hydropower Branch for the NMFS West Coast Region (Interior Columbia Basin Office) states in his Reply Declaration, he is not opposed to operational studies to reduce mortality; he is "opposed to 'rushing' into an action that could be detrimental to fish or that would provide no ability to scientifically assess the effectiveness of the action." ECF 2181

at 2 (Reply Decl. ¶ 2); *see also* ECF 2139 at 31 (Graves Decl. ¶ 71) (noting that NMFS is "prepared to engage our partners through the regional forum process" and others as needed regarding testing increased spill in a "rigorous" and "thoroughly vetted" manner).

There is nothing in the record to indicate that the current spill level is the precise or "magic" level that achieves all the possible survival benefits with the minimum of risk. The CSS analyses support that there will be beneficial effects of increasing spill to the spill caps. Defendants do not offer similarly scientific studies showing that the CSS analyses are wrong. Rather they challenge whether the proof relied on by CSS is good enough, properly vetted, or in the correct format. As the court in *Yurok Tribe* concluded, however, in response to similar arguments that evidence of flushing flows was not certain to reduce harm to listed salmon in the Klamath River and had not been "properly tested through a comprehensive scientific process," the ESA does not require perfect knowledge to support an injunction to protect a listed species, rather it requires action to protect a species consistent with the best available scientific information. *Yurok Tribe*, 2017 WL 512845, at *29.

The CSS has studied and described the benefits of increased spill. ISAB and others have encouraged testing of increased spill. Oregon's experts describe the benefits of increased spill. Further, as the State of Washington has acknowledged, there is a growing scientific body of evidence and growing consensus supporting higher levels of spill. Although Defendants provide expert testimony expressing concerns regarding increased spill, most of these concerns can be addressed with an appropriately-tailored injunction. Other expressed concerns are not appropriate in the context of an injunction under the ESA or the Court finds not as compelling as the evidence supporting additional spill. Accordingly, the Court concludes that there is sufficient scientific support for a limited injunction requiring increased spill to benefit the listed species.

5. Tailored Injunctive Relief

a. Timing for additional spill

The Court has found that the ongoing operation of the FCRPS is likely to cause irreparable harm to the listed species. This weighs in favor of granting an immediate injunction. The Court, however, shares many of the concerns raised by Defendants that implementing increased spill beginning April 3, 2017, is too rushed and does not provide sufficient time to ensure that the increased spill will not cause unintended negative consequences.

The Court recognizes that concerns for both human safety and the listed species require calculating appropriate spill patterns in advance of increasing spill. As Defendants describe, the Corps implements spill using particular spill patterns at each dam, and any change to spill can change the spill pattern and result in eddies or other flow issues that might delay or preclude juveniles from downstream migration, prevent adults from upstream migration, and negatively affect navigation through the lock systems.

The Corps has a testing facility in Vicksburg, Mississippi—the Engineer Research and Development Center ("ERDC"). This facility contains scale models of all eight dams and provides the ability to test spill patterns resulting from increased spill. These models also allow testing of spill patterns and flow to determine effects on navigation and the lock systems of the dams, particularly with regard to tug and barge tows. *See* ECF 2154 at 5-6 (Decl. of Robert Rich ¶ 16). Testing at the ERDC can be time-consuming because there are other agencies that use the facility, so one has to get "in the queue;" further, the models have to be repaired or rebuilt, and there are trial-and-error periods of testing spill patterns to find the pattern that is most advantageous. *See id.* at 6 (¶¶ 18-19). Delaying the increase in spill until the 2018 spring migration season provides time for testing and development of appropriate spill patterns that will maximize juvenile migration, minimize harm to juveniles, minimize harm to adult migration, and

protect human life in the navigation system.[8] Intervenor-Defendant Inland Ports and Navigation conceded at oral argument that delaying the increased spill injunction until 2018 would resolve its concerns regarding human safety. The Federal Defendants conceded that delaying until 2018 would resolve concerns regarding having enough time to test for appropriate spill patterns.

The Court also recognizes that each dam is unique and an "across-the-board" approach to spill is likely not the most effective means to increase salmonid survival at each dam. There are specific considerations at each dam that affect both juvenile and adult migration, and providing time to study and prepare for the increase in spill will allow proper analyses on the best methodology for each dam. Additionally, it also allows sufficient time to consider whether there may be other unintended negative consequences unrelated to salmonid survival, such as the concern expressed with erosion relating to Bonneville Dam.

The Spill Plaintiffs have shown a willingness for spill to be tailored to the needs of each dam as Defendants have raised specific concerns (*e.g.*, offering to reduce requested spill at Bonneville to avoid erosion and at John Day to avoid causing an eddy). The problem with this approach is that Defendants have been raising these concerns in a rushed period while briefing the pending motion. There needs to be sufficient time to identify, test, and address the dam-specific spill needs and issues. Although the Court intends to provide for a robust adaptive management program to allow flexibility to respond to such unintended consequences, having adequate time to prepare beforehand should reduce the number and extent of unintended negative consequences and thus will reduce the number of fish that die while awaiting changes to be implemented under adaptive management.

[8] The Court notes that there must be a way safely to handle navigation during increased spill because there have been times when involuntary spill has been required at levels equal to or greater than those requested by the Spill Plaintiffs.

b. Adaptive management

The Spill Plaintiffs request a new system of adaptive management in which the Corps may make unilateral adjustments to spill under certain involuntary spill conditions and can only make spill adjustment for biological conditions if no member of the FPAC objects. The Court is not inclined at this time to order a new system for implementation, monitoring, and adaptive management of additional court-ordered spill. As explained by Juliet H. Ammann, Chief, Reservoir Control Center, Northwestern Division of the Corps, there is a system currently in place that has been implementing existing court-ordered spill. *See* ECF 2140 at 7-9 (Decl. ¶¶ 16-22). This system includes the Fish Passage Operations and Maintenance group, Technical Management Team ("TMT"), and Regional Implementation Oversight Group ("RIOG"). Specifically, TMT is tasked with recommending real-time operations through monitoring river conditions and provides opportunities for making adjustments. *Id.* at 8 (Decl. ¶ 20). TMT can submit requests to consider changes to planned operations, and if consensus is not reached, RIOG will resolve the issue. *Id.* at 9 (Decl. ¶ 21). The Court also remains available to the parties.

The Spill Plaintiffs offer no evidence that the current system is not sufficiently working to be able to implement additional spill. The Spill Plaintiffs express concern that minority voices need the opportunity to be heard and that current decisionmakers are more policy-focused than science-driven. This latter concern was also echoed by Defendant-Intervenor CSRIA. The Court appreciates that there may be a different system that could be implemented that would include more scientists. But the Court leaves such decisions in the first instance to be made by the experts in the region. Accordingly, at this time, the Court declines to mandate that adaptive management be through a system requiring unanimity among the members of the FPAC. The parties shall confer on an appropriate adaptive management system. If agreement is not reached, the Court will leave the current system (using TMT and RIOG) in place. If, after additional spill

begins, the Spill Plaintiffs or any other party has evidence that the current system is not working, that party may then file a motion with the Court.

c. Spill implementation plan and injunction order

Because the Court is not ordering increased spill to begin until the spring 2018 migration season, the parties and experts in the region have sufficient time to consider an appropriate protocol and methodology for spill at each dam, incorporating the most beneficial spill patterns. Moreover, the Federal Defendants argue that the Spill Plaintiffs' proposed injunction is inappropriate because no shorter-term, within season tests have been performed on any of the dams using increased spill. Now the Federal Defendants have the 2017 spring migration season to conduct short-term tests to consider at least the immediate effects of increased spill. They can evaluate whether unexpected eddies or other problems arise and make immediate adjustments without worrying about being in violation of a court order. These types of tests should inform the experts in the region as they develop appropriate protocols for increased spill in 2018.

The Court will set periodic status conferences to ensure that the parties are making sufficient progress toward a spill implementation plan and proposed injunction order. The Court expects the parties, *amici*, and other regional experts to work together to reach consensus. If the parties cannot reach agreement, the Court will set a briefing schedule and further hearings to resolve any outstanding issues before the 2018 spring migration season.

6. PIT Tag Monitoring

The Spill Plaintiffs assert that there are some indicators that certain listed species are migrating early. The Spill Plaintiffs request that the Federal Defendants begin PIT tag monitoring on March 1 of each year, using established smolt monitoring protocols. The Spill Plaintiffs argue that early monitoring will provide data regarding the important early "tail" of the salmon and steelhead runs, which will help inform future management decisions. The Spill

Plaintiffs offer expert testimony that early monitoring will provide a biological benefit by providing an alternative to turbine passage for outmigrating fish during the pre-spill period and that the early and late tails of a run are particularly important for species diversity. The State of Washington, through its expert Mr. Tweit, agrees that the proposal for earlier PIT tag monitoring "should be considered for immediate implementation. There is strong scientific evidence that the tails of salmon and steelhead runs contain a disproportionate amount of the population traits that support adaptation to environmental changes, such as the conditions witnessed in 2015. Collection of this additional data should begin now . . . ." ECF 2137 at 11 (Decl. ¶ 17).

Defendants do not dispute that early and late tails of a run are important for diversity. Nor do they dispute that there is some evidence that fish are migrating earlier, although they do question the volume of fish that may be migrating early. The primary objections to early PIT tag monitoring are that it is not feasible to begin in 2017 and that Oregon should have made this request through the regional process and not through the Court.

The Court agrees that it is too late this year to begin earlier PIT tag monitoring in 2017. But in light of the importance of the tails of a run for diversity and species adaptation, the Court orders that PIT tag monitoring begin on March 1 of each year of the remand period, beginning in 2018.

D. NEPA Injunction

Plaintiffs argue that the Court should enjoin large capital expenditures at the four Lower Snake River dams because to allow significant sums of money to be spent in long-term investments at the dams for the remaining 4.5 years of the NEPA remand period may result in biased analyses that essentially foreclose the reasonable alternative of breaching, bypassing, or removing dams. Plaintiffs rely primarily on two provisions in NEPA's implementing regulations, 40 C.F.R. §§ 1502.2(f) and 1506.1(a). Section 1502.2(f) provides that: "Agencies shall not

commit resources prejudicing selection of alternatives before making a final decision." Section 1506.1(a) provides that: "Until an agency issues a record of decision as provided in § 1505.2 . . . no action concerning the proposal shall be taken which would: (1) Have an adverse environmental impact; or (2) Limit the choice of reasonable alternatives."

The Court will not enjoin any spending that is necessary for the safe operation of any dam. Regardless of the NEPA process, the Federal Defendants are currently under a statutory obligation to operate the dams and must be allowed to operate them safely. The Court finds that any benefit to the NEPA process in enjoining spending may be outweighed by the risk to human health and safety if dams are not allowed to continue operating in a safe manner. With regard to projects and expenditures that are not required for safe dam operations, however, the Court considers the factors for interim injunctive relief.

1. Success on the Merits

In the 2016 Opinion, the Court found that the Corps and BOR violated NEPA and remanded the case for the agencies to create a single EIS covering FCRPS operations. Thus, Plaintiffs have already succeeded on their underlying NEPA claim.

2. Irreparable Harm

The harm that Plaintiffs seek to redress with this injunction is a biased NEPA process. The Court agrees that generally speaking, this type of harm can be irreparable harm for purposes of a NEPA injunction. The Court is persuaded by the reasoning in *Sierra Club v. Marsh*, 872 F.2d 497, 500 (1st Cir. 1989), which discusses what is sometimes described as the "bureaucratic steamroller" or "bureaucratic momentum" theory, as follows:

> NEPA is not designed to prevent all possible harm to the environment; it foresees that decisionmakers may choose to inflict such harm, for perfectly good reasons. Rather, NEPA is designed to influence the decisionmaking process; its aim is to make government officials notice environmental considerations and take

> them into account. Thus, *when a decision to which NEPA obligations attach is made without the informed environmental consideration that NEPA requires, the harm that NEPA intends to prevent has been suffered*. . . . Moreover, to set aside the agency's action at a later date will not necessarily undo the harm. The agency as well as private parties may well have become committed to the previously chosen course of action, and new information—a new EIS—may bring about a *new* decision, but it is that much less likely to bring about a *different* one. It is far easier to influence an initial choice than to change a mind already made up.
>
> It is appropriate for the courts to recognize this type of injury in a NEPA case, for it reflects the very theory upon which NEPA is based—a theory aimed at presenting governmental decision-makers with relevant environmental data *before* they commit themselves to a course of action. This is not to say that a likely NEPA violation automatically calls for an injunction; the *balance* of harms may point the other way. It is simply to say that a plaintiff seeking an injunction cannot be stopped at the *threshold* by pointing to additional steps between the governmental decision and environmental harm.
>
> In the present case plaintiffs would suffer harm if they were denied an injunction, if the lease sale took place, and if the court *then* held that a supplemental EIS was required. In that event, the successful oil companies would have committed time and effort to planning the development of the blocks they had leased, and the Department of the Interior and the relevant state agencies would have begun to make plans based upon the leased tracts. Each of these events represents a link in a chain of bureaucratic commitment that will become progressively harder to undo the longer it continues. Once large bureaucracies are committed to a course of action, it is difficult to change that course—even if new, or more thorough, NEPA statements are prepared and the agency is told to "redecide." It is this type of harm that plaintiffs seek to avoid, and it is the presence of this type of harm that courts have said can merit an injunction in an appropriate case.

Id. at 500 (quoting *Commonwealth of Massachusetts v. Watt*, 716 F.2d 946, 952-53 (1st Cir. 1983) (emphasis added in *Marsh*)); *see also Friends of the Earth v. Hall*, 693 F. Supp. 904, 913 (W.D. Wash. 1988) (noting that "the risk of bias resulting from the commitment of resources prior to a required thorough environmental review is the type of irreparable harm that results from a NEPA violation"); *cf. Calvert Cliffs' Coordinating Comm. v. Atomic Energy*

Comm'n, 449 F.2d 1109, 1128 (D.C. Cir. 1971) (noting that where large investments affect the NEPA analysis, the NEPA process becomes a "hollow exercise").

Although the Ninth Circuit has not yet expressly adopted the "bureaucratic steamroller" theory, other district courts in this circuit have found it persuasive. For example, in *Protecting Arizona's Res. & Children ("PARC") v. Fed. Highway Admin.*, 2015 WL 12618411 (D. Ariz. July 28, 2015), the court concluded that "under *Marsh*, the Court may consider bureaucratic momentum as a factor in assessing whether environmental harm is likely to occur based on failure to comply with NEPA procedures." *Id.* at *5.

Moreover, the Ninth Circuit has found that financial commitment can constitute an irretrievable commitment of resources for purposes of NEPA. *See Wildwest Inst. v. Bull*, 547 F.3d 1162, 1169 (9th Cir. 2008). In *Wildwest*, the Ninth Circuit analyzed what it means for an agency to take an action that limits the agency's choice of alternatives, which is prohibited under 40 C.F.R. § 1506.1(a). *Id.* at 1168-69. The court analogized this provision to the provisions that trigger when an EIS must be completed. *Id.* at 1168. In those cases, the court had interpreted an EIS as being required only when an agency has "irreversibly and irretrievably" committed resources. *Id.* (citing *Metcalf v. Daley*, 214 F.3d at 1143 (9th Cir. 2000).

In *Wildwest*, the Ninth Circuit discussed how, in cases analyzing when the need for an EIS has been triggered, the commitment of resources was generally natural resources. *Id.* at 1168-69 (discussing *Metcalf*, 214 F.3d at 1144; *Friends of Southeast's Future v. Morrison*, 153 F.3d 1059, 1063-64 (9th Cir. 1998); *Conner v. Burford*, 848 F.2d 1441, 1446, 1449 (9th Cir. 1988)). It is not surprising that, in cases addressing when an EIS is triggered, the primary issue would often involve a commitment relating to natural resources. NEPA requires an EIS for major federal actions that significantly affect the quality of the human environment. 42 U.S.C.

§ 4332(2)(C). The Ninth Circuit in *Wildwest* extended this line of reasoning from the cases discussing when an agency commitment is sufficient to trigger the need for an EIS to when an agency commitment is sufficient to limit its alternatives under 40 C.F.R. § 1506.1(a). 547 F.3d at 1168-69. Thus, the Ninth Circuit held that an agency's "irreversible and irretrievable" commitment of resources may limit its alternatives under Section 1506.1(a). *Id.* In doing so, the court concluded that financial investment alone can, in some circumstances, be an irreversible and irretrievable commitment of resources. *Id.* at 1169.

Defendants argue that tens of millions of dollars cannot rise to the level of commitment required by *Wildwest* because the Ninth Circuit mentioned, by way of example, a commitment of all or most of an agency's limited budget in preparation for only one alternative. That is unavailing for two reasons. First, the Ninth Circuit was providing only one example of when a financial commitment may be considered limiting an agency's alternatives, and there is no indication that example was meant to be exclusive.

Second, the discussion by the Ninth Circuit in *Wildwest* does not mean that a similar level of commitment is required under 40 C.F.R. § 1502.2(f), which prohibits agencies from "prejudicing" the selection of alternatives. The Court must give meaning to the fact that the agency used the term "prejudicing" in § 1502.2(f) and "limiting" in § 1506.1(a). *Cf. Nat'l Fed'n of Indep. Business v. Sebelius*, 132 S. Ct. 2566, 2583 (2012) (noting in the context of statutory interpretation that "[w]here Congress uses certain language in one part of a statute and different language in another, it is generally presumed that Congress acts intentionally"). If "prejudicing" alternatives is construed identically as "limiting" alternatives in § 1506.1(a), then § 1502.2(f) would be superfluous. This is contrary to "the canon of construction that courts interpret statutes so as not to render any section meaningless." *Meng Li v. Eddy*, 324 F.3d 1109, 1110 (9th

Cir. 2003) (citing *Beck v. Prupis*, 529 U.S. 494, 506 (2000)); *see also United States v. Harrell*, 637 F.3d 1008, 1010-11 (9th Cir. 2011) (noting that courts must give effect to each word and "must 'mak[e] every effort not to interpret a provision in a manner that renders other provisions of the same statute inconsistent, meaningless or superfluous'" (alteration in original) (quoting *United States v. Cabaccang*, 332 F.3d 622, 627 (9th Cir. 2003) (en banc))).

The term "limiting" connotes a more definitive restriction than does "prejudicing." *See* BLACK'S LAW DICTIONARY (10th ed. 2014) (defining "limit" as: "1. A restriction or restraint. 2. A boundary or defining line. 3. The extent of power, right, or authority." and defining "prejudice" as "1. Damage or detriment to one's legal rights or claims. . . . 2. A preconceived judgment or opinion formed with little or no factual basis; a strong and unreasonable dislike or distrust. — Also termed *preconception*." (emphasis in original)). Thus, the level of commitment required to "limit" an agency's alternatives is higher than the level commitment required to "prejudice" an agency's alternatives. Accordingly, even if it were required for an agency to spend most or all of its budget on one alternative before it could be found to violate § 1506.1(a) (which the Court does not find is necessitated by the holding in *Wildwest*), the Court holds that a lesser commitment may nonetheless violate § 1502.2(f).

The Court noted in the 2016 Opinion that a compliant NEPA analysis in this case "may well require consideration of the reasonable alternative of breaching, bypassing, or removing one or more of the four Lower Snake River Dams." *NMFS V*, 184 F. Supp. 3d at 942. The "touchstone" of NEPA's alternatives analysis is whether the EIS's "selection and discussion of alternatives fosters informed decision-making and informed public participation." *Headwaters, Inc. v. Bureau of Land Mgmt., Medford Dist.*, 914 F.2d 1174, 1180 (9th Cir. 1990) (quotation marks omitted). The reality is that economic considerations are part of that decisionmaking. In

weighing the environmental benefits of removing, breaching, or bypassing the dams, the costs of such actions also likely will be weighed, as well as the costs of operating the dams. That analysis will be affected if the dams require hundreds of millions in expenditures versus having just had hundreds of millions spent in improvements and maintenance. Considering this fact, the "bureaucratic momentum" theory, the constraints on the Corps dictated by § 1506.1(a), and the limitations on the Corps' actions placed by § 1502.2(f), the Court finds that spending hundreds, tens, or even millions of dollars on the four Lower Snake River Dams during the NEPA remand period is likely to cause irreparable harm by creating a significant risk of bias in the NEPA process. *See, e.g.*, *Wildwest*, 547 F.3d at 1169; *Marsh*, 872 F.2d at 500; *Calvert Cliffs'*, 449 F.2d at 1128; *Hall*, 693 F. Supp. at 913.

3. Balancing the Harms and Considering the Public Interest

a. Current Ice Harbor Projects

Plaintiffs challenge two projects at Ice Harbor Dam: Ice Harbor Turbine Runner Design and Replacement and Ice Harbor Stator Winding Replacement. These projects are estimated to cost $37 million in fiscal years 2018 and 2019. Plaintiffs challenge the replacements at two turbines, Units 1 and 3. Plaintiffs do not challenge improvements being made to Unit 2.

Unit 2, which is not being challenged, is being improved with state-of-the-art nonadjustable blades that are designed to improve fish survival. This design, however, is not suitable at all hydraulic flow levels. Thus, at certain hydraulic flows, Unit 2 cannot operate. Currently, Unit 3 also has nonadjustable blades, due to interim repairs that were previously required. Unit 3 thus cannot be the backup unit when hydraulic flows do not allow Unit 2 to operate.

Unit 1 is the operative adjustable blade unit. Unit 1, however, has had failures in recent years. Thus, if it is not replaced, as currently scheduled, it will at a minimum need repair. The

replacement, however, is with an improved adjustable blade design that is intended to increase juvenile fish survival. If the expected improved fish passage is realized, the Corps intends to implement the new design in other FCRPS dams.

Unit 3 also has had failures in recent years. The interim repairs done to keep the turbine operating potentially increase the harm to fish passage and result in less efficient operation. Additionally, even with interim repairs, the turbine performs poorly and needs replacement.

The Court recognizes the importance of an unbiased NEPA process and the chance for all reasonable alternatives to be considered without undue economic influence. These specific Ice Harbor Dam projects, however, have a primary benefit of increasing fish survival. As the Court has repeatedly noted, including in this Opinion and Order in discussing increased spill, the fish are in need of improved survival now. Improvements at Ice Harbor Dam that result in immediate increased survival of listed species are given great weight in balancing the harms and considering the public interest. *Cottonwood*, 789 F.3d at 1090 (noting that saving endangered species is given the highest priority and is of incalculable public interest). Although the Court has found likely irreparable harm from significant expenditures, in considering these specific projects, the Court finds that the balance of harms and public interest weighs against the specific injunction being requested. *See Marsh*, 872 F.2d at 500 (noting that even when irreparable harm is found, it does not necessitate an injunction because "the *balance* of harms may point the other way" (emphasis in original)).

b. Future Projects

The Court cannot evaluate the balance of harms or public interest in unknown future projects. As the Court has noted, it will not enjoin projects that are needed for the safe operation of the dams. The Court also is not inclined to enjoin projects that provide substantial immediate

survival improvement for the listed species. Thus, the Court does not find a blanket injunction against all future projects of more than $ 1 million to be appropriate.

The Court, however, is concerned with the potential for the irreparable harm that the Court has found likely. Accordingly, the Court will require the Federal Defendants to disclose sufficient information to Plaintiffs regarding the planned projects at each dam during the NEPA remand period, at appropriate and regular intervals. If Plaintiffs believe that a project is not needed for safe operation of the dams and substantially may bias the NEPA process, Plaintiffs may file a new motion with the Court to enjoin any such project.

Within 14 days from the date of this Opinion and Order, the Federal Defendants, after conferring with Plaintiffs, shall submit their proposal for a reasonable process and schedule for providing Plaintiffs the information, including timing (quarterly, annually, etc.) and what information should be included in their disclosure to Plaintiffs. Plaintiffs may, at their discretion, file any response or objection within 14 days. Defendants may then have 14 days to reply.

CONCLUSION

The motions for injunctive relief requested by Plaintiffs, including Oregon, (ECF 2112 and 2114) are GRANTED IN PART, as set forth in this Opinion and Order. The Court intends to hold periodic status conferences regarding the increased spill that must take place in 2018 and its related planning before then. Within 28 days, the parties shall confer and file with the Court their joint or separate recommendations for a schedule of periodic status conferences.

IT IS SO ORDERED.

DATED this 27th day of March, 2017.

Let me see what we can do. I know I will need the Make, Model, Year, Color, Plates and Driver's info asap, cause it has to be submitted to security before COB.

Subject: Re: Wednesday Morning Secretarial Orders

My understanding is that CRA is still in play. It was just mentioned in the call that venting/flaring was on the table in the EO. That would be new as of this morning, so we certainly still prefer a CRA and it's not in our list of Secretarial orders for tomorrow.

From: Hunn, Jocelyn
To: "Freihage, Jason"
Subject: RE: call
Date: Tuesday, March 28, 2017 5:51:21 PM

Jason,

When you called in they gave out a new number to call into! You really didn't miss anything as it was less factual and more of a pep rally about how wonderful the E.O. was. They would not release any advance copies and have now posted the E.O. on whitehouse.gov so the details can be compared to the information contained in the Post and E&E. I a number of DOI riders may be affected and sent the following list to Adrianne to confirm if my assumptions are correct:

House Sec. 122—Oil and Gas Royalties
House Sec. 436—Social Cost of Carbon
House Sec. 440—Royalty Rates on Coal, Oil, Gas Leases (Interior has already informed coal, oil and gas companies they do not have to comply with new ONRR method of calculating royalties for mineral extraction on federal land, delaying the rule's effective date to allow the administration to conduct a detailed review. Does the E.O. just memorialize this action?)
House Sec. 441—Coal PEIS
House Sec. 460—Management Non-Federal Oil and Gas
House Sec. 466—BLM Hydraulic Fracturing Rule

Thanks and hope to talk to you again soon.
Best,
Jocelyn Buck Hunn
U.S. House of Representatives
Committee on Appropriations Democrats

Hi Kristen. We'll make it work for the Senator. We'll most likely ask people to show up at 945 for a prompt 10 am start time. We have space for two staffers, so we'll plan on Colin and Brian being here, unless you all meant someone different.

Thanks again.

Subject: Zinke Signing Ceremony - 3.28.17

All.

Thank you for being willing to attend tomorrow's ceremony, especially with such short notice. Details are all below. A press release/top line summary will be released tomorrow morning prior to the event.

Time: Arrive NLT 945 (preferably closer to 930) for a hard start time of 10 am. Some members have to leave by 1020 so we need to start on time.

Location: Dept. of Interior / 1849 C. St. NW / DOI has two entrances, come to C Street Entrance

Arrival: Members and RSVP'd staff will be on Security list at C Street entrance. You will be greeted in lobby by DOI Staff and escorted up to the Secretary's office for the ceremony

You will need photo ID

Topline Issues: the Secretary will sign several Secretarial Orders to reflect POTUS action on energy. These include:

- Lifting the Federal Coal Leasing Moratorium.
- Withdrawing previous Secretary's Orders on Mitigation and oil & gas prohibitions.

- Announcing the reestablishing of the Royal Policy Committee.

Press: YES

Industry: YES

Never mind. I assume it's everything applicable to the Secretary from the President's EO today?

What is this 2 year review?

Subject: Bloomberg: U.S. Review to Weigh Higher Royalties for Energy on Federal Land

NOTE: *Zinke pushed a similar idea while serving in the House of Representatives alongside Senator Steve Daines, a fellow Republican from Montana.*

U.S. Review to Weigh Higher Royalties for Energy on Federal Land
Bloomberg
https://www.bloomberg.com/politics/articles/2017-03-29/u-s-review-to-weigh-higher-royalties-for-energy-on-federal-land

U.S. Interior Secretary Ryan Zinke is kick-starting a process that could lead to companies paying higher royalties for oil, gas and other energy resources they extract from federal land.

The two-year review, to be formally authorized Wednesday, is designed to determine whether Americans are getting a fair return for those natural resources, he said in an interview.

"We're going to re-evaluate royalty rates across the board," Zinke said, stressing that the analysis will touch on the price developers pay for generating renewable power as well as unearthing fossil fuels. His approach is rooted in the idea that "what we do on public lands is in the best interest of the taxpayer. I want to make sure the taxpayer gets value out of it," Zinke said.

The move will coincide with action by Zinke to resume selling new leases to mine coal from federal land, following a directive issued by President Donald Trump on Tuesday. Zinke will revoke an order from his predecessor that halted those sales in January 2015 and end a broad environmental review of the coal leasing program that the Obama administration launched at the same time.

That environmental assessment was designed to evaluate ways to modernize how the U.S. sells coal on federal land -- including whether it should happen in the first place. The Obama administration issued a blueprint for possible changes in January, such as tacking a carbon fee onto coal leases to account for climate change and requiring payments into a fund that could

help out-of-work miners.

Years of Analysis

Zinke said that with at least two more years of analysis to go, that process would take too long and be too costly -- and is an unnecessary formality for making any potential improvements to the coal leasing program. Proposed coal leases already go through separate tailored environmental reviews, he said.

Conservationists have argued those discrete assessments of individual sales aren't sufficient to solve various problems with the current coal program, including how to guarantee the reclamation of old sites, boost competition and ensure taxpayers get a fair return.

The new advisory committee, focused on just one of those concerns, could recommend a suite of changes. Zinke said he would not prejudge the outcome, which could include recommendations for lower or higher royalty rates as well as other modifications.

Previous Effort

When former Interior Secretary Ken Salazar raised the prospect of higher royalty rates for onshore oil and gas development, energy companies cried foul. Industry trade groups said a hike in rates would discourage developers from drilling on federal land. Across-the-board changes were never adopted, though a Bureau of Land Management regulation imposed last year gives the agency the discretion to boost rates in some cases. That measure, which chiefly aims to reduce the venting and flaring of natural gas on federal land, is the target of repeal legislation in Congress.

In the long run, Zinke said, energy companies will be more interested in bidding on territory -- and maybe pay a higher price -- if they have better chances of development, as the Interior Department reviews Obama-era regulations, including mandates on the hydraulic fracturing process used to stimulate the production of oil and gas.

"We think that by reducing some of this uncertainty, at least on the regulatory environment, that we will be able to get a better price-point for that," Zinke said. "The taxpayer wins, and the industry will win by having a clearer choice based on market conditions whether they should go forward and invest or not."

Committee Membership

The group Zinke is set to authorize Wednesday will have as many as 28 members representing Indian tribes, states that contain federal lands with significant energy development, public

interest groups, academia and other stakeholders. Zinke said it will exclude members who have dealings with the Interior Department to avoid potential ethical conflicts.

Zinke pushed a similar idea while serving in the House of Representatives alongside Senator Steve Daines, a fellow Republican from Montana.

While Zinke emphasized that he isn't prejudging the outcome of the committee's review, it follows a series of reports suggesting the U.S. isn't getting a fair return for oil and gas extracted from its public lands. The Government Accountability Office has blamed Interior Department regulations that fix the royalty rate at 12.5 percent of the value of oil and gas pulled from onshore federal territory -- generally lower than the amount charged by Wyoming, New Mexico, Colorado, Utah and other Western states.

That 12.5 percent rate for onshore production hasn't been updated in nearly a century, though the administration of former President George W. Bush boosted the royalty charged for offshore oil and gas development to 18.75 percent.

'Studied to Death'

The nonpartisan Congressional Budget Office estimated last year that the federal government would net an extra $200 million in income if onshore oil and gas royalties also were increased to 18.75 percent.

"This is an area that has already been studied to death and could be fixed immediately by bringing royalty rates more in line with what states and private landowners charge," said Matt Lee-Ashley, a senior fellow with the Center for American Progress. "There is hardly a need for yet another committee, but hopefully Secretary Zinke is serious about being fair to taxpayers, doesn't just stack the deck with oil industry allies and takes some action within months -- not years."

The Interior Department generally would have to propose and adopt new rules to revise royalties for wind and solar production as well as oil, gas and coal development. Zinke said he would follow up on the committee's eventual recommendations "and put rules forth that are appropriate."

Zinke stressed safeguards are necessary.

"As a lifetime conservationist, and one who loves Teddy Roosevelt, industry does not regulate themselves," he said. "And our public land is for the benefit and enjoyment of the people -- with a big emphasis on benefit."

---

Hi Kate and Kathy,

Hope you are doing well.

No one was leading a Sage Grouse Appropriations s request this year. Chairman Gosar thought we really need to do one and since no one else would, he decided to take the lead.

Here is our current short summary:

FY18 Approps: Western Caucus Chairman Gosar seeks signers for language request to reverse overly restrictive Resource Management Plan Amendments (RMPs) and Land and Resource Management Plan (LRMPs) amendments under the guise of protecting Sage Grouse. DEADLINE NOON WEDNESDAY, MARCH 29.

Current Signers: Rob Bishop, Gosar, Pearce, Tipton, Yoho

The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs) Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases as restrictive as a critical habitat designation would be under an ESA listing. These amendments were not warranted and sought to prevent responsible mineral production and other activities across 11 Western states. The Obama Administration also sought to withdraw 10 million acres of the bird's habitat from future mining activity. Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.

Please contact Jeff Small at Jeff.Small@mail.house.gov to sign.

Draft letter and longer dear colleague are attached.

Here is the actual language that was included in last fiscal year's engrossed Interior Approps bill as a result of Mr. Amodei's amendment. We have been working with Amodei and Chairman Bishop's staff on this request this year. We have this language from last fiscal year in the draft letter currently. However, Jason in Amodei's office correctly pointed out that we needed to update this language since the ROD's were issued as well as the RMPs and LRMPs after last year's language.

(a) None of the funds made available by this or any other Act may be used—

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533), or to issue a regulation with respect thereto that

applies to any State with a State management plan;

(2) to makeor extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.), in a manner inconsistent with a State management plan; or

(3) to implement, amend, or otherwise modify any Federal resource management plan applicable to Federal land in a State with a State management plan, in a manner inconsistent with such State management plan.
(b) For the purposes of this section—

(1) the term "Federal resource management plan" means—

(A) a land use plan prepared by the Bureau of Land Management for public lands pursuant to section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712); or

(B) a land and resource management plan prepared by the Forest Service for National Forest System lands pursuant to section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604);

(2) the term "greater sage-grouse" means the species Centrocercus urophasianus or the Columbia Basin distinct population segment of greater sage-grouse; and

(3) the term "State management plan" means a State-wide plan for the protection and recovery of greater sage-grouse that has been approved by the Governor of such State.

We are under as tight timeframe as this letter needs to be submitted to the Approps Committee tomorrow.

Can you all possibly help update the actual language request that we are trying to get into the base bill to reflect the ROD's that were issued as well as the RMPs and LRMPs after last year's language? Also open to doing something about the mineral withdraw.

My direct is 202-226-8272 if you have questions.

Let me know if you would.

Sincerely,

Jeff Small

Support a viable State-Based Approach for Sage Grouse Recover Efforts

THIS IS A LANGUAGE RE UEST
Members are re uired to submit the re uest online.
Deadline to sign on is NOON on Wednesday, March 29.

Dear Colleague:

The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs) Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases as restrictive as a critical habitat designation would be under an ESA listing. These misguided amendments were not warranted and sought to prevent responsible mineral production and other activities across 11 Western states.

The Obama Administration also sought to withdraw 10 million acres of the bird s habitat from future mining activity. The Obama Administration s scheme to use the Sage Grouse as an excuse to shut down virtually all development on large swaths of public lands in the West, particularly oil, gas, and mineral development, has resulted in devastating impacts for local economies. These unlawful amendments are already having a negative impact for our nation s energy and natural resource independence. Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.

This language request is identical to Section 114 of the engrossed version of H.R. 5538 that passed the House last Congress. We must retain this important provision.

The text of the letter is below. Please contact Jeff Small at jeff.small mail.house.gov if your boss would like to lead or sign this letter. Instructions will be sent along with the final signed letter for submitting this request.

Sincerely,

Paul A. Gosar, D.D.S
Member of Congress

March XX, 2017

The Honorable Ken Calvert
Chairman
Committee on Appropriations
Subcommittee on Interior, Environment, and Related Agencies
U.S. House of Representatives
2007 Rayburn HOB
Washington, DC 20515

The Honorable Betty McCollum
Ranking Member
Committee on Appropriations

Subcommittee on Interior, Environment, and Related Agencies
U.S. House of Representatives

1016 Longworth HOB
Washington, DC 20515

Dear Chairman Calvert and Ranking Member McCollum:

As you begin crafting the Fiscal Year 2018 Interior, Environment, and Related Agencies Appropriations bill, we encourage the subcommittee to reject the Obama Administration's unilateral actions on the Greater Sage Grouse.

The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs) Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases as restrictive as a critical habitat designation would be under an ESA listing. These misguided amendments were not warranted and sought to prevent responsible mineral production and other activities across 11 Western states.

The Obama Administration also sought to withdraw 10 million acres of the bird's habitat from future mining activity. The Obama Administration's scheme to use the Sage Grouse as an excuse to shut down virtually all development on large swaths of public lands in the West, particularly oil, gas, and mineral development, has resulted in devastating impacts for local economies. These unlawful amendments are already having a negative impact for our nation's energy and natural resource independence.

To make matter worse, the Greater Sage Grouse is not endangered. The population is greater today than it has been in recent years thanks to the concerned efforts of several states which implemented at their own expense comprehensive Sage Grouse recovery plans. The Obama restrictions defy commonsense. Further, they are inconsistent with Greater Sage Grouse conservation planning efforts at the state and local level.

Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.

Section 114 of the engrossed version of the FY 2017 Interior, Environment and Related Agencies Appropriations bill contained language which aimed to block this report. Accordingly, we ask that you include language similar to the following again this fiscal year:

(a) None of the funds made available by this or any other Act may be used—

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533), or to issue a regulation with respect thereto that applies to any State with a State management plan;

(2) to makeor extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area

published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.), in a manner inconsistent with a State management plan; or

(3) to implement, amend, or otherwise modify any Federal resource management plan applicable to Federal land in a State with a State management plan, in a manner inconsistent with such State management plan.

(b) For the purposes of this section—

(1) the term "Federal resource management plan" means—

(A) a land use plan prepared by the Bureau of Land Management for public lands pursuant to section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712); or

(B) a land and resource management plan prepared by the Forest Service for National Forest System lands pursuant to section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604);

(2) the term "greater sage-grouse" means the species Centrocercus urophasianus or the Columbia Basin distinct population segment of greater sage-grouse; and

(3) the term "State management plan" means a State-wide plan for the protection and recovery of greater sage-grouse that has been approved by the Governor of such State.

We thank you for your consideration of this request, and for your leadership on the committee.

Sincerely,

Congressional Research Service

CRS REPORT
Prepared for Members and
Committees of Congress

Summary

The greater sage-grouse (*Centrocercus urophasianus*) is a squat, feathered, chicken-like bird that is currently found in 11 western states. For more than 25 years, there has been considerable controversy concerning whether to list sage-grouse for protection under the Endangered Species Act (ESA; P.L. 93-205).

On October 2, 2015, the Fish and Wildlife Service (FWS, Department of the Interior) published its decision not to list the greater sage-grouse as threatened or endangered under ESA. Under the act, one of the factors that can lead to a listing is the inadequacy of existing regulatory mechanisms. However, FWS concluded that existing regulatory mechanisms for lands under federal, tribal, state, or local control were adequate to avoid the need to list the species. Before the listing decision, federal, state, and local governments, as well as other stakeholders in the states where sage-grouse are still found had undertaken extensive efforts to develop conservation plans, monitoring, and other actions to obviate the need for listing sage-grouse. These efforts included collaboration across levels of government, action plans by state governments, voluntary federal programs to assist private landowners in conserving sage-grouse habitat, and revisions in the land management plans of federal agencies.

To be considered adequate regulatory mechanisms, various courts held that these efforts had to meet certain tests. Prior court cases meant that FWS had to determine, in order to reach its conclusion not to list the species, that the regulatory mechanisms of these various levels of government were (1) in effect at the time, (2) not discretionary, and (3) adequate to avoid the need to list the species.

After FWS decided not to list sage-grouse, it fell to other federal agencies and other levels of government to carry out the commitments that had served to avoid listing. All 11 states have plans and programs to address the varying threats to the species in each state. For private lands, the Natural Resources Conservation Service (NRCS, Department of Agriculture) has led voluntary conservation efforts. NRCS uses existing federal conservation programs to help farmers and ranchers benefit sage-grouse.

On federal lands, the Bureau of Land Management (BLM, Department of the Interior) and the Forest Service (FS, Department of Agriculture) have had the greatest role in conserving sage-grouse because more than half of the bird's remaining habitat is found on BLM and FS lands. In September 2015, after a review process including public notice and comment, the two agencies signed records of decision amending 98 land and resource management plans covering the range of the sage-grouse. Lands identified as the most valuable habitat will be given the highest level of protection. The plans have three goals: (1) to improve sage-grouse habitat condition; (2) to minimize new or additional surface disturbance; and (3) to reduce the threat of rangeland fire to sage-grouse and sage-grouse habitat.

Controversy after the FWS decision has focused particularly on the revised land management and conservation strictures adopted on federal lands. The amended plans are proving controversial with various industries, including energy developers, which argue that the development restrictions on high-value habitat under the plans are placing a burden on their activities that is as restrictive as a decision to list the species.

A number of bills and amendments have been introduced in the 114th Congress to address aspects of sage-grouse conservation on specific lands. A common theme in the bills and amendments is a greater role for states in species conservation, with varying amounts of state preemption of federal land management plans. Some measures would provide exemptions from judicial review.

Introduction

There has been controversy for more than 25 years concerning whether to list sage-grouse for protection under the Endangered Species Act (ESA).[1] As with many controversies over rare species, a theme in the sage-grouse controversy is the use of dwindling resources by both humans and sage-grouse—in this case, broad, unfragmented expanses of sagebrush lands. Loss of habitat is the most common factor leading to species' decline.[2] Sagebrush habitat in the western United States is diminishing and becoming fragmented due to energy development, infrastructure, agricultural conversion, wildfire, invasive plants, and other factors.[3] Although the total remaining sagebrush habitat is vast, its fragmentation is problematic for sage-grouse, which need large treeless areas to discourage the roosting of avian predators and to permit travel between breeding and nesting sites. Thus, fences, roads, drilling rigs, and utility poles can produce a substantial change in available sagebrush habitat, even when the actual surface disturbance is minimal.

The sage-grouse (*Centrocercus urophasianus*) is found in 11 western states. The species first appeared as a candidate for listing under ESA in 1991,[4] and its subsequent history with regard to the act has included various petitions, missed deadlines, and lawsuits. Multiple petitions were filed under ESA to ask the Fish and Wildlife Service (FWS, Department of the Interior) to protect the sage-grouse. (See "Chronology of Petitions and FWS Sage-Grouse Action," below.)

Most recently, on September 22, 2015, FWS announced its decision not to list the sage-grouse under ESA, based on the adequacy of existing regulatory mechanisms to protect the species. Some have praised the decision as affording the proper protection through state, local, and private conservation efforts. Others have opposed the decision for varying reasons, including assertions that the existing regulatory mechanisms are not sufficiently protective or that the regulatory mechanisms result in excessive restrictions on land uses. (See "Implementation and Other Issues," below.)

[1] Endangered Species Act (ESA; P.L. 93-205, 87 Stat. 884; 16 U.S.C. §§1531 et seq.). For background on ESA, see CRS Report RL31654, *The Endangered Species Act: A Primer*, by M. Lynne Corn. This report uses the term *sage-grouse*, rather than the nearly equally common *sage grouse*, because the hyphen is used in documents and databases of the Fish and Wildlife Service (FWS) Endangered Species Program. Exceptions are made for quoted material using the alternative form. When the term *sage-grouse* is used in the remainder of the report, it is understood to mean greater sage-grouse (the focus of this report), unless otherwise specified. Moreover, at times various distinct population segments and subspecies of *C. urophasianus* have been proposed, both for taxonomic recognition and for protection under ESA, but that recognition has not been upheld. (See CRS Report R40865, *Sage Grouse and the Endangered Species Act (ESA)*, by M. Lynne Corn.) In addition, a related species called the Gunnison sage-grouse (*Centrocercus minimus*), found in parts of Colorado and Utah, was listed as threatened in 2014.

[2] Estimating population levels of widely scattered animals is exceedingly difficult. In the case of sage-grouse, estimates are usually based on models rating number, size, and distribution of breeding areas to extrapolate total population sizes. More critically, available data show clear downward trends, though the extent of decline varies in time and from area to area. See "Sage-Grouse Breeding and Biology," and "Threats to Sage-Grouse Habitat," below.

[3] For an analysis of these and other factors affecting sage-grouse populations, see FWS, "Endangered and Threatened Wildlife and Plants: 12-Month Finding on a Petition to List Greater Sage-Grouse (*Centrocercus urophasianus*) as an Endangered or Threatened Species," 80 *Federal Register* 59858-59941, October 2, 2015.

[4] Technically, only a portion of the species was considered at that time. See FWS, "Endangered and Threatened Wildlife and Plants; Animal Candidate Review for Listing as Endangered and Threatened Species," 56 *Federal Register* 58804-58836, November 21, 1991.

Sage-Grouse Breeding and Biology

The sage-grouse is a squat, feathered, chicken-like bird, grayish with a black belly and spiked tail feathers; it is highly prized by hunters. (See **Figure 1**.) Sage-grouse have one of the lowest reproductive rates of any North American game bird. Because of this, "its populations are not able to recover from low numbers as quickly as many other upland game bird species."[5]

A particular issue has been conservation of the locations where male sage-grouse gather in the spring year after year—areas called *leks*. The leks are found in open sagebrush areas, usually on broad ridges or valley floors where visibility is excellent and noise will travel well. There, the males strut, raise and lower their wings, fan their tail feathers, and make loud booming noises with the aid of bright yellow inflatable air sacs in their necks. Under optimal conditions, these sounds carry for hundreds of yards. Dozens or even hundreds of males attract the attention of resident females, who survey the offerings of the displaying males, make their choices, and mate. Once mating has occurred, females leave the lek to nest, sometimes at a distance of several miles.[6] Females raise their offspring alone, without help from males. Due to the importance of leks in the breeding cycle, maintenance and protection of traditional lek areas are key concerns for species conservation.

Threats to Sage-Grouse Habitat

The sage-grouse is vulnerable to multiple interrelated changes in its habitat. The construction of a road in sagebrush habitat, for example, may have diverse effects. Sage-grouse hens may hesitate to cross a road with their chicks. A road can also provide ingress for invasive species such as cheatgrass, which is the primary invasive species threat to sagebrush habitat. The plant tends to appear after an area has been grazed or when roads are developed. The nonnative grass spreads quickly, is disliked as forage by grazing mammals and sage-grouse, and burns more readily than native plants. Moreover, the fire threat posed by cheatgrass could be exacerbated by pervasive drought and climate change. Both the number of fires and the total area burned in sage-grouse habitat have increased in the last 100 years.[7] This example illustrates the links among a range of threats to sage-grouse.

Additionally, certain types of development, such as coal-bed methane production and oil wells, introduce standing pools of water into an environment where none existed previously. These pools provide habitat for mosquitoes, and mosquitoes can carry the West Nile Virus. According to the U.S. Geological Survey, the federal agency responsible for tracking wildlife disease, the West Nile Virus is always fatal for the sage-grouse. By 2006, West Nile Virus had been reported among sage-grouse in every state of the sage-grouse's range except for Washington.[8]

---

[5] Western Watersheds Project v. Dyer, 2009 WL 484438, *5 (D. Idaho February 26, 2009).

[6] Female sage-grouse typically travel 0.8 miles to 3.2 miles to nest after mating (FWS, "Endangered and Threatened Wildlife and Plants: 12-Month Finding on a Petition to List Greater Sage-Grouse (*Centrocercus urophasianus*) as an Endangered or Threatened Species," 80 *Federal Register* 59887, October 2, 2015), but some have been documented to travel more than 13 miles to their nest site after mating. (See FWS, "Endangered and Threatened Wildlife and Plants; Final Listing Determination for the Gunnison Sage-Grouse as Threatened or Endangered; Final Rule," 71 *Federal Register* 19956, April 18, 2006.)

[7] See "Altered Fire Cycle" in FWS, "Endangered and Threatened Wildlife and Plants: 12-Month Finding on a Petition to List Greater Sage-Grouse (*Centrocercus urophasianus*) as an Endangered or Threatened Species," 80 *Federal Register* 59896-59897, October 2, 2015.

[8] U.S. Geological Survey, "West Nile Virus in Greater Sage-Grouse," Wildlife Health Bulletin #06-08, November 6, (continued...)

The various threats cited above also sum to form a larger threat: fragmentation of the sagebrush landscape. Although much of the West is still dominated by sagebrush, much of this habitat is no longer intact. As a result, such areas have become unsuitable for successful breeding. Moreover, because habitats are becoming fragmented, sage-grouse populations are becoming genetically isolated, leaving them more vulnerable. Habitat fragmentation, along with lek protection, is a key concern in species conservation.

According to a team assembled by FWS to study the sage-grouse, habitat fragmentation is severely affecting the viability of the species:

> The primary threat to greater sage grouse is fragmentation. Large expanses of intact sagebrush habitat are necessary to maintain viable sage grouse populations. Only two areas in the 11-state range currently provide such expanses and both are already heavily fragmented and are projected to experience additional significant fragmentation in the foreseeable future. Dramatic population declines and local extirpations have already occurred and future fragmentation and habitat degradation is expected to result in remnant, isolated, and dysfunctional populations of greater sage grouse that are in danger of extinction in the foreseeable future.[9]

The sage-grouse was once abundant in 16 western states. Its current range includes portions of 11 states: California, Colorado, Idaho, Montana, Nevada, North Dakota, Oregon, South Dakota, Utah, Wyoming, and Washington.[10] Multiple sources point to a severe decline in the number of sage-grouse; FWS estimates that sage-grouse population numbers may have declined between 69% and 99% from historic to more recent times.[11] FWS also cites data from the Western States Sage and Columbia Sharp-Tailed Grouse Technical Committee, which estimated the decline between historic times and 1999 to have been about 86%.[12]

The increasing threats and declining sage-grouse populations eventually led to eight proposals to list the species or portions of the species under ESA. (See "Chronology of Petitions and FWS Sage-Grouse Action," below.) In making its decision, FWS was required to consider the general requirements for listing a species (see "How Does ESA Work?" below) and the minimum requirements for conservation agreements to be considered adequate to avoid listing. The specific decision not to list the sage-grouse is discussed below in "Why Did FWS Decide Not to List Sage-Grouse?"

How Does ESA Work?

ESA is intended to protect plants and animals from becoming extinct. It authorizes creating a list of protected species, either *endangered* (defined as being in danger of extinction) or *threatened* (defined as likely to become endangered in the foreseeable future).[13] ESA prohibits taking these species, with limited exceptions. In addition, it prohibits federal agencies from jeopardizing the continued existence of listed species and from destroying or adversely modifying listed species' designated critical habitats.

FWS is the federal agency that manages most species under ESA.[14] The Secretary of the Interior, acting through FWS, is charged with deciding whether to list a species. ESA specifies that a listing decision is to be based on five criteria:

[13] 16 U.S.C. §§1532(6), 1532(20). This section is intended to be a brief overview of ESA. For a more detailed analysis of the act, see CRS Report RL31654, *The Endangered Species Act: A Primer*, by M. Lynne Corn.

[14] The National Marine Fisheries Service (Department of Commerce) supervises most marine mammals and oceanic species.

1. The present or threatened destruction, modification, or curtailment of a species' habitat or range.
2. Overutilization for commercial, recreational, scientific, or educational purposes.
3. Disease or predation.
4. Inadequacy of existing regulatory mechanisms.
5. Other natural or man-made factors affecting a species' continued existence.[15]

In making a listing determination, FWS is charged with relying "solely on the basis of the best scientific and commercial data available."[16]

FWS may list a species independently, or citizens may petition the agency to make a listing. When a petition is filed, certain deadlines are imposed by statute. FWS must determine and publish a decision in the *Federal Register* within 90 days of the filing of the petition on whether the petition presents substantial evidence in support of a listing.[17] Within 12 months of filing the petition, FWS must publish a notice on whether listing is warranted.[18] A final decision must be made one year after the 12-month notice.[19] FWS has the option of publishing a determination at the time of a 12-month finding that a listing is "warranted but precluded" due to limited FWS resources.[20] If the adequacy of existing regulatory mechanisms provides the rationale not to list a species, those mechanisms must meet certain criteria, described below.

How Do Different Types of Conservation Agreements Qualify to Avoid Listing?

Under a candidate conservation agreement with assurances (CCAA), FWS provides incentives to nonfederal property owners to carry out voluntary conservation measures that may help to make listing unnecessary. In return, the property owner receives a permit "containing assurances that if they engage in certain conservation actions for the species included in the CCAA, the owner will not be required to implement additional measures beyond those in the CCAA."[21] Moreover, there will be no additional obligations imposed if the species is listed later, unless the owner agrees. Courts have looked at three criteria in determining the adequacy of existing regulatory mechanisms:

1. Courts have found that *voluntary* actions are not *regulatory*; the protections must be enforceable.
2. Courts define *adequate* as sufficient to keep populations at a level such that listing will not prove necessary.
3. *Existing* means the plans for protection must be in place and are not future or speculative.

[15] 16 U.S.C. §1533(a)(1). (Between the fourth and fifth criteria, neither *and* nor *or* appears; in the case of sage-grouse, it appears that the adequacy of existing regulatory mechanisms was the focus, because the mechanisms addressed other threats.)

[16] 16 U.S.C. §1533(b)(1)(A).

[17] 16 U.S.C. §1533(b)(3)(A).

[18] 16 U.S.C. §1533(b)(3)(B).

[19] 16 U.S.C. §1533(b)(6)(A).

[20] 16 U.S.C. §1533(b)(3)(B)(iii).

[21] FWS, "Candidate Conservation Agreements," fact sheet, March 2011, at https://www.fws.gov/endangered/esa-library/pdf/CCAs.pdf.

Regarding the first criterion, no court has deemed a voluntary state action as a *regulatory* action sufficient to avoid federal listing. Even the Ninth Circuit, which found there were adequate regulatory measures to remove the grizzly bear from the threatened species list, expressly ignored the state voluntary actions: "For the purposes of the [existing adequate regulatory mechanisms] determination, however, we need not, and do not consider those [state] measures, some or all of which may not be binding."[22]

The second criterion is whether the measures are *adequate*—that is, sufficient to keep populations at a level such that listing will not prove necessary. Courts have typically looked at the types of measures being taken, in addition to the size of areas being protected, as a way of finding adequacy.

For example, in the case of listing steelhead trout, the Northern District of California found that the state protection plans of Oregon and California for this species were voluntary and thus did not count as a regulatory measure. The court also found that a federal plan for protecting the species would cover only 64% of habitat, which was not enough to prevent species' further decline.[23] Therefore, the regulatory measure affecting federal habitat was not adequate to prevent the need for listing. By contrast, in the previously cited case on grizzly bears, the Ninth Circuit held that a plan that would have the force of law on federal lands but would be voluntary on other lands was adequate to protect the grizzly bear because federal lands constituted 98% of the grizzly's primary conservation area.[24]

The third criterion is that the regulatory mechanisms be in place—*existing*—and not future or speculative. One court said it would not consider a new agreement to be an adequate regulatory mechanism and would require a conservation agreement to have a record of two years to be sufficient.[25]

Chronology of Petitions and FWS Sage-Grouse Action[26]

This section provides a brief chronology of major sage-grouse protection actions, beginning with petitions filed in 1999 to list the sage-grouse for protection under ESA and ending with the FWS decision in 2015 not to list the species. Major events are listed below and followed by discussion.

- Between 1999 and 2005, eight petitions were filed to protect sage-grouse in all or portions of the species' range. Some petitions were rejected because they were not considered substantive enough to be eligible. In 2004, FWS found that three of the petitions (received from 2002 to 2003) were substantive—that is, the petitions presented substantial evidence in support of the listing.[27]

[22] Greater Yellowstone Coalition, Inc. v. Servheen, 665 F.3d 1015, 1032 (9th Cir. 2011).

[23] Federation of Fly Fishers v. Daley, 131 F. Supp. 2d 1158 (N.D. Cal. 2000). The measures did not include a CCAA.

[24] Greater Yellowstone Coalition, Inc. v. Servheen, 665 F.3d 1015, 1021 (9th Cir. 2011).

[25] Save Our Springs v. Babbitt, 27 F. Supp. 2d 739 (W.D. Texas 1997).

[26] For a more comprehensive history of actions discussed in this section, see FWS, "Endangered and Threatened Wildlife and Plants; 12-Month Finding on a Petition to List Greater Sage-Grouse (*Centrocercus urophasianus*) as an Endangered or Threatened Species Proposed Rule," 80 *Federal Register* 59858-59860, October 2, 2015.

[27] FWS, "Endangered and Threatened Wildlife and Plants; 90-day Finding for Petitions To List the Greater Sage-grouse as Threatened or Endangered," 69 *Federal Register* 21486, April 21, 2004.

- In 2005, FWS determined that listing was not warranted.[28] This determination was challenged, questioning the scientific basis for the decision not to list the species. In a 2007 court decision, the District Court for the District of Idaho held that the Deputy Assistant Secretary of the Department of the Interior wrongfully interfered with the listing decision and that FWS did not use the best science as required by ESA.[29] The case was remanded to the agency, and in 2008 FWS issued a notice of status review for the species.[30]
- In 2010, FWS found that "that the inadequacy of existing regulatory mechanisms is a significant threat to the greater sage-grouse now and in the foreseeable future" and announced that "listing the greater sage-grouse (rangewide) is warranted, but precluded by higher priority listing actions. We will develop a proposed rule to list the greater sage-grouse as our priorities allow."[31] FWS assigned the species a listing priority number of 8 (out of 12, with 1 being the highest priority).
- In a separate court settlement in 2011, FWS agreed to make a decision on whether to list the sage-grouse by the end of FY2015.[32] A plaintiff not involved in that settlement sued, arguing that FWS was not making expeditious progress in listing the species, as required under ESA,[33] but the court held otherwise.[34] That plaintiff, Western Watersheds Project, had sued to force listing of the sage-grouse prior to the compromise deadline, but the court held that "despite troubling aspects of the FWS decision process," the warranted but precluded finding was not arbitrary or capricious.[35]
- As part of a court-ordered settlement agreement concerning prior decisions on sage-grouse,[36] FWS filed a work plan in 2011 that committed either to publish proposed rules to list the species or to find that listing was not warranted for sage-grouse by September 30, 2015.
- On December 16, 2014, the President signed the Consolidated and Further Appropriations Act, 2015,[37] which included a provision to prohibit funding to issue a proposed rule for sage-grouse before September 30, 2015.
- On September 22, 2015, FWS announced its decision not to list the sage-grouse under ESA, based on the adequacy of existing regulatory mechanisms to protect

the species. This decision was published in the *Federal Register* on October 2, 2015.[38]

Why Did FWS Decide Not to List Sage-Grouse?

In response to the 2010 FWS finding that sage-grouse warranted ESA listing, federal, state, and private landowners undertook many and varied actions to conserve the species and prevent listing. Secretary of the Interior Sally Jewell later referred to the federal, state, and private collaborative actions to preserve sage-grouse as the most comprehensive conservation effort in the nation's history.[39] As a result, in September 2015, FWS concluded that sage-grouse met the ESA standard of having adequate existing regulatory mechanisms, at several levels. These collaborative, governmental, and nongovernmental efforts are discussed below.

Collaborative Mechanisms to Protect Sage-Grouse

Many efforts involved multiple agencies and landowners. In 2011, several federal agencies signed a memorandum of understanding to coordinate and cooperate in management of sage-grouse habitat.[40] Also in 2011, Wyoming Governor Matt Mead and then-secretary of the Interior Ken Salazar cohosted a meeting to coordinate a multistate effort to protect sage-grouse across land ownerships. As a result of the meeting, two entities were established: a Sage-Grouse Task Force, chaired by the governor of Wyoming, governor of Colorado, and director of the Bureau of Land Management (BLM), and a Conservation Objectives Team (COT), consisting of FWS and state representatives. The COT team issued a report setting out objectives for the conservation and survival of the sage-grouse.[41] FWS Director Dan Ashe indicated that the report was not only for his use in making decisions regarding the sage-grouse but also for guiding other federal land management agencies, state sage-grouse teams, and others in conserving the species.[42]

State and Private Actions

Many western states were concerned about the prospect of listing the sage-grouse on the grounds that listing might affect land use through potential restrictions on energy development, grazing, urban development, and other activities. In particular, states were concerned that listing would affect management of BLM and FS lands, where economic uses such as mining, fossil and alternative fuel development, grazing, hunting, fishing, and outdoor recreation may all be important to local and regional economies.

[42] Ibid., see preface (p. ii).

To avoid potential adverse impacts on these sectors, states took diverse steps to conserve the species and to avoid a listing. For example, the Western Association of Fish and Wildlife Agencies (WAFWA) developed guidelines for best practices to assist states in managing sage-grouse habitat; WAFWA also signed memoranda of understanding with federal agencies.[43] Some states acted to protect sage-grouse and its habitat to avoid further reductions in numbers.[44] California, Colorado, Idaho, Montana, Nevada, and Wyoming all issued conservation plans whose measures varied but included bag limits;[45] where, when, and whether hunting was allowed; control of nonnative predators; limits on placement of utility lines; vegetative treatments to reduce invading juniper trees; habitat restoration after energy development; and other actions.[46]

For private lands, the Natural Resources Conservation Service (NRCS, U.S. Department of Agriculture) has led voluntary conservation efforts through its Sage-Grouse Initiative (SGI), which began in 2010.[47] The SGI uses existing federal conservation programs, namely the Environmental Quality Incentives Program (EQIP) and the Agricultural Conservation Easement Program (ACEP), to provide technical and financial assistance to help farmers and ranchers accelerate installation of conservation practices beneficial to sage-grouse. Examples of approved conservation practices include implementing grazing systems to improve cover for birds, removing invasive conifers from grasslands to improve habitat and increase forage for livestock, and marking or moving fences near breeding sites to reduce bird collisions. The initiative is

[47] For additional information on the Sage-Grouse Initiative (SGI), see U.S. Department of Agriculture (USDA). Natural Resources Conservation Service (NRCS), "Sage Grouse Initiative," at http://www.nrcs.usda.gov/wps/portal/nrcs/detailfull/national/programs/initiatives/?cid=steldevb1027671.

offered in the 11 western states with areas of high sage-grouse populations.[48] Between FY2010 and FY2015, NRCS through the SGI obligated more than $296 million through 1,289 contracts on more than 5 million acres. In August 2015, NRCS expanded the initiative (referred to as *SGI 2.0*), committing approximately $211 million through FY2018 to bring the total to more than 8 million acres conserved.[49]

SGI is part of a larger Working Lands for Wildlife (WLFW) initiative at NRCS.[50] In addition to financial and technical assistance, the WLFW initiative ensures that participating producers who continue to maintain NRCS conservation practices to benefit the targeted species will be considered compliant with ESA for periods as long as 30 years, even if the species is subsequently listed under ESA.[51]

BLM and FS Sage-Grouse Strategy and Conservation Plans[52]

An estimated 271,604 square miles of sage-grouse habitat remain; of this total, two federal agencies manage more than half: BLM manages 45%, and FS manages 6%.[53] In response to the FWS 2010 finding that sage-grouse warranted ESA listing, BLM and FS began a coordinated and cooperative effort to develop and implement a joint conservation strategy to "protect, enhance, and restore sage-grouse and its habitat and to provide sufficient regulatory certainty" to warrant FWS not listing the species.[54] In 2011, both agencies published a notice of intent to prepare environmental impact statements (EISs) to incorporate sage-grouse conservation measures into the agencies' land and resource management plans across the range of the species.[55] The final COT report, mentioned above, other research efforts,[56] WAFWA, state conservation plans, and conservation activities on private lands all contributed to the development of the federal conservation strategy.

[48] A map illustrating the SGI boundary is at http://www nrcs.usda.gov/Internet/FSE_MEDIA/nrcsdev11_023999.png.

Table 2. Other federal agencies (including the National Park Service) manage 2% of remaining sage-grouse habitat, tribes manage 3%, states manage 5%, and private owners manage 39%.

[54] FS, *Greater Sage-grouse Record of Decision for Idaho and Southwest Montana, Nevada, and Utah*, September 2015, p. 12, at http://www.fs fed.us/sites/default/files/great-basinROD-package-.pdf.

[55] BLM, "Notice of Intent to Prepare Environmental Impact Statements and Supplemental Environmental Impact Statements to Incorporate Greater Sage-Grouse Conservation Measures into Land Use Plans and Land Management Plans," 76 *Federal Register* 77008-77011, December 9, 2011.

[56] For example, U.S. Geological Survey, *Conservation Buffer Distance Estimates for GRSG - A Review*, 2014.

In 2013, BLM and FS released for public comment and review draft EISs to amend 98 land and resource management plans covering the range of the sage-grouse in 10 states.[57] The final EISs were published in May 2015, and the records of decision were signed in September 2015.[58] These plans establish management goals, objectives, and direction for sage-grouse habitat and conservation on FS and BLM lands but do not require specific on-the-ground activities. However, any FS or BLM project or on-the-ground activity planned within these areas must comply with the management direction established by the plans.

The plans build on the multitiered approach identified by WAFWA and state conservation plans and establish different land allocations, with different land management prescriptions, based on habitat conditions. Lands identified as the most valuable habitat will be afforded the highest levels of protection, whereas other lands may permit more flexible management and resource development. The land allocations are identified as follows:

- Priority Habitat Management Areas (PHMAs): Lands identified as having the highest habitat value for maintaining sustainable sage-grouse populations.
    - Sagebrush Focal Areas (SFAs): Subsets of PHMAs, these lands were identified as having the highest densities of sage-grouse and other criteria important for the persistence of the species. These areas include the highest protections from new surface disturbances, such as mining activities, to protect sensitive habitats.
- General Habitat Management Areas (GHMAs): Lands that are seasonal or year-round habitat outside of PHMA where some special management would apply to sustain sage-grouse populations.[59]

The FS and BLM plans are based on three objectives for conserving and protecting sage-grouse habitat as identified by the final COT report: improve habitat condition, minimize new or additional surface disturbance, and reduce the threat of rangeland fire to sage-grouse and sagebrush habitat.[60] Each of these objectives is briefly summarized below.

Improve Sage-Grouse Habitat Condition

The plans seek to enhance sage-grouse habitat through varied means. One such means pertains to mitigation by avoiding, minimizing, and compensating for impacts of development. Another relates to consideration for sage-grouse habitat management during the permitting and monitoring processes for livestock grazing, for example. A third involves monitoring and evaluation of

[57] The 10 states are California, Colorado, Idaho, Montana, Nevada, North Dakota, Oregon, Utah, South Dakota, and Wyoming. Washington was not included in the BLM-FS planning effort because sage-grouse habitat in that state is primarily located on state and private lands, according to BLM. See the BLM's sage-grouse website, Frequently Asked Questions, under "How many states are involved in the greater sage-grouse conservation effort?" at http://www.blm.gov/wo/st/en/prog/more/sagegrouse/frequently_asked_questions html.

[58] The records of decision, together with other documents and resources related to sage-grouse conservation on federal, state, and private lands, are on the Documents and Resources page of the BLM website at http://www.blm.gov/wo/st/en/prog/more/sagegrouse/documents_and_resources.html.

[59] This description of the layered management approach is drawn in part from BLM's sage-grouse website, Frequently Asked Questions, under "How do the plans achieve conservation?" at http://www.blm.gov/wo/st/en/prog/more/sagegrouse/frequently_asked_questions html.

[60] BLM and FS, "Fact Sheet: BLM, USFS Greater Sage-Grouse Conservation Effort," September 22, 2015, at http://www fs fed.us/sites/default/files/fact-sheet-greater-sage-grouse.pdf. The discussion that follows is drawn from this fact sheet.

population changes, habitat condition, and mitigation efforts. A fourth provides for adjustment of plans to correct for declines in population or habitat.

Minimize Surface Disturbances

The plans describe several strategies to minimize surface disturbances in sage-grouse habitat, including capping surface disturbances at different levels for different habitat areas. One strategy involves reducing surface disturbances from mineral and energy resource uses, such as locating renewable energy and other projects outside of priority habitat areas. As part of that strategy, the Secretary of the Interior has proposed to withdraw from location and entry under the U.S. mining laws approximately 10 million acres of BLM and National Forest System land in specified sage-grouse habitat in six states,[61] subject to valid existing rights.[62] During the ongoing segregation period, which can last up to two years while the Secretary decides whether to make the withdrawal, the location and entry of new mining claims in these areas are prohibited. During the segregation, BLM is coordinating the National Environmental Policy Act (NEPA) process, including conducting environmental surveys and analyses and inviting public input on the proposed withdrawal.[63]

Reduce Wildfire Threat

The COT report identified fire, and the post-fire spread of invasive grasses, as one of the most immediate threats to sage-grouse habitat. The FS and BLM plans provide guidance and strategies to address this threat, including positioning wildland fire management resources to maximize response capacity, managing vegetation to reduce fire risk, and promoting the post-fire restoration of native grassland species.[64]

Conflicting Views on BLM and FS Plans

The BLM and FS plans have received both support and opposition. Supporters have commended the collaborative process that generated the protections on federal and other lands. Some conservationists and others have praised the plans as containing the necessary safeguards for sage-grouse to recover. However, other environmental organizations have objected to the plans as not protective enough of sensitive sage-grouse habitat and called for an ESA listing or more stringent conservation provisions in the plans. Some states, industries, and others have argued that

[61] Provisions of the Federal Land Policy and Management Act (codified at 43 U.S.C. §1714) authorize the Secretary of the Interior to withdraw lands. The provisions define withdrawal as "withholding an area of Federal land from settlement, sale, location, or entry, under some or all of the general land laws, for the purpose of limiting activities under those laws in order to maintain other public values in the area or reserving the area for a particular public purpose or program; or transferring jurisdiction over an area of Federal land.... " (43 U.S.C. §1702(j)). Except in emergency situations, the Secretary is authorized to withdraw lands outside the Department of the Interior only with the consent of the head of the agency or department (43 U.S.C. §1714(i)).

[62] BLM, "Notice of Proposed Withdrawal; Sagebrush Focal Areas; Idaho, Montana, Nevada, Oregon, Utah, and Wyoming and Notice of Intent to Prepare an Environmental Impact Statement," 80 *Federal Register* 57635-57637, September 24, 2015. A correction notice was subsequently issued, See 80 *Federal Register* 63583, October 20, 2015.

[63] National Environmental Policy Act (NEPA; 42 U.S.C. §§4321-4347). This and other information on the proposed withdrawal is contained in BLM, Documents and Resources, "Withdrawal Order Fact Sheet," at http://www.blm.gov/wo/st/en/prog/more/sagegrouse/documents_and_resources.html.

[64] For more information, see DOI, *Rangeland Fire Prevention, Management, and Restoration*, Secretarial Order No. 3336, January 5, 2015, and DOI, *Implementation Plan for Secretarial Order 3336*, January 30, 2015, at https://www.forestsandrangelands.gov/rangeland/documents/ImplementationPlan_SecretarialOrder3336.pdf.

the plans could unnecessarily restrict uses of federal land, including energy and mineral development, livestock grazing, hunting, and recreation. Other questions have centered on whether the federal government or states should take the lead in conserving the sage-grouse. Some states that had adopted conservation plans disputed the need for federal plans or opposed provisions of those plans as in conflict with their own. Some critics questioned whether the plans were based on adequate science.

More broadly, other concerns have been raised about the overall protection afforded through federal, state, and local efforts. These efforts eliminated only the ESA listing per se, because they formed the basis for the FWS decision not to list the species. However, some conflated an FWS decision not to list with the opportunity to avoid strong conservation measures. For such individuals, the FWS decision seemed like a "bait and switch" because the effects of the federal, state, and local efforts seemed similar to effects that would have been expected from an ESA listing.[65]

Implementation and Other Issues

Although controversy over sage-grouse conservation began decades ago with the question of whether the species was depleted enough to need protection, the current debate has turned to the validity of the FWS decision not to list the species and the impacts of the protections that avoided ESA listing, especially the revised BLM and FS land management plans. Among the issues that have been raised by various parties are the following:

- the efficacy of state management and whether management of federal lands for sage-grouse conservation should be made subordinate to state management;
- the variation among states in protecting the species from recurring threats, and in some cases the failure to limit activities that pose the greatest risk in a given state, such as energy development in Wyoming or geothermal development in Nevada;
- whether restrictions on grazing will be implemented soon enough to reduce nest trampling from cattle;
- whether the decision not to list the species was predicated on the best available science;
- whether federal land management plans to protect sage-grouse habitat disregard the mandates of BLM and FS for multiple use and sustained yield; and
- whether any relaxation of land management plans in a manner to favor economic development might increase the possibility that FWS would revisit its decision not to list the species.

For these and other reasons, states and interest groups have filed lawsuits. In addition, a number of bills have been introduced in the 114th Congress to address aspects of sage-grouse conservation on specific lands.[66] Provisions in various bills overlap considerably but include

[65] For example, see "The Sage Grouse Switcheroo," *Wall Street Journal*, September 27, 2015.

[66] These bills include H.R. 1793/S. 468; H.R. 1997/S. 1036, H.R. 4739; H.R. 4909 (§2864)/S. 2943 (§2864); H.R. 5538 (§114)/S. 3068 (§115); S. 2132 (§119); and P.L. 114-113 (Division G, §117). In some cases, certain versions of these bills may lack provisions on sage-grouse.

- preventing delay of a future listing of the species (e.g., H.R. 4739; H.R. 4909 (§2864)/S. 2943 (§2864));
- exempting certain vegetative management practices designed to benefit sage-grouse from the NEPA (e.g., H.R. 1793 / S. 468);
- allowing states to develop their own sage-grouse management plans (e.g., H.R. 1997/S. 1036);
- allowing state preemption of federal land management plans regarding sage-grouse (e.g., H.R. 1997/S. 1036);
- reversing prior land withdrawals made to protect sage-grouse (e.g., H.R. 4739; H.R. 4909 (§2864)/S. 2943 (§2864)); and
- exempting sage-grouse provisions from judicial review (e.g., H.R. 4739).

Hi guys-

We're en route to you. You might have heard there was an altercation with Capitol police. We were right in the middle of it and are headed your way now.

Apologies for our delay,
Kelly

Please excuse any typos - Siri has a mind of her own

Charter Signed: Establish Royalty Policy Committee

Secretary Zinke is committed to ensuring state, local and tribal governments have a say in energy development within their borders and that taxpayers are getting a fair return on investment. To that end, he is establishing a new Royalty Policy Committee to include renewable energy in addition to mineral resources.

The primary goal is to ensure public continues to receive the full value of all energy produced on federal lands. The Secretary will seek their input on how we determine fair market value, collect revenues and how future policies could impact revenue collection.

Membership

- The charter would establish a 28 member committee to provide the Secretary with advice
- No member may have financial interest/business with us
- Members will be both federal and non-federal partners. They will hail from energy producing states, tribes, the energy industry, academia/interest groups
- Each member will serve a two year term

Signed SO #TBD: American Energy Independence

Following the bold executive order signed by President Trump yesterday, Secretarial Order XXXX, "American Energy Indepenedence," takes numerous steps to unleash the power of American energy on public lands.

- Revokes Secretarial Order 3330 regarding Compensatory Mitigation and launches a review of the program
- Launches a review of all climate change policies within the department
- Launches a review of the National Parks Service and Fish and Wildlife Service oil and gas regulations
- Launches a review of Bureau of Land Management's venting & flaring (methane) rule
- Confirms that Bureau of Land Management is withdrawing the hydraulic fracking rule

Time: Arrive NLT 945 (preferably closer to 930) for a hard start time of 10 am. Some members have to leave by 1020 so we need to start on time.

Location: Dept. of Interior / 1849 C. St. NW / DOI has two entrances, come to C Street Entrance

Arrival: Members and RSVP'd staff will be on Security list at C Street entrance. You will be greeted in lobby by DOI Staff and escorted up to the Secretary's office for the ceremony

You will need photo ID

Topline Issues: the Secretary will sign several Secretarial Orders to reflect POTUS action on energy. These include:

- Lifting the Federal Coal Leasing Moratorium.
- Withdrawing previous Secretary's Orders on Mitigation and oil & gas prohibitions.
- Announcing the reestablishing of the Royal Policy Committee.

SO #TBD: Repealing the 2016 Coal Moratorium - Ending the PEIS

Rescind SO 3338 signed by Sally Jewell and direct BLM to process lease applications

Federal coal leasing is important to the U.S. economy and roughly 40% of U.S. coal is produced on federal lands.

The Department determined the public interest not served by halting leases for several years and that the PEIS is not needed to improve the program.

Note: In 2013, both the OIG and the GAO audited BLM's coal leasing program Between The OIG and GAO there were 21 recommendations made to improve transparency in the leasing program to ensure that the American taxpayer was receiving a fair return from the coal program. BLM has addressed all 21 recommendations and works closely with the Office of Valuation Services to ensure that bonus bids are calculated appropriately. In

addition, the Federal Royalty Policy Committee has been reestablished.

Mining companies are held accountable and expected to comply with strict environmental standards and present reclamation plans. Every year the "best of" reclaimed mine lands are highlighted by the Office of Surface Mining and Reclamation and Enforcement.

Charter Signed: Establish Royalty Policy Committee

Secretary Zinke is committed to ensuring state, local and tribal governments have a say in energy development within their borders and that taxpayers are getting a fair return on investment. Hi Ed,

This email responds to your request for statements made by governors about national monument designations with areas over 100k acres. Please see the table below and the accompanying attachments for the statements that we were able to identify. We searched subscription news databases, including Nexis and Factiva, as well as state and general websites.

Note that we couldn't find a statement for every monument designation. For those statements that we did identify, some statements appear to support the designation, while others appear to oppose the designation. We didn't identify any statements by CA governors on designations, but did find some statements made by the CA Secretary of Natural Resources. Some of the attached PDFs include more than one monument (relevant portions have been highlighted).

Statements Made by Governors or Other State Officials on Selected National Monument Designations

Subject: CRS Folow-Up on National Monument Request

Hello Ed This email is a follow-up to our phone conversation this morning on your request for information on state support of presidentially proclaimed national monuments since 1995 It conveys additional information on the CRS approach to researching this question, following consultation with CRS colleagues First, we are researching post-1995 monuments that exceed 100,000 acres, a size larger than we discussed (10,000 acres) The larger size was chosen to reduce the number of eligible monuments in the interest of expediting this research We have identified 20 monuments in excess of 100,000 acres, listed below by state Second, this list excludes marine national monuments, as generally not affiliated with a particular state Third, we are seeking expressions of support/opposition by state governors at the time of monument designation, and in a short period thereafter We may undertake research on support/opposition by state legislatures if possible under your deadline You had stated a preference for information by COB today, but we were not able to complete the research by this deadline This is because the information is not aggregated in one place, thus requiring 19 separate searches You had also stated that it would nevertheless be helpful to receive information by COB Tuesday, and we are endeavoring to provide information by that time In the meantime, please do not hesitate to let us know if you have questions I am copying Lisa Mages, manager of the librarian section that is conducting the research to respond to your question

Court upholds Clinton creation of 7 monuments, 3 in Arizona

BYLINE: Howard Fischer, Capitol Media Services

SECTION: TUCSON/REGION; Pg. B8

LENGTH: 660 words

Former President Clinton did not exceed his legal authority in creating a host of new national monuments in Arizona and elsewhere in the West, a federal appeals court ruled Friday.

In a unanimous decision, the District of Columbia Circuit Court of Appeals threw out two separate challenges to Clinton's actions. The judges said the president has broad authority under the law.

Among the monuments that were challenged was the Ironwood Forest National Monument, about 25 miles northwest of Tucson. Ironwood has one of the richest stands of Ironwood trees in the Sonoran Desert and has several mountain ranges including the Silver Bell, Waterman and Sawtooth, according to the Arizona Bureau of Land Management Web site.

Friday's rulings say that those who want to challenge presidential proclamations to create national monuments have a difficult legal burden.

Friday's ruling provides no relief to Gov. Jane Hull, who objected to Clinton's creation of the Arizona monuments and has been working to redraw the boundaries and lift some restrictions.

Clinton created 18 national monuments and expanded two others before leaving office.

Mountain States Legal Foundation challenged six of them, including the Desert Sonoran National Monument southwest of Phoenix, Ironwood and the Grand Canyon-Parashant National Monument in northwest Arizona. Attorneys for the Denver-based organization charged that the proclamations exceeded any legal authority Congress gave the president.

A separate lawsuit was filed by Tulare County, Calif., challenging the creation of the Sequoia National Forest in south-central California.

At the heart of the dispute is the Antiquities Act, approved by Congress in 1906. That law allows the president "in his discretion" to declare "historic landmarks; and other objects of historic or scientific interest; situated upon (federal) lands; to be national monuments." The statute also requires the monuments to be the "smallest area compatible with the proper care and management of the objects to be protected."

Mountain States attorneys said Congress intended only to preserve ruins, artifacts and other man-made objects situated on public lands, with only minimal acreage included in the monuments.

The three Arizona monuments constitute more than 2 million acres.

Judge Judith Rogers said Clinton's actions appear to meet all legal conditions.

"Each proclamation identifies particular objects or sites of historic or scientific interest and recites grounds for the designation," she wrote. For example, Rogers said, the proclamation for Ironwood Forest states it holds "abundant rock sites and other archeological objects of scientific interest."

Rogers also rejected arguments that the proclamations must include a certain level of detail.

"No such requirement exists," she wrote. Rogers also said the president is entitled to ecosystems and scenic vistas in the list of things that qualify land for

protection.

The judge also rejected arguments that too much land was included in the monuments. Rogers said that, in both cases, the challengers made only general assertions without spelling out which lands they believed were inappropriate for inclusion.

Last year Hull wrote to Interior Secretary Gale Norton, seeking a change in the boundaries of the new national monuments Clinton created.

The governor said she was not trying to repeal the proclamations nor even reduce the size of the monuments. She said, though, the boundaries threaten future use of rights of way for roads and power lines as well as tie up a potential $100 million in mineral rights.

Hull also wants permission for certain activities within monument boundaries, including chaining or burning of vegetation for wildlife management, research or ecological restoration. She has proposed giving the state the authority to manage wildlife within the monuments.

Nick Simonetta, a spokesman for the state Land Department, said negotiations have been ongoing with the Bush administration.

Arizona has much at stake when Interior Secretary makes decisions

BYLINE: By GIOVANNA DELL'ORTO, Associated Press Writer

SECTION: State and Regional

LENGTH: 575 words

DATELINE: PHOENIX

Environmentalists have a list of issues they plan to spotlight Wednesday when U.S. Interior Secretary Gale Norton visits Arizona.

Norton plans to tour a forest health rehabilitation project near Flagstaff and dedicate a new section of trail at the Grand Canyon. She will be in Phoenix Thursday to meet state water officials.

The Sierra Club in Phoenix and other groups said Tuesday they want Norton to take a stand on the new national monuments that former President Bill Clinton created in Arizona.

The Bush administration has suggested it might scale back the more than 3 million acres that Clinton put under protection to explore public lands for energy resources. In March, Norton, whose agency oversees the National Park Service, asked officials from several states to suggest boundary and other changes to the new national monuments.

Environmentalists, however, worry that might open the door to logging, mining and development on lands where even power lines should not be placed, said Phoenix Sierra Club spokesman Rob Smith.

Three out of four Arizonans support the monuments, according to a poll released Tuesday by the Behavior Research Center. The poll was commissioned by the Sierra Club and other environmental groups. It surveyed 602 registered voters last month and had a margin of error is 4.1 percent.

Gov. Jane Hull, however, suggested that some boundaries should be redrawn.

In an April letter to Norton, Hull said the monuments created problems with energy transmission, cut into the state's long-term water supply, prohibited essential roads and diminished the use of thousand of acres of private property.

"National monuments are a great opportunity, not a problem," Smith countered on Tuesday.

The five monuments, covering nearly 2 million acres, are: Grand Canyon Parashant, on the canyon's northern rim; Agua Fria, off I-17 near Black Canyon City; Ironwood Forest, near Tucson; Sonoran Desert, west of Phoenix; Vermilion Cliffs, near Lake Powell.

Public land management is also within Norton's discretion and some environmentalists have pledged to protest various thinning and burning treatments employed in a forest experiment near Flagstaff.

Proponents of the Fort Valley Restoration Project say the forest needs some thinning because years of wildfire suppression have left it too prone to large fires. Critics, including the Southwest Forest Alliance, argue that the project only amounts to extensive logging.

"It causes such a drastic reduction in the number of trees that the current ecosystem is being sacrificed," said Southwest Forest Alliance spokesman Brian Nowicki.

Norton also has a say on Arizona wildlife because she oversees the U.S. Fish & Wildlife Service, which is involved in determining where development should be restricted to protect endangered or threatened species.

Last month, a federal appeals court directed Norton to reconsider her decision not to list the flat-tailed

horned lizard for protection as a threatened species. Its habitat is in southwestern Arizona.

Norton and Hull also will discuss negotiations with tribes about water rights, Hull's spokeswoman Francie Noyes said.

Hull wants to alter new monuments

BYLINE: Tony Davis

SECTION: NEWS; Pg. A4

LENGTH: 830 words

Republican Gov. Jane Hull has asked the Bush administration to redraw the boundaries of Arizona's five newest national monuments and to delay both the Sonoran Desert Conservation Plan and the federal pygmy owl recovery plan.

Pima County supervisors and environmentalists contend that the governor's actions are escalating conflicts between the state and county over growth and the environment.

While the governor says she wants the state to have more say over these plans, county supervisors say they've given the state many chances to cooperate with them.

"We've always had an open door. Maybe it wasn't always the most welcome, but it's unfortunate to try to circumvent local government rather than to try to deal directly with the people who are working and voting here," Republican Supervisor Ray Carroll said.

Last month the governor wrote separate letters to Interior Secretary and fellow Republican Gale Norton asking for:

* New boundaries for the Ironwood Forest National Monument and four other monuments that ex-President Bill Clinton and former Interior Secretary Bruce Babbitt approved for the state before Clinton left office on Jan. 20.

Hull also proposed that the Interior Department allow certain kinds of vegetation disturbance such as chaining or burning that's needed to maintain wildlife management, research and ecological restoration on the monuments. Her proposal would give Arizona authority to manage the monuments' wildlife and require that the state Game and Fish Department sign off on road closures, travel restrictions and other transportation plans for the monuments.

* A delay in decisions on Pima County's million-acre Desert Conservation Plan and the new owl recovery plan. She asked the Interior Department to provide an "appropriate state role" in shaping them.

Norton's office didn't reply Monday to questions about the governor's letters. Her department must approve the county's conservation plan and is currently reviewing the owl recovery plan, now more than 2 1/2 years behind its federally required release date. The plan would bring 175,000 acres of private and state-owned land under federal development limits to protect the endangered bird.

Hull wrote that she wasn't trying to repeal or downsize the monuments but did want to change their boundaries. The Ironwood Monument threatens future use of up to 14 rights of way for roads or power lines and up to $100 million in mineral rights, Hull wrote.

"We have monuments with boundaries that do not protect the best of the terrain, do not give due consideration to wildlife management, do not allow vital energy transmission to cross into regions of the state, prohibit essential roads, create uncertainty in the state's long-term water supply and diminish the use of thousands of acres of private property," Hull's April 6 letter said.

The Ironwood monument spans the Silver Bell, Waterman and Roskruge mountains north of the Avra Valley. The Sonoran Desert National Monument covers a rugged, hilly area 30 miles southwest of Phoenix. The Vermilion Cliffs Monument contains the Paria Plateau and Paria River Canyon in Northern Arizona. The Grand

Canyon-Parashant Monument lies on the Shivwits Plateau near the Canyon's North Rim. The Agua Fria monument, 40 miles north of Phoenix, includes an extensive area of Indian ruins dating back to 1250 to 1450.

Julie Sherman, a Sierra Club activist in Phoenix, said the various monument areas have long been considered for protection and pointed out that Ironwood and two of the other new monuments will be "much more permissive" than typical national monuments. Existing grazing, hunting, road and trail use, and existing mineral leases will be protected, she said.

"We don't understand her concerns that they can't be used," Sherman said.

Francie Noyes, Hull's press secretary, said the governor's staff has recently tried to improve communications with Pima County by holding a meeting with two county supervisors.

"The fact is that state agencies already, by statute and the constitution, have these responsibilities," Noyes said. "We simply want to be able to do our jobs."

Environmentalists and county officials said that state officials have had plenty of opportunities to participate. Officials from two state agencies sit on two committees involved in advising the federal government on drafting the pygmy owl recovery plan.

"What Hull really wants is veto power over anything to do with protecting the pygmy owl and the Sonoran Desert," said Kieran Suckling, science director of the environmentalist Center for Biological Diversity.

Democratic Supervisors Raul Grijalva and Sharon Bronson and Republican Carroll disagreed with the governor's stance. Grijalva said the conservation plan is fighting one hurdle after another: "It's not only private interests that will be a bone of contention: We now have the state with Hull's access to the Interior Department that makes it a much bigger issue."

Clinton Creates, Expands Four National Monuments; Arizona Officials Complain About Federal Government Controls on Use of Land in Western States

Charles Babington, Washington Post Staff Writer

SECTION: A SECTION; Pg. A03

LENGTH: 875 words

DATELINE: GRAND CANYON NATIONAL PARK, Ariz., Jan. 11

With this panoramic canyon as a backdrop, President Clinton today vigorously defended his decision to broaden federal protections for more than a million acres in the West as necessary to preserve scenic areas for generations to come.

After touring the Grand Canyon's northern rim by helicopter, the president signed documents creating two new national monuments in Arizona and one in California, and expanding an existing monument in California. Then, speaking to a few hundred supporters at Hopi Point on the south rim, he repeatedly invoked the name of Theodore Roosevelt, the president who gave federal protection to the Grand Canyon on this date in 1908.

He noted that Roosevelt used the federal Antiquities Act to protect the canyon, the same law that several other presidents have invoked and the one Clinton used today to create the new monuments.

"This is not about locking lands up; it is about freeing them from the pressures of development and the threat of sprawl, for all Americans, for all time," said Clinton, who wore a leather jacket in the clear but chilly and breezy late morning. Addressing a frequent criticism, Clinton said local authorities and residents will have a voice in the uses of the lands, which generally will allow for recreation such as hiking and fishing but will limit amenities such as roads.

"In managing the new monuments," he said, "we will continue to work closely with the local communities to ensure that their views are heard and their interests are respected."

Several Arizona Republicans, including Gov. Jane Hull, declined to join Clinton today, complaining that the federal government uses too heavy a hand in western states in controlling the rights to mining, grazing, road-building and water use. Today's ceremonies, and the criticisms by those who did not attend, are but the latest example of long-running tensions regarding the extent to which this part of the country should be protected and controlled by politicians who see it only on occasional vacations.

In many ways, today's debate centers more on process and pride than on any likelihood that the newly declared monuments would fall prey to development. Nearly all the land in question is already federally owned, and the White House said existing mining and water rights "will be maintained." But no new mining claims will be allowed, and "the current prohibition on off-road vehicles will be made permanent" at the two new Arizona monuments, according to the White House.

Hull and other Arizona Republicans have been careful to criticize Clinton's procedures without attacking the notion of preserving scenic lands.

"The governor is not opposed to protecting this land," said Hull's press secretary, Francie Noyes. "She's disappointed that the people of Arizona were completely bypassed in making this decision." She said Hull is not "trying to protect business interests" because few business enterprises are practical in the rugged and remote areas in question.

Speaking with reporters before his speech, Clinton said administration officials consulted closely with local citizens and officials before making his decision. "We've tried to be, and will always be, sensitive to the concerns and the legitimate interests of local people, but I think we've done a good job with this," he said.

He also pointed to a recent statewide poll that found most Arizona voters support federal protection of scenic or historic sites. Still marked by vast open and arid tracts, Arizona nonetheless has gained 1.3 million new residents in the past decade, creating pressures for new developments and sprawl. Only 17 percent of Arizona land is privately owned. The federal government owns 42 percent, the state owns 13 percent, and Indian reservations cover the remaining 28 percent.

Clinton's actions added 7,900 acres to the Pinnacles National Monument south of San Jose. He also created these three monuments:

* Grand Canyon-Parashant National Monument, more than a million acres on the northern rim of the Grand Canyon.

* Agua Fria National Monument, a 71,100-acre site 40 miles north of Phoenix. It includes rock pueblos that were inhabited centuries ago.

* California Coastal National Monument, which comprises thousands of islands, rocks and reefs along 840 miles of California coast.

Clinton was joined today by Interior Secretary Bruce Babbitt, a former Arizona governor who long has championed expanding the zone of protection around the Grand Canyon. Speaking before the president, Babbitt said Clinton "has written a full, final chapter to the protection of this canyon."

Protected Land

President Clinton today declared three new national monuments and expanded a fourth.

1. Coastal National Monument

Thousands of small islands, reefs and rocks off the California Coast.

2. Pinnacles National Monument

To be expanded.

3. Grand Canyon-Parashant National Monument

1,500 square miles of desert.

4. Agua Fria National Monument

71,000 acres filled with Indian ruins.

GOP TELLS CLINTON TO BUTTE OUT OF NATIONAL MONUMENTS

BYLINE: Mary Dalrymple, CQ Staff Writer

LENGTH: 639 words

Amid expectations that President Clinton will establish three new national monuments and expand one during a visit to the Grand Canyon on Tuesday, Arizona Republicans have already begun to express their irritation.

"They have not even told us what the areas are, what the boundaries are, what the limits will be. It's basically a decree," said Sen. Jon Kyl, R-Ariz.

Interior Secretary Bruce Babbitt recommended last month that Clinton establish two new monuments in Arizona -- a million-acre Grand Canyon Parashant National Monument north of Grand Canyon National Park to protect remote canyons and buttes; and a 71,000-acre Agua Fria National Monument to protect prehistoric American Indian ruins.

In addition, Babbitt proposed a new California Coastal National Monument, incorporating thousands of small islands, rocks and reefs that serve as a wildlife habitat, and expanding the Pinnacles National Monument south of San Jose by 8,000 acres. The federal government already owns the land that would be protected, but the new designation would block mining, grazing, hunting and commercial development.

Arizona Republicans objected to the creation of new national monuments, saying the Clinton administration should work with state officials and local citizens to carve out new protected lands.

"There have not been public hearings," Kyl said. "There have been a couple of meetings where there was no transcript, with an informal exchange of ideas."

The expected announcement also faces opposition from Arizona's Republican governor, Jane Dee Hull.

"The governor does not like it when Washington dictates to the state of Arizona," said spokeswoman Fancie Noyes.

In particular, the governor and lawmakers prefer using legislation to protect land north of the Grand Canyon. Sens. Kyl and John McCain, R-Ariz., have drawn up a bill (S 1560) that would set aside 380,000 acres of land in a proposed Shivwits Plateau National Conservation Area, considerably less than Babbitt's proposed million-acre park.

On Friday, the state's Republican congressional delegation and Hull sent Clinton a letter asking him to forgo the declaration.

"Once again, we are writing to ask you to refrain from this unilateral action and instead work with us to develop a solution reflecting the wishes of the people of Arizona," they wrote.

Other Republicans suggested that the declaration could be timed to boost Vice President Al Gore's presidential candidacy.

"These lands are our sacred trust and should not be used for election-year politicking or personal legacies," said Utah Republican James V. Hansen, chairman of the House Resources Subcommittee on National Parks and Public Lands.

The president has the power to designate new national monuments under the 1906 Antiquities Act. Clinton provoked Western Republicans after he used the law to create the 1.7 million-acre Grand Staircase-Escalante National Monument in southern Utah in 1996.

In response, Hansen authored legislation that would amend the 1906 law to require the federal government to consult with local officials and hold public hearings before establishing new monuments.

The House passed the bill (HR 1487) in September, and the Senate Energy and Natural Resources Committee approved it in October but has not yet reported it to the Senate.

After Babbitt's December recommendations to establish more national monuments, panel chairman Frank H. Murkowski, R-Alaska, said he would revisit the issue as soon as Congress reconvened. He suggested the committee might add new provisions to the bill requiring the federal government to draft environmental impact statements for all proposed new monuments.

December 14, 1999

WESTERN LAWMAKERS WARY OF CLINTON PLAN ON MONUMENTS

BYLINE: Suzanne Dougherty, CQ Staff Writer

LENGTH: 601 words

With President Clinton's announcement Tuesday that three new national monuments could be designated within the next year, Western Republicans are on the warpath.

Heading the charge is the congressional delegation from Arizona, which would be home to two of the new monuments. A spokeswoman for Republican Bob Stump, who represents the district where the monuments would be located, said the delegation is writing the president to urge him to hold off on the designations.

"Artificial time constraints do not make good policy. There are no urgent threats to the area that we can't take the time to go through a public comment period and spend the necessary time to work with people who have an interest in the areas," said Lisa Atkins, Stump's chief of staff.

Recommendations submitted to President Clinton by Interior Secretary Bruce Babbitt would create national monuments in Arizona and California, and expand another in California. Clinton indicated in a speech on Tuesday that he will probably act on the recommendations within a year.

Babbitt proposed designating 1 million acres along the north rim of the Grand Canyon as the Grand Canyon-Parashant National Monument; 71,100 acres of federal land north of Phoenix as the Agua Fria National Monument; thousands of small federally owned islands, reefs and rocks along the California Coast as the Coastal National Monument; and adding 8,000 acres to the Pinnacles National Monument near San Jose, Calif.

Arizona Gov. Jane Dee Hull, R, is displeased with the recommendations of Babbitt, a former Arizona governor. While some of the parcels fit the federal government's criteria for land preservation, a governor's spokesman said other areas are not threatened.

"The governor believes that the federal government is coming in and running roughshod over the process without any input from the public," said Scott Celley, the governor's assistant.

Clinton has come under fire for his use of the powers granted to him under the little-used 1906 Antiquities Act. The law allows the president to unilaterally set aside threatened federal lands as national monuments.

Critics say the monument designation has become a political tool with little accountability, citing Clinton's September 1996 designation of 1.8 million acres in southern Utah as the Grand Staircase-Escalante National Monument.

Environmental groups praised the possible designations and urged the administration to do more to protect the environment. "Bravo to the administration for making some national monuments, but that is not going to take away from the fact that they have not addressed some of the major environmental problems we are facing today," said Mark Whiteis-Helm, a spokesman for Friends of the Earth.

Legislation that would allow more public participation in monument designations has strong support from Western lawmakers. One measure (HR 1487) introduced by Utah Republican James V. Hansen was passed by the House in September and approved by the Senate Energy and Natural Resources Committee on Oct. 20.

In light of the president's announcement Tuesday, however, Senate Energy Chairman Frank H. Murkowksi, R-Alaska, indicated that he would take another look at the legislation before reporting it out of the committee. "Early in the next session, the

committee will probably take the bill up again in an effort to strengthen the provisions," said Tina Kreisher, the committee's press secretary.

Owens axes federal land swap Cites Clinton's high-handed tactics in creating national monuments

BYLINE: By Mike Soraghan, Denver Post Washington Bureau,

SECTION: DENVER & THE WEST; Pg. B-01

LENGTH: 731 words

WASHINGTON - Gov. Bill Owens, angered by what he considers the high-handed tactics of President Clinton in his drive for a 'lands legacy,' has called off a land swap involving 180,000 acres in 20 counties.

Owens' top lieutenant for public lands, Department of Natural Resources head Greg Walcher, put the kibosh on the swap that state and federal managers had been working on for more than six months.

The Owens administration said that Clinton and Interior Secretary Bruce Babbitt created the Canyons of the Ancients National Monument in southwest Colorado without regard for what local residents thought of it.

And Owens is worried that Clinton will do the same thing in northwest Colorado near Craig. Some environmental groups have proposed creating a Vermillion National Monument there.

'We're concerned that they're kind of having their way with us without any consent or any public input,' said Susan Wadhams, spokeswoman for Walcher.

Officials with the state Land Board and the U.S. Bureau of Land Management had been working on the massive exchange.

State officials say Babbitt had suggested the swap to streamline ownership, eliminating 'inholdings' on each other's lands.

The land that would have been exchanged is scattered across the state, but much of it is in northwest Colorado, Grand County and the San Luis Valley. It didn't involve land in the new Canyons monument or the proposed Vermillion.

But after Clinton designated Canyon of the Ancients in June, Walcher sent a memo to the Land Board saying the administration did not want to proceed with the land bartering. A spokesman for Owens said the governor has not been directly involved in the land swap, but wholeheartedly approves of what Walcher is doing.

'We don't want to deal with someone who's not dealing with the public,' Susan Wadhams said.

That's fine with Babbitt, according to his spokeswoman.

'The Bureau of Land Management is continuing to do technical work on this proposal,' said Stephanie Hanna of the Department of the Interior. 'It will continue to work with the state at whatever pace the state chooses.'

It was to have been done as a 'legislative land exchange,' which bypasses some of the usual federal appraisal procedures by having a member of Congress get it passed.

Some environmentalists have bitterly fought such deals in other states, saying they're a bad deal for federal taxpayers. They say that state land boards in the West, which manage their land to raise money for schools, usually get a sweetheart deal. So they're surprised to see a state blocking such a swap.

'I can't understand why Owens would oppose it,' said Janine Blaeloch, director of the Western Land Exchange Project. 'The states are making out so well.'

A General Accounting Office report critical of such land exchanges, including some in Colorado, is expected to be released next week in Washington.

But in Colorado, environmentalists support land exchanges as a way to separate state land, which generally must be managed to raise the most money for schools, from federal land, which can be used purely for conservation purposes. Pam Eaton, the Denver-based regional director for the Wilderness Society, expressed some disappointment that Owens is stopping the swap.

'It's unfortunate that this process would be scuttled for political reasons,' Eaton said. 'These exchanges can be very productive.'

In his drive to create a federal lands legacy before he leaves office in January, Clinton has designated eight new monuments this year.

Monument status can restrict mining and oil and gas exploration at a site, along with other activities, depending on how the government's management plan is drafted.

Owens says he fears that Clinton will create another monument, Vermillion, in northwestern Colorado near Craig and Dinosaur National Monument, because the National Wildlife Federation and other environmental groups have proposed it to Babbitt. But Babbitt has expressed no support for the proposal.

Owens also showed his dislike for Clinton's tactics by pulling together nine other Republican governors in the West to demand that the administration seek public input before creating any new monuments.

WASHINGTON -- As private landowners clamor to have their property removed from the Upper Missouri River Breaks National Monument, the state of Montana is in no hurry to yank its land from the controversial new monument.

The House Resources Committee approved a bill Wednesday that would remove 81,000 acres of privately owned land from the monument and redraw its boundaries. The bill, introduced by Rep. Dennis Rehberg, R-Mont., says nothing about the 39,000 acres of land in the monument that belongs to the Montana Division of School Trust Lands.

President Clinton created the 377,000-acre monument shortly before leaving office. Although Gov. Judy Martz has been one of the monument's loudest critics, she hasn't asked Congress or the federal government to have the state's lands removed from its boundaries.

That's a position the state land board would have to take, and it has not yet discussed the issue, said Todd O'Hair, Martz's natural resource policy adviser. The state land board is made up of three Democrats and two Republicans -- the governor, attorney general, auditor, secretary of state and superintendent of public instruction. The board's job is to manage the state's 5.1 million acres of trust lands in a way that generates the most money for the state's schools.

"It's a very controversial issue, and a lot of time these issues have a tendency to fall along party lines," O'Hair said. "If Congressman Rehberg can get the legislation through for the private landowners, that will be good."

The state will gain more financially by leaving the land in the monument, for now, and then trading it for other federal land later, said Janine Blaeloch, a Seattle-based critic of federal land exchange programs. That's because the Bureau of Land Management has a history of giving away the store when it exchanges its land for state lands in national monuments and wilderness areas, especially when development is mentioned, she said.

"The state is going to make out like crazy," said Blaeloch, director of the Western Land Exchange Project. "Montana must be rubbing their hands knowing they own this valuable historic land. All they have to do is threaten to build a road, and everybody will go nuts."

The BLM would not be interested in doing a land exchange with the state if its lands are removed from the monument's boundaries, Monument Manager Gary Slagel said.

"We can't enlarge the monument; only Congress can," Slagel said.

The state of Utah is making a ton of money off BLM lands it received in exchange for a lot of low-value land it owned in the Grand Staircase-Escalante National Monument, Blaeloch said.

In 1999, Utah received 200,000 acres of BLM land, which included the Ferron Coalbed Methane Trend in central Utah, plus $50 million cash. In exchange, the federal government received 177,000 acres of state land in the national monument plus an additional 200,000 acres of state lands that were scattered around wilderness areas, national forests, parks and reservations in Utah.

Before the exchange, Utah received about $100,000 a year off the land it owned in the national monument. Since the exchange, it has earned $10 million off the land it received from the BLM on its coal- bed methane leases, according to the Utah Trust Lands' Web site. Within two years, Utah expects to receive $10 million a year for 20 years on this land with residual revenues continuing for a century.

Dave Hebertson, spokesman for Utah Trust Lands, said the state gave up very valuable coal deposits in the national monument. The coal is low in sulfur and would be easy to mine. Even though it's in a national monument, he predicted that it will be mined someday, "five days after the hot tubs in California go cold."

"(The exchange) has been very lucrative for us," Hebertson said. "It's really wrong to believe the federal government got hoodwinked.

"They're smart people. They drove as hard a bargain as anyone."

BLM spokeswoman Celia Boddington said her agency does a good job of appraising lands involved in exchanges, and that taxpayers get good value for lands they get in exchange. BLM appraisers are licensed and certified and follow professional standards, she said. In Las Vegas, where the BLM has congressional authority to auction its lands rather than exchange them, the agency's appraised values come in very close to the actual selling prices, she said.

"Clearly, it's a very different market in Las Vegas, but if we can get it right in Las Vegas, we can get it right in most places," Boddington said.

The area is known simply as "the breaks." It's a rugged, remote slice of north-central Montana cradling the upper reaches of the Missouri River as it zig zags through the badlands. By most assessments, the breaks have changed little since Lewis and Clark ventured into this frontier nearly 200 years ago.

By design, their journey (see sidebar on page 19) opened a growing country's eyes to the vast potential this and other places in the West held for American expansion.

Over the decades, scores of ranching families have grown into the fabric of the breaks. They have stewarded the land, water and wildlife -- working with government land managers assigned to oversee the public resources that characterize the area. For nearly 20 years though, there's been an undercurrent of resentment over the designation of a 149-mile stretch of the Missouri River as "Wild and Scenic."

Public interest in the breaks intensified after publication of historian Stephen Ambrose's book "Undaunted Courage" -- one of the more popular chronicles of the Lewis and Clark expedition. Then in 1999, Interior Secretary Bruce Babbitt floated through the river breaks with Ambrose, Montana Sen. Max Baucus and a cadre of environmental activists. There was no question Babbitt wanted the area preserved.

So last January, President Clinton, using his powers under the U.S. Antiquities Act, created the Upper Missouri River Breaks National Monument.

Now, this designation and attention to the Lewis and Clark expedition's upcoming bicentennial is haunting people and communities that have become dependent on the resources in and around the breaks. Comprised mainly of land managed by the Bureau of Land Management (BLM), the nearly half-million-acre monument also includes 40,000 acres of state land and 81,000 acres of privately owned land. It's estimated that ranchers graze nearly 10,000 head of cattle on land they own and/or lease within the monument boundaries.

So Where's My Hug?

"There's no question that, in time, this designation is going to affect our grazing uses as well as the value of our ranches," says rancher Matt Knox, Winifred, MT. He and his wife Karla feel their lives will change in what is now designated as national monument area.

"It happened when we got the Wild and Scenic designation, and it will happen again," Matt Knox says. "We think it's the next step in phasing out ranching in this area."

The Knoxs have demonstrated that grazing systems on both their private land and leased allotments have helped protect the environment. But, they now feel they'll be held to a higher standard with the monument.

Wendy Whitehorn, Dutton, MT, is a member of Friends of the Missouri Breaks Monument. She emphasizes that the vast majority of land in the monument is public land, and the designation will not affect ranchers' private property.

"The BLM will continue to manage the public land as it always has," Whitehorn says. "And, the public has every right to know what is happening on public land."

Knox, though, gets a little tired of people telling him what a great thing monument status will be for ranchers.

"We'll see more interference into our lifestyles. It won't happen overnight -- but it will happen," he says. "They say there's good 'karma' coming with this designation. And, they think we'll all have a big group hug when it's finished -- well that's just not going to happen."

In Neon Lights

While the Knoxs look down the road at long-term threats to the livestock business, they and others are also keeping an eye on what monument status means in the short run. And they shake their heads at what Clinton and Babbitt thought they were accomplishing.

"This remote location retains unspoiled, natural settings that form a backdrop for outstanding recreational and cultural tourism opportunities," stated Babbitt after his trip down the river. He noted the "remote location offers opportunities for solitude not commonly found today."

"Babbitt effectively built a giant neon sign saying the breaks are 'open for business' -- so to speak," says outdoor enthusiast Ron Poertner of Winifred. He's a retired military officer with family ties in central Montana.

He says Babbitt supported his arguments for monument designation by predicting as many as 2,000 people/day would float portions of the breaks during the height of the Lewis and Clark bicentennial set to begin in 2003.

"Monument designation is a death wish for the preservation of the breaks," Poertner explains. "Now there is potential for resource damage in the breaks."

Whitehorn says this is exactly the reason for monument status.

"We all believe the monument needs to stay intact," she says. "We're not thrilled about seeing millions of visitors, but we need to be prepared for them when they come." She says monument designation is the best way to prepare for the inevitable attention to the breaks.

Whitehorn explains that monument status gives the BLM "line-item" budgets for the breaks. And funding will come in time to for monument managers to plan ahead.

Poertner believes ranchers should be given more credit for preserving the breaks -- and not be penalized for living there. He says ranchers have the most to lose with monument designation.

"I just can't see what the upside is here. You can't tell me traditional uses won't be affected," Poertner says. "This country is in better shape than it's ever been because these ranchers have figured out how to live here. They certainly can't do it by abusing the land."

Promises, Promises...

Last winter the Bush administration, through Interior Secretary Gale Norton, promised to assess the impact of monument designation. Norton criticized Clinton and Babbitt for fostering conflict and hardship -- instead of environmental stewardship.

"They didn't work with local property owners, elected officials and other people whose lives were affected," Norton said in a March 2001 statement. "We're committed to building on the principle of respect for property rights."

Whitehorn argues, though, that there was an extensive public process that occurred prior to designation.

"The BLM held many public hearings and took hundreds of comments," she explains. "Babbitt gave our congressional delegation a chance to come up with their own plan to protect the breaks. They didn't do it."

Nevertheless, Norton looked for alternatives to undo what she called an "11th-hour action by the Clinton administration." She sent letters last summer asking Montana Gov. Judy Martz and other local officials for input into monument boundaries and an interim management plan. Martz appointed a task force charged with soliciting input on those two points.

But with the events of Sept. 11, national priorities changed. Attention to things like monument designations eroded. Some believe it's a convenient excuse to sidestep controversy and cop-out on the issue.

"I think the secretary reneged on her earlier commitment -- saying she really doesn't have the authority to make these changes," says Steve Pilcher, executive secretary of the Montana Stockgrowers Association. "I think it's

unfortunate Secretary Norton put Gov. Martz and a lot of other Montanans through all that agony -- and let me tell you, the arguments were very brutal."

Others think Martz could have been more insistent with Norton. There was consensus during one task force meeting that the governor failed to give her full support to task force recommendations.

"From the very beginning she had steadfastly opposed monument designation," adds Pilcher. "Personally, I'm surprised she's taking the secretary's change in direction as well as she is."

A Legislative Approach?

So, with executive branch attention to the breaks shut down -- monument opponents are looking into the legislative arena for help.

Even as early as July, legislation (H.R. 2114, the National Monument Fairness Act) was drafted recognizing there was virtually no time for opposing sides to negotiate a compromise over monument land use or boundaries. But, H.R. 2114 was also shelved after Sept. 11.

Now it appears the ranchers' best hope for relief is legislation that would exclude private property from the monument boundaries. With Gov. Martz's blessing, Rep. Denny Rehberg (R-MT) says he'll draft legislation removing private land from monument boundaries.

Whitehorn is not sure this legislation is necessary, though. She says access to private property and traditional grazing uses are already protected by Clinton's proclamation.

"I don't know what the purpose would be to take the private property out of the monument," she says, adding that no one is telling anyone what can or cannot be done with private property.

"We want to keep those guys on the land," Whitehorn explains. "The proclamation and the Interim Management Plan both state that grazing can continue."

Welcome To The Breaks

Some ranchers aren't so sure about Rehberg's legislation -- but for different reasons. They feel it only scratches the surface of the problems they're facing.

"There's a lot spelled out in the monument resolution and the Antiquities Act that really bothers us," says Knox. "It just leaves too much room for interpretation. These things will come back to haunt us."

Wording of particular concern is over water rights. Monument status assures, "a quantity of water... sufficient to fulfill the purposes for which this monument is established."

"That's a Trojan Horse for government water rights," says Poertner. "Who's going to decide how much water is needed from the river's tributaries 'for the purposes' of the monument?"

Consideration for species thought to be potentials for the Endangered Species list -- like sage grouse and prairie dogs -- also concerns ranchers. They fear perching and nesting habitat for many species of falcons, eagles, hawks and shore birds could become the next spotted owl issue.

The coulees and breaks contain archeological and historical sites, from teepee rings and remnants of historic trails to abandoned homesteads. Warning has already been given by the BLM to all "unauthorized" persons not to injure, destroy or remove any feature of the monument.

An Old Story

"Monument designation changes the way the government looks at all the animals, features and all uses in the breaks," says Karla Knox. "We just can't say where they will draw the line."

For example, predator control will be left in the hands of the monument manager. And a "transportation plan," including road closures or travel restrictions, will be implemented by the BLM to protect the "objects" identified in the monument proclamation.

And Poertner says the designation opens the door for more government land grabs.

"The proclamation states that lands within the proposed monument not owned by the government shall be reserved as a part of the monument upon acquisition of title by the U.S.," he says.

But, the BLM has no hidden agenda for the private lands within this boundary, says Dave Mari, Lewistown, MT, field manager for the BLM. However, he says if a willing landowner approaches the BLM about an acquisition, easement or an exchange, the BLM would manage the acquired lands just as other public land within the monument.

Poertner doesn't buy it. And he wonders aloud why, with all the local opposition to monument designation, so much land had to be set aside.

"I just can't see why they need so much land," he says. "There's just more to this then meets the eye."

Whitehorn says there's tremendous public support for the monument, and boundaries were carefully drawn.

"Several opinion polls showed support for the monument. All the major Montana newspapers and some of the smaller ones came out in support of the monument," she points out. "So, how can the designation be 'haunting' Montana?"

For Pilcher, it's the fear of the unwritten.

"It isn't the changes implemented today that the people fear as much the 'vehicle' monument designation provides for future changes," explains Pilcher. "The agencies and their supporters are smart enough not to make dramatic changes immediately, as the backlash would be overwhelming. It's an old story to say there will be no change."

But, the proclamation clearly states that the designation applies only to public land, emphasizes Mari.

Knox isn't being swayed by what he thinks are hollow promises.

"Everyone is telling us this is something we're going to have to live with," he concludes. "I don't know about that -- I guess we'll see. If it is, it's a tough pill to swallow."

The History Of "The Breaks"

On April 30, 1803, a single pen stroke by President Thomas Jefferson doubled the geographical area of the U.S.

Napoleon Bonaparte, preparing for another war with England, had announced he'd sell the port of New Orleans to the U.S. if Jefferson would also take the entire 820,000-square-mile Louisiana Territory for $15 million or about 3cents/acre.

While New Orleans was strategically important to Jefferson, he viewed westward expansion equally key to the future of the young country. He convinced Congress the commercial and agricultural possibilities of the region were crucial to the nation's growth.

First, the Louisiana Purchase had to be explored and charted. On July 5, 1803, the president's aide, Meriwether Lewis, left Washington, D.C., to begin assembling an expedition to survey the headwaters of the Missouri River and to search for a waterway connecting it with the Pacific Ocean.

Over the next four years, Lewis and his friend William Clark would lead the Corps of Discovery. They explored lands and rivers and experienced peoples previously enigmatic to 19th Century Americans. They spent three weeks -- May 24 through June 13, 1805 -- exploring what is now the Upper Missouri National Wild and Scenic River. Today, this portion is considered to be the premier component of the Lewis and Clark National Historic Trail.

Earlier depictions of the land and creatures in the West had often come from the imaginations of people who had never been there. Many reports told of Western terrain spotted with unicorns, woolly mastodons, seven-foot-tall beavers, Peruvian llamas and blue-eyed, Welsh-speaking Indians.

Lewis and Clark dispelled many of those myths and made numerous assessments of the region's potential.

Of the Missouri Breaks, or "badlands," Captain Clark wrote: "This country may with propriety, I think, be termed the Deserts of America, as I do not conceive any part can ever be settled, as it is deficient in water, timber, and too steep to be tilled." History has shown, of course, that Clark was only partly correct in his appraisal of the region's agrarian potential.

But, he knew that as a route of Western expansion, the Missouri River would have few equals. The fur trade era stimulated the first extensive use of the river as an avenue of transportation. Then, steamboats began braving the treacherous Missouri in 1859, arriving just in time to supply the gold camps in southwest Montana and northern Idaho. Supplies unloaded in Fort Benton, MT, were freighted as far west as Washington and north to Canada's Northwest Territories.

The railroad reached Fort Benton in 1887. The last commercial steamboat arrived there in 1890. By then, the buffalo had disappeared from the Plains -- replaced by livestock. Fort Benton changed from a river port to an agricultural supply center, and homesteaders began arriving in large numbers around 1910.

A task force appointed by Republican Gov. Judy Martz has recommended scaling back the size of the Upper Missouri River Breaks National Monument, established by then President Bill Clinton.

The panel recommended shrinking the 497,000-acre monument by more than 80% by removing 81,000 acres of private property and a significant chunk of public land. The move was praised by landowners but condemned by environmentalists.

"It basically just makes the monument (status) meaningless," said Mark Good, field organizer for the Montana Wilderness Association.

National monument status protects areas from new natural gas leases and mining but keeps existing rights. Off-road vehicle travel also is forbidden.

Clinton created the monument during his final year in office. Martz appointed the task force after Interior Secretary Gale Norton asked state officials to suggest boundary and other changes to national monuments.

Task force members on Tuesday recommended trimming the monument designation to 90,000 acres. Martz is expected to send her recommendation to Norton before Sept. 1.

APRIL 29, 1997, TUESDAY

PREPARED STATEMENT OF MICHAEL O. LEAVITT GOVERNOR, UTAH BEFORE THE HOUSE RESOURCES COMMITTEE SUBCOMMITTEE ON NATIONAL PARKS, FORESTS AND LANDS

SECTION: IN THE NEWS

LENGTH: 2357 words

Thank you for allowing me the opportunity to speak to you today about the recently designated Grand Staircase - Escalante National Monument in Southern Utah.

The protection of public lands in the State of Utah is a familiar issue. The federal government administers more than 65% of the land in the State, and we are continually pursuing new and better ways to work with the federal government in the planning and administration of these lands. We have worked hard to build relationships, forge partnerships, and lay the groundwork for interagency cooperation unmatched by other public lands states. For these reasons, the chain of events surrounding the establishment of the Grand Staircase - Escalante National Monument have caused me great concern, and created a greater distrust of governmental processes by many people in the State of Utah.

On September 18, 1996, President Clinton invoked a provision of the 1906 Antiquities Act to designate 1.7 million acres in southern Utah as the Grand Staircase - Escalante National Monument. The first reports of this that I, or any other elected official in the State of Utah, had received were from a story in the Washington Post only 9 days prior to Mr. Clinton's public proclamation.

I would like to share with you a day-by-day account, from my perspective, of the events leading up to President Clinton's announcement:

Monday, September 9, 1996: Upon reading of the new National Monument in the Washington Post, I placed a call to Secretary of the Interior Bruce Babbitt. I asked Secretary Babbitt about the article in the Post and was told that Interior was not involved and that I should call the White House.

When I called the White House, I spoke with Director of Intergovernmental Affairs, Marcia Hales. She had seen the story and told me that they weren't certain were it came from. She committed to get back to me relative to how serious the proposal was.

Wednesday, September 11, 1996: Two days later, Ms. Hales reported that a monument was being discussed but "no decision had been made." I asked, "what is the timing on this?" "That's what we are trying to decide," she replied. I asked Ms. Hales for an appointment with the President Clinton or his Chief of Staff, Leon Panetta. Later that week an appointment was confirmed with Mr. Panetta for the following Tuesday.

Friday, September 13, 1996: My office became aware through the news media that an important environmental announcement was planned by the President at the Grand Canyon the following week. Preparations were being made by environmental organizations to transport groups from Utah. When we inquired directly of the Administration about the time, place and subject of an event they were not willing to even confirm the event would occur. Local governments in Utah were becoming more and more concerned. On two other occasions during the week I had conversations with Mr. Babbitt or his office. They continued to indicate that they had no information, insisting that this matter was being handled by the White House. When we called the White House we were referred to the Interior Department.

Late Friday afternoon, Secretary Babbitt called an emergency meeting in his office for the next day, Saturday. The Congressional delegation was invited. I was not able to attend the meeting, but the fact that meetings were being called on a weekend added to the sense of inevitability. However, we were still being told that "no decision had been made."

Monday, September 16, 1996: The weekend was a

blur of phone calls, and meetings with local officials. Despite the fact that buses where being organized to take Utahan's to Arizona for the announcement, the Governors office could still not get confirmation of where or what the official announcement would be. I traveled to Washington for my meeting with Mr. Panetta.Tuesday, September 17, 1996: Tuesday afternoon, I met with Mr. Panetta. I was told that Mr. Panetta had the responsibility of making a recommendation to the President. Mr. Panetta said that he had set aside the afternoon to prepare that recommendation. Kathleen McGinty, Chair of the President's Council on Environmental Quality, Marcia Hale, Director of Intergovernmental Affairs and another member of the white house staff.

My presentation focused on the problems caused by this complete abandonment of public process. I explained that it was our desire to protect the spectacular lands of this region but that this was the wrong way to go about it. I detailed for them a proposal ironically called, Canyons of the Escalante: A National EcoRegion that resulted from an intergovernmental public planning process I initiated three years earlier to protect the area. This concept was developed by state, local and federal land managers working together for over a year. It would have provided flexibility and yet gave even more stringent protection for the most pristine areas. I also spent a considerable amount of time discussing our school trust lands. Mr. Panetta asked me to explain the status of those lands.

Prior to our discussion he was unaware of their existence or the importance they hold to the school children of our state.

Our meeting lasted just under an hour. Mr. Panetta told me that this was the first time he had been able to focus on this issue. He reiterated that he would make a recommendation to the President that afternoon. To Mr. Panetta's credit, he was very thoughtful in the questions he asked. He told me that he didn't like making decisions in a vacuum like this. At the conclusion of the presentation, Mr. Panetta said, "you make a very compelling case." To which I replied, "If this is compelling to you, then before the President sets aside part a piece of land equal to Rhode Island, Delaware and Washington, D.C. combined, he needs to hear the same information, directly from the Governor of the State." I was told Mr. Clinton was campaigning in Illinois and Michigan, but he would call me later in the evening.

Wednesday, September 18, 1996: At 1:58 a.m., my telephone rang, it was the President. The President told me that he was just then beginning to review this matter. I restated in short form the material I discussed with Mr. Panetta.

The call lasted for nearly 30 minutes. At 2:30 a.m. we were both very tired. I offered to write a memo that the President could read when he woke in the morning. He asked that I write the memo. I sat at the desk in my room and prepared a handwritten two plus page memo to the President. It was faxed to him at 4:00 a.m. that morning. The memo, told the President that if a monument was going to be created he should create a commission that included state and local government officials to recommend boundaries and to solve a number of management questions. I told him that it should work toward a policy that protects the land, preserves the assets and maintains the integrity of the public process. I knew the local government leaders in this area would welcome such a process. At 7:30 a.m. I spoke with Mr. Panetta. He had reviewed the memo that was written for the President and again indicated he felt my ideas had merit. He said he would be reviewing the matter again with the President. Later in the morning Mr. Panetta called to inform me that the monument would be announced. He detailed the conditions of the action, which gratefully, incorporated some of my suggestions on water, wildlife access and a planning process with local and state participation.

At 2 p.m. Eastern time, President Clinton stood on the north rim of the Grand Canyon to announce the creation of the Grand Staircase- Escalante National Monument, a 1.7 million acre expanse in Utah's Garfield and Kane counties. No member of Congress, local official or the Governor were ever consulted, nor was the public. As the Governor, I had not seen a map, read the proclamation or for that matter even been invited. This is not about courtesy, it is about process and public trust. A major land decision, the biggest in the last two decades, was being made. Obviously, this is not the way public land decisions should, nor were ever intended to be made.

In 1976 this nation made an important public policy decision. Congress passed landmark legislation in the Federal Land Policy and Management Act (FLPMA), requiring great deliberation and careful process in determining how public lands would be used. That act, and other related legislation, contains protections for states and local communities. It is the policy of my administration to assure that our state is not denied those protections. We will defend Utah's interest against abuses of our existing protections and we will seek additional protections where they are currently

inadequate.

The President's use of the Antiquities Act to create the monument was a clear example of inadequate protection. Our system of government was constructed to prevent one person from having that much power without checks or balances from another source. This law was originally intended to provide emergency power to protect Indian ruins and other matters of historic importance. Over the past ninety years the federal courts have allowed a gradual expansion of the powers. The President's recent proclamation was a classic demonstration of why the founders of this nation divided power. Power unchecked is power abused. Utah and other states need protection from further abuses of the 1906 Antiquities Act. My administration will join other states in support of appropriate amendments.

Land preservation decisions must consider the relationship between the land and the local economy. The State of Utah intends to intensify our efforts in assisting in the promotion of new economic opportunities for the region and will challenge the national government to be responsive to the needs that its actions in Southern Utah have created. Historically, whenever the federal government has determined that a local interest is subordinate to the national interest, then some form of federal assistance is provided. We should all focus on developing real economic opportunities for rural Utah counties in order to build a more diversified and sustainable economy.

There are many issues surrounding the creation of this monument apart from the designation process. One of the most controversial and most complicated are the school trust lands located within the boundaries of the monument. Approximately 176,000 acres of school trust lands were included within the monument.

The school trust lands are managed by the Utah School and Institutional Trust Lands Administration, an independent state agency. The Trust Lands Administration is governed directly by a separate Board of Trustees, and is required to optimize the value of the lands for both the short and long term.

The Chairman of the Board of Trustees will testify later today and will give more details. However, I want to emphasize that not only did the declaration of the monument possibly affect the use and value of the trust lands in the long term, but also that several sources of revenue from the lands, including an imminent multi-million dollar deal involving coal, have been eliminated as a result of the declaration.

The Board of Trustees, the Trust Lands Administration and myself are united in protecting the value of the trust lands within the monument and in protecting the purposes of the trust. We will work together to see that either the landscan be used for their purpose as the national economy permits or that other federal assets will be available as compensation for the trust lands.

I appreciate the President's remarks concerning the trust lands at the time he signed the declaration and appreciate his decision to resolve any reasonable differences in value in favor of the school children as part of any land exchange proposal. However, I must express some healthy skepticism about the efficiency of the federal exchange or compensation process and the ability to bring such processes to conclusion at all. The problem of school trust lands within federal reservations like the monument is both an old problem and a constantly recurring one. Currently, Trust Lands and the federal government are negotiating several different exchange packages, including the statutorily authorized process mentioned by the President in his remarks (P.L. 103-93). These exchange processes are complex, heavily laden with federal rule-driven procedures and very costly to the trust. The Trust Lands Administration estimates that an exchange process for the monument lands, similar to that in P.L. 103-93, could cost 5 to 10 million dollars; a cost which, in all fairness, should be covered by the federal government.

I would hope that we can learn from past experience and begin to take advantage of new ideas or approaches which are more expeditious, yet fair to both parties. The Trust Lands Administration intends to propose solutions for the trust lands within the monument in the near future. I will ask Congress to give these proposals serious consideration and to consider appropriating funds to the Trust Lands Administration to offset any costs resulting from the declaration of the monument.

The State of Utah is committed to being a full partner in the planning process for the Grand Staircase - Escalante National Monument. Promises were made by both President Clinton and Secretary Babbitt which ensured the State a prominent role in the plan development and implementation process. The State of Utah intends to take full advantage of those commitments and has, in fact, already appointed five members of the planning team who will represent the State and its issues and concerns. We have every intention of being active participants in the process and committing the necessary resources to see that the Grand Staircase - Escalante National Monument best meets the needs of the citizens of the State of Utah. We intend to use every mechanism available to ensure that the federal government keeps its commitments to this

end. We would appreciate your help in assuring that this happens.

GOVERNOR SAYS UTAH WON'T SUE OVER MONUMENT

By Lucinda Dillon, Staff Writer

Utah will not sue the federal government over President Clinton's designation of the Grand Staircase-Escalante National Monument, Gov. Mike Leavitt said Thursday at his monthly press conference.

Leavitt used the taped KUED event to reinforce his outlook for Utah's wilderness and to tell how he expects to pay for an enormous transportation project that will take place during the next several years.

State highway improvements scheduled in the next decade will cost more than $3.5 billion, and gasoline taxes must increase by 1 cent per gallon each year during the next 10 years to help pay the bill, Leavitt said.

The state has 20 years of road and highway improvements ahead, and people are going to disagree over how to pay the costs.

``Is this going to be without pain legislatively? No. Will we get it done? Yes,'' he said.The $3.5 billion price tag is much more than the roughly $2 billion figure Leavitt has used in recent months.

Gas-tax hikes will provide $500 million toward the project during the next 10 years. Utahns now pay a 19-cent tax on each gallon of gas they buy.

Although Leavitt said he endorses a long-term approach in which gas-tax increases are aligned with inflation, some lawmakers don't want to phase-in the gas tax over several years. There may be a move to implement it all at once when lawmakers convene in January, he said.

As he outlined sources of the $3.5 billion, Leavitt defended accusations by Democratic gubernatorial opponent Jim Bradley and other candidates who say he's done little to plan for or deal with the insufficient infrastructure along the Wasatch Front.

A billboard purchased by the Utah Democratic Party alongside I-15 about 3900 South tells southbound drivers their traffic jam is brought to them by 20 years of Republican leadership.

But Leavitt points out that lawmakers last year set aside nearly $100 million in general-fund cash - on top of normal highway funding. Similar amounts are built into the base of future budgets for the next 10 years.

``That money, about $1 billion over the course of 10 years, will be added to another $1 billion already dedicated to transportation needs over the next 10 years. Much of that money comes from the federal government.

The remainder of the money comes from the gasoline tax, $500 million in anticipated additional federal money, $300 million to $500 million culled from reduced administration and waste and roughly $500 million in bonds.

But Leavitt acknowledges that none of the $1 billion in resources is guaranteed. ``I'm probably being optimistic about the amount of new federal money,'' he said.

Federal funds will make up a substantially lower amount than previously believed. ``It's a new world,'' Leavitt said. The federal funds just aren't available.

Leavitt said his ``Growth Summit'' last December helped lay groundwork for deliberations about transportation projects. For example, all parties were able to agree on changes that allowed a nine-year transportation plan to be streamlined to 41/2 years, he said.

He hopes the same kind of cooperation can be applied to the wilderness issue.

The process by which President Clinton dedicated 1.7 million acres to the monument was inadequate and political, Leavitt told reporters. ``But it's time to turn our attention away from what happened in the past and toward what happens in the future.''

Instead, Leavitt wants Utah to help create a vision for the monument. ``This is not entirely negative,'' he told reporters.

Those who govern Utah's land - county officials, residents, environmentalists and state leaders - all must come together to decide which parts and how much of the state's land will stay wild.

Leavitt supports a mixed use for the monument: some protected wilderness, where visitors stations and roads aren't allowed; some traditional national monument areas and some land designated for multiple use.

During the news conference, he also hammered a plan by Interior Secretary Bruce Babbitt to reinventory Utah's lands. Officials say the reinventory is based on a new criteria for what constitutes wilderness, which doesn't conform to existing federal law. The criteria only applies to Utah lands.

It is ``illogical'' that Babbitt is using special criteria for Utah, he said. ``There is a disturbing pattern of executive branch using unique means of distributing power in Utah,'' he said.

LEAVITT HOPES GOOD WILL EMERGE FROM BAD MONUMENT DEAL

By Jerry Spangler, Staff Writer

In a twist on the adage, ``when life gives you lemons, make lemonade,'' Gov. Mike Leavitt is hoping something positive will come from the truckload of political lemons dumped on the state by President Bill Clinton's designation of the 1.7 million-acre GrandStaircase-Escalante National Monument.

``My desire now is to try and asses the impact of what has occurred and then find ways to make the very best possible outcome from this,'' Leavitt said Thursday during his monthly KUED news conference. ``We now need to take what's been dealt us and do the best we can to turn to the future.''

Leavitt confirmed that Clinton specifically promised him that state and local governments would have a meaningful role in the development of management plans for the new monument. If that participation is, in fact, meaningful then the state would even be willing to contribute resources to the management plan, which is expected to take three years to complete.

The governor downplayed the possibility of a lawsuit against the federal government over the national monument designation, saying the state should ``evaluate for awhile'' the potential impacts of the designation.

That does not preclude the possibility of a lawsuit, he said, adding he first wants to meet with legislative leaders and school trust lands officials about the prospects.

The governor's comments came eight days after Clinton used the Grand Canyon as a backdrop for the Grand Staircase-Escalante National Monument announcement. The move was seen by Western states leaders as election-year pandering to environmental interests and a political swipe at conservative lawmakers who have attempted to stymie Secretary of the Interior Bruce Babbitt's conservation agenda.

The move was also targeted at stopping the development of a coal mine in the Kaiparowits Plateau, a region considered to hold the nation's largest untapped coal reserves.

The national monument designation does not categorically exclude coal mining. But it does impose a more rigorous standard by which that development could occur. ``It is clear where the administration is headed,'' Leavitt said.

Leavitt flew to Washington, D.C., the day before the announcement to convince Clinton's staff that the state was also interested in protecting the region, but there were other ways to protect the Kai- parowits from unwanted development. The ``sad part,'' he said, is that ``everyone could have come out feeling a lot better'' about the monument designation.

But Leavitt said it was clear within the first 10 or 15 minutes that the decision to designate the monument had already been made without comment or discussions with Utah officials.

``I've made a lot of statements and I think strong statements about how wrong I think it was for the president to proceed the way he did. He got his photo-op, but we are left with decades of policy to untangle.''

The issue now is whether Clinton will fulfill his promise that school trust lands will be traded for other lands or resources. The monument designation effectively isolates approximately 200,000 acres of trust lands, which were given to the state at the time of statehood for the support of public schools. The state has another 200,000 acres of trust lands isolated inside other national parks, national forests and Indian reservations.

Leavitt acknowledged there was a lot of political symbolism in how Clinton designated the monument, including the fact the president made the announcement in Arizona, the fact that Utah officials were not invited and the fact Clinton consulted with Colorado Gov. Roy Romer but not with Leavitt. It is obvious, he added, that all of Utah's elected officials have little influence with the White House.

Leavitt used the press conference to reiterate his endorsement of Republican attorney general candidate Scott Burns, who is challenging Democratic incumbent Jan Graham. Burns has made it an issue that if he is elected he would sue the federal government over the national monument designation.

On the issue of transportation, Leavitt said Utah motorists should see a slight gasoline tax increase to help fund the renovation of I-15. That increase, which Leavitt prefers to refer to as ``indexing for inflation,'' would amount to less than a penny per gallon to begin with.

That tax increase has been part of the governor's transportation finance package all along, he said.

Utah Gov. Considers Legal Challenge To National Monument

307 words
27 September 1996
07:31
Capital Markets Report
CM
English
(Copyright (c) 1996, Dow Jones & Company, Inc.)

SALT LAKE CITY (Dow Jones)--Utah Gov. Mike Leavitt isn't ruling out a legal challenge to President Clinton's creation of a new national monument in the southern part of the state.

"We now need to take what's been dealt us and do the best we can to turn to the future," Leavitt said on Thursday at his monthly KUED-TV news conference. "That doesn't preclude us from challenging parts of this action based on what I think to be the misuse of executive power."

Leavitt was referring to Clinton's use of the 90-year-old Antiquities Act to declare the monument without congressional approval. The president designated the 1.7-million-acre Grand Staircase-Escalante National Monument last week during a campaign stop at the Grand Canyon.

The election-year move effectively blocks development of part of America's largest known coal reserve by Dutch-based Andalex Resources, Inc. And it forces the state to trade out 200,000 acres of trust lands that could have earned coal royalties for public schools.

In the next few weeks, Leavitt plans to talk to legislative leaders, school trust lands officials, southern Utah communities and the U.S. Interior Department before making a decision on any legal action.

"My desire now is to try and assess the impact of what has occurred and then to find ways to make the very best possible outcome from this."

Right now, Leavitt said, it is impossible to know what effect the designation will have, including whether Andalex will be allowed to mine the area or what kind of return Utah schools will get for their lands.

MAKING OF A MONUMENT; The Present; What Led to Clinton's Grand Staircase Decision?; Monument Decision Tied To Insiders

JIM WOOLF THE SALT LAKE TRIBUNE

(Copyright 1996)

Utah Gov. Mike Leavitt claims national environmental groups were behind President Clinton's decision to create the 1.7 million-acre Grand Staircase-Escalante National Monument.

``This was packaged outside of government and taken to the White House. I know that to be true,'' says the governor. ``It was confirmed to me by several people as we went through this process at the White House.''

But Western environmental leaders deny any involvement in the monument deliberations, and there is strong evidence the idea came directly from the White House's Council on Environmental Quality (CEQ) -- Clinton's inner circle of environmental advisers.

Tom Jensen, CEQ's associate director for natural resources, is intimately familiar with the Escalante area and the battle over the Kaiparowits Plateau's coal. Before working for Clinton, Jensen was a well-known environmental attorney who worked as a senior Senate staffer on natural-resources issues and served as executive director of the Flagstaff, Ariz.-based Grand Canyon Trust. The trust's area of interest is the Colorado Plateau.

And CEQ Director Kathleen McGinty visited Utah about two years ago to hike the Kaiparowits and see firsthand some of the areas that wilderness advocates want included in their 5.7 million-acre proposal. She has been involved in behind-the-scenes discussions on the wilderness issue.

Jensen and McGinty ``have asked us at various points about a national monument,'' said Mike Matz, executive director of the Southern Utah Wilderness Alliance (SUWA).

But he said SUWA has been focused on the wilderness debate and did not know the administration was giving serious consideration to the monument idea until The Washington Post ran a story Sept. 7 saying Clinton was preparing to create it.

SUWA never was consulted on the size or management of the monument, Matz said.

``They have done a stupendous job,'' said Matz of McGinty's and Jensen's efforts to persuade Clinton to create the monument.

All calls to McGinty and Jensen were referred to a CEQ spokesman who said the monument was a Clinton administration initiative and it would be wrong to focus on one or two individuals.

Another probable advocate for the monument within the administration was Harold Ickes, Clinton's deputy chief of staff. Ickes' father, also named Harold, was President Franklin D. Roosevelt's interior secretary in 1936 when he advocated the creation of a 4.5 million-acre Escalante National Monument.

Much of the land Ickes wanted to protect in the 1930s already has been incorporated into Canyonlands and Capitol Reef national parks and Glen Canyon National Recreation Area. But the core of Ickes' vision -- the Escalante River canyon -- had no special protection until this week.

``I'm sorry he never got a chance to see his dream become a reality, but I'm very glad that his son and namesake is my deputy chief of staff and is here today,'' Clinton said proudly at a Grand Canyon ceremony Wednesday before creating the monument.

An administration source, who asked not to be identified, said ``it was at least a couple of months ago'' when Clinton first asked for a ``legal and scientific analysis of a monument option.''

It was just an information request at the time, and staffers did not know whether the president would follow through on the idea.

The Interior Department prepared the requested analysis, but nothing happened while the campaign staff was preoccupied with such things as the Democratic National Convention and Clinton's train trip through the Midwest. Then, suddenly, the president showed a renewed interest in the idea, said the source.

Tom Robinson, director of conservation policy for the Grand Canyon Trust, said he heard that campaign officials included the monument idea in opinion polls and found it was ``one of the most popular things the administration could do.''

Robinson stressed that his group was not consulted about the monument proposal and had heard only rumors about it before the story in The Post. ``It was definitely not our initiative,'' he said.

Sen. Bob Bennett, R-Utah, offered this analysis of the president's decision-making process during a recent news conference:

``I've had folks within the administration tell me that the primary drive behind doing this came from Dick Morris, who looked at his polls and said you need to shore up your environmental credentials. What better way to do it than to create a splashy new national monument or national park? And then they told the Interior Department to come up with something we can create. . . . I think the decision was made months ago.''

Morris is the former Clinton campaign adviser who resigned when a tabloid published reports of his long-term relationship with a prostitute.

But the administration source put a different spin on Clinton's decision.

He said the president was tired of simply blocking the ``anti-environmental'' initiatives coming out of the Republican-dominated Congress and wanted to advance his own policy objectives. Creation of the monument allowed him to make progress toward a long-term goal of protecting more public land in southern Utah.

Greg Gibson/The Associated Press Utah Rep. Jim Hansen contends 14 trees were cut down for this photo, but Grand Canyon National Park employees deny it. See story on Page C-1. Al Hartmann/The Salt Lake Tribune Western writers fear a backlash from the creation of the Grand Staircase-Escalante National Monument, and Gov. Mike Leavitt urged miners to "turn to the future" as mining opponents celebrated in southern Utah. See stories on C-1 and C-2. Utah officials up in arms about the new monument

547 words
21 September 1996
The Arizona Daily Star
TUCS
8A
English
(Copyright 1996)

Associated Press

SALT LAKE CITY (AP) - From senators and congressmen to a state attorney general candidate, foes of a 1.7 million-acre southern Utah national monument are gathering their forces.

Meantime, Conoco Inc. issued a statement late yesterday calling on the White House to work with the company to "develop a plant where prudent oil and gas development of the area can coexist with . . . environmental protection and preservation ideals."

In a statement issued from Midland, Texas, by Bob Irelan, regional manager for exploration and development, Conoco estimated up to 5 billion or more barrels of untapped oil could be in the monument area, already known for its huge coal reserves.

Conoco, in partnership with Rangeland Petroleum, is involved in exploratory leasing and drilling in and near the designated monument site, Irelan said.

At a news conference earlier yesterday, Republican Utah Attorney General candidate Scott Burns said if elected, he would go to court to fight creation of the new Grand Staircase-Escalante National Monument.

President Clinton invoked his authority under the federal Antiquities Act in making the monument declaration Wednesday, but Burns believes there's room in the statute to challenge the decision.

"It is my belief that the Antiquities Act can be interpreted to require the smallest amount of land compatible with other interests, and 1.7 million acres is the biggest land grab in the lower 48 states," he said.

Sens. Orrin Hatch and Bob Bennett, R-Utah, supported Burns' call for a lawsuit. The two lawmakers also co-chair Burns' campaign to unseat Democratic Utah Attorney General Jan Graham.

Hatch has said he feels Clinton may have violated environmental laws passed in the 1970s by not obtaining more public comment and studies before acting.

Hatch and Bennett said numerous options for legislation are also under review in the Senate to ensure, as Hatch said, "that the Antiquities Act is not abused again."

Thursday, Rep. Jim Hansen, R-Utah, introduced a bill seeking to ensure that any future monuments would be no larger than 5,000 acres. Congress is not expected to act on it before adjournment, but Hansen said he would reintroduce it next year.

Locally, political candidates were nudging Graham toward a lawsuit.

In a letter to Graham, Rep. Grant Protzman, D-North Ogden, said Clinton's designation of the monument was a "terrible manifestation of unrighteous dominion on the part of the federal government."

He wants Graham to see if the state or school officials can sue to recover lost trust lands revenue.

In a statement Thursday, Gov. Michael O. Leavitt said the president had the legal power to designate the monument but now is obligated to have meaningful talks with Utahns as he carries out the plan.

Protzman said it may be a long shot to sue, "but I think it has better potential than letting the federal government fix this out of the goodness of their hearts."

Only once, in 1944, has Congress tried to rescind a presidential proclamation, after Franklin Roosevelt declared Wyoming's Grand Teton Mountains a national monument.

Roosevelt vetoed the congressional action. In 1950, Congress authorized Grand Teton as a national park but forbade any future president to name any more national monuments in Wyoming.

Taking Swipes at Clinton, Utahns Vow to Fight Back

LAURIE SULLIVAN MADDOX THE SALT LAKE TRIBUNE
1,246 words
19 September 1996
The Salt Lake Tribune
SLTR
A5
English
(Copyright 1996)

President Clinton's establishment of the Grand Staircase-Escalante National Monument in southern Utah was met with blistering denunciations from the state's governor and congressional representatives.

``In all my 20 years in the U.S. Senate, I have never seen a clearer example of the arrogance of federal power,'' GOP Sen. Orrin Hatch fumed at a delegation news conference held just after the president's announcement Wednesday.

``Indeed, this is the mother of all land grabs.''

Democratic Rep. Bill Orton, walking a tightrope between comradeship with his Democratic president and the concerns of constituents, called the action a ``monumental blunder -- pun intended.''

Government figures from other Western states joined the Utahns in a show of support. Sen. Conrad Burns, R-Mont., described Clinton's designation as the act of a ``tyrant,'' while Sen. Larry Craig, R-Idaho, labeled it a ``phenomenal misuse of power.''

The solidarity was not accidental, Hatch said, since other states with public-land issues to be settled now may find themselves affected by a unilateral decision that bypasses the public debate required by federal laws such as the National Environmental Policy Act.

``What should be made clear to everyone in a state with public land is that if they can do this to Utah, they can do it to you,'' Hatch warned.

As the rebukes flew, the Utah politicians also were looking for ways to undo the executive order creating the largest monument in the lower 48 states.

There was uncertainty about whether Congress has the authority to rescind Clinton's directive, which was made under the 1906 Antiquities Act.

Some congressional offices said lawmakers could not revoke the executive order, although a future president could. But Hatch said since it was Congress that established the law giving the president the power, it also could take away that power. The option will be studied further, Hatch said.

Otherwise, the delegation was discussing three more likely possibilities: a lawsuit filed by Kane and Garfield counties challenging the way the decision was made; congressional action to cut off Interior Department funding for the monument; and legislation that would narrow the sweep of the Antiquities Act.

Orton said he anticipated all three responses -- sooner than later.

Indeed, Craig intended to file legislation today that would ``prevent President Clinton and {Interior Secretary} Bruce Babbitt from doing to Idaho and other states what it did to Utah. No more midnight land grabs.''

The bill would require that the public and Congress be involved and give approval before such an administrative act could take effect, Craig said.

Rep. Jim Hansen, R-Utah -- who would handle companion legislation in the House as head of the House Subcommittee on National Parks, Forests and Lands -- is looking at ways to circumvent the president using the appropriations process.

In Democratic circles, Clinton's move was seen as a shrewd way to bolster his environmental standing and give the nation a warm fuzzy while taking heat from a small state that probably will not vote for him anyway.

From other vantage points, it was characterized as a blatant political ploy carried out on a beautiful stage: the sweeping panorama of the Grand Canyon with orchestra music playing in the background.

Some also saw it as ruthless.

Talk among the Utah delegation was that administration officials had acknowledged the move may cost Democrats their only House seat in the state -- Orton's -- but that they considered him expendable.

Orton acknowledged that the administration did him no favors by keeping him in the dark -- along with the rest of the state -- until just a week ago.

But he said the president phoned him at 1:45 a.m. Wednesday to consult on the matter and that seven important concerns were brainstormed by the two.

As outlined in Clinton's speech, those included:

-- The president's commitment that the Bureau of Land Management, rather than the National Park Service, will manage the monument.

-- Hunting, fishing, hiking, camping and grazing will continue.

-- The federal government will not pre-empt or reserve water rights.

-- Monument boundaries will exclude all developed areas, state-park lands and timber and forest lands.

-- School-trust lands contained within the boundaries would be swapped for holdings of comparable value, or the government will compensate the difference.

-- Communities in the area would not be frozen out of the decision-making. A three-year process of public hearings was announced to develop a management plan.

-- Coal leases for the Kaiparowits would not be terminated and the environmental-impact statement for the Andalex Resources mine would continue -- although Clinton expressed his personal desire that Andalex trade the leases.

Given those concessions, Orton said, the president is left with a ``hollow monument'' motivated purely by political considerations.

Asked if he trusted the president to honor the commitments, Orton replied, ``What choice do I have?

``He's the president. He has the statutory authority to do this. I can either try to work with him and make my constituents' interests known and ensure that my constituents are involved, or I can just get mad and pick up my marbles and go home and yell at him. I don't think that resolves the problem.''

For Orton and the rest of the delegation, the hardest aspects to swallow were the school-trust-lands issue and the shadowy move to terminate the coal mine.

GOP Sen. Bob Bennett griped that the designation will lock up the nation's largest reserve of clean, environmentally beneficial coal -- and potential revenues it would bring Utah schoolchildren through the 200,000 acres of trust lands located within the monument.

``The president is asking us to trust him that Utah's schoolchildren will be made whole. Is he prepared to approve $1 billion in federal funding? . . . Of course he isn't.''

Republican Rep. Enid Greene charged that the president ``doesn't know or doesn't care that there aren't sufficient coal leases in other areas'' to swap for the Andalex holdings.

But what Utahns object to most, she said, is the ``autocratic process'' by which Clinton sidestepped the Federal Land Policy and Management Act, the National Environmental Policy Act, the state's elected representatives and its people.

GOP Gov. Mike Leavitt, the only state leader from southern Utah, said he grew up one mountain over from the new monument and loves the land.

But as an outspoken advocate of a more equitable federal-state balance of power, the governor was incensed about the executive branch's imposition of its will on the state with no public debate.

``I would just say to the president of the United States, `You chose to ignore a high public trust with the almost unilateral power that you were granted through the course of this act, power that was not intended by the founders of this nation.'

``From this point forward he has a higher standard of duty to deal in fairness with those of us in the state who have been disadvantaged by his lack of concern. The state will step forward, we'll follow the process at this point, but it is up to him and to his administration to make this right.''

Al Hartmann/The Salt Lake Tribune Hikers make their way down a canyon south of Kodachrome Basin State Park. The spot is at the western end of the newly designated Grand Staircase-Escalante National Monument.

CLINTON MAKES IT OFFICIAL: MONUMENT NOW A REALITY

By Lee Davidson and Jerry Spangler, Staff Writers

GRAND CANYON -- Despite repeated pleas - including some in the middle of the night - from Utah officials to defer it, President Clinton announced plans Wednesday for a vast new Grand Staircase-Escalante National Monument in southern Utah's Kane County.

The only surprise in the announcement was the change in name. As proposed in the past several days, the monument would have been named Canyons of the Escalante.

Clinton's action was purely political, Utah leaders say.

Clinton, who has not set foot in the state since he finished third in Utah in the 1992 presidential race, announced the creation of the new monument from south of Utah's border - at the Grand Canyon. Aides said that site was chosen because it has facilities needed to hold a press con-ference.

``I think it's pretty clear this is a straight political move on the part of the Clinton administration. It will be a good photo op in the middle of a presidential campaign, and they'll worry about the real impact later,'' said Utah GOP Sen. Bob Bennett said.

``The fact that it happens on the eve of an election cannot be ignored,'' said Utah Gov. Mike Leavitt.

Even Democratic Rep. Bill Orton, in whose district the monument lies, said, ``This is more a political issue than a policy issue.''

Actor Robert Redford, author Terry Tempest Williams and former Utah first lady Norma Matheson were the only Utahns on stage with President Clinton. Redford, who has fought for years to protect Utah lands and specifically the Kaiparowits Plateau, made a speech. Williams gave a reading.

Democrats Jim Bradley and Ross Anderson, both currently candidates for office in Utah, were in the audience at the Grand Canyon gathering, which drew thousands of people, many sporting ``5.7 Wild'' buttons.

The buttons refer to an environmentalist-backed proposal that 5.7 million acres of southern Utah be designated wilderness.

Redford told the Deseret News that the region belongs to all Americans, not ``in the pockets of politicians.'' He called the 1.8 million-acre designation better than no monument at all. The designation ``puts it right where it belongs,'' Redford said.

Is there a sense of satisfaction now that the area has protection?

``It will be when I hear the final results,'' Redford said before the event began.

Orton and Bennett conceded the administration promised several steps to address local concerns. That came after Orton and Leavitt had personal phone calls with Clinton in the middle of the night Wednesday.

But, Bennett said, this is essentially a ``trust us'' kind of offer from the administration, ``and I would continue to be critical until we got everything nailed down.''

And despite the concessions, Orton said, ``Let me make clear that I still oppose it. I think it is a monument to political blunders and is unwise, unneeded and premature.''

Among the steps Clinton promised are:

- An ongoing environmental impact statement on a proposal by Andalex Resources to mine coal on the Kaiparowits Plateau will continue, and if a way is found to environmentally mine and transport coal, it will be allowed.

- To protect Utah schools from loss of mineral revenues on 200,000 acres of school trust lands with coal that may be surrounded by the monument, he also promised to either trade them for other federal coal leases or ask Congress to find another direct funding mechanism in exchange value of the lands.

Bennett said those two proposals taken together show him ``they don't intend to let Andalex proceed.'' He adds that he told White House chief of staff Leon Panetta that ``no other comparable coal reserves exist anywhere in the country, and he replied, `I'm beginning to find that out.' ''

- The administration will establish a three-year process of public hearings to identify and define management processes for the national monument.

Bennett complained, ``In other words, they've turned the process completely backward. . . . They declare first and look for facts afterward.''

- The U.S. Bureau of Land Management will continue to manage the area, not the National Park Service.

Some local residents view the park service as heavy-handed. Orton said, ``It makes sense to use the people who already know the areas.'' It would be the first national monument overseen by the BLM.

- Hunting, fishing and grazing will continue under existing laws.

- Water rights will remain under state law, and the monument ``should not affect any water-rights issues at all,'' Orton said.

- The boundaries will specifically exclude any developed areas such as towns in the area. Orton said it will also exclude all forested lands and state parks.

However, Orton said if it is to proceed, the steps taken by the administration mean ``we've gotten about as good as we could get.''

Not all Utahns were unhappy with the president's decision. Democratic candidates Jim Bradley, who's running for governor, and Ross Anderson, a candidate in the 2nd Congressional District, were expected to join Clinton in the Grand Canyon in support the new national monument.

And envirnomental groups that have long sought federal protection for the region, including the Southern Utah Wilderness Alliance, also praised the proposal. Even actor and Utah resident Robert Redford was expected to be by the president's side at the announcement.

Despite everything, Orton said when he looked at the proposal, it essentially amounted to the national conservation area idea he had been promoting - except that his would have had a public process to decide boundaries.

Leavitt also had pushed Clinton and Panetta in meetings and phone calls to consider his idea of managing ecosystems regardless of political boundaries and to have more local input on management plans, which was one of the concessions won.

Still, Utah officials made it clear they were unhappy with the process leading to the announcement, including making it in Arizona and not Utah.

Utah members also didn't like a quote reported in the press from White House press secretary Mike McCurry, who said that when it came to opponents of the monument, ``We've gone to great lengths to try to take their views into consideration.''

Utah officials begged to differ, noting they had not been given specifics on any plans until the last second, had little input and had been misled as late as last week by the White House, which then said repeatedly it had no imminent plans for the monument.

Orton said the White House told him that Utahns had been consulted so late because ``environmental counselors urged the presi-dent to take this step as part of the campaign," but that had not been communicated to the administration's land managers - and caused delays in speaking to Utahns.

``It's extremely frustrating, but that's politics," Orton said.

Rep. Jim Hansen, R-Utah, complained the administration has insisted that congressional Republicans follow lengthy study and hearing processes on public-lands issues they pursue - for example, delaying for more public input a relatively small 1,320-acre land trade for Snowbasin ski resort ``even though we've been talking about it for 10 years."

But Hansen complained the administration had no public input and little consultation from Utah officials on a monument that may include a whopping 2 million acres - or almost 4 percent of all land in Utah.

And Hansen added, ``No one's seen a map. I doubt there is a map" of the proposal.

Orton also said White House officials were surprised at his figures on how economically devastating the monument could be to southern Utah and said they were surprised to learn its coal reserves are "the largest untapped energy resource left in the continental United States."

Sounds good. 202-226-8272 when you get out of your meeting.

I reached out to a few other folks as well on language.

Or my boss and I literally just drove through a gunfight to be here for the DOI signing.

> > The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs)

Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases as restrictive as a critical habitat designation would be under an ESA listing. These amendments were not warranted and sought to prevent responsible mineral production and other activities across 11 Western states. The Obama Administration also sought to withdraw 10 million acres of the bird's habitat from future mining activity. Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.

Please contact Jeff Small at Jeff.Small@mail.house.gov to sign.

Draft letter and longer dear colleague are attached.

Here is the actual language that was included in last fiscal year's engrossed Interior Approps bill as a result of Mr. Amodei's amendment. We have been working with Amodei and Chairman Bishop's staff on this request this year. We have this language from last fiscal year in the draft letter currently. However, Jason in Amodei's office correctly pointed out that we needed to update this language since the ROD's were issued as well as the RMPs and LRMPs after last year's language.

(a) None of the funds made available by this or any other Act may be used —

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533), or to issue a regulation with respect thereto that applies to any State with a State management plan;

(2) to makeor extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.), in a manner inconsistent with a State management plan; or

(3) to implement, amend, or otherwise modify any Federal resource management plan applicable to Federal land in a State with a State management plan, in a manner inconsistent with such State management plan.

(b) For the purposes of this section—

(1) the term "Federal resource management plan" means—

(A) a land use plan prepared by the Bureau of Land Management for public lands pursuant to section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712); or

(B) a land and resource management plan prepared by the Forest

Service for National Forest System lands pursuant to section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604);

(2) the term "greater sage-grouse" means the species Centrocercus urophasianus or the Columbia Basin distinct population segment of greater sage-grouse; and

(3) the term "State management plan" means a State-wide plan for the protection and recovery of greater sage-grouse that has been approved by the Governor of such State.

We are under as tight timeframe as this letter needs to be submitted to the Approps Committee tomorrow.

Can you all possibly help update the actual language request that we are trying to get into the base bill to reflect the ROD's that were issued as well as the RMPs and LRMPs after last year's language? Also open to doing something about the mineral withdraw.

My direct is 202-226-8272 if you have questions.

Let me know if you would.

Sincerely,

Jeff Small

Talking Points for Today's Signing. This is meant to craft your individual office press releases, please do not share. Draft Press Release to follow shortly. See you all soon.

Note: We will not have order numbers until AFTER the orders are signed and processed by exec sec.

SO #TBD: Repealing the 2016 Coal Moratorium - Ending the PEIS

Rescind SO 3338 signed by Sally Jewell and direct BLM to process lease applications

Federal coal leasing is important to the U.S. economy and roughly 40% of U.S. coal is produced on federal lands.

The Department determined the public interest not served by halting leases for several years and that the PEIS is not needed to improve the program.

Note: In 2013, both the OIG and the GAO audited BLM's coal leasing program Between The OIG and GAO there were 21 recommendations made to improve transparency in the leasing program to ensure that the American taxpayer was receiving a fair return from the coal program. BLM has addressed all 21 recommendations and works closely with the Office of Valuation Services to ensure that bonus bids are calculated appropriately. In addition, the Federal Royalty Policy Committee has been reestablished.

Mining companies are held accountable and expected to comply with strict environmental standards and present reclamation plans. Every year the "best of" reclaimed mine lands are highlighted by the Office of Surface

Mining and Reclamation and Enforcement.

Charter Signed: Establish Royalty Policy Committee

Secretary Zinke is committed to ensuring state, local and tribal governments have a say in energy development within their borders and that taxpayers are getting a fair return on investment. To that end, he is establishing a new Royalty Policy Committee to include renewable energy in addition to mineral resources.

The primary goal is to ensure public continues to receive the full value of all energy produced on federal lands. The Secretary will seek their input on how we determine fair market value, collect revenues and how future policies could impact revenue collection.

Membership

- The charter would establish a 28 member committee to provide the Secretary with advice
- No member may have financial interest/business with us
- Members will be both federal and non-federal partners. They will hail from energy producing states, tribes, the energy industry, academia/interest groups
- Each member will serve a two year term

Signed SO #TBD: American Energy Independence

Following the bold executive order signed by President Trump yesterday, Secretarial Order XXXX, "American Energy Indepenedence," takes numerous steps to unleash the power of American energy on public lands.

- Revokes Secretarial Order 3330 regarding Compensatory Mitigation and launches a review of the program
- Launches a review of all climate change policies within the department
- Launches a review of the National Parks Service and Fish and Wildlife Service oil and gas regulations
- Launches a review of Bureau of Land Management's venting & flaring (methane) rule
- Confirms that Bureau of Land Management is withdrawing the hydraulic fracking rule

Subject:	Timely Sage Grouse Approps Langauge Request
Date:	Wednesday, March 29, 2017 2:41:43 PM
Attachments:	image001.png image002.png image003.png Revised Sage Grouse Dear Colleague and Letter AEMA edits.docx

---

After much discussion, Laura Skaer and I settled on this language:

Sec.___. None of the funds made available by this or any other Act may be used—

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); or

(2) to make or extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.).

Let me know if you all have any concerns or other thoughts but think this gets us something in the bill and doesn't restrict the Secretary.

Thanks again Laura! After thinking a little bit more about it, I think we need probably need to cut point #2 as he may want to issue a rule we like.

I think we are probably safe just going with this. Thoughts?

Sec.___. None of the funds made available by this or any other Act may be used—
(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); or
~~*(2) to issue a rule for the greater sage-grouse (Centrocercus urophasianus) or the Columbia Basin distinct population segment of greater sage-grouse; or*~~

(3) to make or extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.).

Subject: RE: Timely Sage Grouse Approps Langauge Request

Jeff,

I'm assuming this is for FY 2018. Given the new administration and changes at DOI coupled with what Sec. Zinke has told Gov. Otter and the Public Lands Council, we believe the language should be narrowed to prevent a listing and the withdrawal. Sec. Zinke needs flexibility to address the sage grouse LUPAs. We believe this should be viewed as a placeholder as we believe the political landscape with respect to sage grouse is going to evolve in a good way over the next 30-45 days. We also believe it needs to be "slow walked" so that it can be tweaked/modified as necessary pending the outcome of what the Sec. does with the LUPAs and what happens with the litigation.

Our suggestions are attached. We also think consideration should be given to the language in the FY2016 Consolidated Approps. Act:

SAGE -GROUSE

SEC. 117. None of the funds made available by this or any other Act may be used by the Secretary of the Interior to write or issue pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533)—
(1) a proposed rule for greater sage-grouse (Centrocercus urophasianus);
(2) a proposed rule for the Columbia basin distinct population segment of greater sage-grouse.

I think the potential risk that needs to be addressed is what happens with respect to the listing decision if the LUPAs are rescinded/remanded. The above language protects mining, oil & gas, grazing etc., and the Secretary until new LUPAs are completed.

I'll call you in a few to explain and discuss a couple of issues.

Thank you for reaching out.

Subject: Timely Sage Grouse Approps Langauge Request

Hi Laura,

Hope you are doing well.

No one was leading a Sage Grouse Appropriations s request this year. Chairman Gosar thought we really need to do one and since no one else would, he decided to take the lead.

Here is our current short summary:

FY18 Approps: Western Caucus Chairman Gosar seeks signers for language request to reverse overly restrictive Resource Management Plan Amendments (RMPs) and Land and Resource Management Plan (LRMPs) amendments under the guise of protecting Sage Grouse. DEADLINE NOON WEDNESDAY, MARCH 29.
Current Signers: Rob Bishop, Gosar, Pearce, Tipton, Yoho
The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs) Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases as restrictive as a critical habitat designation would be under an ESA listing. These amendments were not warranted and sought to prevent responsible mineral production and other activities across 11 Western states. The Obama Administration also sought to withdraw 10 million acres of the bird's habitat from future mining activity. Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.
Please contact Jeff Small at Jeff.Small@mail.house.gov to sign.

Draft letter and longer dear colleague are attached.

Here is the actual language that was included in last fiscal year's engrossed Interior Approps bill as a result of Mr. Amodei's amendment. We have been working with Amodei and Chairman Bishop's staff on this request this year. We have this language from last fiscal year in the draft letter currently. However, Jason in Amodei's office correctly pointed out that we needed to update this language since the ROD's were issued as well as the RMPs and LRMPs after last year's language.

(a) None of the funds made available by this or any other Act may be used—

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533), or to issue a regulation with respect thereto that applies to any State with a State management plan;

(2) to makeor extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.), in a manner inconsistent with a State management plan; or

(3) to implement, amend, or otherwise modify any Federal resource management plan applicable to Federal land in a State with a State management plan, in a manner inconsistent with such State management plan.
(b) For the purposes of this section—

(1) the term "Federal resource management plan" means—

(A) a land use plan prepared by the Bureau of Land Management for public lands pursuant to section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712); or

(B) a land and resource management plan prepared by the Forest Service for National Forest System lands pursuant to section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604);

(2) the term "greater sage-grouse" means the species Centrocercus urophasianus or the Columbia Basin distinct population segment of greater sage-grouse; and

(3) the term "State management plan" means a State-wide plan for the protection and recovery of greater sage-grouse that has been approved by the Governor of such State.

We are under as tight timeframe as this letter needs to be submitted to the Approps Committee tomorrow.

Can you all possibly help update the actual language request that we are trying to get into the base bill to reflect the ROD's that were issued as well as the RMPs and LRMPs after last year's language.

My direct is 202-226-8272 if you have questions.

Let me know if you would.

Sincerely,

Jeff Small

Support a viable State-Based Approach for Sage Grouse Recover Efforts

THIS IS A LANGUAGE RE UEST
Members are re uired to submit the re uest online.
Deadline to sign on is NOON on Wednesday, March 29.

Dear Colleague:

The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs) Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases more restrictive than a critical habitat designation would be under an ESA listing. These misguided amendments were not warranted and sought to prevent responsible mineral production, grazing and other activities across 11 Western states.

The Obama Administration also sought to withdraw 10 million acres of the bird s habitat from future mining activity. The Obama Administration s scheme to use the Sage Grouse as an excuse to shut down virtually all development on large swaths of public lands in the West, particularly oil, gas, and mineral development, has resulted in devastating impacts for local economies. These unlawful amendments are already having a negative impact for our nation s energy and natural resource independence. Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.

This language request is similar to Section 114 of the engrossed version of H.R. 5538 that passed the House last Congress. We must retain this important provision.

The text of the letter is below. Please contact Jeff Small at jeff.small mail.house.gov if your boss would like to lead or sign this letter. Instructions will be sent along with the final signed letter for submitting this request.

Sincerely,

Paul A. Gosar, D.D.S
Member of Congress

March XX, 2017

The Honorable Ken Calvert
Chairman
Committee on Appropriations
Subcommittee on Interior, Environment, and Related Agencies
U.S. House of Representatives
2007 Rayburn HOB
Washington, DC 20515

The Honorable Betty McCollum
Ranking Member
Committee on Appropriations
Subcommittee on Interior, Environment, and Related Agencies
U.S. House of Representatives
1016 Longworth HOB
Washington, DC 20515

Dear Chairman Calvert and Ranking Member McCollum:

As you begin crafting the Fiscal Year 2018 Interior, Environment, and Related Agencies Appropriations bill, we encourage the subcommittee to reject the Obama Administration's unilateral actions on the Greater Sage Grouse.

The Department of Interior under the Obama Administration found in 2015 that a listing of the Sage Grouse under the Endangered Species Act (ESA) was not warranted. However, the agency unilaterally chose to implement a de facto listing through overly restrictive Resource Management Plan (RMPs) Amendments and Land and Resource Management Plan (LRMPs) Amendments. These RMPs and LRMPs are in many cases more restrictive than a critical habitat designation would be under an ESA listing. These misguided amendments were not warranted and sought to prevent responsible mineral production and other activities across 11 Western states.

The Obama Administration also sought to withdraw 10 million acres of the bird's habitat from future mining activity. The Obama Administration's scheme to use the Sage Grouse as an excuse to shut down virtually all development on large swaths of public lands in the West, particularly oil, gas, and mineral development, has resulted in devastating impacts for local economies. These unlawful amendments are already having a negative impact for our nation's energy and natural resource independence.

To make matter worse, the Greater Sage Grouse is not endangered. The population is greater today than it has been in recent years thanks to the concerted efforts of several states which implemented at their own expense comprehensive Sage Grouse recovery plans. The Obama restrictions defy commonsense. Further, they are inconsistent with the Federal Land Policy and Management Act (FLPMA) and Greater Sage Grouse conservation planning efforts at the state and local level.

Congress must act to prevent severe economic losses to the U.S. economy and to ensure military readiness on affected military ranges is not compromised.

Section 114 of the engrossed version of the FY 2017 Interior, Environment and Related Agencies Appropriations bill contained language which aimed to block this report. Accordingly, we ask that you include language similar to the following again this fiscal year:

Sec.___. None of the funds made available by this or any other Act may be used—

(1) to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); or

(2) to make or extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.).

We thank you for your consideration of this request, and for your leadership on the committee.

Sincerely,

Thanks again Laura! After thinking a little bit more about it, I think we need probably need to cut point #2 as he may want to issue a rule we like.

I think we are probably safe just going with this. Thoughts?

Sec.___. None of the funds made available by this or any other Act may be used—

(1) *to review the status of or determine whether the greater sage-grouse is an endangered species or a threatened species pursuant to section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); or*

(2) ~~*to issue a rule for the greater sage-grouse (Centrocercus urophasianus) or the Columbia Basin distinct population segment of greater sage-grouse; or*~~

(3) to make or extend any withdrawal pursuant to section 204 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1714) within any Sagebrush Focal Area published in the Federal Register on September 24, 2015 (80 Fed. Reg. 57635 et seq.).

Cc: Culp, Rita <Rita.Culp@mail.house.gov>
Subject: Energy Independence Executive Order

Good Morning:

Can you please tell me if the Energy Independence Executive Order will have any impact on the following provisions:

House Sec. 122—Oil and Gas Royalties
House Sec. 436—Social Cost of Carbon
House Sec. 440—Royalty Rates on Coal, Oil, Gas Leases (Interior has already informed coal, oil and gas companies they do not have to comply with new ONRR method of calculating royalties for mineral extraction on federal land, delaying the rule's effective date to allow the administration to conduct a detailed review. Does the E.O. just memorialize this action?)
House Sec. 441—Coal PEIS
House Sec. 460—Management Non-Federal Oil and Gas
House Sec. 466—BLM Hydraulic Fracturing Rule

Any additional information you can provide on the E.O., lifting the coal leasing moratorium, the impact of the rescission of the Climate Action Plan on your current operating procedures and conservation management decisions, timeline for Interior revision of rules (in accordance with APA), etc. would be helpful.

Thank you,

Subject: BLM methane rule
Date: Thursday, March 30, 2017 9:12:04 AM

Take a look at the Earthjustice attorney's quote. Highlighted below.

METHANE

What Trump's order means for CRA, litigation on BLM rule

Pamela King and Ellen M. Gilmer, E&E News reporters
Published: Thursday, March 30, 2017

Efforts to repeal the Bureau of Land Management's methane rule under the **Congressional Review Act** are not dead following President Trump's "energy independence" executive order, the American Council for Capital Formation said yesterday.
As the CRA resolution stalled in the Senate, ACCF this month launched a campaign to strike from the books BLM's regulation curbing natural gas venting, flaring and leakage from production sites on public lands. If the upper chamber were to vote in support of the CRA resolution, the Methane and Waste Prevention Rule would quickly disappear, along with any possibility that BLM would reintroduce a substantially similar regulation.

Trump's direction to the Interior Department to suspend, revise or rescind four rules, including the methane rule, is a much lengthier process, ACCF said.

"Unraveling the methane rule at the agency level would require months of staff work and would undoubtedly face vigorous legal challenges from environmental groups, which could delay its repeal for up to two years," ACCF wrote in a statement yesterday. "On the other hand, Senate passage of a disapproval resolution under the CRA — something the House has already accomplished — would be quick and efficient, saving the agency both time and resources."

In a legal sense, rescinding a rule under the CRA is a far cleaner process, said Mark Barron, a partner at the law firm BakerHostetler.

"If they get 51 votes to repeal the regulation, then the regulation goes away, and that's the end of it," he said.

The order did little to move the needle, particularly with respect to the methane rule's future, Barron said.

"It was already widely known that the Trump Administration did not support the venting and flaring rule and I think most folks anticipated that, if the CRA did not pass, BLM would move to rescind the rule through the regulatory process," he wrote in an email to E&E News. "The debate since the election has never been whether the rule would be discarded, but whether it would be discarded quickly and easily in Congress or through the time consuming and expensive process of administrative rulemaking (and subsequent litigation). The Executive Order doesn't do anything to change that analysis."

Hogan Lovells attorney Hilary Tompkins, the former solicitor for President Obama's Interior, read the executive order as a change in strategy.

"It does provide an alternative approach, and I think they were reading the tea leaves in Congress and the Senate on that CRA, and they've kicked it back to the executive branch to find an alternative approach," she said.

A revised rule could keep the elements of the regulation that strengthen BLM's royalty collection process, said Ryan Alexander, president of Taxpayers for Common Sense.

"That's much more productive than CRA," she said.

Environmental lawyers saw a silver lining in the White House's direction. Groups that opposed CRA repeal have asked BLM to tweak the rule, rather than allowing Congress to eliminate it.

"The fact that this executive order shows that President Trump himself wants the Bureau of Land Management to use a scalpel to change the methane waste prevention rule is yet another sign that the oil and gas lobbyists who are asking Congress to use a sledgehammer to get rid of the rule using the Congressional Review Act are just too extreme," said Joel Minor, an Earthjustice attorney representing environmental intervenors in litigation over the methane rule.

The regulation went through years of comment and technical review and is therefore deserving of a more thorough examination before it is killed, said Erik Schlenker-Goodrich, executive director of the Western Environmental Law Center.

"The current administration might not like it, but it does have the authority to go through a new rulemaking process," he said.

A window of opportunity to pass the CRA resolution through the Senate could open up after the chamber votes on Supreme Court justice nominee Neil Gorsuch, ACCF said.

The Senate has until the week of May 8 to nullify the rule with a simple majority vote, the group said.

In the courtroom

This week's executive order creates a wave of uncertainty for litigation over the methane rule.

Industry groups and states challenged the regulation immediately after BLM finalized it last year. The U.S. District Court for the District of Wyoming declined their request to freeze the rule, and it took effect in January, gradually phasing in compliance requirements.

Environmental defenders of the rule are now monitoring the court docket to see if the Justice Department seeks to pause the case. DOJ lawyers have already asked courts to pause proceedings in litigation over U.S. EPA's Clean Power Plan and BLM's hydraulic fracturing rule, which were also targeted by the executive order. As in those cases, environmental lawyers have vowed to oppose any attempt to halt the methane litigation.

"We don't see any reason to put the litigation on hold until there is a firm and final decision revoking the rule from the Bureau of Land Management, and that will require notice-and-comment rulemaking, and that's a process that is likely to take far longer than resolving the litigation in court," Minor said.

Earthjustice and other environmental groups will argue that the issues in the litigation must be resolved to inform Interior's reconsideration of the rule, as challengers contend that the methane rule is essentially an air quality regulation that falls on EPA's and states' turf. Minor noted that BLM "at least in theory needs to know what it has legal authority to do before it takes action."

Tompkins, the former Interior solicitor, said it's "a big question mark" whether the district court would agree with environmental groups and allow litigation to move forward in either the methane

case or the fracking case.

"I think the court will want to know: Is this an issue that could likely be capable of repetition and recur?" she said. "Or are we truly mooting out all the issues in these cases? It's really going to depend on the vantage point of those judges."

Courts have previously allowed environmental intervenors to continue pressing litigation after the federal government has retreated in some cases, including litigation over the Clinton administration's "roadless rule" and an enforcement case against Duke Energy Corp. initiated by the Clinton administration just before George W. Bush took office.

Another wrinkle from Trump's executive order is its erasure of the Obama administration's metric for weighing the "social cost" of greenhouse gases. The social cost of methane was incorporated into the cost-benefit analysis for the methane rule and faced deep skepticism from the federal judge handling the case (***Energywire***, Jan. 17).
Minor said the new administration's rejection of the metric should not affect legal arguments surrounding the rule.

"The fact that the executive order effectively rescinds the use of the social cost of methane in the future doesn't retroactively change the use of the social cost of methane in the past," he said. "An agency's regulation has to stand based on the record and the decision that the agency made when it issued the rule, not post hoc developments that perhaps the agency changed its mind about something."

Legal briefs in the case are due in April and May.

And as Interior moves forward with a rulemaking process to reconsider the rule, supporters of increased regulation are also preparing for new opportunities to hold the agency accountable along the way and challenge a final decision if needed. Minor noted that any attempt to weaken the Obama administration's effort to prevent methane waste "could well be grounds for litigation over that choice."

"They are going to have to provide a robust rebuttal of all the vast administrative record that exists for [the methane and fracking rules]," Tompkins said. "There was extensive public comment, analysis and research, and if the new administration is going to rescind or significantly change those Interior regulations and policies, they're going to have to provide a counterpoint to why and address all those issues in the records that support the prior administration's actions."

Subject: Additional information on impacts of Energy E.O. and recent Secretarial Orders

All,

In response to the President's Executive Order on Energy Independence, we were asked how it might impact several pending riders up for discussion in conference:

- House Sec. 122- Oil and Gas Royalties
- House Sec. 436 - Social Cost of Carbon
- House Sec. 440 - Royalty Rates on Coal, Oil and Gas Leases
- House Sec. 441 - Coal PEIS
- House Sec. 460 - Management Non-Federal Oil and Gas
- House Sec. 466 - BLM Hydraulic Fracturing Rule

As indicated in the attached cleared response, most of the specific rules in the legislative proposals above, were called out for review or elimination in either the President's E.O or Secretarial Order 3349.

Consistent with the President's E.O, the Secretary's Order directs the Department to review all existing regulations, orders, guidance documents, policies, and "any other similar actions that potentially burden the development or utilization of domestically produced energy resources."

To that end, the Department is undertaking a comprehensive review and urges caution in considering language which could be construed to limit the Administration's flexibility to review or implement changes to existing policies.

Let me know if you have questions. Thank you.

Hey Micah,

Thanks for checking in! The event was awesome; standing room only. We had to turn people away. Very interesting discussion since we found a speaker to oppose Yoo and Gaziano.

Here's a link: https://www.youtube.com/watch?v=Ic_voqhS2ho&feature=youtu.be.

I also attached the report if you find yourself with a few min to spare — ha!

Chris

Senator Mike Lee Cordially Invites You to Attend a Program on

Presidential Authority to Revoke or Reduce National Monument Designations

Wednesday, March 29, 2017

4:00 – 5:00 p.m.

Dirksen Senate Office Building, Room 366

Reception to follow sponsored by the Pacific Legal Foundation

and American Enterprise Institute with Honorary Co-host Sen. Lee

This is a widely attended event

Opening Remarks:

U.S. Senator Mike Lee (R-UT)

House Natural Resources Committee Chair Rob Bishop (R-UT)

Panel Discussion on the Release of their New AEI Paper:

John Yoo

Emanuel S. Heller Professor, University of California Berkeley School of Law

Visiting Scholar, American Enterprise Institute

Todd Gaziano

Senior Fellow in Constitutional Law & Executive Director of Pacific Legal Foundation's DC Center

President Obama set the record for the number of national monument proclamations he issued and the millions of acres of public lands he designated for such monuments. A few weeks before he left office, President Obama used the Antiquities Act of 1906 again to proclaim 1.35 million acres in Utah and 300,000 acres in Nevada to be new national monuments. White House officials claimed that both actions were “permanent” because there was no express authority to reverse them. In a new AEI paper to be released on March 29, Yoo and Gaziano argue that such claims of permanence get the constitutional principles and legal presumptions exactly backwards. The text, history, and executive practice under the Antiquities Act, as well as foundational constitutional principles, provides for presidential discretion in the creation and revocation of national monuments. Moreover, his discretion to significantly change monument boundaries, including substantial reductions in a monument’s size, is strongly supported by the text of the Act, its legislative history and purposes, and unbroken presidential practice going back to the early years of the act’s history. In support of these conclusions, the new AEI paper makes news by questioning a 1938 Attorney General opinion with new insights into an 1862 AG opinion and by revealing new historical research not covered in prior scholarship on the Antiquities Act. Please join us to ask your questions.

RSVP to Collin Callahan at CBC@pacificlegal.org or call (703) 647-2112.

Following the event, please join us for a reception to continue the conversation.

MARCH 2017

AMERICAN ENTERPRISE INSTITUTE

Executive Summary

The Antiquities Act of 1906 grants the president the power to designate national monuments in order to protect archeological sites, historic and prehistoric structures, and historic landmarks, such as battlegrounds. We are confident that, pursuant to this power to designate, a president has the corresponding power to revoke prior national monument designations, although there is no controlling judicial authority on this question. Based on the text of the act, historical practice, and constitutional principles, we have even more confidence that he can reduce the size of prior designations that cover vast areas of land and ocean habitat, although his power of reduction may in some instances be related to his implicit power of revocation.

An attorney general opinion in 1938 concluded that the statutory power granted to the president to create national monuments does not include the power to revoke prior designations. The opinion has been cited a few times in government documents, including by the solicitor of the Interior Department in 1947 (although for a different proposition) and in legal commentary, but the courts have never relied on it. We think this opinion is poorly reasoned; misconstrued a prior opinion, which came to the opposite result; and is inconsistent with constitutional, statutory, and case law governing the president's exercise of analogous grants of power. Based on a more careful legal analysis, we believe that a general discretionary revocation power exists.

Apart from a general discretionary power to revoke monuments that were lawfully designated, we think the president has the constitutional power to declare invalid prior monuments if they were illegal from their inception. In the first instance, there is no reason why a president should give effect to an illegal act of his predecessor pending a judicial ruling. Beyond this, we think the president may also have a limited power to revoke individual monument designations based on earlier factual error or changed circumstances, even if he does not possess a general discretionary revocation power.

In addition to the above powers, almost all commentators concede that some boundary adjustments can be made to monument designations, and many have been made over the years. In 2005, the Supreme Court of the United States implicitly recognized that such adjustments can be made. The only serious question is over their scope. No court has ruled on this question. Some commenters claim this is because no president has attempted to significantly reduce the size of an existing monument, but that is simply inaccurate. In the act's early years alone, some monuments were reduced by half or more.

Regardless of past practice, arguments that limit the president's authority to significantly reduce prior designations are largely conclusory—and based on the erroneous premise that the president lacks authority to revoke monuments—or driven by a selective reading of the act's purpose rather than its text. We believe a president's discretion to change monument boundaries is without limit, but even if that is not so, his power to significantly change monument boundaries is at its height if the original designation was unreasonably large under the facts as they existed then or based on changed circumstances.

Presidential Authority to Revoke or Reduce National Monument Designations

BY JOHN YOO AND TODD GAZIANO

As he left the Oval Office, President Barack Obama tried to exempt his environmental policies from the effects of the November 2016 elections. Five days before Christmas, the White House announced the withdrawal of millions of acres of Atlantic and Arctic territory from petroleum development. Obama continued his midnight orders by proclaiming 1.35 million acres in Utah and 300,000 acres in Nevada to be new national monuments. White House officials claimed that both types of actions were "permanent" because there was no express authority to reverse them. But that gets the constitutional principles and legal presumptions exactly backward. All the ex-president will prove is the fleeting nature of executive power.

These actions, like many others taken by the Obama administration, will remain vulnerable to reversal by President Donald Trump. In our constitutional system, no policy can long endure without the cooperation of both the executive and legislative branches. Under Article I of the Constitution, only Congress can enact domestic statutes with any degree of permanence. And because of the Constitution's separation of powers, no policy will survive for long without securing and retaining a consensus well beyond a simple majority. Our nation's most enduring policies—antitrust, Social Security, and civil rights—emerged as the product of compromise and deliberation between the political parties.

President Obama's refusal to compromise with his political opponents will guarantee that his achievements will have all the lasting significance of Shelley's King Ozymandias.[1] The president's only substantial legislative victories, Obamacare and Dodd-Frank, never gained bipartisan input or broad support. Trump executive appointees can begin unraveling both laws with executive actions, with legislation to significantly alter them to follow. President Obama's refusal to yield an inch to Republicans intensified their opposition over many years and created a powerful electoral consensus to reverse these alleged reforms. The coming fight over public lands shows, in microcosm, the constitutional dynamics that render Obama's legacy so hollow.

Background on Antiquities Act National Monument Designations

The original motive for the Antiquities Act of 1906 was to protect ancient and prehistoric American Indian archeological sites on federal lands in the southwest from looting. The Antiquities Act was passed during the same month (June 1906) as the act creating Mesa Verde National Park, and the problems that arose in protecting the Mesa Verde ruins inform the Antiquities Act's central focus. In a report to the secretary of the interior, Smithsonian Institution archeologist Jesse Walter Fewkes described vandalism at Mesa Verde's Cliff Palace:

> Parties of "curio seekers" camped on the ruin for several winters, and it is reported that many hundred specimens there have been carried down the mesa and sold to private individuals. Some of these objects

> are now in museums, but many are forever lost to sci ence. In order to secure this valuable archaeological material, walls were broken down . . . often simply to let light into the darker rooms; floors were invari ably opened and buried kivas mutilated. To facilitate this work and get rid of the dust, great openings were broken through the five walls which form the front of the ruin. Beams were used for firewood to so great an extent that not a single roof now remains. This work of destruction, added to that resulting from erosion due to rain, left Cliff Palace in a sad condition.[2]

The legislative history of the Antiquities Act on the Department of Interior website provides additional historical detail,[3] but the act's text confirms that its primary purpose was to "preserve the works of man."[4] Section 1 of the original act made it a crime to "appropriate, excavate, injure, or destroy any historic or prehistoric object of antiquity" on federal land without permission. Section 3 provided for permits for the examination of "ruins, the excavation of archeological sites, and the gathering of object of antiquity upon" federal land. Section 4 provided the authority to the relevant department secretaries who managed federal land to issue uniform regulations to carry out the act's provisions. Section 2, which allows for the designation of national monuments and the reservation of such federal land as is necessary to protect the objects at issue, also focuses primarily on "historic and prehistoric *structures*, and other *objects* of historic or scientific interest" (emphasis added).

The addition of only two words, "historic landmarks," in that sequence in Section 2 (see below) denotes something broader than preserving human artifacts. In prior proposals to protect antiquities, the Department of Interior had sought authority for scenic monuments and additional national parks, but Congress repeatedly rejected that authority.[5] Congress was annoyed by large forest designations and guarded its authority over western lands jealously.[6] Yet the final language has been used and abused for such purposes, or effectively for such purposes—since the official designation of national parks is still left to Congress.

As previously mentioned, Section 2 of the Antiquities Act not only allows protection for small areas around human archeological sites but also authorizes the president:

> in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric struc tures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Government of the United States to be national monuments, and may reserve as part thereof parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and maintenance of the objects to be protected.

There are three steps to land being reserved and protected under the Antiquities Act, the first two of which are delineated in the section above. First, the monument must be declared for a protective purpose upon lands owned or controlled by the United States. Second, a reservation of certain parcels of land that constitute a "part thereof" may be made, but such parcels of land may not exceed what is necessary to protect the "objects" at issue. And third, the president may specify certain restrictions or other protections that apply to the land thus reserved for the monument in the initial proclamation, or the relevant department secretary who has responsibility to manage the monument may issue regulations consistent with such protections.[7]

Although the act's final language covered more than antiquities, and there is evidence that small scenic landmarks were contemplated, the statute's title, drafting history, and historical context may still be valuable to presidents who want to follow the text and spirit of the original law. For example, earlier and contemporaneous bills for the same purpose limited monument designation to 320 or 640 acres.[8] The final bill replaced that with the (now seemingly open-ended) requirement that such monuments "shall be confined to the smallest area compatible with the proper care and management of the objects to be protected," but that was added to provide flexibility for special situations and not to allow a million-acre designation. Such

background also helps illuminate earlier presidential abuses, whether such abuses rise to the level of a statutory violation or are just garden-variety political acts that offend individual due process rights and separation of powers principles.

Besides Mesa Verde National Park, only a handful of other national parks existed in 1906. Congress did not create the National Park Service to manage them until 1916. The Grand Canyon, for example, was not a national park in 1906 and was open to mining claims and other federal program leases.

President Theodore Roosevelt initially used his new Antiquities Act authority to protect some relatively small landmarks (e.g., Devils Tower) and Native American ruins (e.g., El Morro and Montezuma Castle), but his abuses were not long in coming. In 1908, he proclaimed the Grand Canyon National Monument, reserving more than 808,000 acres for its protection. Although later Congresses converted some national monuments covering large geological formations into national parks, including the Grand Canyon National Park in 1919, the Congress that enacted the Antiquities Act did not intend monuments of that size to be established by presidential designation.

Nevertheless, the Supreme Court relied on the validity of the 1908 reservation that created the Grand Canyon National Monument in rejecting a private mining claim in *Cameron v. United States*.[9] There is no indication that the size of the original monument designation was at issue, perhaps because Congress had recently converted the monument into a national park. Yet the Supreme Court also has considered issues relating to two other large monuments or former monuments.[10] While the original monuments' sizes were not challenged in any of these cases, it is unclear whether the courts will invalidate large geological monument designations due to their size alone.[11]

Even so, the Antiquities Act's primary motivation and historical context is still legally relevant to refute the arguments of those who would limit a president's revocation power based on a selective and misleading statement about its purpose. Moreover, other interpretive questions remain open, such as the meaning of the textual requirement that the lands being reserved under the monument designations are "owned or controlled" by the United States.

Three of the most important Indian lands where prehistoric artifacts might be looted were not even states in 1906; Arizona, New Mexico, and Oklahoma were then federal territories. Hawaii was only recently annexed and organized as a territory, and Alaska was still a sparsely settled American "district" after the gold rushes of the 1890s—not yet an official federal territory. These were areas of exclusive federal ownership *and* control.

The Congress that enacted the Antiquities Act did not intend monuments of [such massive] size to be established by presidential designation.

Other areas of the West that included early national monument designations were owned by the national government, so an issue of control short of ownership was not at play in any of those designations. That may be relevant to the type of control Congress intended as a predicate to the exercise of authority under the Antiquities Act. (See later discussion regarding marine areas, especially those not owned by the United States and subject to limited regulation or control.)

A General Discretionary Power to Revoke Prior Designations

Attorney General Homer Cummings advised President Franklin Roosevelt in 1938 that he lacked the authority to revoke President Calvin Coolidge's

designation of the Castle Pinckney National Monument because he concluded that no power existed to revoke a prior monument designation.[12] Although the opinion has been cited in some later government documents[13] and by legal commentators, no court has ruled on the president's revocation power or cited the opinion, in part because no president has attempted to revoke a prior designation. In all events, the 1938 attorney general opinion is poorly reasoned, and we think it is erroneous as a matter of law.

The attorney general was first authorized to issue legal opinions to the president under the Judiciary Act of 1789, now codified at 28 U.S.C. §§ 511-513, and to other agency heads by that act and other delegations of authority from the president. Attorney general opinions, and those that now are issued by the Department of Justice (DOJ) Office of Legal Counsel (OLC), are binding on executive branch agencies. In contrast, a president is free to disregard them—especially if he concludes that his oath to take care that the laws are faithfully executed conflicts with such an opinion.

Nevertheless, prudence dictates that the next president request that his own attorney general reexamine such opinion, perhaps with the assistance of OLC, which became an independent division of the DOJ in 1951 and is commissioned to provide serious legal analysis on such matters. The existence of Cummings' 1938 published opinion is an internal hurdle that any administration should address, preferably with another published opinion, either affirming, qualifying, or overruling Cummings' advice.

In 1938, Cummings addressed the question of whether the secretary of the interior could abolish the Castle Pinckney National Monument in Charleston, South Carolina, and transfer the land to the War Department. Under the Antiquities Act, President Coolidge had formed the monument in 1924 from a US fort that had existed in the Charleston harbor since the early 19th century. As Cummings observed, the Antiquities Act contained no clear textual authorization to "abolish" national monuments. "If the President has such authority, therefore, it exists by implication."[14]

Cummings concluded that without clear authorization from Congress, President Roosevelt could not reverse the designation of Castle Pinckney as a national monument. In a brief opinion, he relied on two grounds. First, he believed Attorney General Edward Bates had settled the issue in an 1862 opinion that found that the president could not return a military reservation to the pool of general public lands available for sale. Second, he compared the Antiquities Act to other federal laws governing temporary withdrawals of federal land or forests, which explicitly provide for presidential modification of past designations. In addressing past practice, which he conceded supported a right to reduce the size of national monuments, Cummings argued that "it does not follow from power so to confine that area that he has the power to abolish a monument entirely."[15]

We believe the 1938 opinion is wrong in some obvious respects and too cursory to be persuasive, even if its errors were excised. One major flaw is Cummings' misreading of Bates' opinion,[16] 44 years before the enactment of the Antiquities Act. Bates' opinion discusses whether an administration in the 1840s could rescind a military reservation in Illinois for which Congress had appropriated money and on which a fort had been constructed. He found that the statute delegating to the president the power to designate land for military purposes did not include a power to withdraw the designation. Bates seemed to believe that delegated power, once used, could not be activated to reverse the decision—that the president had effectively exhausted the delegation of power. "A duty properly performed by the Executive under statutory authority has the validity and sanctity which belong to the statute itself, and, unless it be within the terms of the power conferred by that statute, the Executive can no more destroy his own authorized work, without some other legislative sanction, than any other person can."[17]

But the original 1862 opinion contains many factual and legal distinctions that Cummings does not address. For example, Bates states that he is interpreting military reservation authority under "early acts of Congress" and an "act of 1809," which provided appropriations for constructing forts "for the protection of the northern and western frontiers." Perhaps most importantly, the 1862 opinion acknowledges that the

military reservation itself could be abandoned by the War Department, which is the equivalent of revoking a land reservation under the Antiquities Act. It also relies on the fact that in 1858, Congress had specifically repealed any statutes that authorized the sale or transfer of military sites to the public. Of course, no such express statutory prohibition on the presidential withdrawal of national monument status exists in the Antiquities Act.

Instead, Bates' opinion focuses on whether an abandoned military reservation and its buildings would be subject to "entry or preemption by settlers." This refers to the Preemption Act of 1841, which allowed squatters on federal land during the 1840s and 1850s to secure title to it at a low price (preempting a general public sale) if they also worked it for a number of years.[18] To conclude that squatters could not simply enter the military reservation and secure title to it "by preemption," Bates' opinion relies on a combination of factors that are distinguishable from revoking a monument designation under the Antiquities Act, including: the unnamed "early acts of Congress," which authorized its initial selection as a military reservation; the 1809 appropriation for military forts on the frontier; that Fort Armstrong had been constructed and occupied for more than two decades; that its buildings were still in good order; that other laws governed the sale of abandoned military property; and more recent acts of Congress relating to the particular piece of property, which assumed it was not subject to preemption by settlers.

Cummings did not acknowledge these and other potential distinctions. Bates found that separate laws governed the management and disposal of military property from the homesteading or preemption laws that had populated Kansas and Nebraska. It is not surprising that interpreting different statutes yields different results, but even so, Bates conceded that an improved military reservation could be abandoned and sold, just not pursuant to the Preemption Act of 1841. Cummings mistakenly read the 1862 opinion for the proposition that once land is reserved under any act of Congress, that reservation can never be rescinded.

In contrast to the question Bates addressed, revoking a monument designation under the Antiquities Act would not change the federal ownership of the land at issue. For this and other reasons, the portion of the 1862 opinion that Cummings quoted is especially questionable as applied to land reservations under the Antiquities Act. The quoted language also contains several inapt analogies and question-begging propositions of law.

For example, Cummings quotes the proposition that the "power to execute a trust, even discretionarily, *by no means* implies the further power to undo it when it has been completed" (emphasis supplied). The italicized phrase is misleading. Not every grant of a power to create something must include the power to abolish it, but many do. Special circumstances might make revoking certain acts impossible, or that power might be withheld, but a presumption of revocability is often implied if the grant is silent.[19]

Not every grant of a power to create something must include the power to abolish it, but many do.

Indeed, reliance on trust law should have led to the opposite conclusion, at least under the Antiquities Act. Under general trust principles, at least in the 20th and 21st centuries, the power to create a trust includes the power to revoke it when the settler retains an interest in it, unless the trust is expressly irrevocable under the original grant of authority.[20] If a court applied trust law principles to the Antiquities Act, we think it would conclude that the president retains an interest in the monument designations he or a predecessor creates, including that he has the duty to manage them, issue and enforce regulations to protect them, and adjust their borders from time to time with subsequent presidential proclamations. Moreover, the broader principle of trust law is that

the party creating the trust has the power to decide whether it is revocable; the discretionary nature of the president's power under the Antiquities Act and certain textual cues suggest Congress did not intend to make all monument reservations permanent.

Cummings' reliance on Bates' constitutional-statutory analysis fares no better than his reliance on trust law. It is true that a president has no general constitutional authority to manage federal land, although he may have some limited powers as commander in chief or under other statutory grants of authority. That, however, does not answer whether Congress' grant of authority in "early acts of Congress" or the Antiquities Act of 1906 to make reservations includes the power to rescind or revoke them. Indeed, Bates conceded that military reservations could be abandoned; he just believed the land would not be subject to "preemption by settlers." In the context of the Antiquities Act that Cummings was supposed to interpret, a president could rescind or amend the parcels of land reserved for a given monument without repealing the underlying monument designation. There is no evidence that Congress intended to withhold either revocation power in the Antiquities Act, let alone both of them.

Bates' final constitutional-statutory proposition is equally circular as applied to the Antiquities Act. He asserts that reading the unnamed "early acts of Congress" and especially the 1809 appropriation to allow "preemption by settlers" would effect a repeal of the underlying laws: "To assert such a principle is to claim for the Executive the power to repeal or alter an act of Congress at will." That presidents cannot unilaterally repeal statutes does not answer whether Congress included the power both to make and revoke reservations in the original grant of authority under the Antiquities Act.

Cummings' only attempt at an original argument starts and ends with one of the Antiquities Act's purposes: "to preserve . . . objects of national significance for the inspiration and benefit of the people of the United States." Cummings then immediately concludes, in *ipse dixit* fashion (without making a coherent argument), that: "For the reasons stated above, I am of the opinion that the President is without authority" to issue a proclamation revoking the Castle Pinckney National Monument.

Such casual reliance on one of the act's purposes, and one that was not set forth in the act itself, adds nothing of weight, since it does not explain why revoking the monument at issue was inconsistent with that general purpose of preserving objects of national significance. What if the president determined, for example, that no objects of national significance remained at a given site?

Cummings also does not fairly consider other purposes. If a textual ambiguity justified a resort to legislative materials, the full record would show that the act's primary purpose was to provide a power to the president to prevent the destruction and looting of artifacts until they were excavated and safeguarded or until Congress could consider long-term measures regarding the site. This more complete statement of purposes highlights that the passage of time matters and that a later president could reasonably conclude that Congress declined the opportunity to legislate on the land or objects in an earlier monument designation or that they were now safeguarded, such as by excavation and display in a museum.

A proper analysis of the revocation power under the Antiquities Act would also consider other grants of authority to the president in the Constitution and other statutes and how the courts and constitutional practice have treated them. Cummings made no effort to do that in 1938, and the range of presidential action the courts have upheld, even under older delegations dating to the post–Civil War era, is now more muscular than in early-20th-century jurisprudence.

Although our research is limited on analogous delegations, we believe the general principle would prevail that the authority to execute a discretionary government power usually includes the power to revoke it—unless the original grant expressly limits the power of revocation. One particularly relevant statutory example is the executive's power to issue regulations pursuant to statutory authority. When Congress gives an agency the discretionary authority to issue regulations, it is presumed to also have the authority to repeal them.[21] This is especially true when the regulation has shown to be contrary to the

purposes underlying the statute.[22] Section 4 of the Antiquities Act grants three department secretaries the power to publish "from time to time uniform rules and regulations for the purpose of carrying out this Act." Although Congress did not expressly state that the officials can repeal or significantly alter their regulations once they are published "from time to time," that is presumed by law. The broader power of revocation by the president should also be presumed.

Constitutional law axioms are even more relevant in undermining Cummings' view. A basic principle of the Constitution is that a branch of government can reverse its earlier actions using the same process originally used. Thus, Article I, Section 7, of the Constitution describes only the process for enacting a federal law. A statute must pass through both bicameralism (approval of both Houses of Congress) and presentment (presidential approval). But the Constitution describes no process for repealing a statute.

Under the Obama administration's logic, Congress could not repeal previous statutes because of the Constitution's silence. Since the adoption of the Constitution, however, our governmental practice is that Congress may eliminate an existing statute simply by enacting a new measure through bicameralism and presentment. While passage of an earlier law may make its repeal politically difficult, due to the need to assemble majorities in both Houses and presidential agreement, no Congress can bind later Congresses from using their legislative power as they choose.

This principle applies to all three branches of the federal government. The Supreme Court effectively repeals past opinions simply by overruling the earlier case, as most famously occurred in *Brown v. Board of Education*,[23] which overruled *Plessy v. Ferguson*.[24] While the Court may follow past precedent out of *stare decisis*, it also employs the same procedure to reverse the holding of past cases, as Congress does to reverse an earlier statute. Both a precedent and its subsequent overruling decision require only a simple majority of the justices. No Supreme Court can bind future Supreme Courts.

This rule also applies to the Constitution as a whole. In Article V, the Constitution creates an additional process for amending its own text, which requires two-thirds approval by the House and the Senate and then the agreement of three-quarters of the states. Without this additional option in Article V, the Constitution would require the same or a similar process for its amendment as for its enactment, which would have impractically required a new constitutional convention. Reinforcing our point, the framers decided to set out explicit mechanisms for repealing part of the original constitutional text when they wanted to provide a means that did not mirror the original enacting process.

No president can bind future presidents in the use of their constitutional authorities.

The same principle applies to the constitutional amendments themselves. The Constitution contains no provision for undoing a constitutional amendment. Instead, the nation has used constitutional amendments to repeal previous constitutional amendments. The 21st Amendment repealed Prohibition, which had been enacted by the 18th Amendment. When the Constitution is silent about a method for repeal, it is assumed that we are to use the same process as that of enactment.

The executive branch operates under the same rule. No president can bind future presidents in the use of their constitutional authorities. Presidents commonly issue executive orders reversing, modifying, or even extending the executive orders of past presidents, and no court has ever questioned that authority, even when it is used to implement statutorily delegated powers. Good examples include the successive executive orders Presidents Ford, Carter, Reagan, Clinton, George W. Bush, and Obama used to specify how the congressionally mandated rulemaking process would be conducted and reviewed in the executive branch.[25] It would be quite an anomaly to

identify an executive directive or presidential proclamation that a subsequent president could not revoke.

Presidents also regularly add or remove executive branch officers appointed to White House committees or even the cabinet. They have created and eliminated whole offices in the Executive Office of the President. They have increased or reduced the use of cost-benefit analysis in regulatory decisions. In fact, when the Constitution deviates from this lawmaking symmetry, it explicitly does so in the text and in a manner that makes repeal easier than the first affirmative act.

The most famous example is the president's removal power. In Anglo-American constitutional history, the executive power traditionally included the power both to hire and fire subordinate executive officials. The Constitution altered the appointment process. Under Article II, Section 2, the president can nominate and, with the Senate's advice and consent, appoint high executive branch officers, judges, and ambassadors. The Constitution, however, did not explicitly address removing an officer.

In *Myers v. United States*,[26] the Supreme Court found that the Constitution implicitly retained the traditional rule that a president could unilaterally undo an appointment without the Senate's approval. In revoking an official's commission that was issued after Senate confirmation, the president is more clearly negating a specific, deliberative, and official Senate act. By contrast, revoking a predecessor's individual monument designation does not negate anything in particular that Congress approved.

A similar dynamic applies to the Treaty Clause. Under Article II, Section 2, of the Constitution, the president can make treaties subject to the advice and consent of the Senate. Again, the Constitution does not explicitly address terminating a treaty. But as a four-justice plurality of the Supreme Court and the US Court of Appeals for the DC Circuit have found, the president retains the traditional executive authority to unilaterally terminate treaties.[27] Past presidents and Senates cannot bind future presidents to treaties, just as they cannot prevent future presidents from removing executive branch officials.

Although the power to unilaterally abrogate a treaty flows from a grant of constitutional authority to the president to manage foreign relations, Congress is also constitutionally prohibited from delegating a statutory power to the president and then micromanaging the discretion granted.[28] Thus, even if the Antiquities Act attempted to prevent later presidents from using its authority to reverse an earlier monument designation, that would raise serious constitutional questions.

At a minimum, a thorough and up-to-date analysis of both constitutional principles and statutory examples should be performed before Cummings' opinion is followed.

A Limited Power to Revoke Certain National Monuments or Declare Others Invalid

Even if every monument designation cannot be revoked as a matter of presidential discretion, and we still question such limitation, authority might still exist to abolish some designations based on an earlier factual error, changed circumstances, or an original statutory violation. In short, three determinations, two factual and one legal, may provide strong grounds for certain monument revocations or invalidations.

New Factual Determinations. First, if the president concludes that the original designation was mistaken, perhaps because of an archeological fraud, historical error, or improved or updated scientific analysis, the predicate for original designation would be undermined. It would be hard to argue that Congress intended that every curiosity deemed scientifically interesting to a president 100 years ago (the once popular but now discredited and racist branch of human craniology/phrenology comes to mind) forever must remain a valid source of scientific interest and protection. It might be more controversial for a president to determine that a geological monument designation thought to be rare and scientifically interesting by an earlier president is not all that worthy of protection as a monument, but limiting such reevaluation would elevate certain determinations (or

privilege geological claims) over others in a manner that would be hard to logically sustain.

Second, as explained above, the act also was intended to provide authority to preserve artifacts that might otherwise be looted. Even assuming the original designation was proper, if the relevant artifacts were excavated and removed and are now on display in a museum off-site, how can it be said that the reserved parcels are currently the "smallest areas compatible with the proper care and management of the objects to be protected"? If any of these changes of fact or scientific interest justify revocation, then the general argument against revocation would be on shaky grounds, and discretionary revocations at will would be a more plausible interpretation of the act.

Problems of Size. A presidential determination that the original designation was illegally or inappropriately large is a special case. It may provide a sound predicate for declaring a designation to be invalid in some cases or for significantly reducing the monument's size in others. The president might be presented with an issue analogous to a severability determination regarding such monuments. If there is no reasonable way to reduce a reservation's size and maintain a meaningful monument, rescinding or declaring invalidity may be more appropriate. In all events, a review of controversies over the size of national monuments highlights three distinct periods of use and abuse, the last of which contains the most breathtakingly large monument designations.

Between 1906 and 1943, most monument reservations were smaller than 5,000 acres, and many of them actually protected antiquities. Yet there also were several large monument reservations or expansions during that period, mostly for scenic or geological formations.

President F. Roosevelt's designation of Jackson Hole National Monument in 1943 was the catalyst for two reforms, only one of which was made permanent. Wyoming congressmen were strongly opposed to the 210,950-acre Jackson Hole monument and reservation and secured a bill to overturn it, but President Roosevelt vetoed it. In 1950, Congress made Grand Teton National Park out of most of the land from the Jackson Hole monument and added the southern portion of the former monument to the National Elk Refuge. That law also amended the Antiquities Act, forbidding further use of it to expand or establish a national monument in Wyoming without express congressional authorization.[29] Note that the proviso enacted in 1950 does not prohibit the president from reducing the size of the monument reservation in Wyoming.

For 35 years after the congressional dispute over the Jackson Hole National Monument, presidents were quite temperate in their use of the Antiquities Act. Except for a couple of proclamations of large tracts by President Johnson, the period between 1943 and 1978 contained no especially vast monument reservations, and some presidents even reduced the size of older monuments. Eisenhower's combined proclamations under the act caused a net reduction in total acreage devoted to national monuments. President Nixon issued no Antiquities Act proclamations whatsoever.

In 1976, Congress enacted the Federal Land Policy and Management Act (FLPMA), which prevents a secretary of interior from withdrawing more than 5,000 acres of federal land without congressional approval. The FLPMA did not alter the president's authority under the Antiquities Act, perhaps because presidential abuses had abated. Although one ambiguous sentence of one House committee report has been mistakenly read to provide otherwise, the plain text of the FLPMA and settled canons of construction establish that the president's authority under the Antiquities Act was not affected by a provision that limited the secretary of interior's authority regarding similar land withdrawals.[30]

Unfortunately, presidential abuses under the Antiquities Act expanded significantly after 1978, especially by Presidents Carter, Clinton, and Obama. Until a few months ago, President Carter held the record for the most extensive monument reservations, with nine designations that were larger than a million acres and two larger than 10 million acres. Carter's designation of more than 56 million acres of monument reservations in Alaska on a single day led to the most recent amendment to the Antiquities Act.

The Alaska National Interest Lands Conservation Act (ANILCA), P.L. 96-487, was enacted by Congress and signed by President Carter on December 2, 1980, after his election loss to Reagan and the impending loss of Democratic Party control in the Senate. The ANILCA settled many long-standing issues and land disputes, and it made many Alaska-specific changes to laws governing federal land management, including requiring congressional approval for national monuments in Alaska larger than 5,000 acres.[31] Whether this congressional reaction made an impression on them or for other reasons, Presidents Reagan and George H. W. Bush both issued no proclamations under the Antiquities Act.

Several of President Obama's proclamations were also in the teeth of strong congressional opposition and undermined pending congressional legislation.

Nevertheless, President Clinton broke new ground with the number of monument designations per term,[32] many of which were larger than 100,000 acres and two of which were larger than one million acres.[33] He also proclaimed a questionable new type of monument on the high seas. President George W. Bush issued fewer than half as many monument designations as Clinton, and some were relatively small. Yet, President George W. Bush made a few large monument designations, including a questionable designation along the Pacific Ocean's Marianas Trench.[34]

President Barack Obama broke both Clinton's record number of monument proclamations per term and Carter's record for the total acres withdrawn. Among his 34 proclamations,[35] Obama enlarged the Papahanaumokuakea Marine National Monument by approximately 283.4 million acres,[36] enlarged the Pacific Remote Islands Marine National Monument by approximately 261.3 million acres,[37] and created the Northeast Canyons and Seamounts Marine National Monument, which covers approximately 3.1 million acres.[38]

Several of President Obama's proclamations were also in the teeth of strong congressional opposition and undermined pending congressional legislation. For example, on December 28, 2016, he created the 1.35 million–acre Bears Ears National Monument in southern Utah and the 300,000-acre Gold Butte National Monument in Nevada. Both designations were opposed by state officials and GOP congressional leaders, including the unanimous congressional delegation from Utah, which was willing to compromise on a smaller monument in Utah that permitted reasonable public uses of the area. The protective impact of the Bears Ears National Monument is particularly dubious since it is supposed to protect isolated Native American sites. It is unclear, for example, how the agency officials will protect those sites any differently after the monument designation than they might have before.

A designation smaller than 5,000 acres may still be too large (relative to some objects being protected) or politically abusive if the designation is for a questionable purpose, for example, to interfere with congressional deliberations over a compromise land-use arrangement or to regulate fishing that is not otherwise authorized. But reservations larger than 5,000 acres merit special review out of respect for Congress' traditional authority to establish federal land policy, especially if there was no "emergency" necessitating the monument designation without congressional action or if congressional leaders had expressed serious opposition to the monument designation.

If a president makes a credible determination, based on the facts and a reasonable interpretation of the act, that some former monuments are illegally large relative to the original "object" supposedly being protected, he could declare that the initial designation was void, especially if there is no easy way to make it lawful by severing discrete parcels of land.

That is distinct from his power to "revoke" those he thinks were originally lawful, and it would stem from his constitutional authority to take care that the laws are faithfully executed. Even so, a president trying to insulate such a decision should invoke both his constitutional authority to declare the prior designation void and his authority under the act to revoke the designation if it were legal. If he uses both sources of authority, he should issue a proclamation to exercise his authority under the Antiquities Act.

Judicial Review

Someone would have to establish standing to sue to overturn a later declaration of invalidity or a revocation, and that might be quite difficult in many cases. Standing has been a hurdle for many challenging monument designations that impaired grazing, timber, mining, or other rights to use the reserved land.[39] It might be even more difficult for a party to establish a sufficient and particularized injury that resulted from a monument revocation that restores land to public use.

If standing is established, challengers would have to satisfy different burdens, depending on the nature of their claims. A challenge to the president's legal authority to establish a particular monument, perhaps because the land in question is not owned or controlled by the United States,[40] is an issue of law that ought to decided without deference to either party. A legal challenge to the president's authority to ever revoke any prior monument under the act would probably be decided in a similar manner.

Someone challenging the president's discretionary determinations under the act would likely have to show an abuse of discretion—and to do so without an administrative record. And it is possible, absent proof of corruption, legal violation, or a failure of process, that certain factual determinations are committed to the president's discretion by law and are not subject to judicial review.[41] That standard might apply to presidential determinations that justify a reduction in the size of existing monuments, which is discussed further below.

Special Questions Regarding Marine Monument Designations

The Supreme Court has upheld or discussed the application of the act to the submerged lands of two different monuments along the coast and inland waterways,[42] but some issues regarding these kinds of monuments still remain open, and recent marine monument designations on the high seas raise new questions.

The submerged lands under inland waterways and territorial seas at issue in the two cases mentioned above were owned by the United States when the monuments were designated. That is not true with the areas associated with certain high-sea designations by Presidents Clinton, George W. Bush, and Obama. President Obama's most recent purported designation of the Northeast Canyons and Seamounts Marine National Monument is located approximately 130 miles off Cape Cod. This approximately 3.14 million–acre monument is in the United States' Exclusive Economic Zone (EEZ), but under domestic and international law, America does not own it. The Pacific Legal Foundation recently filed suit on behalf of a coalition of New England fishing organizations challenging the legality of the most recent marine monument, which is the first lawsuit of its kind.[43]

There are two problems with the designation of marine monuments far from shore under the Antiquities Act. First, the submerged land at issue is not the type of land that the United States could have owned or controlled in 1906. The modern EEZ is not only vastly wider than the "territorial waters" of 1906 but also a qualitatively different type of property interest than the United States may have acquired or controlled in an earlier era.[44] The United States had a sovereign interest in the submerged land near its coast and its territorial waters (whether that was then three miles from the coast and is now 12 miles), which justifies sovereign military and economic controls; it could not have and still does not have such a sovereign interest in the area beyond its territorial waters.[45] Relatedly, even current domestic and international law permits only limited regulation or control of the marine and wind resources in the EEZ outside our

territorial waters, and thus, it does not constitute the type of federal government "control" of the relevant land that is required under the Antiquities Act.

In *Treasure Salvors, Inc. v. Unidentified Wrecked and Abandoned Sailing Vessel*,[46] the Fifth Circuit held that the Antiquities Act does not extend beyond the territorial sea, despite subsequent legislation authorizing federal regulation beyond it. Although the Fifth Circuit acknowledged that the federal government's role in regulating beyond the territorial seas had expanded since 1906, including through the adoption of the Outer Continental Shelf Lands Act,[47] none of that conveyed the degree of control that the federal government enjoyed on federally owned lands or federally controlled territories in 1906.[48]

When President Clinton proposed to designate the first marine monument beyond American territorial waters, he received some surprising pushback from the Departments of Interior and Commerce, which submitted a joint memorandum to OLC asserting that the EEZ is not "owned or controlled by the Federal Government." OLC ultimately disagreed but acknowledged that it was a "closer question" than earlier disputes over the president's designation authority.[49]

We believe that the OLC opinion is flimsy and that the attorney general or White House counsel should request a reconsideration of it as well. The Clinton-era OLC opinion argues that the EEZ is sufficiently controlled by the federal government because recent presidents have consistently asserted *some* regulatory authority over the area and the United States has greater regulatory authority than any foreign government.[50] Of course, the same is true of many areas that are unquestionably *not* "owned or controlled by the Federal Government."

Private lands in the United States, for instance, are subject to federal regulation under the Commerce Clause, and no other nation can claim an authority to regulate them. But this does not mean the president has the authority to unilaterally designate privately owned lands as a monument. The Antiquities Act confirms this, stating that the president can receive privately owned lands to include them in a monument, but only through the owner's voluntary relinquishment of them.[51] The OLC opinion cannot be squared with this.

It also asserts that the EEZ is sufficiently controlled by the federal government because it has the authority to protect threatened or endangered species found there.[52] Yet the same could be said of any privately owned land under the Endangered Species Act.[53]

The OLC opinion has other problems, but its main defect is the failure to effectively grapple with the federal government's limited power to regulate in the EEZ. Rather than address whether this affects the president's ability to designate a monument in this area, the opinion instead argues that the regulations imposed within the monument are limited by the customary international law that otherwise applies. However, that cannot be squared with the Antiquities Act. In 1906, land owned or controlled by the federal government described federally owned land and federal territories in which the federal government had almost no limits on its authority and could exercise its full police power. Consistent with that, the Antiquities Act *requires* monuments to be regulated as necessary to effectuate the statute's purposes. For these reasons, we think the OLC opinion in 2000 is erroneous.

Finally, even if the Antiquities Act does allow monument designations in international submerged lands in the United States' EEZ, such designations might be valid only for the seabed itself and for the purpose of seabed protection. If so, that would provide additional authority to revoke designations that are primarily designed to protect sea life in international waters and remove other restrictions in ocean habitat, even if they are above seabed features that might be the subject of protection. To be clear, other authority exists to regulate fishing and other activity in the oceans, but it is questionable whether the Antiquities Act provides such authority.

The act's text provides strong support for limiting monuments to landmarks and objects on the land and further limits reservations relating to such monuments to parcels "of land." In particular, the act provides authority for monument designations of only "*land*marks, historic and prehistoric *structures*, and other *objects* of historic or scientific interest that are

situated *upon the land*," and when such monuments are designated, the president may then "reserve as part thereof parcels of *land*" for protection (emphasis supplied). There may be some ancillary power to regulate the air above a monument or some activity in the sea above a marine monument (see discussion of *Cappaert v. United States* below), but it is doubtful that the ocean itself and its living denizens can be designated as part of the monument. It is equally doubtful that a reservation of land can encompass the water column as a matter of presidential discretion under the Antiquities Act.

The act's text provides strong support for limiting monuments to landmarks and objects on the land and further limits reservations relating to such monuments to parcels "of land."

In *Cappaert*, the Supreme Court upheld some authority to regulate the immediate watershed outside a monument if that is necessary to protect geologic structures and endangered wildlife in the monument grounds, but its holding was based on other federal law governing reserved water rights.[54] The Court did mention the endangered fish that swim in the unmoving pool of the monument at issue, but that reference does not seem necessary to its holding that appurtenant water outside the monument was reserved. The facts of that case are distinguishable in other ways from the unbounded ocean and the unthreatened fish, mammals, and other sea creatures that swim in and out of it.

Yates v. United States[55] supports one such distinction. If a "fish" is not a "tangible object" within the meaning of Sarbanes-Oxley law because it is not like the other listed things that should be protected from shredding,[56] then it is even less likely that the ocean and its sea life are objects analogous to "structures" and "landmarks" that are "situated upon the land" within the meaning of the Antiquities Act. And even if the ocean and its sea life are "objects" that could be part of a monument, the Antiquities Act's second step permits the reservation of only the "part thereof" that are "parcels of land" necessary to protect them.

Accordingly, if the ocean and its sea life cannot be designated as part of a monument, or if no reservation "of land" can include them, then their regulation must rely on some other principle of law (analogous to the federal law regarding reserved water rights) and perhaps on proof that such regulation is necessary to protect the landmark, structure, or other objects of historic or scientific interest at issue in the actual monument, such as the seamounts and underwater valleys or mountains. For these reasons, the president should be free to lift erroneous fishing restrictions that are in place solely by reason of a marine monument designation.

The Power to Reduce the Scope of a Reservation Pursuant to a Monument Designation

Almost all commentators, including past opinions from the attorney general and the solicitor of interior, agree that monument boundary adjustments are permissible.[57] Environmentalists often seek large expansions of existing monuments. As a result, several presidents have added vast additional reservations to existing national monuments, including three by President Obama that added millions of acres to them. Many presidents have made other boundary adjustments, including some modest to large reductions, and the Supreme Court has cited some of these

changes in describing the monuments at issue, implicitly assuming they were valid.

If large additions of land have been deemed necessary to protect certain objects, it is doubtful the president could not determine that some large reductions are reasonable or necessary to satisfy the "smallest area" requirement of the act. Modern technology might even help justify a reduction, for example, if smaller boundaries may now be more effectively monitored and protected.

Yet several commentators claim that the question of whether the president could affect significant reductions remains open.[58] No court has ruled on the scope of downward boundary adjustments. Several commenters assert that the absence of judicial authority is because no president has attempted a significant reduction in the land reserved for a monument, but that is not true. According to the National Park Service:

- President Eisenhower reduced the reservation for the Great Sand Dunes National Monument by 25 percent. (He reduced the original 35,528-acre monument by a net 8,920 acres.)[59]

- President Truman diminished the reservation for Santa Rosa Island National Monument by almost half. (The original 9,500-acre reservation by F. Roosevelt was diminished by 4,700 acres.)[60]

- Presidents Taft, Wilson, and Coolidge collectively reduced the reservation for Mount Olympus by almost half, the largest by President Wilson in 1915 (cutting 313,280 acres from the original 639,200-acre monument).[61]

- The largest percentage reduction was by President Taft in 1912 to his own prior reservation in 1909 for the Navajo National Monument. (His elimination of 320 acres from the original 360-acre reservation was an 89 percent reduction.)[62]

There are many other reductions or adjustments to monument boundaries, but the above reductions are significant by any measure.

It is surprising that some scholars who claim expertise in this area have accepted and repeated the mistaken assertion that no substantial reductions have been made. More importantly, their position that significant reductions might be prohibited is based on a selective reading of the act's purposes and personal policy arguments instead of the text, and it is often built on the premise that authority to repeal or rescind a prior designation does not exist, including an uncritical reliance on Attorney General Cummings' questionable opinion in 1938. Under this reading of the Antiquities Act, monuments may be significantly enlarged by later presidents but never significantly reduced absent an act of Congress.

For many of the same reasons that we reject a limitation on the president's revocation power, we also question limitations on his power to substantially reduce the size of existing monument reservations. Moreover, we think there are additional reasons why the president has broad authority to alter the parcels of land reserved under existing monument designations, including logical inferences from textual provisions and the varied reasons prior presidents have given for boundary reductions that do not suggest clear limitations.

One textual command supporting boundary adjustments is that the act requires reservations to be "in all cases . . . confined to the smallest area compatible with the proper care and management of the objects to be protected." There is no temporal limit to this requirement, and some presidential proclamations adjusting the boundaries of existing monuments recognize a continuing duty to review and comply with it. Even if boundary adjustments to date had all been somewhat minor, which is not the case, it is hard to read into the text a limiting principle that allows large additions but not large reductions.

Another textual hook is the discretionary nature of the president's authority under the Antiquities Act. The relevant language in Section 2 states that it is "in his discretion" whether to declare the national monument. It then states that he "*may* reserve as part thereof parcels of land" to protect the objects at issue (emphasis added). The parcels must, as noted above, be confined to the smallest *area* compatible with the

protective purpose, but it is still up to the president's discretion which precise parcels to designate. Apart from reducing the overall size, the next president may determine that a given monument with a patchwork of private inholdings is better protected by concentrating the monument within the federal land that the government owns and controls.[63] There is nothing in the act that privileges the original designation and regulations over a later presidential determination.

Moreover, there are more fundamental questions about how best to manage and protect federal property near national monuments with available resources. The belief that increasing federal regulation is always the best means of protecting something is more ideologically than empirically based, especially when it excludes all other options. Cooperation with state authorities and private property owners who own adjoining land often promotes better land-use decisions, including better protections for such properties. Such consultation and multiparty agreements tend to increase support for the resulting decisions and increase fundamental fairness, since some prior designations have walled in private lands and restricted the reasonable use of such private property.

The evidence surrounding many recent monument designations also suggests that some of the largest geological and scenic monuments were not motivated exclusively or even primarily by a desire to protect an "object" of historic or scientific interest as much as to lock up natural resources from development and use—regardless of how limited or temporary the surface disturbances would be. Such actions not only create economic hardship for local communities and injustice to those who may have reasonably depended on the timber, grazing, or mineral resources, but they may actually be counterproductive to the ecological and environmental interests that past presidents claimed to protect. For example, prohibiting fishing in vast grounds in the Atlantic or Pacific Oceans where fishermen have engaged in sustainable practices forces more concentrated activity in other areas that may trigger unsustainable impacts.

Such large monument reserves also contribute to an estimated $13.5 to $20 billion maintenance backlog on Department of Interior land-management responsibilities[64]—and deny the federal government any reasonable return on land-use fees and leases. "Limited resources" was the primary justification for several of President Obama's executive actions that redirected enforcement resources from broader narcotics and immigration enforcement policies to those Obama designated as more important narcotics and immigration priorities. A more careful accounting of federal land policy might lead a president to conclude that some vast monument reserves, under the Antiquities Act and other acts, diffuse attention and resources from higher priorities and contribute to environmental degradation, soil erosion, and other forms of mismanagement of federal property.

Prohibiting fishing in vast grounds in the Atlantic or Pacific Oceans where fishermen have engaged in sustainable practices forces more concentrated activity in other areas that may trigger unsustainable impacts.

Apart from all that, increasing public use of vast tracts of federal land should be sufficient grounds for reducing certain prior monument reservations. The facts that underlie one Supreme Court case may prove instructive in defining possible grounds for monument reductions.

In *Alaska v. United States*,[65] the Supreme Court affirmed its special master's recommendation regarding the federal versus state ownership of certain

submerged lands underwater near Alaska's southeast coast. Some of the land in dispute was under Glacier Bay, which is now a national park. Glacier Bay was first reserved as a national monument by President Coolidge's proclamation in 1925 and later enlarged by President F. Roosevelt's proclamation in 1939, both pursuant to the Antiquities Act. In describing the relevant lands in question, the Court also noted that President Eisenhower "slightly altered" the monument's boundaries in 1955.

The Supreme Court accepted without discussion that the addition by Roosevelt and the "altered" boundaries by Eisenhower were valid. The monument was made part of the Glacier Bay National Park by an act of Congress in 1980, but since the status of the land in 1959 (when Alaska was made a state) was the critical focus of its analysis, the national park act was not particularly relevant to that determination. The Court did not discuss the Eisenhower proclamation further, but that proclamation reduced the size of the Glacier Bay National Monument in three ways without any land swaps or additions to counter those reductions. More importantly, the grounds Eisenhower provided for that reduction are historically interesting and legally relevant.

In Proclamation 3089 on March 31, 1955,[66] Eisenhower reduced the size of Glacier Bay National Monument for three different reasons. One ground was that some lands "including several homesteads which were patented prior to the enlargement of the monument [by Roosevelt] are suitable for a limited type of agriculture use and are no longer necessary for the proper care and management of the object of scientific interest on the lands within the monument." Although Proclamation 3089 provides no further explanation of this exclusion, it is fair to read it as concluding that the original inclusion of this land was mistaken and, perhaps as important, that the lands were *no longer* necessary for the proper care of the objects of scientific interest in the monument.

The second reduction in the size of Glacier Bay National Monument was based squarely on Eisenhower's conclusion that such lands should have been included in Tongass National Forest instead of the national monument in 1939, when Roosevelt enlarged it, "and such lands are suitable for national-forest purposes." Eisenhower determined that the earlier inclusion of these lands in the monument was in error, since their exclusion from the forest was "erroneous." He did not specifically declare that they were "no longer necessary" to the proper care of the objects of scientific interest in the Glacier Bay National Monument, but he must have concluded they were never necessary to be included or that the mistaken inclusion in 1939 was sufficient to exclude them in 1955.

The third reduction (the first mentioned in the proclamation) was because certain lands are "now being used as an airfield for national-defense purposes and are no longer *suitable* for national-monument purposes" (emphasis supplied). How land reserved in a national monument became a military airfield is not explained. In some respects, this may be the most interesting exclusion of all. Whether the earlier use of the land for an airfield was legal or not, Eisenhower asserted the authority to declare a higher government purpose for federal land that was part of a national monument and, by proclamation, to remove it from the national monument reservation. Note also that Eisenhower states that the airfield land was no longer *suitable* for inclusion in the national monument *because it was an airfield*, not that the land was otherwise unsuitable for inclusion in the monument. Would the same reasoning apply if it were not yet an airfield?

And while Eisenhower's total reductions in the size of Glacier Bay National Monument were not great relative to the monument's overall size, they were not trivial either. According to the National Park Service, the reductions total more than 4,100 acres of submerged land and 24,900 acres of other land.[67] Most national monuments before 1955 were not 29,000 acres, so the reductions were large in an absolute sense. Moreover, some of President Eisenhower's other monument reductions constituted a larger proportion of the original size of the monument (e.g., Great Sand Dunes), and earlier presidential reductions were even greater, as discussed above.

Attempts to argue from the act's broad purposes that significant reductions would not be authorized are as conclusory as Cummings' analysis of the revocation issue. Reasoning from selective, broad protective purposes can always yield the desired result. We reach the opposite conclusion based on the text discussed above and consideration of all the act's purposes, the original compromises the act incorporated, and separation of powers principles.

Subsequent congressional land-management statutes do not change the Antiquities Act, but they cut sharply against the policy argument that the act's use is necessary to promptly secure land that is otherwise prone to looting or harmful development. Indeed, these more recent laws provide the same or superior protection without undermining Congress' primary role in federal land-use decisions. Of special note, the secretary of interior now has statutory authority to make emergency withdrawals of federal land with few limitations (and none relating to size), including land not under his department's jurisdiction, which expire no later than three years after they are withdrawn.[68]

Thus, one cannot truthfully defend the president's power to lock up land from reasonable public uses in perpetuity as an "emergency" measure to stop imminent harm, no matter how often some make this claim. Yet monument declarations do have one powerful, immediate effect: They stop or inhibit ongoing congressional debate and potential compromise over the land at issue—which is often the unstated goal. Congress has withdrawn many federal lands for heightened protection, but its background law and representative principles balance the interests of multiple stakeholders. Defenders of Antiquities Act abuse regularly implore the president to preempt or interfere with Congress' deliberations. Even so, they cannot reasonably argue that presidential authority under the act can work only in one direction and that the interest of the states and other citizens cannot be reconsidered.

Returning to the text of the act, we have previously noted that it would have to be tortured extensively to yield a manageable standard that allows permissible "minor" boundary changes and large "additions" but forbids "significant" reductions. Eisenhower's Proclamation 3089, and perhaps others, proves that reductions have been recognized as valid even without further additions or other "enhancements" based on later presidential determinations. It was enough for a president to declare that certain lands: (1) were mistakenly included in the original designation, (2) are no longer necessary to be included, or (3) serve some higher federal purpose.

If the president can revoke prior monuments altogether, there is no strong argument that he lacks a lesser power to significantly reduce the land withdrawn for one. But even if the president lacks the power to revoke a monument, past practice includes proclamations that reduced some monuments to a fraction of their current size, such as President Taft's 89 percent reduction of the Navajo Nation Monument. Moreover, we think the courts are more likely to uphold significant reductions if the president could credibly include in his determination that the original designation was inappropriately large relative to the object to be protected or has become so with changed circumstances.

It would bolster his position if the president includes any existing site-specific justifications for reducing the particular monument's land reservation. For example, a president might issue a proclamation determining that limited resources prevent proper management of the largest national monuments, that other authority now exists for the excluded parcels to be regulated and managed (including perhaps a management plan for them), that changed technology or other changed circumstances allow a smaller area to be designated to protect the objects in question, or that other changed circumstances warrant such reductions.

The president's authority to significantly reduce the size of an existing monument would be less certain if the Supreme Court or other appellate court ruled that he lacked a general discretionary authority to revoke prior monument designations. But even then, we think the president would retain the authority, if not the duty, to reduce the size of existing monuments that were unreasonably large relative to the objects being preserved—or have become illegally

large with changed circumstances. And such determinations should be entitled to the same or similar respect as the original reservations.

As with a complete revocation, someone would have to establish standing to sue to overturn a proclamation reducing the size of a monument, and that might be difficult in many cases. And even if standing is established, we think the challenger would have a significant burden to prove in order to prevail. If the challenge were based on a factual determination, such a challenger might have to prove an abuse of discretion to overcome the president's more recent determinations under the act, or the courts might hold that some determinations under the act are textually committed to the president's absolute discretion (absent corruption or a procedural failure) and not subject to judicial review.

The Power to Modify a Monuments' Management Conditions and Restrictions

In addition to revoking a monument or significantly altering its boundaries, a president could change some of the restrictions on management grounds if he determines that it still properly protects the "objects" of scientific or historic interest. Accordingly, a president could "transfer the management of a monument from one agency to another; expand, authorize, or prohibit uses such as mining or grazing; or allow new rights-of-way across the lands."[69] Recent monument proclamations tend to contain more detailed management plans than earlier proclamations,[70] which relied on the statutory authority of the agency secretary delegated to oversee the monument to issue regulations for managing it.[71]

Restrictions or allowances set forth in the original proclamation would need to be changed by a subsequent proclamation, unless the proclamation delegated that authority to the relevant agency official. Although the FLPMA limits the power of the secretary of interior to modify or revoke an actual monument designation or the land withdrawn, it does not change the secretary's power under the Antiquities Act to alter the monument's management plan when that is consistent with the underlying proclamation.

There should be no doubt that the president can modify land-use restrictions. As early as 1936, President Franklin Roosevelt issued a proclamation expressly making the restrictions on Katmai National Monument "subject to valid claims under the public-land laws . . . existing when the proclamations were issued and since maintained."[72] And nothing in the act's text limits the president's authority to change restrictions or uses for the land withdrawn.

Nevertheless, those who believe revocation is not permissible also raise questions about the "scope of this authority . . . to the extent that greatly reducing a monument's restrictions or expanding its uses can be analogized to effectively abolishing the monument."[73] That is not an inconsistent argument, but it is based almost entirely on the flawed premise that presidents are prohibited from revoking or significantly reducing the land withdrawn for any prior monument.

Conclusion

We have argued that the president retains a general discretionary power to revoke prior monument designations pursuant to the Antiquities Act. It is a general principle of government that the authority to execute a discretionary power includes the authority to reverse the exercise of that power. This power is at its height when prior designations were made illegally or in contravention of the act's mandate that designations be reasonable in size.

Moreover, the purpose of the act supports the president in his ability to respond to new factual determinations or changes in circumstance that require modification of a monument's boundaries. The plain language of the act, its legislative purpose, and the practice of past presidents all support this conclusion. Most importantly, it is compelled by the constitutional principle of separation of powers. If presidents choose not to protect their policies through Congress' bicameral process, they leave those policies vulnerable to their successors by constitutional design.

About the Authors

John Yoo is Emanuel S. Heller Professor of Law at the University of California, Berkeley, and a visiting scholar at the American Enterprise Institute.

Todd Gaziano is the executive director of Pacific Legal Foundation's DC Center and its senior fellow in constitutional law. He is also one of attorneys for a coalition of New England fishing organizations suing to overturn a marine monument in *Massachusetts Lobstermen's Association v. Ross.*

Notes

1. Percy Shelley's 1818 poem "Ozymandias" is about the ruins of an ancient kingdom, whose stern but long dead ruler declared it would last forever and make men tremble in despair. All that remains in modern times is a wrecked statue of the king, his boastful claim on its pedestal, and sand all around. For the text and history of the poem, see *Economist*, "The Real Ozymandias: King of Kings," December 18, 2013, http://www.economist.com/news/christmas specials/21591740 enthusiasms rivalries fads and fashions lie behind shelleys best known. Poetry and rulers vainly asserting the permanence of their works, however, are more timeless.
2. US Department of Interior, Rept. to Secretary of the Interior for Fiscal Year Ended June 30, 1909, 486 87.
3. Ronald F. Lee, "The Antiquities Act, 1900 1906," in *The Story of the Antiquities Act* (National Park Service, March 15, 2016), https://www.nps.gov/archeology/pubs/lee/Lee CH6.htm.
4. See Pub. L. 59 209, 34 Stat. 225 (June 8, 1906), now codified at 54 U.S.C. §§ 320301 03.
5. See Lee, "The Antiquities Act, 1900 1906," discussing Congress' refusal in the period before the Antiquities Act to pass five bills that sought to grant the secretary of the interior broad authority for designating national parks.
6. Ibid. ("The reluctance of the members of the Public Lands Committee, most of them western public lands states, to grant general authority to the Executive Branch to create new national parks is understandable in the light of their past experience with the timber reservations act of 1891.")
7. Although the National Park Service currently manages most existing national monuments, other units of the Department of Interior (the Bureau of Land Management and the US Fish and Wildlife Service) manage or comanage others. See list of national mon uments and their corresponding management agencies at National Parks Conservation Association, "Monuments Protected Under the Antiquities Act," January 13, 2017, https://www.npca.org/resources/2658 monuments protected under the antiquities act#sm. 00000py0rl7d8qfp5wxkeb7uvkeow. The original act contemplated that the Departments of Agriculture and Defense (then War) might also manage or relinquish land for national monuments and specified that the secretaries of interior, agriculture, and war had authority to jointly issue uniform regulations for managing national monuments. In recent decades, presidents have given responsibility to the National Oceanic and Atmospheric Administration (in the Department of Commerce) to manage or comanage marine monuments, and the US Forest Service (in the Department of Agriculture) manages or comanages certain other recent monuments.
8. See Lee, "The Antiquities Act, 1900 1906."
9. 252 U.S. 450 (1920).
10. See United States v. California, 436 U.S. 32 (1978); and Alaska v. United States, 545 U.S. 75 (2005), discussed in the section titled "Special Questions Regarding Marine Monument Designations."
11. See Tulare County v. Bush, 306 F.3d 1138, 1142 (D.C. Cir. 2001) (rejecting a challenge to the 327,769 acre Giant Sequoia National Monument as not constituting "the smallest areas compatible with proper care and management" of the objects being protected). Although the Supreme Court has not ruled expressly on a challenge to the excessive size of a monument, the courts have deferred to many presidential determinations under the act, and challengers may have to show an abuse of discretion to prevail on a size based claim. See discussion of judicial review in the section titled "Judicial Review." Nevertheless, *Tulare County* may be distinguishable in future challenges since the court held that the challengers failed to establish a factual basis for their claim, not that such a claim was barred. Consider one justification President Obama provided for creating the recent Bears Ears National Monument (see the section titled "Problems of Size"), which Utah officials have already said they will challenge: that it contains several ancient archeological sites. Although the proclamation also cited the area's cultural, geological, and historical significance, it is unclear how isolated archeological sites are better protected after a massive 1.35 million acre monument designation that incorporates all of them than before the designa tion, especially when the same two federal agencies (the US Forest Service and the Bureau of Land Management) will each manage the same areas after the designation as before it.

18. The Homestead Act of 1862 revised this law, significantly reducing the number of "preemption" claims. But Bates was addressing the rights of settlers who may have occupied the former military property before 1862.

19. See Uniform Trust Code: Revocation or Amendment of Revocable Trust § 602(a) (2010) ("Unless the terms of a trust expressly provide that the trust is irrevocable").

20. See Restatement (Third) of Trusts: Power of Settlor to Revoke or Modify § 63 (2003).

21. See, e.g., Commonwealth of Pa. v. Lynn, 501 F.2d 848, 855 56 (D.C. Cir. 1974).

22. See ibid.

23. 347 U.S. 483 (1954)

24. 163 U.S. 537 (1896).

25. Exec. Orders Nos. 11821, 39 F.R. 41501 (1974) (Ford); 12044, 43 F.R. 12661 (1978) (Carter); 12291, 46 F.R. 13193 (1981) (Reagan); 12866, 58 F.R. 51735 (1993) (Clinton); 13258, 67 F.R. 9385 (2002), and 13422, 72 F.R. 2763 (2007) (G. W. Bush); and 13497. 74 F.R. 6113 (22009) (Obama).

26. 272 U.S. 52 (1926).

27. See Goldwater v. Carter, 617 F.2d 697 (D.C. Cir. 1979), vacated by Goldwater v. Carter, 444 U.S. 996 (1979); and Kucinich v. Bush, 236 F. Supp. 2d 1 (D.D.C. 2002).

28. See INS v. Chadha, 462 U.S. 919 (1983).

29. 64 Stat. 849 (1950), codified at 54 U.S.C. § 320201(d) ("No extension or establishment of national monuments in Wyoming may be undertaken except by express authorization of Congress").

30. The FLPMA expressly limits agency officials' authority to "modify or revoke" national monuments created by the president under the Antiquities Act or other monuments created by Congress, but that simply confirms the natural reading of the Antiquities Act, which grants authority to the president alone to specify the parcels of land withdrawn for any monument created pursuant to the act. It should not be read to raise doubts about the president's authority to modify or revoke national monuments, as two Congressio nal Research Service reports (R44687 and RS20647) have suggested. FLPMA §204(j), 43 U.S.C. § 1714(j) provides:

> The Secretary shall not make, modify, or revoke any withdrawal created by Act of Congress; make a withdrawal which can be made only by Act of Congress; *modify or revoke any withdrawal creating national monuments under* [*the Antiquities Act*]; or modify, or revoke any withdrawal which added lands to the National Wildlife Refuge System prior to October 21, 1976, or which thereafter adds lands to that System under the terms of this Act. (emphasis supplied)

This restriction on the secretary's power creates no inference that Congress modified the president's authority in the Antiquities Act, and repeals by implication are strongly disfavored even if such an inference existed. The opposite reading of the text is much stronger, i.e., that Congress knew how to write express limitations and that it would have listed the president if its restriction on the secretary of interior's power was intended to bind the president. The lone sentence in a House report cited for the contrary view is, at best, itself ambiguous, but even unambiguous legislative history material is irrelevant when the statutory text is clear.

31. See 16 U.S.C. § 3213.

32. President Obama's 34 designations also overtook the previous record set by President Franklin Roosevelt, with 32 monument proclamations. See Juliet Eilperin and Brady Dennis, "Obama Names Five New National Monuments, Including Southern Civil Rights Sites," *Washington Post,* January 12, 2017, https://www.washingtonpost.com/national/health science/obama names five new national monuments including southern civil rights sites/2017/01/12/7f5ce78c d907 11e6 9a36 1d296534b31e story.html. All presidents since 1906 have issued such proclamations except Presidents Nixon, Reagan, and George H. W. Bush. National Park Service, "National

Monuments Designated by Presidents 1906 2009," https://www.nps.gov/parkhistory/hisnps/NPSHistory/national monuments.pdf. According to the National Parks Conservation Association, 157 monuments have been created under the Antiquities Act. See National Parks Conservation Association, "Monuments Protected Under the Antiquities Act." A few have been abolished by Congress. See National Park Service, "About 'Abolished' Monuments," March 15, 2016, https://www.nps.gov/archeology/sites/antiquities/abolished.htm. And the land constituting Papago Saguaro National Monument was conveyed to the state of Arizona for public purposes. See 54 U.S.C.A. § 320301 note, citing Pub. L. 92, 71st Cong., Apr. 7, 1930, c. 107, 46 Stat. 142.

Jeff,

Question for you. In the information below it mentions an energy royalty policy committee and mentions minerals and solar. When I sent it out several of my guys called asking what the role of this committee will be ? Anything you can share on that?

Regards,

Western Caucus Members Celebrate Action Toward American Energy Independence

WASHINGTON, D.C. – Today, Congressional Western Caucus **Chairman Paul A. Gosar D.D.S. (AZ-04), Executive Vice-Chairman Rep. Scott Tipton (CO-03), Chairman Emeritus Rep. Rob Bishop (UT-01), Chairman Emeritus Rep. Steve Pearce (NM-02)** and Western Caucus member **Rep. Doug Lamborn (CO-05)** issued the following statements after Secretary of the Interior Ryan Zinke signed several secretarial orders in response to President Trump's American Energy Independence Executive Order:

"It is a great thing when Congress and the Administration can work together to effect meaningful change. Revoking two more job-killing policies from the Obama Administration in the form of

the federal coal lease moratorium and the unlawful Compensatory Mitigation Order is common sense. Reestablishing the Royalty Policy Committee will ensure the American people have a voice on federal policies that impact their livelihoods. During his confirmation hearings, Secretary Zinke reiterated his commitment to restoring trust with local communities. With today's secretarial orders, he is doing precisely that," said **Chairman Gosar**. "I was honored to stand alongside friends, fellow Westerners and Secretary Zinke as the Secretary acted quickly on several directives laid out in President Trump's American Energy Independence Executive Order."

"It was an honor to stand alongside several of my Congressional colleagues from western states to witness Secretary Zinke sign orders that will repeal the Obama Administration's 2016 Coal Moratorium, support U.S. energy independence, and establish an energy royalty policy committee that ensures state, local, and tribal governments have a seat at the table when it comes to setting royalties for energy development within their borders. This is the type of support the West needs from Washington," said **Congressman Tipton.**

Congressman Bishop remarked, "This moratorium was a hallmark policy of the prior administration to stomp out coal with absolutely no plan to replace our most abundant domestic energy source. In the House, we've worked hard to empower states and tribes and promote a diverse energy portfolio. It's reassuring to now have partners at Interior and the White House working to advance these shared goals."

"I was happy to join some of my colleagues in the Congressional Western Caucus at today's signing ceremony with Secretary Zinke, confirming a joint effort as we pave the way forward in responsible energy policy. Revenues from energy production contribute greatly to our local economies in New Mexico," stated **Congressman Pearce**. "The orders signed today will allow for the responsible development of these resources on federal lands. We can start focusing on expanding an 'all of the above' energy strategy in New Mexico without choking and duplicative regulations, creating greater opportunities and putting people back to work."

"Just yesterday, the President signed an Executive Order that helps create American jobs and increase energy production. Today, the Department of the Interior took this Executive Order one step further by reviewing Obama-era environmental policies and lifting the Federal Coal Moratorium on our public lands," said **Congressman Lamborn**. "Around 40% of coal production occurs on public lands. We don't need stifling restrictions—we need more responsible and efficient coal production to help get people back to work and our economy back on track. I was pleased to join Secretary Zinke on this historic occasion, and I look forward to working with the Department of the Interior in the future."

Background:

Secretarial Order 3348: Repealing the 2016 Coal Moratorium and Ending the PEIS

On March 28, 2017, President Donald Trump signed the American Energy Independence Executive Order, which directed Secretary of the Interior Ryan Zinke to lift the federal coal lease moratorium issued by former Obama Administration Secretary of the Interior Sally Jewell. Federal coal leasing is important to the U.S. economy and roughly 40% of U.S. coal is produced on federal lands. By their own admission, Obama's Bureau of Land Management (BLM) estimated that nearly 1.9 billion tons of coal reserves were placed off limits in nine states as a result of the Secretarial Order.

On January 15, 2016, Interior Secretary Sally Jewell issued this Secretarial Order, imposing an

unprecedented moratorium on further coal lease sales pending the completion of a Programmatic Environmental Impact Statement (PEIS) and review of the Federal Coal Leasing Program. The coal industry was already facing an onslaught of destructive government regulations from the Obama Administration, but the moratorium was yet another crushing blow to producers across the South and West.

The moratorium not only undermined the integrity of present production potential, but more importantly threatened the very future of coal development on federal lands by signaling to investors that resources will be kept "in the ground" at whatever cost. Most troubling is the impact this decision had on families that rely on jobs tied to the industry. The moratorium and PEIS put nearly 65,000 direct and in-direct mining jobs at risk as well as negatively impacted billions of dollars in revenues to states used to pay for schools, reclamation, construction, and other critical infrastructure projects.

Text of Secretarial Order 3348, Concerning the Federal Coal Moratorium can be found HERE.

Charter Signed to Establish the Royalty Policy Committee

Secretary Zinke is committed to ensuring state, local and tribal governments have a say in energy development within their borders and that taxpayers are getting a fair return on investment. To that end, this charter establishes a new Royalty Policy Committee to include renewable energy in addition to mineral resources.

On April 2, 2014, Secretary Jewell terminated the charter of the Royalty Policy Committee, effectively stripping state, local and tribal governments of their say and input regarding energy development within their respective jurisdictions.

The primary goal of this committee is to ensure the public continues to receive the full value of all energy produced on federal lands.

The composition of the charter is further detailed as follows:

- The charter establishes a 28 member committee to provide the Secretary with advice
- No member may have financial interest/business with the Department of the
- Members will be both federal and non-federal partners. They will hail from energy producing states, tribes, the energy industry, academia/interest
- Each member will serve a two year term

Text of the Royalty Policy Committee Charter can be found HERE.

Secretarial Order 3349: Regarding American Energy Independence

Following the bold executive order signed by President Trump on March 28, 2017, Secretarial Order 3349, "American Energy Independence," takes numerous steps to unleash the power of American energy on public lands including the following items:

- Revokes Secretarial Order 3330 regarding Compensatory Mitigation and launches a review of the program
- Launches a review of all climate change policies within the department
- Launches a review of the National Park Service and Fish and Wildlife Service oil and gas regulations
- Launches a review of Bureau of Land Management's venting & flaring (methane) rule
- Confirms that Bureau of Land Management is withdrawing the hydraulic fracking rule

Text of the Secretarial Order 3349, American Energy Independence can be found HERE.

Hi Jeff, our talking points below touch on what the RPC's role will be.

Please let me know if you need anything else - thanks!

Charter Signed: Establish Royalty Policy Committee

Secretary Zinke is committed to ensuring state, local and tribal governments have a say in energy development within their borders and that taxpayers are getting a fair return on investment. To that end, he is establishing a new Royalty Policy Committee to include renewable energy in addition to mineral resources.

The primary goal is to ensure public continues to receive the full value of all energy produced on federal lands. The Secretary will seek their input on how we determine fair market value, collect revenues and how future policies could impact revenue collection.

Membership
The charter would establish a 28 member committee to provide the Secretary with advice;
No member may have financial interest/business with Interior;
Members will be both federal and non-federal partners. They will hail from energy producing states, tribes, the energy industry, academia/interest groups;
Each member will serve a two year term.

Jeff,

Question for you. In the information below it mentions an energy royalty policy committee and mentions minerals and solar. When I sent it out several of my guys called asking what the role of this committee will be ? Anything you can share on that?

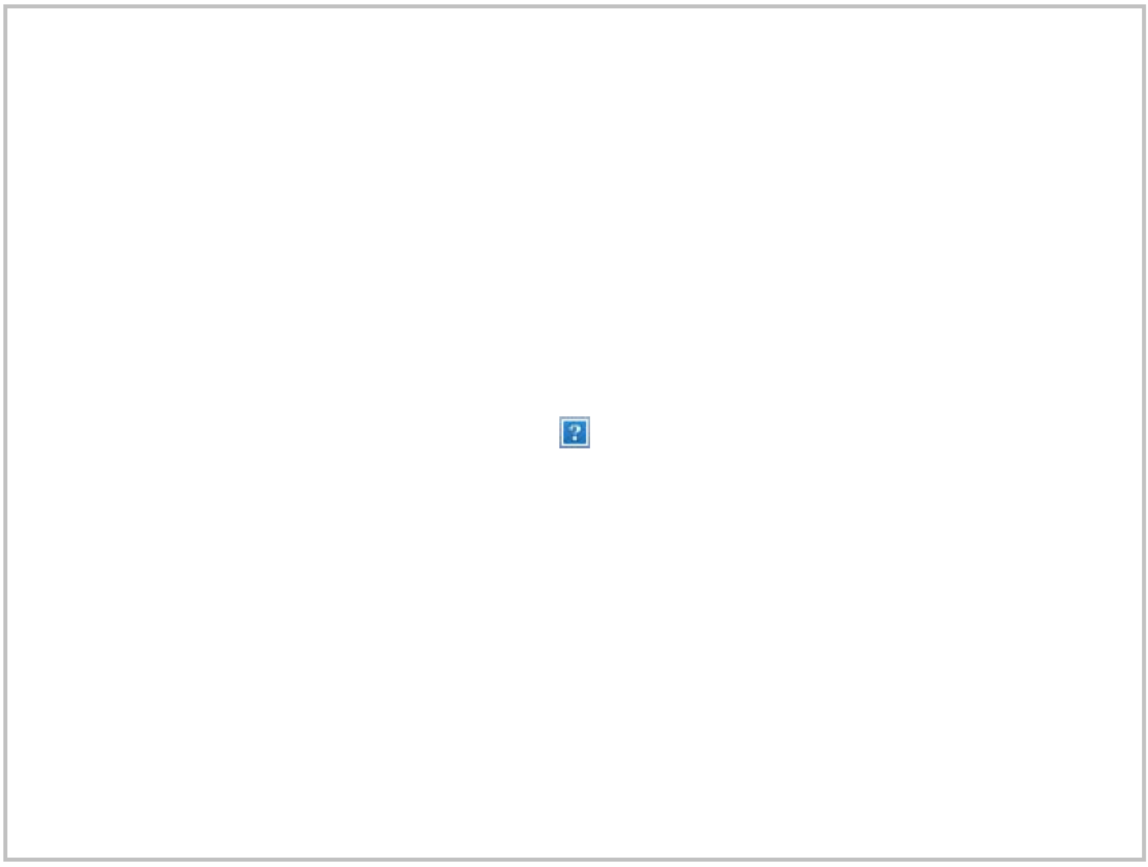
Western Caucus Members Celebrate Action

Toward American Energy Independence



WASHINGTON, D.C. – Today, Congressional Western Caucus **Chairman Paul A. Gosar D.D.S. (AZ-04), Executive Vice-Chairman Rep. Scott Tipton (CO-03), Chairman Emeritus Rep. Rob Bishop (UT-01), Chairman Emeritus Rep. Steve Pearce (NM-02)** and Western Caucus member **Rep. Doug Lamborn (CO-05)** issued the following statements after Secretary of the Interior Ryan Zinke signed several secretarial orders in response to President Trump's American Energy Independence Executive Order:

"It is a great thing when Congress and the Administration can work together to effect meaningful change. Revoking two more job-killing policies from the Obama Administration in the form of the federal coal lease moratorium and the unlawful Compensatory Mitigation Order is common sense. Reestablishing the Royalty Policy Committee will ensure the American people have a voice on federal policies that impact their livelihoods. During his confirmation hearings, Secretary Zinke reiterated his commitment to restoring trust with local communities. With today's secretarial orders, he is doing precisely that," said **Chairman Gosar**. "I was honored to stand alongside friends, fellow Westerners and Secretary Zinke as the Secretary acted quickly on several directives laid out in President Trump's American Energy Independence Executive Order."

"It was an honor to stand alongside several of my Congressional colleagues from western states to witness Secretary Zinke sign orders that will repeal the Obama Administration's 2016 Coal Moratorium, support U.S. energy independence, and establish an energy royalty policy committee

that ensures state, local, and tribal governments have a seat at the table when it comes to setting royalties for energy development within their borders. This is the type of support the West needs from Washington," said **Congressman Tipton.**

Congressman Bishop remarked, "This moratorium was a hallmark policy of the prior administration to stomp out coal with absolutely no plan to replace our most abundant domestic energy source. In the House, we've worked hard to empower states and tribes and promote a diverse energy portfolio. It's reassuring to now have partners at Interior and the White House working to advance these shared goals."

"I was happy to join some of my colleagues in the Congressional Western Caucus at today's signing ceremony with Secretary Zinke, confirming a joint effort as we pave the way forward in responsible energy policy. Revenues from energy production contribute greatly to our local economies in New Mexico," stated **Congressman Pearce**. "The orders signed today will allow for the responsible development of these resources on federal lands. We can start focusing on expanding an 'all of the above' energy strategy in New Mexico without choking and duplicative regulations, creating greater opportunities and putting people back to work."

"Just yesterday, the President signed an Executive Order that helps create American jobs and increase energy production. Today, the Department of the Interior took this Executive Order one step further by reviewing Obama-era environmental policies and lifting the Federal Coal Moratorium on our public lands," said **Congressman Lamborn**. "Around 40% of coal production occurs on public lands. We don't need stifling restrictions—we need more responsible and efficient coal production to help get people back to work and our economy back on track. I was pleased to join Secretary Zinke on this historic occasion, and I look forward to working with the Department of the Interior in the future."

Good afternoon,

Attached is the hearing memo for Tuesday's legislative hearing on:

H.R. 220 (Rep. Don Young), To authorize the expansion of the existing Terror Lake hydroelectric project, and for other purposes.

H.R. 1411 (Rep. Frank Pallone, Jr.), Exempts the summer flounder fishing from current federal fishery regulations. *"Transparent Summer Flounder Quotas Act."*

Discussion Draft of H.R. ____ (Rep. Doug Lamborn)**,** To amend the Reclamation Project Act of 1939 to authorize pumped storage hydropower development utilizing multiple Bureau of Reclamation reservoirs. *"Bureau of Reclamation Pumped Storage Hydropower Development Act."*

I have also reattached the calendar invite for your convenience.

Testimony for Tuesday can be found HERE when made available. Please check back periodically.

Please feel free to contact me at the Subcommittee on Water, Power and Oceans if you have any questions at extension 5-8331.

Thank you and we look forward to seeing you all there.

Hearing Memorandum

March 31, 2017

To: All Subcommittee on Water, Power and Oceans Members

From: Majority Committee Staff, Subcommittee on Water, Power and Oceans (x5-8331)

Hearing: Legislative hearing on H.R. 220, a bill to authorize the expansion of an existing hydroelectric project, and for other purposes.
April 4, 2017 at 10:00 a.m. in 1324 Longworth H.O.B.

Bill Summary:

H.R. 220 authorizes the limited expansion of the Terror Lake hydroelectric project on Kodiak Island, Alaska.

Invited Witnesses:

Mr. Darron Scott
President and CEO
Kodiak Electric Association, Inc.
Kodiak, Alaska

Department of the Interior
Washington, DC

Background:

The Terror Lake Hydroelectric Project (Project) on Kodiak Island, Alaska provides 31 Megawatts[1] of hydropower capacity to the Island's approximately 13,789 residents and a U.S. Coast Guard Station (USCG). Kodiak Island (Island) is off the North American electricity grid and is reliant solely on electric generation within the Island or imported diesel fuel. Before the Project was built, the Island primarily relied on diesel fuel.[2]

The Project, licensed by the Federal Energy Regulatory Commission (FERC) as Project No. 2743 in 1981, was the result of an agreement between the federal government, the State of

[1] http://www.akenergyauthority.org/TerrorLake.
[2] Olive, Stewart W. and Lamb, Berton L. *Conducting a FERC Environmental Assessment: A Case Study and Recommendations from the Terror Lake Project*. U.S. Fish and Wildlife Service. April 1984, p. 8.

Alaska, environmental groups and the Kodiak Electric Association (KEA).[3] Since the Project is within the Kodiak Island National Wildlife Refuge (Refuge), the settlement required the following mitigation measures: 1) the Alaska Department of Natural Resources agreed to manage 28,000 acres of state-owned land contiguous to the Refuge at Kiliuda Bay as though it were part of the refuge; and 2) The State of Alaska agreed that at least half of the Shearwater Peninsula would be designated as wildlife habitat where grazing would be prohibited.[4] The Refuge currently comprises 82.6% of the Island.[5]

The KEA, a rural electric cooperative, owns and operates the Project. Almost 99.7% of KEA's energy sources are renewable and consist of wind energy and hydropower produced at Terror Lake with the remaining 0.3% consisting of diesel generation.[6] One of KEA's largest customers is the USCG Base on the Island, which includes Air Station Kodiak, USCG Cutter Spar, and the USCG Cutter Alex Haley.[7] KEA also provides electricity for USCG housing and support services. Due to the harsh environment in Alaska and the importance of offshore activities to the local economy, these USCG activities are essential not only to the Island's residents but to activities in the Bering Sea and the Gulf of Alaska.

In light of growing electricity demand on the Island, KEA will be unable to meet the needs of the residents without acquiring additional energy resources. KEA believes that the increased generation capacity must come in the form of either an expansion of the Terror Lake Hydroelectric Project or increased diesel fuel imports.[8] As a result, the utility seeks to expand the Project. The proposed expansion would divert a small portion of flows in the Upper Hidden Basin into Terror Lake via a 1.2 mile underground tunnel (see Map 1 below). This diversion would increase the water resources at Terror Lake by 25%, resulting in an additional 33,000 Megawatt-hours (MWh) of generation each year and totaling an estimated output of the Project of approximately 168 million MWh annually.[9] According to KEA estimates, if the expansion of

[4] "The Terror Lake Case", p. 5.

[5] https://www.fws.gov/refuge/Kodiak/about html; http://www kodiak.org/kodiak_island_detailed_geography. Percentage determined as 1.9MM acres of refuge out of 2.3 MM acres total land comprising Kodiak Island.

[6] http://www.kodiakelectric.com/generation html.

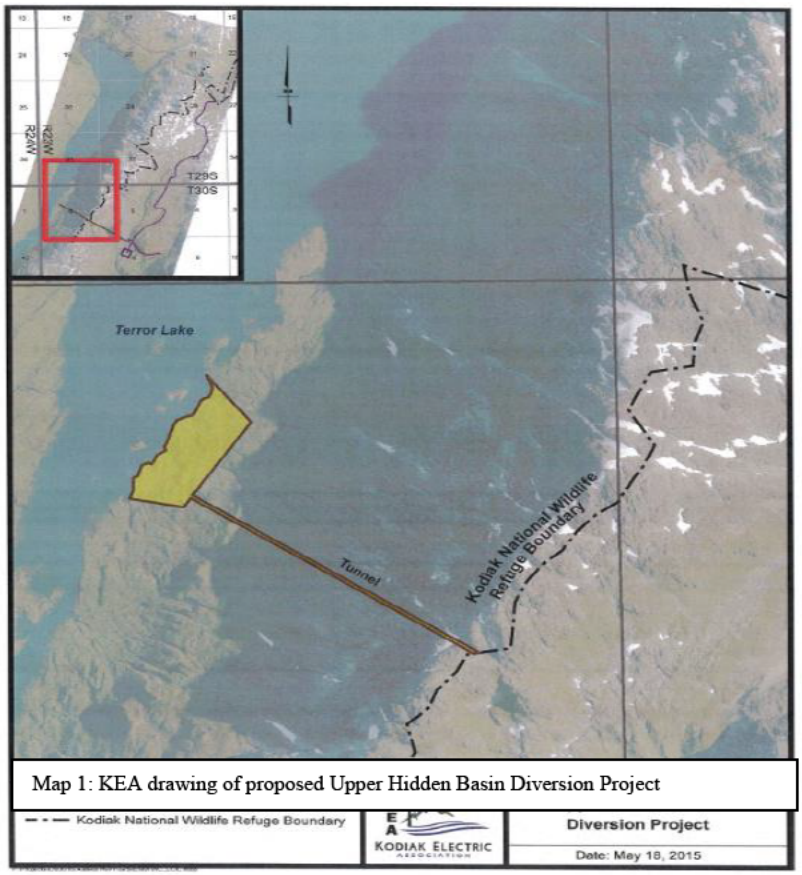
[7] https://www.uscg.mil/BaseKodiak/default.asp (See "Team Kodiak" tab).

[8] As KEA explained in its FERC amendment application, the stability and reliability that will be provided by the Upper Hidden Basin Diversion cannot be met by additional variable renewable resources: KEA is already pushing the technologic edge for wind energy penetration on its isolated micro-grid with battery and flywheel energy storage system integration, and cannot practically engineer any more wind energy additions to its system. The stable integration of all variable energy forms . . . on KEA's isolated micro-grid has reached its maximum under KEA's current conditions. Application for Non-Capacity Amendment to License, Preliminary Draft Environmental Assessment § 2.2.2. https://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=14258904.

[9] Application for Non-Capacity Amendment to License, Exhibit B. https://elibrary ferc.gov/idmws/common/opennat.asp?fileID=14258904.

Terror Lake is not approved, the diesel generation required for heat alone will result in an annual release of 140 tons of NO_x and 6,500 tons of greenhouse gases into the atmosphere.[10]

KEA plans to use up to twenty acres of land on the Refuge to accommodate the construction of the needed tunnel and remediation site. H.R. 220 allows KEA to use not more than twenty acres of federal land within the Refuge for the proposed expansion. The legislation specifically requires the expansion to be subject to appropriate terms and conditions under the Federal Power Act. This would allow the U.S. Fish and Wildlife Service to impose what's commonly referred to as "mandatory conditions" under Section 4(e) of the Federal Power Act as a way for the federal agency to order mitigation.



Map 1: KEA drawing of proposed Upper Hidden Basin Diversion Project

The bill seeks to expedite the expansion in light of rising costs and a limited construction season. According to KEA, delaying construction by just one year would incur $11 million in additional project costs, which includes $1.3 million in costs associated with future supplemental diesel generation that will be required to meet electricity demand.[11] All of these costs would be borne by the Island's ratepayers, including the U.S. Coast Guard.

[10] Alaska Dept. of Environmental Quality, Kodiak Generating Station Title V Air Quality Operating Permit No. AQ0211TVP03, Condition 10.3.b for Emission Units 2C and 3C. http://dec.alaska.gov/Applications/Air/airtoolsweb/AirPermitsApprovalsAndPublicNotices .

[11] KEA estimates that 600,000 gallons of diesel would be required annually to produce the electricity that will be provided by the Upper Hidden Basin Diversion. Although the price of diesel fuel is volatile and KEA's contract price is tied to the Oil Price Information Service, its most recent delivery of diesel fuel (in January 2017) was invoiced at $2.26/gallon.

Major Provisions of H.R. 220:

Section 1(b) – Authorizes the licensee for the Terror Lake hydroelectric project to occupy not more than 20 acres of Federal land to construct, operate and maintain the Upper Hidden Basin Diversion Expansion without further authorization of the Secretary of the Interior or under the Alaska National Interest Lands Conservation Act.

Section 1(c) – Clarifies that this legislation does not impact any requirement to procure a revised license from FERC nor impact the ability of the USFWS to impose conditions on that license, pursuant to the Federal Power Act and in particular section 4(e) of that Act. This also in no way impacts any requirement to conduct an environmental review pursuant to the National Environmental Policy Act of 1969.

Cost

The Senate Energy and Natural Resources Committee voice voted an identical bill (S. 1583 – Sen. Murkowski) during the 114th Congress. The Congressional Budget Office (CBO) found that that the Senate language would have "no significant impact on the federal budget."[12] The Senate Energy and Natural Resources Committee passed the same bill (S. 214) in this Congress by voice vote on March 30, 2017.

Administration Position

Unknown.

Effect on Current Law (Ramseyer)

Not applicable.

H.R. 1411 (Rep. Frank Pallone, D-NJ), *"Transparent Summer Flounder Quotas Act"*

Bill Summary:

H.R. 1411 exempts the Atlantic summer flounder fishery from an updated regulation revising the 2017 and 2018 seasons and instead requires federal fishery managers to manage the fishery under the original regulation that set the 2017 and 2018 seasons.

Cosponsors: Rep. LoBiondo (R-NJ)

Invited Witnesses:

Mr. Robert Beal
Executive Director
Atlantic States Marine Fisheries Commission
Arlington, Virginia

Captain John McMurray

Washington, D.C.

Background:

Each state in the Atlantic region manages its own fisheries in state waters (0-3 miles from shore) or collectively through the Atlantic States Marine Fisheries Commission (ASMFC). The National Oceanic and Atmospheric Administration (NOAA) manage fisheries in federal waters (3-200 miles from shore) through the applicable fishery management council (in this case the Mid-Atlantic Fishery Management Council).

A vital species to the mid-Atlantic economy is summer flounder, more commonly known as "fluke." While fluke range from Canada to Florida, they are most abundant in the mid-Atlantic region.[1] According to the ASMFC, fluke are "one of the most sought after commercial and recreational fish along the Atlantic coast," with more than seventeen million pounds being harvested in 2014.[2] The ASMFC manages the fluke fishery in state waters while NOAA manages the fishery in federal waters.[3]

Picture 1: Summer Flounder
Source: NOAA

Under the current quota system for fluke, the commercial fishery receives 60 percent and the recreational fishery receives 40 percent of the overall quota set for a given year.[4] While this split can cause some disagreement among the different user groups, the state-by-state allocations are more contentious in part because NOAA and the ASMFC use historical state landings data from 1998[5] to determine state allocations. Some states have argued that changes in the resource status and fishery performance warrant a reallocation of the overall quota among states.[6]

Controversy over fluke fishing has increased due to new developments within the fishery. In 2013 and 2014, the ASMFC alleged that some fishermen abused the Mid-Atlantic Fishery Management Council's Research Set-Aside program to illegally harvest fish.[7] Subsequently, a 2015 stock assessment update for fluke found that the stock was being overfished – mostly attributed to below-average year classes from 2010-2013.[8] The findings of the 2015 assessment

[7] http://www.asmfc.org/species/summer-flounder
[8] National Oceanic and Atmospheric Administration: Stock Assessment Update of Summer Flounder for 2015, August, 2015

contrast with the last fluke assessment in 2013 that found that the stock was not overfished, and that overfishing was not occurring.[9]

As the 2015 assessment illustrated a significant decrease in the health of the stock, a 29 percent reduction in total fluke Allowable Biological Catch (ABC) – which is the maximum amount of fish that can be sustainably harvested, from which quotas are derived – was recommended for the 2016 fishing season.[10] However, industry criticized this assessment and the resulting recommended reductions. According to one angler: "We see a lot of flounder. We raised the [size] limit and saved a lot of fish. It looks like it recovered and then the next year they say we have a problem."[11] Ultimately, NOAA reduced the 2016 ABC by **29 percent** over the previous year.[12] The 2016 ABC resulted in a commercial quota of 8.12 million pounds, and a recreational harvest limit of 5.24 million pounds.[13] The final rule that set the 2016 season also set the 2017 and 2018 seasons, with further declining ABCs of 15.86 and 15.68 million pounds, respectively.[14]

To determine if the ABCs set for 2016-2018 were still appropriate, NOAA's Northeast Fishery Science Center conducted an updated stock assessment in 2016, which included 2015 commercial and recreational catch levels.[15] Although recreational and commercial landings for 2015 were both below their annual quotas, the assessment determined that overfishing of the fluke fishery was occurring.[16] Due to that determination, NOAA published a final rule in December 2016 revising the previously set 2017 and 2018 commercial and recreational ABCs.[17] The revised ABCs resulted in additional reductions of approximately **30 percent for 2017** and **16 percent for 2018** in relation to the previously set ABCs for those years.[18] Following those reductions, the ASMFC released its final fishery management plan for recreational fluke harvest in February 2017.[19] These regulations required all states, with the exception of North Carolina, to increase the minimum size of a retained fish by one inch, but kept the possession limit of four fish per day.[20]

[20] Id at 19, table 5

New Jersey's economy stands to take a significant hit under these reductions as, historically, the state has accounted for nearly 40 percent of landings among states.[21] As such, state officials and the New Jersey congressional delegation have been vocal against NOAA and the ASMFC implementing these cuts. New Jersey's Department of Environmental Commissioner Bob Martin has called the cuts an "attack on our economy, it's an attack on our way of life."[22] However, others do not question the underlying stock assessment science but believe that the outcome may not be favorable.[23]

H.R. 1411 aims to reverse these cuts by exempting the fishery from the regulation revising the 2017 and 2018 quotas and instead requires that NOAA and the ASMFC manage the fishery under the original 2017 and 2018 quotas. Under the bill, this exemption would remain in effect until federal fishery managers conduct a new stock assessment and publish a new rule in the Federal Register to set new seasons.[24]

Major Provisions/Analysis of H.R. 1411:

Section 2 exempts the summer flounder fishery from the 2017 fishery regulations (81 FR 93842) the fishery from the regulation revising the 2017 and 2018 quotas and instead requires that NOAA and the ASMFC manage the fishery under the original 2017 and 2018 quotas. Under this section, this exemption would remain in effect until NOAA has completed a new stock assessment and published a rule in the Federal Register to set new seasons.

Cost:

The Congressional Budget Office has not completed a cost estimate of this bill at this time.

Administration Position:

Unknown.

Effect on Current Law (Ramseyer):

Not applicable.

Subcommittee on Water, Power and Oceans
Doug Lamborn, Chairman
Hearing Memorandum

March 31, 2017

To: All Subcommittee on Water, Power and Oceans Members

From: Majority Committee Staff
Subcommittee on Water, Power and Oceans (x5-8331)

Hearing: Legislative hearing on a Discussion Draft of H.R. ____ (Rep. Doug Lamborn), To amend the Reclamation Project Act of 1939 to authorize pumped storage hydropower development utilizing multiple Bureau of Reclamation reservoirs. *"Bureau of Reclamation Pumped Storage Hydropower Development Act."*
April 4, 2017 at 10:00 a.m. in 1324 Longworth HOB

Bill Summary:

In order to stimulate non-federal pumped storage hydropower development in the seventeen western states, the Discussion Draft of H.R. ___ (Rep. Lamborn, R-CO) authorizes pumped storage hydropower at Bureau of Reclamation facilities.

Invited Witnesses:

Mr. Tim Culbertson
Secretary-Manager
Columbia Basin Hydropower
Ephrata, Washington

U.S. Department of the Interior
Washington, DC

Background:

Overview

The arid western United States (West), once sparsely populated due in large part to scarce water supplies, is now home to more than 70 million people and is one of the most productive agricultural regions in the world. This transformation of the West primarily occurred due to the development of multi-purpose surface water projects that stored water in mainstem rivers and their tributaries. The Bureau of Reclamation (Reclamation), a federal agency created in 1902, played a pivotal role in developing and maintaining much of the water infrastructure in the West.

Many of Reclamation's projects are multi-purpose in nature, and its reservoirs and dams further generate enough emissions-free electricity to serve at least 3.5 million homes annually.[1] This is accomplished through the operation of 53 hydroelectric power plants that annually produce, on average, 40 billion kilowatt-hours over the last 10 years.[2] It would take approximately 23.5 million barrels of crude oil or 6.8 million tons of coal to produce an equal amount of electricity.[3] Nationally, hydropower accounts for almost 7% of domestic electricity generation, divided equally between federal and non-federal output.[4]

Pumped Storage

Pumped storage hydropower facilities pump water stored at a lower reservoir to an upper reservoir during periods of low electricity demand. During periods of high electricity demand, water is released from the upper reservoir and run through turbines to produce electricity.[5] It not only provides power for baseload (full-time) needs and peak times, but also serves as a backup generation source for intermittent wind and solar power.[6]

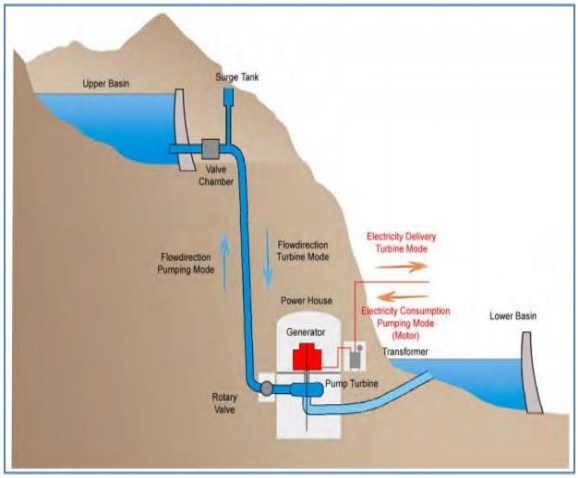

Figure 1 Typical Pumped Storage Facility. Source: Alstom Power

When Reclamation allows non-federal entities to produce hydropower at its facilities, it uses a "lease of power privilege" (LOPP) process. A LOPP is a contractual right given to a non-federal entity to use a Reclamation facility for electric power generation that is consistent with the project's purposes.[7] As part of this arrangement, the entity pays a fee (commonly referred to as a "falling water charge") to Reclamation for the use of the facilities and that fee is credited towards the capital repayment of the Reclamation facility. There are currently thirteen LOPP projects at Reclamation facilities: seven dams and six conduits with a combined capacity of nearly 46,000 kW.[8] According to Reclamation, the national potential for new pumped storage is 34,000 MW, although it would be far less at the agency's facilities.[9]

[6] http://www.vox.com/2015/6/19/8808545/wind-solar-grid-integration
[7] https://www.usbr.gov/power/LOPP/index.html
[8] https://www.usbr.gov/Power/LOPP/LOPP_Development_11-2016.xlsx
[9] https://www.usbr.gov/power/video/index.html

Even though the LOPP is used for Reclamation facilities that are authorized for hydropower development, there has been some historic inconsistency over what federal agency would manage hydropower development at Reclamation's facilities. In some cases, Reclamation has clear authority to develop hydropower at a specific project given its legislative history and authorized project purposes. In other cases, the Federal Energy Regulatory Commission (FERC) could have authority if the underlying project's authorization did not specifically include hydropower as a component. Congress cleared up some of this confusion when it passed and President Barack Obama signed the *"Bureau of Reclamation Small Conduit Hydropower Development and Rural Jobs Act"*, which explicitly authorized hydropower development at Reclamation's canals and water pipelines (conduits).[10]

There is still some confusion over which agency would oversee pumped storage development at certain Reclamation facilities. As an example, some of Reclamation's water users have expressed a desire to work directly with Reclamation to develop pumped storage hydropower at the agency's facilities but have run into uncertainty.

One such entity is Columbia Basin Hydropower (CBHP), which is looking to develop a pumped storage hydropower project in Washington State rated up to 500 megawatts.[11] CBHP seeks to develop the Banks Lake North Dam Project (Project), located in central Washington State near the Grand Coulee Dam. The Project would utilize two existing Reclamation reservoirs: the Banks Lake upper reservoir and Franklin D. Roosevelt (Roosevelt Lake) lower reservoir.[12] Since April 2012, there has been uncertainty over which federal regulatory process should apply to the Project. CBHP wishes to pursue the LOPP process since the Project would be located on federal lands administered by the Reclamation and operated in coordination with Reclamation's Keys Pumping Plant and Grand Coulee. A CBHP witness will testify on this subject.

To help clarify this process and to bring about certainty, the discussion draft authorizes pumped storage hydropower development that utilizes multiple Reclamation reservoirs. This authorization is intended to make it clear that Reclamation would be the lead agency which would oversee pumped storage hydropower development at these facilities.

Major Provisions of the Discussion Draft of H.R. :

Section 2 amends the Reclamation Project Act of 1939 to authorize pumped storage hydropower development utilizing multiple Bureau of Reclamation reservoirs.

Cost:

The Congressional Budget Office has not completed a cost estimate of this draft bill at this time.

Administration Position:

Unknown.

Effect on Current Law (Ramseyer):

Showing Existing Law As Amended by the Discussion Draft of the Bureau of Reclamation Pumped Storage Hydropower Development Act
[text to be added highlighted in blue]

Reclamation Project Act of 1939 (43 U.S.C. 485h)

§485h. New projects; sale of water and electric power; lease of power privileges

(a) Findings of Secretary

No expenditures for the construction of any new project, new division of a project, or new supplemental works on a project shall be made, nor shall estimates be submitted therefor, by the Secretary until after he has made an investigation thereof and has submitted to the President and to the Congress his report and findings on-

(1) the engineering feasibility of the proposed construction;

(2) the estimated cost of the proposed construction;

(3) the part of the estimated cost which can properly be allocated to irrigation and probably be repaid by the water users;

(4) the part of the estimated cost which can properly be allocated to power and probably be returned to the United States in net power revenues;

(5) the part of the estimated cost which can properly be allocated to municipal water supply or other miscellaneous purposes and probably be returned to the United States.

If the proposed construction is found by the Secretary to have engineering feasibility and if the repayable and returnable allocations to irrigation, power, and municipal water supply or other miscellaneous purposes found by the Secretary to be proper, together with any allocation to flood control or navigation made under subsection (b) of this section, equal the total estimated cost of construction as determined by the Secretary, then the new project, new division of a project, or supplemental works on a project, covered by his findings, shall be deemed authorized and may be undertaken by the Secretary. If all such allocations do not equal said total estimated cost, then

said new project, new division, or new supplemental works may be undertaken by the Secretary only after provision therefor has been made by Act of Congress enacted after the Secretary has submitted to the President and the Congress the report and findings involved.

(b) Allocation of part of cost to flood control or navigation

In connection with any new project, new division of a project, or supplemental works on a project there may be allocated to flood control or navigation the part of said total estimated cost which the Secretary may find to be proper. Items for any such allocations made in connection with projects which may be undertaken pursuant to subsection (a) of this section shall be included in the estimates of appropriations submitted by the Secretary for said projects, and funds for such portions of the projects shall not become available except as directly appropriated or allotted to the Department of the Interior. In connection with the making of such an allocation, the Secretary shall consult with the Chief of Engineers and the Secretary of the Army, and may perform any of the necessary investigations or studies under a cooperative agreement with the Secretary of the Army. In the event of such an allocation the Secretary of the Interior shall operate the project for purposes of flood control or navigation, to the extent justified by said allocation therefor.

(c) Furnishing water to municipalities; sale of electric power; lease of power privileges

(1) The Secretary is authorized to enter into contracts to furnish water for municipal water supply or miscellaneous purposes: *Provided*, That any such contract either (A) shall require repayment to the United States, over a period of not to exceed forty years from the year in which water is first delivered for the use of the contracting party, with interest not exceeding the rate of 3½ per centum per annum if the Secretary determines an interest charge to be proper, of an appropriate share as determined by the Secretary of that part of the construction costs allocated by him to municipal water supply or other miscellaneous purposes; or (B) shall be for such periods, not to exceed forty years, and at such rates as in the Secretary's judgment will produce revenues at least sufficient to cover an appropriate share of the annual operation and maintenance cost and an appropriate share of such fixed charges as the Secretary deems proper, and shall require the payment of said rates each year in advance of delivery of water for said year. Any sale of electric power or lease of power privileges, made by the Secretary in connection with the operation of any project or division of a project, shall be for such periods, not to exceed forty years, and at such rates as in his judgment will produce power revenues at least sufficient to cover an appropriate share of the annual operation and maintenance cost, interest on an appropriate share of the construction investment at not less than 3 per centum per annum, and such other fixed charges as the Secretary deems proper: *Provided further*, That in said sales or leases preference shall be given to municipalities and other public corporations or agencies; and also to cooperatives and other nonprofit organizations financed in whole or in part by loans made pursuant to the Rural Electrification Act of 1936 [7 U.S.C. 901 et seq.]. Nothing in this subsection shall be applicable to provisions in existing contracts, made pursuant to law, for the use of power and miscellaneous revenues of a project for the benefit of users of water from such project. The provisions of this subsection respecting the sales of electric power and leases of power privileges shall be an authorization in addition to and alternative to any authority in existing laws related to particular projects, including small conduit hydropower development and pumped storage hydropower development utilizing multiple Bureau of Reclamation reservoirs. No contract relating to municipal water supply or miscellaneous purposes or to electric power or

power privileges shall be made unless, in the judgment of the Secretary, it will not impair the efficiency of the project for irrigation purposes.

(2)(A) When carrying out this subsection, the Secretary shall first offer the lease of power privilege to an irrigation district or water users association operating the applicable transferred conduit, or to the irrigation district or water users association receiving water from the applicable reserved conduit. The Secretary shall determine a reasonable time frame for the irrigation district or water users association to accept or reject a lease of power privilege offer for a small conduit hydropower project.

(B) If the irrigation district or water users association elects not accept [1] a lease of power privilege offer under subparagraph (A), the Secretary shall offer the lease of power privilege to other parties in accordance with this subsection.

(3) The Bureau of Reclamation shall apply its categorical exclusion process under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.) to small conduit hydropower development under this subsection, excluding siting of associated transmission facilities on Federal lands.

(4) The Power Resources Office of the Bureau of Reclamation shall be the lead office of small conduit hydropower policy and procedure-setting activities conducted under this subsection.

(5) Nothing in this subsection shall obligate the Western Area Power Administration, the Bonneville Power Administration, or the Southwestern Power Administration to purchase or market any of the power produced by the facilities covered under this subsection and none of the costs associated with production or delivery of such power shall be assigned to project purposes for inclusion in project rates.

(6) Nothing in this subsection shall alter or impede the delivery and management of water by Bureau of Reclamation facilities, as water used for conduit hydropower generation shall be deemed incidental to use of water for the original project purposes. Lease of power privilege shall be made only when, in the judgment of the Secretary, the exercise of the lease will not be incompatible with the purposes of the project or division involved, nor shall it create any unmitigated financial or physical impacts to the project or division involved. The Secretary shall notify and consult with the irrigation district or water users association operating the transferred conduit before offering the lease of power privilege and shall prescribe terms and conditions that will adequately protect the planning, design, construction, operation, maintenance, and other interests of the United States and the project or division involved.

(7) Nothing in this subsection shall alter or affect any existing agreements for the development of conduit hydropower projects or disposition of revenues.

(8) Nothing in this subsection shall alter or affect any existing preliminary permit, license, or exemption issued by the Federal Energy Regulatory Commission under Part I of the Federal Power Act (16 U.S.C. 792 et seq.) or any project for which an application has been filed with the Federal Energy Regulatory Commission as of August 9, 2013.

(9) In this subsection:

(A) Conduit.-The term "conduit" means any Bureau of Reclamation tunnel, canal, pipeline, aqueduct, flume, ditch, or similar manmade water conveyance that is operated for the distribution of water for agricultural, municipal, or industrial consumption and not primarily for the generation of electricity.

(B) Irrigation district.-The term "irrigation district" means any irrigation, water conservation or conservancy, multicounty water conservation or conservancy district, or any separate public

entity composed of two or more such districts and jointly exercising powers of its member districts.

(C) Reserved conduit.-The term "reserved conduit" means any conduit that is included in project works the care, operation, and maintenance of which has been reserved by the Secretary, through the Commissioner of the Bureau of Reclamation.

(D) Transferred conduit.-The term "transferred conduit" means any conduit that is included in project works the care, operation, and maintenance of which has been transferred to a legally organized water users association or irrigation district.

(E) Small conduit hydropower.-The term "small conduit hydropower" means a facility capable of producing 5 megawatts or less of electric capacity.

(d) Delivery of water for irrigation; repayment contract prerequisites

No water may be delivered for irrigation of lands in connection with any new project, new division of a project, or supplemental works on a project until an organization, satisfactory in form and powers to the Secretary, has entered into a repayment contract with the United States, in a form satisfactory to the Secretary, providing among other things-

(1) That the Secretary may fix a development period for each irrigation block, if any, of not to exceed ten years from and including the first calendar year in which water is delivered for the lands in said block; and that during the development period water shall be delivered to the lands in the irrigation block involved at a charge per annum per acre-foot, or other charge, to be fixed by the Secretary each year and to be paid in advance of delivery of water: *Provided*, That where the lands included in an irrigation block are for the most part lands owned by the United States, the Secretary, prior to execution of a repayment contract, may fix a development period, but in such case execution of such a contract shall be a condition precedent to delivery of water after the close of the development period: *Provided further*, That when the Secretary, by contract or by notice given thereunder, shall have fixed a development period of less than ten years, and at any time thereafter but before commencement of the repayment period conditions arise which in the judgment of the Secretary would have justified the fixing of a longer period, he may amend such contract or notice to extend such development period to a date not to exceed ten years from its commencement, and in a case where no development period was provided, he may amend such contract within the same limits: *Provided further*, That when the Secretary shall have deferred the payment of all or any part of any installments of construction charges under any repayment contract pursuant to the authority of the Act of September 21, 1959 (73 Stat. 584), he may, at any time prior to the due date prescribed for the first installment not reduced by such deferment, and by agreement with the contracting organization, terminate the supplemental contract by which such deferment was effected, credit the construction payments made, and exercise the authority granted in this section. After the close of the development period, any such charges collected and which the Secretary determines to be in excess of the cost of the operation and maintenance during the development period shall be credited to the construction cost of the project in the manner determined by the Secretary.

(2) That the part of the construction costs allocated by the Secretary to irrigation shall be included in a general repayment obligation of the organization; and that the organization may vary its distribution of construction charges in a manner that takes into account the productivity of the various classes of lands and the benefits accruing to the lands by reason of the construction: *Provided*, That no distribution of construction charges over the lands

included in the organization shall in any manner be deemed to relieve the organization or any party or any land therein of the organization's general obligation to the United States.

(3) That the general repayment obligation of the organization shall be spread in annual installments, of the number and amounts fixed by the Secretary, over a period of not more than 40 years, exclusive of any development period fixed under paragraph (1) of this subsection, for any project contract unit or, if the project contract unit be divided into two or more irrigation blocks, for any such block, or as near to said period of not more than forty years as is consistent with the adoption and operation of a variable payment formula which, being based on full repayment within such period under average conditions, permits variance in the required annual payments in the light of economic factors pertinent to the ability of the organization to pay.

(4) That the first annual installment for any project contract unit, or for any irrigation block, as the case may be, shall accrue, on the date fixed by the Secretary, in the year after the last year of the development period or, if there be not development period, in the calendar year after the Secretary announces that the construction contemplated in the repayment contract is substantially completed or is advanced to a point where delivery of water can be made to substantially all of the lands in said unit or block to be irrigated; and if there be no development period fixed, that prior to and including the year in which the Secretary makes said announcement water shall be delivered only on the toll charge basis hereinbefore provided for development periods.

(e) Contracts to furnish water

In lieu of entering into a repayment contract pursuant to the provisions of subsection (d) of this section to cover that part of the cost of the construction of works connected with water supply and allocated to irrigation, the Secretary, in his discretion, may enter into either short- or long-term contracts to furnish water for irrigation purposes. Each such contract shall be for such period, not to exceed forty years, and at such rates as in the Secretary's judgment will produce revenues at least sufficient to cover an appropriate share of the annual operation and maintenance cost and an appropriate share of such fixed charges as the Secretary deems proper, due consideration being given to that part of the cost of construction of works connected with water supply and allocated to irrigation; and shall require payment of said rates each year in advance of delivery of water for said year. In the event such contracts are made for furnishing water for irrigation purposes, the costs of any irrigation water distribution works constructed by the United States in connection with the new project, new division of a project, or supplemental works on a project, shall be covered by a repayment contract entered into pursuant to said subsection (d).

(f) Public participation

No less than sixty days before entering into or amending any repayment contract or any contract for the delivery of irrigation water (except any contract for the delivery of surplus or interim irrigation water whose duration is for one year or less) the Secretary shall-

(1) publish notice of the proposed contract or amendment in newspapers of general circulation in the affected area and shall make reasonable efforts to otherwise notify interested parties which may be affected by such contract or amendment, together with information indicating to whom comments or inquiries concerning the proposed actions can be addressed; and

(2) provide an opportunity for submission of written data, views and arguments, and shall consider all substantive comments so received.

Subject: Cruz News: March 31, 2017
Date: Saturday, April 01, 2017 4:40:23 AM

March 31, 2017

Greetings,

This week the Trump Administration issued an executive order rolling back a number of costly Obama-era regulations, including the Clean Power Plan, the rules for new power plants, and the methane rule. Excessive regulations like these slow the economy, and crush job creation. This is a significant victory for Texas and the nation and I am hopeful it serves as an initial, powerful early step in unleashing the American Energy Renaissance.

On Wednesday, I joined a majority of my colleagues in the Senate Judiciary Committee in support of Judge Neil Gorsuch's nomination to the Supreme Court. I have been thankful for the opportunity to do my part in helping successfully usher Judge Gorsuch's confirmation through the first stages of his confirmation, and urge my colleagues across the aisle to join in support of this brilliant and immensely talented judge when the full Senate takes up his nomination next week.

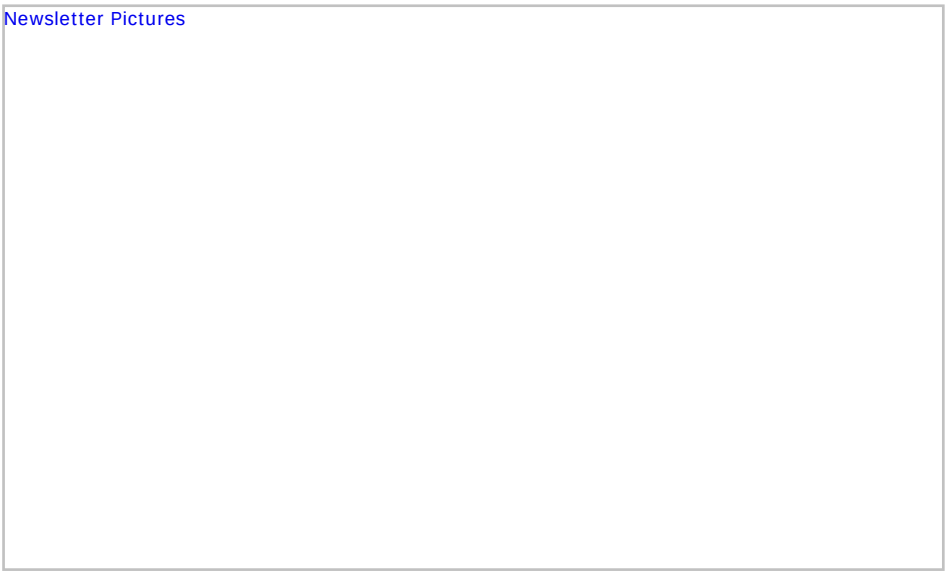
Throughout the week, I also had the pleasure of visiting with members of the Texas Farm Bureau, Texas Cattle Feeders Association, American Loggers Council, Texas Restaurant Association, and Texas AIPAC where I discussed my priorities for the 115th Congress. I remain excited and optimistic about the opportunities before us to repeal Obamacare, implement fundamental tax reform and regulatory reform, and confirm Judge Gorsuch to the Supreme Court.

Please read below for an update from this last week.

Keep Texas Strong,

TC Sig

Ted Cruz



Sen. Cruz: 'Judge Gorsuch Should be Confirmed to the Supreme Court and He Will be Confirmed to the Supreme Court'

On Wednesday, Sen. Cruz joined his colleagues in the Senate Judiciary Committee in support of Judge Neil Gorsuch's nomination to the Supreme Court. Sen. Cruz urged his Democratic colleagues who were willing to confirm Judge Gorsuch ten years ago to do so again.

"Judge Gorsuch should be confirmed to the Supreme Court and he will be confirmed to the Supreme Court," Sen. Cruz said. "On any objective measure Judge Gorsuch is impeccably well qualified for the court. Gorsuch has spent a lifetime in the law building a record demonstrating that he will make an exemplary justice. A decade ago when he was nominated to the Federal Court of Appeals, the Senate confirmed him by voice vote – not a single senator spoke out against him. If they supported his being on the Court of Appeals a decade ago, what's changed? The universal assessment of Judge Gorsuch's tenure as a judge is that he is a judge who follows the law without partiality to any litigant and without partiality to any policy outcome. That is what we want and deserve in judges."

Sen. Cruz Praises Coast Guard for Approving Presidio Bridge Permit

Sen. Ted Cruz issued the following statement praising the U.S. Coast Guard for advancing Texas' Presidio International Rail Bridge permit process after urging action in a Senate Commerce Committee hearing last week.

"Reconstruction of the Presidio International Rail Bridge is an important project to the State of Texas," Sen. Cruz said. "After burning to the ground in February of 2008, the Texas Department of Transportation developed plans with the Army Corp of Engineers for reconstruction – however the project was delayed due to bureaucratic red tape. I urged the Coast Guard to work with my office in expediting the reconstruction permit of the bridge – and I am grateful that they have moved the process forward by issuing a 30-day notice for permit approval."

Texas Transportation Commissioner Jeff Austin III thanked Sen. Cruz for urging the Coast Guard to move forward with the reconstruction permit at the beginning of the Texas

Department of Transportation Commission meeting this week.

“We are extremely grateful to Senator Ted Cruz for his swift action in speaking directly to Coast Guard Commandant, Admiral Paul Zukunft, to rectify the delays in our permit for the South Orient Rail Bridge,” Commissioner Austin said. “We look forward to seeing the process move forward and in continuing to work with Senator Cruz on behalf of Texans.”

Read the full press release here.

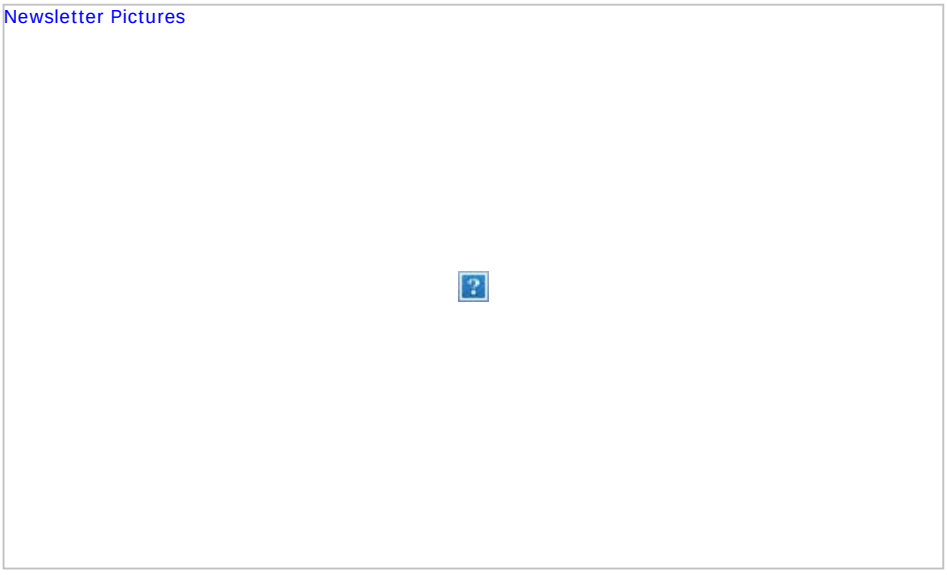
Sen. Cruz Introduces the Public Water Supply Invasive Species Compliance Act of 2017

On Thursday, Sen. Cruz introduced a bill to provide certainty to water agencies who supply water to Texans and to protect the water supply future of Texas. The legislation ensures that interstate water transfers between Texas, Louisiana and Arkansas will not be interrupted as a result of the Lacey Act, which affects trade in wildlife, fish, or plants across state lines. Rep. Louie Gohmert (R-Texas) has filed companion legislation in the U.S. House of Representatives.

“For the last several years, Texas water interests have faced regulatory barriers at every turn,” Sen. Cruz said. “With this legislation, water agencies who supply water to Texans will now have the confidence and clarity to continue providing water without interruption from Washington.”

Last month, Sen. Cruz addressed the 13th annual Texas Water Day, hosted by the Texas Water Conservation Association, where he reiterated his commitment to reducing federal regulations that impact Texas water rights and water conservation and returning more regulatory authority to state and local governments.

Read the full press release here.



Sen. Cruz: ‘When We Think Boldly and Creatively We Can Unleash the Free Enterprise System’

Sen. Cruz delivered remarks at a luncheon hosted by the Federalist Society to discuss the role of economic liberty in the U.S. and what can be done to remove government barriers that restrict Americans’ full participation in the economy.

“What folks here understand is that jobs and economic growth, they come from the private sector, they come from entrepreneurs putting capital at risk and they come from small businesses,” Sen. Cruz said. “I can tell you in the Senate my number one priority is jobs and economic growth. The reason for that is simple, it is the number one priority for the Texans I represent. From East Texas to West Texas, from the Panhandle to the Rio Grande, Texans want more jobs, higher wages and more opportunity. Two-thirds of all new jobs come from small businesses, and if you want to see more jobs and economic growth there's a tried-and-true method - regulatory reform and tax reform. When we think boldly and creatively, we can unleash the free enterprise system.”

Read the full press release here.

Sen. Cruz: White House Action is a Win for Job Creation and Economic Growth

On Wednesday, Sen. Cruz released the following statement praising the Trump Administration’s executive action to roll back a number of costly Obama-era climate regulations, including the Clean Power Plan, the rules for new power plants, and the methane rule:

“Today’s executive order is a huge victory for Texans and Americans in every corner of our nation. President Trump should be commended for rolling back these regulations that were intended to effectively eliminate coal power plants and drive up the price of certain key forms of energy. Excessive regulations like these, that pick winners and losers and force Americans to use certain types of energy, harm job creation and slow economic growth.

“All of us want clean water and clean air, but we shouldn’t have to choose between a clean environment and a healthy, growing economy. The previous administration’s effort to regulate our energy sector by executive fiat should be a lesson that regulations that impact the lives of every American should be approved by Congress, not imposed by the unelected bureaucracy. In fact, Congress should return much of the environmental rulemaking and regulation to the states, whose regulators are closer to the people and have a better understanding of their own state’s economy and environmental conditions.

“Over the last eight years, regulations aimed at reducing greenhouse gas emissions cost more than $457 billion, which is more than $3,350 per household. The United States should be focusing on pro-growth policies that encourage competition and create consumer choice. This action by the president today is a significant and powerful step in unleashing the American Energy Renaissance.”

DEPARTMENT OF THE INTERIOR
FY 2011 Interior Appropriations Bill
Effect Statement on Congressional Action

Bureau/Office: Bureau of Land Management
Appropriation: Management of Land and Resources, General Provisions, and Administrative Provisions
Project/Budget Element: Railroad Rights-of-Way

House Action: The House includes two provisions regarding the use of rights-of-way granted pursuant to the General Railroad Right-of-Way Act of 1875.

House Report Statement: "Section 115 addresses Solicitor Opinion M-37025, dated November 4, 2011."

House Bill Language: "SEC. 115. None of the funds made available by this or any other Act may be used by the Secretary of the Interior to review, require approval of, or withhold approval for use of a right-of-way granted pursuant to the General Railroad Right-of-Way Act of 1875 (43 U.S.C. 934-939) if authorization of the use would have been considered under Department policy to be within the scope of a railroad's authority as of the day before the effective date of the Department's Solicitor's Opinion M-37025, issued on November 4, 2011."

The House also adds related bill language to BLM's Administrative Provisions

"Administrative Provisions" .
Provided further, That the Secretary shall approve any use of a right-of-way granted pursuant to the General Railroad Right-of-Way Act of 1875 (43 U.S.C. 934-939) if authorization of the use would have been considered under Department policy to be within the scope of a railroad's authority as of the day before the effective date of the Department's Solicitor's Opinion M-37025, issued on November 4, 2011."

Reference: H.R. 5538, Pages 8 and 61-62.

Effect of House Action: Section 115 and the new clause added by the House to BLM's Administrative Provisions are contradictory and the Department cannot reconcile the direction in both provisions. Section 115 and the Administrative Provisions language are clearly intended to override the Department's legal interpretation of the scope of the General Railroad Right-of-Way Act of 1875 (43 U.S.C. 934-939), as specifically expressed through the Department's Solicitor's Opinion M-37025 (November 4, 2011), and to reinstate the Department's previous legal interpretation of the 1875 Act.[1] However, the provisions provide inconsistent direction to the

[1] The Solicitor's Opinion M-37025 concluded that the scope of the 1875 Act rights-of-way are limited to only those activities that derive from or further a railroad purpose and that any activities beyond this scope require approval by the BLM. Whereas, the Department's previous legal interpretation, as reflected in Solicitor's Opinion M-36964 (January 5, 1989), concluded that a railroad could conduct any activity within the right-of-way (ROW) as long as such activity was not inconsistent with the purpose of railroad operations and that the BLM had no authority over such activities.

Secretary and seem to reflect a misunderstanding of the Department's legal interpretations of the 1875 Act. The Administrative Provisions language requires BLM "to approve" any use of a right-of-way granted pursuant to the 1875 Act "if authorization of the use would have been considered under Department policy to be within the scope of a railroad's authority as of the day before the Solicitor's Opinion M-37025." The provisions appear to reflect a misunderstanding of the interpretations offered prior to Solicitor's Opinion M-37025 because those interpretations viewed BLM as having no authority over activities within railroad ROWs, and therefore no authority to review or approve a railroad's activities. The provisions are inconsistent because the Administrative Provisions language would require BLM to affirmatively "approve" uses within a railroad's 1875 Act ROW, while section 115 would prevent BLM from carrying out that obligation by prohibiting it from spending funds "to approve" the planned use of a railroad ROW. There are additional ambiguities regarding these provisions that could generate problems, including, but not limited to: (1) the Administrative Provisions language is unclear as to whether it is intended only to cover uses existing as of November 4, 2011, or whether it covers existing uses and future uses, and (2) it is unclear whether the Administrative Provisions language is directing the Secretary to use existing authority to approve such uses or whether this is independent authority for such an approval.

In addition to the contradictory nature of the proposed new clause in the Administrative Provisions and Section 115, the Department would strongly oppose any language that overrides Solicitor's Opinion M-37025 for several reasons. The proposed provisions inaccurately refer to the Solicitor's Opinion as "Departmental policy." Instead of being a policy statement, Solicitor's Opinion M-37025 is the Department's legal interpretation of the scope of the right-of-way granted under the 1875 Act based on relevant case law. The proposed provisions would effectively require the Department to ignore its legal interpretation of the scope of the rights railroads received under the 1875 Act and give railroads greater rights than they obtained through the original grants. Railroad grantees, in fact, would receive overly expansive rights to the detriment of the public (and possibly to private land holders) and counter to the Federal government's general statutory direction to protect Federal interests, e.g., Section 504(g) of the Federal Land Policy and Management Act. Additionally, by extension, these provisions would effectively provide railroad ROW holders with an exemption from environmental laws, including the National Environmental Policy Act, that would otherwise be required under the Department's legal interpretation of the scope of 1875 Act grants.

In short, the Administrative Provisions and Section 115 include contradictory direction that could lead to inaction and they also include ambiguous language that could generate confusion. Moreover, the intended purpose of the provisions would create legally ambiguous outcomes for the public's interests, railroad ROW holders, and private property holders with rights to lands.

Senate Action The Senate includes report language on railroad rights-of-way and the Department's Solicitor's Opinion M-37025.

Senate Report Statement "Railroad Rights-of-Way." The Committee notes with concern the broad ramifications of the Bureau's treatment of acceptable uses of railroad rights of way as re-interpreted in the Department's Solicitor's Opinion M-37025, issued on November 4, 2011. The Committee believes the Department should amend its policies to ensure any use of a right-of-

way granted pursuant to the General Railroad Right-of-Way Act of 1875 by the railroad holding title to the right of way, or authorized by such railroad, is within the scope of the railroad's authority to use, or authorize others to use, the right of way received pursuant to the act, if authorization of the use would have been considered under Department policy to be within the scope of a railroad's authority as of the day before the effective date of the Opinion M-37025. In the interim, the Bureau should refrain from engaging in unnecessary and costly new permitting activities for existing uses.

Senate Bill Language SEC. 118. (a) Any proposed new use of the Arizona & California Railroad Company's Right of Way for conveyance of water shall not proceed unless the Secretary of the Interior certifies that the proposed new use is within the scope of the Right of Way.

(b) No funds appropriated or otherwise made available to the Department of the Interior may be used, in relation to any proposal to export groundwater for municipal use, for approval of any right-of-way or similar authorization on the Mojave National Preserve or lands managed by the Needles Field Office of the Bureau of Land Management, or for carrying out any activities associated with such right-of-way or similar approval.

Reference S.3068, Page 64, and Senate Report 114-281, Pages 13-14.

Effect of Senate Action In light of the November 2011 Solicitor's Opinion M-37025, the BLM issued Instruction Memorandum 2014-122 in August 2014, which provides specific guidance on the evaluation of existing and proposed uses within rights-of-way granted under the General Railroad Right-of-Way Act of March 3, 1875. While the Department acknowledges the Senate report language expressing the Committee's concern with the November 2011 Solicitor's Opinion M-37025, the BLM would use that Opinion and Instruction Memorandum 2014-122 as the basis for the certification required by Section 118(a).

Consistent with the Solicitor's Opinion M-37025 and BLM's Instruction Memorandum 2014-122, the BLM evaluated Cadiz, Inc.'s proposed use of the Arizona & California Railroad's (ARZC) right-of-way (ROW). On October 2, 2015, the BLM California State Office made an administrative determination that the Cadiz Project as contemplated was beyond the scope of ARZC's ROW grant because it does not derive from or further a railroad purpose. The determination was sent to Cadiz, Inc. on October 5, 2015.

The administrative determination indicates that Cadiz, Inc. would require a separate authorization (e.g., a FLPMA ROW) from BLM in order for the project to proceed. However, section (b) of the proposed bill language would prohibit BLM from approving or issuing such an authorization or ROW.

Preferred Action The Department strongly opposes any language that overrides the Department's Solicitor's Opinion M-37025.

Good morning, Todd,
As you know, Artesia and Roswell are planning our annual Washington Fly-in. Usually, we meet with FWS and BLM in separate meetings, but have had some difficulties in the last two years with BLM. This year, I am asking for assistance in setting up meetings that would be appropriate for the following issues, which are primarily focused on BLM and FWS, but may include others:

- APD processing and permitting for oil & gas production – the new computerized system was not ready for roll-out, which is causing confusion and delays; moreoever, we would like to discuss the unpredictable timelines for APDs which cause delays in production and tie up significant funding.
- State BLM sale – we would like to see the BLM return to quarterly sales in New Mexico.
- The Resource Management Plan, which is delayed
- Venting & Flaring rule – the rule is not ready for

implementation; we hope for reconsideration of the rule altogether
The anticipated decision on the Texas Horned Shell Mussel and the associated CCAs
Other ESA listings that may be in the works

We will be in Washington May 1-3. We respectfully request a meeting or meetings at Interior on Monday, May 1. I have attached a list of our attendees. Please let me know if you have questions or need additional information.

Thank you for your assistance and direction,
Hayley

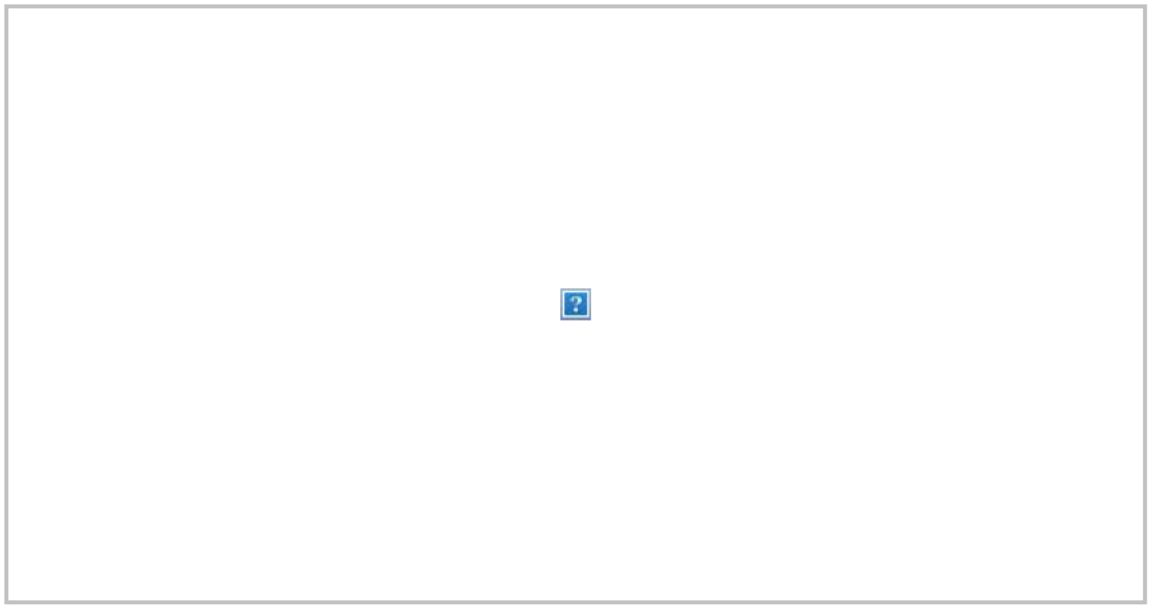
Western Caucus Members Applaud Zinke Proposal to Repeal Job-Killing ONRR Rule



WASHINGTON, D.C. – Today, Congressional Western Caucus **Chairman Paul A. Gosar D.D.S. (AZ-04), Executive Vice Chairman Rep. Scott Tipton (CO-03), Chairman Emeritus Rep. Rob Bishop (UT-01), Chief Forestry Officer Rep. Bruce Westerman (AR-04), Chairman Emeritus Rep. Steve Pearce (NM-02)** and Western Caucus member **Rep. Steve Scalise (LA-01)** released the following statements following the announcement from the Department of the Interior of a proposal to repeal the Obama Administration's Consolidated Federal Oil & Gas and Indian Coal Valuation Reform Rule in its entirety:

Chairman Gosar remarked, "I am thrilled to hear that Secretary Zinke is taking action to roll back another duplicative and costly regulation from the Obama Administration. ONRR's valuation rule would disproportionately impact small producers by burying them with compliance costs, ultimately driving up energy prices for everyday consumers. By taking steps to repeal this unconstitutional tax on job creators, the Trump Administration continues to follow through on the promise to get America back on the path toward energy independence and job creation."

"The ONRR's mineral valuation rule added more red-tape, complexity and confusion to an already overly-complicated mineral valuation process, creating a disincentive for responsible development of our natural resources on federal land and ultimately hurting hardworking Americans and their families the most. I am glad to see that Secretary Zinke joins us in recognizing the harmful impact this rule would have on energy producers and consumers alike and has started the process for withdrawing the regulation through the rulemaking process," **Congressman Tipton** stated.

"The Trump administration should be commended for beginning the process of reversing the impossible regulatory requirements imposed on energy development by this rule. Endless layers of regulation don't yield greater returns for taxpayers, they paralyze economic activity. In this case, the rule hit marginal producers – the small businesses that support local economies – the hardest," **Congressman Bishop** said**.**

"The ONRR Coal, Oil, and gas valuation reform rule does nothing to help consumers. Instead, it would result in high costs for energy used to heat homes, fuel cars, and more. The Interior Department is right to repeal this overreach by the Obama administration. It is my hope that the Interior Department continues to unwind unnecessary and burdensome regulations handed down by an administration bent on protecting a political legacy instead of standing with the American people," said **Congressman Westerman.**

"These rules are a direct attack on energy production taking place on federal lands and I applaud the Administration's decision to review them. The valuation rule must be substantially changed or repealed to ensure taxpayers in New Mexico and across the nation are getting a fair return. The proposed rules will reduce federal, state, and tribal royalty revenue and will take away good-paying jobs by making it more difficult to develop domestic energy resources," said **Congressman Pearce**. "I am pleased to see the Department of the Interior take action to allow for the affordable and reliable production of energy, bringing American taxpayers more jobs and lower costs."

Congressman Scalise remarked, "Let's be clear—the ONRR mineral valuation rule was nothing but a shadow tax on American energy. In my home state of Louisiana, it meant reduced state revenue sharing dollars, hindering our ability to make major investments to restore our coast and protect Louisiana families and businesses from devastating storms. I applaud Secretary Zinke's action to begin withdrawing this damaging rule, and look forward to working with the Department of Interior to promote safe and responsible energy production throughout the U.S."

Background

***(Courtesy of Western Caucus members Tipton and Scalise as well as westerncaucus.house.gov)*:**

Today, April 3, 2016, the Department of the Interior announced a proposal to repeal the Obama Administration's Consolidated Federal Oil & Gas and Indian Coal Valuation Reform Rule in its entirety

On July 1, 2016 the Office of Natural Resource Revenue (ONRR) published its Final Rule for the valuation of federal onshore and offshore oil & gas production, as well as for coal production on federal and Indian lands for the purposes of calculating federal royalties. The agency premised the rule on a need for greater clarity and simplicity in the calculation of royalties owed on produced natural resources. However, the Rule achieves the opposite – injecting uncertainty and arbitrary bureaucracy into complex accounting determinations. In turn, the rule would bankrupt small, independent energy producers, and discourage production on federal lands across the West and offshore in the Gulf of Mexico and Alaska, meaning less revenue for the U.S. Treasury and our nation's rural communities.

On February 13, 2017, Reps. Scott Tipton and Steve Scalise introduced H.J. Res. 71, a resolution of disapproval under the Congressional Review Act that would rescind the onerous rulemaking and prohibit substantially similar rules from being considered. Further information on the bill can be found HERE.

Reps. Pearce and Lamborn have led multiple appropriations requests to prohibit funding for carrying out this rule.

In 2016, the federal revenue generated from onshore and offshore energy production brought over $5.4 billion to the federal treasury. Despite the regulatory onslaught from the Obama Administration, the energy industry managed to provide well-paying jobs to thousands of Americans and contribute billions of dollars to both the federal treasury and local communities in which the production takes place.

When the ONRR's 247-page Royalty Valuation Rule was finalized on June 30, 2016, the Department of the Interior insisted it was trying to improve and update its regulatory framework. However, rather than simplifying the valuation process, the ONRR rule would impose burdensome, costly, and unnecessary reporting requirements on small oil and gas producers,

arbitrarily requiring the collection of unneeded information. In many cases, the rule changes the reporting requirements without changing the method by which natural resources are valued, i.e., the valuation process, which is a perfect example of the government raising the costs of doing business with no tangible benefit to show for it.

Especially in a time of low commodity prices, unnecessary and costly government regulations like this with no actual benefit do nothing but raise energy prices, jeopardize America's source of domestically-produced energy, and cost good-paying, quality jobs. Further, the subjective nature of the rule's language creates more uncertainty, not less, thus increasing the chance that businesses and government bureaucrats will interpret the requirements of the rule differently.

This regulation also hits the coal industry very hard in a number of ways. Under prior rules, in non-arm's length situations coal royalties were based upon public indicators of the value of the coal, such as published coal prices from arm's length transactions. The United States thus received royalties on the fair market value of the coal. The new rule eliminates any ability to pay royalties based upon arm's length sales prices for coal, and requires the value of the coal be calculated by starting with the sale price of the electricity.

Promulgated under the guise of updating the mineral valuation method to ensure a fair return to the taxpayer for the resources extracted on both federal and tribal lands, as well as offshore sites, the final version of this rule makes one thing clear: the Obama Administration wanted to make it virtually impossible to develop the resources in its vast holdings. If allowed to remain, this rule will lead to further job loss, economic hardship for the hardworking families in our districts, and the loss of an important revenue source for the federal treasury and our local communities.

Melissa,

Congressman Pearce has a fly-in group from Roswell/Artesia, NM region coming to DC on May 1st. They have been able to get in the last few years with FWS and BLM. Unfortunately, those meetings have not been very successful.

For this year's visit, the Congressman seeks the Secretary's assistance in confirming this year's group to meet with FWS, BLM and Department leadership, preferably the Secretary, on May 1st. Below is the request from their coordinator and attached is the attendee list.

We appreciate the Secretary and the Department's consideration of this request.

Subject: Interior meetings request

Good morning, Todd,

As you know, Artesia and Roswell are planning our annual Washington Fly-in. Usually, we meet with FWS and BLM in separate meetings, but have had some difficulties in the last two years with BLM. This year, I am asking for assistance in setting up meetings that would be appropriate for the following issues, which are primarily focused on BLM and FWS, but may include others:

APD processing and permitting for oil & gas production – the new computerized system was not ready for roll-out, which is causing confusion and delays; moreoever, we would like to discuss the unpredictable timelines for APDs which cause delays in production and tie up significant funding.

State BLM sale – we would like to see the

BLM return to quarterly sales in New Mexico.

The Resource Management Plan, which is delayed

Venting & Flaring rule – the rule is not ready for implementation; we hope for reconsideration of the rule altogether

The anticipated decision on the Texas Horned Shell Mussel and the associated CCAs

Other ESA listings that may be

in the works

We will be in Washington May 1-3. We respectfully request a meeting or meetings at Interior on Monday, May 1. I have attached a list of our attendees. Please let me know if you have questions or need additional information.

Thank you for your assistance and direction,

Hayley

Hey Micah,
I took over as chief last week so I've just been trying to keep my head above water. Though it probably doesn't hold a candle to what you guys are doing getting Secretary Zinke set up!

Wanted to say thanks again for the invitation to have Kristi attend the signing ceremony last week. Was a great event.

Secretary Zinke Takes Immediate Action to Advance American Energy Independence

WASHINGTON – Today, U.S. Secretary of the Interior Ryan Zinke signed two secretarial orders to advance American energy independence. The Secretary's orders foster responsible development of coal, oil, gas, and renewable energy on federal and Tribal lands and initiate review of agency actions directed by President Trump's executive order entitled "Promoting Energy Independence and Economic Growth." Secretary Zinke also signed a charter establishing a Royalty Policy Committee to ensure the public receives the full value of natural resources produced from federal lands. In signing the historic actions on energy independence, Secretary Zinke was joined by Members of Congress from western states and other stakeholders.

"Today I took action to sign a series of directives that put America on track to achieve the President's vision for energy independence and bringing jobs back to communities across the country" said Secretary Zinke. "American energy powers our national and local economies. But for too many local communities, energy on public lands has been more of a missed opportunity and has failed to include local consultation and partnership. Today's orders allow for Americans to benefit from safe and environmentally responsible development on federal lands and put America on track for energy independence."

Secretarial Order 3348 overturns the 2016 moratorium on all new coal leases on federal land and ends the programmatic environmental impacts statement that was set to be completed no sooner than 2019. Based upon the Department's review of Secretarial Order 3338, the order notes that, "the public interest is not served by halting the federal coal program for an extended time, nor is a PEIS required to consider potential improvements to the program." The order notes that the federal coal leasing program supplies approximately 40 percent of the coal produced in the United States that is of critical importance to the U.S. economy.

Secretarial Order 3349 implements review of agency actions directed by the President's Executive Order signed yesterday on energy independence. It also directs a reexamination of the mitigation and climate change policies and guidance across the Department of the Interior in order to better balance conservation strategies and policies with the equally legitimate need of creating jobs for hardworking American families. In particular, the order sets a timetable for review of agency actions that may hamper responsible energy development and reconsideration of regulations related to U.S. oil and natural gas development.

In an effort to ensure the public continues to receive the full value of natural resources produced on federal lands, Secretary Zinke also signed a charter establishing a Royalty Policy Committee to provide regular advice to the Secretary on the fair market value of and collection of revenues from Federal and Indian mineral and energy leases, include renewable energy sources. The Committee may also advise on the potential impacts of proposed policies and regulations related to revenue collection from such development, including whether a need exists for regulatory reform. The group will be made up of up to 28 local, Tribal, state, and other stakeholders and will serve as an advisory role only.

Secretary Zinke added that, "It's important that taxpayers get the full value of traditional and renewable energy produced on public lands and that we ensure companies conduct environmental reviews under NEPA and have reclamation plans."

Secretary Zinke issued the following statement regarding the President's executive order on energy independence:

"American energy production benefits the economy, the environment, and national security. First, it’s better for the environment that the U.S. produces energy. Thanks to advancements in drilling and mining technology, we can responsibly develop our energy resources and return the land to equal or better quality than it was before. I’ve spent a lot of time in the Middle East, and I can tell you with 100 percent certainty it is better to develop our energy here under reasonable regulations and export it to our allies, rather than have it produced overseas under little or no regulations. Second, energy production is an absolute boon to the economy, supporting more than 6.4 million jobs and supplying affordable power for manufacturing, home heating, and transportation needs. In many communities coal jobs are the only jobs. Former Chairman Old Coyote of the Crow Tribe in my home state of Montana said it best, 'there are no jobs like coal jobs.' I hope to return those jobs to the Crow people. And lastly, achieving American energy independence will strengthen our national security by reducing our reliance on foreign oil and allowing us to assist our allies with their energy needs. As a military commander, I saw how the power of the American economy and American energy defeated our adversaries around the world. We can do it again to keep Americans safe."

1) ***Program to Phase-out High-bleed Pneumatic Controllers – Implementation Principles***

General

- 5-year replacement goal for all onshore continuous high bleed pneumatic controllers
- Create a new and separate Gas STAR Pneumatics Program (separate from the proposed Gas Star Gold program and the old Gas STAR program)
- Work together with interested parties to develop the program specifics

Program Specifics

- Replace all onshore continuous-high-bleed controllers with one of the following:
  - Continuous-low-bleed controllers
  - Intermittent-vent controllers
  - Electrically operated controllers and valve actuators or mechanical controllers
  - Convert to instrument air to replace natural gas as the motive gas, or
  - Remove from service where feasible with no replacement
- Support annual reporting and alignment with timing of GHG reporting March 31st reporting deadline for the previous calendar year. Reports would include the following regarding a company s on shore continuous-high-bleed controllers:
  - Number replaced
  - Number swapped to instrument air
  - Number eliminated
  - Number remaining
- Targets to meet 100 replacement goal within 5 years
- Only affects controllers located at upstream onshore production and gathering facilities as well as natural gas processing plants
- EPA may make program details and submitted company-specific data publically available
- Maintain Subpart OOOO exemption based on functional needs, including but not limited to maintain time, safety, and positive actuation

2) ***Leak Program for Oil and Gas Production Sources – Implementation Principles***

General

- Targeted toward higher emissions sources
- Applies to new and existing onshore sites upstream of gas processing plant (as defined in OOOO)
- Applies to onshore production sites with online storage vessel or compressor
- Incorporates five-year phase in schedule to implement initial monitoring for participating existing sites based on individual company plan

- Instrument based monitoring programs within existing state regulatory and permit requirements or participation in voluntary program should satisfy future regulatory requirements (i.e., NSPS OOOO)
- Allow flexibility in leak detection methods and technologies (e.g., Method 21, IR camera, or other equivalent) to satisfy the voluntary program requirements
- Committed to reasonable, cost-effective reporting that tracks progress

Program Specifics

Target	Broad facility survey
Target Components	Significant emission sources such as malfunctioning fugitive emission components, pneumatic controllers not functioning as designed, and controlled hydrocarbon storage vessels
Method	IR camera or equivalent
Initial Surve	
Existing Site	Phased in, initiated within no later than 18 months and concluded over no more than a 5 year period
New Site	Within 180 days of start of production following installation of new hydrocarbon storage vessel or compressor
Subse uent Surve s	Annual after initial survey
Repair Period	• 1st attempt within 15 days • Repair within 60 days (pending part availability) • Delay of repair (at next shut down or pending part availability)
Reporting	
Frequency	Annual
Contents	• Number of new sites monitored • Number of existing sites monitored • Number of leaks repaired (excluding those repaired during survey) • Number of leaks not repaired and reason for delay
Tagging/Other identification	Only of leaking components not repaired during survey

3) Continue reporting of liquids unloading venting and work with companies to help reduce their liquids unloading venting.

    o The Waste Prevention, Production Subject to Royalties, and Resource Conservation rule requires that liquids unloading venting be reported that lasts more than 24 hours in a production month or greater than 75 MCF during a

production month. BLM could continue such reporting to determine wells with high liquids unloading venting.

- BLM should work with companies with high liquids unloading venting to identify options to reduce venting.

Bishop Statement on Zinke Appointment of Kate MacGregor to Interior Post

FOR IMMEDIATE RELEASE: April 6, 2017
CONTACT: Parish Braden or Molly Block (202) 226-9019

Washington, D.C. – Today, U.S. Secretary of the Interior Ryan Zinke announced the appointment of Katharine MacGregor, former senior professional staff on the Subcommittee on Energy and Mineral Resources, as Deputy Assistant Secretary for Land and Minerals Management at the Department of the Interior. Chairman Rob Bishop (R-UT) issued the following statement:

"*Secretary Zinke made a fantastic decision with this appointment. Kate has been a force on these issues and an invaluable resource to our Committee and Capitol Hill for many years. She brings a wealth of knowledge and energy to this important leadership post and will be a tremendous asset to the Department at a critical time. I wish her the very best and congratulate her on this appointment.*"

During her time with the Natural Resources Committee, MacGregor's portfolio included offshore leasing as well as oil and gas issues. In her new role at the Department, she will advise the Secretary and Assistant Secretary on energy development and public land use.

RE: GRAND COUNTY, CO PROTEST under regulation 43 CFR 3120.1-3 for the June 8, 2017 (aka May 11, 2017) Oil and Gas Lease Sale and Environmental Assessment for the May 11, 2017 Competitive Oil & Gas Lease Sale DOI-BLM-CO-NO5-2016-0099-EA

Dear BLM Colorado State Field Office:

The Grand County Board of County Commissioners are respectfully filing a protest to the June 8, 2017 Competitive Oil and Gas Lease Sale and Environmental Assessment DOI-BLM-2016-CO-NO5-2016-0099-EA, specifically, the inclusion of all the Grand County parcels that are up for sale. The parcels being protested are referenced in TABLE 1 (top of page 2) by Serial Number and acreage as is required by BLM rules for submitting a protest.

TABLE 1
Grand County Parcels
June 8, 2017 Competitive Oil & Gas Lease Sale

BLM PARCEL SERIAL #	ACREAGE
COC-78284	1,362.710
COC-78285	2,537.860
COC-78286	1,873.800
COC-78287	360.000
COC-78288	1,626.660
COC-78289	2,212.610
COC-78290	2,390.410
COC-78291	1,258.200
COC-78292	1,239.130
COC-78293	1,512.150
COC-78294	232.870
COC-78295	2,025,760
COC-78296	1,580.230
COC-78300	1,647.040
COC-78301	1,186.200
COC-78302	1,523.490
COD-78303	1,678.480
COD-78304	1,101.920
COD-78314	110.34
COD-78315	40.00
TOTAL ACRES	**27,499.860**

Furthermore, the County is protesting the fact that the Environmental Assessment that was completed for this proposed oil and gas lease sale failed to present a range of alternatives. It considered leasing as the only action, with no other scenarios. This narrow scope is an "all or nothing" approach, which is clear violation of the National Environment Protection Act (NEPA).

Grand County has a vested interest in the health, safety and welfare of its citizens and in the protection and appropriate utilization of lands and natural resources within our jurisdiction. In support of our protest Grand County is providing the following comments:

Grand County and its Board of Commissioners are opposed to the proposed lease sale of 27,500 acres in Grand County for future oil and gas development. These parcels and the County itself are geologically characterized as currently having low or no potential for oil and gas development. There is no oil and gas activity in Grand County today, and over the past years there have been more than 50 oil or gas wells drilled and each has been abandoned because of no production. These previously drilled wells are located in predominantly the same or similar areas as the proposed oil and gas lease sale. We recognize the importance of this resource to our state and national economy, however, the presence and number of these dry and abandoned wells should be proof that Grand County does not have viable oil and gas resource.

The only rationale provided for inclusion of the Grand County parcels in the proposed lease sale is to clear a group of deferred parcels that were set aside almost 10 years ago when BLM commenced the revision to the Kremmling Field Office Resource Management Plan. These parcels are not being nominated as a result of new Expressions of Interest from the oil and gas industry or individuals. Nor are these parcels located over the McCallum Oil Field. Drilling for oil and gas in Grand County will come only with significant effort, investment and costs and harm to our environment and economy, while there is not economic or resource justification for such activity.

The appropriateness of the Grand County parcels in this lease sale as a viable and developable resource is questionable. Furthermore, the potential environmental and socioeconomic impacts of the effects of drilling will severely hinder achieving the vision for our community as outlined in the Grand County Master Plan. Grand County's success and sustainability is linked directly to tourism/recreation related opportunities and business that are complimentary to outdoor recreation and tourism which requires protecting natural resources as they exist today, without oil and gas development.

The nominated parcels that are being considered with the lease sale are located in Central and Western Grand County, which is primarily rural, agricultural, undeveloped forest or public land with high wildlife habitat, scenic and recreation based values. Key natural areas include: Arapaho National Forest, the Colorado River, Willow Creek, Willow Creek Reservoir, Elk Mountain, Grouse Mountain, Byers Canyon and many stream tributaries to the Colorado River. The tributaries are Trail Creek, Willow Creek, Drowsy Water Creek, McQueary Creek, Sheriff Creek, Ute Bill Creek, First Creek, Second Creek and several other un-named water courses. US 40, SH 125 and US 34 also run through or are adjacent to this area and each are scenic corridors in their own right. US 40 is a designated Colorado Scenic Byway. Rocky Mountain National

Park exists in close proximity, and is the third most visited park in the United States. To reach the Park, tourists would be travelling through these potential lease areas. The sight of oil wells and the attendant facilities needed for their support would severely lessen the attraction of visiting this priceless resource. There is an abundance of recreation in this area that serves resort ranches, outfitters, hunting and fishing, hiking and trail running, mountain biking, cross country skiing, snowshoeing and snowmobiling. The area is also an important habitat for elk, deer, eagles, falcons, Greater Sage Grouse and native species of cutthroat trout. Lastly, on the southern edges of the proposed oil and gas lease sale, are the towns and communities of Granby, Hot Sulphur Springs, and Parshall that rely on this area for its scenic, resource, recreation and economic attractions for their residents and visitors.

The County feels that the impending development of Oil and Gas would have drastic negative consequences on our local environment, infrastructure and economy, as are more particularly described below:

RECREATION/TOURISM ECONOMY

Grand County enjoys strong tourism because of its proximity to Rocky Mountain National Park, Arapaho National Recreation Area, Arapaho National Forest and Indian Peaks Wilderness Area. It is the County's goal to continue to improve and develop our tourism based economy, and protecting our natural resources is vital to this goal. Critical to this will be the protection of view corridors, wildlife habitat, night sky, and natural spaces so they remain attractive for tourism and outdoor recreation purposes.

Recreation based tourism accounts for over 4,200 jobs in the county. As our county has only approximately 15,000 full-time residents, this is considerable and in fact tourism is the primary driver of our economy. For example, hunting, fishing and wildlife watching activities in Grand County alone accounts for approximately $50 million in direct and secondary spending. Our tourism-based economy with its links to natural resource protection is also helping the County conserve our ranching heritage through working resort dude ranches, like C Lazy U and Drowsy Water. The following will provide an idea of the values these businesses contribute to Grand County:

C Lazy U Ranch.

1. *The C Lazy U is an historic resource having started in 1919 making it nearly 100 years old. The C Lazy U barn was built in 1925 and the lodge was constructed in 1947 with logs felled from the Baldy hillside behind the lodge. The unique design of the lodge (suspension of second floor to avoid log posts on the ground floor to accommodate square dancing) was overseen by the Schoenbergers and set the tone for the rustic mountain elegance that would define the ranch for years to come.*

2. *The ranch is an important part of our County and State history and culture. Guest or "dude" ranches are disappearing across the American West.*

3. *C Lazy U is one of the best examples of a large landholding that is preserving Grand County's ranching heritage and equestrian traditions. The wranglers at the C Lazy U practice natural horsemanship and in the tradition of the "buckaroo". Wranglers work on horseback, not on four-wheelers, just as they did a century ago.*

4. *The ranch provides valuable tourism and recreational attributes. C Lazy U and its local fishery, Willow Creek, is an Orvis endorsed lodge.*

5. *The ranch preserves view sheds from Highway 125 across the Willow Creek Valley, which are very important scenic and visual assets to the County. The view across the ranch is enjoyed by thousands of public travelers.*

6. *The ranch employs approximately 50 year-round staff and 150 seasonal staff to accommodate the 4,000 guests each year.*

7. *The ranch hosts community events and charitable fundraisers to help the local community.*

8. *The four adjacent ranch communities (Homesteads, Dexter Meadows/Dexter Ridge, Aspen Springs and Chimney Rock Cabins) provide residential uses and continuity to the C Lazy U community. These residences are a valuable source of property tax dollars for the County and oil and gas development would almost certainly conflict with the surface uses of these residences. The ranch's riding program for children is world-renown and exposes youngsters to a wholesome outdoor experience. Real safety concerns arise from introducing oil and gas traffic and development as a conflicting surface use.*

9. *The payroll, revenues from ranch operations and related tourism and recreational dollars are essential to the local economy of Grand County.*

Drowsy Water

1. *A large portion of Drowsy Water operates utilizing a Special Recreation Permit on the adjoining public BLM lands.*

2. *Drowsy Water has been owned and operated by the Fosha Family for 40 years, and it has been a guest ranch in the County since the 1930's.*

3. *The ranch averages 2,300 user days each summer and activities are designed to provide folks with a heritage outdoor experience free of motorized vehicles in the Colorado High County.*

4. *Drowsy Water employs 30 people to accommodate approximately 700 summer guests.*

5. *The ranch provides an authentic western vacation focusing around horseback riding, moving cattle, kids' programs, hiking and enjoying the ranch private lands and surrounding federal lands.*

6. *The ranch provides valuable conservation, tourism and recreational attributes.*

Oil and gas development presents many challenges to Grand County: (1) financial impacts, such as roads, fire, Emergency Medical Services and police; (2) increased wildfire hazards because of development being located in pine beetle effected areas of the county; (3) reduced economic value to our public lands for their scenic and recreational values and reduced county and municipal revenues (sales, lodging and property tax); and (4) added negative threats to our water supply in the form of pollution from oil spills to byproducts of the drilling business such as increased erosion from the land and trees that must be cleared.

Grand County's legacy and its success will be based in its natural, cultural and historic heritage by and through a tourist/recreation-based economy; not the oil and gas industry. Oil and gas development will not complement or enhance the County's desired rural character and natural setting that sustains quality of life for our residents, visitors and businesses.

GEOLOGY

The landform in the proposed leased area consists of narrow, steep valleys that follow the tributary headwaters to the Colorado River. The region is characterized by significant faulting, which may prohibit effective containment of hydraulic fracturing fluids beneath aquitards or what would otherwise be confining geologic layers. The area proposed for leasing also contains an abundance of geological formations that contain expansive soils, are mapped by the U.S. Geological Survey as landslide, or that are prone to landslides, such as the Troublesome Formation (see FIGURE 1). In Grand County's experience with a landfill located to the south of parcel 7821, several water quality monitoring wells have been sheared off due to a buried slide plane that is perpendicular to the land surface. Complex slip planes such as these do not tend to show up on USGS maps, but a simple drive along the Colorado River will demonstrate that they are extremely common in the region. Leasing lands for oil and gas development that contain geologic formations that are known to slide would be irresponsible. Well development in these regions poses a serious threat to water quality due to the threat of pollution from oil or gas drilling fluids moving into aquifers from these faults.

Hot Sulphur Springs is named for its geothermal resource and it serves as the main tourist attraction for the town. The town is also bisected by the Mount Bross Fault. Oil and gas development in the parcels around Hot Sulphur Springs could alter the hydrodynamic regime that support the hot springs. In addition, contamination from fracking fluids or other pollution could enter the hot springs. Either possibility could destroy the hot springs and ruin this resource for future generations.

The BLM must also consider the fact that Grand County, and particularly the proposed oil and gas lease parcels, are not located in one of Colorado's major oil and gas basins. Grand County is not a resource area for oil and gas development. Furthermore, the area is constrained topographically. The areas is accessed by a primitive road system with seasonal access only. These road are narrow, with steep grades and switchbacks. It is made up of many steep valleys that have slopes ranging from 30% to 45% and an abundance of streams and creeks. The costs to overcome the terrain will make oil and gas development even less economically viable for a company or individual.

DEVELOPMENT ACCESS AND INFRASTRUCTURE

The area where the lease parcels are located is served by a road system that consists of narrow roads, steep grades, sharp curves and in many cases, only seasonal access. The area is primarily not accessible by vehicle from December to May each year. The road system as designed is not adequate for the construction vehicles associated with oil and gas development. Road improvements to access this area would definitely require intersection improvements where BLM, County or Forest Service roads connect with US 40. Furthermore, the roads would have to be improved in width, grade, curves and load capacity to adequately serve the type of traffic associated with oil and gas. Due to terrain, the improvements would require significant cuts and fills resulting in significant scarring of the landscape. These improvements would also come at a highly significant cost to the company or individual trying to develop these parcels. Road improvements of this magnitude would result in unacceptable impacts to the mountain landscape due to increased use, construction, traffic, dust, sediment and erosion. Our concern is that much of this sediment and erosion, potentially carrying un-natural substances, will end up in the local streams and rivers.

WILDLIFE AND FISH

The proposed lease sale parcels are located in important wildlife habitat:

- Severe winter range, winter concentration areas and migration corridors for mule deer, elk, moose and pronghorn (see FIGURE 2 and FIGURE 3).

- A significant portion of the leased parcels are located in sagebrush vegetation that is integral priority and general habitat for the Greater Sage Grouse. Grand County, Colorado Parks & Wildlife, BLM and the Middle Park Sage Grouse Working Group have made significant efforts to protect this habitat as set forth in the Middle Park Sage Grouse Conservation Plan and BLM Sage Grouse Final EIS. To lose this habitat may result in an endangered species listing for the Sage Grouse with negative spill over economic impacts to agriculture (i.e., loss of grazing lands) and recreation on this valuable public resource.

- Nesting habitat for raptors (eagles and falcons) along the Colorado River and tributaries along US 40 and SH at the edges of the proposed leased parcels.

- Native cutthroat trout in Kinney Creek
- Core habitat areas --- Parshall Divide, Sulphur Gulch

Oil and gas development will only contribute to further disruption and fragmentation of these important habitat areas and will restrict wildlife movement and migration due to new permanent structures, roads and other oil and gas facilities and activities. This habitat is important to the County's economic, recreational and environmental values.

County plans require that development minimize its impacts to critical wildlife habitat and corridors by directing new growth and development into areas where it can be served by adequate, roads, water, sewer, utilities, schools, parks, trails, housing, emergency services and public safety. We do this primarily to preserve the rural and mountain landscapes of Grand County. The improvements that will be required in support of oil and gas development on the proposed lease sale parcels will only serve to degrade the character of Grand County's landscapes and wildlife habitats.

WATER RESOURCES

The headwater of the Colorado River originate within Grand County and many tributaries to the Colorado River run through the proposed lease parcels. The creeks include; Trail Creek, Willow Creek, Drowsy Water Creek, McQueary Creek, Sheriff Creek, Ute Bill Creek, First Creek, Second Creek and several un-named water courses. Water quality in all of these Creeks and water courses is of concern, as they provide irrigation water to several area ranches that are critical to the ranching and outdoor recreation economy in Grand County. These tributaries are also linked through surface and ground water to the water supplies of the towns of Granby, Hot Sulphur Springs, Hot Sulphur Springs Resort, Grand County Government Offices and C Lazy U and Drowsy Water Guest Ranches. The region also contains a high number of individual domestic wells for nearby residences.

Several of the parcels are located in the Willow Creek drainage area flowing into Willow Creek Reservoir, which is a part of the Colorado-Big Thompson (C-BT) Project. Portions of some of the parcels may also drain to Coyote Creek, a tributary to Windy Gap Reservoir, which utilizes C-BT facilities for the conveyance of water. The C-BT Project supplies water to about 860,000 people and 650,000 acres of irrigated farmland in Northern Colorado. Any degradation of these waters has the potential to impact water quality in Willow Creek Reservoir, Granby Reservoir, Shadow Mountain Reservoir, Grand Lake, and several Front Range reservoirs, as well as hundreds of thousands of people.

Historic flows in the Colorado River between Granby Dam and the Williams Fork River have been reduced significantly due to trans-basin diversions which carry water to front-range cities and farms. That number is set to be further reduced with the expansion of Gross Reservoir and construction of Chimney Hollow Reservoir. Replacement water to compensate for these current diversions does not begin to enter the Colorado River until its confluence with the Williams Fork

River. As a result, it creates a depleted stretch of the Colorado River that is adjacent to the area of the proposed lease sale. Currently this stretch of the Colorado is subject to low flows, warmer water temperatures, and depleted species of food necessary for a strong cold water fishery. Tremendous efforts have been made to protect this reach of the Colorado River through complicated Windy Gap Agreement and Colorado River Cooperative Agreement negotiations. The agreements have resulted in the commitment of time and energy on the parts of several diverse agencies to protect and, where possible, to enhance the condition of the Colorado River through an ongoing collaborative effort called Learning by Doing. In addition, a project called the Windy Gap Connectivity Channel that would cost nearly $10 million is being pursued to reconnect the Colorado River and help restore the proper functioning condition and aquatic habitat to reverse extirpation of mottled sculpin, giant stonefly, and other macroinvertebrate species in the Colorado River downstream of Windy Gap. It is questionable whether this reach of the Colorado River would have the ability to recover from additional impacts such as the potential pollution from fracking fluids, disposal of produced water, accidental spills, and the developmental impacts that could be caused by oil and gas operations in this area.

Grand County has a growing concern regarding availability of water to support the current and future population and tourism sector. Adding large industry, such as Oil and Gas, would put even further strain on this valuable resource. Water resources such as the Colorado River and many local lakes are also major tourist and recreation attractions. The heavy water needs adherent to Oil and Gas development would put a strain on these water bodies, thus endangering the features of these attractions and the investments in these assets that we have made as both a Count and community.

AIR QUALITY

The oil and natural gas industry includes a wide range of operations and equipment, from wells to natural gas gathering lines and processing facilities, to storage tanks, and transmission and distribution pipelines.

The oil and gas industry is a significant source of methane emissions, a potent greenhouse gas with a global warming potential more than 25 times that of carbon dioxide. Oil and gas is also the largest industrial source of emissions of volatile organic compounds (VOCs), a group of chemicals that contribute to the formation of ground-level ozone (smog). Exposure to ozone is linked to a wide range of health effects, including aggravated asthma, increased emergency room visits and hospital admissions, and premature death.

In addition to helping form ozone, VOC emissions from the oil and gas industry include air toxics such as benzene, ethylbenzene, and n-hexane. Air toxics are pollutants known, or suspected of causing cancer and having other serious health effects.

Fracking has been linked to increased air pollution that is hazardous to the health of residents near wells, and may contribute to the larger problem of climate change. Fracking creates many opportunities for the release of air pollutants. The construction of drilling pads results in air pollution, as does the increased truck traffic back and forth from the well sites. Drilling itself

results in more air pollution from diesel fuel engines, evaporation of wastewater, release of fracturing fluid, flaring of wells (burning or venting of gas at the wells), condensate material, and fugitive emissions from compressor stations. A report in the Scientific American found that fracked wells leak 40 to 60 percent more methane than conventional natural gas wells.

The towns of Grand Lake and Granby, Rocky Mountain National Park and Indian Peaks Wilderness are all located in the air shed of the emissions from oil and gas development on the nominated lease parcels. These emissions will impact the opacity of the air and create serious health effects. Clean and clear skies are an important part of visual quality for our beautiful landscape and the tourism/recreation economy in Grand County.

ROCKY MOUNTAIN NATIONAL PARK

Rocky Mountain National Park's (RMNP) 415 square miles encompass and protect spectacular mountain environments. It includes Trail Ridge Road – which crests at over 12,000 feet including many overlooks to experience the subalpine and alpine worlds – along with over 300 miles of hiking trails, wildflowers, wildlife, starry nights, and fun times. In a world of superlatives, Rocky is on top! In 2015, RMNP had more than four million recreational visitors from across the United States and the world, making it the third most visited national park in the USA. It is only seven (7) miles from the eastern edge of the proposed oil and gas lease sale. New roads, well pad development, emissions, traffic, and night-lighting that would be associated with oil and gas activity would have severe negative impacts to this national park.

CULTURAL/HISTORIC RESOURCES

Grand County culture and history is based in agriculture and tourism. A great deal of the area that is in the proposed oil and gas lease sale was previously Ute Indian settlements and hunting grounds. The areas around Hot Sulphur Springs were considered sacred, especially the hot springs that are located at the base of Mount Bross. The area was also explored by mountain men like William Jefferson "Ute Bill" Thompson. His historic path is along Ute Bill Creek just north of Hot Sulphur Springs to the areas surrounding Elk and Grouse Mountains. The homes, tools, paths and other artifacts of the Ute Indians and explorers like Ute Bill still remain in this area and remain in a fragile state as they were made from local sources (land, vegetation, soil and fiber). High impact development like that of oil and gas development could very easily destroy this history. These stories of our history and culture are played out and told by the Grand County Historical Association for the benefit of the Heritage Coalition of Grand County. Our history and heritage is important to our quality of life and to the visitors of Grand County and they need to remain preserved and intact.

PUBLIC REVIEW AND COMMENT

As county commissioners in a public lands county, we know first-hand how important it is for federal land managers to work with local communities. Many of our citizens travel on roads

across federal lands to get to work every day and many families and businesses make their living working our county's natural resources. Those that live, work and raise their families in our county know that our communities are linked to the land.

The BLM over the last few years has been recommending the recently adopted Planning 2.0 for its improved public involvement process. Planning 2.0 is the agency's means to improve decision making, add transparency and provide early, meaningful public involvement. All government agencies, including local government, strive for planning programs that are efficient, transparent, responsive to change, have opportunity for meaningful public involvement and broad community buy-in from elected officials to private citizens.

The County recognizes that Planning 2.0 was done for Resource Management Plans and their adoption process. However, if public involvement is a main tenet for BLM resource planning then the same or similar principle should apply with oil and gas development review. The BLM has as one of its responsibilities under the Mineral Leasing Act the requirement to promote development of oil and gas. The development of oil and gas and the decisions leading to that development must be coordinated and shared because the management of this landscape is shared amongst federal agencies, including the BLM, towns, counties and other forms of local governments. Each entity involved will have varying goals, plans and policies regarding land use and management. The BLM leasing process recommends stakeholder coordination prior to public scoping. Grand County was not consulted or contacted on this matter and no public meetings were held in the County until we requested one. Local county governments can be invaluable allies to federal land managers when it comes to land use matters. The necessity for local government to be close to its land and its people makes us a significant resource.

Oil and gas development is a land use that because of its potential impact must be reviewed in depth in order to understand: (1) the economic potential for the resource; (2) the areas where it is most likely to take place; (3) the means for maintaining and improving the condition of natural resource values in the area; (4) the phasing and timing of development; (5) the improvements or infrastructure that will be needed to service the new development; and (6) the best protection measures and best management practices for oil and gas development. Due to the limited potential for oil and gas development in Grand County we are not recommending a Master Leasing Plan, only better analysis and greater coordination for the review and decision making related to oil and gas planning and development.

Grand County sincerely appreciated the White River Field Office and NW Regional Director appearing before the BOCC to provide an overview of the leasing process and to answer public questions. This is the type of action that should have been done in June or July, well in advance of public scoping and review of the EA.

CONCLUSION

- The "all or nothing" or "limited scope" approach of the Environmental Assessment that was completed for this proposed oil and gas lease sale failed to present any alterative actions to leasing, which is a clear violation of NEPA.

- These parcels and the County itself are geologically characterized as having low or no potential for oil and gas development.

- There is no oil and gas activity in Grand County today and over the past 50 years there have been 59 oil or gas wells drilled and each has been abandoned because of no production.

- There is no demand for the nomination of these parcels by companies or individuals.

- Leasing lands for oil and gas development that contain geologic formations that are known to contain faults and slides would be irresponsible and thus development in this area poses a serious threat to water quality.

- The Colorado River does not have the ability to absorb or recover from additional impacts such as the potential pollution from fracking fluids, disposal of produced water, accidental spills, and the development impacts that could be caused by oil and gas operations in this area.

- Adding large industry, such as Oil and Gas, would put even further strain on valuable water resources. Water resources such as the Colorado River and its tributaries, and many local lakes are major tourist and recreation attractions. The water needs adherent to Oil and Gas development would put a strain on these water bodies, thus endangering the features of these attractions and the investments in these assets that we have made as both a Count and community.

- Degradation to the Colorado River and its tributaries has the potential to impact water quality in Willow Creek Reservoir, Granby Reservoir, Shadow Mountain Reservoir, Grand Lake and for Hot Sulphur Springs, Hot Sulphur Springs Resort, Grand County, C Lazy U and several Front Range reservoirs, as well as hundreds of thousands of people and acres of land.

- On and off-site improvements result in unacceptable impacts to the mountain landscape due to increased use, construction, traffic, dust, emissions, sediment and erosion.

- Critical wildlife habitat would be significantly segmented or lost as a result of oil and gas development.

- It would create unacceptable impacts to Rocky Mountain National Park, a key natural and economic asset for Grand County and the State of Colorado.

- Our history and heritage is impacted as a result of oil and gas development occurring here in Grand County, which are important the quality of life for our residents and visitors.

- The payrolls and revenues from tourism and recreation operations and other related tourism and recreational dollars that are essential to the local economy of Grand County

will be negatively impacted by oil and gas development in the lease sale area. This impact will be most apparent with C Lazy U and Drowsy Water Guest Ranches.

- County air quality will be negatively impacted by the emissions from oil and gas developing through reduced opacity of the air and polluted air that will cause serious health effects.

In conclusion, Grand County requests that the BLM withdraw the nominated parcels from the June 8, 2017, competitive lease sale. In the event that the BLM proceeds to offer these parcels, Grand County requests that you make all bidders aware and informed of our protest and our position on oil and gas development in Grand County. Finally, we request that the BLM Kremmling Field Office initiates a revision to the Resource Management Plan for the closure of all of Grand County's portion of the Kremmling Resource Area to oil and gas development.

Sincerely,

Kristen Manguso	Merrit Linke	Richard Cimino

> WASHINGTON -- U.S. Secretary of the Interior Ryan Zinke today announced that the Department will offer 73 million acres offshore Texas, Louisiana, Mississippi, Alabama and Florida for oil and gas exploration and development. The proposed region-wide lease sale scheduled for August 16, 2017 would include all available unleased areas in federal waters of the Gulf of Mexico.
>
> "Opening more federal lands and waters to oil and gas drilling is a pillar of

President Trump's plan to make the United States energy independent," Secretary Zinke said. "The Gulf is a vital part of that strategy to spur economic opportunities for industry, states and local communities, to create jobs and home-grown energy and to reduce our dependence on foreign oil."

Proposed Lease Sale 249, scheduled to be livestreamed from New Orleans, will be the first offshore sale under the new Outer Continental Shelf Oil and Gas Leasing Program for 2017-2022 (Five Year Program). Under this new program, ten region-wide lease sales are scheduled for the Gulf, where the resource potential and industry interest are high, and oil and gas infrastructure is well established. Two Gulf lease sales will be held each year and include all available blocks in the combined Western, Central, and Eastern Gulf of Mexico Planning Areas.

The estimated amount of resources projected to be developed as a result of the proposed region-wide lease sale ranges from 0.211 to 1.118 billion barrels of oil and from 0.547 to 4.424 trillion cubic feet of gas. The sale could potentially result in 1.2 to 4.2 percent of the forecasted cumulative OCS oil and gas activity in the Gulf of Mexico. Most of the activity (up to 83% of future production) of the proposed lease sale is expected to occur in the Central Planning Area.

Lease Sale 249 will include about 13,725 unleased blocks, located from three to 230 miles offshore, in the Gulf's Western, Central and Eastern planning areas in water depths ranging from nine to more than 11,115 feet (three to 3,400 meters). Excluded from the lease sale are blocks subject to the Congressional moratorium established by the Gulf of Mexico Energy Security Act of 2006; blocks that are adjacent to or beyond the U.S. Exclusive Economic Zone in the area known as the northern portion of the Eastern Gap; and whole blocks and partial blocks within the current boundary of the Flower Garden Banks National Marine Sanctuary.

"To promote responsible domestic energy production, the proposed terms of this sale have been carefully developed through extensive environmental analysis, public comment and consideration of the best scientific information available," said Walter Cruickshank, the acting director of Interior's Bureau of Ocean Energy Management (BOEM). "This will ensure both orderly resource development and protection of the environment."

The lease sale terms include stipulations to protect biologically sensitive resources, mitigate potential adverse effects on protected species and avoid potential conflicts associated with oil and gas development in the region. BOEM's proposed economic terms include a range of incentives to encourage diligent development and ensure a fair return to taxpayers. The terms and conditions for Sale 249 in the Proposed Notice of Sale are not final. Different terms and conditions may be employed in the Final Notice of Sale, which will be published at least 30 days before the sale.

BOEM estimates that the U.S. Outer Continental Shelf (OCS) contains about 90 billion barrels of undiscovered technically recoverable oil and 327 trillion cubic feet of undiscovered technically recoverable gas. The Gulf of Mexico OCS, covering about 160 million acres, has technically recoverable resources of 48.46

billion barrels of oil and 141.76 trillion cubic feet of gas.

Production from all OCS leases provided 550 million barrels of oil and 1.25 trillion cubic feet of natural gas in FY2016, accounting for 72 percent of the oil and 27 percent of the natural gas produced on federal lands. Energy production and development of new projects on the U.S. OCS supported an estimated 492,000 direct, indirect, and induced jobs in FY2015 and generated $5.1 billion in total revenue that was distributed to the Federal Treasury, state governments, Land and Water Conservation Fund, and Historic Preservation Fund.

As of March 1, 2017, about 16.9 million acres on the U.S. OCS are under lease for oil and gas development (3,194 active leases) and 4.6 million of those acres (929 leases) are producing oil and natural gas. More than 97 percent of these leases are in the Gulf of Mexico; about 3 percent are on the OCS off California and Alaska.

The current Five Year Program [2012-2017] has one final Gulf lease sale scheduled on March 22, 2017 for Central Planning Area Sale 247. The 2012-2017 Five Year Program has offered about 73 million acres, netted more than $3 billion in high bids for American taxpayers and awarded more than 2,000 leases.)

All terms and conditions for Gulf of Mexico Region-wide Sale 249 are detailed in the Proposed Notice of Sale (PNOS) information package, which is available at: http://www.boem.gov/Sale-249/. Copies of the PNOS maps can be requested from the Gulf of Mexico Region's Public Information Unit at 1201 Elmwood Park Boulevard, New Orleans, LA 70123, or at 800-200-GULF (4853).

The Notice of Availability of the PNOS will be available today for inspection in the Federal Register at: http://www.archives.gov/federal-register/public-inspection/index.html and will be published in the March 7, 2017 *Federal Register*.

Subject: DOI OIG Yellowstone investigation & 2 verification reviews

Here is the web-redacted investigative report into allegations of misconduct and reprisal at Yellowstone National Park. It will be posted publicly on doioig.gov Wednesday 4/12.

We initiated this investigation in September 2016 after the National Park Service (NPS) reported allegations brought forward by a Yellowstone National Park employee. This employee alleged that a pervasive culture of gender bias, sexual harassment, and financial misconduct existed in a work unit within Yellowstone's Maintenance Division. He alleged that this behavior was tolerated, and even fostered, by a "men's club" environment —one of insensitivity and arrogance toward other Yellowstone employees— that was pervasive in the division from 2011 to 2015.

During our investigation, we interviewed over 100 current and former Yellowstone employees and reviewed more than 500 documents, including NPS-wide employee surveys from 2014 and 2015 and a 2016 exit survey of over 200 seasonal Yellowstone employees. An additional allegation of hiring discrimination by a supervisor in the Maintenance Division was raised during the interviews, so we included this allegation in our investigation.

We found credible evidence that male supervisors and staff in the Maintenance Division unit created a work environment that included unwelcome and inappropriate comments and actions toward women. This negative work environment was allowed to continue because of the actions, or inaction, of supervisors. Specifically, the Maintenance Division supervisor should have known about and addressed some of the alleged misconduct.

Our investigation of the employee's allegations of financial misconduct confirmed that the Maintenance Division supervisor had allowed his employees to use his Government credit card to make purchases, in violation of the U.S. Department of the Interior's Integrated Charge Card Policy. We also found that between 2011 and 2015, some Yellowstone employees made split purchases (breaking a large purchase into small, separate purchases in order to circumvent the procurement process). The employee's allegation that Yellowstone promoted another employee after she made over $10,000 in personal charges to her Government credit card was unfounded.

We also did not find evidence of hiring discrimination by the Maintenance Division supervisor. Although we confirmed that he had told a subordinate in early 2016 that he would not be hiring women to fill open positions in the work unit, we found that he later offered positions to two women.

The next 2 attachments are reviews verifying specific findings from

previous audits.

Investigative Report of Alleged Se□ual Misconduct and Reprisal at Yello□stone National Par□

Date Posted to Web: April 12, 2017

This is a version of the report prepared for public release.

SYNOPSIS

We initiated this investigation in September 2016 after the National Park Service (NPS) reported allegations brought forward by a Yellowstone National Park employee. This employee alleged that a pervasive culture of gender bias, sexual harassment, and financial misconduct existed in a work unit within Yellowstone's Maintenance Division. He alleged that this behavior was tolerated, and even fostered, by a "men's club" environment" one of insensitivity and arrogance toward other Yellowstone employees" that was pervasive in the division from 2011 to 2015.

During our investigation, we interviewed over 100 current and former Yellowstone employees and reviewed more than 500 documents, including NPS-wide employee surveys from 2014 and 2015 and a 2016 exit survey of over 200 seasonal Yellowstone employees. An additional allegation of hiring discrimination by a supervisor in the Maintenance Division was raised during the interviews, so we included this allegation in our investigation.

We found credible evidence that male supervisors and staff in the Maintenance Division unit created a work environment that included unwelcome and inappropriate comments and actions toward women. This negative work environment was allowed to continue because of the actions, or inaction, of supervisors. Specifically, the Maintenance Division supervisor should have known about and addressed some of the alleged misconduct.

Our investigation of the employee's allegations of financial misconduct confirmed that the Maintenance Division supervisor had allowed his employees to use his Government credit card to make purchases, in violation of the U.S. Department of the Interior's Integrated Charge Card Policy. We also found that between 2011 and 2015, some Yellowstone employees made split purchases (breaking a large purchase into small, separate purchases in order to circumvent the procurement process). The employee's allegation that Yellowstone promoted another employee after she made over $10,000 in personal charges to her Government credit card was unfounded.

We also did not find evidence of hiring discrimination by the Maintenance Division supervisor. Although we confirmed that he had told a subordinate in early 2016 that he would not be hiring women to fill open positions in the work unit, we found that he later offered positions to two women.

DETAILS OF INVESTIGATION

We opened this investigation on September 23, 2016, after the National Park Service (NPS) reported allegations to us that had been described in a magazine article. A Yellowstone National Park employee alleged in the article that exploitation, predatory sexual behavior, reprisals, abuse, and financial misconduct had occurred in an unnamed division of Yellowstone from 2011 to 2015; he also alleged that a pervasive "men's club" environment in the division – one of insensitivity and arrogance toward other Yellowstone employees – had encouraged these issues.

After the article was published, the employee discussed his allegations with Yellowstone Superintendent Dan Wenk, who initiated an investigation into them with a contract investigator. Wenk stopped his contracting efforts, however, when we communicated our intent to initiate an investigation. Our investigation included interviewing over 100 current and former Yellowstone employees and reviewing more than 500 documents, including NPS-wide employee surveys from 2014 and 2015 and a 2016 exit survey of over 200 seasonal Yellowstone employees. During our interviews, an additional allegation of hiring discrimination was raised against a supervisor in the Maintenance Division; we included this allegation in our investigation.

The Employee's History at Yellowstone and Decision To Report Allegations

In 2010, the employee began working at Yellowstone, on a temporary seasonal basis, in the park's Maintenance Division. He was selected in 2012 for a permanent position, later taking a detail in another Maintenance Division unit. After completing his detail, he returned to his permanent position.

The employee told us that he read a magazine article about allegations of misconduct by NPS employees at Grand Canyon National Park. He said that as he read the article, which included an interview of then-NPS Director Jonathan Jarvis, he thought that some of the issues involving how male employees at Grand Canyon talked about and treated female employees were similar to what he himself had seen at Yellowstone. He said he also found Jarvis' comments in the article "arrogant." He said he then contacted a magazine and reported his allegations of misconduct at Yellowstone. He told us that he did not report the allegations to Yellowstone officials because he did not believe they would be addressed.

The employee confirmed to us that the division he referred to in the article was a unit where he had worked. This unit, one of 25 units and subunits in the Maintenance Division, is staffed by seasonal and permanent employees who primarily do seasonal maintenance work at Yellowstone. The number of temporary seasonal employees fluctuates with the workload during the park's summer and winter seasons.

Agent's Note: *Temporary seasonal employees serve under appointments limited to 1 year or less. The term "seasonal" refers to the employees' work schedules, not the appointment type used to hire them. These employees are subject to termination at any time without use of adverse actions or reduction-in-force procedures.*

As of the date of this report, the unit had no permanent supervisor; that position had been filled by acting supervisors since the last supervisor retired. A Maintenance Division supervisor was the first-line supervisor of the unit until the mid-2000s, when he was promoted to his current position and became the second-line supervisor for this unit and for another unit in the division. This supervisor reported to a Maintenance Division official, who had been in that role since 2012.

The Emplo□ee□s Allegations in the Article Found To Be Inaccurate or E□aggerated

Allegation 1: A Supervisor in the Maintenance Division Unit Sexually Exploited a Subordinate

According to the article, the employee alleged that female employees in the Maintenance Division unit were □exploited□by their male coworkers, and the article stated that a female employee had been □more or less kept by . . . one of her supervisors for a sexual relationship.□ According to the article, this woman did minimal work, drank daily, and was □essentially . . . kept inebriated and available for favors from her superior.□

When we interviewed the employee, he admitted that □exploitation□might not have □been the best word□he could have used to describe the mistreatment of women assigned to the Maintenance Division unit. He clarified that what he had witnessed was primarily an environment of verbal abuse in which male employees would □talk down□to women and use inappropriate language toward them.

He said, however, that he did believe that a former seasonal employee had been sexually exploited by her supervisor during her time in the unit. He explained that he believed her supervisor (a subordinate of the Maintenance Division supervisor) had kept her employed, despite her well-known drinking problem, so that he could continue a relationship with her. The employee claimed that her supervisor had spoken openly about their relationship.

The employee said that he had seen the former seasonal employee drink wine □many times□ while at work, and he told us he had once relieved her of her duties because she was □so drunk she couldn□t even stand up.□Furthermore, he said, her supervisor asked him on one occasion to buy him a bottle of wine for her, but he refused because he assumed that she would drink it while on duty.

The employee told us he had heard that the seasonal employee lost her job at Yellowstone after an alcohol-related incident at work. He said that one day she and her supervisor were arguing in his vehicle, and her supervisor got angry at her, told her to get out, and drove off without her. The employee said that the seasonal employee, who was drunk at the time, got into another vehicle and drove off, but Yellowstone law enforcement later stopped her. As a result of this incident, he said, she was fired.

Our review of the seasonal employee□s personnel records showed that she worked at Yellowstone for over 20 seasons. She left the park, but returned when the Maintenance Division supervisor hired her.

We interviewed the former seasonal employee, who was no longer associated with NPS, about the Yellowstone employee's allegation. She denied the allegation and said that she was never kept "drunk on the job" in order to have sex. She acknowledged that she and her supervisor had been in a relationship while she worked for him, but explained that the relationship was consensual. She declined to give specific information about the relationship but told us that she cared "deeply" for her supervisor, that he had been "very kind and good" to her, and that she would never say anything against him. She also confirmed that she did have a drinking problem and had lost her job at Yellowstone due to an alcohol-related incident at work, but she stated that her supervisor had been concerned about her problem and had tried to help her with it, not exploit it. Her supervisor, who had retired, declined to be interviewed.

When we interviewed the Maintenance Division supervisor, he said that he had hired the former seasonal employee and approved yearly requests from her supervisor to rehire her thereafter. He said he knew her as an acquaintance before he hired her, and he acknowledged that he did not seek any references from her previous supervisors before hiring her.

The Maintenance Division supervisor acknowledged that the former seasonal employee had a problem with alcohol and that he had terminated her employment after Yellowstone law enforcement informed him that they had stopped her while she was intoxicated and driving a vehicle at work. He said he understood that she had consumed alcohol at her supervisor's house before driving the vehicle. He said that the season after her termination, he was having trouble finding laborers to hire and her supervisor suggested rehiring her if a replacement could not be found. He said he told him: "No, that won't happen again."

We asked the Maintenance Division supervisor when he first became aware that the former seasonal employee had a drinking problem. He said at first that it was about 4 months after he initially hired her, but he then clarified that he had just heard she liked to "party." There was a difference, he said, between drinking and having a drinking problem. When we specifically asked him whether anybody had told him that she drank on the job, he said no. He insisted that he had not known she had a drinking problem until he fired her after the incident with the vehicle.

Statements by two of the Maintenance Division supervisor's other subordinates, however, contradicted his assertion that he knew nothing about the former seasonal employee's drinking problem or her drinking on the job. One told us that her drinking problem was common knowledge among her coworkers. He said that she would drink while on the job and that he had called her supervisor on several occasions to come get her because she was drunk and he was concerned for her safety. This subordinate said he spoke to both the seasonal employee's supervisor and the Maintenance Division supervisor "more than once" about her drinking problem. Another subordinate told us that he told the Maintenance Division supervisor at least twice that the seasonal employee had been drinking on the job. He explained that she had smelled of alcohol and that he had seen her walking unevenly at work.

Other employees who had worked with the former seasonal employee said that her coworkers had known about her drinking problem for years. One told us that he had worked with her in another Yellowstone unit and that she "drank heavy" during that time. A second employee said

that she drank on the job during the time he worked with her and that more than once he had smelled alcohol on her breath first thing in the morning. He said he understood that the unit they had worked in together stopped rehiring her because of her drinking problem, and he was mystified when he heard she had later been hired to work in the Maintenance Division unit because her drinking problem was common knowledge and he knew she had not quit drinking.

In addition, a former employee who had worked with the former seasonal employee recalled an occasion when the former seasonal employee came to work so drunk that she could not do her job. This former employee said that her supervisor, who knew about the seasonal employee s drinking problem, asked her if she would take the seasonal employee home to sleep it off, which she said she did. She recalled another incident in which the former seasonal employee drove a work vehicle while intoxicated.

When asked about his knowledge of the former seasonal employee s relationship with her supervisor, the Maintenance Division supervisor stated that he heard rumors about it about 3 years after he hired her. He said he confronted her supervisor about the rumors, but her supervisor denied the relationship. The Maintenance Division supervisor acknowledged that he did not inquire further into the matter, nor did he inform his own then-supervisor about it. That supervisor, who has also retired, denied knowing anything about the relationship.

Allegation 2: Supervisors Improperly Hired an Employee for the Maintenance Division Unit

According to the article, the Yellowstone employee alleged that a woman had been hired specifically so she could be exploited for sex. When we interviewed him, he clarified that he believed the Maintenance Division supervisor and another supervisor, his subordinate, had hired another seasonal employee in order to have sex with her. He said he believed the Maintenance Division supervisor terminated her employment in part because she had rejected his sexual advances.

The employee, who was on a detail to another Yellowstone unit when this former seasonal employee was hired, explained that sometime after she was interviewed for her position, the Maintenance Division supervisor s subordinate told him: You ve got to see this [employee] we just hired, implying that this supervisor found her attractive. According to the employee, he then told the employee that he intended to try to have sex with her. The employee also alleged that he later heard secondhand that the Maintenance Division supervisor had also wanted to have sex with her.

Although the employee told us that he had assumed these two supervisors had interviewed the former seasonal employee in person, we determined that the Maintenance Division supervisor interviewed her by telephone and selected her for the position without having met her in person. The former seasonal employee explained in an interview that she met both supervisors for the first time when she reported to Yellowstone to start work.

The former employee s personnel records showed that she worked at Yellowstone for two seasons. Her employment was terminated after she became intoxicated at work and could not perform her duties.

The former employee, who was no longer associated with NPS, told us that neither supervisor made any sexual advances toward her while she worked for them. She described the Maintenance Division supervisor as a "wonderful boss" and said his relationship with her was friendly and supportive. None of our other interviews substantiated the allegation against the Maintenance Division supervisor.

The former employee did acknowledge, however, that after the other supervisor retired, he made sexual advances toward her by phone and text. (The supervisor declined to be interviewed.)

The Maintenance Division supervisor denied the allegations about why he hired the former employee. He told us that he selected her for the position after a telephone interview, and he denied making any sexual advances toward her. He confirmed that he fired her after she became intoxicated at work and could not do her job.

Allegation 3: The Maintenance Division Supervisor Groped an Employee

The article stated that, when asked if he had seen sexual harassment firsthand at Yellowstone, the Yellowstone employee alleged that he had seen "blatant physical groping."

During our interview, the employee clarified this allegation. He explained that he had once seen the Maintenance Division supervisor grab a female employee's buttocks with both hands. He explained that at the time of this incident, he was part of a small group of employees waiting for the supervisor to join them for an office equipment demonstration. He said that the supervisor came out of his office and then walked up to the employee, put his hands "all over her backside," and grabbed her "right on her ass cheeks." He said the employee "just kind of laughed" about the incident but seemed uncomfortable.

Another Maintenance Division employee told us that he had also witnessed the incident, which he believed had happened a few years before. He said, however, that the Maintenance Division supervisor did not grab the employee's buttocks. Instead, he said, the supervisor rubbed her lower back for several minutes. He said that he and a coworker were standing in the back during the demonstration when the incident occurred, and that the female employee "just stood there" and did not tell the supervisor to stop. He said the incident made him uncomfortable and he left the demonstration soon afterward.

We interviewed the coworker, who confirmed that he had witnessed the incident. He told us that the supervisor did not put his hand on the female employee's buttocks, but did rub her lower back. He said he and his coworker were the only ones standing behind the woman when the supervisor placed his hand on her back and "rubbed it kind of low" for about 10 seconds. He said the incident made him uncomfortable and he moved away from where he was standing.

We also interviewed the female employee about the incident. She told us that she could not recall the Maintenance Division supervisor touching her during the demonstration, but said that if he had, it would have been to put his hands on her waist and move her out of the way. She acknowledged that he had touched her shoulders and arms occasionally during the years they

worked together, and that he would stand behind her and put his hands on her shoulders while she was sitting in her office chair. She said, however, that he had never touched her inappropriately or made her uncomfortable.

While the Maintenance Division supervisor acknowledged that he and the female employee had been at the demonstration together, he denied grabbing her buttocks or rubbing her lower back. He did admit that he could have touched her lower back because they were friendly with each other and had a good working relationship. He also admitted that he occasionally touched her shoulders, her arms, and the middle of her back, and he said that she would reciprocate by tapping him on the shoulder when he walked by her.

When asked whether it was right or wrong for him, as a supervisor, to touch a female employee, the Maintenance Division supervisor stated: "Times have changed," but admitted: "Nowadays, yes, it's wrong."

Allegation 4: Employees Verbally Abused a Female Coworker

The article stated that the Yellowstone employee described "a practice of abuse" of female employees in the Maintenance Division unit. Although the article did not specify that he was referring to verbal abuse, during our interview he gave an example of alleged verbal abuse that he had witnessed. He explained that a woman who had worked there had been subjected to abusive behavior in the form of derogatory comments and name calling by two male coworkers, and that he had witnessed the female employee crying several times because of the abusive behavior and language directed toward her. He claimed that the two male employees had called her a bitch and said that she was not capable of doing her job. He said that the two were well behaved as individuals, but when they were together they acted like "two 3-year-olds."

We interviewed the woman, who was no longer associated with NPS. She told us that when she was with the unit, she was assigned to operate the worst equipment, which she felt was unfair treatment. She explained that the two male employees, both of whom were younger and less experienced than she was, were given better equipment while she was given equipment that always broke down. She said that the male employees would tease her and blame her when she reported broken equipment, and she would go home crying out of frustration.

She also described an experience she had at Yellowstone that predated the period the Yellowstone employee discussed in his initial allegations (2011 to 2015). She told us that a coworker, who left NPS in the early 2000s, had verbally abused her by calling her a derogatory name after they had a disagreement and telling her that if she had not been a woman, he would have punched her. She stated that the other men in the unit turned against her after the incident because they thought she was going to file a complaint against her coworker, but she did not because she needed her job. Instead, she said, she requested help from her supervisor to resolve the conflict, and he, along with the Maintenance Division supervisor, eventually resolved the matter.

When we interviewed one of the male employees about the allegation that he had verbally abused the woman, he told us that he had "more or less" gotten along with her but felt she was

□pushy.□He said that when he first started working with her, he accepted her negative behavior toward him, but over time he became more comfortable in his job and learned to ignore her. He admitted that he had called her a bitch and said he had done so because he was frustrated with her; he told us he considered her □marginal□in her job. When asked if the other male employee had ever called her a bitch, he said he did not know.

The second male employee told us that he had gotten along □just fine□with her and had never argued with her. He denied the allegation that he had called her a bitch or spoken negatively to her. He told us that she and his male coworker had not always agreed about how to operate equipment and that his coworker felt she had not maintained equipment properly. He said, however, that his coworker□s complaints about equipment operation and maintenance were not solely directed at her, but at male employees as well. When asked if his coworker had ever called her a bitch, he said not to his knowledge.

Allegation 5: A "Men's Club" Environment Existed in the Maintenance Division Unit

In the article, the Yellowstone employee referred to a □men□s club□environment. When we asked him to clarify, he told us that working with the unit□s male employees, who had worked together and known each other for a long time, was difficult because they would □just take over the place.□

The employee acknowledged that the unit, which handled many repair and maintenance tasks at Yellowstone, played a vital role in the park□s operations. He believed, however, that the mentality of having prestige at the park□ along with being under the direction of the Maintenance Division supervisor, who the employee said promoted this mentality□ created an environment ripe for abusive behavior like the issues he had alleged. He also stated that the Maintenance Division supervisor knew about the misconduct in the unit, but did not stop it.

Current and previous Maintenance Division officials partially agreed with the employee□s allegation regarding the mindset of the unit□s employees. The Maintenance Division supervisor described the culture at Yellowstone as a □good old boy system.□He told us that when he came to Yellowstone in the 1990s, this culture was rampant, and he acknowledged that although it had improved over time, it still existed. He explained that the absence of available housing at Yellowstone hindered the park□s ability to attract qualified applicants for open positions, so local applicants had to be selected. He acknowledged that when he first became a supervisor, he felt pressured to hire local individuals considered to be part of the □good old boys□club,□but that pressure had lessened over time. He believed that hiring people from outside the area would help change the park□s culture. Another Maintenance Division official also believed that there was a good old boy system in this unit and in another Maintenance Division unit, and told us of past incidents of misconduct had occurred. In addition, the former deputy superintendent said that he believed there was □some merit□to the statement that such a system existed and that there was some tolerance of □boys being boys.□

We found that between 2010 and 2016, six women who had previously worked in this unit had been subjected to derogatory comments or actions that made them feel uncomfortable:

- As discussed in Allegation 4 of this report, a former employee told us that she was subjected to verbal abuse and unequal treatment while assigned to the unit.

- The former seasonal employee we interviewed in connection with Allegation 2 told us that men in the unit would make sexual and racist comments in her presence while she was working, and their remarks made her feel "uncomfortable and degraded." She said that a relative of her supervisor was part of the unit and his drinking and comments were among the worst. We interviewed this employee, who acknowledged that he might have used a racial slur in the former employee's presence. The former employee also said that someone once stole six pairs of her underwear from her dresser drawer.

- Another Yellowstone employee told us that when she worked in the unit she was subjected to verbal abuse and "dirty" language from two male coworkers. We interviewed the coworkers, both of whom denied the allegation.

- A former temporary seasonal employee told us that when she worked in the unit, her supervisor offended her by referring to her and the other Native American employees in the unit as Indians.

- Another former temporary seasonal employee told us that a male coworker had harassed her and made inappropriate comments that caused her to feel nervous around him. She said that she reported this behavior to the Maintenance Division supervisor and told him she did not want to work with the male employee anymore, and the supervisor agreed. The supervisor confirmed her account and told us that he did not rehire the male employee for the following season.

- The former seasonal employee interviewed in connection with Allegation 1 told us that she had been mistreated during her time at Yellowstone. While she did not want to discuss her experiences in detail, she told us that she believed women at Yellowstone were treated differently because they were women. She said that Yellowstone was a "man's world" and that park officials needed to "wake up" to the fact that men there were "very dominating."

We also confirmed the Yellowstone employee's allegation that the Maintenance Division supervisor had been aware of some misconduct in the unit but failed to correct it:

- Regarding the statement by the former seasonal employee that some employees drank heavily and used derogatory language, the Maintenance Division supervisor said that he had a stated policy that no open drinking was permitted in common areas of work locations. He admitted, however, that he knew the employees drank openly in spite of this policy. He also admitted that he knew the drinking occurred in the former employee's presence but that he took no action except to warn her when she got drunk. A subordinate of the Maintenance Division supervisor, who had briefly supervised these employees, said that some drank in the former employee's presence and that at times they got a "little loud" and "maybe a little obnoxious." He told us that, in hindsight, he should never have allowed alcohol "anywhere near that whole area."

- This subordinate also alleged that an employee had been allowed to work directly for a relative. He told us that "on paper" the employee worked for the Maintenance Division supervisor, but in reality he worked for his relative. This employee acknowledged that he had worked under his relative's direct supervision. The Maintenance Division supervisor also admitted that the employee had worked under his relative's supervision at times and acknowledged that he had known at the time that this violated NPS anti-nepotism policy.

As part of our investigation, we identified all current permanent and seasonal female employees who were assigned to the Maintenance Division in 2016. We interviewed 30 of these employees, as well as 26 male employees. Most stated that they had not personally experienced or witnessed sexual harassment, discrimination, or intimidation, but seven employees reported concerns about the male-dominated environment or perceived hiring discrimination (discussed on p. 13 of this report) in the Maintenance Division.

In an attempt to assess whether sexual harassment or gender discrimination was a problem outside the Maintenance Division, we reviewed all 14 Equal Employment Opportunity (EEO) complaints (8 formal and 6 informal) filed by Yellowstone employees from 2011 to 2016. There were no EEO complaints involving sexual harassment, and the only gender-based complaint was filed in 2012 by a male employee alleging discrimination based on sexual orientation.

We also reviewed Yellowstone's 2016 exit survey of 217 seasonal employees. Two of the 38 survey questions pertained to safety concerns, discrimination, sexual harassment, hostile work environment, and bullying in the workplace:

1. "I felt empowered to report occurrences of safety concerns, discrimination, sexual harassment, a hostile work environment and/or bullying."
    - Of the 217 respondents, 14 percent gave a negative answer (either "disagree" or "strongly disagree") to this question.
    - The Maintenance Division had the highest percentage of negative answers, with 30 percent.
2. "I understood my responsibilities on reporting safety concerns, sexual harassment, a hostile work environment and/or bullying in the workplace."
    - Of the 217 respondents, 4 percent either disagreed or strongly disagreed.
    - The division with the highest percentage of negative answers was Resource and Visitor Protection, with 7.59 percent, followed by Maintenance, with 6.67 percent.

Allegation 6: Financial Misconduct Occurred Under the Maintenance Division Supervisor's Direction

The article mentioned reports of an environment of financial misconduct at Yellowstone. When we interviewed the Yellowstone employee, he alleged that during his detail in another unit under the supervision of the Maintenance Division supervisor, the Maintenance Division supervisor directed him and a coworker to use the supervisor's assigned Government credit card to make purchases when the two reached their monthly credit limit on their assigned Government credit cards. The employee explained that the supervisor interrupted a meeting he and his coworker were attending and told them that he did not "give a goddamn if [they were] out of money." He then directed the two to use his Government credit card to make purchases when the two no longer had credit remaining on their cards. He said he objected to this directive, but the supervisor told him that there would be no discussion about it.

Another supervisor in this unit confirmed the Yellowstone employee's account of this directive. He explained that he had been out of the office the day the Maintenance Division supervisor interrupted the meeting, but the employee had called him the same day and informed him about what had happened. He told us that when he returned to work, he confronted the Maintenance Division supervisor and told him: "We can't do this," because the two employees would "lose their purchasing authority" if they did. He said that about 7 or 8 years before, he had often seen the Maintenance Division supervisor give his Government credit card to two employees in the unit and direct them to use it to make purchases.

We interviewed these employees, who both acknowledged that the Maintenance Division supervisor had directed them to use his Government credit card to make purchases once they reached their monthly credit limit on their cards. One said that the supervisor gave him this direction approximately 2 to 4 years before; the other said the supervisor had directed him to do this approximately 5 years before.

We reviewed the U.S. Department of the Interior's Integrated Charge Card Policy Manual, which governs the use of credit cards issued by the Department. The manual expressly states that cardholders must not allow anyone else to use their cards, convenience checks, account numbers, personal identification numbers, or other sensitive information related to their cards.

The Maintenance Division supervisor admitted that he had in the past directed four employees to use his assigned Government credit card to make purchases when they had reached their monthly credit limits. He acknowledged that allowing someone else to use his assigned card violated departmental policy. He said that now, when his staff reached their credit limits on their assigned cards, he would make purchases for them using his card.

The Yellowstone employee also alleged that other employees had tried to get him to use his Government credit card to make split purchases (breaking a large purchase into small, separate purchases) in order to circumvent the lengthy procurement process. He said that he refused to do this.

The Maintenance Division supervisor acknowledged that split purchasing had been a common practice 7 or 8 years before, but said it no longer occurred because the Maintenance Division had begun using blanket purchase agreements to purchase larger items. A Maintenance Division official also acknowledged that the division had frequently used split purchasing, in part because dealing with the contracting office was "extremely difficult." An employee told us that the Maintenance Division supervisor had directed him in the past to make split purchases, but he could not recall specifics. He said that the practice had stopped approximately 8 years before. Another employee also told us that the Maintenance Division supervisor had directed him in the past to make split purchases but that he had refused.

To confirm the extent of split purchasing in the units under the supervision of the Maintenance Division supervisor, we reviewed the results of Yellowstone's Government credit card audits from 2011 to 2016. Out of 1,962 total accounts audited during these years, no split purchases were identified in one of the units. In another, nine transactions were identified in 2013, four in 2014, two in 2015, and none in 2011, 2012, or 2016.

Finally, the Yellowstone employee alleged that another employee had made approximately $10,000 in personal charges to her Government credit card. He said that she "got caught" but was later promoted.

We interviewed this employee, who now worked for another bureau in the Department, about the allegation. She denied charging $10,000 to her Government card, but admitted that for a period in the 1990s she had used the card occasionally for personal cash advances and once to pay for work-related training for another NPS employee. She said, however, that she had paid all of the money back, and she clarified that she was not promoted afterward; rather, she was demoted and reassigned to a lower-level position at Yellowstone.

We confirmed that the employee was demoted. In the late 2000s she made a lateral transfer to her current bureau, where several years later she was promoted to her current pay grade.

Yellowstone and Regional Officials Were Unaware of These Alleged Issues

We interviewed Yellowstone and NPS regional officials, including Superintendent Dan Wenk, Wenk's former deputy, and two officials from NPS' Intermountain Region about the issues the employee alleged in the article. All denied any knowledge of the issues until just before the article was published; however, Wenk believed that "there might be a grain of truth" to the allegations. He acknowledged there had been issues with employee misconduct in the Maintenance Division, specifically the units referenced in this report. In addition, the deputy said there had been two sexual harassment incidents at Yellowstone in 2016, but both had been resolved with the suspension or reprimand of the male employees involved. Neither incident involved the Maintenance Division or the employees mentioned in this report.

No Indication of Hiring Discrimination by the Maintenance Division Supervisor

During our investigation, a subordinate of the Maintenance Division supervisor alleged hiring discrimination against women in one of the Maintenance Division units. He said that in early

2016, the Maintenance Division supervisor told him: "We're not hiring any women this year." He said the Maintenance Division supervisor made the comment after learning that a woman was planning to apply for an open position in the unit.

The Maintenance Division supervisor acknowledged making the comment to his subordinate and told us he had not wanted to hire any women into that unit because the unit had not had a permanent supervisor since the former supervisor retired. Knowing that the unit did not have "too good a record at this point in time," he said, he did not want the "distraction" of a woman there without direct supervision. He told us, however, that he later changed his mind; he said he offered seasonal positions to two women, but they both declined. We confirmed this statement. As of the date of this report, the unit had no female employees.

We reviewed all job announcements, lists of certified applicants, and selectees associated with the Maintenance Division since 2013, and found the following:

- There were 61 job announcements associated with the Maintenance Division. (Many of these announcements had multiple hires.)

- Out of the 1,238 certified applicants for these announcements, 170 (13.7 percent) were women.

- Of the 170 certified female applicants, 94 were offered positions.

- Of the 216 total applicants who accepted positions, 31 (14.4 percent) were women. (The remaining 63 female applicants declined for various reasons.)

SUBJECTS

1. Maintenance Division supervisor, Yellowstone National Park, NPS.
2. Maintenance Division supervisor's former subordinate (retired), Yellowstone National Park, NPS.

DISPOSITION

We provided this report to the Acting NPS Director for any action he deemed appropriate.

OFFICE OF
INSPECTOR GENERAL
U.S. DEPARTMENT OF THE INTERIOR

APR 07 2017

Memorandum

To: Amy Holley
Acting Assistant Secretary for Policy, Management and Budget

James Cason
Acting Deputy Secretary of the Interior

From: Amy R. Billings Amy R Billings
Central Region Manager for Audits, Inspections, and Evaluations

Subject: Verification Review – Recommendations for the Report, "Management of Rights-of-Way in the U.S. Department of the Interior," (Report No. C-IN-MOA-0013-2010)
Report No. 2017-CR-009

The Office of Inspector General (OIG) has completed a verification review of 13 of the 17 recommendations in our September 27, 2012 audit report, "Management of Rights-of-Way in the U.S. Department of the Interior," (Report No. C-IN-MOA-0013-2010). Our objective was to determine whether the National Park Service (NPS), the Office of Valuation Services (OVS), and the Office of Appraisal Services (OAS) implemented the recommendations pertaining to them as reported to the Office of Financial Management (PFM), Office of Policy, Management and Budget (PMB).

PFM reported to us when each of the 13 recommendations were addressed and provided supporting documentation. Based on our review, we consider 8 of the 13 recommendations (1, 4, 5, 7, 9, 12, 16, and 17) resolved, implemented, and closed. In addition, we acknowledge that OVS's ability to fully meet the intent of recommendations 10, 13 and 14 is hampered by the need for other bureaus to voluntarily change their rules and regulations. Therefore, we consider these recommendations closed but not implemented. We consider recommendations 2 and 3 not implemented and not closed.

Background

Our audit report found that NPS, OVS, OAS and the Bureau of Land Management (BLM) did not receive market value for rents on Rights-of-Way (ROW) and had an opportunity to collect as much as $100 million or more annually if they had assessed market value for rents. We made 17 recommendations designed to take advantage of these opportunities including performing ROW rent valuations based on actual market values, revising and updating ROW rent schedules, and identifying unreported services and collecting back rents on ROW. The Department generally concurred with the report's recommendations in a memorandum dated July 18, 2012.

On March 12, 2013, we referred all 17 of the recommendations to PFM to track their implementation or resolution. PFM issued a series of memoranda to us between March 5, 2014, and September 27, 2016 reporting the recommendations as implemented and closed. As of September 27, 2016, 13 recommendations 1, 2, 3, 4, 5, 7, 9, 10, 12, 13, 14, 16, and 17 were reported closed by PFM, which are the subject of this verification review. Recommendations 6, 8, 11 and 15 pertain directly to BLM and are closely tied to the recommendations covered in this review. BLM s recommendations, however, have not yet been reported as closed and were not part of this review.

Scope and Methodolog

We limited the scope of this review to the 13 recommendations reported closed by PFM and pertaining to NPS, OVS, and OAS. To accomplish our objective, we reviewed the supporting documentation that was provided to PFM, discussed issues with the OVS Chief Appraiser, and collected and reviewed additional supporting documentation as required to independently verify each recommendation s implementation.

We did not test internal controls, visit sites, or conduct fieldwork to determine whether the underlying deficiencies that we initially identified have been corrected. As a result, this review was not conducted in accordance with Generally Accepted Government Auditing Standards issued by the Comptroller General of the United States or the Quality Standards for Inspection and Evaluation of the Council of the Inspectors General on Integrity and Efficiency.

Results of Revie

Based on our review we conclude that 8 of the 13 recommendations reported as closed by PFM have been resolved, implemented, and closed:

Recommendation 1 Following Uniform Appraisal Standards, Valuation Services should define market value of ROW to include the value of the right or use granted.

Recommendation 4 Valuation Services should perform high-priority, individual valuations as allowed, given its resources.

Recommendation 5 Valuation Services should develop and implement guidance and training requirements for staff to conduct individual ROW valuations.

Recommendation Valuation Services should work with BLM to implement linear rent schedules for department-wide use with provisions to periodically update the schedules.

Recommendation Valuation Services should work with BLM to implement communications rent schedules for department-wide use with provisions to periodically update the schedules.

Recommendation 1 The Department s Office of Budget should seek authority for BLM and other bureaus with ROW responsibilities to retain a percentage of the revenues

recovered from reviews that identify unpaid rent from unreported services. Bureaus could use these additional revenues to fund additional reviews.

Recommendation 16—NPS should continue to implement a ROW management program that includes completing an inventory of its ROW and assigning qualified realty staff.

Recommendation 1—Appraisal Services should consult with the Office of the Solicitor to determine which recommendations in this report are applicable to Indian Affairs.

We consider recommendations 10, 13, and 14 closed, but not implemented:

Recommendation 10—Valuation Services should work with BLM to develop and implement procedures for department-wide periodic reevaluations of ROW grants, with authority to update rental rates to reflect current market values.

Actions Taken—In its response to our audit report, the Department stated that OVS would assist in the development of a department-wide reevaluation procedure by assisting BLM and DOI with developing methodologies for periodically reevaluating and updating the linear and communications rent schedules. It also stated that OVS would conduct periodic audits of ROW grants to determine whether rental rates are still representative of market value post-implementation.

In its request to PFM to close this recommendation, OVS stated that BLM determined it would have to pursue formal rulemaking to allow development of rent schedules other than those included in regulation. During our review, OVS provided us with drafts of the regulations that BLM wants to change and which OVS had input. OVS is not conducting periodic reevaluations of ROW grants, which was a finding in our original report. Rather, grant leases are evaluated at the end of the ROW terms. We believe that periodic audits of ROW grants are warranted; however, we understand that OVS's ability to implement the full intent of the original recommendation is heavily contingent on BLM action. Therefore, we consider this recommendation closed but not implemented.

Recommendation 13—Valuation Services should work with bureaus with ROW responsibilities to implement penalties for grantees that do not report additional services and fail to pay rents.

Recommendation 14—Valuation Services should work with the bureaus to develop and implement department-wide procedures for calculating and collecting unpaid back rents.

Actions Taken—In its response to our audit report, the Department noted that a considerable amount of research would be needed prior to implementing penalties for grantees or developing department-wide procedures for calculating and collecting unpaid back rents. To address these two recommendations, the Department stated it would have OVS convene a work group to—

- Identify authorities that may permit penalties and collection of back rents;

- Review current penalty and rent collections programs in the bureaus, if any;
- Develop recommendations for the implementation of penalties and back rent collections programs; and
- Implement programs in each bureau.

In its request to close the recommendation, OVS stated that it had convened a work group made up of key bureau personnel, and provided a list of attendees and a small chart outlining each bureau's applicable regulations, the section of the regulation that pertains to back rents, and a brief summary of the types of penalties or pecuniary actions available to each bureau. We were told, during the course of this review, that the work group met once, discussed the information provided in the chart, and concluded that OVS did not have the authority to implement any department-wide policies regarding penalties and back rents and that each of the bureaus would need to complete rulemaking to modify their existing regulations.

Though a work group was convened, and each bureau identified its own applicable authorities that may permit penalties and the collection of back rents. The group did not undertake any sort of in depth review, develop any recommendations regarding possible improvements, or implement or improve the implementation of a penalty or back rent collection programs in the bureaus. However, since OVS does not have direct authority to implement penalties, or to develop department-wide procedures for calculating and collecting back rents, its ability to meet the full intent of these two recommendations is limited. Therefore, we consider Recommendations 13 and 14 closed but not implemented.

We do not consider recommendations 2 and 3 implemented or closed:

Recommendation Valuation Services should create and maintain a database of comparable ROW information.

Actions Taken OVS has begun collecting market transaction data related to ROW from completed NPS and FWS appraisals, as well as ROW market-related information from State government agencies and other public sources. In addition, OVS has come to an agreement with OAS to buy licenses (through OAS enterprise agreement) for OAS appraisal software program, which includes the ability to create a database for ROW market transactions. In order to use the appraisal software program, however, we learned that OVS must clear this arrangement through the Department's Office of the Chief Information Officer (OCIO). According to OVS Chief Appraiser, OVS has not yet submitted this request to the OCIO, and as such is not currently using the appraisal software system.

OVS has made significant progress towards implementing this recommendation, and we commend the efficiency of using available resources (OAS appraisal system) rather than duplicating efforts by securing another similar system. Until OVS submits its request to the OCIO and gets approval, however, it cannot create and maintain a database of comparable ROW information as intended by the recommendation. Therefore, we do not consider this recommendation implemented or closed.

Recommendation 3—Valuation Services should establish criteria to prioritize ROW using market considerations, including the value and volume of the service authorized.

Actions Taken—In its closure request, OVS proposed that this recommendation be closed without implementation pending legal review. OVS noted that it did not have the authority to establish criteria for prioritization of ROW, but it met with BLM numerous times to discuss the implementation of this recommendation. The issue in question is whether determining market rents based on the value and volume of the authorized services violates the Commerce Clause of the U.S. Constitution, as ruled in *Western Oil and Gas Association v. Cory*, 726 F. 2d 1340 (1985). If the Office of the Solicitor determines that this approach is not a violation, OVS stated that it could take on the necessary market data collection effort to assist BLM, in the event that BLM requests valuation work from OVS. The other bureaus would each have to amend their regulations through the rulemaking process to allow this methodology to be used for establishing market rent.

Shortly after we began our review, OVS submitted a request for legal review to the Office of the Solicitor. At the time of this report, OVS had not yet received an opinion. Until OVS receives an opinion from the Solicitor indicating whether determining market rents based on the value and volume of the authorized services is a violation, we do not consider this recommendation implemented or closed.

Conclusion

We informed NPS, OVS, and OAS officials of the results of this review on March17, 2017.

Memorandum

To: Amy Holley
Acting Assistant Secretary for Policy, Management and Budget

From: Amy R. Billings Amy R Billings
Central Region Manager for Audits, Inspections, and Evaluations

Subject: Verification Review – Recommendations for the Report, "Department of the Interior's Radio Communications Program" (Audit No. C-IN-MOA-0007-2005) Report No. 2017-CR-008

The Office of Inspector General (OIG) has completed a verification review of the seven recommendations presented in our January 2007 audit report "Department of the Interior's Radio Communications Program" (Audit No. C-IN-MOA-0007-2005). Our objective for this review was to determine if the U.S. Department of the Interior (Department) implemented the seven recommendations as reported to the Office of Financial Management (PFM), Office of Policy, Management and Budget. Based on our review, we conclude that the report's recommendations have been resolved, implemented, and closed.

In our 2007 audit, we found that DOI has over 100 radio sites in extremely poor or hazardous condition, which posed an immediate risk of injury or death to employees and the public. We made seven recommendations for improving the Department's controls over radio communications. Between July 2009 and September 2016, PFM reported to OIG that the Department had addressed, implemented, and closed the seven following recommendations:

Recommendation 1: Reinstate wireless telecommunications as a departmental material weakness until the findings in this report are sufficiently addressed and corrected.

Recommendation 2: Assign full responsibility over the radio communications program to the OCIO [Office of the Chief Information Officer], including management and funding of all radio equipment and related infrastructure.

Recommendation 3: Develop a comprehensive management plan for the radio communications program, with input from users and stakeholders to include—

- the CPIC [Capital Planning and Investment Control] process to manage the radio communications program;
- a department-wide action plan with milestones to perform necessary site assessments and correct deficiencies;

- a determination of the funding necessary to conduct site assessments, correct deficiencies, and perform routine maintenance on the radio infrastructure; and
- short- and long-term strategies for completing the narrowband conversion.

Recommendation 4 Identify specific user groups (for example, fire fighter, law enforcement, and biologists) and ensure

- user needs are thoroughly assessed and addressed;
- guidance that meets all users' needs is provided and enforced;
- all user groups are provided adequate training on radio use; and
- users are allowed to purchase analog narrowband technology or to develop hybrid systems to address health and safety issues or limitations in infrastructure capabilities.

Recommendation 5 Appoint a credentialed project manager to oversee the radio communications program.

Recommendation 6: DOI [Department] should enforce existing safety procedures, such as posting warning signs, to inform employees and the general public of hazardous site conditions.

Recommendation Implement the following best practices, where appropriate:

- Establish a universal property management and radio system network database to better identify existing resources department-wide and to help identify resource sharing opportunities within DOI.
- Share infrastructure with other Federal agencies and State and local governments.
- Consider alternate technologies.
- Centralize the bureaus technical service capabilities to take advantage of the expertise and resources department-wide.
- Establish a consistent funding mechanism, such as a working capital fund, to ensure availability of funds for annual maintenance.
- Establish a life-cycle replacement program to systematically track the condition and useful life of the radio infrastructure so radio costs can be systematically projected.

We limited the scope of our review to determine if the Department implemented the recommendations reported closed by PFM. To accomplish our objective, we reviewed the supporting documentation that Department officials provided to PFM, and collected and reviewed additional supporting documentation necessary to verify each recommendation s implementation independently.

We did not test internal controls, visit sites, or conduct fieldwork to determine whether the underlying deficiencies that we initially identified have been corrected. As a result, we did not conduct this verification review in accordance with Generally Accepted Government

Auditing Standards issued by the Comptroller General of the United States, or Quality Standards for Inspection and Evaluation issued by the Council of the Inspectors General on Integrity and Efficiency.

We informed Department officials of the results of this review on April 03, 2017.

Caryl Fagot BOEM (504) 736-2590

Secretary Zinke Announces Proposed 73-Million Acre Oil and Natural Gas Lease Sale for Gulf of Mexico

All available areas in federal waters will be offered in first region-wide sale under new Five Year Program

WASHINGTON -- U.S. Secretary of the Interior Ryan Zinke today announced that the Department will offer 73 million acres offshore Texas, Louisiana, Mississippi, Alabama and Florida for oil and gas exploration and development. The proposed region-wide lease sale scheduled for August 16, 2017 would include all available unleased areas in federal waters of the Gulf of Mexico.

"Opening more federal lands and waters to oil and gas drilling is a pillar of President Trump's plan to make the United States energy independent," Secretary Zinke said. "The Gulf is a vital part of that strategy to spur economic opportunities for industry, states and local communities, to create jobs and home-grown energy and to reduce our dependence on foreign oil."

Proposed Lease Sale 249, scheduled to be livestreamed from New Orleans, will be the first offshore sale under the new Outer Continental Shelf Oil and Gas Leasing Program for 2017-2022 (Five Year Program). Under this new program, ten region-wide lease sales are scheduled for the Gulf, where the resource potential and industry interest are high, and oil and gas infrastructure is well established. Two Gulf lease sales will be held each year and include all available blocks in the combined Western, Central, and Eastern Gulf of Mexico Planning Areas.

The estimated amount of resources projected to be developed as a result of the proposed region-wide lease sale ranges from 0.211 to 1.118 billion barrels of oil and from 0.547 to 4.424 trillion cubic feet of gas. The sale could potentially result in 1.2 to 4.2 percent of the forecasted cumulative OCS oil and gas activity in the Gulf of Mexico. Most of the activity (up to 83% of future production) of the proposed lease sale is expected to occur in the Central Planning Area.

Lease Sale 249 will include about 13,725 unleased blocks, located from three to 230 miles offshore, in the Gulf's Western, Central and Eastern planning areas in water depths ranging from nine to more than 11,115 feet (three to 3,400 meters). Excluded from the lease sale are blocks subject to the Congressional moratorium established by the Gulf of Mexico Energy Security Act of 2006; blocks that are adjacent to or beyond the U.S. Exclusive Economic Zone in the area

known as the northern portion of the Eastern Gap; and whole blocks and partial blocks within the current boundary of the Flower Garden Banks National Marine Sanctuary.

“To promote responsible domestic energy production, the proposed terms of this sale have been carefully developed through extensive environmental analysis, public comment and consideration of the best scientific information available,” said Walter Cruickshank, the acting director of Interior’s Bureau of Ocean Energy Management (BOEM). “This will ensure both orderly resource development and protection of the environment.”

The lease sale terms include stipulations to protect biologically sensitive resources, mitigate potential adverse effects on protected species and avoid potential conflicts associated with oil and gas development in the region. BOEM’s proposed economic terms include a range of incentives to encourage diligent development and ensure a fair return to taxpayers. The terms and conditions for Sale 249 in the Proposed Notice of Sale are not final. Different terms and conditions may be employed in the Final Notice of Sale, which will be published at least 30 days before the sale.

BOEM estimates that the U.S. Outer Continental Shelf (OCS) contains about 90 billion barrels of undiscovered technically recoverable oil and 327 trillion cubic feet of undiscovered technically recoverable gas. The Gulf of Mexico OCS, covering about 160 million acres, has technically recoverable resources of 48.46 billion barrels of oil and 141.76 trillion cubic feet of gas.

Production from all OCS leases provided 550 million barrels of oil and 1.25 trillion cubic feet of natural gas in FY2016, accounting for 72 percent of the oil and 27 percent of the natural gas produced on federal lands. Energy production and development of new projects on the U.S. OCS supported an estimated 492,000 direct, indirect, and induced jobs in FY2015 and generated $5.1 billion in total revenue that was distributed to the Federal Treasury, state governments, Land and Water Conservation Fund, and Historic Preservation Fund.

As of March 1, 2017, about 16.9 million acres on the U.S. OCS are under lease for oil and gas development (3,194 active leases) and 4.6 million of those acres (929 leases) are producing oil and natural gas. More than 97 percent of these leases are in the Gulf of Mexico; about 3 percent are on the OCS off California and Alaska.

The current Five Year Program [2012-2017] has one final Gulf lease sale scheduled on March 22, 2017 for Central Planning Area Sale 247. The 2012-2017 Five Year Program has offered about 73 million acres, netted more than $3 billion in high bids for American taxpayers and awarded more than 2,000 leases.)

All terms and conditions for Gulf of Mexico Region-wide Sale 249 are detailed in the Proposed Notice of Sale (PNOS) information package, which is available at: http://www.boem.gov/Sale-249/. Copies of the PNOS maps can be requested from the Gulf of Mexico Region's Public Information Unit at 1201 Elmwood Park Boulevard, New Orleans, LA 70123, or at 800-200-GULF (4853).

The Notice of Availability of the PNOS will be available today for inspection in the Federal Register at: http://www.archives.gov/federal-register/public-inspection/index.html and will be published in the March 7, 2017 *Federal Register*.

Hi Casey. My name is Chuck Kleeschulte and I work for Sen. Lisa Murkowski at the Energy committee. I believe Kate copied you on this email last week, but was checking back, mostly because she suggested I check in with you, on the issue of a land trade in Alaska needed to build the last major segment of a rebuilt Sterling Highway in the Cooper Landing area. The backup that I sent Kate is attached, plus a companion letter to DOT that also is needed to solve an issue with the Resurrection Pass Trail crossing. Call if you have questions. My direct line is 202/224-8276. Thank you. Chuck Kleeschulte

Re: Russian River Land Act/Sterling Highway reroute/land exchange

Dear Mr. Secretary:

I write to seek your assistance to help unravel one of the the longest running environmental regulatory roadblocks in the State of Alaska, the dispute over how to relocate a segment of Alaska Highway 1 (the Sterling Highway) as it runs along the Kenai River through and past the town of Cooper Landing.

Since the late 1970s a series of Administrations and Congress have been attempting to find the best route for a modern 15-mile bypass that would avoid funneling all traffic to Southcentral Alaska within a few feet of America's premiere king salmon streams, the Kenai and Russian Rivers. We are in the midst of the third Environmental Impact Statement, most recently costing $16 million. This is a complex issue as the Sterling Highway snakes through the Kenai Mountains near Cooper Landing, crossing the Chugach National Forest, the Kenai National Wildlife Refuge/formal wilderness and the Kenai State Park.

The Highway, one of America's most scenic, runs through major brown bear and moose habitat, crosses historic and culturally archaeological grounds for the Kenaitze Indian Tribe, and comes within a few feet of the Kenai River, the breeding grounds of America's largest king salmon. Hundreds of thousands of tourists travel the narrow highway yearly; despite this, commercial and sport fishing along the river account for 40 percent of the Kenai Peninsula's total economy.

The long-standing goal has been to build a by-pass around the tourist areas at Cooper Landing so that 70 percent of all traffic does not have to travel on the 1950's era pavement. This would protect the nearby salmon streams from potential fuel and chemical spills. Four route alternatives have been developed, the best from an environmental and Native archaeological standpoint is the Juneau Creek alternative that would run the highway 1.5 miles north of Kenai Lake, requiring no bridges to cross the

river, and protecting salmon from all sediment and road runoff. By contrast, the most significant negative impact environmentally would be from the G-South Alternative. This alternative, which remarkably is now "preferred," would require a new bridge over the river, counter to the requirements of the Kenai River Comprehensive Management Plan.

Unfortunately, the Federal Highway Administration recently ruled the Juneau Creek route out of consideration – even though it once approved of it -- because that route must cross the width of the Resurrection Pass National Historic Recreation Trail and about a quarter mile of the Mystery Creek Wilderness Area located inside the Kenai National Wildlife Refuge. It will take a 33-acre boundary adjustment to the southeast corner of the wilderness to clear a route for the highway.

Fifteen years ago, Congress envisioned that the best route for the bypass would cross the wilderness area and approved the Russian River Land Act (PL. 107-362, 116 Stat. 3021). That Act established a formal process for a land exchange to clear the right of way. Under that law, the region's Native Regional Corporation, Cook Inlet Inc. (CIRI), was required to trade lands to the U.S. Fish and Wildlife Service to be added to the refuge to offset the 33-acre boundary adjustment. CIRI was then allowed to select other less valuable lands to the west of Cooper Landing in exchange. Under P.L. 107-362, however, only the Secretary of the Interior can initiate negotiations for the exchange.

A land exchange to permit the bypass to follow the Juneau Creek alternative (again, a better route from an environmental standpoint) is supported by the Kenai River Sportfish Association, by the Kenai Peninsula Borough, the City of Kenai, the cities of Soldotna and Homer, the Kenaitze Indian Tribe, the Salamatof Native Association, the Ninilchik Traditional (Tribal) Council, and the environmental-fishery groups: Cook Inlet Keeper, Kenai Watershed Forum, Kenai Peninsula Fishermen's Association, United Cook Inlet Drift Association, the Kenai River Professional Guide Association, and the Kenai River Keys Property Owners Association.

Time is of the essence. Last fall the Federal Highway Administration unveiled its draft "final" EIS that eliminated the Juneau Creek alternative from consideration. At least in part because the FHwA noted there has yet to be a land exchange initiated that would prevent the road from crossing the wilderness area – a violation of Section 4(f) of the Federal Highway Act and because of concerns about the route crossing the Resurrection Pass Trail. The FHWA is scheduled to finalize its record of decision this fall.

Prompt action on a land exchange, however, in which CIRI is prepared to quickly engage, would prevent a poor alternative from being selected, and avoid additional delays and cost hikes in construction of one of the last segments of this key Alaska highway.

I hope you will consider quickly initiating the needed land exchange and that you will encourage all agencies in your department to press for the most narrow land exchange possible – one that will fully compensate the refuge for any wilderness acreage it loses for a road, but an exchange that will solve only the land issues raised by this project and not encompass all of the potential land ownership proposals that could arise – the

appraisal process obviously becoming far more complex and lengthy if a more expansive exchange is sought by federal agencies.

I and my staff stand ready to discuss this request with you at any time. It is just another of many vital issues to Alaska that you face as Secretary as a result of being the landlord for about 190 million acres of my state. Thank you for your consideration of this issue.

Sincerely,

Lisa Murkowski
United States Senator

Attachments: Sterling Highway Summary Sheet and DEIS Report

Sterling Highway MP 45-60 Reconstruction Project

Project Purpose: The purpose of the Sterling Highway MP 45-60 Reconstruction Project is to bring the highway up to current standards and to efficiently and safely serve the through-traffic, local community traffic and traffic bound for recreation destinations within the project area both now and in the future.

Background: This section of the Sterling Highway is essentially the same highway that was built in the 1940's and 1950's. The environmental work for this project was initiated in 1975 and has continued on to the present.

Alternatives: There are four "build" alternative routes evaluated in detail in the EIS. These are the Cooper Creek Alternative, G South Alternative, Juneau Creek Alternative (desired by local government, tribes and sport fishing organizations) and Juneau Creek Variant Alternative. There is also the "No Build Alternative".

Selected Alternative: The G South Alternative was selected for the following reasons: 1) The two Juneau Creek Alternatives cross the Resurrection Pass National Recreation Trail which FHWA has determined to be Section 4(f) resource. Section 4(f) refers to the original section within the U.S. Department of Transportation Act of 1966 which established the requirement for consideration of park and recreation lands, wildlife and waterfowl refuges, and historic sites in transportation project development. By law, if a Section 4(f) evaluation identifies a feasible and prudent alternative that completely avoids Section 4(f) properties, it must be selected. The G South and Cooper Creek Alternative are both feasible and prudent; therefore, neither of the Juneau Creek Alternatives can be selected. 2) The Cooper Creek Alternative would have considerable impacts to the community of Cooper Landing and would not address the congestion and safety problems in this portion of the highway as the G South Alternative; therefore, G South is the selected alternative.

Roles of FHWA and DOT&PF: FHWA makes the decisions on what is to be evaluated and makes the final route alternative selection which is published in a Record of Decision (ROD). DOT&PF performs the work as required by FHWA. Once the ROD is published, DOT&PF can either build the selected alternative in the ROD or decide not to build anything. Either way, the money spent on the EIS remains eligible for federal funds.

Financial Information: Current costs for the EIS exceed $16 million dollars. The construction cost estimates for this project are around $300 million. The project is a Federal Aid Highway Project. Under that program the federal government pays about 90% of project costs from State of Alaska apportioned funds from the Federal Highway Trust Fund, with the State paying the remaining 10%.

Current Status: In December 2015, DOT&PF and the Federal Highway Administration (FHWA) identified the G South Alternative as the preferred alternative for the Sterling Highway MP 45-60 Project near Cooper Landing. The Final EIS will be released for review by cooperating agencies this month (November 2016). The Final EIS public availability period is expected in the Summer of 2017. The Record of Decision is anticipated in November 2017.

Impacts and Benefits Table	27

The Project at a Glance

Originally completed in 1950, the Sterling Highway is the only road that links western Kenai Peninsula communities (e.g., Kenai, Soldotna, and Homer) to the rest of the state. For many years, the Alaska Department of Transportation and Public Facilities (DOT&PF) has recognized the need for improved safety and traffic flow along this highway to accommodate increased traffic from community growth, recreation, and tourism.

The Problems and Challenges

The Sterling Highway from Milepost 45 to 60 follows the Kenai River valley through the Kenai Mountains. The highway's problems and challenges through Cooper Landing include:

- A constricted valley between the Kenai River and steep mountain walls
- Narrow, curvy highway design
- Traffic congestion
- Many driveways and side roads
- Conflicts between local traffic and through-traffic
- Elevated crash rate
- Risk of contaminant spills into the Kenai River

The scenic nature of the area, community growth, and world-class fishing on the Kenai and Russian rivers combine to create serious congestion problems for the highway from May through September. This level of congestion has created safety issues for highway travelers, especially in areas where high-speed traffic conflicts with vehicles turning on and off the highway.

The Goal

DOT&PF seeks to:

- Reduce congestion
- Improve the highway to current "rural principal arterial" design standards
- Improve highway safety

See detailed project map on pages 3-4.

Whose project is this?

The Sterling Highway Milepost (MP) 45 to 60 Project is proposed by the DOT&PF (as the highway owner) and by the Federal Highway Administration (FHWA). FHWA administers Federal transportation project funds, which means that FHWA would approve the final environmental impact statement and subsequent record of decision.

Overview

Sterling Highway Milepost 45-60

Thousands of Alaskans and visitors from around the world drive to the spectacular upper Kenai River every summer. Most come from Anchorage, which is home to the majority of the state's population and the region's main airport. From the other direction, they may come from Kenai, Soldotna, or Homer—the principal cities on the western Kenai Peninsula. From either direction, they drive a consistent highway—with uniform lane widths, ample shoulders, and curves designed for uniform highway speeds—until they approach Cooper Landing.

Near Cooper Landing, the Sterling Highway reverts to its original design, with narrow lanes, no shoulders, and sharp curves. The highway through this stretch was constructed in the 1940s and 1950s and served the traffic and vehicles of that time. Since then, however, the sizes and numbers of cars and trucks have changed, as well as the standards for a highway's lanes, shoulders, and sharpness of curves. Along this stretch, the highway does not meet current highway standards. The narrow lanes and shoulders, sharp curves, and poor visibility mean the road is less safe than similar roads around the state.

In summer, traffic overwhelms the road. Cooper Landing and the nearby confluence of the Kenai and Russian rivers draw people for fishing, boating, camping, and hiking. This slow-moving local traffic is continually pulling on and off the highway. People traveling through the area, between places like Soldotna and Anchorage, share the same highway and get caught in the local traffic.

The idea of a new highway in the Cooper Landing area is favored by some people and is a source of concern for others.

Why favored?

This project holds promise for a better highway design and safer driving experience. The Sterling Highway runs for several miles along the Kenai River, in some places following every bend. The road is narrow and winding, with low speed limits in some areas, with no shoulders or adequate space along the road for safety, with little opportunity to pass, and with many connecting driveways that create multiple access points to the highway. Traffic is gradually increasing and has been for decades, reducing the ability of the highway to handle the traffic.

Upgrades to modern highway design standards would allow for more consistent highway speeds to serve long-distance travelers and commercial truck traffic. With a new highway route, segments of the old highway would remain as a lower-speed road suited to serving local and recreational traffic. A reconstructed highway would match other nearby portions of the Sterling and Seward highways, which have been upgraded to modern standards.

Why is there concern?

The Kenai River valley is not an easy place to improve a road. Land along the highway in Cooper Landing is largely built upon, leaving little room to alter the alignment or widen the highway without impacts to private property. The topography of mountain slopes and river bends also physically constrains the design of the highway, in some cases forcing proposed alignments into locations that are protected or important for other uses. Any change to the highway likely would impact wildlife corridors and habitat, recreation areas, and cultural sites. The Cooper Landing community provides essential support services, and people are concerned that traffic might be routed away from existing businesses.

The Kenai River is a State park, and the confluence of the Russian and Kenai rivers is a major destination for sport fishing. The two rivers also attract a concentration of brown bears. Most of the land in the area is managed by Chugach National Forest and Kenai National Wildlife Refuge.

The area is largely natural and provides habitat for bears, moose, and other wildlife. Besides fishing, people enjoy camping, hiking, mountain biking, rafting and boating, and backcountry winter sports on these public lands.

The fish in the confluence area have been important to Native peoples for thousands of years, and the river was important later to early Russian and American explorers and gold miners. Hundreds of historic and archaeological features dot the area and make it culturally important today to the Kenaitze Indian Tribe and to Cook Inlet Region, Inc. (CIRI), the regional Alaska Native corporation, which owns land in the area. All of this makes the area a complex setting for this project.

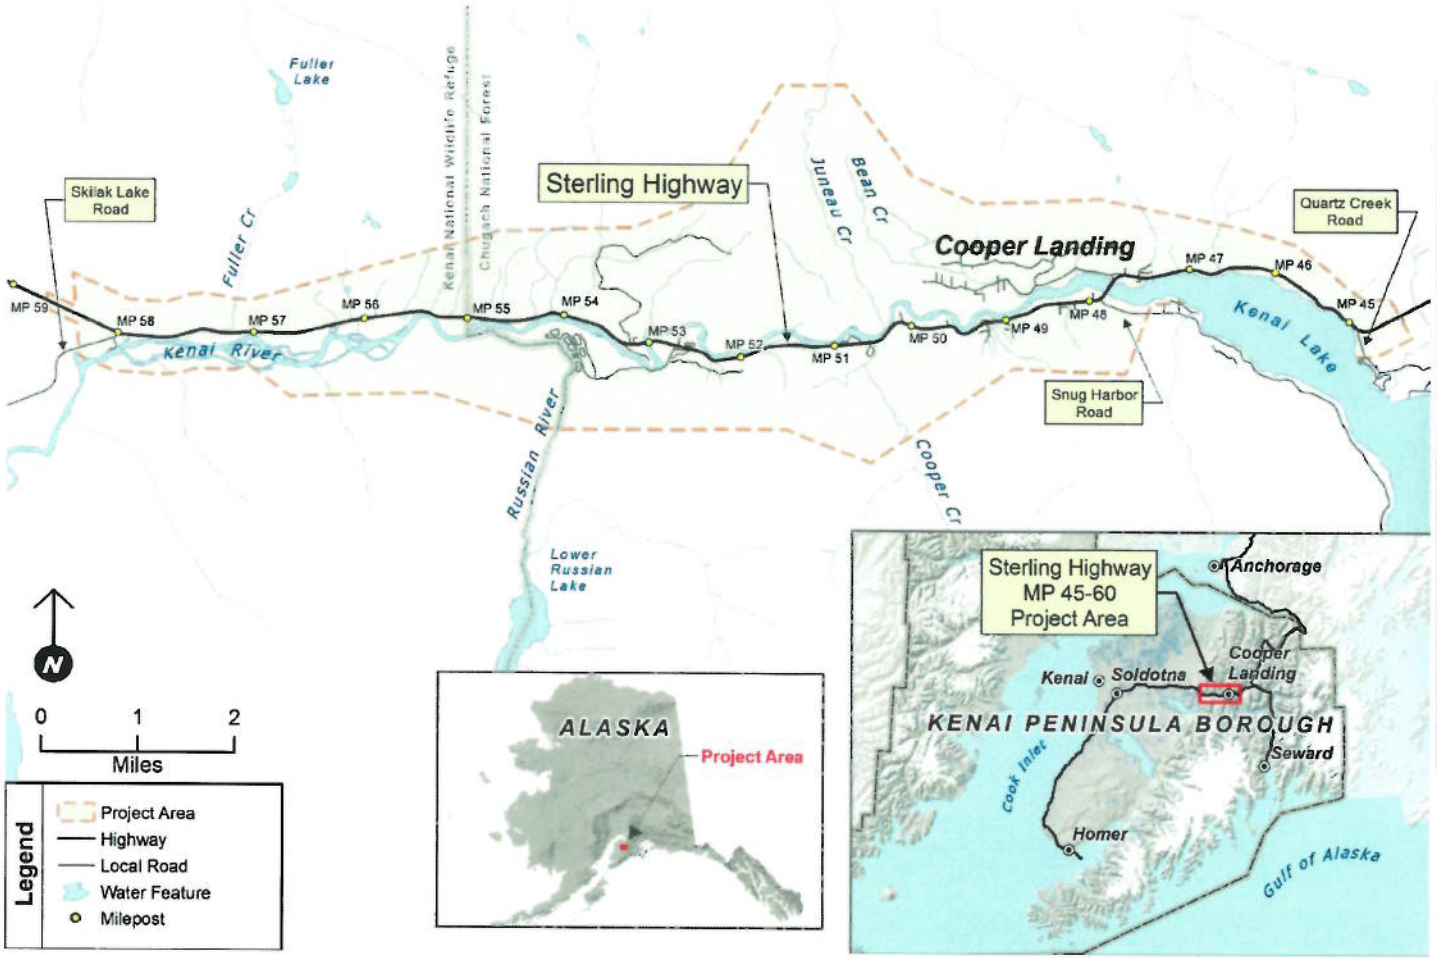
What is an EIS? An Environmental Impact Statement (EIS) is a document prepared to describe the effects of proposed activities on the environment. It considers both the natural and physical environment and the relationship of people with the environment. The purpose of developing an EIS is to help agencies, officials, and the public make sound decisions. Its preparation is prescribed by the National Environmental Policy Act of 1969, and it is necessary to disclose potential impacts in order to secure the use of Federal funding for transportation projects.

Why is this a supplemental EIS?

A supplemental EIS (SEIS) is meant to review the findings of an existing EIS and supplement them with new or updated information. DOT&PF and FHWA previously released two draft EISs for this project, in 1982 and 1994. These addressed a larger project area, extending from MP 37 (Seward Highway junction) to MP 60, 8 miles longer than the current project area (MP 45-60). Based on the complexity in the MP 45-60 area and on a determination that the MP 37-45 project would be useful on its own, the 8-mile segment was expedited and constructed by 2001. At about the same time, DOT&PF began preparing this SEIS, building on past work. Because the entire MP 37-60 area has been under a single ongoing work agreement between DOT&PF and FHWA since the 1970s, this EIS is formally considered a supplement. Enough time has passed, however, that all research was begun anew.

Where is the project?

The Sterling Highway is located on the Kenai Peninsula in Southcentral Alaska. It runs east-west through the Kenai Mountains and continues to the City of Homer. The project area is in the heart of the Kenai Mountains and runs from MP 45 to MP 60. The project's starting and stopping points for construction would be the intersection of the existing Sterling Highway with Quartz Creek Road on the east and the intersection with Skilak Lake Road on the west. The limits of any potential construction activities would be MP 44.5 to 58.2. However, MP 45 and MP 60 have been used historically to define the project, and therefore continue to be used as part of the project's formal name.



Why is the Sterling Highway important?

The Sterling Highway is the only road that connects the western Kenai Peninsula with the Seward Highway and the rest of the nation's highway system. It is part of the National Highway System and is Interstate Highway A-3. While the eastern end of the Sterling Highway connects to the rest of the national highway system on land, the opposite end of the Sterling Highway, at the city of Homer, connects to the Alaska Marine Highway System (ferry). Marine Highway ferries connect travelers by ocean to other Alaskan communities and the North American highway system at points in Southcentral and Southeast Alaska; at Prince Rupert, British Columbia; and at Bellingham, Washington.

Purpose and Need

What is "Purpose and Need," and how does it affect the process?

The Purpose and Need describes transportation problems the project is meant to address. It also helps the public and agencies determine which of the proposed alternatives best solve the transportation problems.

What is the project purpose?

The purpose of the project is to bring the highway up to current standards to efficiently and safely serve through-traffic, local community traffic, and traffic bound for recreation destinations in the area both now and in the future. DOT&PF and FHWA recognize the importance of protecting the Kenai River corridor while still achieving this transportation purpose.

What are the needs for the project?

There are three interrelated needs that the project would address: reducing highway congestion, meeting current highway design standards, and improving highway safety.

Need 1: Reduce Highway Congestion.

The construction of multiple driveways and side street accesses over time, combined with a curvy, constrained alignment with little passing opportunity and increasing traffic volumes, has led to unacceptable congestion that is forecast to worsen in the future. As a result, the highway performs below acceptable levels of service (LOS) for a rural principal arterial that is a component of the National Highway System. LOS is illustrated in the Congestion graphic to the right.

Congestion

Level-of-service (LOS) is a term used to qualitatively describe roadway and intersection traffic operations using "letter grades" ranging from A (best) to F (worst).

LOS A describes the highest quality of traffic service. Motorists travel at their desired speed. Without strict enforcement, LOS A results in average speeds of 55 mph or more for rural principal arterial highways. Passing demand is below passing capacity. Platoons of three or more vehicles are rare. Drivers are delayed no more than 35% of their travel time by other vehicles.

LOS B characterizes traffic flow with speeds of 50 mph or slightly higher on level terrain. The demand for passing to maintain desired speeds becomes significant. Drivers are delayed in platoons up to 50% of the time.

LOS C describes noticeable increases in platoon formation, platoon size, and frequency of passing impediments. The average speed still exceeds 45 mph. Chaining of platoons can occur. Although traffic flow is stable, it is susceptible to congestion due to turning traffic and slow-moving vehicles. Percent time spent following may reach 65%.

LOS D describes unstable traffic flow. Passing demand is high, with passing capacity near zero. Platoon sizes of 5-10 vehicles are common, although speeds of 40 mph still can be maintained. Turning vehicles and roadside distractions cause major shock waves in the traffic stream. Motorists are delayed in platoons nearly 80% of their travel time.

LOS E describes a condition where percent time spent following is greater than 80%. Speeds may drop below 40 mph, down to 25 mph on sustained grades. Passing is virtually impossible. Platooning becomes intense. Operating conditions are at capacity and unstable.

LOS F represents heavily congested flow with traffic demand exceeding capacity. Speeds are highly variable (possibly stop-and-go). While more cars are on the road at each level through LOS D/E, the traffic volume decreases at LOS F because vehicles cannot move freely.

Need 2: Meet Current Highway Design Standards.

Existing characteristics of the Sterling Highway do not meet current design standards for a rural principal arterial road. The existing highway contains curves, shoulders, guardrail, and clear zones that do not meet current design standards (see Current Design Standards and the Existing Highway table below).

Need 3: Improve Highway Safety.

The interrelated effects of highway congestion and outdated highway design characteristics lead to higher-than-average rates of traffic crashes in the project area, and a greater severity of crashes, when compared to the statewide average. The combination of narrow lanes, narrow or non-existent shoulders, sharp curves, and a high number of access points result in these safety issues. The crash rates are higher than the statewide average for similar types of roadways (rural principal arterials). The severity of crashes—that is, those that have major injuries or fatalities—is higher than the statewide average for portions of the highway in the project area.

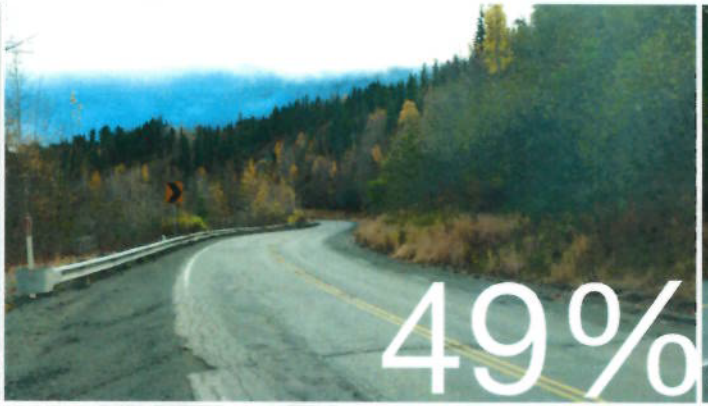
Current Design Standards and the Existing Highway

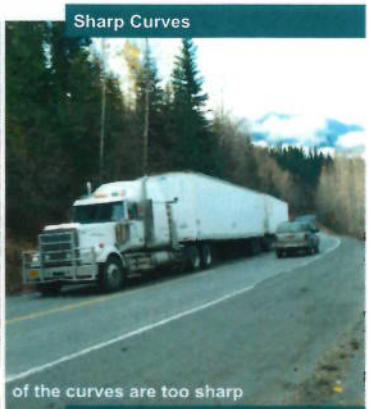
	Design Standards*	Distance Not Meeting Standard	Percent Not Meeting Standard
Design Speed *(mph)*	60	15 miles at 55 mph or less 4 miles at 40 mph or less	100%
Minimum Curve Radius *(feet)*	1,330	21 of 43 curves less than standard radius	49%
Lane Width *(feet)*	12	13.7 of 15 miles less than 12-foot-wide lanes	91%
Shoulder Width *(feet)*	6–10	15 of 15 miles less than 6-foot-wide shoulders	100%
Clear Zone *(feet)*	30–32	14 of 15 miles less than 30-foot-wide clear zone	95%

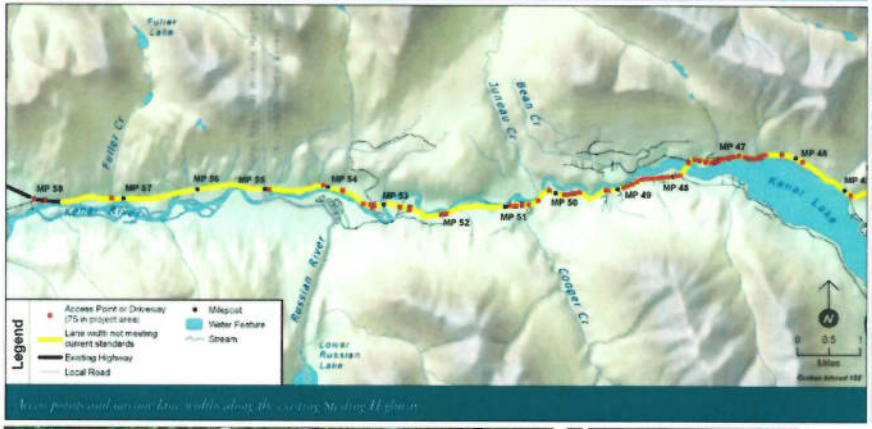
Where do I look in the Draft SEIS?

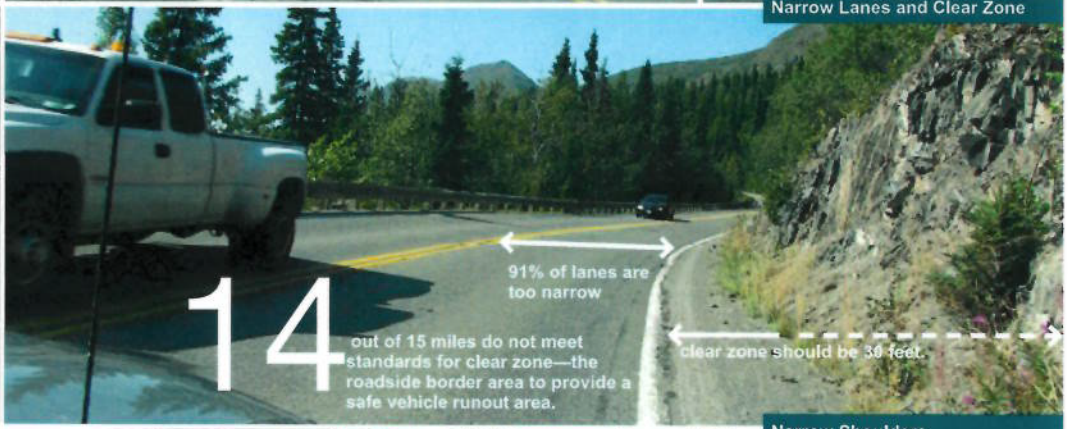
» Chapter 1 addresses purpose and need.

Purpose and Need continued...









Alternatives

Preliminary engineering and the alternatives screening process narrowed the potential build alternatives to four. These four and the No Build Alternative are evaluated in detail in the SEIS.

1. No Build Alternative
2. Cooper Creek Alternative
3. G South Alternative
4. Juneau Creek Alternative
5. Juneau Creek Variant Alternative

What is the No Build Alternative?

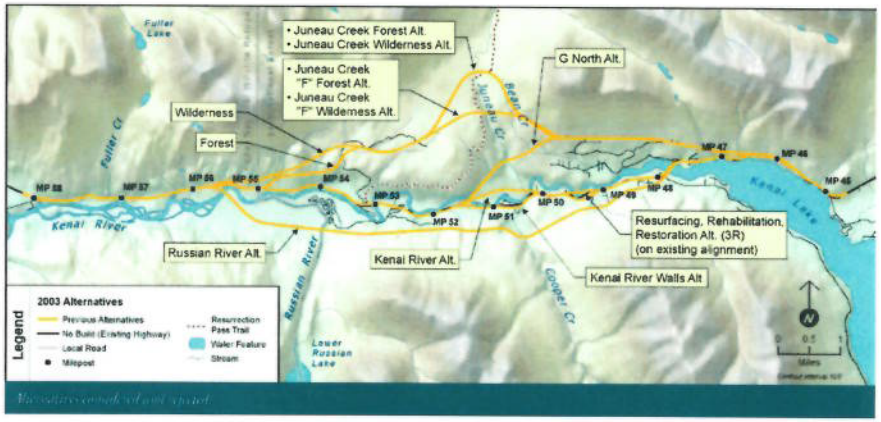
The National Environmental Policy Act requires that an EIS describe and analyze the impacts of not building the project as a benchmark that allows for comparison of the degree of environmental effects of the various project alternatives. In this document this alternative is called the "No Build Alternative." Under the No Build Alternative, the highway would remain much as it is today, with only maintenance and already programmed work assumed to occur.

What are the Build Alternatives?

The four build alternatives are the Cooper Creek Alternative, G South Alternative, Juneau Creek Alternative, and Juneau Creek Variant Alternative. Each of the build alternatives is engineered based on highway design standards for rural principal arterials. The build alternatives are identical from MP 45 to MP 46.3, at the eastern end of the project, and from MP 55.8 to MP 60, at the western end of the project. Each alternative would consist of a two-lane highway with paved shoulders, passing lanes, and turning lanes. Travel lanes would be 12 feet wide, paved shoulders would be 8 feet wide (adequate for safe bicycle and pedestrian use), passing lanes would be 12 feet wide, and all major intersections would have right- and left-turn lanes. No interchanges would be constructed. T-intersections would be used where the "old" highway intersects new segments within each alternative. Maps on pages 11 and 12 illustrate the build alternatives.

Were other alternatives considered?

More than thirteen alternative alignments were considered. Those that are fully analyzed in the SEIS are considered to represent the full range of reasonable alternatives. Those not carried forward were determined either not reasonable or similar to (but not as good as) a nearby similar alignment.



Alternatives were determined to not be reasonable for a combination of the following factors:

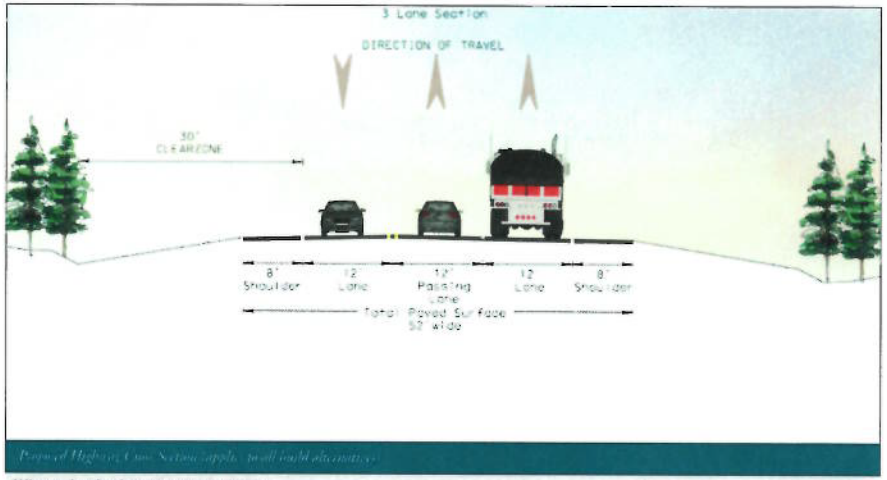
- Technical problems (for example, poor rock or soils).
- Inability to satisfy the project purpose and need (for example, grades too steep for a safe road).
- Impacts to the community, the natural environment, recreational areas, or high costs.
- General lack of public and agency support.

A formal analysis process that used criteria based on the purpose and need and preliminary impact assessment was conducted and is summarized in Chapter 2 of the SEIS. A map of alternatives considered and rejected appears on page 9.

Why not just improve the existing highway all the way through?

A segment of the existing highway in the area from MP 49 to MP 50.5 has several curves that do not meet current standards for a rural principal arterial. The hillside in this area rises abruptly from the winding Kenai River and its floodplain. The hillside is composed of fine-grained soils such as silt and clay-like soils. These soils were left by glacial retreat and water action. They were eroded into steep slopes by the Kenai River and its tributary, Cooper Creek. The soils are prone to landslides and mud flows. Multiple teams of DOT&PF and consulting engineers have examined this area over 30 years and determined that any alignment that straightened out the curves and widened the highway to meet standards would require huge cuts into the poor soils or would require direct impacts to the Kenai River. Civil and structural engineers have consistently recommended against large cuts in this area because of the unusual wall heights (as tall as 16-story buildings) and risk of slope and structure failure. Therefore, all alternatives have been routed around this area.

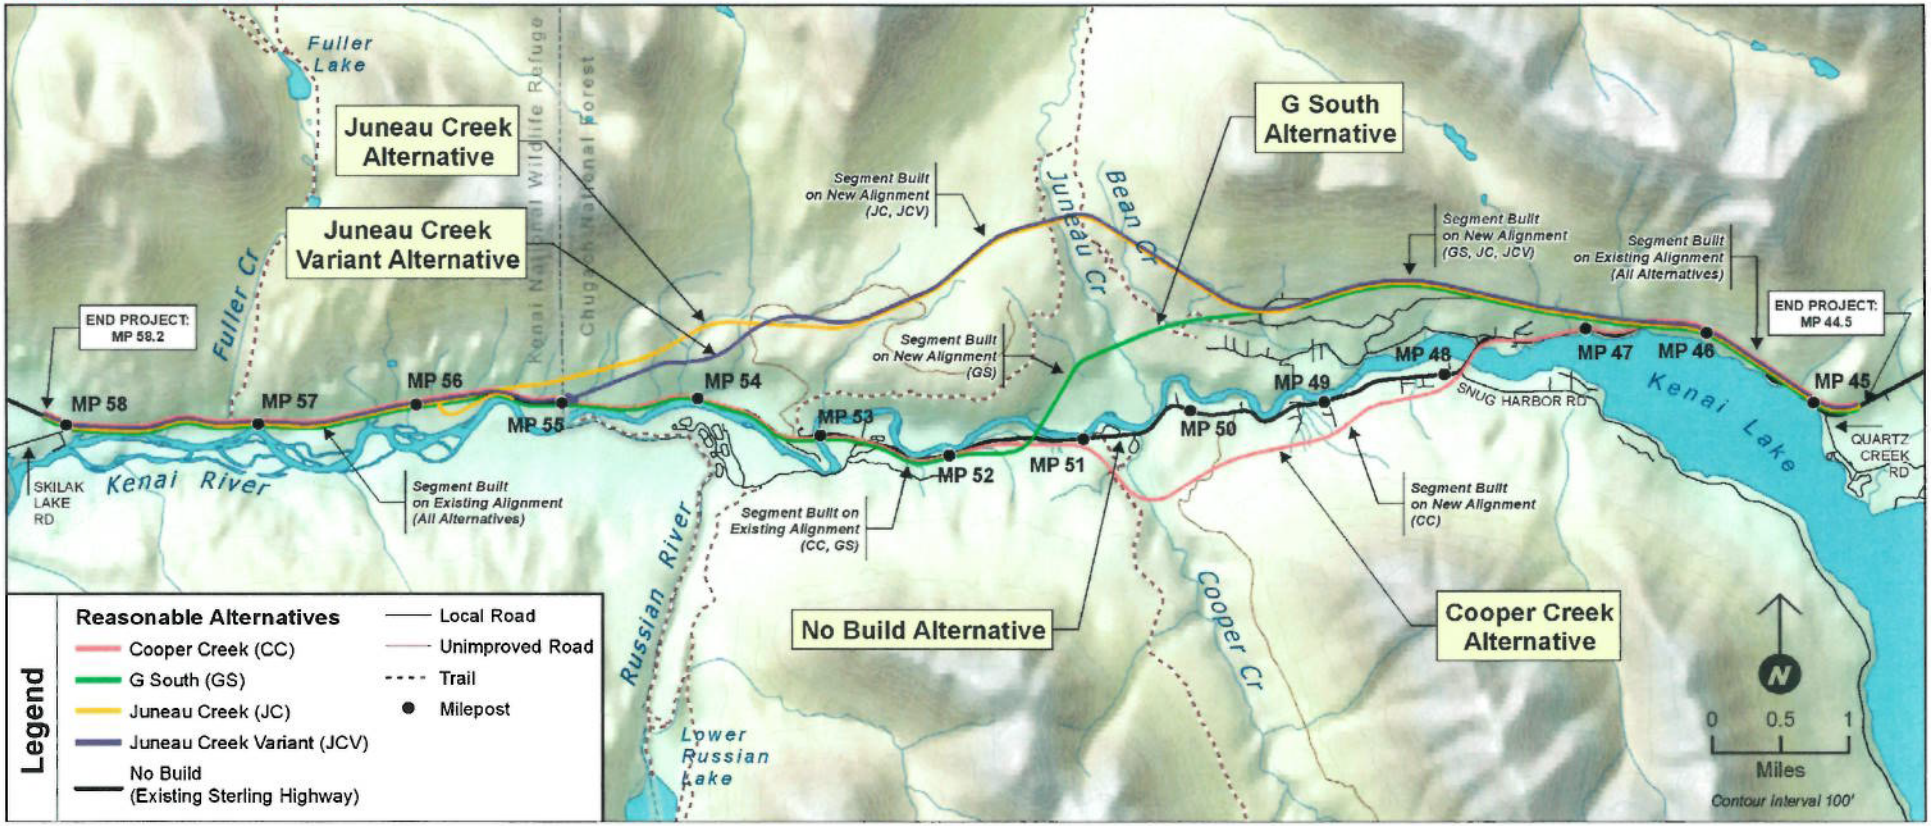
Highway Cross-Section. The highway would generally be a two-lane highway, but many portions of each alternative would have a passing lane or turning lane (three-lane cross-section, as shown below), and some areas would have passing lanes in both directions (four-lane cross-section). Widths of each lane (12 feet), widths of shoulders (8 feet), and clear zones (30 feet from lane edge) would be the same throughout.



Where do I look in the Draft SEIS?

- Chapter 2 addresses alternatives.

Alternatives evaluated in detail in the SEIS

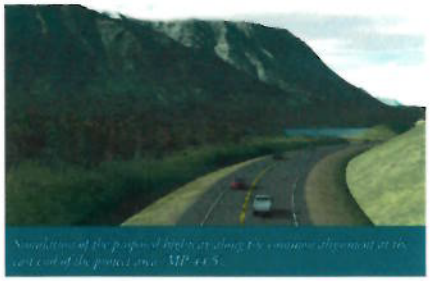


Cooper Creek Alternative. The Cooper Creek Alternative follows the existing alignment for most of its length. Only about 3.5 miles would be located on a new alignment, routed south of Cooper Landing. This alternative would include construction of three large bridges—two replacing existing Kenai River bridges and one new large bridge over Cooper Creek.

G South Alternative. The G South Alternative would construct 5.5 miles of new alignment skirting north of Cooper Landing and the Kenai River, reconnecting with the existing alignment near MP 52. This alternative was designed to avoid impacts to the Resurrection Pass Trail and Juneau Creek Falls area. This alternative would include construction of three bridges—one replacing an existing bridge over the Kenai River and two new bridges, a large bridge over lower Juneau Creek, and one new bridge over the Kenai River.

Juneau Creek Alternative. The Juneau Creek Alternative deviates from the existing alignment more than the other alternatives—about 10 of 14 miles would be on a new alignment. It would run north of Cooper Landing and the Kenai River, climbing the hillside and crossing Juneau Creek Canyon with a new bridge south of Juneau Creek Falls. The new segment would cross the Mystery Creek Wilderness in the KNWR and would rejoin the existing highway at about MP 56. The alternative includes one large bridge spanning Juneau Creek Canyon. It would be the longest single-span bridge in Alaska.

Juneau Creek Variant Alternative. The Juneau Creek Variant Alternative is almost the same as the Juneau Creek Alternative but was specifically designed to avoid use of land from the KNWR and the Mystery Creek Wilderness. The Juneau Creek Variant Alternative would rejoin the existing alignment at MP 55 of the existing highway near Sportsman's Landing. The alternative includes one large bridge crossing Juneau Creek Canyon. It would be the longest single-span bridge in Alaska.



Where do I look in the Draft SEIS?

» Chapter 2.6 SEIS Alternatives Advanced for Full Analysis

Affected Environment and Environmental Consequences

DOT&PF and FHWA analyzed the social and environmental conditions of the project area. Results of the analysis are the baseline for determining the potential impacts of the alternatives.

The analysis of existing conditions and impacts includes issues raised by agencies and the public, and issues discussed by the DOT&PF and FHWA in consultation with agencies while preparing the SEIS. This executive summary focuses on resources with greater potential impacts, resources identified during scoping as being resources of particular concern, and resources that illustrate substantive differentiation among alternatives. The impact tables at the end of this executive summary provide quantified data, where available, about impacts to resources. A larger number of resources and much more detailed discussion appear in the Draft SEIS (see Chapter 3). Chapter 4 of the Draft SEIS focuses on lands protected by Section 4(f) of the U.S. Department of Transportation Act; Federal transportation law provides additional protection for certain parks, wildlife refuges, recreation areas, and cultural/historic sites.

Where do I look in the Draft SEIS?

- Chapter 3 covers the "Affected Environment," "Environmental Consequences," and mitigation measures.
- Chapter 4 covers Section 4(f) impacts (park, recreation area, refuge, and cultural site impacts).

Land Ownership / Land Use Plans and Policies

Most lands in the project area are owned and managed by the Federal government, including the U.S. Forest Service (Chugach National Forest), east of MP 55, and the U.S. Fish and Wildlife Service (KNWR), west of MP 55. Within the Federal lands, and generally in blocks near the highway, there are undeveloped State- and Borough-owned lands, as well as smaller vacant and developed private parcels. Two relatively large parcels of private land are owned by Cook Inlet Region, Inc. (CIRI), the regional Alaska Native corporation formed by the Alaska Native Claims Settlement Act.

One important land issue involves the KNWR. The KNWR encompasses much of the western Kenai Peninsula. It is the most visited of Alaska's many wildlife refuges and provides the most accessible Federally designated Wilderness. The KNWR was established originally to protect the Kenai Peninsula moose population and generally to protect multiple wildlife and bird species. Its purposes include recreation that is compatible with wildlife protection. The existing highway is within a DOT&PF right-of-way easement on KNWR land. North of the highway right-of-way in the project area is the Mystery Creek Wilderness; south of the right-of-way is the Kenai River and then the Andrew Simons Wilderness.

Key Impacts and Issues:

- Impact to private land owners was an issue raised by the public, and land management agencies are interested in impacts to their Borough, State, or Federal lands. The tables at the end of this summary display the acreage of impacts on various public and private land owners. The Cooper Creek Alternative would impact more private land than the other alternatives—see also the Housing and Relocation section on pages 14-15.

- One of the most important issues for this project is the effect to Federal Wilderness land. The Juneau Creek Alternative differs from the other alternatives because it would cross a corner of the Mystery Creek Wilderness. The affected area would be 33.4 acres of the 1.9-million-acre KNWR, including 19.1 acres of the KNWR's 1.3 million acres of designated Wilderness. As this alternative proposes to reroute the Sterling Highway through a national Wildlife Refuge and designated Wilderness, it is subject to the procedural requirements, and determinations required under ANILCA Title XI, Transportation and Utility Systems (TUS). ANILCA Section 1106 (b) provides the procedural requirements for approval of a TUS in a designated Wilderness area, including Presidential review and recommendation and Congressional approval.
- The Russian River Land Act allows CIRI and the KNWR to exchange lands in this area. CIRI owns land just outside the KNWR boundary that would lie adjacent to the Cooper Creek, G South, and Juneau Creek alignments and that would be bisected by the Juneau Creek Variant Alternative. CIRI requested that the DOT&PF and FHWA continue to analyze the Juneau Creek Alternative fully in the SEIS. CIRI has stated an intention to pursue a land exchange.
- The Juneau Creek and Juneau Creek Variant alternatives would cross the Resurrection Pass National Recreation Trail; other alternatives would not. Like KNWR, the 1,000-foot-wide trail corridor is subject to ANILCA Title XI. However, because it is not Wilderness, it does not require approval of the President and Congress. (See also Parks and Recreation Resources, Section 3.8 of the SEIS).

Housing and Relocation

Much of the housing in Cooper Landing is used seasonally, with a smaller year-round base of residents. According to the 2010 U.S. Census, there were 395 housing units in Cooper Landing, of which 234 were vacant. Of the 234 vacant housing units, 207 were used seasonally and were generally not available for rental. There are also a number of undeveloped private lots in the community and other lots platted by the Kenai Peninsula Borough.

Where do I look in the Draft SEIS?

- Land Ownership in Section 3.1.
- Land Use Plans and Policies in Section 3.2.
- KNWR and ANILCA Title XI issues in Section 3.2, specifically 3.2.12, 3.2.1.5, 3.2.2.5 (KNWR), and 3.2.5 (Title XI). Chapter 4 also addresses the KNWR as a Section 4(f) resource.

Crossing Wilderness

Wilderness designated by Congress is particularly complex to cross with a road corridor, because the Wilderness Act defines a designated Wilderness as a large area without roads. Typically Wilderness areas do not allow wheeled or mechanized vehicles. The Alaska National Interest Lands Conservation Act (ANILCA) provides a mechanism in Title XI to authorize road corridors across Wilderness lands in Alaska.

Housing and Relocation continued...

Key Impacts/Issues:

- The Cooper Creek Alternative would impact 38 privately owned properties. Sixteen would be completely acquired. Of the 16, 6 are vacant parcels, 8 have developed residences that would require relocation, and 2 have accessory buildings.
- The G South Alternative would require partial acquisition of 6 vacant private properties but would not require relocation of any residences or businesses.
- The Juneau Creek Alternative would require partial acquisition of 4 private properties. None of these acquisitions would require any relocation.
- The Juneau Creek Variant Alternative would require partial acquisitions of 5 private properties. None of these acquisitions would require any relocation. One of the 5 properties is a 42-acre CIRI parcel near Sportsman's Landing, which the alignment would bisect.

Mitigation Measures:

Adversely affected property owners would compensated at fair market value as provided by the Uniform Relocation Assistance and Real Property Acquisition Act of 1970, and the Alaska Relocation Assistance and Real Property Acquisition Practices (Alaska Statutes 34.60.010 et seq.).

Where do I look in the Draft SEIS?

- Housing and Relocation: Section 3.4

Economic Environment

The Kenai and Russian rivers draw thousands of people for salmon and trout fishing, and rafting—both tourists and in-state recreationists. Fishing and outdoor recreation, combined with the lake, river, and mountain scenery, drive much of the local economy. Cooper Landing is the only location between Summit Lake, Moose Pass, and Sterling that provides services to highway travelers. Many bed and breakfast inns, resorts, and fishing lodges in Cooper Landing accommodate visitors. The economy is seasonal and experiences a fluctuation of annual employment, as businesses reduce the number of employees or close entirely during the winter.

River-based businesses, such as guiding and lodging businesses catering to fishing and recreational enthusiasts, are destinations and are less dependent on spontaneous (drive-by) customers. Highway-based businesses, such as gas stations, grocery and general merchandise stores, restaurants, and motels, are more dependent on highway vehicle traffic and spontaneous stops.

Most businesses in the project area are clustered in the central commercial area of Cooper Landing (MP 47-50), but a few lodges, dining establishments, and gas stations occur outside the community along the highway.

Agencies and the public, particularly residents of Cooper Landing, have expressed concern that alternatives built on a new alignment would induce, or spur, development. One concern is that the highway could provide new access to previously undeveloped State or Borough lands, and new rural residential neighborhoods would spring up. A related concern is that new businesses would open to serve travelers along new highway segments and draw business away from the existing community. River-based businesses appear to be destination-oriented; their owners are more concerned about protecting the quality of the Kenai River and reducing traffic congestion in the area where they transport rafts and clients and less concerned about loss of drive-by customers. Highway-based retail businesses are more concerned about reduced business if traffic were removed from passing by their businesses.

Land use planning goals for the community of Cooper Landing, adopted into the Kenai Peninsula Borough Comprehensive Plan, indicate a desire to retain the commercial center within Cooper Landing and to avoid development of a competing commercial center along any new highway segment.

Key Impacts/Issues:

- All build alternatives include a highway segment built on a new alignment that would remove about 70 percent of the traffic from all or a portion of the central commercial area of Cooper Landing. A benefit of reducing traffic would be a more attractive community environment, with decreased congestion and improved safety for pedestrians, residents, and visitors to the community. Decreased traffic also would benefit local businesses that use the existing road in their daily local business transactions, such as river guides who shuttle rafts and sport fishing clients. People currently relying on Cooper Landing businesses would likely continue to do so, although some spontaneous economic activity would decrease. To varying degrees, all of the build alternatives have the potential to adversely affect individual businesses by diverting travelers who might make spontaneous stops at businesses located on the "old" highway. These spontaneous stops constitute a meaningful portion of their clientele, especially for highway-related businesses like gas stations, eateries, and convenience stores. This would be more of an issue for the G South Alternative and the two Juneau Creek alternatives, because they would not be routed through any portion of the community. The Cooper Creek Alternative would remain more connected to the community but would divert from the existing highway immediately south of the Cooper Landing Bridge.
- DOT&PF would not allow driveways and side roads to be connected to highway segments built on new alignments (bypass segments). Access to developable land adjacent to the bypass segments would need to be from the existing Sterling Highway only, as it is today. Therefore, no competing commercial development is anticipated as a result of this project, none of the build alternatives would create any new access to developable lands, and none of the build alternatives would induce new development of businesses or residences.
- All build alternatives would cost millions of dollars to build and maintain over the life of the project (see the Costs of the Alternatives table below). These funds would be Federal and State monies allocated for transportation projects. Such funds are limited, and use for this project would mean they would not be available for other Alaska transportation projects. The funds would flow principally to Alaska design and construction firms and into the Cooper Landing, Southcentral Alaska, and statewide economy.

Mitigation Measures:

The project would include directional signs to ensure that motorists were aware that business services were available in Cooper Landing, off the main highway.

Where do I look in the Draft SEIS?

- Economic Environment: Section 3.5

Costs of the Alternatives (millions)

	Cooper Creek	G South	Juneau Creek	Juneau Creek Variant
Construction[a]	$236.2	$250.4	$205.4	$211.6
Other Costs[b]	$54.5	$53.1	$44.2	$45.4
Total	**$291**	**$304**	**$250**	**$257**

[a] Construction costs include the road itself and bridges/tunnels/retaining walls, plus 20% for contingencies and 15% for construction administration.
[b] Other costs include permitting, design, utility relocations, right-of-way acquisition, and Indirect Cost Allocation Plan (ICAP). Note that right-of-way costs estimate the land payment portion only. It does not address the other per parcel costs of land acquisition. These costs only reflect privately owned land impacted by the alternatives. Land owned by Federal, State, and Municipal agencies is assumed to be acquired via interagency land transfers.

Parks and Recreation Resources; and Section 4(f)

The upper Kenai River area draws many people, both Alaska residents and visitors, for recreation. The area contains:

- Kenai River Special Management Area.
- Boat launch and river access areas: Jim's Landing (KNWR), Sportsman's Landing/Russian River Ferry (State and KNWR), and Cooper Landing Boat Launch and Day Use Area (State).
- Trails: Resurrection Pass National Recreation Trail, Bean Creek Trail, and Stetson Creek Trail (Chugach National Forest); Fuller Lakes Trail (KNWR); and informal trails such as the Art Anderson Slaughter Gulch Trail.
- Forest Service campgrounds: Russian River Campground and Cooper Creek Campground.
- Forest Service areas set aside for recreation: Kenai River Recreation Area, Juneau Falls Recreation Area, and Lower Russian Lake Recreation Area.

The main area of activity and land protected for recreation purposes is the central 4-mile river corridor between the confluence of Cooper Creek with the Kenai River (near existing highway MP 51) and the confluence of the Russian River with the Kenai River (near MP 55). Many park and recreation properties are centered in a core area along the river and loosely function together and are managed similarly, even though the different types of properties are managed by different entities. The Kenai River and the adjacent Kenai River Recreation Area, together with Sportsman's Landing, the Russian River Ferry, the Russian River Campground, the Lower Russian Lake Recreation Area, and the Cooper Creek Campground all are contiguous park, recreation, and refuge lands and waters comprising well over 700 acres. In addition, the K'Beq Footprints Heritage Site and the trailheads for the Resurrection Pass Trail, Russian Lakes Trail, and Stetson Creek Trail are located in this area. This area also is the heart of the Sqilantnu Archaeological District and Confluence Traditional Cultural Property.

The Juneau Falls Recreation Area (320 acres), Resurrection Pass Trail corridor (1,000 feet wide), and Bean Creek Trail corridor form a similar block of recreation properties on a smaller scale at the head of Juneau Creek Canyon. All are U.S. Forest Service properties.

Personal-use and commercial recreation use levels are high, with "combat fishing" a common term for elbow-to-elbow sportfishing near the Russian and Kenai rivers confluence. Thousands of float trips occur on the Kenai River each summer. The campgrounds and trails also are well used, and use of trails continues year round (for snowmobiles and skiing in winter). The Resurrection Pass Trail is 38 miles long and connects to the Hope area, with several side trails and backcountry public use cabins.

Most of the park and recreation properties are protected under Section 4(f) transportation law (see box, next page). However, a few are not because they are not publicly owned, not maintained or managed by any agency, or otherwise not significant as park or recreation facilities.

Key Impacts/Issues:

- All alternatives would use land from various park and recreation properties.
- The Cooper Creek Alternative would truncate the lower end of Stetson Creek Trail, which is a recreational and historic trail. The project would construct a new pullout trailhead at the terminus of the truncated trail and make over the old trailhead area into an interpretive loop trail for Cooper Creek Campground.
- The G South Alternative is considered to have the greatest impacts to the Kenai River (a designated park unit), primarily because it would add a new bridge over the Kenai River. New bridges are counter to the Kenai River Comprehensive Management Plan.

- Both the Cooper Creek and G South alternatives would continue to follow the existing alignment through the 4-mile core recreational area along the river. Thus, all traffic would remain in this area instead of being routed around it.
- The Juneau Creek and Juneau Creek Variant alternatives would impact the Resurrection Pass Trail with a crossing 3.4 miles north of the trail's southern terminus. The bridge over Juneau Creek Canyon would span the Resurrection Pass Trail, minimizing impact, but the backcountry atmosphere of the trail and Juneau Falls Recreation Area in this location would change to a more "front-country" experience, with greater use. Under these two alternatives, 70 percent of Sterling Highway traffic is expected to use the new highway, leaving the old highway through the 4-mile core area (Cooper Creek to Russian River) as a quieter, winding, lower-speed, local road suited to providing access to that area's multiple recreational amenities.

Mitigation Measures:

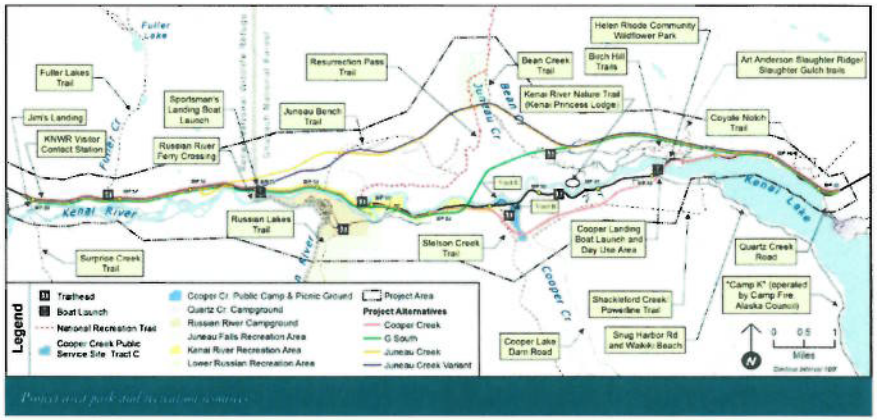
Substantial mitigation is proposed for impacts to recreation areas. These are spelled out in the Section 4(f) Evaluation, in section 4.7 of the SEIS. Mitigation proposed includes new parking and trailheads for Stetson Creek Trail, Bean Creek Trail, and Resurrection Pass Trail where alternatives cross the trail and addition of new connecting trails or re-routed trails where necessary. Underpasses would be created where an alternative would cross certain existing unimproved roads used as trails—the Cooper Lake Dam Road, extension of Slaughter Ridge Road, and West Juneau Road. Under the two Juneau Creek alternatives, a falls overlook would be added in the Juneau Falls Recreation area, and a pedestrian walkway would be added to the highway bridge to connect trails on either side of the canyon. For these alternatives, DOT&PF has accepted the Forest Service's suggestion to compensate for impacts to the long-distance experience on the Resurrection Pass Trail by providing a new connection for another long-distance trail nearby in the Kenai River watershed—the Iditarod National Historic Trail. DOT&PF would commit to providing a pedestrian crossing of the Snow River bridges at the opposite end of Kenai Lake to accommodate the Iditarod commemorative trail.

What is Section 4(f)?

Section 4(f) of the Federal Department of Transportation Act prohibits use of certain parks, recreation areas, wildlife refuges, or historic properties for transportation projects unless there is "no prudent and feasible alternative" or the impacts are "de minimis." The Draft SEIS evaluates Section 4(f) resources, the impacts of the proposed alternatives, alternatives that could avoid use of Section 4(f) resources, and all possible measures to minimize harm to these resources. If there is no prudent and feasible avoidance alternative, FHWA must select the alternative with the least overall harm. See Chapter 4 of the SEIS.

Where do I look in the Draft SEIS?

The Draft SEIS addresses park and recreation resources in Section 3.8. Chapter 4 also extensively addresses park and recreation areas determined to be Section 4(f) resources.



Historic and Archaeological Resources

Historic, archaeological, and other cultural properties in the project area that are eligible for the National Register of Historic Places include:

- Prehistoric archaeological sites associated with Alaska Native cultures.
- Historic sites associated principally with gold prospectors and settlement of the area by Russians and Americans from outside Alaska, including the Bean Creek Trail and Stetson Creek Trail.
- Traditional Cultural Properties (TCPs)—areas of cultural importance to the Kenaitze Indian Tribe.

The Sqilantnu Archaeological District encompasses most of the project area and both sides of the Kenai River valley up to an elevation of about 1,000 feet. This district is recognized in Federal law under the Russian River Land Act. Most other historic properties, including two historic mining districts, two TCPs, and portions of the historic trails, overlap with the Sqilantnu District. Hundreds of archaeological sites, comprised collectively of thousands of individual archaeological features, contribute to the district. The TCPs are individually eligible for the National Register of Historic Places and also contribute to the Sqilantnu District. While the cultural and archaeological features are not well known to the general public, the area is considered quite important by the Kenaitze Indian Tribe, CIRI, the Chugach National Forest, the KNWR, and the State of Alaska's Office of History and Archaeology. There is potential for future nomination of the area as a National Historic Landmark. All cultural and historic properties eligible for the National Register of Historic Places are considered to be protected by Section 4(f) (see box on the previous page).

Key Impacts/Issues:

- The Cooper Creek and G South alternatives pass directly through an area of overlapping historic and archaeological districts and TCPs. However, they mostly overlap the existing highway corridor. In general, the Cooper Creek and G South alternatives are similar in their effects. See the large summary table at the end of this document.
- The Juneau Creek and Juneau Creek Variant alternatives follow similar alignments and generally have fewer impacts to known cultural sites than the other two alternatives. The Juneau Creek Alternative would affect the least acreage and the fewest archaeological properties of any of the alternatives. The Juneau Creek Variant Alternative, designed to avoid use of the KNWR/Wilderness, would intersect the existing Sterling Highway at the confluence of the Kenai and Russian rivers in the heart of the Confluence TCP and Sqilantnu Archaeological District. It would therefore have greater impact to culturally important sites than the Juneau Creek Alternative, including proximity to human burials, although it would impact fewer sites than the Cooper Creek and G South alternatives.

Mitigation Measures:

Substantial mitigation for effects to adversely affected historic properties is expected. An agreement to be spelled out among tribal entities and agencies (consulting parties) will be presented in the Final EIS.

Where do I look in the Draft SEIS?
The Draft SEIS addresses cultural and archaeological resources and impacts in Section 3.9, Chapter 4 also addresses these topics as Section 4(f) resources.

Noise

Much of the project area away from the existing highway is generally quiet, consisting of natural areas, with running water and wind being the primary contributions to base sound levels. Noise measurements were taken at key sensitive locations (receptors) throughout the project area as a baseline, and sound levels were computer-modeled to forecast noise increases from traffic on the alternatives.

Key Impacts/Issues:

All build alternatives would create noise that would substantially increase noise levels and/or exceed noise abatement criteria. Forecast increases in traffic would result in increased noise levels even under the No Build Alternative, which would impact three more sensitive receptors than are impacted today. Only the Cooper Creek Alternative, which would impact five more properties than are impacted today, would have noise impacts at more sensitive noise receptors than the No Build Alternative.

Mitigation Measures:

DOT&PF examined the ability to mitigate permanent noise impacts with walls or barriers and could not find a way to make them effective given either the large land areas that are sensitive or the need to accommodate driveways (i.e., necessitating a break in the noise barrier). As a result, no noise walls, berms, or barriers are proposed.

Visual Resources

The glacially carved Kenai River valley frames the visual environment of the project area. Steep mountains and the unique turquoise color of Kenai Lake and the Kenai River are the predominant features seen from the project area. Canyons formed by Juneau Creek and Cooper Creek, tributaries of the Kenai River, notch the north and south sides of the main valley. The Sterling Highway is recognized as a State Scenic Byway because of its scenery, history, and recreational opportunities. Foreground views are of riparian forest and human development; mountain uplands and peaks can be seen in the background. The view of Cooper Landing is mainly of single-story small, framed (and sometimes log) residential and commercial buildings. The project identified key views and rated them using a formal process (Visual Quality Evaluation). The evaluation identified mostly moderate to high ratings for the existing visual environment.

Key Impacts/Issues:

All alternatives would adversely affect the visual environment but also would provide new views. Negative change in Visual Quality Evaluation scores would be highest under the Juneau Creek Variant Alternative, followed by the Juneau Creek, Cooper Creek, and G South alternatives with progressively fewer adverse changes in visual quality.

Mitigation Measures:

No specific mitigation for visual impacts is proposed. However, as part of the standard design, all cuts and fills would be constructed with care, and bare soils would be seeded for quick greening of the landscape. Large new bridges under all alternatives would be designed with aesthetics in mind for recreationists passing near or under the bridge on trails or in boats.

Where do I look in the Draft SEIS for Noise?
The Draft SEIS addresses noise in Section 3.15. A Noise Analysis report is also available on the project web site and is published in the SEIS as Appendix D.

Where do I look in the Draft SEIS for Visual Resources?
The Draft SEIS addresses visual resources in Section 3.16. A Visual Analysis report is available on the project web site.

Wetlands and Vegetation

The project area is vegetated with natural vegetation. It has been substantially modified in developed areas in and around Cooper Landing and at recreation developments. Multiple types of wetlands exist in the project area, from forested wetlands to ponds along the Kenai River to open, unforested wetlands. Wetlands and vegetation in general perform important functions, from wildlife habitat to floodwater retention. The U.S. Army Corps of Engineers (Corps) is a cooperating agency for this SEIS and must issue a permit for any fill to be placed in wetlands or other waters. The SEIS aids the Corps' decision-making process.

Key Impacts/Issues:

- All build alternatives would permanently eliminate wetlands. However, there would be substantial differences among the alternatives, with the Cooper Creek Alternative having relatively low impacts compared to the two Juneau Creek alternatives. These two alternatives would result in more than 3 times the total area of wetland loss of the Cooper Creek Alternative, including 6 times as much loss of emergent wetlands and nearly 12 times as much loss of forested wetlands. The G South Alternative would have intermediate wetland impacts.
- All alternatives would permanently eliminate vegetation. Again, the Cooper Creek Alternative would affect the least, the Juneau Creek alternatives the most. See the Impacts and Benefits Summary tables at the back of this document.

Where do I look in the Draft SEIS?

The Draft SEIS addresses wetlands and vegetation in Section 3.20. A wetlands report is available on the project web site.

Mitigation Measures:

The alternatives were developed to avoid and minimize impacts to wetlands and other waters. Where it was not practical to avoid impacts altogether, the SEIS contains a description of construction-related best management practices that would be followed to minimize impacts to wetlands and vegetation. DOT&PF has committed to paying a fee (in-lieu of creating or enhancing wetlands) to a land conservation organization that would use the funds for protection or enhancement of wetlands in a critical location on the Kenai Peninsula. This fee would be meant to compensate for the unavoidable impacts to wetlands and waters of the U.S. and to offset wetland loss.

Fish and Essential Fish Habitat

Fish habitat and water quality are related discussions, but appear separately in the SEIS. This section addresses both in describing fish and impacts to fish habitat.

The Kenai River ecosystem is a productive, diverse system that supports a wide variety of resident fish and fish that travel between freshwater and saltwater ("anadromous" fish) species. Major water bodies within the project area include Kenai Lake, Kenai River, Bean Creek, Juneau Creek, Cooper Creek, Russian River, and Fuller Creek. The project area contains important fish migration corridors. Kenai River fisheries for king (Chinook), sockeye (red), and coho (silver) salmon are the largest freshwater sport fisheries for these species in Alaska. More than one million sockeye salmon return each year to spawn in the Kenai and Russian rivers. Sockeye, Chinook, coho, and pink salmon all spawn in the upper reaches of the Kenai River, and chum salmon are also present.

The entirety of the Kenai River and its tributaries, where used by salmon, are designated essential fish habitat (EFH). EFH designations emphasize the importance of habitat protection to healthy fisheries. Water quality in the Kenai River and its tributaries within the project area is considered good. Downstream parts of the river have, in the recent past, been considered polluted with hydrocarbons from outboard motor use, but 2008 regulatory changes improved the water quality. Outboard motors are not allowed on the river in most of the project area, but are allowed on Kenai Lake and at its outlet in Cooper Landing.

A consistent theme in public comments has been concern about maintaining water quality and salmon habitat, including concerns about the risk of spills from the current highway and the problems with its design.

Key Impacts/Issues:

- All build alternatives would result in an increase in storm water runoff because the project area would have more paved surfaces—a wider highway where rebuilt, and all-new highway in the segments built on a new alignment. Impacts from storm water runoff would not be substantial enough to impact wells and wellhead protection areas or fish in the rivers.
- Each build alternative would move the majority of vehicle traffic away from the Kenai River along those segments built on new alignment. This would reduce the risk of spills and general runoff pollution reaching the river. The Juneau Creek and Juneau Creek Variant alternatives would divert traffic from the river over the greatest road length, and the Cooper Creek Alternative would divert the least amount of traffic away from the river. While the Cooper Creek Alternative would divert the least amount of traffic of all the build alternatives, it would be an improvement over the No Build Alternative and result in a reduction of risk over the existing conditions.
- Direct impacts on water bodies, water quality, and fish habitat would result from new and replacement bridges and culverts and from new roadway embankment placed in water bodies. New culvert crossings and bridge crossings would be likely to alter natural flow patterns and habitat in streams at the location of the crossings, and possibly upstream and downstream. The Cooper Creek and G South alternatives would involve substantial construction in the Kenai River to replace existing bridges and build new bridges. The Juneau Creek and Juneau Creek Variant alternatives would have no bridge construction in the Kenai River. All alternatives would include a segment of reconstructed highway at the western end of the project where rip-rap (rock) would be placed in the edge of the Kenai River, where the existing highway already is adjacent to the river.

Mitigation Measures:

Mitigation measures would be implemented during the construction process to minimize impacts to water quality from runoff and fuel. Construction timing windows would ensure that construction in the water (principally bridge construction) would occur outside of critical times in the salmon life cycle. New culverts and replacement culverts would be designed to modern fish passage standards wherever fish use those drainages. Where existing culverts do not allow fish to pass, replacements culverts would improve habitat availability for fish. These efforts would reduce impacts to fish habitat and water quality. Permanent impacts would be minimized by commitments to maintain or reduce the number of in-water piers for any replacement bridge.

Where do I look in the Draft SEIS?

- Water Bodies and Water Quality: Section 3.13
- Fish/Essential Fish Habitat: Section 3.21
- Kenai River Special Management Area description: Section 4.2.2
- Kenai River Special Management Area impacts: Section 4.5

A separate Essential Fish Habitat report is also published on the project website at www.sterlinghighway.net.

Wildlife

More than 175 species of mammals, birds, and amphibians live in, seasonally use, or visit the Kenai River basin. Brown bears and moose are two of nine species selected for in-depth analysis in the SEIS because of their status with State and Federal agencies and because of their susceptibility to project impacts.

The population of brown bears for the entire Kenai Peninsula appears to have approximately equal numbers of males and females and dependent young. Brown bears on the Kenai Peninsula use a wide variety of habitats, including rivers and

streams, forests, and subalpine and alpine areas, and generally avoid areas in proximity to roads. The general area between MP 45 and 60 is in a class of habitat with medium to high probability of use by both lone adult females and females with cubs during spring and summer. Brown bears likely move back and forth in a northwest-southeast direction over the Kenai Mountains and across the Kenai River within the project area between MP 45-55, with the area just west of Cooper Landing near Juneau Creek identified by wildlife managers as an important "linkage" zone.

The largest cause of bear deaths on the Kenai Peninsula is bears killed in defense of life and property (DLP kills), which appears to be closely associated with increasing human population, development, and activity on the Peninsula. The rate of deaths of female brown bears on the Kenai Peninsula has consistently been higher than management objectives expressed by the Alaska Department of Fish and Game.

Moose are a common and important species in the project area, providing many viewing opportunities to residents and tourists, as well as subsistence and sport hunting. Collisions with automobiles on the Sterling Highway are common, and present a risk to individual animals and to motorists. Portions of the MP 45-60 area include rutting, wintering, and enhanced feeding habitat for moose, and north-south wildlife movement corridors through the project area are considered important. The moose population is slowly declining. The factors most greatly affecting the moose population on the Kenai Peninsula are considered to be declining habitat quality, predation, weather, and mortality caused by vehicle collisions.

Key Impacts/Issues:

- All of the build alternatives would affect brown bears and moose due to habitat loss, habitat fragmentation, and decrease in habitat quality; changes in behavior to avoid the new highway; and potential injury or mortality from vehicle collisions.
- None of the alternatives would induce further residential or business development more than would be anticipated under the No Build Alternative because of DOT&PF's decision to prohibit access from new sections of adjacent property. By not inducing new growth (and potentially increasing DLP kills), indirect impacts to bears and other mammals would be minimized.
- The Juneau Creek and Juneau Creek Variant alternatives would have the greatest impact on wildlife habitat, because they have the longest lengths of highway built on a new alignment, resulting in larger areas of new effects to habitat.

Mitigation Measures:

DOT&PF is sponsoring a wildlife movement study, in consultation with wildlife management agencies. Results of this study, which began in 2014, are expected to aid in the placement of one or more wildlife crossings and other measures to accommodate wildlife movement across the highway for brown bears, moose, and other species. In the Final SEIS, DOT&PF hopes to have more detail on how many, what kind, and locations of potential wildlife crossings and other recommended measures.

Where do I look in the Draft SEIS?
Wildlife: Section 3.22.

Coordination

The basic requirement of the National Environmental Policy Act is that the Federal government must involve the public and agencies in its project decision-making process. The Act ensures a process of disclosing impacts to the public and incorporating public input before any decision is made.

A primary component of the Sterling Highway MP 45–60 Project has been involvement of key stakeholders and the consideration of their comments and concerns. Chapter 5 of the SEIS summarizes the coordination process conducted during development of the Draft SEIS, including tribal consultation under Section 106 of the National Historic Preservation Act. Chapter 5 of the SEIS also includes a summary of key issues and pertinent information received from the public, Alaska Native tribes and corporations, and government agencies. The coordination process will continue through the final decision.

How much has the public been involved in the project?

The Draft SEIS summarizes a long public and agency coordination process, including initial efforts to determine the scope of the SEIS inquiry ("scoping") and many follow-up meetings with stakeholder groups, the public, and agencies on multiple topics. Key topics that have included substantial coordination are:

- Alternatives screening and selection.
- Section 106 (cultural properties).
- Section 4(f) (park, refuge, recreation, and cultural properties).
- Bears, moose, and other wildlife impacts.
- Business and community impacts.
- ANILCA Title XI process for the Resurrection Pass National Recreation Trail and KNWR.
- Mitigation of impacts.

Scoping began in 2000 and included several kinds of meetings over several years:

- Agency Consultation Committee (six meetings).
- Individual stakeholder interviews (14 agency interviews; five public interviews).
- Stakeholder Sounding Board (five meetings for more than 60 invited groups).
- Public Listening Posts (four rounds of listening posts for a total of nine events in Cooper Landing, Soldotna, and Anchorage).

A web site (www.sterlinghighway.net), internet survey, mailing list, newsletters, and press releases were included. Public and agency input has continued as the Draft SEIS has taken shape, including public comment taken on the alternatives screening before some alternatives were dropped from further consideration. Agencies have been involved heavily regarding impacts and mitigation. From 2002 to 2014, there have been:

- 35 agency meetings on topics such as wildlife, recreation impacts, land issues, and Section 4(f).
- An additional 13 meetings with tribal entities and agencies regarding cultural resources to define new boundaries for the Sqilantnu Archaeological District, define for the first time two traditional cultural properties, define the boundaries of historic mining districts, and determine impacts to cultural properties.

These consultations have been valuable in sorting out the complex issues involved in the project and have formed the basis for much of the analysis in the EIS. Such coordination with the public and agencies will continue as the project moves forward.

Next Steps

Now that the Draft SEIS has been issued for public and agency review, the anticipated next steps are to respond to comments and revise the SEIS, identify a Preferred Alternative, and issue a Final EIS for review and comment. When the environmental process is complete, the FHWA will issue a Record of Decision. Your comments and input are important to the process.

The public and agencies are encouraged to review the Draft SEIS, accompanying appendices, and technical reports are available for review online at www.sterlinghighway.net. Printed copies of the documents are available for public review at the following locations:

Kenai Peninsula

- Cooper Landing Community Library, Mile 0.8 Bean Creek Road
- Kenai Community Library, 163 Main Street Loop
- Soldotna Public Library, 235 N. Binkley Street

Anchorage

  Anchorage, AK 99519-6900
- **Email:** sterlinghwy@hdrinc.com
- **In person:** at project open house/public hearings

Please visit the project website, www.sterlinghighway.net, for up-to-date project details, public open house and public hearing notifications, and comment deadlines.

What happens with my comments?

Some EISs receive many, many comments, and processing them takes time. Comments are categorized by topic in a database, and the entire email or letter is captured electronically for context. DOT&PF and FHWA will consider all comments and write responses. Comments frequently result in changes to the analysis in an EIS. Text clarifications are common. Sometimes comments result in new or modified environmental analyses or new measures proposed to mitigate impacts. A summary of comments and responses will be appended to the Final SEIS to document the comments and record how each was addressed.

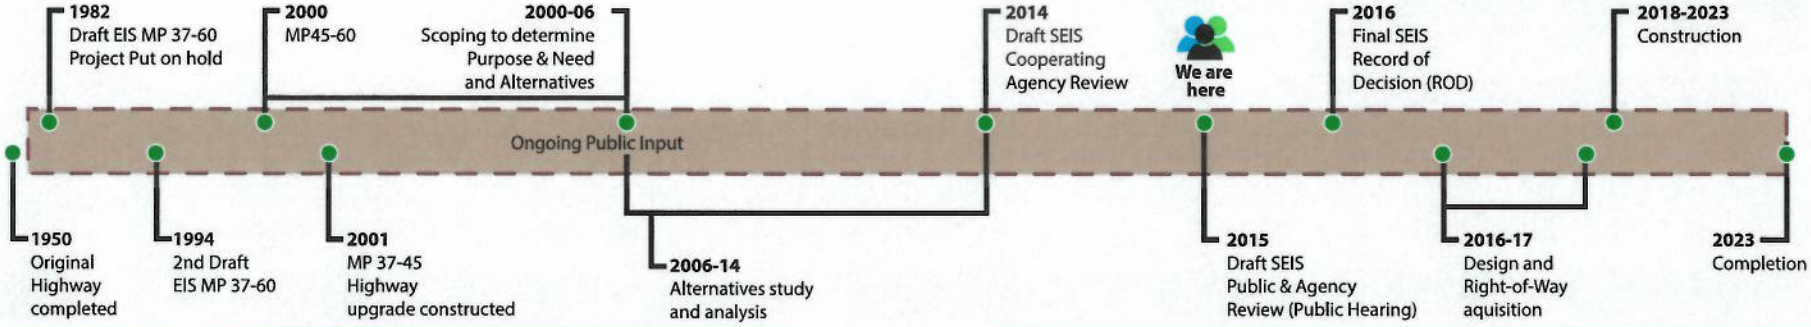
Who makes the final decision?

The FHWA is the lead Federal agency for the SEIS and makes the final decision about selection of an alternative. This decision is made in conjunction with the DOT&PF. Other Federal agencies have their own authorizations, including permits for fill in wetlands and water bodies and land transfer authorizations. Those agencies will also use this SEIS and your comments in making their decisions.

When will something be built?

If a build alternative is selected, the project will enter the design phase following publication of the Final SEIS and signing of a Record of Decision. The earliest construction could start is 2018; however, that is dependent on the availability of funding.

Project Timeline



Impacts and Benefits Table

The "Affected Environment and Environmental Consequences" section of this Executive Summary discusses key impact topics, with references to the tables that follow specific numerical impact data. These tables cover the key topics addressed earlier in this Executive Summary and all other resource topics analyzed in the Draft SEIS.

The tables present impacts of the alternatives side-by-side for comparison. Dividing bars that run horizontal across the table identify each resource by the same heading and section number used in the Draft SEIS. Readers may refer directly to that section of the SEIS for context and greater detail. A few sections of the Draft SEIS are not presented in these tables: sections 3.24 Permits; 3.25 Short-Term Uses vs. Long-Term Productivity; 3.26 Irreversible and Irretrievable Commitments of Resources; and 3.27 Cumulative Impacts. Please see the full Draft SEIS to learn about those topics.

Impact Category		Impacts and Benefits								
		No Build Alternative	Cooper Creek Alternative		G South Alternative		Juneau Creek Alternative		Juneau Creek Variant Alternative	
3.1 Land Ownership and Land Use										
Land Ownership *(acres, % in project area)*	Federal *(9,000)*	No impact	54	<1%	90	1%	167	2%	115	1%
	State *(1,720)*		9	<1%	43	3%	90	5%	92	5%
	Borough *(2,013)*		93	5%	126	6%	129	6%	129	6%

3.2 Land Use Plans and Policies										
Kenai National Wildlife Refuge Comprehensive Conservation Plan		No impact	No KNWR land would be acquired, developed, or directly used as a result of the Cooper Creek Alternative outside the existing highway right-of-way.		No KNWR land would be acquired, developed, or directly used as a result of the G South Alternative outside the existing highway right-of-way.		New transportation right-of-way across a corner of the KNWR Mystery Creek Wilderness unit and the KNWR Intensive Management area would be needed. The process would require approval by the President of the United States and then a joint resolution of Congress.		No KNWR land would be acquired, developed, or directly used as a result of the Juneau Creek Variant Alternative outside the existing highway right-of-way.	

Impact Category		Impacts and Benefits				
		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.2 Land Use Plans and Policies continued...						
Chugach National Forest		No impact	Alignment is within the Fish, Wildlife and Recreation and the Major Transportation/ Utility Systems management area prescriptions.	Alignment is within the Fish, Wildlife and Recreation; Fish and Wildlife Conservation; and the Major Transportation/ Utility Systems management area prescriptions.	Alignment is within the Fish, Wildlife and Recreation; Major Transportation/ Utility Systems; Fish and Wildlife Conservation; and Backcountry management area prescriptions.	Alignment is within the Fish, Wildlife and Recreation; Major Transportation/Utility Systems; Fish and Wildlife Conservation; and Backcountry management area prescriptions.
National Forest Inventoried Roadless Area Lands *(acres of right-of-way, miles traversed)*		No impact	3.8 acres 0.1 mile	48.4 acres 1.1 miles	127.5 acres 3.3 miles	96 acres 2.4 miles
ANILCA Title XI *(conservation system units affected)*		No impact	No impact	No impact	The Juneau Creek Alternative would cross Resurrection Pass Trail and would cross a corner of the Mystery Creek Wilderness unit within the KNWR.	The Juneau Creek Variant Alternative would cross Resurrection Pass Trail.
State Plans		No impact	The build alternatives, to differing extents, meet the recommendation of the Kenai River Comprehensive Management Plan that new public road construction be located away from the Kenai River.			
Borough Plans and Other Pertinent Plans						
Consistency with planning documents		No impact	May require Kenai Borough Comprehensive Plan amendment.	May require Kenai Borough Comprehensive Plan amendment.	Consistent with Kenai Borough Comprehensive Plan.	
3.3 Social Environment						
Social Environment		Traffic congestion would make travel and social interaction within the community more difficult.	Change in local traffic patterns and community character through re-routing of traffic, less change for the Cooper Creek Alternative, more for the G South, Juneau Creek, and Juneau Creek Variant alternatives.			
3.4 Housing and Relocation						
Private and Native Property Impacts and Relocations *(number of affected parcels)*	**Private**	No impact	38	4	4	4
	Full Parcel	-	16 *(8 residential properties and approximately 14 people relocated.)*	0 *(0 relocations)*	0 *(0 relocations)*	0 *(0 relocations)*
	Part of Parcel	-	22	4	4	4
	Native Corporation (CIRI)	-	2	2	0	1
	Full Parcel	-	0	0	0	0
	Part of Parcel	-	2	2	0	1

Impacts and Benefits Table continued...

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.5 Economic Environment					
Tax Base/Business Impacts	No impact	Would not result in any business relocations. All traffic would remain routed through a portion of the central commercial area of Cooper Landing. Highway-based businesses would retain benefit of passing traffic. River-based businesses would contend with highway traffic.	Would not result in any business relocations. These alternatives would remove 70 percent of the traffic from all of the central commercial area of Cooper Landing. Thirty percent of the traffic would continue traveling through Cooper Landing on the "old" highway. Beneficial impacts would result from decreased congestion. Adverse impacts would result from reduced spontaneous stops for services.		
Construction Cost	--	**$290.7 million**	**$303.5 million**	**$249.6 million**	**$257.0 million**
O&M and Periodic Major Activities *(over 20 years)*	**$69.7 million**	**$23.7 million**	**$23.8 million**	**$24.2 million**	**$24.3 million**
Operations & Maintenance[a]	$4.9 million *($245,500/yr)*	$11.9 million *($593,400/yr)*	$11.7 million *($585,400/yr)*	$12.2 million *($608,600/yr)*	$12.2 million *($611,700/yr)*
Periodic Major Activities[b,c]	$64.8 million	$11.8 million	$12.1 million	$12.0 million	$12.1 million
TOTAL	**$69.7 million**	**$314.4 million**	**$327.3 million**	**$273.8 million**	**$281.3 million**

[a]Operations and maintenance (O&M), includes annual cost such as snow plowing, crack sealing, and other basic maintenance on the alignments.
[b]Values for build alternatives do not account for O&M and Periodic Major Activities on exiting/unimproved highway in the corridor. See Section 3.27, Cumulative Impacts, for those values.
[c]Periodic major activities include projects such as replacement of guardrail and pavement overlays that are reasonably anticipated over a 20-year span.
Note: Numbers are rounded and therefore totals do not add perfectly. All estimates are in 2014 dollars (i.e. future dollars have not been inflated to the future year values)

Impact Category		Impacts and Benefits				
		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.6 Transportation						
Roadway System						
Number of horizontal curves meeting minimum standard for 60 mph/total number curves		22 / 43	27 / 27	25 / 25	21 / 21	22 / 22
Percent of length above maximum grade *(>6% grade)*		0	0	0	0	0
Percent of length at 5.9 – 6% grade *(steep)*		0	9	8	2	0
Percent of length >5% grade *(hilly)*		-	9	14	16	26

		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.6 Transportation continued...						
Travel Patterns		No change	This alternative would remove 70% of traffic from a portion of the central commercial area of Cooper Landing *(MP 47-48)* but would retain all traffic in the MP 48-50 portion. No change in overall traffic volumes.	This alternative would remove 70% of all traffic from all of the central commercial area of Cooper Landing *(approximately MP 47 to 50)*. No change in overall traffic volumes.	These alternatives would remove 70% of all traffic from all of the central commercial area of Cooper Landing *(approximately MP 47 to 50)* and from the primary recreation corridor *(approximately MP 50 to 55)*. No change in overall traffic volumes.	
Accessibility		No change	Under this alternative, getting on and off the highway would remain difficult at some times because all traffic would remain in town in the MP 47-48 area.	Under these alternatives, accessibility for Cooper Landing businesses and residents along the "Old Sterling Highway" is expected to improve because traffic would be reduced in this area.		
Traffic Level of Service in 2043 at LOS C or Better *(% of road length, including both directions of travel)*		0%	61%	69%	83%	82%
Crash Rate Reduction		No improvement. Potential increase in crash rate.	65% reduction	65% reduction	65% reduction	65% reduction
Aviation, Pedestrians, and Bicyclists		No impact	No impact to aviation. Pedestrians and bicyclists would benefit from wider shoulders on the new highway and decreased traffic on the existing *("old")* highway.			
Pullouts	Pullouts eliminated *(of 24 existing)*	No impact	16	12	4	4
	New pullouts/ parking areas provided	No impact	1 *(Stetson Creek Trail pullout)*	2 *(Bean Creek Trail pullout and parking lot)*	2 *(Bean Creek Trail pullout; trailhead parking lot for Resurrection Pass Trail)*	
3.7 River Navigation						
River Navigation		No impact	The proposed bridge structures to be built would not result in any permanent new impacts to river navigation.	The new Kenai River bridge would be a new structure to navigate, but would be built with adequate clearance.	No new or replacement structures over any navigable waterways. No impact to river navigation.	

Impacts and Benefits Table continued...

Impact Category	Impacts and Benefits

3.10 Subsistence					
Changes in Resources, Resource Habitat, or Competition for Resources	No impact	Changes in both fish and wildlife resources may occur as a result of construction and operation of the build alternatives. Impacts to subsistence and hunting uses in the project area may include wildlife avoiding or reducing use of habitat near the highway, actual loss of habitat within the new alignment, decreased habitat quality, fragmentation of habitat, and injury or mortality of wildlife from collisions or hazardous materials spills.			
Changes in Resource Availability due to Alteration in Resource Migration Patterns or Distribution	No impact	Changes to the landscape caused by project construction can influence wildlife population migration patterns and distribution through habitat loss, changes in habitat suitability, changes in habitat use, or reduced survival. In addition, the highway itself can become a barrier to resource migration patterns through design, such as steep embankments or retaining walls, or through resource injuries or mortality due to collisions.			
Physical or Legal Barriers to Accessing Resources	No impact				

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.11 Utilities					
Utilities	–	Relocates local power poles and underground utility lines along existing alignment. Adds lighting to major intersections. No new utilities proposed along segment built on new alignment. Crossing regional transmission line twice requires raising high voltage power lines and relocating one of the large towers.	Relocates local power poles and underground utility lines along existing alignment. Adds lighting to major intersections. No new utilities proposed along segment built on new alignment.		
3.12 Geology and Topography					
Geology and Topography	No impact	The build alternatives would alter the topography along the roadway corridor through roadway construction, grading, and extraction of sand and gravel for road foundation materials. Bridge construction would require excavations and/or blasting, which would change the topographic contours and remove rock and soils.			
		Unstable soils at large cut east of Cooper Creek may require special treatment/terracing.	No notable soils issue known.	Fractured rock at Juneau Creek canyon bridge site indicates need for extra evaluation for bridge foundations.	
3.13 Water Bodies and Water Quality					
New Bridges	–	**Kenai River** Replacement Cooper Landing Bridge: » 3 to 4 piers Replacement Schooner Bend Bridge: » 2 to 3 piers **Cooper Creek** New Cooper Creek Bridge: » No piers or fill in creek	**Kenai River** New Kenai River Bridge: » 2 to 3 piers Replacement Schooner Bend Bridge: » 2 to 3 piers **Juneau Creek** New Juneau Creek Bridge: » No piers or fill in creek	**Kenai River** No bridges **Juneau Creek** New Juneau Creek Bridge: » No piers or fill in creek	
Drainages	–	57 small drainage crossings: » 47 replacement culverts » 10 new culverts	73 small drainage crossings: » 39 replacement culverts » 32 new culverts *(drainages combined into one culvert where possible)*	63 small drainage crossings: » 20 replacement culverts » 41 new culverts *(drainages combined into one culvert where possible)*	
Longitudinal Encroachments to the Kenai River	No change	5 locations	4 locations	1 location	
Surface Water Quality	No change from existing conditions.	Increase in storm water runoff because the project area would have more paved surfaces. Cooper Creek Alternative would have least new surface area, G South Alternative more, Juneau Creek Variant Alternative more yet, and Juneau Creek Alternative most.			

Impacts and Benefits Table continued...

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.14 Air Quality					
Air Quality	No impact to air quality standards. Emissions are higher under congested conditions. Higher emissions likely to be offset in part by higher efficiencies in vehicle fleet nationwide.	No impact to air quality standards. Each of the build alternatives would result in a slight increase in vehicle miles traveled compared to existing conditions. The increase in emissions associated with vehicle miles traveled would be partially offset by increased engine efficiency and reductions in emissions associated with smoothly-flowing traffic. This would vary slightly by alternative, similar to level of service variations (see Section 3.6). Higher efficiencies in vehicle fleet nationwide would also offset increased emissions from vehicle miles traveled.			
3.15 Noise					
Noise *(number of receptors at which noise approaches or exceeds Noise Abatement Criteria, or where a substantial increase is predicted in 2043)*	4 residential 1 recreational **5 total**	4 residential 2 recreational 1 commercial **7 total**	0 residential 2 recreational **2 total**	0 residential 1 recreational **1 total**	0 residential 1 recreational **1 total**
3.16 Visual Environment					
Visual Quality Evaluation	–	All build alternatives have at least moderate impacts as a result of new or updated roadway elements. None of the build alternatives result in impacts that are orders of magnitude different than others.			
3.17 Hazardous Waste Sites and Spills					
Waste Sites	No impact				
Potential Risk of Water Quality Impacts Due to Spills *(percentage of roadway located within 500 feet of the Kenai River, Kenai Lake, Cooper Creek, Juneau Creek, and Russian River)*	77%	56%	45%	25%	26%

Re: Alaska Highway 1 / Sterling Highway By-Pass EIS/ Juneau Creek Alternative

Dear Madam Secretary:

I write to seek your assistance to help unravel one of the longest running environmental regulatory roadblocks in the State of Alaska, the dispute over how to relocate a segment of Alaska Highway 1 (the Sterling Highway) as it runs along the Kenai River through and past the town of Cooper Landing.

Since the late 1970s a series of Administrations and Congress have been attempting to find the best route for a modern 15-mile bypass that would avoid funneling all traffic to Southcentral Alaska within a few feet of America's premiere king salmon streams, the Kenai and Russian Rivers. We are in the midst of the third Environmental Impact Statement, most recently costing $16 million. This is a complex issue as the Sterling Highway snakes through the Kenai Mountains near Cooper Landing, crossing the Chugach National Forest, the Kenai National Wildlife Refuge/formal wilderness and the Kenai State Park.

The Highway, one of America's most scenic, runs through major brown bear and moose habitat, crosses historic and culturally archaeological grounds for the Kenaitze Indian Tribe, and comes within a few feet of the Kenai River, the breeding grounds of America's largest king salmon. Commercial and sport fishing along the river account for 40 percent of the Kenai Peninsula's total economy yet hundreds of thousands of tourists travel the narrow highway yearly. We need to reduce the risks this traffic and potential fuel and chemical spills present for the nearby salmon streams.

The long-standing goal has been to build a by-pass around the tourist areas at Cooper Landing so that 70 percent of all traffic does not have to travel on the 1950's era pavement. Four route alternatives have been developed. The best one from an environmental and Native archaeological standpoint is the Juneau Creek alternative that

would run the highway 1.5 miles north of Kenai Lake, requiring no bridges to cross the river, and protecting salmon from all sediment and road runoff. By contrast, the most significant negative impact environmentally would be from the G-South Alternative. This alternative, which remarkably is now the "preferred" one, would require a new bridge to be built over the river, counter to the requirements of the Kenai River Comprehensive Management Plan.

Unfortunately, the Federal Highway Administration recently ruled the Juneau Creek route out of consideration – even though it once approved of it -- because that route must cross the width of the Resurrection Pass National Historic Recreation Trail and about a quarter mile of the Mystery Creek Wilderness Area located inside the Kenai National Wildlife Refuge. It will take a 33-acre boundary adjustment to the southeast corner of the wilderness to clear a route for the highway.

Fifteen years ago, Congress envisioned that the best route for the bypass would cross the wilderness area and approved the Russian River Land Act (PL. 107-362, 116 Stat. 3021). That Act established a formal process for a land exchange to clear the right of way. Under that law, the region's Native Regional Corporation, Cook Inlet Inc. (CIRI), was required to trade lands to the U.S. Fish and Wildlife Service to be added to the refuge to offset the 33-acre boundary adjustment. CIRI was then allowed to select other less valuable lands to the west of Cooper Landing in exchange. Under P.L. 107-362, however, only the Secretary of the Interior can initiate negotiations for the exchange. I have recently asked the new Secretary of the Interior to formally start those talks.

My understanding is that the Alaska Department of Transportation and Public Facilities last year was required by FHwA to remove the Juneau Creek alternative from route consideration because of that by-pass route. The Juneau Creek alternative would cross the Resurrection Pass Trail and would also cross the current boundaries of a wilderness area. As I understand it, if there are "feasible and prudent" alternatives to avoid crossing park, recreation, wildlife lands, and historic sites, these crossings would run afoul of Section 4(f) of the Federal Highway Act of 1966. However, I do not believe that the G-South Alternative represents a "feasible and prudent alternative," nor to I believe there is such an alternative to the Juneau Creek alternative.

That prompts me to ask several questions.

- If the Secretary of the Interior would reach agreement on a 33-acre land exchange, which Congress authorized in P.L.107-362, the boundary of the wilderness area would be to the north of Juneau Creek alternative's needed right of way corridor. Why wouldn't this serve to solve the problem resented by section 4(f)?

- Would the FHwA delay finalizing the current EIS if land exchange talks with the Department of the Interior began? This would avoid the cost and delays inherent in conducting a new supplemental EIS. Would a SEIS be needed before or if the land exchange is completed?

- If the exchange is completed to clear the right of way from crossing a wilderness, would section 4(f) present an issue for the Juneau Creek route because it would still need to cross the Resurrection Pass Recreational Trail?

- According to the current draft EIS, the Juneau Creek alternative calls for construction of a bridge over Juneau Creek Canyon to route the trail under the highway. (That crossing would come just 3.4 miles north of the 39-mile trail's existing terminus.) Since the Juneau Creek option is clearly listed as the better option on environmental grounds in the current draft EIS, could the FHwA now reconsider whether it is the only "feasible and prudent" route? In contrast to the other alternatives, the Juneau Creek alternative would avoid the environmental impact caused by construction of a second bridge over the river. It would also avoid archaeological damage to Native historic sites closer to the river, eliminate the danger of fuel and chemical spills from entering the river, and avoid most all other recreational impacts.

- Is there any formal process that the State of Alaska or outside parties currently can undertake to prompt the FHwA administratively to reconsider its 2016 ruling and reinstate the Juneau Creek alternative as a viable route and then to select it as the route for the by-pass road?

- And are there any alternatives you could suggest that Congress could take to permit the Juneau Creek alternative by-pass to be constructed, if that alternative is not reinstated administratively by the FHwA?

I ask these questions because the Juneau Creek route is clearly the preferred route on environmental grounds. It is supported by the Kenai River Sportfish Association, by the Kenai Peninsula Borough, the City of Kenai, the cities of Soldotna and Homer, the Kenaitze Indian Tribe, the Salamatof Native Association, the Ninilchik Traditional (Tribal) Council, and the environmental-fishery groups: Cook Inlet Keeper, Kenai Watershed Forum, Kenai Peninsula Fishermen's Association, United Cook Inlet Drift Association, the Kenai River Professional Guide Association, and the Kenai River Keys Property Owners Association.

I hope you will ask FHwA to revisit the Juneau Creek alternative as the only feasible and prudent route for this vital Alaska road project. I understand that the FHwA intends to finalize its record of decision in this case by October 2017. A final determination in favor of the G-South Alternative would result in the worst environmental and most economically costly road alternative being selected – a decision that will perhaps delay once again a project already 40 years in the making.

I stand ready to discuss this request with you at any time. My staff is also available to you and your staff. Thank you for your consideration.

Sincerely,

Lisa Murkowski
United States Senator

Sterling Highway MP 45-60 Reconstruction Project

Project Purpose: The purpose of the Sterling Highway MP 45-60 Reconstruction Project is to bring the highway up to current standards and to efficiently and safely serve the through-traffic, local community traffic and traffic bound for recreation destinations within the project area both now and in the future.

Background: This section of the Sterling Highway is essentially the same highway that was built in the 1940's and 1950's. The environmental work for this project was initiated in 1975 and has continued on to the present.

Alternatives: There are four "build" alternative routes evaluated in detail in the EIS. These are the Cooper Creek Alternative, G South Alternative, Juneau Creek Alternative (desired by local government, tribes and sport fishing organizations) and Juneau Creek Variant Alternative. There is also the "No Build Alternative".

Selected Alternative: The G South Alternative was selected for the following reasons: 1) The two Juneau Creek Alternatives cross the Resurrection Pass National Recreation Trail which FHWA has determined to be Section 4(f) resource. Section 4(f) refers to the original section within the U.S. Department of Transportation Act of 1966 which established the requirement for consideration of park and recreation lands, wildlife and waterfowl refuges, and historic sites in transportation project development. By law, if a Section 4(f) evaluation identifies a feasible and prudent alternative that completely avoids Section 4(f) properties, it must be selected. The G South and Cooper Creek Alternative are both feasible and prudent; therefore, neither of the Juneau Creek Alternatives can be selected. 2) The Cooper Creek Alternative would have considerable impacts to the community of Cooper Landing and would not address the congestion and safety problems in this portion of the highway as the G South Alternative; therefore, G South is the selected alternative.

Roles of FHWA and DOT&PF: FHWA makes the decisions on what is to be evaluated and makes the final route alternative selection which is published in a Record of Decision (ROD). DOT&PF performs the work as required by FHWA. Once the ROD is published, DOT&PF can either build the selected alternative in the ROD or decide not to build anything. Either way, the money spent on the EIS remains eligible for federal funds.

Financial Information: Current costs for the EIS exceed $16 million dollars. The construction cost estimates for this project are around $300 million. The project is a Federal Aid Highway Project. Under that program the federal government pays about 90% of project costs from State of Alaska apportioned funds from the Federal Highway Trust Fund, with the State paying the remaining 10%.

Current Status: In December 2015, DOT&PF and the Federal Highway Administration (FHWA) identified the G South Alternative as the preferred alternative for the Sterling Highway MP 45-60 Project near Cooper Landing. The Final EIS will be released for review by cooperating agencies this month (November 2016). The Final EIS public availability period is expected in the Summer of 2017. The Record of Decision is anticipated in November 2017.

Impacts and Benefits Table	27

The Project at a Glance

Originally completed in 1950, the Sterling Highway is the only road that links western Kenai Peninsula communities (e.g., Kenai, Soldotna, and Homer) to the rest of the state. For many years, the Alaska Department of Transportation and Public Facilities (DOT&PF) has recognized the need for improved safety and traffic flow along this highway to accommodate increased traffic from community growth, recreation, and tourism.

The Problems and Challenges

The Sterling Highway from Milepost 45 to 60 follows the Kenai River valley through the Kenai Mountains. The highway's problems and challenges through Cooper Landing include:

- A constricted valley between the Kenai River and steep mountain walls
- Narrow, curvy highway design
- Traffic congestion
- Many driveways and side roads
- Conflicts between local traffic and through-traffic
- Elevated crash rate
- Risk of contaminant spills into the Kenai River

The scenic nature of the area, community growth, and world-class fishing on the Kenai and Russian rivers combine to create serious congestion problems for the highway from May through September. This level of congestion has created safety issues for highway travelers, especially in areas where high-speed traffic conflicts with vehicles turning on and off the highway.

The Goal

DOT&PF seeks to:

- Reduce congestion
- Improve the highway to current "rural principal arterial" design standards
- Improve highway safety

See detailed project map on pages 3-4.

Whose project is this?

The Sterling Highway Milepost (MP) 45 to 60 Project is proposed by the DOT&PF (as the highway owner) and by the Federal Highway Administration (FHWA). FHWA administers Federal transportation project funds, which means that FHWA would approve the final environmental impact statement and subsequent record of decision.

Overview

Sterling Highway Milepost 45-60

Thousands of Alaskans and visitors from around the world drive to the spectacular upper Kenai River every summer. Most come from Anchorage, which is home to the majority of the state's population and the region's main airport. From the other direction, they may come from Kenai, Soldotna, or Homer—the principal cities on the western Kenai Peninsula. From either direction, they drive a consistent highway—with uniform lane widths, ample shoulders, and curves designed for uniform highway speeds—until they approach Cooper Landing.

Near Cooper Landing, the Sterling Highway reverts to its original design, with narrow lanes, no shoulders, and sharp curves. The highway through this stretch was constructed in the 1940s and 1950s and served the traffic and vehicles of that time. Since then, however, the sizes and numbers of cars and trucks have changed, as well as the standards for a highway's lanes, shoulders, and sharpness of curves. Along this stretch, the highway does not meet current highway standards. The narrow lanes and shoulders, sharp curves, and poor visibility mean the road is less safe than similar roads around the state.

In summer, traffic overwhelms the road. Cooper Landing and the nearby confluence of the Kenai and Russian rivers draw people for fishing, boating, camping, and hiking. This slow-moving local traffic is continually pulling on and off the highway. People traveling through the area, between places like Soldotna and Anchorage, share the same highway and get caught in the local traffic.

The idea of a new highway in the Cooper Landing area is favored by some people and is a source of concern for others.

Why favored?

This project holds promise for a better highway design and safer driving experience. The Sterling Highway runs for several miles along the Kenai River, in some places following every bend. The road is narrow and winding, with low speed limits in some areas, with no shoulders or adequate space along the road for safety, with little opportunity to pass, and with many connecting driveways that create multiple access points to the highway. Traffic is gradually increasing and has been for decades, reducing the ability of the highway to handle the traffic.

Upgrades to modern highway design standards would allow for more consistent highway speeds to serve long-distance travelers and commercial truck traffic. With a new highway route, segments of the old highway would remain as a lower-speed road suited to serving local and recreational traffic. A reconstructed highway would match other nearby portions of the Sterling and Seward highways, which have been upgraded to modern standards.

Why is there concern?

The Kenai River valley is not an easy place to improve a road. Land along the highway in Cooper Landing is largely built upon, leaving little room to alter the alignment or widen the highway without impacts to private property. The topography of mountain slopes and river bends also physically constrains the design of the highway, in some cases forcing proposed alignments into locations that are protected or important for other uses. Any change to the highway likely would impact wildlife corridors and habitat, recreation areas, and cultural sites. The Cooper Landing community provides essential support services, and people are concerned that traffic might be routed away from existing businesses.

The Kenai River is a State park, and the confluence of the Russian and Kenai rivers is a major destination for sport fishing. The two rivers also attract a concentration of brown bears. Most of the land in the area is managed by Chugach National Forest and Kenai National Wildlife Refuge.

The area is largely natural and provides habitat for bears, moose, and other wildlife. Besides fishing, people enjoy camping, hiking, mountain biking, rafting and boating, and backcountry winter sports on these public lands.

The fish in the confluence area have been important to Native peoples for thousands of years, and the river was important later to early Russian and American explorers and gold miners. Hundreds of historic and archaeological features dot the area and make it culturally important today to the Kenaitze Indian Tribe and to Cook Inlet Region, Inc. (CIRI), the regional Alaska Native corporation, which owns land in the area. All of this makes the area a complex setting for this project.

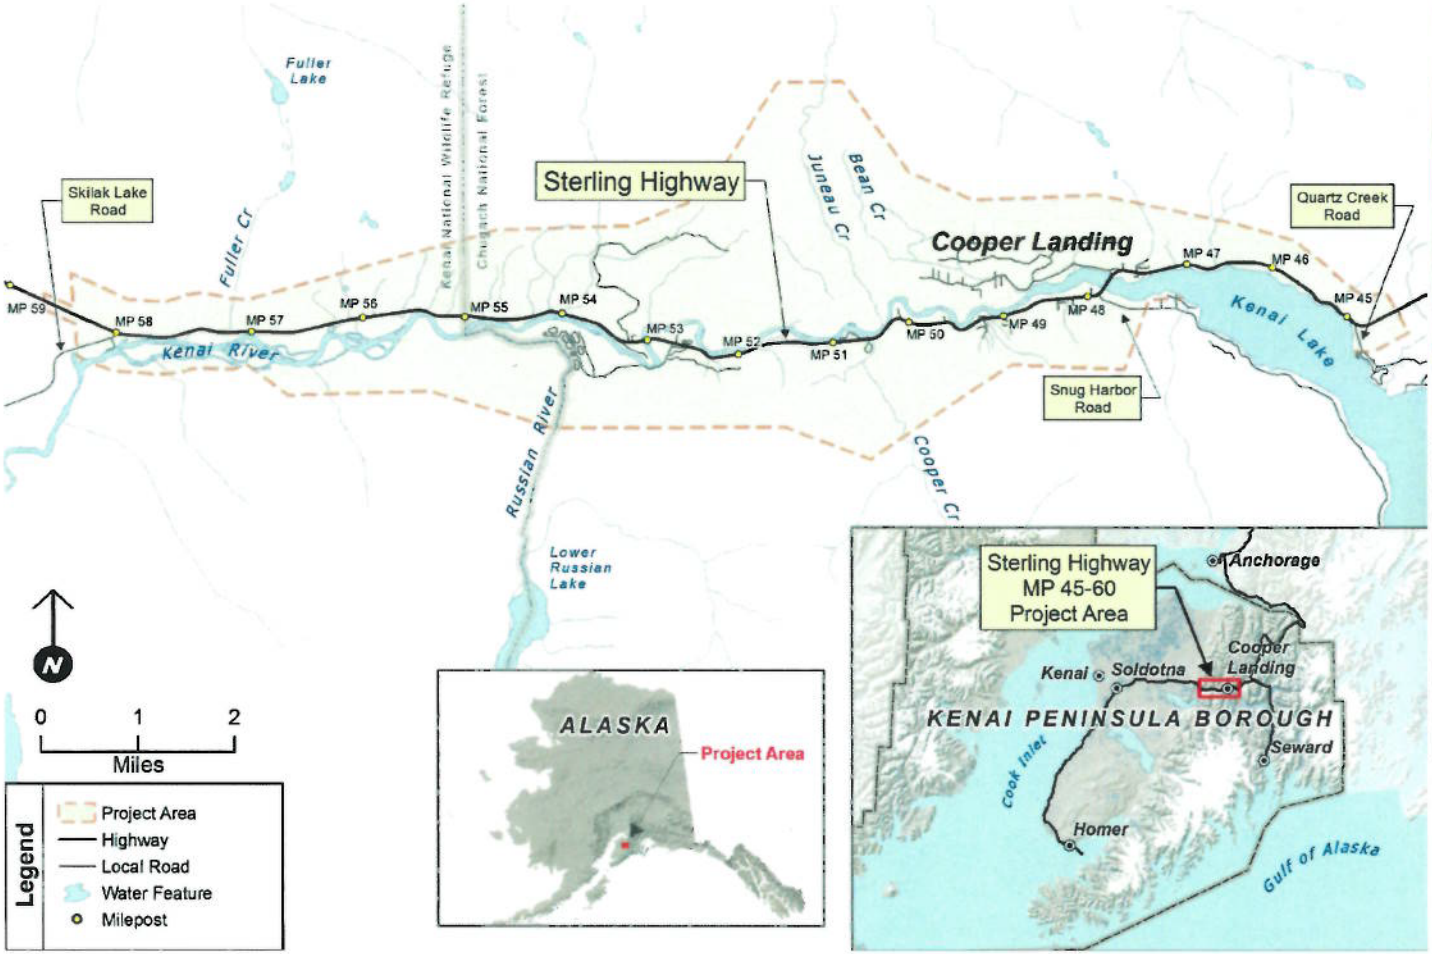
What is an EIS? An Environmental Impact Statement (EIS) is a document prepared to describe the effects of proposed activities on the environment. It considers both the natural and physical environment and the relationship of people with the environment. The purpose of developing an EIS is to help agencies, officials, and the public make sound decisions. Its preparation is prescribed by the National Environmental Policy Act of 1969, and it is necessary to disclose potential impacts in order to secure the use of Federal funding for transportation projects.

Why is this a supplemental EIS?

A supplemental EIS (SEIS) is meant to review the findings of an existing EIS and supplement them with new or updated information. DOT&PF and FHWA previously released two draft EISs for this project, in 1982 and 1994. These addressed a larger project area, extending from MP 37 (Seward Highway junction) to MP 60, 8 miles longer than the current project area (MP 45-60). Based on the complexity in the MP 45-60 area and on a determination that the MP 37-45 project would be useful on its own, the 8-mile segment was expedited and constructed by 2001. At about the same time, DOT&PF began preparing this SEIS, building on past work. Because the entire MP 37-60 area has been under a single ongoing work agreement between DOT&PF and FHWA since the 1970s, this EIS is formally considered a supplement. Enough time has passed, however, that all research was begun anew.

Where is the project?

The Sterling Highway is located on the Kenai Peninsula in Southcentral Alaska. It runs east-west through the Kenai Mountains and continues to the City of Homer. The project area is in the heart of the Kenai Mountains and runs from MP 45 to MP 60. The project's starting and stopping points for construction would be the intersection of the existing Sterling Highway with Quartz Creek Road on the east and the intersection with Skilak Lake Road on the west. The limits of any potential construction activities would be MP 44.5 to 58.2. However, MP 45 and MP 60 have been used historically to define the project, and therefore continue to be used as part of the project's formal name.



Why is the Sterling Highway important?

The Sterling Highway is the only road that connects the western Kenai Peninsula with the Seward Highway and the rest of the nation's highway system. It is part of the National Highway System and is Interstate Highway A-3. While the eastern end of the Sterling Highway connects to the rest of the national highway system on land, the opposite end of the Sterling Highway, at the city of Homer, connects to the Alaska Marine Highway System (ferry). Marine Highway ferries connect travelers by ocean to other Alaskan communities and the North American highway system at points in Southcentral and Southeast Alaska; at Prince Rupert, British Columbia; and at Bellingham, Washington.

Purpose and Need

What is "Purpose and Need," and how does it affect the process?

The Purpose and Need describes transportation problems the project is meant to address. It also helps the public and agencies determine which of the proposed alternatives best solve the transportation problems.

What is the project purpose?

The purpose of the project is to bring the highway up to current standards to efficiently and safely serve through-traffic, local community traffic, and traffic bound for recreation destinations in the area both now and in the future. DOT&PF and FHWA recognize the importance of protecting the Kenai River corridor while still achieving this transportation purpose.

What are the needs for the project?

There are three interrelated needs that the project would address: reducing highway congestion, meeting current highway design standards, and improving highway safety.

Need 1: Reduce Highway Congestion.

The construction of multiple driveways and side street accesses over time, combined with a curvy, constrained alignment with little passing opportunity and increasing traffic volumes, has led to unacceptable congestion that is forecast to worsen in the future. As a result, the highway performs below acceptable levels of service (LOS) for a rural principal arterial that is a component of the National Highway System. LOS is illustrated in the Congestion graphic to the right.

Congestion

Level-of-service (LOS) is a term used to qualitatively describe roadway and intersection traffic operations using "letter grades" ranging from A (best) to F (worst).

LOS A describes the highest quality of traffic service. Motorists travel at their desired speed. Without strict enforcement, LOS A results in average speeds of 55 mph or more for rural principal arterial highways. Passing demand is below passing capacity. Platoons of three or more vehicles are rare. Drivers are delayed no more than 35% of their travel time by other vehicles.

LOS B characterizes traffic flow with speeds of 50 mph or slightly higher on level terrain. The demand for passing to maintain desired speeds becomes significant. Drivers are delayed in platoons up to 50% of the time.

LOS C describes noticeable increases in platoon formation, platoon size, and frequency of passing impediments. The average speed still exceeds 45 mph. Chaining of platoons can occur. Although traffic flow is stable, it is susceptible to congestion due to turning traffic and slow-moving vehicles. Percent time spent following may reach 65%.

LOS D describes unstable traffic flow. Passing demand is high, with passing capacity near zero. Platoon sizes of 5-10 vehicles are common, although speeds of 40 mph still can be maintained. Turning vehicles and roadside distractions cause major shock waves in the traffic stream. Motorists are delayed in platoons nearly 80% of their travel time.

LOS E describes a condition where percent time spent following is greater than 80%. Speeds may drop below 40 mph, down to 25 mph on sustained grades. Passing is virtually impossible. Platooning becomes intense. Operating conditions are at capacity and unstable.

LOS F represents heavily congested flow with traffic demand exceeding capacity. Speeds are highly variable (possibly stop-and-go). While more cars are on the road at each level through LOS D/E, the traffic volume decreases at LOS F because vehicles cannot move freely.

Need 2: Meet Current Highway Design Standards.

Existing characteristics of the Sterling Highway do not meet current design standards for a rural principal arterial road. The existing highway contains curves, shoulders, guardrail, and clear zones that do not meet current design standards (see Current Design Standards and the Existing Highway table below).

Need 3: Improve Highway Safety.

The interrelated effects of highway congestion and outdated highway design characteristics lead to higher-than-average rates of traffic crashes in the project area, and a greater severity of crashes, when compared to the statewide average. The combination of narrow lanes, narrow or non-existent shoulders, sharp curves, and a high number of access points result in these safety issues. The crash rates are higher than the statewide average for similar types of roadways (rural principal arterials). The severity of crashes—that is, those that have major injuries or fatalities—is higher than the statewide average for portions of the highway in the project area.

Current Design Standards and the Existing Highway

	Design Standards[1]	Distance Not Meeting Standard	Percent Not Meeting Standard
Design Speed *(mph)*	60	15 miles at 55 mph or less 4 miles at 40 mph or less	100%
Minimum Curve Radius *(feet)*	1,330	21 of 43 curves less than standard radius	49%
Lane Width *(feet)*	12	13.7 of 15 miles less than 12-foot-wide lanes	91%
Shoulder Width *(feet)*	6–10	15 of 15 miles less than 6-foot-wide shoulders	100%
Clear Zone *(feet)*	30–32	14 of 15 miles less than 30-foot-wide clear zone	95%

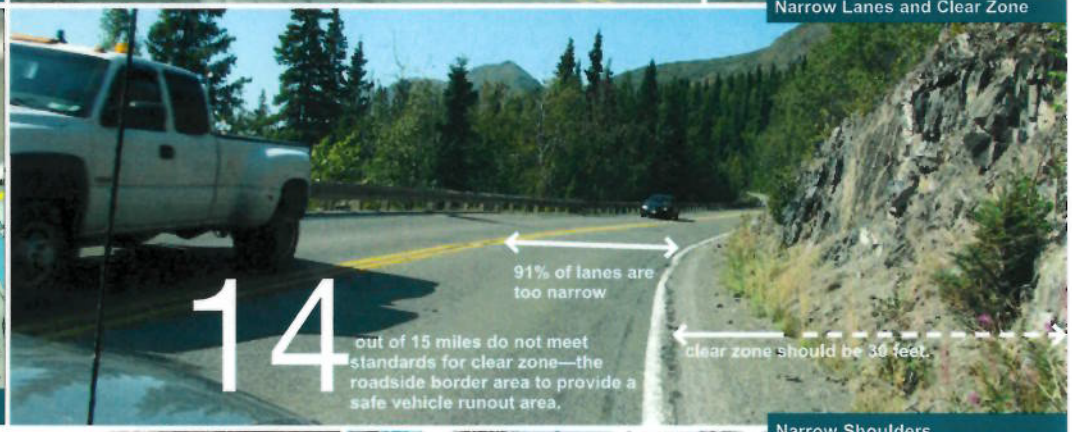
Narrow Lanes and Clear Zone



Narrow Shoulders

Alternatives

Preliminary engineering and the alternatives screening process narrowed the potential build alternatives to four. These four and the No Build Alternative are evaluated in detail in the SEIS.

1. No Build Alternative
2. Cooper Creek Alternative
3. G South Alternative
4. Juneau Creek Alternative
5. Juneau Creek Variant Alternative

What is the No Build Alternative?

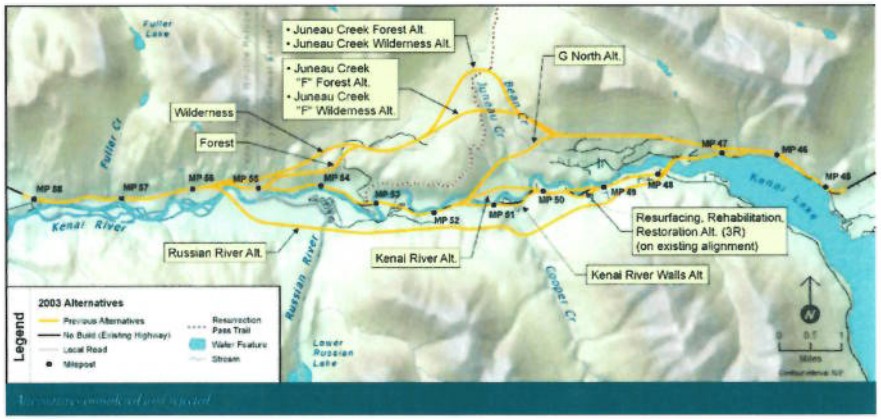
The National Environmental Policy Act requires that an EIS describe and analyze the impacts of not building the project as a benchmark that allows for comparison of the degree of environmental effects of the various project alternatives. In this document this alternative is called the "No Build Alternative." Under the No Build Alternative, the highway would remain much as it is today, with only maintenance and already programmed work assumed to occur.

What are the Build Alternatives?

The four build alternatives are the Cooper Creek Alternative, G South Alternative, Juneau Creek Alternative, and Juneau Creek Variant Alternative. Each of the build alternatives is engineered based on highway design standards for rural principal arterials. The build alternatives are identical from MP 45 to MP 46.3, at the eastern end of the project, and from MP 55.8 to MP 60, at the western end of the project. Each alternative would consist of a two-lane highway with paved shoulders, passing lanes, and turning lanes. Travel lanes would be 12 feet wide, paved shoulders would be 8 feet wide (adequate for safe bicycle and pedestrian use), passing lanes would be 12 feet wide, and all major intersections would have right- and left-turn lanes. No interchanges would be constructed. T-intersections would be used where the "old" highway intersects new segments within each alternative. Maps on pages 11 and 12 illustrate the build alternatives.

Were other alternatives considered?

More than thirteen alternative alignments were considered. Those that are fully analyzed in the SEIS are considered to represent the full range of reasonable alternatives. Those not carried forward were determined either not reasonable or similar to (but not as good as) a nearby similar alignment.



Alternatives were determined to not be reasonable for a combination of the following factors:

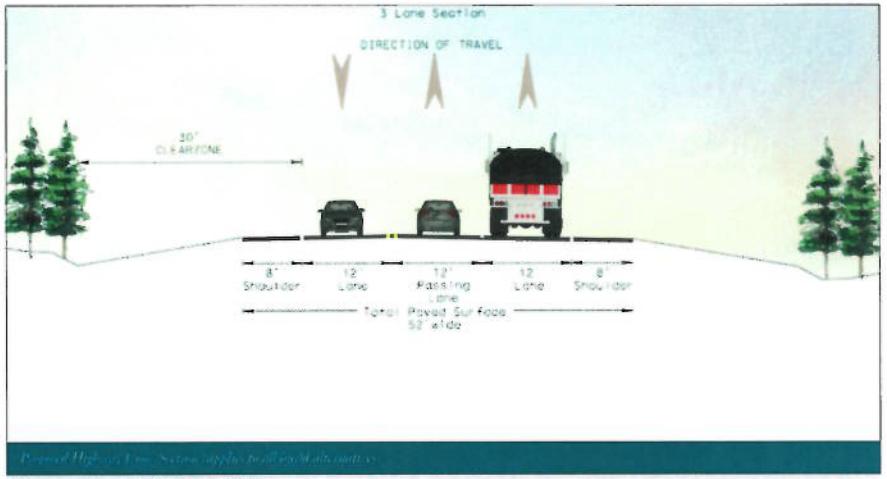
- Technical problems (for example, poor rock or soils).
- Inability to satisfy the project purpose and need (for example, grades too steep for a safe road).
- Impacts to the community, the natural environment, recreational areas, or high costs.
- General lack of public and agency support.

A formal analysis process that used criteria based on the purpose and need and preliminary impact assessment was conducted and is summarized in Chapter 2 of the SEIS. A map of alternatives considered and rejected appears on page 9.

Why not just improve the existing highway all the way through?

A segment of the existing highway in the area from MP 49 to MP 50.5 has several curves that do not meet current standards for a rural principal arterial. The hillside in this area rises abruptly from the winding Kenai River and its floodplain. The hillside is composed of fine-grained soils such as silt and clay-like soils. These soils were left by glacial retreat and water action. They were eroded into steep slopes by the Kenai River and its tributary, Cooper Creek. The soils are prone to landslides and mud flows. Multiple teams of DOT&PF and consulting engineers have examined this area over 30 years and determined that any alignment that straightened out the curves and widened the highway to meet standards would require huge cuts into the poor soils or would require direct impacts to the Kenai River. Civil and structural engineers have consistently recommended against large cuts in this area because of the unusual wall heights (as tall as 16-story buildings) and risk of slope and structure failure. Therefore, all alternatives have been routed around this area.

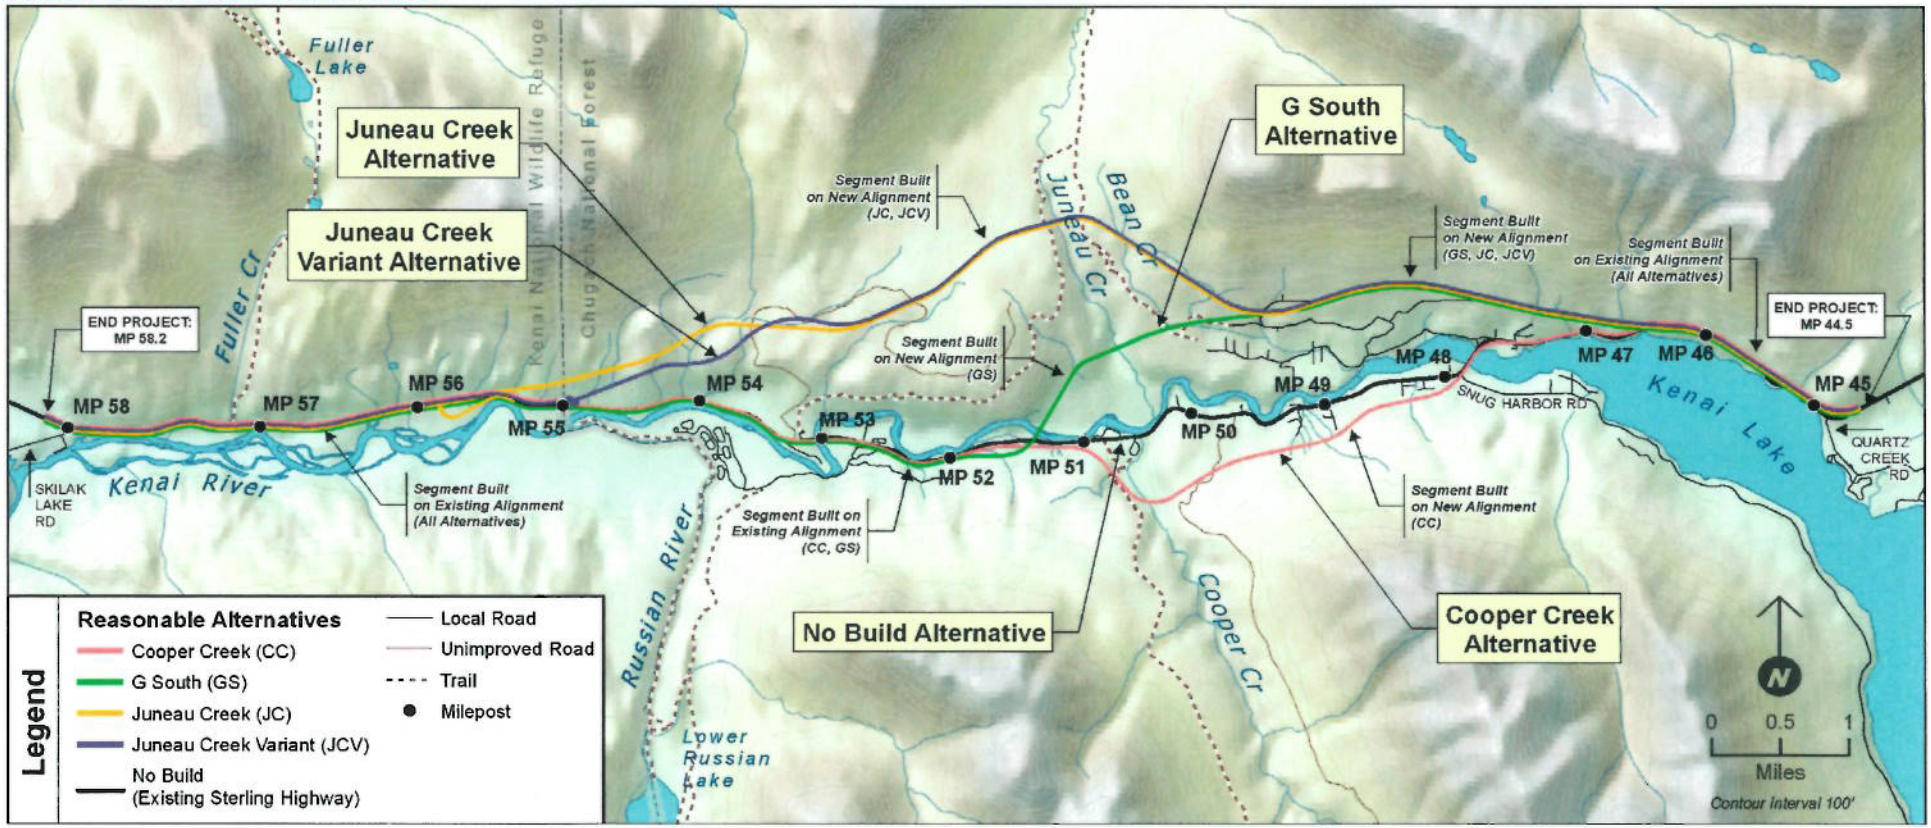
Highway Cross-Section. The highway would generally be a two-lane highway, but many portions of each alternative would have a passing lane or turning lane (three-lane cross-section, as shown below), and some areas would have passing lanes in both directions (four-lane cross-section). Widths of each lane (12 feet), widths of shoulders (8 feet), and clear zones (30 feet from lane edge) would be the same throughout.



Where do I look in the Draft SEIS?

- Chapter 2 addresses alternatives.

Alternatives evaluated in detail in the SEIS



Cooper Creek Alternative. The Cooper Creek Alternative follows the existing alignment for most of its length. Only about 3.5 miles would be located on a new alignment, routed south of Cooper Landing. This alternative would include construction of three large bridges—two replacing existing Kenai River bridges and one new large bridge over Cooper Creek.

G South Alternative. The G South Alternative would construct 5.5 miles of new alignment skirting north of Cooper Landing and the Kenai River, reconnecting with the existing alignment near MP 52. This alternative was designed to avoid impacts to the Resurrection Pass Trail and Juneau Creek Falls area. This alternative would include construction of three bridges—one replacing an existing bridge over the Kenai River and two new bridges, a large bridge over lower Juneau Creek, and one new bridge over the Kenai River.

Juneau Creek Alternative. The Juneau Creek Alternative deviates from the existing alignment more than the other alternatives—about 10 of 14 miles would be on a new alignment. It would run north of Cooper Landing and the Kenai River, climbing the hillside and crossing Juneau Creek Canyon with a new bridge south of Juneau Creek Falls. The new segment would cross the Mystery Creek Wilderness in the KNWR and would rejoin the existing highway at about MP 56. The alternative includes one large bridge spanning Juneau Creek Canyon. It would be the longest single-span bridge in Alaska.

Juneau Creek Variant Alternative. The Juneau Creek Variant Alternative is almost the same as the Juneau Creek Alternative but was specifically designed to avoid use of land from the KNWR and the Mystery Creek Wilderness. The Juneau Creek Variant Alternative would rejoin the existing alignment at MP 55 of the existing highway near Sportsman's Landing. The alternative includes one large bridge crossing Juneau Creek Canyon. It would be the longest single-span bridge in Alaska.

Where do I look in the Draft SEIS?

» Chapter 2.6 SEIS Alternatives Advanced for Full Analysis

Affected Environment and Environmental Consequences

DOT&PF and FHWA analyzed the social and environmental conditions of the project area. Results of the analysis are the baseline for determining the potential impacts of the alternatives.

The analysis of existing conditions and impacts includes issues raised by agencies and the public, and issues discussed by the DOT&PF and FHWA in consultation with agencies while preparing the SEIS. This executive summary focuses on resources with greater potential impacts, resources identified during scoping as being resources of particular concern, and resources that illustrate substantive differentiation among alternatives. The impact tables at the end of this executive summary provide quantified data, where available, about impacts to resources. A larger number of resources and much more detailed discussion appear in the Draft SEIS (see Chapter 3). Chapter 4 of the Draft SEIS focuses on lands protected by Section 4(f) of the U.S. Department of Transportation Act; Federal transportation law provides additional protection for certain parks, wildlife refuges, recreation areas, and cultural/historic sites.

Where do I look in the Draft SEIS?

- Chapter 3 covers the "Affected Environment," "Environmental Consequences," and mitigation measures.
- Chapter 4 covers Section 4(f) impacts (park, recreation area, refuge, and cultural site impacts).

Land Ownership / Land Use Plans and Policies

Most lands in the project area are owned and managed by the Federal government, including the U.S. Forest Service (Chugach National Forest), east of MP 55, and the U.S. Fish and Wildlife Service (KNWR), west of MP 55. Within the Federal lands, and generally in blocks near the highway, there are undeveloped State- and Borough-owned lands, as well as smaller vacant and developed private parcels. Two relatively large parcels of private land are owned by Cook Inlet Region, Inc. (CIRI), the regional Alaska Native corporation formed by the Alaska Native Claims Settlement Act.

One important land issue involves the KNWR. The KNWR encompasses much of the western Kenai Peninsula. It is the most visited of Alaska's many wildlife refuges and provides the most accessible Federally designated Wilderness. The KNWR was established originally to protect the Kenai Peninsula moose population and generally to protect multiple wildlife and bird species. Its purposes include recreation that is compatible with wildlife protection. The existing highway is within a DOT&PF right-of-way easement on KNWR land. North of the highway right-of-way in the project area is the Mystery Creek Wilderness; south of the right-of-way is the Kenai River and then the Andrew Simons Wilderness.

Key Impacts and Issues:

- Impact to private land owners was an issue raised by the public, and land management agencies are interested in impacts to their Borough, State, or Federal lands. The tables at the end of this summary display the acreage of impacts on various public and private land owners. The Cooper Creek Alternative would impact more private land than the other alternatives—see also the Housing and Relocation section on pages 14-15.

- One of the most important issues for this project is the effect to Federal Wilderness land. The Juneau Creek Alternative differs from the other alternatives because it would cross a corner of the Mystery Creek Wilderness. The affected area would be 33.4 acres of the 1.9-million-acre KNWR, including 19.1 acres of the KNWR's 1.3 million acres of designated Wilderness. As this alternative proposes to reroute the Sterling Highway through a national Wildlife Refuge and designated Wilderness, it is subject to the procedural requirements, and determinations required under ANILCA Title XI, Transportation and Utility Systems (TUS). ANILCA Section 1106 (b) provides the procedural requirements for approval of a TUS in a designated Wilderness area, including Presidential review and recommendation and Congressional approval.
- The Russian River Land Act allows CIRI and the KNWR to exchange lands in this area. CIRI owns land just outside the KNWR boundary that would lie adjacent to the Cooper Creek, G South, and Juneau Creek alignments and that would be bisected by the Juneau Creek Variant Alternative. CIRI requested that the DOT&PF and FHWA continue to analyze the Juneau Creek Alternative fully in the SEIS. CIRI has stated an intention to pursue a land exchange.
- The Juneau Creek and Juneau Creek Variant alternatives would cross the Resurrection Pass National Recreation Trail; other alternatives would not. Like KNWR, the 1,000-foot-wide trail corridor is subject to ANILCA Title XI. However, because it is not Wilderness, it does not require approval of the President and Congress. (See also Parks and Recreation Resources, Section 3.8 of the SEIS).

Housing and Relocation

Much of the housing in Cooper Landing is used seasonally, with a smaller year-round base of residents. According to the 2010 U.S. Census, there were 395 housing units in Cooper Landing, of which 234 were vacant. Of the 234 vacant housing units, 207 were used seasonally and were generally not available for rental. There are also a number of undeveloped private lots in the community and other lots platted by the Kenai Peninsula Borough.

Where do I look in the Draft SEIS?

- Land Ownership in Section 3.1.
- Land Use Plans and Policies in Section 3.2.
- KNWR and ANILCA Title XI issues in Section 3.2, specifically 3.2.12, 3.2.1.5, 3.2.2.5 (KNWR), and 3.2.5 (Title XI). Chapter 4 also addresses the KNWR as a Section 4(f) resource.

Crossing Wilderness

Wilderness designated by Congress is particularly complex to cross with a road corridor, because the Wilderness Act defines a designated Wilderness as a large area without roads. Typically Wilderness areas do not allow wheeled or mechanized vehicles. The Alaska National Interest Lands Conservation Act (ANILCA) provides a mechanism in Title XI to authorize road corridors across Wilderness lands in Alaska.

Housing and Relocation continued...

Key Impacts/Issues:

- The Cooper Creek Alternative would impact 38 privately owned properties. Sixteen would be completely acquired. Of the 16, 6 are vacant parcels, 8 have developed residences that would require relocation, and 2 have accessory buildings.
- The G South Alternative would require partial acquisition of 6 vacant private properties but would not require relocation of any residences or businesses.
- The Juneau Creek Alternative would require partial acquisition of 4 private properties. None of these acquisitions would require any relocation.
- The Juneau Creek Variant Alternative would require partial acquisitions of 5 private properties. None of these acquisitions would require any relocation. One of the 5 properties is a 42-acre CIRI parcel near Sportsman's Landing, which the alignment would bisect.

Mitigation Measures:

Adversely affected property owners would compensated at fair market value as provided by the Uniform Relocation Assistance and Real Property Acquisition Act of 1970, and the Alaska Relocation Assistance and Real Property Acquisition Practices (Alaska Statutes 34.60.010 et seq.).

Where do I look in the Draft SEIS?

- Housing and Relocation: Section 3.4

Economic Environment

The Kenai and Russian rivers draw thousands of people for salmon and trout fishing, and rafting—both tourists and in-state recreationists. Fishing and outdoor recreation, combined with the lake, river, and mountain scenery, drive much of the local economy. Cooper Landing is the only location between Summit Lake, Moose Pass, and Sterling that provides services to highway travelers. Many bed and breakfast inns, resorts, and fishing lodges in Cooper Landing accommodate visitors. The economy is seasonal and experiences a fluctuation of annual employment, as businesses reduce the number of employees or close entirely during the winter.

River-based businesses, such as guiding and lodging businesses catering to fishing and recreational enthusiasts, are destinations and are less dependent on spontaneous (drive-by) customers. Highway-based businesses, such as gas stations, grocery and general merchandise stores, restaurants, and motels, are more dependent on highway vehicle traffic and spontaneous stops.

Most businesses in the project area are clustered in the central commercial area of Cooper Landing (MP 47-50), but a few lodges, dining establishments, and gas stations occur outside the community along the highway.

Agencies and the public, particularly residents of Cooper Landing, have expressed concern that alternatives built on a new alignment would induce, or spur, development. One concern is that the highway could provide new access to previously undeveloped State or Borough lands, and new rural residential neighborhoods would spring up. A related concern is that new businesses would open to serve travelers along new highway segments and draw business away from the existing community. River-based businesses appear to be destination-oriented; their owners are more concerned about protecting the quality of the Kenai River and reducing traffic congestion in the area where they transport rafts and clients and less concerned about loss of drive-by customers. Highway-based retail businesses are more concerned about reduced business if traffic were removed from passing by their businesses.

Land use planning goals for the community of Cooper Landing, adopted into the Kenai Peninsula Borough Comprehensive Plan, indicate a desire to retain the commercial center within Cooper Landing and to avoid development of a competing commercial center along any new highway segment.

Key Impacts/Issues:

- All build alternatives include a highway segment built on a new alignment that would remove about 70 percent of the traffic from all or a portion of the central commercial area of Cooper Landing. A benefit of reducing traffic would be a more attractive community environment, with decreased congestion and improved safety for pedestrians, residents, and visitors to the community. Decreased traffic also would benefit local businesses that use the existing road in their daily local business transactions, such as river guides who shuttle rafts and sport fishing clients. People currently relying on Cooper Landing businesses would likely continue to do so, although some spontaneous economic activity would decrease. To varying degrees, all of the build alternatives have the potential to adversely affect individual businesses by diverting travelers who might make spontaneous stops at businesses located on the "old" highway. These spontaneous stops constitute a meaningful portion of their clientele, especially for highway-related businesses like gas stations, eateries, and convenience stores. This would be more of an issue for the G South Alternative and the two Juneau Creek alternatives, because they would not be routed through any portion of the community. The Cooper Creek Alternative would remain more connected to the community but would divert from the existing highway immediately south of the Cooper Landing Bridge.
- DOT&PF would not allow driveways and side roads to be connected to highway segments built on new alignments (bypass segments). Access to developable land adjacent to the bypass segments would need to be from the existing Sterling Highway only, as it is today. Therefore, no competing commercial development is anticipated as a result of this project, none of the build alternatives would create any new access to developable lands, and none of the build alternatives would induce new development of businesses or residences.
- All build alternatives would cost millions of dollars to build and maintain over the life of the project (see the Costs of the Alternatives table below). These funds would be Federal and State monies allocated for transportation projects. Such funds are limited, and use for this project would mean they would not be available for other Alaska transportation projects. The funds would flow principally to Alaska design and construction firms and into the Cooper Landing, Southcentral Alaska, and statewide economy.

Mitigation Measures:

The project would include directional signs to ensure that motorists were aware that business services were available in Cooper Landing, off the main highway.

Where do I look in the Draft SEIS?

- Economic Environment: Section 3.5

Costs of the Alternatives (millions)

	Cooper Creek	G South	Juneau Creek	Juneau Creek Variant
Construction[a]	$236.2	$250.4	$205.4	$211.6
Other Costs[b]	$54.5	$53.1	$44.2	$45.4
Total	**$291**	**$304**	**$250**	**$257**

[a] Construction costs include the road itself and bridges/tunnels/retaining walls, plus 20% for contingencies and 15% for construction administration.
[b] Other costs include permitting, design, utility relocations, right-of-way acquisition, and Indirect Cost Allocation Plan (ICAP). Note that right-of-way costs estimate the land payment portion only. It does not address the other per parcel costs of land acquisition. These costs only reflect privately owned land impacted by the alternatives. Land owned by Federal, State, and Municipal agencies is assumed to be acquired via interagency land transfers.

Parks and Recreation Resources; and Section 4(f)

The upper Kenai River area draws many people, both Alaska residents and visitors, for recreation. The area contains:

- Kenai River Special Management Area.
- Boat launch and river access areas: Jim's Landing (KNWR), Sportsman's Landing/Russian River Ferry (State and KNWR), and Cooper Landing Boat Launch and Day Use Area (State).
- Trails: Resurrection Pass National Recreation Trail, Bean Creek Trail, and Stetson Creek Trail (Chugach National Forest); Fuller Lakes Trail (KNWR); and informal trails such as the Art Anderson Slaughter Gulch Trail.
- Forest Service campgrounds: Russian River Campground and Cooper Creek Campground.
- Forest Service areas set aside for recreation: Kenai River Recreation Area, Juneau Falls Recreation Area, and Lower Russian Lake Recreation Area.

The main area of activity and land protected for recreation purposes is the central 4-mile river corridor between the confluence of Cooper Creek with the Kenai River (near existing highway MP 51) and the confluence of the Russian River with the Kenai River (near MP 55). Many park and recreation properties are centered in a core area along the river and loosely function together and are managed similarly, even though the different types of properties are managed by different entities. The Kenai River and the adjacent Kenai River Recreation Area, together with Sportsman's Landing, the Russian River Ferry, the Russian River Campground, the Lower Russian Lake Recreation Area, and the Cooper Creek Campground all are contiguous park, recreation, and refuge lands and waters comprising well over 700 acres. In addition, the K'Beq Footprints Heritage Site and the trailheads for the Resurrection Pass Trail, Russian Lakes Trail, and Stetson Creek Trail are located in this area. This area also is the heart of the Sqilantnu Archaeological District and Confluence Traditional Cultural Property.

The Juneau Falls Recreation Area (320 acres), Resurrection Pass Trail corridor (1,000 feet wide), and Bean Creek Trail corridor form a similar block of recreation properties on a smaller scale at the head of Juneau Creek Canyon. All are U.S. Forest Service properties.

Personal-use and commercial recreation use levels are high, with "combat fishing" a common term for elbow-to-elbow sportfishing near the Russian and Kenai rivers confluence. Thousands of float trips occur on the Kenai River each summer. The campgrounds and trails also are well used, and use of trails continues year round (for snowmobiles and skiing in winter). The Resurrection Pass Trail is 38 miles long and connects to the Hope area, with several side trails and backcountry public use cabins.

Most of the park and recreation properties are protected under Section 4(f) transportation law (see box, next page). However, a few are not because they are not publicly owned, not maintained or managed by any agency, or otherwise not significant as park or recreation facilities.

Key Impacts/Issues:

- All alternatives would use land from various park and recreation properties.
- The Cooper Creek Alternative would truncate the lower end of Stetson Creek Trail, which is a recreational and historic trail. The project would construct a new pullout trailhead at the terminus of the truncated trail and make over the old trailhead area into an interpretive loop trail for Cooper Creek Campground.
- The G South Alternative is considered to have the greatest impacts to the Kenai River (a designated park unit), primarily because it would add a new bridge over the Kenai River. New bridges are counter to the Kenai River Comprehensive Management Plan.
- Both the Cooper Creek and G South alternatives would continue to follow the existing alignment through the 4-mile core recreational area along the river. Thus, all traffic would remain in this area instead of being routed around it.
- The Juneau Creek and Juneau Creek Variant alternatives would impact the Resurrection Pass Trail with a crossing 3.4 miles north of the trail's southern terminus. The bridge over Juneau Creek Canyon would span the Resurrection Pass Trail, minimizing impact, but the backcountry atmosphere of the trail and Juneau Falls Recreation Area in this location would change to a more "front-country" experience, with greater use. Under these two alternatives, 70 percent of Sterling Highway traffic is expected to use the new highway, leaving the old highway through the 4-mile core area (Cooper Creek to Russian River) as a quieter, winding, lower-speed, local road suited to providing access to that area's multiple recreational amenities.

Mitigation Measures:

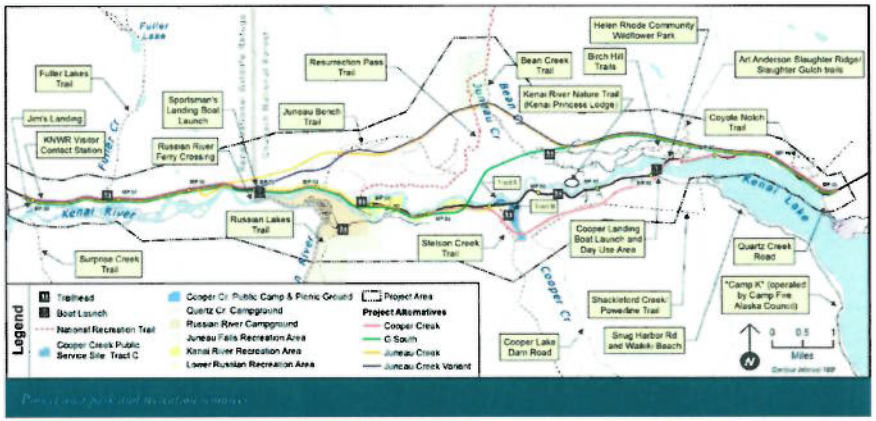
Substantial mitigation is proposed for impacts to recreation areas. These are spelled out in the Section 4(f) Evaluation, in section 4.7 of the SEIS. Mitigation proposed includes new parking and trailheads for Stetson Creek Trail, Bean Creek Trail, and Resurrection Pass Trail where alternatives cross the trail and addition of new connecting trails or re-routed trails where necessary. Underpasses would be created where an alternative would cross certain existing unimproved roads used as trails—the Cooper Lake Dam Road, extension of Slaughter Ridge Road, and West Juneau Road. Under the two Juneau Creek alternatives, a falls overlook would be added in the Juneau Falls Recreation area, and a pedestrian walkway would be added to the highway bridge to connect trails on either side of the canyon. For these alternatives, DOT&PF has accepted the Forest Service's suggestion to compensate for impacts to the long-distance experience on the Resurrection Pass Trail by providing a new connection for another long-distance trail nearby in the Kenai River watershed—the Iditarod National Historic Trail. DOT&PF would commit to providing a pedestrian crossing of the Snow River bridges at the opposite end of Kenai Lake to accommodate the Iditarod commemorative trail.

What is Section 4(f)?

Section 4(f) of the Federal Department of Transportation Act prohibits use of certain parks, recreation areas, wildlife refuges, or historic properties for transportation projects unless there is "no prudent and feasible alternative" or the impacts are "de minimis." The Draft SEIS evaluates Section 4(f) resources, the impacts of the proposed alternatives, alternatives that could avoid use of Section 4(f) resources, and all possible measures to minimize harm to these resources. If there is no prudent and feasible avoidance alternative, FHWA must select the alternative with the least overall harm. See Chapter 4 of the SEIS.

Where do I look in the Draft SEIS?

The Draft SEIS addresses park and recreation resources in Section 3.8. Chapter 4 also extensively addresses park and recreation areas determined to be Section 4(f) resources.



Historic and Archaeological Resources

Historic, archaeological, and other cultural properties in the project area that are eligible for the National Register of Historic Places include:

- Prehistoric archaeological sites associated with Alaska Native cultures.
- Historic sites associated principally with gold prospectors and settlement of the area by Russians and Americans from outside Alaska, including the Bean Creek Trail and Stetson Creek Trail.
- Traditional Cultural Properties (TCPs)—areas of cultural importance to the Kenaitze Indian Tribe.

The Sqilantnu Archaeological District encompasses most of the project area and both sides of the Kenai River valley up to an elevation of about 1,000 feet. This district is recognized in Federal law under the Russian River Land Act. Most other historic properties, including two historic mining districts, two TCPs, and portions of the historic trails, overlap with the Sqilantnu District. Hundreds of archaeological sites, comprised collectively of thousands of individual archaeological features, contribute to the district. The TCPs are individually eligible for the National Register of Historic Places and also contribute to the Sqilantnu District. While the cultural and archaeological features are not well known to the general public, the area is considered quite important by the Kenaitze Indian Tribe, CIRI, the Chugach National Forest, the KNWR, and the State of Alaska's Office of History and Archaeology. There is potential for future nomination of the area as a National Historic Landmark. All cultural and historic properties eligible for the National Register of Historic Places are considered to be protected by Section 4(f) (see box on the previous page).

Key Impacts/Issues:

- The Cooper Creek and G South alternatives pass directly through an area of overlapping historic and archaeological districts and TCPs. However, they mostly overlap the existing highway corridor. In general, the Cooper Creek and G South alternatives are similar in their effects. See the large summary table at the end of this document.
- The Juneau Creek and Juneau Creek Variant alternatives follow similar alignments and generally have fewer impacts to known cultural sites than the other two alternatives. The Juneau Creek Alternative would affect the least acreage and the fewest archaeological properties of any of the alternatives. The Juneau Creek Variant Alternative, designed to avoid use of the KNWR/Wilderness, would intersect the existing Sterling Highway at the confluence of the Kenai and Russian rivers in the heart of the Confluence TCP and Sqilantnu Archaeological District. It would therefore have greater impact to culturally important sites than the Juneau Creek Alternative, including proximity to human burials, although it would impact fewer sites than the Cooper Creek and G South alternatives.

Mitigation Measures:

Substantial mitigation for effects to adversely affected historic properties is expected. An agreement to be spelled out among tribal entities and agencies (consulting parties) will be presented in the Final EIS.

Where do I look in the Draft SEIS?
The Draft SEIS addresses cultural and archaeological resources and impacts in Section 3.9. Chapter 4 also addresses these topics as Section 4(f) resources.

Noise

Much of the project area away from the existing highway is generally quiet, consisting of natural areas, with running water and wind being the primary contributions to base sound levels. Noise measurements were taken at key sensitive locations (receptors) throughout the project area as a baseline, and sound levels were computer-modeled to forecast noise increases from traffic on the alternatives.

Key Impacts/Issues:

All build alternatives would create noise that would substantially increase noise levels and/or exceed noise abatement criteria. Forecast increases in traffic would result in increased noise levels even under the No Build Alternative, which would impact three more sensitive receptors than are impacted today. Only the Cooper Creek Alternative, which would impact five more properties than are impacted today, would have noise impacts at more sensitive noise receptors than the No Build Alternative.

Mitigation Measures:

DOT&PF examined the ability to mitigate permanent noise impacts with walls or barriers and could not find a way to make them effective given either the large land areas that are sensitive or the need to accommodate driveways (i.e., necessitating a break in the noise barrier). As a result, no noise walls, berms, or barriers are proposed.

Visual Resources

The glacially carved Kenai River valley frames the visual environment of the project area. Steep mountains and the unique turquoise color of Kenai Lake and the Kenai River are the predominant features seen from the project area. Canyons formed by Juneau Creek and Cooper Creek, tributaries of the Kenai River, notch the north and south sides of the main valley. The Sterling Highway is recognized as a State Scenic Byway because of its scenery, history, and recreational opportunities. Foreground views are of riparian forest and human development; mountain uplands and peaks can be seen in the background. The view of Cooper Landing is mainly of single-story small, framed (and sometimes log) residential and commercial buildings. The project identified key views and rated them using a formal process (Visual Quality Evaluation). The evaluation identified mostly moderate to high ratings for the existing visual environment.

Key Impacts/Issues:

All alternatives would adversely affect the visual environment but also would provide new views. Negative change in Visual Quality Evaluation scores would be highest under the Juneau Creek Variant Alternative, followed by the Juneau Creek, Cooper Creek, and G South alternatives with progressively fewer adverse changes in visual quality.

Mitigation Measures:

No specific mitigation for visual impacts is proposed. However, as part of the standard design, all cuts and fills would be constructed with care, and bare soils would be seeded for quick greening of the landscape. Large new bridges under all alternatives would be designed with aesthetics in mind for recreationists passing near or under the bridge on trails or in boats.

Where do I look in the Draft SEIS for Noise?
The Draft SEIS addresses noise in Section 3.15. A Noise Analysis report is also available on the project web site and is published in the SEIS as Appendix D.

Where do I look in the Draft SEIS for Visual Resources?
The Draft SEIS addresses visual resources in Section 3.16. A Visual Analysis report is available on the project web site.

Wetlands and Vegetation

The project area is vegetated with natural vegetation. It has been substantially modified in developed areas in and around Cooper Landing and at recreation developments. Multiple types of wetlands exist in the project area, from forested wetlands to ponds along the Kenai River to open, unforested wetlands. Wetlands and vegetation in general perform important functions, from wildlife habitat to floodwater retention. The U.S. Army Corps of Engineers (Corps) is a cooperating agency for this SEIS and must issue a permit for any fill to be placed in wetlands or other waters. The SEIS aids the Corps' decision-making process.

Key Impacts/Issues:

- All build alternatives would permanently eliminate wetlands. However, there would be substantial differences among the alternatives, with the Cooper Creek Alternative having relatively low impacts compared to the two Juneau Creek alternatives. These two alternatives would result in more than 3 times the total area of wetland loss of the Cooper Creek Alternative, including 6 times as much loss of emergent wetlands and nearly 12 times as much loss of forested wetlands. The G South Alternative would have intermediate wetland impacts.
- All alternatives would permanently eliminate vegetation. Again, the Cooper Creek Alternative would affect the least, the Juneau Creek alternatives the most. See the Impacts and Benefits Summary tables at the back of this document.

Where do I look in the Draft SEIS?

The Draft SEIS addresses wetlands and vegetation in Section 3.20. A wetlands report is available on the project web site.

Mitigation Measures:

The alternatives were developed to avoid and minimize impacts to wetlands and other waters. Where it was not practical to avoid impacts altogether, the SEIS contains a description of construction-related best management practices that would be followed to minimize impacts to wetlands and vegetation. DOT&PF has committed to paying a fee (in-lieu of creating or enhancing wetlands) to a land conservation organization that would use the funds for protection or enhancement of wetlands in a critical location on the Kenai Peninsula. This fee would be meant to compensate for the unavoidable impacts to wetlands and waters of the U.S. and to offset wetland loss.

Fish and Essential Fish Habitat

Fish habitat and water quality are related discussions, but appear separately in the SEIS. This section addresses both in describing fish and impacts to fish habitat.

The Kenai River ecosystem is a productive, diverse system that supports a wide variety of resident fish and fish that travel between freshwater and saltwater ("anadromous" fish) species. Major water bodies within the project area include Kenai Lake, Kenai River, Bean Creek, Juneau Creek, Cooper Creek, Russian River, and Fuller Creek. The project area contains important fish migration corridors. Kenai River fisheries for king (Chinook), sockeye (red), and coho (silver) salmon are the largest freshwater sport fisheries for these species in Alaska. More than one million sockeye salmon return each year to spawn in the Kenai and Russian rivers. Sockeye, Chinook, coho, and pink salmon all spawn in the upper reaches of the Kenai River, and chum salmon are also present.

The entirety of the Kenai River and its tributaries, where used by salmon, are designated essential fish habitat (EFH). EFH designations emphasize the importance of habitat protection to healthy fisheries. Water quality in the Kenai River and its tributaries within the project area is considered good. Downstream parts of the river have, in the recent past, been considered polluted with hydrocarbons from outboard motor use, but 2008 regulatory changes improved the water quality. Outboard motors are not allowed on the river in most of the project area, but are allowed on Kenai Lake and at its outlet in Cooper Landing.

A consistent theme in public comments has been concern about maintaining water quality and salmon habitat, including concerns about the risk of spills from the current highway and the problems with its design.

Key Impacts/Issues:

- All build alternatives would result in an increase in storm water runoff because the project area would have more paved surfaces—a wider highway where rebuilt, and all-new highway in the segments built on a new alignment. Impacts from storm water runoff would not be substantial enough to impact wells and wellhead protection areas or fish in the rivers.
- Each build alternative would move the majority of vehicle traffic away from the Kenai River along those segments built on new alignment. This would reduce the risk of spills and general runoff pollution reaching the river. The Juneau Creek and Juneau Creek Variant alternatives would divert traffic from the river over the greatest road length, and the Cooper Creek Alternative would divert the least amount of traffic away from the river. While the Cooper Creek Alternative would divert the least amount of traffic of all the build alternatives, it would be an improvement over the No Build Alternative and result in a reduction of risk over the existing conditions.
- Direct impacts on water bodies, water quality, and fish habitat would result from new and replacement bridges and culverts and from new roadway embankment placed in water bodies. New culvert crossings and bridge crossings would be likely to alter natural flow patterns and habitat in streams at the location of the crossings, and possibly upstream and downstream. The Cooper Creek and G South alternatives would involve substantial construction in the Kenai River to replace existing bridges and build new bridges. The Juneau Creek and Juneau Creek Variant alternatives would have no bridge construction in the Kenai River. All alternatives would include a segment of reconstructed highway at the western end of the project where rip-rap (rock) would be placed in the edge of the Kenai River, where the existing highway already is adjacent to the river.

Mitigation Measures:

Mitigation measures would be implemented during the construction process to minimize impacts to water quality from runoff and fuel. Construction timing windows would ensure that construction in the water (principally bridge construction) would occur outside of critical times in the salmon life cycle. New culverts and replacement culverts would be designed to modern fish passage standards wherever fish use those drainages. Where existing culverts do not allow fish to pass, replacements culverts would improve habitat availability for fish. These efforts would reduce impacts to fish habitat and water quality. Permanent impacts would be minimized by commitments to maintain or reduce the number of in-water piers for any replacement bridge.

Where do I look in the Draft SEIS?

- Water Bodies and Water Quality: Section 3.13
- Fish/Essential Fish Habitat: Section 3.21
- Kenai River Special Management Area description: Section 4.2.2
- Kenai River Special Management Area impacts: Section 4.5

A separate Essential Fish Habitat report is also published on the project website at www.sterlinghighway.net.

Wildlife

More than 175 species of mammals, birds, and amphibians live in, seasonally use, or visit the Kenai River basin. Brown bears and moose are two of nine species selected for in-depth analysis in the SEIS because of their status with State and Federal agencies and because of their susceptibility to project impacts.

The population of brown bears for the entire Kenai Peninsula appears to have approximately equal numbers of males and females and dependent young. Brown bears on the Kenai Peninsula use a wide variety of habitats, including rivers and

streams, forests, and subalpine and alpine areas, and generally avoid areas in proximity to roads. The general area between MP 45 and 60 is in a class of habitat with medium to high probability of use by both lone adult females and females with cubs during spring and summer. Brown bears likely move back and forth in a northwest-southeast direction over the Kenai Mountains and across the Kenai River within the project area between MP 45-55, with the area just west of Cooper Landing near Juneau Creek identified by wildlife managers as an important "linkage" zone.

The largest cause of bear deaths on the Kenai Peninsula is bears killed in defense of life and property (DLP kills), which appears to be closely associated with increasing human population, development, and activity on the Peninsula. The rate of deaths of female brown bears on the Kenai Peninsula has consistently been higher than management objectives expressed by the Alaska Department of Fish and Game.

Moose are a common and important species in the project area, providing many viewing opportunities to residents and tourists, as well as subsistence and sport hunting. Collisions with automobiles on the Sterling Highway are common, and present a risk to individual animals and to motorists. Portions of the MP 45-60 area include rutting, wintering, and enhanced feeding habitat for moose, and north-south wildlife movement corridors through the project area are considered important. The moose population is slowly declining. The factors most greatly affecting the moose population on the Kenai Peninsula are considered to be declining habitat quality, predation, weather, and mortality caused by vehicle collisions.

Key Impacts/Issues:

- All of the build alternatives would affect brown bears and moose due to habitat loss, habitat fragmentation, and decrease in habitat quality; changes in behavior to avoid the new highway; and potential injury or mortality from vehicle collisions.
- None of the alternatives would induce further residential or business development more than would be anticipated under the No Build Alternative because of DOT&PF's decision to prohibit access from new sections of adjacent property. By not inducing new growth (and potentially increasing DLP kills), indirect impacts to bears and other mammals would be minimized.
- The Juneau Creek and Juneau Creek Variant alternatives would have the greatest impact on wildlife habitat, because they have the longest lengths of highway built on a new alignment, resulting in larger areas of new effects to habitat.

Mitigation Measures:

DOT&PF is sponsoring a wildlife movement study, in consultation with wildlife management agencies. Results of this study, which began in 2014, are expected to aid in the placement of one or more wildlife crossings and other measures to accommodate wildlife movement across the highway for brown bears, moose, and other species. In the Final SEIS, DOT&PF hopes to have more detail on how many, what kind, and locations of potential wildlife crossings and other recommended measures.

Where do I look in the Draft SEIS?
Wildlife: Section 3.22.

Coordination

The basic requirement of the National Environmental Policy Act is that the Federal government must involve the public and agencies in its project decision-making process. The Act ensures a process of disclosing impacts to the public and incorporating public input before any decision is made.

A primary component of the Sterling Highway MP 45–60 Project has been involvement of key stakeholders and the consideration of their comments and concerns. Chapter 5 of the SEIS summarizes the coordination process conducted during development of the Draft SEIS, including tribal consultation under Section 106 of the National Historic Preservation Act. Chapter 5 of the SEIS also includes a summary of key issues and pertinent information received from the public, Alaska Native tribes and corporations, and government agencies. The coordination process will continue through the final decision.

How much has the public been involved in the project?

The Draft SEIS summarizes a long public and agency coordination process, including initial efforts to determine the scope of the SEIS inquiry ("scoping") and many follow-up meetings with stakeholder groups, the public, and agencies on multiple topics. Key topics that have included substantial coordination are:

- Alternatives screening and selection.
- Section 106 (cultural properties).
- Section 4(f) (park, refuge, recreation, and cultural properties).
- Bears, moose, and other wildlife impacts.
- Business and community impacts.
- ANILCA Title XI process for the Resurrection Pass National Recreation Trail and KNWR.
- Mitigation of impacts.

Scoping began in 2000 and included several kinds of meetings over several years:

- Agency Consultation Committee (six meetings).
- Individual stakeholder interviews (14 agency interviews; five public interviews).
- Stakeholder Sounding Board (five meetings for more than 60 invited groups).
- Public Listening Posts (four rounds of listening posts for a total of nine events in Cooper Landing, Soldotna, and Anchorage).

A web site (www.sterlinghighway.net), internet survey, mailing list, newsletters, and press releases were included. Public and agency input has continued as the Draft SEIS has taken shape, including public comment taken on the alternatives screening before some alternatives were dropped from further consideration. Agencies have been involved heavily regarding impacts and mitigation. From 2002 to 2014, there have been:

- 35 agency meetings on topics such as wildlife, recreation impacts, land issues, and Section 4(f).
- An additional 13 meetings with tribal entities and agencies regarding cultural resources to define new boundaries for the Sqilantnu Archaeological District, define for the first time two traditional cultural properties, define the boundaries of historic mining districts, and determine impacts to cultural properties.

These consultations have been valuable in sorting out the complex issues involved in the project and have formed the basis for much of the analysis in the EIS. Such coordination with the public and agencies will continue as the project moves forward.

Next Steps

Now that the Draft SEIS has been issued for public and agency review, the anticipated next steps are to respond to comments and revise the SEIS, identify a Preferred Alternative, and issue a Final EIS for review and comment. When the environmental process is complete, the FHWA will issue a Record of Decision. Your comments and input are important to the process.

The public and agencies are encouraged to review the Draft SEIS, accompanying appendices, and technical reports are available for review online at www.sterlinghighway.net. Printed copies of the documents are available for public review at the following locations:

Kenai Peninsula

- Cooper Landing Community Library, Mile 0.8 Bean Creek Road
- Kenai Community Library, 163 Main Street Loop
- Soldotna Public Library, 235 N. Binkley Street

Anchorage

- Z.J. Loussac Library (Alaska Collection), 3600 Denali Street
- Alaska Resources Library and Public Information Services (ARLIS), 3211 Providence Drive
- DOT&PF Central Region, 4111 Aviation Avenue

Juneau

- Alaska State Library, 333 Willoughby Avenue
- FHWA AK Division, 709 W. 9th Street, Room 851

Washington DC

- Martin Luther King Jr. Central Library, 901 G Street NW, 3rd Floor

To request a CD copy of the full Draft SEIS, send an email to sterlinghwy@hdrinc.com.

Opinions and preferences regarding the alternatives are appreciated and noted; however, the most helpful comments are those that provide new information, identify a new issue, identify a flaw or gap in analysis, or identify unexplored lines of research that could materially alter the assessment of impacts.

Comments can be submitted:

- **Preferred method:** online at www.sterlinghighway.net
- **Standard mail:**
  Brian Elliott, Environmental Manager
  DOT&PF Central Region
  Sterling Highway MP 45-60 Project
  PO Box 196900
  Anchorage, AK 99519-6900
- **Email:** sterlinghwy@hdrinc.com
- **In person:** at project open house/public hearings

Please visit the project website, www.sterlinghighway.net, for up-to-date project details, public open house and public hearing notifications, and comment deadlines.

What happens with my comments?

Some EISs receive many, many comments, and processing them takes time. Comments are categorized by topic in a database, and the entire email or letter is captured electronically for context. DOT&PF and FHWA will consider all comments and write responses. Comments frequently result in changes to the analysis in an EIS. Text clarifications are common. Sometimes comments result in new or modified environmental analyses or new measures proposed to mitigate impacts. A summary of comments and responses will be appended to the Final SEIS to document the comments and record how each was addressed.

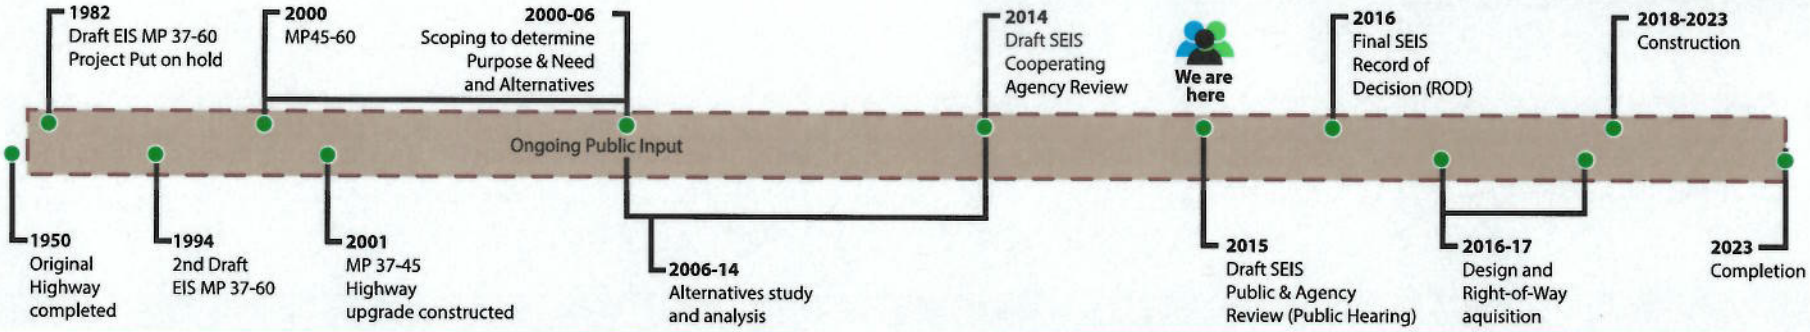
Who makes the final decision?

The FHWA is the lead Federal agency for the SEIS and makes the final decision about selection of an alternative. This decision is made in conjunction with the DOT&PF. Other Federal agencies have their own authorizations, including permits for fill in wetlands and water bodies and land transfer authorizations. Those agencies will also use this SEIS and your comments in making their decisions.

When will something be built?

If a build alternative is selected, the project will enter the design phase following publication of the Final SEIS and signing of a Record of Decision. The earliest construction could start is 2018; however, that is dependent on the availability of funding.

Project Timeline



Impacts and Benefits Table

The "Affected Environment and Environmental Consequences" section of this Executive Summary discusses key impact topics, with references to the tables that follow specific numerical impact data. These tables cover the key topics addressed earlier in this Executive Summary and all other resource topics analyzed in the Draft SEIS.

The tables present impacts of the alternatives side-by-side for comparison. Dividing bars that run horizontal across the table identify each resource by the same heading and section number used in the Draft SEIS. Readers may refer directly to that section of the SEIS for context and greater detail. A few sections of the Draft SEIS are not presented in these tables: sections 3.24 Permits; 3.25 Short-Term Uses vs. Long-Term Productivity; 3.26 Irreversible and Irretrievable Commitments of Resources; and 3.27 Cumulative Impacts. Please see the full Draft SEIS to learn about those topics.

Impact Category		Impacts and Benefits								
		No Build Alternative	Cooper Creek Alternative		G South Alternative		Juneau Creek Alternative		Juneau Creek Variant Alternative	
3.1 Land Ownership and Land Use										
Land Ownership (acres, % in project area)	Federal (9,008)	No impact	54	<1%	90	1%	167	2%	115	1%
	State (1,720)		9	<1%	43	3%	90	5%	92	5%
	Borough (2,013)		93	5%	126	6%	129	6%	129	6%
	Native (61)		1	2%	1	2%	-	-	12	19%
	Private (696)		57	8%	<1	<1%	<1	<1%	<1	<1%
	Total (13,500)		214	2%	261	2%	387	3%	349	3%
Land Use (acres, % in project area)	Commercial (103)	No impact	1	1%	-	-	-	-	-	-
	Institutional (58)		<2	2%	-	-	-	-	-	-
	Residential (548)		41	8%	<2	<1%	<2	<1%	<2	<1%
	Vacant (12,791)		170	1%	260	2%	385	3%	347	3%
	Total (13,500)		214	2%	261	2%	387	3%	349	3%
3.2 Land Use Plans and Policies										
Kenai National Wildlife Refuge Comprehensive Conservation Plan		No impact	No KNWR land would be acquired, developed, or directly used as a result of the Cooper Creek Alternative outside the existing highway right-of-way.		No KNWR land would be acquired, developed, or directly used as a result of the G South Alternative outside the existing highway right-of-way.		New transportation right-of-way across a corner of the KNWR Mystery Creek Wilderness unit and the KNWR Intensive Management area would be needed. The process would require approval by the President of the United States and then a joint resolution of Congress.		No KNWR land would be acquired, developed, or directly used as a result of the Juneau Creek Variant Alternative outside the existing highway right-of-way.	

Impact Category		Impacts and Benefits				
		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.2 Land Use Plans and Policies continued...						
Chugach National Forest		No impact	Alignment is within the Fish, Wildlife and Recreation and the Major Transportation/ Utility Systems management area prescriptions.	Alignment is within the Fish, Wildlife and Recreation; Fish and Wildlife Conservation; and the Major Transportation/ Utility Systems management area prescriptions.	Alignment is within the Fish, Wildlife and Recreation; Major Transportation/ Utility Systems; Fish and Wildlife Conservation; and Backcountry management area prescriptions.	Alignment is within the Fish, Wildlife and Recreation; Major Transportation/Utility Systems; Fish and Wildlife Conservation; and Backcountry management area prescriptions.
National Forest Inventoried Roadless Area Lands (acres of right-of-way, miles traversed)		No impact	3.8 acres 0.1 mile	48.4 acres 1.1 miles	127.5 acres 3.3 miles	96 acres 2.4 miles
ANILCA Title XI (conservation system units affected)		No impact	No impact	No impact	The Juneau Creek Alternative would cross Resurrection Pass Trail and would cross a corner of the Mystery Creek Wilderness unit within the KNWR.	The Juneau Creek Variant Alternative would cross Resurrection Pass Trail.
State Plans		No impact	The build alternatives, to differing extents, meet the recommendation of the Kenai River Comprehensive Management Plan that new public road construction be located away from the Kenai River.			
Borough Plans and Other Pertinent Plans						
Consistency with planning documents		No impact	May require Kenai Borough Comprehensive Plan amendment.	May require Kenai Borough Comprehensive Plan amendment.	Consistent with Kenai Borough Comprehensive Plan.	
3.3 Social Environment						
Social Environment		Traffic congestion would make travel and social interaction within the community more difficult.	Change in local traffic patterns and community character through re-routing of traffic, less change for the Cooper Creek Alternative, more for the G South, Juneau Creek, and Juneau Creek Variant alternatives.			
3.4 Housing and Relocation						
Private and Native Property Impacts and Relocations (number of affected parcels)	**Private**	No impact	38	4	4	4
	Full Parcel	-	16 (8 residential properties and approximately 14 people relocated.)	0 (0 relocations)	0 (0 relocations)	0 (0 relocations)
	Part of Parcel	-	22	4	4	4
	Native Corporation (CIRI)	-	2	2	0	1
	Full Parcel	-	0	0	0	0
	Part of Parcel	-	2	2	0	1

Impacts and Benefits Table continued...

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.5 Economic Environment					
Tax Base/Business Impacts	No impact	Would not result in any business relocations. All traffic would remain routed through a portion of the central commercial area of Cooper Landing. Highway-based businesses would retain benefit of passing traffic. River-based businesses would contend with highway traffic.	Would not result in any business relocations. These alternatives would remove 70 percent of the traffic from all of the central commercial area of Cooper Landing. Thirty percent of the traffic would continue traveling through Cooper Landing on the "old" highway. Beneficial impacts would result from decreased congestion. Adverse impacts would result from reduced spontaneous stops for services.		
Construction Cost	–	**$290.7 million**	**$303.5 million**	**$249.6 million**	**$257.0 million**
O&M and Periodic Major Activities *(over 20 years)*	**$69.7 million**	**$23.7 million**	**$23.8 million**	**$24.2 million**	**$24.3 million**
Operations & Maintenance[a,b]	$4.9 million *($245,500/yr)*	$11.9 million *($593,400/yr)*	$11.7 million *($585,400/yr)*	$12.2 million *($608,600/yr)*	$12.2 million *($611,700/yr)*
Periodic Major Activities[b,c]	$64.8 million	$11.8 million	$12.1 million	$12.0 million	$12.1 million
TOTAL	**$69.7 million**	**$314.4 million**	**$327.3 million**	**$273.8 million**	**$281.3 million**

[a]Operations and maintenance (O&M); includes annual cost such as snow plowing, crack sealing, and other basic maintenance on the alignments.
[b]Values for build alternatives do not account for O&M and Periodic Major Activities on exiting/unimproved highway in the corridor. See Section 3.27, Cumulative Impacts, for those values.
[c]Periodic major activities include projects such as replacement of guardrail and pavement overlays that are reasonably anticipated over a 20-year span.
Note: Numbers are rounded and therefore totals do not add perfectly. All estimates are in 2014 dollars (i.e. future dollars have not been inflated to the future year values)

Impact Category		Impacts and Benefits				
		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.6 Transportation						
Roadway System						
Number of horizontal curves meeting minimum standard for 60 mph/total number curves		22 / 43	27 / 27	25 / 25	21 / 21	22 / 22
Percent of length above maximum grade *(>6% grade)*		0	0	0	0	0
Percent of length at 5.9 – 6% grade *(steep)*		0	9	8	2	0
Percent of length >5% grade *(hilly)*		-	9	14	16	26
Percent of length that meets clear zone standards		7	100	100	100	100
Percent of length that meets standards for shoulder width		0	100	100	100	100

Impact Category		Impacts and Benefits				
		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.6 Transportation continued...						
Travel Patterns		No change	This alternative would remove 70% of traffic from a portion of the central commercial area of Cooper Landing *(MP 47-48)* but would retain all traffic in the MP 48-50 portion. No change in overall traffic volumes.	This alternative would remove 70% of all traffic from all of the central commercial area of Cooper Landing *(approximately MP 47 to 50)*. No change in overall traffic volumes.	These alternatives would remove 70% of all traffic from all of the central commercial area of Cooper Landing *(approximately MP 47 to 50)* and from the primary recreation corridor *(approximately MP 50 to 55)*. No change in overall traffic volumes.	
Accessibility		No change	Under this alternative, getting on and off the highway would remain difficult at some times because all traffic would remain in town in the MP 47-48 area.	Under these alternatives, accessibility for Cooper Landing businesses and residents along the "Old Sterling Highway" is expected to improve because traffic would be reduced in this area.		
Traffic Level of Service in 2043 at LOS C or Better *(% of road length, including both directions of travel)*		0%	61%	69%	83%	82%
Crash Rate Reduction		No improvement. Potential increase in crash rate.	65% reduction	65% reduction	65% reduction	65% reduction
Aviation, Pedestrians, and Bicyclists		No impact	No impact to aviation. Pedestrians and bicyclists would benefit from wider shoulders on the new highway and decreased traffic on the existing *("old")* highway.			
Pullouts	Pullouts eliminated *(of 24 existing)*	No impact	16	12	4	4
	New pullouts/ parking areas provided	No impact	1 *(Stetson Creek Trail pullout)*	2 *(Bean Creek Trail pullout and parking lot)*	2 *(Bean Creek Trail pullout; trailhead parking lot for Resurrection Pass Trail)*	
3.7 River Navigation						
River Navigation		No impact	The proposed bridge structures to be built would not result in any permanent new impacts to river navigation.	The new Kenai River bridge would be a new structure to navigate, but would be built with adequate clearance.	No new or replacement structures over any navigable waterways. No impact to river navigation.	

Impacts and Benefits Table continued...

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.8 Parks and Recreation Resources					
Park and Recreation Resources					
Recreation Resources Affected	No impact	Kenai River Special Management Area — Cooper Landing Boat Launch and Day Use Area — Kenai River Recreation Area — Sportsman's Landing *(temporary occupancy during construction only)* — Stetson Creek Trail — Cooper Lake Dam Road/Powerline Trail *(crossed with bridge)*	Kenai River Special Management Area — Kenai River Recreation Area — Sportsman's Landing *(temporary occupancy during construction only)* — Bean Creek Trail *(rerouted, crossed with bridge)* — Birch Ridge Trail *(shortened)* — Art Anderson/ Slaughter Gulch Trail *(shortened)*	Kenai National Wildlife Refuge and Wilderness — Resurrection Pass Trail *(crossed with bridge, added new trailhead)* — Bean Creek Trail *(rerouted, crossed with bridge)* — Birch Ridge Trail *(shortened)* — Art Anderson/ Slaughter Gulch Trail *(shortened)* — Juneau Bench Trails *(crossed with grade separation)* — Juneau Falls Recreation Area	Kenai River Recreation Area — Sportsman's Landing boat launch *(temporary occupancy during construction only)* — Resurrection Pass Trail *(crossed with bridge, added new trailhead)* — Bean Creek Trail *(rerouted, crossed with bridge)* — Birch Ridge Trail *(shortened)* — Art Anderson/Slaughter Gulch Trail *(shortened)* — Juneau Bench Trails *(crossed with grade separation)* — Juneau Falls Recreation Area
3.9 Historic and Archaeological Preservation					
Historic Properties Adversely Affected	–	Sqilantnu Archaeological District *(28 contributing properties)* — Confluence Traditional Cultural Property — Charles G. Hubbard Mining Claims Historic District — Kenai Mining and Milling Company Historic District — Stetson Creek Trail	Sqilantnu Archaeological District *(25 contributing properties)* — Confluence Traditional Cultural Property — Charles G. Hubbard Mining Claims Historic District — Bean Creek Trail	Sqilantnu Archaeological District *(JC Alt: 13 contributing properties)* *(JC Variant Alt: 22 contributing properties)* — Confluence Traditional Cultural Property — Bean Creek Trail	
3.10 Subsistence					
Changes in Resources, Resource Habitat, or Competition for Resources	No impact	Changes in both fish and wildlife resources may occur as a result of construction and operation of the build alternatives. Impacts to subsistence and hunting uses in the project area may include wildlife avoiding or reducing use of habitat near the highway, actual loss of habitat within the new alignment, decreased habitat quality, fragmentation of habitat, and injury or mortality of wildlife from collisions or hazardous materials spills.			
Changes in Resource Availability due to Alteration in Resource Migration Patterns or Distribution	No impact	Changes to the landscape caused by project construction can influence wildlife population migration patterns and distribution through habitat loss, changes in habitat suitability, changes in habitat use, or reduced survival. In addition, the highway itself can become a barrier to resource migration patterns through design, such as steep embankments or retaining walls, or through resource injuries or mortality due to collisions.			
Physical or Legal Barriers to Accessing Resources	No impact				

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.11 Utilities					
Utilities	–	Relocates local power poles and underground utility lines along existing alignment. Adds lighting to major intersections. No new utilities proposed along segment built on new alignment. Crossing regional transmission line twice requires raising high voltage power lines and relocating one of the large towers.	Relocates local power poles and underground utility lines along existing alignment. Adds lighting to major intersections. No new utilities proposed along segment built on new alignment.		
3.12 Geology and Topography					
Geology and Topography	No impact	The build alternatives would alter the topography along the roadway corridor through roadway construction, grading, and extraction of sand and gravel for road foundation materials. Bridge construction would require excavations and/or blasting, which would change the topographic contours and remove rock and soils.			
		Unstable soils at large cut east of Cooper Creek may require special treatment/terracing.	No notable soils issue known.	Fractured rock at Juneau Creek canyon bridge site indicates need for extra evaluation for bridge foundations.	
3.13 Water Bodies and Water Quality					
New Bridges	–	**Kenai River** Replacement Cooper Landing Bridge: » 3 to 4 piers Replacement Schooner Bend Bridge: » 2 to 3 piers **Cooper Creek** New Cooper Creek Bridge: » No piers or fill in creek	**Kenai River** New Kenai River Bridge: » 2 to 3 piers Replacement Schooner Bend Bridge: » 2 to 3 piers **Juneau Creek** New Juneau Creek Bridge: » No piers or fill in creek	**Kenai River** No bridges **Juneau Creek** New Juneau Creek Bridge: » No piers or fill in creek	
Drainages	–	57 small drainage crossings: » 47 replacement culverts » 10 new culverts	73 small drainage crossings: » 39 replacement culverts » 32 new culverts *(drainages combined into one culvert where possible)*	63 small drainage crossings: » 20 replacement culverts » 41 new culverts *(drainages combined into one culvert where possible)*	
Longitudinal Encroachments to the Kenai River	No change	5 locations	4 locations	1 location	
Surface Water Quality	No change from existing conditions.	Increase in storm water runoff because the project area would have more paved surfaces. Cooper Creek Alternative would have least new surface area, G South Alternative more, Juneau Creek Variant Alternative more yet, and Juneau Creek Alternative most.			

Impacts and Benefits Table continued...

Impact Category	Impacts and Benefits				
	No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.14 Air Quality					
Air Quality	No impact to air quality standards. Emissions are higher under congested conditions. Higher emissions likely to be offset in part by higher efficiencies in vehicle fleet nationwide.	No impact to air quality standards. Each of the build alternatives would result in a slight increase in vehicle miles traveled compared to existing conditions. The increase in emissions associated with vehicle miles traveled would be partially offset by increased engine efficiency and reductions in emissions associated with smoothly-flowing traffic. This would vary slightly by alternative, similar to level of service variations (see Section 3.6). Higher efficiencies in vehicle fleet nationwide would also offset increased emissions from vehicle miles traveled.			
3.15 Noise					
Noise *(number of receptors at which noise approaches or exceeds Noise Abatement Criteria, or where a substantial increase is predicted in 2043)*	4 residential 1 recreational **5 total**	4 residential 2 recreational 1 commercial **7 total**	0 residential 2 recreational **2 total**	0 residential 1 recreational **1 total**	0 residential 1 recreational **1 total**
3.16 Visual Environment					
Visual Quality Evaluation	–	All build alternatives have at least moderate impacts as a result of new or updated roadway elements. None of the build alternatives result in impacts that are orders of magnitude different than others.			
3.17 Hazardous Waste Sites and Spills					
Waste Sites	No impact				
Potential Risk of Water Quality Impacts Due to Spills *(percentage of roadway located within 500 feet of the Kenai River, Kenai Lake, Cooper Creek, Juneau Creek, and Russian River)*	77%	56%	45%	25%	26%
3.18 Energy					
Energy	No impact				
3.19 Floodplains					
Floodplains *(acres of encroachment in official mapped floodplain)*	–	5.1 acres	6.2 acres	–	<0.1 acre
3.20 Wetlands and Vegetation					
Wetlands *(acres filled)*	–	11 acres	26.6 acres	38.5 acres	37.5 acres
Vegetation *(acres removed)*	–	188 acres	202 acres	269 acres	256 acres
3.21 Fish and Essential Fish Habitat					
Essential Fish Habitat Impacts *(acres altered; crossings of anadromous fish streams with type of crossing)*	–	1.2 acres/8 crossings: » 4 culverts » 3 bridges » 1 creek re-routed	1.0 acre/8 crossings: » 3 bridges » 5 culverts	0.8 acres/2 crossings: » 1 culvert » 1 bridge	0.8 acres/2 crossings: » 1 culvert » 1 bridge

Impact Category		Impacts and Benefits				
		No Build Alternative	Cooper Creek Alternative	G South Alternative	Juneau Creek Alternative	Juneau Creek Variant Alternative
3.22 Wildlife						
Brown Bear	Habitat Avoidance Area *(acres in addition to the avoidance area created by existing highway)*	–	605 acres	1,468 acres	2,834 acres	2,640 acres
	Quality of habitat loss	–	Impacts Kenai River corridor and bench from Cooper Creek to Russian River Not as intense brown bear use as other streams in the project area	Impacts high-quality brown bear movement and feeding corridors *(along Kenai River and Juneau Creek)*. Alternatives could permanently deter bear movement to, from, and feeding in area.		
	Length of Alternative within Bear Use Area *(miles)*	–	2.7	3.5	4.3	4.4
	Length of double highway barrier to movement within Bear Use Area *(miles)*	–	0.15	0.9	3.9	3.8
Moose	General	–	37 acres	37 acres	59 acres	40 acres

Sterling High□a□MP 45-60 Reconstruction Pro□ect

Pro□ect Purpose□The purpose of the Sterling Highway MP 45-60 Reconstruction Project is to bring the highway up to current standards and to efficiently and safely serve the through-traffic, local community traffic and traffic bound for recreation destinations within the project area both now and in the future.

Bac□ground□This section of the Sterling Highway is essentially the same highway that was built in the 1940□s and 1950□s. The environmental work for this project was initiated in 1975 and has continued on to the present.

Alternatives□There are four □build□alternative routes evaluated in detail in the EIS. These are the Cooper Creek Alternative, G South Alternative, Juneau Creek Alternative (desired by local government, tribes and sport fishing organizations) and Juneau Creek Variant Alternative. There is also the □No Build Alternative□

Selected Alternative□The G South Alternative was selected for the following reasons: 1) The two Juneau Creek Alternatives cross the Resurrection Pass National Recreation Trail which FHWA has determined to be Section 4(f) resource. Section 4(f) refers to the original section within the U.S. Department of Transportation Act of 1966 which established the requirement for consideration of park and recreation lands, wildlife and waterfowl refuges, and historic sites in transportation project development. By law, if a Section 4(f) evaluation identifies a feasible and prudent alternative that completely avoids Section 4(f) properties, it must be selected. The G South and Cooper Creek Alternative are both feasible and prudent; therefore, neither of the Juneau Creek Alternatives can be selected. 2) The Cooper Creek Alternative would have considerable impacts to the community of Cooper Landing and would not address the congestion and safety problems in this portion of the highway as the G South Alternative; therefore, G South is the selected alternative.

Roles of FHWA and DOT□PF□FHWA makes the decisions on what is to be evaluated and makes the final route alternative selection which is published in a Record of Decision (ROD). DOT□PF performs the work as required by FHWA. Once the ROD is published, DOT□PF can either build the selected alternative in the ROD or decide not to build anything. Either way, the money spent on the EIS remains eligible for federal funds.

Financial Information□Current costs for the EIS exceed $16 million dollars. The construction cost estimates for this project are around $300 million. The project is a Federal Aid Highway Project. Under that program the federal government pays about 90□ of project costs from State of Alaska apportioned funds from the Federal Highway Trust Fund, with the State paying the remaining 10□.

Current Status□In December 2015, DOT□PF and the Federal Highway Administration (FHWA) identified the G South Alternative as the preferred alternative for the Sterling Highway MP 45-60 Project near Cooper Landing. The Final EIS will be released for review by cooperating agencies this month (November 2016). The Final EIS public availability period is expected in the Summer of 2017. The Record of Decision is anticipated in November 2017.

Dear Secretary Zinke,

Over the last decade, advancement in technology and engineering has enabled an unprecedented opportunity for the production of oil and natural gas from underground shale formations. As a result of this increased production, the United States has become more energy secure and states like Ohio have seen an increase in direct and indirect oil and gas investments.

The Department of the Interior, through the Bureau of Land Management (BLM), plays an integral role in the responsible development of the vast energy resources owned and managed by the federal government. The BLM, through the Mineral Leasing Act, is responsible for preventing the waste of methane emitted during the oil and natural gas production process. It is important that the Department minimize the waste of methane through a pragmatic approach that prevents waste but does not discourage investment. I have been encouraged by your comments during your confirmation process and in your time as Secretary that you have made public comments about your desire to reduce methane waste in a similar approach.

As you know, a Congressional Review Act (CRA) resolution currently sits before the Senate that would repeal the previous Administration's Methane and Waste Prevention Rule. I have concerns with the rule as it was written but also believe that there are actions that you can take to reduce methane waste than the previous status quo. As I consider whether or not I will vote for the CRA resolution it would be helpful to know what actions you can commit to taking should the CRA pass.

I look forward to working with you to reduce the waste of our natural resources.

Sincerely,

RP

Melissa,

Congressman Pearce has a fly-in group from Roswell/Artesia, NM region coming to DC on May 1st. They have been able to get in the last few years with FWS and BLM. Unfortunately, those meetings have not been very successful.

For this year's visit, the Congressman seeks the Secretary's assistance in confirming this year's group to meet with FWS, BLM and Department leadership, preferably the Secretary, on May 1st. Below is the request from their coordinator and attached is the attendee list.

We appreciate the Secretary and the Department's consideration of this request.

Subject: Interior meetings request

Good morning, Todd,
As you know, Artesia and Roswell are planning our annual Washington Fly-in. Usually, we meet with FWS and BLM in separate meetings, but have had some difficulties in the last two years with BLM. This year, I am asking for assistance in setting up meetings that would be appropriate for the following issues, which are primarily focused on BLM and FWS, but may include others:

APD processing and permitting for oil & gas production – the new computerized system was not ready for roll-out, which is causing confusion and delays; moreoever, we would like to discuss the unpredictable timelines

for APDs which cause delays in production and tie up significant funding.

State BLM sale – we would like to see the BLM return to quarterly sales in New Mexico.

The Resource Management Plan, which is delayed

Venting & Flaring rule – the rule is not ready for implementation; we hope for reconsideration of the rule altogether

The anticipated decision on the Texas Horned Shell Mussel and the associated CCAs

Other ESA listings that may be in the works

We will be in Washington May 1-3. We respectfully request a meeting or meetings at Interior on Monday, May 1. I have attached a list of our attendees. Please let me know if you have questions or need additional information.

Thank you for your assistance and direction,
Hayley

Northeast Canyons and Seamounts Marine National Monument | Proclamation | 9/15/2016

- Creates New England Marine National Monument. Ideally Administration can repeal. However if that is not the case we can have members push the industry alternative as a Congressional Designation (we would have to address oil and gas issues in congressional approach).

Papahanaumokuakea Marine National Monument Expansion | Proclamation | 8/26/2016

- Expanded Monument surrounding HI to 580k sq.mi. Administration needs to repeal expansion as there is no scientific basis for expansion.

William Ball
Committee on Natural Resources

Alaska □climate resilience area□- https://obamawhitehouse.archives.gov/the-press-office/2016/12/09/fact-sheet-white-house-announces-actions-protect-natural-and-cultural

In□urious Wildlife Species□Listing 10 Fresh□ater Fish and 1 Cra□fish □81 FR 67862 □ 9/30/2016

- Listed a number of species under Lacey Act, including a freshwater crayfish that is raised via aquaculture facilities in Gulf States.
- At-least the Crayfish needs to be removed as this listing creates a nearly impossible hurdle for aquaculture growers to move their product over state lines.

Fish and Fish Product Import Provisions of MMPA □81 FR 54389 □8/15/2016

- Final action restricts U.S. imports from foreign countries that don□t follow procedures and conditions set forth by NMFS. After effective date, NMFS will publish in FR a list of foreign nations that export seafood to U.S. and request all nations provide documents on management and sustainability of their fisheries within 90 days. NMFS will reevaluate nations□every four years.
- This rule was brought to be by a petition pushed by CBD to restrict swordfish imports into U.S.
- Gross overreach of Agency authority and may result in trade barriers or retaliatory restrictions.
- Final Rule effective Jan 1, 2017

Trade Monitoring Procedures for Fisher□Products□Permits Re□uired for Importers and E□porters □81 FR 51126 □8/3/2016

- Result of □Streamlining Ex/Im□Exec Order □2/19/2014
- Final rule sets forth regulations to integrate the collection of trade documentation within the government-wide International Trade Data System (ITDS) and require electronic information collection through the automated portal maintained by the DHS and CBP. Under rule, NMFS will require annual Int□l Fisheries Trade Permits for importers and exporters.
- Requires excessive paperwork and data collection □creates significant issue for both importers and exporters and Customs officials.
- At BEST: Repeal; At WORST: Permitting and data collection on behalf of US interests needs to be revised allowing full participation by importers/exporters, customs officials, etc., to ensure effective and efficient system.

Critical Habitat for Endangered North Atlantic Right Whale □81 FR 4837 □1/27/2016

- This rule added approx. 29,763 NM of marine habitat in Gulf of Maine and in the Southeast Atlantic (Florida up-)
- May be tough to roll back but could be ripe for subsequent rule revising boundaries. Possibly address offshore development activities in Atlantic.

Revised guidance for Treatment of Climate Change in NMFS Endangered Species Act Decisions □10/2016

- Creates regulatory □guidance□(mandatory) on climate change for ESA fish species.
- Has the potential to negatively impact hydropower and storage in the West
- http://www.nmfs.noaa.gov/pr/pdfs/pr_climate_change_guidance_june_2016.pdf

NMFS□Ecos□stem Based Fisheries Management Road Map □11/17/2016

- Provides additional guidance to initial policy (below) on Agency-wide implementation of EBM in federal fisheries management.
- http://www.nmfs.noaa.gov/op/pds/documents/01/120/01-120-01.pdf

NMFS□Ecos□stem Based Fisheries Management Polic□ □5/23/2016

- Lays the ground work to implement EBM □a pillar of NOP □throughout all fishery management actions taken by NMFS. This policy fundamentally changes how federal fisheries are managed.
- EBM needs to be struck entirely from all aspects of NMFS policy
- http://www.nmfs.noaa.gov/op/pds/documents/01/01-120.pdf

Statement of

Abigail Ross Hopper

Director, Bureau of Ocean Energy Management

U.S. Department of the Interior

Before the

House Committee on Natural Resources

Subcommittee on Energy and Mineral Resources

March 02, 2016

Chairman Lamborn, Ranking Member Lowenthal and members of the Subcommittee, I am pleased to appear before you today to discuss the President's fiscal year (FY) 2017 budget request for the Bureau of Ocean Energy Management (BOEM). Thank you for inviting me to appear here today with my counterparts from the Bureau of Safety and Environmental Enforcement (BSEE), and the Bureau of Land Management. BOEM coordinates and collaborates with BSEE in a variety of ways on a daily basis to ensure effective management of offshore energy activities. Through the sharing of applicable data and collaboration on cross-cutting topics, BOEM and BSEE work efficiently to ensure that the offshore energy resources belonging to the American public are managed in a safe and responsible manner that brings maximum benefit to the United States taxpayer.

BOEM is responsible for managing the development of U.S. offshore energy and mineral resources in a balanced way that promotes efficient and environmentally responsible development. BOEM's functions include offshore oil and gas leasing, resource evaluation, review and administration of oil and gas exploration plans and development and production plans, renewable energy development, National Environmental Policy Act analyses, and environmental studies. The Bureau is committed to applying the best available science to decision-making, using research and rigorous analysis to balance the Nation's need for offshore energy resources with the protection of the human, marine and coastal environments.

The FY2017 budget request is designed to provide the resources necessary to advance BOEM's commitment to effective and efficient management and oversight of the Nation's offshore resources, including safe and responsible domestic oil and gas exploration and development, as well as development of clean and abundant renewable energy resources. Through the President's energy strategy, the United States is safely and responsibly developing our traditional energy resources while advancing cleaner forms of energy, such as natural gas and renewables. Roughly two years ago, America hit a milestone of energy independence: For the first time in nearly two decades, the U.S. produced more oil domestically than it imported from foreign sources. The U.S. is now the number-one natural gas producer in the world. Thanks in part to these initiatives, America's dependence on foreign oil is at a 40-year low — and declining.

Furthermore, renewable electricity generation from wind, solar, and geothermal sources has doubled since 2009.

The FY 2017 Budget Request

The FY 2017 budget requests $175.1 million for BOEM operations, which includes $94.9 million in offsetting collections (approximately $88.5 million from rental receipts and over $6 million from cost recovery fees). The President's request includes a $6 million increase in direct appropriations, which is partially offset by a projected decrease in offsetting collections, for a net increase in BOEM's total budget authority of $4.3 million. BOEM's FY 2017 request reflects a careful analysis of the resources needed to further develop the Bureau's capacity and to execute its functions carefully, responsibly, and efficiently. It also reflects modest increases that will support high priority offshore oil and gas activities, including those outlined in the 2012-2017 OCS Oil and Gas Leasing Program and the 2017-2022 Program currently in preparation. Specifically, BOEM is requesting additional resources for its risk management program (discussed further below), for the workload primarily associated with deepwater activity in the Gulf of Mexico, and to fund the special salary rate for hard-to-fill geoscientist and petroleum engineer positions.

The FY 2017 budget will support ongoing efforts and important initiatives that are vital to BOEM's mission and critical to advancing Administration priorities. BOEM's FY 2017 request reflects a careful analysis of the resources needed to develop the Bureau's capacity and to execute its functions carefully, responsibly, and efficiently.

Key Priorities and Accomplishments

BOEM's FY 2017 request builds upon recent accomplishments and supports critical ongoing efforts.

Conventional Energy

BOEM manages access to, and ensures fair return for, the energy and mineral resources of the OCS to help meet the energy demands and mineral needs of the Nation, while also balancing such access with the protection of the human, marine, and coastal environments. As the offshore energy and mineral resource manager, BOEM administers comprehensive analyses to provide the key information necessary for decisions about whether, where, and when offshore energy and mineral development can or should occur. BOEM's responsibilities are broad, beginning with identifying and calculating appropriate boundaries and legal descriptions; identifying, inventorying, and assessing offshore energy and mineral endowment; developing a transparent, systematic, and comprehensive schedule for OCS oil and gas resource offerings; developing appropriate financial terms to ensure the public receives fair market value for OCS resources; carefully reviewing requests for approval of comprehensive, detailed industry plans to explore, develop, and produce leased resources; and finally, ensuring OCS lessees have the financial capacity to fulfill decommissioning obligations.

As of January 2016, BOEM administers more than 5,000 active oil and gas leases on nearly 27 million OCS acres. In FY 2015, production from these leases generated $4.4 billion of dollars in leasing revenue for the Federal Treasury, Land and Water Conservation Fund, Historic Preservation Fund and state governments. The overall level of activity on the OCS related to this production, drilling, and development of new projects is estimated to support employment associated with approximately 650,000 direct, indirect, and induced jobs. In FY 2015, OCS leases provided more than 550 million barrels of oil and 1.35 trillion cubic feet of natural gas, accounting for about sixteen percent of the Nation's oil production and about five percent of domestic natural gas production, almost all of which is produced in the Gulf of Mexico.

The Bureau is currently implementing the 2012-2017 OCS Oil and Gas Leasing Program. The 2012-2017 Program focuses on making OCS areas with the greatest resource potential available for oil and gas leasing. Together, the lease areas included in the 2012-2017 Program contain more than 75 percent of the undiscovered, technically recoverable oil and gas resources estimated to exist in Federal waters offshore the United States. The Program includes 12 potential lease sales in the Gulf of Mexico, of which eight have been held, and three off the coast of Alaska, of which two have been cancelled due to market conditions and lack of industry interest. During calendar year 2015, BOEM held two lease sales and issued 194 leases, which generated more than $561 million in bonus bids. Three lease sales are planned for calendar year 2016, and two lease sales are planned for calendar year 2017 before the 2012-2017 Program expires.

BOEM is continuing efforts in the Atlantic to facilitate updated resource evaluation information. During FY 2014, BOEM developed a framework for the acquisition and management of geological & geophysical (G&G) data within the Mid-Atlantic and South Atlantic Planning Areas. BOEM also issued a Record of Decision (ROD) for the PEIS for Atlantic G&G activities that establishes the highest practicable mitigation measures while allowing for potential G&G survey activities off the Mid-Atlantic and South Atlantic coast. Since issuance of the ROD, BOEM has received twelve applications for G&G permits. One permit (that did not require an Incidental Harassment Authorization (IHA) from National Marine Fisheries Service (NMFS)) was issued in July 2014, and three other permit applications have been withdrawn. Of the remaining eight permits, six are awaiting a decision from the NMFS on an IHA. One of the remaining two applications has not yet been submitted to NMFS, and the other application does not require review by NMFS. It was, however, only recently submitted to BOEM for its review.

BOEM is moving forward with the development of the 2017-2022 Program that will lay out the schedule of oil and gas lease sales that the Secretary of the Interior determines will best meet national energy needs and address energy security for that five-year period. The Department released the Draft Proposed Program (DPP) for the 2017-2022 OCS Oil and Gas Leasing Program on January 27, 2015. The DPP is the first of three proposals to create an oil and gas leasing program that identifies offshore areas for potential lease sales during the 2017-2022 timeframe. The DPP continues the regionally-tailored planning employed in the current 2012-2017 Program, which aims to achieve the dual goals of promoting prompt development of the offshore oil and gas resources while protecting the marine, coastal, and human environments. The DPP includes 14 potential lease sales in 8 planning areas—10 sales in the Gulf of Mexico, three off the coast of Alaska (in 2020, 2021, and 2022), and one in portions of the Mid-Atlantic

and South Atlantic Planning Areas (2021). The DPP would make areas containing nearly 80 percent of undiscovered technically recoverable oil and gas resources in the OCS available for exploration and development. Following the release of the DPP, BOEM held 23 public meetings along the coasts and conducted extensive outreach with states, stakeholders and the public. FY 2016 will be a critical year for the Program, with the publication of the Proposed Program and Draft Programmatic Environmental Impact Statement (PEIS) anticipated in the first quarter of calendar year 2016, followed by a public comment period and public meetings. The Proposed Final Program and final PEIS are expected to be published in late 2016 with the Program to take effect in July 2017.

In order to better align regulatory requirements with the realities of aging offshore infrastructure, as well as to ensure that lease obligations, such as decommissioning, do not fall to the taxpayer, BOEM is proactively implementing a comprehensive Risk Management and Financial Assurance Program to modernize our regulatory regime. BOEM's efforts in this regard will continue throughout FY 2016 and FY 2017. The Risk Management Program will provide essential financial risk protection to the U.S. government through use of a flexible, comprehensive mitigation effort to decrease risk to taxpayers. It will also develop risk governance structures, including revised bonding and financial assurance regulations, as well as general and project-specific risk management strategies and procedures. Finally, it will monitor and track the financial strength of lessees for offshore activities and infrastructure to ensure that BOEM is requiring the proper level of bonding or other acceptable financial risk mitigation measures to protect taxpayers. The requested funds will allow us to fully implement the recommendation of the Government Accountability Office to "ensure that BOEM completes its plan to revise its financial assurance procedures" (Offshore Oil and Gas Resources: Actions Needed to Better Protect Against Billions of Dollars in Federal Exposure to Decommissioning Liabilities (GAO-16-40)).

The requested FY 2017 funds, which will be fully offset by cost recovery fees, combined with funding received in FY 2016, should bring the Risk Management Program to full staffing capacity and allow it to become fully operational. A total investment of less than $6 million (for both FY16 and FY17), partially offset by industry fees, has the potential to save the American taxpayers from *billions* in contingent liabilities that could result from industry bankruptcies and associated decommissioning costs. (Estimated total liabilities in the Gulf could be as high as $50 billion.)

Marine Minerals

In carrying out its mission to manage the responsible development of offshore resources, BOEM considers resources other than conventional or renewable energy. Pursuant to the OCS Lands Act, BOEM is the steward of OCS sand, gravel, and shell resources. Through its Marine Minerals Program, BOEM manages the responsible use of these resources, which are critical for the long-term success and cost-effectiveness of many shore protection, beach nourishment, and wetlands restoration projects along the Gulf and Atlantic coasts. The Marine Minerals Program provides the Bureau with the capability to provide sand and gravel resources to protect and improve coastal resources and the environment locally, regionally and nationally. To date, BOEM (and its predecessor the Minerals Management Service) has conveyed the rights to more

than 112 million cubic yards of OCS sediment by executing 48 leases for projects that have restored 269 miles of coastline in seven states.

Looking forward, BOEM's conventional energy and marine mineral activities will continue to meet the high standards set by the Administration, Congress, and the public through appropriate planning, development and protection of the Nation's offshore resources in response to the Nation's energy and coastal resilience needs.

Renewable Energy Development

The President's energy strategy includes the development of the readily-available renewable energy resources that are vital to our Nation's long-term economic development and energy security. Securing clean sources of energy not only benefits the environment, but also creates American jobs and promotes innovation in the United States.

BOEM continues to work diligently to oversee responsible renewable energy development. BOEM facilitates environmentally responsible offshore wind development along the OCS by identifying wind energy areas using a coordinated approach with extensive environmental analysis, public review, and large-scale planning. As of February 2016, BOEM has issued eleven commercial offshore wind energy leases, including two issued through the non-competitive lease negotiation process (one for the Cape Wind project proposed for Nantucket Sound, Massachusetts, and another for a potential project offshore Delaware) and nine through the competitive lease sale process (two offshore Rhode Island-Massachusetts, two offshore Maryland, one offshore Virginia, two offshore Massachusetts, and two offshore New Jersey). Competitive lease sales have generated more than $16.4 million in bonus bids for more than 1.18 million acres in Federal waters. If fully developed, these eleven leases could generate enough energy to power over 4 million homes. BOEM has also executed 6 limited/research leases (three offshore New Jersey, one offshore Delaware, one offshore Florida, and one offshore Virginia). BOEM has received three commercial wind lease requests from two different companies for offshore Hawaii, as well as one unsolicited lease request for a commercial wind lease offshore California. In FY 2015, $2.2 million in rent payments were collected on OCS renewable energy leases, and BOEM estimates annual rent payments of more than $3.5 million in FY 2016 and $4.7 million in FY 2017. BOEM is currently engaged in renewable energy planning efforts for areas offshore North Carolina, South Carolina, New York, Oregon, and Hawaii. BOEM is also making progress on siting demonstration and technology testing projects for wind and marine hydrokinetic energy offshore both the Atlantic and Pacific coasts.

Through detailed planning and analysis, and partnerships with states, other governmental agencies and stakeholders, BOEM has advanced the Renewable Energy Program nationwide and will continue to do so in FY 2017. Offshore wind leasing activities, including both commercial and research leases, have increased, contributing to the Administration's goal of promoting clean energy development. BOEM continues to demonstrate science-based decision-making by initiating and funding research. The studies directly benefit BOEM, other energy and mineral programs, renewable energy stakeholders and individual states. State interest in pursuing offshore renewable energy development is readily apparent in the increased involvement of the states through BOEM's intergovernmental renewable energy task forces – there are now 13 such

task forces consisting of representatives from Federal, state, local and tribal governments. BOEM anticipates the Renewable Energy Program will continue to grow and is prepared to support this valuable effort in response to the Nation's energy needs.

Environmental Programs

BOEM, in coordination with BSEE, is responsible for assessing the impacts of and providing effective environmental safeguards for the exploration and development of energy and mineral resources on the OCS. Utilizing science as the foundation for sound policy decisions, and managing offshore energy and mineral resources in an environmentally and economically responsible way, BOEM facilitates top-quality research by talented scientists from a range of disciplines that is targeted to support policy needs and priorities.

These responsibilities require BOEM to assess the environmental impacts of planned and proposed OCS development and to provide guidance to developers and other stakeholders concerning the place, time, and nature of activities to be authorized. BOEM's environmental programs provide information for decision-makers and the public about potential environmental impacts of OCS energy and mineral resource development, how to prevent or mitigate those impacts, and how to monitor impacts. This information supports and guides decision-making not just within BOEM, but also by BSEE and other government authorities.

BOEM will continue environmental reviews of mission-critical activities and lease sales included in the current Five Year OCS Oil and Gas Leasing Program (2012-2017). Within the past year, BOEM has published five draft and final Environmental Impact Statements (EIS) related to Gulf of Mexico oil and gas lease sales. In addition, BOEM completed almost 700 NEPA analyses during FY 2015 related to oil and gas plans and permits, renewable energy leasing, and marine minerals leasing activities across all OCS regions. In FY 2016 and early FY 2017, BOEM plans to finalize the Programmatic EIS in support of the next Five Year OCS Oil and Gas Leasing Program (2017-2022). In FY 2016, BOEM plans to publish the Draft Programmatic EIS for Gulf of Mexico Geophysical & Geological (G&G) Activities, support environmental reviews for potential G&G permits in the Atlantic OCS, continue preparing an EIS for the Liberty Development and Production Plan in the Beaufort Sea, and continue working with BSEE on the programmatic assessment of well stimulation treatments in the Pacific OCS.

Because of its quality, scale, and duration, BOEM's Environmental Studies Program is a leading contributor to the growing body of scientific knowledge about the nation's marine and coastal environment. In its applied research program, BOEM has leveraged partnerships with academic institutions and other Federal agencies to extend its allocated research budget, and will continue to advance those partnerships and produce top-tier scientific work in the coming year. The FY 2017 budget builds on the work done on landscape-level and ecosystem-wide conservation, oceans policy, and climate adaptation and resilience, and moves toward institutionalizing these Administration priorities.

BOEM's management of the Nation's OCS oil and gas, marine minerals and renewable energy resources will continue to be informed through the environmental assessments, studies and partnerships conducted under the Environmental Program. These efforts are vital to ensuring that

the impacts of OCS activities on the environment are understood and that effective protective measures are put in place.

Conclusion

BOEM plays a vital role in advancing safe and responsible offshore energy development and in helping to secure our energy future. In a time when serious fiscal constraints demand difficult tradeoffs, we appreciate the critical resources provided this fiscal year – including investment in robust science to inform decisions relating to ocean energy policy and management and appropriate environmental safeguards. It is important to sustain this level of investment moving into the next fiscal year, and the FY 2017 request reflects a careful analysis of the resources needed for the Bureau to carry out the important mission with which we are charged.

Thank you once again for the opportunity to testify here today, and for your consistent support for BOEM's programs. I look forward to our continued work together and to answering your questions today.

Jennie-
I have attached the one page summary that you requested yesterday.
Are you planning on getting this to Interior or do you need me to?
Look forward to our meeting, we are flying in tonight.
-Chance

Farrell-Cooper Mining company (FCMC) request to meet with Interior Department regarding the unlawful attack by the Obama administration against Farrell Cooper Mining Company and the State of Oklahoma.

Subject: Department of Interior Federal Violations NOV N11-030-370-001 (Liberty #5), NOV N12-030-246-001 (Liberty #6) and NOV N13-030-370-001 (Rock Island).

Background: In 2010 the Office of Surface Mining unilaterally changed its longstanding interpretation of the "Approximate Original Contour" section of the Surface Mining Control and Reclamation Act of 1977. Without following the requirements of the APA, the agency then applied the new interpretation of this law retroactively on 3 permits in the State of Oklahoma and issued Notices of Violations to the mining company which required the company to redo existing reclamation at a cost estimate of $25,000,000.

FCMC challenged the Notices of Violations at the administrative court level. FCMC was successful in asserting its claims at Liberty #5 and Liberty #6 that the NOVs were unlawfully issued and the NOVs were vacated. The NOV issued at Rock Island was upheld. All of the cases are currently on appeal as discussed below.

SMCRA was intended to confer primary, if not completely exclusive, jurisdiction to administer surface coal mining programs to the primacy States. Although OSM retains considerable oversight authority, Congress and the Secretary have clarified that OSM should defer to the State regulatory authority when there is conflict over interpretation of a SMCRA requirement – unless the State's position is arbitrary, capricious, or an abuse of discretion.

-Judge Pearlstein Decision, NOV N11-030-370-001 (Liberty #5). p. 27

ODM took the position that FCMC was not in violation of state law and applicable regulations and Judge Pearlstein determined in both Liberty #5 and Liberty #6 that ODM's position was not arbitrary, capricious or an abuse of discretion.

The Office of Surface Mining has appealed the Liberty #5 and Liberty #6 decisions to the Interior Board of Land Appeals (IBLA) and the appeals are currently pending. Recent correspondence in the Liberty #5 and Liberty #6 cases indicates that a decision by the IBLA may be issued soon in each of those appeals. The Rock Island case* was initially appealed to the IBLA and then subsequently to the U. S. District Court in Oklahoma after the IBLA denied FCMC's request for a stay. An appeal on the issue of jurisdiction was recently heard at the 10th Circuit in Denver, Colorado.

Request: FCMC, the National Mining Association, Senator Jim Inhofe, and Representative Markwayne Mullin request that the Secretary of Interior withdraw the appeals of the Liberty #5 and Liberty #6 NOVs and let the decisions of Judge Pearlstein stand.

Authority: Executive Order signed by the President on March 28, 2017 and entitled, "Promoting Energy Independence and Economic Growth." The Secretarial Order 3349. Resolution of disapproval (H.J. Res. 38) under the Congressional Review Act voiding the Stream Protection Rule.

*-We would like to discuss the Rock Island case and find a solution that complies with the Executive Order and Secretarial Order 3349.

Subject: Revised

Please let me know what you think here. As I mentioned earlier, there are concerns with boxing us into only a certain set of options, particularly if there are other options we haven't explored or haven't seen yet. Let me know what your boss thinks. Thank you and enjoy california. Hope you get to catch a breath soon.

Micah

The Honorable Rob Portman

United States Senator

448 Russell Senate Office Building

Washington, D.C. 20510

April xx, 2017

Dear Senator Portman:

Thank you for your letter regarding the Department of the Interior's (DOI) Venting and Flaring rule. I, too, believe DOI has an integral role to play in this issue, which is why I intend to act within my authority as Secretary to craft solutions that incentivize responsible development.

I share your concerns regarding methane waste and I agree that we must manage our public lands in a pragmatic way. Should you and your Senate colleagues choose to rescind the rule through the Congressional Review Act (CRA), the Bureau of Land Management (BLM) will continue to have the ability to act under its existing authorities to meaningfully update its policies to reduce waste. The BLM will continue to regulate venting, flaring, and beneficial

use of gas pursuant to the 1979 Notice to Lessees and Operators of Onshore Federal and Indian Oil and Gas Leases, Royalty or Compensation for Oil and Gas Lost (NTL-4A). The world has certainly changed since these regulations were last updated, and we need revisions to reflect the world we live in today. Whether the BLM pursues new rulemaking or revisions to existing processes, the Department intends to address the following venting and flaring issues:

- Strengthening policies to encourage conservation through beneficial use of oil or gas on leases;

- Conserving unsold gas by reinjection for enhanced oil recovery or for later recovery;

- Improving rights-of-way (ROW) timelines and removing obstacles to timely approval for pipeline and gathering infrastructure;

- Recognizing existing flaring restrictions and policies in states like North Dakota, Wyoming, Utah, New Mexico, Colorado, and Montana to avoid duplication and redundancy.

I have been tasked to lead and plan for the Department's future over the next 100 years. As an admirer of President Teddy Roosevelt, you can rest assured that the policies I propose will reflect the promise I made to you and your colleagues during my confirmation hearing: we will work together to ensure the use of our public lands reflects higher purpose so that our children's children can look back and say, "We did it right."

Sincerely,

Secretary Ryan Zinke

I think that works. I'm a little concerned about the suggestion that BLM might pursue revisions to existing processes-- by that, do you mean the reg we would void via CRA? If so, I think that raises the specter of the substantially the same as problem, and it would be helpful if the letter clarifies that any new rule will not be substantially the same as the current rule. I know the department doesn't think that issue is judicially reviewable, but the judicial review bar only applies to actions/omissions "under this subchapter"-- and I do not think the writing of a new rule is an action taken under the CRA. So we do want to be sure that the letter to be clear that future action will be different from the current rule. Thanks, Amanda

No. If it is CRA'd (new word) BLM reverts back to the NTL4A. We would look at taking the principles we mentioned and updating the NTL4A with the options listed. However, if we find that some of these options are more complex for the Federal Register system, then we might have to look into a new rulemaking process. But the options in the letter are very different than the current rule while achieving the same objective. Feel free to call if none of that made sense. 202.706.9093

Subject: Re: Revised

This read any clearer?

If a CRA is passed, the BLM will continue to regulate venting, flaring, and beneficial use of gas pursuant to the 1979 Notice to Lessees and Operators of Onshore Federal and Indian Oil and Gas Leases, Royalty or Compensation for Oil and Gas Lost (NTL-4A). The world has changed since these regulations were first implemented so any revisions should reflect today's realities. Whether the BLM proposes new rulemaking or revisions to the NTL-4A process, the Department remains committed to reducing methane waste by pursuing, among other options, the following strategies:

> No. If it is CRA'd (new word) BLM reverts back to the NTL4A. We would look at taking the principles we mentioned and updating the NTL4A with the options listed. However, if we find that some of these options are more complex for the Federal Register system, then we might have to look into a new rulemaking process. But the options in the letter are very different than the current rule while achieving the same objective. Feel free to call if none of that made sense. 202.706.9093

so, I think that raises the specter of the substantially the same as problem, and it would be helpful if the letter clarifies that any new rule will not be substantially the same as the current rule. I know the department doesn't think that issue is judicially reviewable, but the judicial review bar only applies to actions/omissions "under this subchapter"-- and I do not think the writing of a new rule is an action taken under the CRA. So we do want to be sure that the letter to be clear that future action will be different from the current rule. Thanks, Amanda

Dear Senator Portman:

Thank you for your letter regarding the Department of the Interior's (DOI) Venting and Flaring rule. I, too, believe DOI has an integral role to play in this issue, which is why I intend to act within my authority as Secretary to craft solutions that incentivize responsible development.

I share your concerns regarding methane waste and I agree that we must manage our public lands in a pragmatic way. Should you and your Senate colleagues choose to rescind the rule through the Congressional Review Act (CRA), the Bureau of Land Management (BLM) will continue to have the ability to act under its existing authorities to meaningfully update its policies to reduce waste. The BLM will continue to regulate venting, flaring, and beneficial use of gas pursuant to the 1979 Notice to Lessees and Operators of Onshore Federal and Indian Oil and Gas Leases, Royalty or Compensation for Oil and Gas Lost (NTL-4A). The world has certainly changed since these regulations were last updated, and we need revisions to reflect the world we live in today. Whether the BLM pursues new rulemaking or revisions to existing processes, the Department intends to address the following venting and flaring issues:

- Strengthening policies to encourage conservation through beneficial use of oil or gas on leases;
- Conserving unsold gas by reinjection for enhanced oil recovery or for later recovery;
- Improving rights-of-way (ROW) timelines and removing obstacles to timely approval for pipeline and gathering infrastructure;
- Recognizing existing flaring restrictions and policies in states like North Dakota, Wyoming, Utah, New Mexico, Colorado, and Montana to avoid duplication and redundancy.

I have been tasked to lead and plan for the Department's future over the next 100 years. As an admirer of President Teddy Roosevelt, you can rest assured that the policies I propose will reflect the promise I made to you and your colleagues during my confirmation hearing: we will work together to ensure the use of our public lands reflects higher purpose so that our children's children can look back and say, "We did it right."

Sincerely,

Secretary Ryan Zinke

FOR IMMEDIATE RELEASE

April 26, 2017

EXECUTIVE ORDER

- - - - - - -

REVIEW OF DESIGNATIONS UNDER THE ANTIQUITIES ACT

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in recognition of the importance of the Nation's wealth of natural resources to American workers and the American economy, it is hereby ordered as follows:

Section 1. Policy. Designations of national monuments under the Antiquities Act of 1906, recently recodified at sections 320301 to 320303 of title 54, United States Code (the "Antiquities Act" or "Act"), have a substantial impact on the management of Federal lands and the use and enjoyment of neighboring lands. Such designations are a means of stewarding America's natural resources, protecting America's natural beauty, and preserving America's historic places. Monument designations that result from a lack of public outreach and proper coordination with State, tribal, and local officials and other relevant stakeholders may also create barriers to achieving energy independence, restrict public access to and use of Federal lands, burden State, tribal, and local governments, and otherwise curtail economic growth. Designations should be made in accordance with the requirements and original objectives of the Act and appropriately balance the protection of landmarks, structures, and objects against the appropriate use

of Federal lands and the effects on surrounding lands and communities.

Sec. 2. Review of National Monument Designations. (a) The Secretary of the Interior (Secretary) shall conduct a review of all Presidential designations or expansions of designations under the Antiquities Act made since January 1, 1996, where the designation covers more than 100,000 acres, where the designation after expansion covers more than 100,000 acres, or where the Secretary determines that the designation or expansion was made without adequate public outreach and coordination with relevant stakeholders, to determine whether each designation or expansion conforms to the policy set forth in section 1 of this order. In making those determinations, the Secretary shall consider:

(i) the requirements and original objectives of the Act, including the Act's requirement that reservations of land not exceed "the smallest area compatible with the proper care and management of the objects to be protected";

(ii) whether designated lands are appropriately classified under the Act as "historic landmarks, historic and prehistoric structures, [or] other objects of historic or scientific interest";

(iii) the effects of a designation on the available uses of designated Federal lands, including consideration of the multiple-use policy of section 102(a)(7) of the Federal Land Policy and Management Act (43 U.S.C. 1701(a)(7)), as well as the effects on the available uses of Federal lands beyond the monument boundaries;

(iv) the effects of a designation on the use and enjoyment of non-Federal lands within or beyond monument boundaries;

(v) concerns of State, tribal, and local governments affected by a designation, including the economic development and fiscal condition of affected States, tribes, and localities;

(vi) the availability of Federal resources to properly manage designated areas; and

(vii) such other factors as the Secretary deems appropriate.

(b) In conducting the review described in subsection (a) of this section, the Secretary shall consult and coordinate with, as appropriate, the Secretary of Defense, the Secretary of Agriculture, the Secretary of Commerce, the Secretary of Energy, the Secretary of Homeland Security, and the heads of any other executive departments or agencies concerned with areas designated under the Act.

(c) In conducting the review described in subsection (a) of this section, the Secretary shall, as appropriate, consult and coordinate with the Governors of States affected by monument designations or other relevant officials of affected State, tribal, and local governments.

(d) Within 45 days of the date of this order, the Secretary shall provide an interim report to the President, through the Director of the Office of Management and Budget, the Assistant to the President for Economic Policy, the Assistant to the President for Domestic Policy, and the Chairman of the Council on Environmental Quality, summarizing the findings of the review described in subsection (a) of this section with respect to Proclamation 9558 of December 28, 2016 (Establishment of the Bears Ears National Monument), and such other designations as the Secretary determines to be appropriate for inclusion in the interim report. For those designations, the interim report shall include recommendations for such Presidential actions, legislative proposals, or other actions consistent with law as the Secretary may consider appropriate to carry out the policy set forth in section 1 of this order.

(e) Within 120 days of the date of this order, the Secretary shall provide a final report to the President, through the Director of the Office of Management and Budget, the Assistant to the President for Economic Policy, the Assistant to the President for Domestic Policy, and the Chairman of the Council on Environmental Quality, summarizing the findings of the review described in subsection (a) of this section. The final report shall include recommendations for such Presidential actions, legislative proposals, or other actions consistent with law as the Secretary may consider appropriate to carry out the policy set forth in section 1 of this order.

Sec. 3. General Provisions. (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

DONALD J. TRUMP

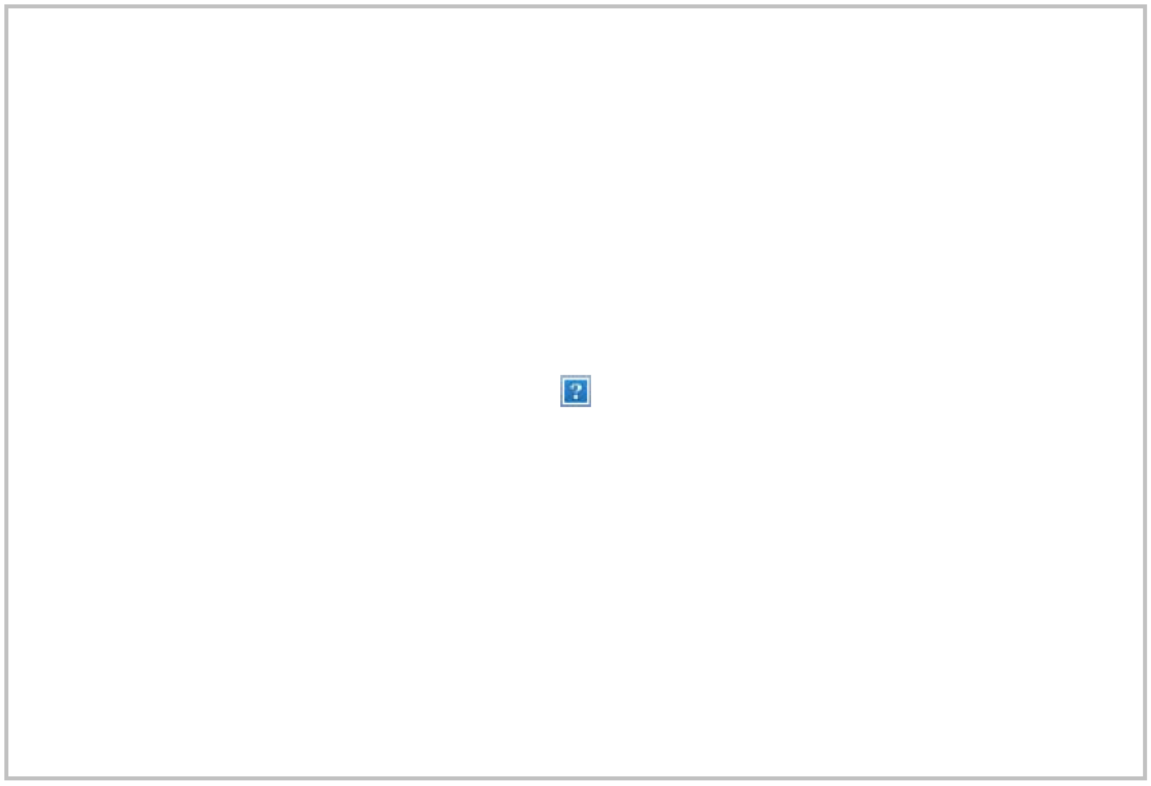
President Trump Signs Order to Review Massive Land Grabs, Western Caucus Members Cheer



WASHINGTON, D.C. – Today, Congressional Western Caucus **Chairman Paul A. Gosar D.D.S. (AZ-04), Chief Defense and Interior Officer Rep. Chris Stewart (UT-02), Chairman Emeritus Rep. Steve Pearce (NM-02), Vice Chairman for Indian Affairs and Oceans Rep. Don Young (AK-At Large), Chairman Emeritus Rep. Rob Bishop (UT-01)** and Western Caucus members **Speaker Paul Ryan (WI-01), Majority Leader Kevin McCarthy (CA-23), Rep. Tom Emmer (MN-06), Rep. Markwayne Mullin (OK-02), Rep. Aumua Amata (American Samoa-At Large), Rep. Doug LaMalfa (CA-01), Rep. Doug Lamborn (CO-05), Rep. Jason Chaffetz (UT-03)** and **Rep. Raúl Labrador (ID-01)** issued the following statements after President Donald Trump signed an Executive Order requiring Secretary of the Interior Ryan Zinke for a review of the 1906 Antiquities Act:

Chairman Gosar said, "After enduring the Obama Administration's tyrannical land grabs, I am elated by President Trump's action to require a formal review of misguided monument declarations over the past 20 years that have restricted massive swaths of land and water throughout the country. President Obama's abuse of a century-old law allowed one man to unilaterally lock up more than 550 million acres with the stroke of a pen. Local stakeholders deserve to have a voice in the land management process and I am pleased they will finally be included in the conversation. I applaud President Trump and look forward to working closely with Secretary Zinke during this review. However, this fight won't be over and communities won't be safe until Congress reforms the antiquated Antiquities Act."

"Over the years, the original intent of the Antiquities Act has morphed well beyond the original intent of the Act, which was to preserve the 'smallest area compatible with proper care and management of the objects to be protected'. These land grabs occur with no input from Congress or the local communities most impacted by the designations. It's an emotional issue to communities around the Bears Ears and Grand Staircase-Escalante National Monuments, as it affects and threatens their ways of life. That's why I believe this Executive Order asking for a review of National Monuments is both a healthy and necessary process," said **Congressman Stewart.** "Utahns deserve a collaborative land management process that ensures local residents have a seat at the table."

"The last several Presidents have abused the Antiquities Act by creating expansive monuments that have disregarded input from local communities and governments who are affected the most by these designations. New Mexicans, and people across the nation, should be able to access federal lands for recreation, hunting, grazing, and the economic opportunity that comes with it. We all share the common goal of preserving the natural beauty we are blessed to have in the West, but responsible conservation has to consider how these actions affect the surrounding communities and local economies," said **Congressman Pearce**. "I support today's Executive Order that puts surrounding communities back in the driver's seat by calling for an appropriate review of previously designated monuments."

Congressman Young said, "For too long, we've seen the crippling impacts associated with the monument designation process, all with little to no consultation or support of those that live in or rely upon the areas. I welcome today's actions and remain committed to reforming the outdated monument designation process from a top down executive mandate to a locally driven, bottom-up approach. The days of Presidents unilaterally closing off thousands of acres of land or water must change."

"Today's action sends the powerful message that communities will no longer take a back seat to out-of-state special interest groups. I'm pleased to see President Trump recognize long-standing abuses of the Antiquities Act. It was created with noble intent and for limited purposes, but has been hijacked to set aside increasingly large and restricted areas of land without public input," stated **Congressman Bishop**. "I applaud the Trump administration's clear commitment to do what past administrations refused to do, actually talk to real people who live in the area. This EO is not the end of the story, we will work the Trump administration and our communities to get this right."

Speaker Ryan said, "The Antiquities Act is a century-old law that has been hijacked by executive overreach in recent years. While designating monuments is a noble goal, this law, like many others, has strayed far from its original purpose. Presidents have used the law to lock up thousands of acres of lands and water with the stroke of a pen, disregarding the needs and concerns of local communities. I comment the Trump administration for stopping this cycle of executive abuse and beginning a review of past designations."

"Government must still retain the authority to preserve our nation's most treasured sites, but that authority was clearly abused by the Obama Administration when it restricted over 550 million acres in 34 national monuments under the Antiquities Act. The Antiquities Act was not intended to restrict state and local usage of such a large amount of territory. This abuse of federal authority and the subsequent disruption of the wellbeing of communities and citizens is the exact kind of behavior from Washington that the American people are sick of. Local control is not only better policy; it respects the American people who can get along just fine without a distant government controlling all the details of their lives," said **Majority Leader McCarthy**. "President Trump and House Republicans will work together to offer a defense against future executive overreach and bring a necessary dose of commonsense to public land policy."

Congressman Emmer said, "I am pleased to see President Trump call for a review of the Antiquities Act in this morning's executive order," said Emmer. "Under the Obama Administration, we witnessed unilateral land grabs by the executive without Congressional consent. My home state of Minnesota was hit with similar last minute actions that closed off nearly a quarter million acres of land, which would stunt our state's economic growth. I look forward to the results of the review to indicate what next steps may be necessary."

"President Obama's time in office led to more than 554,000,000 acres of land being declared as national monuments, practically the definition of a land grab. While the Antiquities Act serves a

purpose, it has been abused by previous presidents and I'm glad to see President Trump sign an executive order to review the land taken in this drastic overreach of power," remarked **Congressman Mullin**.

Aumua Amata said, "I want to applaud President Trump for the executive order he signed today to review the Antiquities Act, which regulates national marine monument designations. The national marine monuments that have been instituted in the Western Pacific have closed off vast swaths of the ocean that our people have fished for over a *millennium*. I look forward to the actions that will be taken upon the completion of the review. It is essential that our fishing fleet in American Samoa has access to these traditional fishing grounds and this is the first step in restoring that access for our people."

"I fully support the President's decision to review national monuments that had been recklessly expanded under the Obama Administration. Downsizing many of these monuments will help the Department of Interior to better manage our federal lands. It is time to reform the Antiquities Act and return the power to designate and expand national monuments back to Congress," remarked **Congressman LaMalfa.**

Congressman Lamborn said, "The review of the monuments designated under the Antiquities Act is both warranted and necessary. Today's executive order signifies a shift in power from the federal government to the local communities who support these monuments and deserve to have a voice in the process. As the President and Secretary Zinke review the monuments in Colorado, I urge them to consider multi-user groups and recreation, community outreach, and the ability to fund and manage these important lands."

"Unilaterally locking up millions of acres of land for political gain was not the original intent of the Antiquities Act. Imposing such designations without any kind of local support from those who will bear the burden is an abuse of power. I strongly support President Trump's order to review the gross misuse of such an outdated law. The American people – especially Utahns – deserve better than to have their livelihoods turned upside down with the stroke of a pen," remarked **Congressman Chaffetz**.

Congressman Labrador stated, "I am pleased by President Trump's decision to review the Antiquities Act, which was used by his predecessors to designate national monuments without input from Congress or local communities. That's why, in the last Congress, I introduced the National Monument Designation Transparency and Accountability Act, which would require Congressional approval and public input before restricting access to public lands in a proposed monument. When it comes to land in Idaho, Idahoans know best, and we appreciate a President who understands that. We need a legislative fix, and I look forward to working with President Trump on this issue."

Background:

(Courtesy of the White House)

Today's Executive Order directs the Department of the Interior to review monuments designated using the Antiquities Act since January 1, 1996, that are in excess of 100,000 acres, or that were expanded without adequate public outreach and coordination with relevant stakeholders. The order does not strip any monument of a designation and does not loosen any environmental or conservation regulations on any land or marine areas.

Further, the Executive Order:

- Directs the Secretary of the Interior to conduct the above-mentioned review.

- Directs the Secretary of the Interior to make recommendation to the President on whether a monument should be rescinded or resized.

- Directs the Secretary of the Interior to consult and coordinate with, as appropriate, the Secretary of Defense, the Secretary of Agriculture, the Secretary of Homeland Security, and the heads of any other executive departments or agencies concerned with areas designated under the Act.

- Directs the Secretary of the Interior to consult and coordinate with the Governors of States affected by monument designations or other relevant officials of affected State, Tribal, and local
- Directs the Secretary of the Interior to provide an interim report to the President within 45 days of the date of the
- Directs the Secretary of the Interior to provide a final report to the President within 120 days of the date of the order.

Text of the Executive Order can be found HERE.

(Courtesy of the Congressional Western Caucus)

The president's ability to set aside land for monuments and national parks comes from the outdated Antiquities Act of 1906, which was originally intended to protect prehistoric Indian ruins and artifacts on federal lands in the West. More than one hundred years later, the original intent of this law, which included language to limit these designations to "the smallest area compatible with proper care and management of the objects," has been significantly abused. Compared to early application of the Antiquities Act, where the average size of a national monument was merely 422 acres, in recent years it became commonplace for a monument to exceed a million acres in size.

President Obama exceeded the intent of the Antiquities Act more than any other president in the history of this nation. With designation of the 1.35 million acre Bears Ears National Monument in Utah and the 300,000 acre Gold Butte National Monument in Nevada, President Obama designated or expanded 34 national monuments, more than any other president in history. These unilateral declarations locked-up 554,590,000 million acres of land and water.

National monument designations under the Antiquities Act typically have significant consequences that negatively affect grazing rights, water rights, wildfire prevention and other land management activities. These declarations also result in some of the most restrictive land-use regulations possible and also greatly impact hunting, fishing, OHV and other recreational activities.

Unilateral designations that circumvent Congress typically result in devastating consequences for rural America and our future economic prosperity. For every new acre claimed for the federal government, there is an acre of private land lost. Such actions exacerbate challenges for local communities to fund things like education and infrastructure as lands that are added to the federal rolls can no longer be taxed.

See below for the additional edits Senator Portman needs in addition to the specific polices on beneficial use. Let us know if you have any questions.

Thanks,

Pat

April xx, 2017

Dear Senator Portman:

Thank you for your letter regarding the Department of the Interior's (DOI) Methane and Waste Prevention Rule. I, too, believe DOI has an integral role to play in this issue, which is why I intend to act within my authority as Secretary to craft solutions that incentivize responsible development.

I share your concerns regarding methane waste and I agree that we must manage our public lands in a pragmatic way. Should you and your Senate colleagues choose to rescind the rule through the Congressional Review Act (CRA), the Bureau of Land Management (BLM) will continue to have the authority to meaningfully update its policies to reduce methane waste. If a CRA is passed, the BLM will continue to regulate venting, flaring, and beneficial use of gas pursuant to the DOI Order known as NTL-4A[1]. The world has changed a lot since these regulations were first implemented. I will update and revise the NTL-4A process or initiate a new rulemaking process, the Department is—and will remain—committed to reducing methane waste.

You asked me in your letter about specific concrete actions that the Department would take in the absence of the current Methane and Waste Prevention Rule. The Department would pursue, among other options, the following strategies:

· Strengthening policies to encourage companies to capture methane to be used for other purposes. Such policy changes will include:

  · [additional policy] Currently companies do not have to pay royalties to the government on methane used for a specific list of purposes. The Department

will expand this list which would encourage companies to capture and use more methane;

- [additional policy];
- [additional policy];

- Tightening restrictions on the flaring of unmarketable methane from oil wells;
- Conserving unsold methane by reinjection into the existing well for enhanced oil recovery or for later recovery;
- Expediting approval for methane pipeline and gathering infrastructure;
- Eliminating BLM policies that conflict with or duplicate flaring restrictions in states like North Dakota, Wyoming, Utah, New Mexico, Colorado, and Montana.

I have been tasked to lead and plan for the Department's future over the next 100 years. As an admirer of President Teddy Roosevelt, you can rest assured that the policies I propose will reflect the promises I made to you and your colleagues during my confirmation hearing: we will work together to ensure the use of our public lands reflects higher purpose so that our children's children can look back and say, "We did it right." Under my leadership, the Department will take important steps to reduce methane waste, and we will do that without hurting job creation and economic growth. Thank you for your interest in this issue, and thank you for your letter.

Sincerely,

Secretary Ryan Zinke

THE WHITE HOUSE

Office of the Press Secretary

FOR IMMEDIATE RELEASE

April 26, 2017

EXECUTIVE ORDER

- - - - - - -

REVIEW OF DESIGNATIONS UNDER THE ANTIQUITIES ACT

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in recognition of the importance of the Nation's wealth of natural resources to American workers and the American economy, it is hereby ordered as follows:

Section 1. Policy. Designations of national monuments under the Antiquities Act of 1906, recently recodified at sections 320301 to 320303 of title 54, United States Code (the "Antiquities Act" or "Act"), have a substantial impact on the management of Federal lands and the use and enjoyment of neighboring lands. Such designations are a means of stewarding America's natural resources, protecting America's natural beauty, and preserving America's historic places. Monument designations that result from a lack of public outreach and proper coordination with State, tribal, and local officials and other relevant stakeholders may also create barriers to achieving energy independence, restrict public access to and use of Federal lands, burden State, tribal, and local governments, and otherwise curtail economic growth. Designations should be made in accordance with the requirements and original objectives of the Act and appropriately balance the protection of landmarks, structures, and objects against the appropriate use of Federal lands and the effects on surrounding lands and communities.

Sec. 2. Review of National Monument Designations. (a) The Secretary of the Interior (Secretary) shall conduct a review of all Presidential designations or expansions of designations under the Antiquities Act made since January 1, 1996, where the designation covers more than 100,000 acres, where the designation after expansion covers more than 100,000 acres, or where the Secretary determines that the designation or expansion was made without adequate public outreach and coordination with relevant stakeholders, to determine whether each designation or expansion conforms to the policy set forth in section 1 of this order. In making those determinations, the Secretary shall consider:

(i) the requirements and original objectives of the Act, including the Act's requirement that reservations of land not exceed "the smallest area compatible with the proper care and management of the objects to be protected";

(ii) whether designated lands are appropriately classified under the Act as "historic landmarks, historic and prehistoric structures, [or] other objects of historic or scientific interest";

(iii) the effects of a designation on the available uses of designated Federal lands, including consideration of the multiple-use policy of section 102(a)(7) of the Federal Land Policy and Management Act (43 U.S.C. 1701(a)(7)), as well as the effects on the available uses of Federal lands beyond the monument boundaries;

(iv) the effects of a designation on the use and enjoyment of non-Federal lands within or beyond monument boundaries;

(v) concerns of State, tribal, and local governments affected by a designation, including the economic development and fiscal condition of affected States, tribes, and localities;

(vi) the availability of Federal resources to properly manage designated areas; and

(vii) such other factors as the Secretary deems appropriate.

(b) In conducting the review described in subsection (a) of this section, the Secretary shall consult and coordinate with, as appropriate, the Secretary of Defense, the Secretary of Agriculture, the Secretary of Commerce, the Secretary of Energy, the Secretary of Homeland Security, and the heads of any other executive departments or agencies concerned with areas designated under the Act.

(c) In conducting the review described in subsection (a) of this section, the Secretary shall, as appropriate, consult and coordinate with the Governors of States affected by monument designations or other relevant officials of affected State, tribal, and local governments.

(d) Within 45 days of the date of this order, the Secretary shall provide an interim report to the President, through the Director of the Office of Management and Budget, the Assistant to the President for Economic Policy, the Assistant to the President for Domestic Policy, and the Chairman of the Council on Environmental Quality, summarizing the findings of the review described in subsection (a) of this section with respect to Proclamation 9558 of December 28, 2016 (Establishment of the Bears Ears National Monument), and such other designations as the Secretary determines to be appropriate for inclusion in the interim report. For those designations, the interim report shall include recommendations for such Presidential actions, legislative proposals, or other actions consistent with law as the Secretary may consider appropriate to carry out the policy set forth in section 1 of this order.

(e) Within 120 days of the date of this order, the Secretary shall provide a final report to the President, through the Director of the Office of Management and Budget, the Assistant to the President for Economic Policy, the Assistant to the President for Domestic Policy, and the Chairman of the Council on Environmental Quality, summarizing the findings of the review described in subsection (a) of this section. The final report shall include recommendations for such Presidential actions, legislative proposals, or other actions consistent with law as the Secretary may consider appropriate to carry out the policy set forth in section 1 of this order.

Sec. 3. General Provisions. (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or

legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

DONALD J. TRUMP

WEEK IN REVIEW

April 28, 2017

Financial CHOICE Act Will Result in Growth, End Bailouts

Witnesses testifying at Wednesday's full committee hearing on the Financial CHOICE Act praised the proposal's focus on economic growth, accountability and ending bank bailouts

"By far the most important aspect of this proposed legislation is the provision which allows properly capitalized banks to opt out of the regulatory nightmare which is paralyzing the industry and slowing innovation, creativity and thereby economic growth. Lower income individuals are the most negatively damaged by this sad situation," said John Allison, former CEO of BB&T.

Alex Pollock of the R Street Institute called the Financial CHOICE Act "an excellent example of the Congress asserting itself at last to clarify that regulatory agencies are derivative bodies accountable to the Congress, that they cannot be sovereign fiefdoms—not even the dictatorship of the CFPB."

"Smaller companies, which are an important part of our economy and of many Americans' lives, have been forced to fight for the capital markets' scraps through an awkward set of exemptions," said Hester Peirce of the Mercatus Center at George Mason University. "The CHOICE Act also allows more investors to qualify as accredited, a label that allows them access to a broader array of investments. Because many investors prefer to invest through pools, the relief afforded to pooled investment vehicles and their advisers by the CHOICE Act could also be instrumental in expanding small businesses' access to capital."

"The Dodd-Frank Act has had a highly adverse effect on economic growth in the United States, primarily—although not entirely—through imposing substantial costs on small and community banks. The CHOICE Act attacks this problem in a comprehensive way—providing these banks, and potentially others, with an 'off-ramp' that would allow them to avoid many of the most costly regulations if they adopt a capital position based on a 10% leverage ratio instead of the Basel risk-based capital standards," said Peter Wallison of the American Enterprise Institute.

Subcommittee Examines Ways to Stem Illicit

On the Horizon

Tuesday, May 2 at 10:00 a.m.
Markup of H.R. 10, the Financial CHOICE Act of 2017

In the News

PoliticoPro | Big banks battered as Dodd-Frank repeal debate kicks off

Housing Wire | Mnuchin declares support for Republican Dodd-Frank replacement

Washington Post | Republicans launch effort to roll back Dodd-Frank regulations

Newsmax | Trump tackles Dodd-Frank with executive order, memo

American Banker | Republicans optimistic about housing finance reform

Financing

The Subcommittee on Terrorism and Illicit Finance held a hearing Thursday to examine information sharing and data collection practices at the Financial Crimes Enforcement Network (FinCEN) and assess how the process and coordination could be improved.

“From the most traditional forms of financial transactions to the ever-evolving world of financial technology, it is essential that our nation have an efficient, effective, and modern set of rules and regulation to safeguard our nation’s financial system. This hearing starts the conversation and ensures our subcommittee is taking a pragmatic and complete look at the laws and regulations we currently have in place,“ ,” said Subcommittee Chairman Steve Pearce (R-NM).

MEMBER SPOTLIGHTS

Rep. Mia Love (R-UT) | Bring on the CHOICE Act

This common sense alternative to Dodd-Frank represents a fundamental break from the overregulation and micro-management of banks by Washington bureaucrats in favor of strong capital and the freedom to serve the financial needs of American households and businesses.

Rep. Ann Wagner (R-MO) | Americans Deserve the Financial CHOICE Act

Our Republican-led Congress has a better way – the Financial CHOICE Act, which stands for Creating Hope and Opportunity for Investors, Consumers and Entrepreneurs. And that’s exactly what we’re going to do: provide you with the financial opportunities you deserve.

Rep. Bill Huizenga (R-MI) |Financial CHOICE Act Would Restore Accountability, Opportunity

The Financial CHOICE Act will protect taxpayers and consumers alike, remove the anti-growth regulations put in place by Dodd-Frank, and provide more opportunity for hardworking individuals in West Michigan to achieve financial independence.

Weekend Must Reads

Washington Examiner | Here’s why the GOP plan to replace Dodd-Frank is a marked improvement

Rather than ending the "Too Big to Fail" problem, Dodd-Frank further entrenched the risk of taxpayer-funded bailouts for the largest banks and financial institutions while failing to address the root causes of the financial crisis. Likewise, by layering overly complicated regulations onto the financial system, Dodd-Frank stunted economic growth and limited access to capital.

National Taxpayers Union | Coalition supports legislation repealing key provisions of Dodd-Frank

The Financial CHOICE Act will begin the process of eliminating Dodd-Frank and the burdensome regulations that have restricted business creation, innovation, and entrepreneurship. By reducing

red tape and empowering job creators and consumers over Washington bureaucrats, the CHOICE Act will help get our economy out of its historically slow economic recovery and create a financial system that benefits all Americans.

Financial Regulation News | ICBA, NAFCU endorse Financial CHOICE Act

Congressional Republicans' proposal to replace Dodd-Frank, the Financial CHOICE Act, received endorsements this week from two major financial players — the Independent Community Bankers of America (ICBA) and the National Association of Federally-Insured Credit Unions (NAFCU).

Subject: Protecting public lands and national treasures
Date: Friday, April 28, 2017 2:11:31 PM

HELPING REDUCE THE PUBLIC SAFETY THREAT IN OUR COMMUNITIES

This week, I introduced bipartisan legislation to allow marijuana-related businesses in states with existing regulatory structures to access the banking system. The Secure and Fair Enforcement Banking Act (SAFE Banking Act) helps align federal and state laws - specifically as it relates to the banking crisis confronting marijuana-related businesses. The legislation will ensure all small businesses and their

employees are treated fairly.

Most importantly, the SAFE Banking Act reduces the public safety threat that arises when small businesses are forced to operate on a cash-only basis. Allowing tightly regulated marijuana businesses the ability to access the banking system will help reduce the threat of crime, robbery and assault in our communities and keep the cash out of cartels.

With eight states and Washington, D.C. now allowing adult-use recreational marijuana and 29 states legalizing medical marijuana, we have reached a tipping point on this issue and it's time for Congress to act.

VISITING LOCAL SCHOOLS

I enjoyed visiting with students at several local school in the district last week including 5th graders at Mesa Elementary, the Thornton High School Health Center, and Adams County Head Start.

I held a mock legislative session with the students at Mesa Elementary and they asked me several questions about my job as a member of Congress.

At Thornton High School, I learned about school-based health centers and how they can help keep students in school. A new health center will be opening at the school in the fall.

PROTECTING PUBLIC LANDS AND NATIONAL TREASURES

President Trump signed an executive order this week asking the Interior Department to review national monument designations dating back to 1996 that are more than 100,000 acres. Colorado is home to eight national monuments encompassing more than 440,000 acres including the Canyons of the Ancients, which comes under scrutiny by the Trump Administration because it spans more than 176,000 acres. Dinosaur National Monument is more than 210,000 acres but is partially in Utah.

As the Denver Post reported earlier this week, the Canyons of the Ancients has more than 6,000 Ancestral Puebloan cliff dwellings, kivas and rock paintings, and is a big tourism attraction for the Four Corners region, drawing about 30,000 visitors a year. Two studies by Headwaters Economics found that a national monument designation goes hand-in-hand with economic growth.
These public lands and national monuments are a significant contributor to our state's economy. We need to protect our public lands and national treasures, not find ways to roll back those protections.

Micah – hope you had a nice weekend. See below for a few further edits. I believe NTL -4A is a guidance so I switched that from order. Let me know if you have any questions.

April xx, 2017

Dear Senator Portman:

Thank you for your letter regarding the Department of the Interior's (DOI) Methane and Waste Prevention Rule. I, too, believe DOI has an integral role to play in this issue, which is why I intend to act within my authority as Secretary to craft solutions that incentivize responsible development.

I share your concerns regarding methane waste and I agree that we must manage our public lands in a pragmatic way. Should you and your Senate colleagues choose to rescind the rule through the Congressional Review Act (CRA), the Bureau of Land Management (BLM) will continue to have the authority to meaningfully update its policies to reduce methane waste. If a CRA is passed, the BLM will continue to regulate venting, flaring, and beneficial use of gas pursuant to the DOI guidance known as NTL-4A[1]. The world has changed a lot since these regulations were first implemented. I will update and revise the NTL-4A guidance or initiate a new rulemaking process, because the Department is—and will remain—committed to reducing methane waste.

You asked me in your letter about specific concrete actions that the Department would take in the absence of the current Methane and Waste Prevention Rule. The Department would pursue, among other options, the following strategies:

- Engaging in a robust assessment of all venting and flaring requirements to ensure the industry conserves resources and prevents waste, and so the taxpayer is assured the fair value of royalties. This includes, and is not limited to:
    - Criteria for approving venting and flaring
    - Venting and flaring thresholds
    - Venting and flaring time limits
    - Beneficial use
    - Royalty requirements

· Strengthening policies to encourage companies to capture methane to be used for other purposes, such as the beneficial use of methane on lease for generating power, powering equipment, and compressing or treating methane.

· Tightening restrictions on the flaring of unmarketable methane from oil wells;

· Conserving unsold methane by reinjection into the existing well for enhanced oil recovery or for later recovery;

· Expediting approval for methane pipeline and gathering infrastructure;

· Eliminating BLM policies that conflict with or duplicate flaring restrictions in states like North Dakota, Wyoming, Utah, New Mexico, Colorado, and Montana.

I have been tasked to lead and plan for the Department's future over the next 100 years. As an admirer of President Teddy Roosevelt, you can rest assured that the policies I propose will reflect the promises I made to you and your colleagues during my confirmation hearing: we will work together to ensure the use of our public lands reflects higher purpose so that our children's children can look back and say, "We did it right." Under my leadership, the Department will take important steps to

reduce methane waste, and we will do that without hurting job creation and economic growth. Thank you for your interest in this issue, and thank you for your letter.

Sincerely,

Secretary Ryan Zinke

Subcommittee on Federal Lands (x 6-7736)

Hearing: Oversight hearing on *"Examining the Consequences of Executive Branch Overreach of the Antiquities Act."*
May 2, 2017 at 10:00 AM; 1324 Longworth HOB.

The Subcommittee on Federal Lands will hold an oversight hearing to hear testimony on *"Examining the Consequences of Executive Branch Overreach of the Antiquities Act"* on Tuesday, May 2, at 10:00 a.m. in 1324 Longworth House Office Building. The hearing will focus on reviewing national monuments designated without significant local input or support and national monuments with excessively large or restrictive designations.

Policy Overview

- Presidents of both parties have exceeded the intent and law of the Antiquities Act since its enactment in 1906 to designate increasingly large and restricted areas of land.

- Originally intended to protect rare, sacred Native American burial grounds and endangered archeological sites, Presidents now routinely use the Antiquities Act to lock up millions of acres of land and water from public access, energy development, timber production, grazing, fishing and other uses.

- President Obama's excessive use of the Antiquities Act locked up nearly *554 million acres* of land and water--more than any other Administration in history, and resulted in designations that prioritized legacy-building over state and local input and support.

- Widely opposed designations in Maine, Utah, Oregon, and California exemplify the negative results that unilateral national monument designations can force on local communities through elimination of multiple-use, loss of rural jobs, and restricted recreational access.

Invited Witnesses

The Honorable Paul LePage
Governor, The State of Maine
Augusta, Maine

Ms. Kathleen Clarke
Director, Utah Public Lands Policy Coordinating Office
Former Director, Bureau of Land Management
Bountiful, Utah

Mr. Knox Marshall
Vice President of Resources, Murphy Company
Eugene, Oregon

Mr. Lucas St. Clair
President, Elliotsville Plantation, Inc.
Portland, Maine

Background

At the beginning of the 20th century, vandals and robbers began looting sacred Native American burial grounds and archeological sites throughout the territories in the Southwest. The destruction of archeological artifacts prompted Congress to enact the Antiquities Act of 1906, which authorized the President to designate national monuments on federal lands containing "historic landmarks, historic and prehistoric structures, or other objects of historic or scientific interest."[1] The law also specified that national monuments "be confined to the smallest area compatible with proper care and management of the objects to be protected."[2] Furthermore, the President could only designate national monuments "upon the lands owned or controlled by the Government of the United States."[3]

The Act granted Presidents the flexibility to quickly protect small Native American sites in imminent danger from looting and destruction.[4] President Theodore Roosevelt designated the first National Monument, Devils Tower, in 1906. Since that time, Presidents have broadly interpreted the Antiquities Act to expand both the size and justifications for National Monument designations, despite the 1906 Congressional Record plainly reflecting Congress's clear intent to limit the size of the designations.[5]

Presidents have used their authority under the Antiquities Act 233 times to establish and enlarge 157 National Monuments totaling 840.4 million acres, or roughly 10 times the size of the entire National Park System.[6] Although the National Park Service (NPS) primarily manages National Monuments, in recent decades the majority of National Monuments have been placed under the management of agencies like the Bureau of Land Management (BLM), U.S. Forest Service (FS), and the U.S. Fish and Wildlife Service (FWS). Although presidential declarations create most national monuments, Congress has also established 45 national monuments, including Appomattox (1935), Badlands (1929), and Biscayne (1968).

[5] In their discussions of the bill, Congressmen Lacey and Stephens debated whether Presidents would eventually abuse the Antiquities Act Congressman Lacey, the bill's sponsor, reassured the bill provides that reservations "shall be the smallest area necesstry [sic] for the care and maintenance of the objects to be preserved," Congressional Record, 1906, https://coast noaa gov/data/Documents/OceanLawSearch/Congressional%20Record_House%20&%20Senate%201906 pdf?redirect=301ocm
[6] Information provided by the Congressional Research Service

In its 111-year history, Congress amended the Antiquities Act only twice to enact statutory restrictions on the President's authority to designate National Monuments. The first, passed in 1950, prohibits the designation of National Monuments in the State of Wyoming. The second restriction, passed in 1986, requires prior Congressional approval of executive land withdrawals in the State of Alaska exceeding 5,000 acres.[7] These actions followed the controversial declarations of Jackson Hole National Monument by President Franklin Roosevelt and President Carter's establishment of several monuments in Alaska, respectively.

The Antiquities Act pre-dates the establishment of 5 states, including New Mexico and Arizona, the establishment of the National Park Service, and the creation of major environmental and archeological resources protection laws. Since the creation of the Antiquities Act, Congress and the executive branch enacted over one dozen new statutes and regulations rendering protections under the Act outdated.[8]

On April 26, 2017, President Trump signed a Presidential Executive Order directing the Secretary of the Interior to review all unilateral national monument designations "made since January 1, 1996, where the designation covers more than 100,000 acres, where the designation after expansion covers more than 100,000 acres, or where the Secretary determines that the designation or expansion was made without adequate public outreach and coordination with relevant stakeholders."[9] The Executive Order directs the Secretary to recommend any necessary legislative or administrative changes to those designations. This Executive Order itself makes no changes to any national monuments, and will not affect the ownership of the land in the event the administration decides to reduce or rescind certain national monuments.

Modern Abuses of the Antiquities Act

Over the past eight years, President Obama used the Antiquities Act 34 times to lock up **553,599,880 acres** of land and water as national monuments--representing 66% of all of the land and water ever designated as a national monument using the Antiquities Act. This is more than any other administration in history.[10]

[10] President Obama's total acreage equates to 189,589 acres designated as a national monument for every day he was in office, or an area roughly equivalent to the size of Delaware for every month of the Obama Administration

Katahdin Woods and Waters National Monument

On August 24, 2016, President Obama designated 87,563 acres in central Maine as the Katahdin Woods and Waters National Monument. One day prior to the designation, Elliotsville Plantation, Inc. donated the land to the Department of the Interior (DOI) with the intention of eventually converting the area to a National Park.[11] Nearly twice the size of Acadia National Park, the Katahdin Woods and Waters National Monument became the largest parcel of federal land in a state that has just 1.1% federal land ownership.[12]

The effort to create a National Park in this area began over two decades ago with a proposal to create a 3.2 million acre National Park, the second largest in the continental U.S.[13] Varied other proposals have included the creation of a 150,000 acre National Park and National Recreation Area. In 2002, to facilitate the creation of a National Park, Roxanne Quimby, the founder of Burt's Bees,[14] established Elliotsville Plantation, Inc. According to media accounts, after acquiring land for the proposed park site, Elliotsville Plantation evicted campers, burned down cabins, and closed the area to the "hunters and to the snowmobilers who had long relied on it for north-south access."[15] These actions were strongly opposed in the surrounding communities who were concerned a National Park would restrict snowmobiling, hunting and the local timber industry, and in 2016, residents of East Millinocket, Medway, and Patten voted resoundingly against the proposed National Park.[16]

After the National Park proposal failed to gain traction in the state, Elliotsville Plantation, Inc., led by Mr. Lucas St. Clair, shifted its focus toward designating the land as a National Monument under the Antiquities Act. The National Monument proposal faced significant opposition in the State of Maine. No Member of Congress introduced a bill studying the creation of or designating the land as a National Park or National Monument. Comparatively, every NPS National Monument designation made by President Obama prior to the designation of Katahdin Woods and Waters National Monument had corresponding legislation in Congress either establishing the area as an NPS unit or authorizing a special resource study.[17]

On November 20, 2015, Maine Senators Collins and King and Representative Poliquin, wrote President Obama to express "serious reservations and significant concerns" about the proposed monument.[18] Later that year, the Maine State Legislature passed L.D. 1600, a bill opposing the creation of a National Monument in Maine, sponsored by Rep. Stephen Stanley (D-Medway), by bipartisan votes in both the House and Senate.[19] On June 1, 2016, the Committee on Natural Resources held a field hearing in East Millinocket, Maine, on the proposed National Monument designation entitled *"Elevating Local Voices and Promoting Transparency for a*

[19] L D 1600, Maine State Legislature, http://www mainelegislature org/legis/bills/bills_127th/billtexts/HP109102 asp At a listening session between locally-elected officials from the towns surrounding the National Monument and NPS, only 2 of the 75 attendees voiced support for a designation See: Sambides, Nick "Maine people weigh in on proposed national monument at packed forums " 05/17/16 https://bangordailynews com/2016/05/16/news/state/maine-people-weigh-in-on-proposed-national-monument-at-packed-forums-in-orono-east-millinocket/

Potential Monument Designation in Maine."[20] During the hearing, numerous state and locally-elected officials representing the area, along with witnesses from sportsmen and snowmobiling groups, expressed significant concerns about the National Monument proposal. Although multiple proponents of the National Monument, including Mr. St. Clair, were repeatedly invited to testify at the hearing, they declined to attend.

Map 2: Source: The Boston Globe, National Park Service, Wilderness.org

Among the concerns raised, opponents of the National Monument argued it was an unsuitable addition to the National Park System. Many believed Ms. Quimby's status as a Board Member of the National Park Foundation would grant her unfair influence in the decision. Furthermore, NPS currently faces an $11.927 billion deferred maintenance backlog and any new land acquisition would add to that total. In Acadia National Park alone, NPS boasts a $68.25 million deferred maintenance backlog. Along with the land donation, Elliotsville Plantation, Inc. created a $20 million endowment to maintain the National Monument and pledged to raise an additional $20 million in donations. Although the endowment helps alleviate some costs of maintaining the land, the entire endowment would still not be sufficient to cover the deferred maintenance backlog of Acadia National Park.

Mainers also expressed concerns about the National Monument's impact on the local forest products industry and the subsequent effects on rural economies in central Maine. Since the early 1800's, the land in central Maine has been a working forest that supports the local communities. The current gateway community to the National Monument, Millinocket, started in 1989 with the creation of Great Northern Paper, the largest paper mill in the world at the time. In Maine, the forest products industry creates an $8 billion impact on the economy and supplies 1 in 20 jobs in the State.[21] Furthermore, Maine could soon experience a large spruce budworm outbreak that could kill thousands of acres of the spruce-fir forest within the National Monument.[22] Lack of active management of the forests within the National Monument could cause this epidemic to spread and potentially kill thousands of trees on state and private land.

Proponents of the National Monument suggested that jobs related to increased tourism would supplant the forest products industry. However, most of the promised tourism jobs are low-wage and seasonal.[23] Furthermore, according to NPS data from 2017, National Parks created almost six times as many jobs and had an economic output nearly $8 billion greater than NPS-operated

[23] In his analysis about the tourism economy in Maine, Thomas McLaughlin, a professor in the School of Social Work at the University of New England, stated: "Lost in all this good news [about rising tourism spending] is the percentage of the population who rely on seasonal work as employees to make ends meet throughout the entire 52 weeks While a small percentage of the workers may have access to overtime, most will work 30 to 40 hours per week during the 10-week summer period At minimum wage, this means, at most, the worker could gross $3,000 in a 10-week period For most families in Maine who have two seasonal workers, this means a "good summer" would be $6,000 of full-time work, then sporadic hours during the remaining 42 weeks during the year Most of these seasonal workers live well below the poverty line This means summer earnings must be saved and past due bills paid during the good times "Thomas McLaughlin, "How Maine's seasonal workers could benefit more from summer tourism", Bangor Daily News, 07/26/17, http://bangordailynews com/2016/07/25/opinion/contributors/how-maines-seasonal-workers-could-benefit-more-from-summer-tourism/

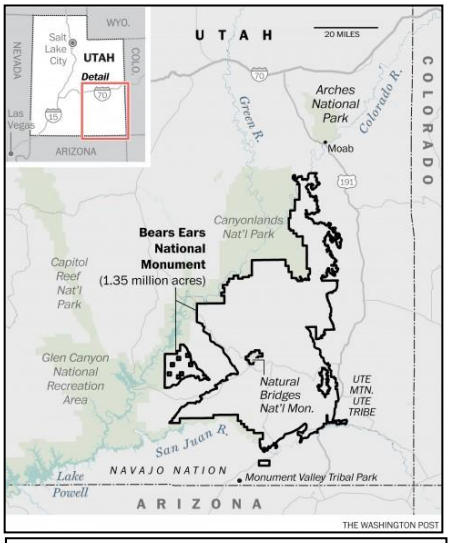
National Monuments.[24] On average, National Parks also hosted over 46.7 million more visitors than National Monuments.[25]

Further hindering economic potential, the National Monument restricts traditional recreational uses of the land, including hunting[26] and snowmobiling,[27] and in some cases, the deeds failed to include protections for pre-existing snowmobiling routes in the National Monument.[28] As of April 2016, NPS advises that the National Monument includes limited amenities and spotty or non-existent cell phone coverage. Currently, there is also no wheeled access to the National Monument, two access roads are gated by NPS, and NPS halted all grooming for snowmobiling and skiing.[29] In November 2016, NPS closed Loop Road, a main attraction in the National Monument, due to snowfall, and have yet to reopen the route.

In a letter dated February 14, 2017, Governor LePage asked President Trump to "undo the [National Monument] designation and return the land to private ownership before economic damage occurs and traditional recreational pursuits are diminished."[30]

Bears Ears National Monument

President Obama designated the Bears Ears National Monument in San Juan County, Utah, during the final weeks of his administration. The National Monument, totaling 1,351,849 acres, covers an area larger than the State of Delaware.[31]



Map 3: Source: Washington Post

The push for a National Monument in southeastern Utah began in October 2014 during a meeting of the Conservation Lands Foundation (CLF) in San Francisco, California. During the meeting, CLF discussed the prospects of designating a national monument in southeastern Utah and agreed to call the National Monument 'Bears Ears', "to move away from a Navajo name."[32] CLF expressed concerns about "hitching [their] success to the Navajo" in the event that local Navajo in San Juan County disagreed with the group's proposals.[33] The campaign to designate Bears Ears as a national monument received millions of dollars in donations from out-of-state environmentalists, including $20 million in donations from the Hewlett and Packard foundations and a portion of $15.6 million in grants from the Leonardo DiCaprio Foundation.[34] Outside organizations also heavily supported

the Bears Ears Inter-Tribal Coalition, a group representing five tribes that supported a National Monument designation, by creating their website, crafting maps of their National Monument proposal, and sending out their press releases and contacting the media.[35] According to Blanding City Manager Jeremy Redd, "This is not a grass-roots Native American effort to protect sacred lands. This is an effort by environmental groups to get what they want. … People feel like they are being run over by the money and the organization that these special interest groups have. Sadly, local people don't have that kind of money behind them." San Juan County Commissioner Rebecca Benally, a Diné and Navajo woman, testified on the record during a Natural Resources Committee hearing last September that:

> "Bears Ears National Monument campaign is a cynical political stunt that, if successful, will deny grass roots Utah Navajos access to their sacred and spiritual grounds. Traditional Utah Navajo people depend on that land for their necessities of life: to gather medicinal plants, fire wood, piñon nuts, as well as to hunt and practice sacred ceremonies. Traditional Utah Navajo people are not conspiring with lawyers in board rooms in Salt Lake City and San Francisco. Traditional Utah Navajo people are not collecting $20 million from the Hewlett and Packard foundations and Leonardo De Caprio to sponsor this toxic divide-and-conquer campaign. Traditional Utah Navajo people are not magazine environmentalists but are real stewards of the land whose interests will be destroyed by a Bears Ears National Monument. Grassroots Utah Navajo people do not support this effort to convert our sacred lands into a federal designation that will subjugate them to micromanagement by bureaucrats in Washington DC."

Since the designation, out-of-state groups and corporations have continued campaigns aimed at maintaining the Bears Ears designation. Outdoor Retailer economically retaliated against the local opposition to Bears Ears National Monument by pulling its $45 million industry shows out of the State.[36] Patagonia, the $800 million outdoor clothing retail corporation, funneled millions of dollars into grants and videos about the new National Monument.[37] After the April executive order reviewing national monument designations, Patagonia stated its intention to continue fighting any diminishment of the National Monument's boundaries.

The National Monument proposal faced enormous opposition in the state of Utah. In a poll conducted in May 2016, only 17 percent of Utahans favored the President designating Bears Ears as a National Monument.[38] No members of the Utah Congressional delegation or the Governor supported the unilateral designation and were not meaningfully consulted on a national monument proposal prior to the designation. The Obama Administration failed to offer any concrete plans or details about the designation to members of the Congressional delegation, despite repeated requests on the record to discuss the future of the area. In a 2016 Subcommittee on Oversight and Investigations hearing, Council on Environmental Quality (CEQ) Chair Christy Goldfuss refused to discuss the Administration's plans for Bears Ears:

> "CHAIRMAN BISHOP: Is CEQ actively working on a national monument proposal for Bears Ears in San Juan County in my State?

[35] Ibid

MS. GOLDFUSS. I cannot talk about any specific proposals that we are working on out of CEQ or out of the Administration with regard to national monuments."[39]

In addition, at a Committee on Natural Resources oversight hearing on March 1, 2016, Secretary Jewell stated President Obama had no prior intentions of designating any national monuments:

> "DR. GOSAR: How many more new national monuments does this Administration plan to designate this year? What are the names and geographic locations of potential monuments being considered?
> SECRETARY JEWELL: That is entirely up to the President of the United States. There are many people that come through the doors saying, "We would like you to look at monuments." There are, you know, assessments that happen from across the country of interest. They go directly to the White House.
> DR. GOSAR: So let me stop you there. *So, the President hasn't given you any detailed leanings, one way or the other?*
> SECRETARY JEWELL: *The President has not.*
> DR. GOSAR: *Absolutely zippo?*
> SECRETARY JEWELL: *Absolutely zippo."*[40] (emphasis added)

In a written response to a Senator's question, the former Acting Assistant Director of the National Landscape Conservation System and Community Partnerships for BLM, denied any knowledge of plans to designate national monuments such as Bears Ears.[41]

Given the Administration's use of the Antiquities Act, this "midnight monument" designation did not come as a surprise to many local residents.[42] However, these transcripts point to a clear lack of coordination and consultation between the Administration and members of the delegation on the National Monument and demonstrate the total lack of transparency in the designation process.

Local San Juan County tribes and residents also voiced overwhelming opposition to a National Monument designation under the Antiquities Act. In May 2016, the Blue Mountain Dine' Community unanimously passed a resolution against the proposed National Monument, stating they disagreed "that the creation of an Inter-Tribal National Monument will be in the best interests and welfare of not only local Navajo people, but of all locals who love the land of their heritage."[43] The Aneth Chapter of the Navajo Nation, based in San Juan County, also passed a resolution opposing the unilateral National Monument designation.[44] One hundred San Juan County residents signed a petition endorsing a National Conservation Area over a National

Monument, in part because it offered "the greatest recognition/protection of our sacred sites and cultural resources that are existing in the proposed designated area."[45]

In a letter to Interior Secretary Zinke after the designation, a community organization, Stewards of San Juan County, stated, "The majority of Navajo and Ute residents in San Juan County overwhelmingly oppose the monument designation, in contrast to out-of-county/state tribes who know very little of this area and will simply not be affected by this monument. It is appalling that non-local voices have drowned out those who treasure this land the most." The group later continued, "This monument was designated in order to appease outside special interest groups. It was done WITHOUT a robust consultation with the stakeholders who actually live in San Juan County. Voices of life-long residents and tribal members have been, and continue to be, blatantly ignored."[46] After the designation, Suzette Morris, a Ute Mountain Ute member and Vice President of Stewards of San Juan County, stated, "We have cemeteries up there and I don't want our ancestors to be put in museums" and "We all have a fight and we all are going to continue to fight for this to be rescinded."[47]

According to previous statements on the record, the National Monument designation likely fell short of expectations of even the most vocal National Monument supporters. A major point of contention during the debate over a National Monument versus a National Conservation Area revolved around the ability to allow the tribes to co-manage the land. Since its establishment, some supporters of the National Monument falsely claim the designation allowed the first ever tribal co-management of a National Monument. However, the tribes do not currently co-manage the land and the words "co-management" do not appear anywhere in the text of the proclamation.[48] Instead, the proclamation creates the Bears Ears Commission, a standard advisory committee created using authority under the Federal Advisory Committee Act, not the Antiquities Act.[49] The proclamation states that the Commission will "provide guidance and recommendations" on the management of the National Monument, but stops short of actually allowing the tribes to partner with the BLM and FS to manage Bears Ears.[50]

After the release of a Secretarial Order promoting the role of tribes in the management of lands, Willie Grayeyes, Chairman of Utah Dine Bikéyah, stated that, "I would have to read [the Secretarial Order], but *if it is less than co-management, I think it would fall short of our goal*."[51] (emphasis added) Additionally, in testimony before the Committee on Natural Resources, Regina Lopez-Whiteskunk, the Co-Chair of the Bears Ears Inter-Tribal Coalition, stated that a key reason the BEITC supported unilateral executive action over the Public Lands Initiative process was the acreage size for the National Monument. In her written testimony, she stated that BEITC's "call to protect 1.9 million acres is already a conservation request. *Anything less is tantamount to destruction of sacred sites that the identities of native people are affixed to*."[52] (emphasis added) Despite the administration failing to follow through on these core aspects of

[52] Regina Lopez-Whiteskunk, Testimony before the House Committee on Natural Resources Subcommittee on Federal Lands, Hearing on H R 5780, Utah Public Lands Initiative Act, 09/14/16

their proposal, BEITC and Utah Dine Bikéyah supported the National Monument after its creation.

Prior to the unilateral designation of the National Monument, Natural Resources Committee Chairman Bishop and Oversight and Government Reform Committee Chairman Chaffetz proposed two alternative National Conservation Areas to protect the Bears Ears area in H.R. 5780, *"Utah Public Lands Initiative Act."* The process to craft the solution, which lasted over three years and involved over 1,200 meetings with stakeholders, drew widespread support from locals in San Juan County. This solution offered the only permanent protection for the Bears Ears area and the only legal mechanism to allow the tribes to co-manage the land. The Bears Ears National Conservation Area language focused on creating the necessary footprint to preserve the archeological resources and objects of antiquity within Bears Ears, while also allowing the tribes access to sacred sites and preserving traditional tribal uses of the land. The Indian Creek National Conservation Area focused on allowing outdoor recreation and preserving traditional uses of the land, such as grazing. On September 22, 2016, the Committee on Natural Resources successfully reported H.R. 5780 out of Committee by a vote of 21-13. During the markup, an amendment offered by Ranking Member Grijalva striking the section of the bill related to Bears Ears failed on a bipartisan vote of 11-19.[53]

As in the case of Grand Staircase-Escalante 20 years earlier, the National Monument designation locked up 109,000 acres of Utah School and Institutional Trust Land Administration (SITLA) land, which benefits Utah public schoolchildren.[54] Scattered across Utah in a checkerboard pattern, SITLA land derives revenues from activities such as energy and mineral resource development, grazing, and timber production. The funds from these revenues go into the State School Fund, "a permanent income-producing endowment created by Congress in the Utah Enabling Act for the support of the state's K-12 public education system."[55] In the past 20 years, revenue from SITLA's lands generated over $1.7 billion in revenue for Utah's public schoolchildren.[56] According to Dave Ure, SITLA's Director, "Approximately 64 percent of our state is federal public land, while only six percent is trust land."[57] This means that any designation that stunts the growth in revenue from SITLA lands will have far-reaching consequences for public schoolchildren across the state. Resolving this situation and freeing up the SITLA land will require "identification of possible exchange lands, negotiations, appraisals, adherence to the National Environmental Policy Act (NEPA), and approval by the Utah Legislature and likely the U.S. Congress."[58] Previous exchanges took up to 9 years to complete.[59]

While proponents of the National Monument claim it will bring new economic opportunities to San Juan County, this appears unlikely. San Juan County already home to a National Park, a National Forest, a National Recreation Area, and three National Monuments.[60] Despite this seemingly expansive tourism economy, San Juan County is still the poorest county

in Utah, with 28.5% of its population living in poverty--more than double the state average.[61] In order to truly prosper, San Juan County needs to diversify its economy and attract full-time, high-paying jobs. Furthermore, since the designation, groups have already attempted to limit outdoor recreational access, which would bring additional revenue to the area. For example, a coalition of environmental groups initiated litigation blocking previously approved recreation access to the National Monument. In March 2017, a judge halted the creation of a 6.4 mile ATV trail the County worked on for over a decade.[62] The State of Utah, San Juan County, and the BLM are fighting the decision.

After the President's signing of the Executive Order on the Antiquities Act, DOI Secretary Zinke announced his intention to offer a recommendation on maintaining, modifying, or rescinding Bears Ears National Monument to the White House within 45 days.[63] Secretary Zinke said, "For years, the people of Utah and other rural communities have voiced concern and opposition to some monument designations. But too often in recent history, exiting presidents make designations despite those concerns. And the acreage is increasing." In a poll released the day before the executive order, a majority of Utahans supported a reduction or rescission in the size of Bears Ears, with a plurality of Utahans responding they "definitely" supported the action.[64]

Grand Staircase-Escalante National Monument

On September 18, 1996, during the waning months of his first term, President Clinton designated 1.7 million acres in Utah as the Grand Staircase-Escalante National Monument during a ceremony on the South Rim of the Grand Canyon. After generally consolidating national monuments under the National Park Service, Grand Staircase-Escalante represented the first BLM-managed national monument.[65]

The designation immediately kicked off a massive controversy in the State of Utah. The Governor, members of the Congressional delegation, and residents of Utah all expressed outrage at the lack of prior consultation or warning of the designation. Utahans previously worked on proposals to protect the land and were stunned when the designation happened and uprooted those plans. For Utahans, their unhappiness was not a result of not wanting to preserve the environment; "on the contrary, they [understood] that their state is worthy of preservation and [took] measures to assure that proper regions of their state have necessary protection. However, President Clinton's unilateral designation of Grand Staircase as a national monument severely conflicted with many of the uses that national, state, and local governments had planned for the land."[66] The Governor at the time, Mike Leavitt, testified before Congress that:

> "At two o'clock eastern time, the President stood at the north rim of the Grand Canyon to announce the creation of the Grand Staircase-Escalante National Monument and its 1.7 million acre expanse of Utah's Garfield and Kane Counties. As has been mentioned, no

> Member of Congress, no local official, or had the Governor ever been consulted, nor had the public. As the Governor, I had not seen a map. I had not read the proclamation, or, for that matter, was I even invited. This isn't about courtesy, it is about process. It is about public trust. A major land decision, perhaps the biggest land decision that has been made or will be made in the next two decades, had occurred. Obviously, this is not the way public land decisions should or were ever intended to be made."[67]

According to Senator Orrin Hatch, the Administration assured him "in a meeting just a week prior to the President's announcement that the leaks concerning a designation of a monument in Utah were not true, and that no such action was contemplated. If it were, we were told, the Utah Delegation would be fully apprised and consulted."[68] Prior to the designation, the Clinton Administration held no town halls, public meetings, or public comment sessions in Utah and did not receive any input from local stakeholders or land managers in the area. Perhaps most egregiously, the Administration only kept the designation a secret from members of *Utah's* Congressional delegation. CEQ reached out to former Senator Harry Reid (D-NV), Governor Roy Romer (D-CO), Rep. Bill Richardson (D-NM), and Governor Bob Miller (D-NV) to get feedback on the proposal and even questioned if "there [were] Democratic candidates [they] should alert" about the designation.[69] Over a week before the designation, CEQ staff notified reporters at the Washington Post about the designation while simultaneously assuring the Utah delegation that no decision had been made yet.[70]

The Clinton administration clearly established the National Monument for political, not archeological, purposes. According to correspondence obtained by the Committee, former Clinton CEQ Chair, Katie McGinty, expressed hesitation about the designation and said, "I'm [sic] increasingly of the view that we should just drop these utah [sic] ideas. we [sic] do not really know how the enviros will react and I do think there is a danger of ''abuse'' of the withdraw/antiquities authorities especially because these lands are not really endangered."[71] She also wrote to the President that the action "would help overcome the negative views toward the Administration created by the timber rider. Designation of the new monument would create a compelling reason for persons who are now disaffected to come around and enthusiastically support the Administration."[72]

The designation of the Grand Staircase Escalante National Monument resulted in devastating consequences for the surrounding communities. In a study conducted by Utah State University, researchers found that the reduction in grazing alone resulted in a loss of 81 jobs and $9,101,801 in economic input yearly in Garfield and Kane Counties.[73] However, the largest losses in economic output and jobs came from the reduced potential for energy and minerals development. According to a study from the Utah Geological Survey, the value of potential energy mineral resources in Grand Staircase-Escalante totals between **$223 billion and $330 billion,** including $221-321 billion of coal, $2 billion-$17.5 billion of coal-bed gas, $20 million-

$1.1 billion of petroleum, and at least $4.5 million of other minerals.[74] This amounts to an estimated 62 billion tons of coal, 2.6-10.5 trillion cubic feet of methane, and 270 million barrels of oil.[75] At the time of the designation, companies including Andalex, PacifiCorp, and Conoco Oil, had 89 oil and gas leases covering 137,700 acres and 22 coal leases covering 59,100 acres.[76] The National Monument directly prevented the creation of a planned coal mine, costing the area 1,100 jobs.[77] The lost royalties impacted every level of government, with Conoco estimating that the development of a 150 million barrel oil field would have resulted in $864 million in royalties, including $313 million for the state, $33 million for SITLA, and $94 million for the counties.[78]

One of the most controversial aspects of the designation involved the inclusion of roughly 176,000 acres of SITLA land in the exterior boundaries of the National Monument. The White House was not aware of the existence of SITLA land "or their importance" and needed an explanation of their benefits to schoolchildren the day before the National Monument's designation.[79] According to the Utah Geological Survey, "the value of the recoverable coal on School Trust lands [was] at least $17 billion but could [have been] $25 billion or more" with potential royalties worth $1.4-$2 billion.[80] Years later, in order to compensate the State of Utah, SITLA received 145,000 acres of land outside of the National Monument and a $50 million cash equalization payment.[81]

Over 20 years after the designation, the National Monument still creates serious problems for the local communities. On June 22, 2015, Garfield County Commissioners declared a state of emergency due to declining enrollment in the County's schools.[82] Since the designation, enrollment in the Garfield School District dropped by 300 students and the student body in Escalante High School declined by two-thirds.[83] In the resolution declaring the state of emergency, Garfield County cited the National Monument and federal land management policies as the reason for "virtually eliminat[ing] historic social and economic stability in Garfield County's communities and families."[84] Management of the National Monument also continues to present challenges to BLM and local communities. A 2014 Manager's Report highlighted the management difficulties at the National Monument by stating, "Increased backcountry visitor impacts include increased graffiti, human waste issues, water quality concerns and parking congestion."[85] According to BLM, over a 10 year period, Grand Staircase-Escalante experienced 78 separate incidents of vandalism, theft, or damage and destruction of archeological and natural resources.[86] In 2015 alone, rangers removed more than 1,234 square feet of graffiti.[87] In comparison, before its designation as a National Monument, Bears Ears only experienced 1

incident of vandalism over 5 years.[88] On February 17, 2017, Governor Herbert signed H.C.R. 12, a bipartisan state law urging a federal reduction in the size of Grand Staircase-Escalante.[89]

Cascade-Siskiyou National Monument

On June 9, 2000, President Clinton designated Cascade-Siskiyou National Monument in southwestern Oregon. President Obama expanded the National Monument by 47,624 acres, including 5,275 acres in California, as one of his last uses of the Antiquities Act on January 12, 2017. A major concern with the designation involved the massive amount of private land included in the boundaries of the National Monument. President Obama's expansion added 32,977 acres of private land to the National Monument, in addition to the approximately 19,000 of private land already within the National Monument's original footprint.[90]

Currently, Murphy Company, a forest products company, and the Association of O&C Counties are suing over the designation, arguing the expansion illegally overlaps with Oregon and California Railroad lands (O&C Lands). According to a 1940 opinion from DOI Solicitor General Nathan R. Margold, the President does not possess the authority to designate a National Monument on O& C Lands, stating:

> "There can be no doubt that the administration of the lands for national monument purposes would be inconsistent with the utilization of the O. and C. lands as directed by Congress. It is well settled that where Congress has set aside lands for a specific purpose the President is without authority to reserve lands for another purpose inconsistent with that specified by Congress."[91]

Roughly 40,000 acres of the 48,000 acre expansion overlap O&C Lands that are meant for the sustained yield of timber production.[92] Congress passed the O&C Lands Act in 1937 for "permanent forest production" and stated "the timber thereon shall be sold, cut, and removed in conformity with the principal of sustained yield for the purpose of providing a permanent source of timber supply, protecting watersheds, regulating stream flow, and contributing to the economic stability of local communities and industries, and providing recreational facilities."[93] 50 percent of the revenues from O&C Lands go directly to the Counties, which pay for "essential public services of all kinds, from public safety such as sheriff patrols and jails to public health programs and libraries."[94] When these lands are taken out of multiple-use, the Counties face extreme budget shortfalls that negatively impact residents in the surrounding rural communities.

The restrictions from the National Monument expansion will not only harm the local forest products industry, but also make science-based management of the forest a near impossibility. Active management is critical to resilient forest health and preventing catastrophic wildfires in the face of drought, insects, and disease. The National Monument designation will

not only prevent commercial timber harvesting, but also essential forest management activities such as thinning.[95] In a scientific study conducted in 2014, researchers categorized most of the lands in the National Monument footprint as having moderate (25-45%) to high (45-65%) active restoration needs.[96] Potentially exacerbating these conditions are the restrictions on transportation within the National Monument and reduced funds to maintain and repair infrastructure, which could severely limit access for firefighters in the event of a catastrophic wildfire.[97] According to testimony provided by the American Forest Resource Council, "Because these are dynamic ecosystems – and the boundaries of the monument are not – catastrophic fire is not a matter of "if." It is a matter of when."[98]

Grazing presents another challenge with the National Monument's expansion. President Clinton's original designation of Cascade-Siskiyou specifically targeted grazing and ordered BLM to study grazing's impact on biological diversity in the National Monument.[99] After the original designation, the permitted animal unit months (AUMs) fell from 2,714 to 101, covering 47,281 acres.[100] Many ranchers reluctantly agreed to receive buyouts because the regulations impacting their grazing operations became too burdensome and were threatening their profitability.[101] In testimony provided to the Committee, Jackson County, Oregon, reported that one rancher loses nearly $170,000 per year because restrictions on transportation in the National Monument prevent him from reaching his 360 acres of lands leased for grazing.[102] After the expansion of the National Monument, many ranchers faced renewed concerns that the designation would prevent ranchers from "properly maintain[ing] fences, water structures and other range improvements, diminishing the land's suitability for grazing."[103]

Several groups and individuals in Oregon and California opposed the expansion including Chairmen Greg Walden (R-OR-02), Tom McClintock (R-CA-04), and Doug LaMalfa (R-CA-01), Oregon State Senators Herman Baertschiger Jr. and Doug Whitsett, Oregon State Representatives Mike McLane, Carl Wilson, Gail Whitsett, Sal Esquivel, and Duane Stark, Jackson County, Oregon, Siskiyou County, California, Klamath County, Oregon, the Association of O&C Counties, local forestry companies, including the Murphy Company, Medford/Jackson Chamber of Commerce, the Oregon Farm Bureau, the Oregon Cattlemen's Association, Oregon Snowmobilers, Jefferson State 4x4, and the Jackson County Chamber of Commerce.[104] The designation also lacked adequate public input, as the BLM Medford Office never provided "accurate maps and data to enable the public to learn more about how the expansion" would affect the local community.[105]

Secretary Zinke Signs Orders Implementing America-First Offshore Energy Strategy

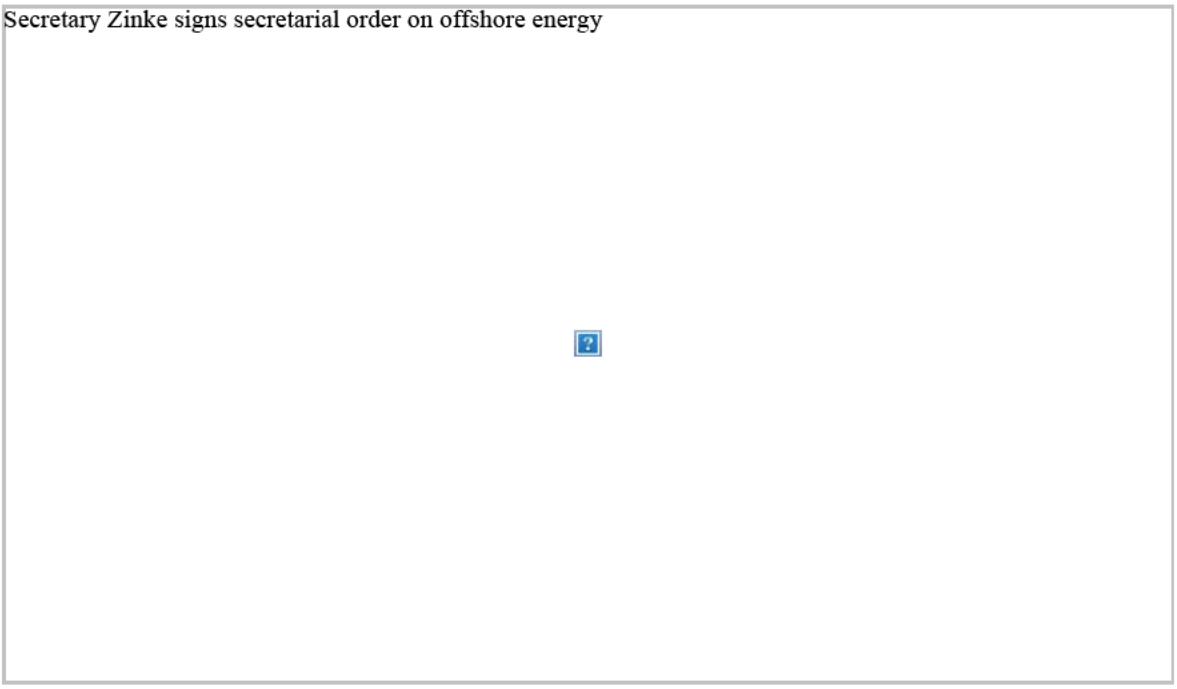
Directs Development of New Five-Year Outer Continental Shelf Oil and Gas Leasing Program to Spur Safe and Responsible Energy Development Offshore

HOUSTON — On the stage of the Offshore Technology Conference, flanked by men and women who work on offshore oil and gas platforms, Secretary of the Department of the Interior Ryan Zinke today signed two secretarial orders aimed at unleashing America's offshore energy potential and growing the U.S. economy. The first order implements President Trump's Executive Order signed Friday and directs the Bureau of Ocean Energy Management (BOEM) to develop a new five-year plan for oil and gas exploration in offshore waters and reconsider a number of regulations governing those activities. The second order establishes a new position – Counselor to the Secretary for Energy Policy – to coordinate the Interior Department's energy portfolio that spans nine of the Department's ten bureaus.

"Following through on the leadership established by President Trump, today's orders will help cement our Nation's position as a global energy leader and foster energy independence and security for the benefit of the American people, while ensuring that this development is safe and environmentally responsible," Secretary Zinke told industry representatives at the annual Offshore Technology Conference in Houston. "We will conduct a thorough review of the Outer Continental Shelf (OCS) for oil and gas exploration and listen to state and local stakeholders. We also will conduct a thorough review of regulations that were created with good intentions but have had harmful impacts on America's energy

security."

Secretary Zinke signs secretarial order on offshore energy



Secretarial Order 3550 directs BOEM to immediately develop a new "Five Year Outer Continental Shelf Leasing Program" with full consideration given to leasing the OCS offshore Alaska, mid- and south-Atlantic, and the Gulf of Mexico. It also directs BOEM to work with the Department of Commerce's National Marine Fisheries Service to expedite authorization requests for seismic surveys, particularly for new or resubmitted permitting applications in the Atlantic to understand the extent of America's energy potential. The Secretary's order also directs prompt completion of the Notice to Lessees No. 2016-N01 dated September 12, 2016, and ceases all activities to promulgate the proposed "Offshore Air Quality Control, Reporting, and Compliance Rule." The order also directs BOEM and BSEE to review a host of other rules and report progress within 21 days.

"We're going to look at everything and make sure the policies are appropriate for each local community, rather than force a Washington-driven one-size-fits-all plan," said Zinke "There's no predetermined map of development, but if there are areas that are acceptable, that have resources, and states and local communities support offshore development, we could include those area in the next 5-Year Program."

As a featured speaker at the Offshore Technology Conference in Houston, TX, on Offshore Energy Policies: Harnessing the Full Potential of America's Offshore, Zinke highlighted that OCS production currently accounts for about 18 percent of domestic crude oil and 4 percent of domestic natural gas supply. In Fiscal Year 2016, federal leasing revenues for the OCS were about $2.8 billion. By contrast, in 2008 federal leasing revenues for the OCS were nearly $18 billion dollars. "That's a drop of more than $15 billion that would otherwise go to the Treasury or toward funding important conservation programs like the Land and Water Conservation Fund and the Historic Preservation Fund," Zinke noted.

"Interior's Bureau of Safety and Environmental Enforcement (BSEE) and Bureau of Ocean Energy Management (BOEM) will play vital roles in this expansive energy policy," Zinke noted while discussing the importance of strengthening frontline staffs to help them work closer with industry and communities. "We are committed to fuller cooperation with the offshore industry and coastal communities to expand responsible energy development while holding industry accountable to strict safety and environmental protections."

BSEE engineers work with offshore operators to carefully review and introduce new technology and ensure that operations remain safe and are conducted responsibly. BSEE inspectors conduct more than 19,000 inspections a year to ensure the safe and environmentally responsible operation of nearly 2,400 offshore oil and gas drilling and production facilities and 27,000 miles of pipeline.

Of the 1.7 billion acres on the OCS, only 16.9 million acres are leased for oil and gas development with 4.4 million of those acres (885 blocks) producing oil and gas. About 97 percent of all OCS leases are currently in the Gulf of Mexico. BOEM estimates the U.S. OCS has about 90 billion barrels of undiscovered technically recoverable oil and 327 trillion cubic feet of undiscovered, technically recoverable natural gas. The Gulf of Mexico, covering 160 million acres of the OCS, has an estimated 48.46 billion barrels of technically recoverable oil and 141.76 trillion cubic feet of technically recoverable natural gas.

United States Senate

WASHINGTON, DC 20510

May 1, 2017

The Honorable Ryan Zinke
Secretary of the Interior
U.S. Department of the Interior
1849 C Street, N.W.
Washington, D.C. 20240

Dear Secretary Zinke,

Over the last decade, advances in technology and engineering have created unprecedented opportunity for the production of oil and natural gas from underground shale formations. This increased production has made the United States more energy secure, lowered gas prices, and created jobs in Ohio and across the country.

Under current law, the Bureau of Land Management (BLM) is responsible for preventing methane waste through venting and flaring as a result of oil and natural gas production on federal land. I believe BLM should be taking actions to reduce and minimize methane waste—but doing that in a way that does not unnecessarily shut down existing production, especially by smaller producers.

Protecting the environment and taxpayer resources while also protecting the jobs and livelihoods of middle-class families should be the balance we seek. I have authored bills that have been signed into law that support our National Park Service, improve water quality, and promote energy efficiency. Each of those bills found common ground between these two objectives. I believe that we can and should try to find that kind of common ground on this issue, too.

A Congressional Review Act (CRA) resolution currently sits before the United States Senate that would repeal the previous Administration's Methane and Waste Prevention Rule. I support the goal of reducing methane waste but have concerns about the rule's provisions, in part because I think the rule could make it harder to create jobs through energy production on federal lands. I do believe, however, that the Department has the authority and responsibility to act on this issue, and I am requesting a commitment from you that the Department would continue to take significant steps to reduce methane waste without hurting job creation. And so my question to you is a simple one: if the United States Congress rescinds this rule, what concrete actions will you then take to prevent methane waste?

I look forward to working with you to promote better stewardship over our natural resources.

Sincerely,

Rob Portman
U.S. Senator for Ohio

ICYMI: Secretary Zinke's OpEd in the Washington Times ENERGY 2017 Issue

Washington Times: An 'America First' energy policy holds 3 powerful benefits
By Secretary Ryan Zinke

The Department of the Interior is the steward and manager of America's natural resources, which in addition to national parks and grazing lands also includes oil, gas, clean coal, hydro, solar and other renewable energy sources.

Being a good steward of our land and resources does not mean locking it up. As America's conservationist president, Theodore Roosevelt, wrote, "Conservation means development as much as it does protection."

Like Theodore Roosevelt, President Trump believes that responsible development of natural resources, conservation stewardship, and outdoor recreation on public lands benefit all Americans. Balancing those priorities is the job of the Interior.

The department oversees 1.7 billion offshore acres of Outer Continental Shelf and 700 million onshore acres of mineral estate. These lands produce 21 percent of the nation's energy, including 45 percent of coal, 43 percent of solar capacity, 23 percent of oil, 15 percent of natural gas, 15 percent of hydropower, and 57 percent of the nation's installed geothermal capacity. As a result, Interior generates more revenue for the federal government than any agency other than the IRS.

While not all public lands are appropriate for energy development, many provide the perfect opportunity to balance energy, conservation and outdoor recreation priorities. Thanks to new innovations in science and technology, developing our resources and conserving the environment are not mutually exclusive. Interior leads the way in showing that responsible energy development and conservation stewardship are possible.

There is no debate that the federal government should regulate energy production within its borders and that the taxpayer should get fair value for the resources extracted. But when regulation crushes American innovation and becomes a tool of political advocacy rather than public interest, we must change course.

Between 2008 and 2016, annual energy and mineral revenue from federal and tribal lands decreased by about $17 billion. Offshore energy revenues — where funding for much land conservation and historic preservation originates — fell by 84 percent over the same period. This trend stops now.

In March, President Trump issued an executive order launching America towards energy independence and economic growth. I followed the president's leadership by ending the moratorium on federal coal leases, eliminating job-crushing energy regulations, and re-establishing a Royalty Policy Committee that gives local, tribal, federal and non-federal stakeholders a seat at the table to discuss energy development on public lands.

These actions have restored balanced access to federal lands for employers to add thousands of jobs and generate billions in revenue for the American taxpayer. And, coupled with President Trump's executive orders to combat bad regulations and streamline government bureaucracy, these actions are already providing relief to hardworking families and jumpstarting the economy.

Developing American energy and achieving American energy independence have three major benefits to the environment, economy and national security:

First, it's better for the environment that the U.S. produces energy. We can responsibly develop our energy resources and return the land to equal or better quality than it was before extraction. I've spent a lot of time as a Navy SEAL in the Middle East, and I can tell you with 100 percent certainty it is better to develop our energy here under reasonable regulations rather than have it produced overseas under little or no regulations.

Second, energy production is a boon to the economy, supporting more than 9.8 million jobs and supplying affordable power for homes, hospitals, manufacturing and transportation. But for too many local communities, energy on public lands has been more of a missed opportunity and has failed to include local consultation and partnership.

And lastly, achieving American energy independence will strengthen our national security by reducing our reliance on foreign oil and allowing us to assist our allies with their energy needs. As a military commander, I saw how the power of the American economy and American energy defeated our adversaries around the world. Under President Trump's leadership, we will once again develop our resources and use them as a diplomatic force to keep prices low and Americans safe.

Together with local, state and tribal partners, we will power the American economy with

American energy. We will create the business conditions to put people back to work on the rigs in the Gulf, in the oil fields of the West, and in the coal mines like those on great Crow Nation's lands. In the Trump administration, all-of-the-above means all-of-the-above, and economic opportunity will once again be available to those who have been left behind and forgotten by the policies of the past.

Former Montana Rep. Ryan K. Zinke was sworn in as 52nd Secretary of the U.S. Department of the Interior on March 1, 2017. A fifth-generation Montanan, Mr. Zinke is the first U.S. Navy SEAL officer to serve as a cabinet secretary.

Senate Will Roll Back Methane Rule Next Week, Chairman Vows

Posted May 02, 2017, 02:45 P.M. ET
By Dean Scott
Bloomberg BNA

The chairman of the Senate Environment and Public Works Committee is confident he has the votes to roll back Interior Department methane limits and will bring the measure to the floor next week.

"It's duplicative, unnecessary, expensive, and we'll pass [a Congressional Review Act resolution] next week," Sen. John Barrasso (R-Wyo.) told Bloomberg BNA. But it's unclear whether he has swayed enough undecided Republicans—including Sen. Cory Gardner (R-Colo.) who said today his vote is still in play.

Barrasso is leading the Senate effort to repeal the regulations covering methane venting and flaring from oil and gas development on federal lands. The Senate is using expedited procedures under the Congressional Review Act, which allows for a simple up-or-down vote on resolutions to nullify regulations with no option for a filibuster.

If Barrasso's measure (S.J. Res. 11) passes, it would go to President Donald Trump for his signature because the House already passed a similar resolution in February.

Supporters of the rollback are racing against the clock to nullify the methane rule within the 60-day window provided under the CRA for fast-tracking a Senate floor vote. Opinions differ on the precise deadline for a vote, with several senators eyeing the week of May 8 as the last chance to use the CRA on Obama-era regulations.

Sen. Patty Murray (D-Wash.) told Bloomberg BNA that, as of Monday, Congress had 11 more days in session before the clock expires. That raises the possibility that there could be an opportunity to consider CRA resolutions as late as the week of May 15.

Republican No Votes Make For Close Call

The Senate vote is close because Republicans only control the Senate 52-48 and at least two of them—Sens. Lindsey Graham (R-S.C.) and Susan Collins (R-Maine)—are opposed to the measure. Several other members, including Gardner and Sen. Rob Portman (R-Ohio), are still undecided.

Gardner said his vote remains in play as he hears from environmental supporters of the methane limits and industry supporters of rolling back the regulations. But he's reluctant to do anything that might jeopardize Colorado's own methane limits.

"I want to make sure I'm taking into account opinions on both sides both the support, the pro, and the cons of this so I'll continue to hear those conversations," he told Bloomberg BNA today. "You know, Colorado has a really strong rule in place and I think that's an important factor in this discussion as well."

To get the resolution passed, Barrasso and other Republicans have one option in the event of a tie: they could rely on Vice President Mike Pence to cast the deciding vote.

Sen. Brian Schatz (D-Hawaii) told Bloomberg BNA that Democrats aren't ready to concede the battle yet.

"This is the next big environmental fight, and it's not at all clear to me that they have the votes" to roll back the methane rule, Schatz said. "If they had the votes, they would schedule the vote," he said.

Downey,

See below for the information that Don Peay, founder of Sportsmen for Fish and Wildlife, will bring up in his meeting with Secretary Zinke tomorrow when he meets with him privately at the dinner.

The attachments include: the economic impacts of hunting to the State of Utah and the areas in and around both national monuments; and photos of big game taken in the area.

Don will also mention his ties to Donald Trump Jr. He developed a relationship with Jr. during the campaign. They have been on several hunts together in Utah.

See you tomorrow.

###

Soon, interior Secretary Zinke will be touring Utah Monuments - Bears Ears and Grand Staircase for a review per Executive Order from President Trump

These 3.2 Million acres, thanks to modern conservation funding are now home to thriving herds of Elk, Mule Deer, Desert Bighorn Sheep, antelope, cougar, black Bear and wild turkey

These areas are lands of the 235 plus inch mule deer, 400 inch elk, 170 inch Rams, and most importantly places where thousands of families have enjoyed world class hunting adventures on public lands. It is the place where many of our children have bagged their first turkey!

51,007 hunters apply for the permits in these areas - highly coveted opportunities! It generates at a Minimum $29 Million in direct conservation funding, and economic activity. See attached.

The above data is supplied by Don Peay, Founder of Sportsmen for Fish And Wildlife, that has an MBA. It is the best data as supplied by the Utah DWR and knowledge of the hunting economies in these areas. See attached, any comments welcome. Very important to the American Sportsmen

Subject: Economic and Hunting Interest In Monuments

Just north of Lake Powell, a cross from the Bears Ears Border, lies the magnificent Henry Mountains, with mountain peaks reaching 10,000 plus feet

The mountain Range is home to the only free ranging, disease free Bison herd in North America. The Bison herd, and restoration of what now many consider the best mule deer herd in North America, are examples of Modern day Sportsmen and state agency Conservation efforts. More than $1 Million of private sportsmen funds have been invested in the last ten years to grow and expand these herds. The Dept. of Interior recognized the Bison efforts last year.

There are opportunities to further expand these herds, and make this a Zinke and Interior Legacy project for elk, Mule Deer and Bison. Desert bighorn are scheduled to be added to the mountain as well.

This is a microcosm for the west. Massive habitat restoration, impacts of fires, finding win win solutions for conflicts between wildlife and domestic livestock, sportsmen funding, state wildlife agencies working cooperatively with Federal Agencies.

And in the end, healthy watersheds, local economic growth, and incredible hunting on Americas great public lands!

.....
Don Peay

Hi Micah and Amanda,

I hope you're both doing well. I wanted to pass along a longer version of our Committee memo from our hearing last week on abuses of the Antiquities Act. It's a pretty comprehensive look at some of these National Monuments and may be helpful in the future to you. If you'd like any other materials from the hearing, please let me know.

Thanks,

Tom McClintock, Chairman

Hearing Memorandum

April 28, 2017

To All Subcommittee on Federal Lands Members
From Majority Committee Staff Aniela Butler
Subcommittee on Federal Lands (x 6-7736)
Hearing Oversight hearing on *"Examining the Consequences of Executive Branch Overreach of the Antiquities Act."*
Ma 01 at 10 00 AM 13 4 Long orth HOB.

The Subcommittee on Federal Lands will hold an oversight hearing to hear testimony on *"Examining the Consequences of Executive Branch Overreach of the Antiquities Act"* on Tuesday, May 2, at 10:00 a.m. in 1324 Longworth House Office Building. The hearing will focus on reviewing national monuments designated without significant local input or support and national monuments with excessively large or restrictive designations.

Polic Overvie

- Since its enactment in 1906, Presidents of both parties abused the Antiquities Act to designate increasingly large and restricted areas of land.
- Originally intended to protect sacred Native American burial grounds and endangered archeological sites, presidents now use the Antiquities Act to lock up millions of acres from public access, energy development, timber production, grazing, and other uses.
- President Obama s excessive use of the Antiquities Act locked up nearly 553.6 million acres of land and water, more than any other President in history, and resulted in designations that prioritized legacy-building over local input and support.
- Widely opposed designations in Maine, Utah, Oregon, and California exemplify the negative results of unilateral national monument designations on local communities through their elimination of multiple-use, loss of rural jobs, and restricted recreational access.

Bac ground

At the beginning of the 20th Century, vandals and robbers began looting sacred Native American burial grounds and archeological sites throughout the territories in the Southwest. The destruction of archeological artifacts prompted Congress to enact the Antiquities Act of 1906, which authorized the President to designate National Monuments on federal lands containing historic landmarks, historic and prehistoric structures, or other objects of historic or scientific interest.[1] The law also specified that National Monuments be confined to the smallest area compatible with proper care and management of the objects to be protected.[2] Furthermore, the President could only designate National Monuments upon the lands owned or controlled by the Government of the United States.[3] The Act granted Presidents the flexibility to quickly protect small Native American sites in imminent danger from looting and destruction.[4] President Theodore Roosevelt designated the first National Monument, Devils Tower, in 1906. Since that time, Presidents broadly interpreted the Antiquities Act to expand both the size and justifications for National Monument designations.

The Congressional Record plainly reflects Congress s clear intent to limit the size of the designations. In their discussions of the bill, Congressmen Lacey and Stephens debated whether Presidents would eventually abuse the Antiquities Act. Congressman Lacey, the bill s sponsor, ensured his colleague this would not be the case by stating:

> Mr. LACEY. *There has been an effort made to have national parks in some of these regions, but this will merely make small reservations where the objects are of sufficient interest to preserve them.*
> Mr. STEPHENS of Texas. Will that take this land off of market, or can they still be settled on as part of the public domain?
> Mr. LACEY. It will take that portion of the reservation out of the market. *It is meant to cover the cave dwellers and cliff dwellers.*
> Mr. STEPHENS of Texas. How much land will be taken off the market in the Western States by the passage of this bill?
> Mr. LACEY. Not very much. The bill provides that it shall be the *smallest area necesstry [sic]* for the care and maintenance of the objects to be preserved.
> Mr. STEPHENS of Texas. Would it be anything like the forest-reserve bill, by which seventy or eighty million acres of land in the United States have been tied up?
> Mr. LACEY. Certainly not. *The object is entirely different. It is to preserve these old objects of special interest in the Southwest*, whilst the other reserves the forests and the water courses.[5]
> (emphasis added)

Presidents used their authority under the Antiquities Act 233 times to establish and enlarge 157 National Monuments totaling 840.9 million acres, or roughly 10 times the size of the

entire National Park System.[6] Although the National Park Service (NPS) primarily manages National Monuments, in recent decades the majority of National Monuments have been managed by agencies like the Bureau of Land Management (BLM) or U.S. Forest Service (FS). Although presidential declarations create most national monuments, Congress also established 45 national monuments, including Appomattox in 1935, Badlands in 1929, and Biscayne in 1968.

In its 111-year history, Congress amended the Antiquities Act only two times to enact statutory restrictions on the President's authority to designate National Monuments. The first, passed in 1950, prohibits the designation of National Monuments in the State of Wyoming. The second restriction, passed in 1980, requires prior Congressional approval of executive land withdrawals in the State of Alaska exceeding 5,000 acres.[7] These actions followed the controversial declarations of Jackson Hole National Monument by President Franklin Roosevelt and President Carter's establishment of several monuments in Alaska, respectively.

The Antiquities Act pre-dates the establishment of 5 states, including New Mexico and Arizona, the establishment of the National Park Service, and the creation of major environmental and archeological resources protection laws. Since the creation of the Antiquities Act, Congress and the executive branch enacted over one dozen new statutes and regulations rendering protections under the Act outdated and unnecessary. Some of the major statutes created to protect archeological resources include:

- *Historic Sites Act (1935)* established the National Historic Landmarks Program
- *National Stolen Property Act (1948)* established fines and penalties for transporting or transferring stolen property
- *Reservoir Salvage Act (1960)* required study and protection of archeological objects that may be destroyed during the construction of a dam or reservoir
- *National Historic Preservation Act (1966)* established the National Register of Historic Places and State Historic Preservation Offices
- *Archeological and Historic Preservation Act (1974)* preserved archeological objects that might otherwise be destroyed during any federally licensed activity or program (such as a federal construction project)
- *Archeological Resources Protection Act (1979)* strengthened fines and penalties for unauthorized excavation of archeological sites on federal land
- *Abandoned Shipwreck Act (1987)* established federal ownership and a management structure of abandoned shipwrecks in submerged waters of the United States
- *Native American Graves Protection and Repatriation Act (1990)* required consultation with Native American groups before archeological excavation of culturally sensitive sites
- *National Maritime Heritage Act (1994)* established to National Maritime Heritage Grants Program
- *American Battlefield Protection Program Act (1996)* provided assistance to private and public individuals and institutions to protect historic battlefields in the United States
- *National Historic Lighthouse Preservation Act (2000)* allowed the transfer of deteriorating historic lighthouses to other government entities or non-profit, educational, or community development organizations with the capacity to maintain the lighthouse
- *Sunken Military Craft Act (2004)* codified the sovereign status and permanent U.S. ownership of sunken military aircraft and vessels and preserved sunken military aircraft and vessels in U.S. waters[8]

[7] Hardy Vincent, Carol "National Monuments and the Antiquities Act" Congressional Research Service P 1
[8] NPS, "Federal Historic Preservation Laws, Regulations, and Orders", https://www.nps.gov/subjects/historicpreservation/laws.htm

On April 26, 2017, President Trump signed the "Presidential Executive Order on the Review of Designations Under the Antiquities Act."[9] The Executive Order directs the Secretary of the Interior to review all unilateral national monument designations "made since January 1, 1996, where the designation covers more than 100,000 acres, where the designation after expansion covers more than 100,000 acres, or where the Secretary determines that the designation or expansion was made without adequate public outreach and coordination with relevant stakeholders" and recommend any necessary legislative or administrative changes to those designations.[10] This Executive Order makes no immediate changes to any national monuments, and will not affect the ownership of the land in the event the administration decides to reduce or rescind certain national monuments.

Modern Abuses of the Anti□uities Act

Overview

The Obama Administration established more national monuments and designated more land and water as national monuments than any other President in history. Over the course of his Administration, President Obama used the Antiquities Act 34 times to lock up 553,599,880 acres of land and water as national monuments. President Obama's acreage total represents 66□ of all of the land and water ever designated as a national monument throughout the Antiquities Act's 111-year history. President Obama's total acreage equates to 189,589 acres designated as a national monument for every day he was in office, or an area roughly equivalent to the size of Delaware for every week of the Obama Administration.

Katahdin Woods and Waters National Monument

On August 24, 2016, President Obama designated 87,563 acres in central Maine as the Katahdin Woods and Waters National Monument. One day prior to the designation, Elliotsville Plantation, Inc. donated the land to the Department of the Interior (DOI) with the intention of eventually converting the area into a National Park.[11] Nearly twice the size of Acadia National Park, the Katahdin Woods and Waters National Monument became the largest parcel of federal land in a state with only 1.1□ federal land ownership.[12]

The effort to create a National Park in this area began over two decades ago with a proposal to create a 3.2 million acre National Park, or the second largest National Park in the continental United States.[13] Details of the proposed National Park varied since, and include proposals to create a 150,000 acre National Park and National Recreation Area. To facilitate the creation of a National Park, Roxanne Quimby established Elliotsville Plantation, Inc. in 2002. Ms. Quimby famously started Burt's Bees, a personal care company purchased by Clorox in 2007 for $925 million. [14] After acquiring land for the proposed National Park site, Elliotsville Plantation, Inc. evicted campers, burned down cabins, and closed the area to the "hunters and to the snowmobilers who had long relied on it for north-south access."[15] Residents in the surrounding communities overwhelmingly opposed creating a National Park due to concerns

over limiting historic uses such as snowmobiling and hunting and the effect of the designation on the local timber industry. In 2016, residents in the towns of East Millinocket, Medway, and Patten voted 320-191, 252-102, and 121-53 against the proposed National Park, respectively.[16] After the controversy created in the State, Ms. Quimby's son, Lucas St. Clair *(invited witness)*, took over the National Park campaign.

After the National Park proposal failed to gain traction in the state, Elliotsville Plantation, Inc. shifted their focus towards designating the land as a National Monument under the Antiquities Act. The National Monument proposal faced significant opposition in the State of Maine. No Member of Congress introduced a bill studying the creation of or designating the land as a National Park or National Monument. Comparatively, every NPS National Monument designation made by President Obama prior to the designation of Katahdin Woods and Waters National Monument had corresponding legislation in Congress either establishing the area as an NPS unit or authorizing a special resource study.[17] On November 20, 2015, three of the four members of Maine's Congressional delegation, including Senators Susan Collins and Angus King and Representative Bruce Poliquin, wrote President Obama to express "serious reservations and significant concerns" about the proposed monument.[18] Later that year, the Maine State Legislature passed L.D. 1600, sponsored by Rep. Stephen Stanley (D-Medway), by bipartisan votes in both the House and Senate.[19] The bill expressed opposition to the creation of a National Monument in Maine. At a listening session between locally-elected officials from the towns surrounding the National Monument and NPS, only 2 of the 75 attendees voiced support for a designation.[20] On June 1, 2016, the Committee on Natural Resources held a field hearing in East Millinocket, Maine, on the proposed National Monument designation entitled *"Elevating Local Voices and Promoting Transparency for a Potential Monument Designation in Maine."*[21] During the hearing, numerous state and locally-elected officials representing the area, along with witnesses from sportsmen and snowmobiling groups, expressed significant concerns about the National Monument proposal. Although multiple proponents of the National Monument, including Mr. St. Clair, were repeatedly invited to testify at the hearing, they declined to attend.

Among the concerns raised with the proposal, opponents of the National Monument argued it was an unsuitable addition to the National Park System. Many believed Ms. Quimby's status as a Board Member of the National Park Foundation would grant her unfair influence in the decision. Furthermore, NPS already faces an $11.927 billion deferred maintenance backlog and any new land acquisition will only increase that total. In Acadia National Park alone, NPS boasts a $68.25 million deferred maintenance backlog. Along with the land donation, Elliotsville Plantation, Inc. created a $20 million endowment to maintain the National Monument and pledged to raise an additional $20 million in donations. Although the endowment helps alleviate some costs of maintaining the land, the entire endowment would still not be sufficient to cover the deferred maintenance backlog of Acadia National Park.

Mainers also expressed concerns about the National Monument's impact on the local forest products industry and the subsequent effects on rural economies in central Maine. Since the early 1800's, the land in central Maine has been a working forest that supports the local communities. The current gateway community to the National Monument, Millinocket, started in

1989 with the creation of Great Northern Paper, the largest paper mill in the world at the time. In Maine, the forest products industry creates an $8 billion impact on the economy and supplies 1 in 20 jobs in the State.[22] Furthermore, Maine could soon experience a large spruce budworm outbreak that could kill thousands of acres of the spruce-fir forest within the National Monument.[23] If the forests within the National Monument are not actively managed, this epidemic could spread and potentially kill thousands of trees on state and private land.

Proponents of the National Monument suggested that jobs related to increased tourism would supplant the forest products industry. However, most of the promised tourism jobs are low-wage and seasonal. In his analysis about the tourism economy in Maine, Thomas McLaughlin, a professor in the School of Social Work at the University of New England, said:

> "Lost in all this good news [about rising tourism spending] is the percentage of the population who rely on seasonal work as employees to make ends meet throughout the entire 52 weeks. While a small percentage of the workers may have access to overtime, most will work 30 to 40 hours per week during the 10-week summer period. At minimum wage, this means, at most, the worker could gross $3,000 in a 10-week period. For most families in Maine who have two seasonal workers, this means a "good summer" would be $6,000 of full-time work, then sporadic hours during the remaining 42 weeks during the year. Most of these seasonal workers live well below the poverty line. This means summer earnings must be saved and past due bills paid during the good times."[24]

Furthermore, according to NPS data from 2017, National Parks created almost 6 times as many jobs and had an economic output nearly $8 billion greater than NPS-operated National Monuments.[25] On average, National Parks also hosted over 46.7 million more visitors than National Monuments.[26]

Further hindering economic potential, the National Monument currently includes several restrictions on traditional recreational uses of the land, including hunting and snowmobiling. Less than 40% of the land conveyed to the Federal Government included specific protections for hunting. NPS can also close that land to hunting at any time "for reasons of public safety, administration, or resource protection" and the deeds specifically ban all trapping and hunting with dogs and bait.[27] Only four deeded parcels, covering less than 20 percent of the National Monument, included any protections to continue traditional snowmobiling uses.[28] In some cases, the deeds failed to include protections for pre-existing snowmobiling routes in the National Monument.[29] As of April 2016, NPS advises that the National Monument includes limited amenities and spotty or non-existent cell phone coverage. Currently, there is also no wheeled access to the National Monument, two access roads are gated by NPS, and NPS halted all grooming for snowmobiling and skiing.[30] In November 2016, NPS closed Loop Road, a main attraction in the National Monument, due to snowfall, and have yet to reopen the route.

On February 14, 2017, Governor LePage asked President Trump in a letter to undo the [National Monument] designation and return the land to private ownership before economic damage occurs and traditional recreational pursuits are diminished.[31]

Bears Ears National Monument

President Obama designated the Bears Ears National Monument in San Juan County, Utah, during the final weeks of his administration. The National Monument, totaling 1,351,849 acres, covers an area larger than the State of Delaware.[32]

The push for a National Monument in southeastern Utah began in October 2014 during a meeting of the Conservation Lands Foundation (CLF) in San Francisco, California. During the meeting, CLF discussed the prospects of designating a national monument in southeastern Utah and agreed to call the National Monument Bears Ears, to move away from a Navajo name.[33] CLF expressed concerns about hitching [their] success to the Navajo in the event that local Navajo in San Juan County disagreed with the group s proposals.[34] This campaign to designate Bears Ears as a national monument received millions of dollars in donations from out-of-state environmentalists, including $20 million in donations from the Hewlett and Packard foundations and a portion of $15.6 million in grants from the Leonardo DiCaprio Foundation.[35] Outside organizations also heavily supported the Bears Ears Inter-Tribal Coalition, a group representing five tribes that supported a National Monument designation, by creating their website, crafting maps of their National Monument proposal, and sending out their press releases and contacting the media.[36] According to Blanding City Manager Jeremy Redd, This is not a grass-roots Native American effort to protect sacred lands. This is an effort by environmental groups to get what they want. People feel like they are being run over by the money and the organization that these special interest groups have. Sadly, local people don't have that kind of money behind them. San Juan County Commissioner Rebecca Benally, a Din and Navajo woman, testified on the record during a Natural Resources Committee hearing last September that:

> Bears Ears National Monument campaign is a cynical political stunt that, if successful, will deny grass roots Utah Navajos access to their sacred and spiritual grounds. Traditional Utah Navajo people depend on that land for their necessities of life: to gather medicinal plants, fire wood, pi on nuts, as well as to hunt and practice sacred ceremonies. Traditional Utah Navajo people are not conspiring with lawyers in board rooms in Salt Lake City and San Francisco. Traditional Utah Navajo people are not collecting $20 million from the Hewlett and Packard foundations and Leonardo De Caprio to sponsor this toxic divide-and-conquer campaign. Traditional Utah Navajo people are not magazine environmentalists but are real stewards of the land whose interests will be destroyed by a Bears Ears National Monument. Grassroots Utah Navajo people do not support this effort to convert our sacred lands into a federal designation that will subjugate them to micromanagement by bureaucrats in Washington DC.

Since the designation, out-of-state groups and corporations continued to fund campaigns aimed at maintaining the Bears Ears designation. Outdoor Retailer economically retaliated against the

[36] Ibid

local opposition to Bears Ears National Monument by pulling its $45 million industry shows from the State.[37] Patagonia, the $800 million outdoor clothing retail corporation, funneled millions of dollars into grants and videos produced about the new National Monument.[38] After the April executive order reviewing national monument designations, Patagonia stated its intention to continue fighting any diminishment of the National Monument's boundaries.

The National Monument proposal faced enormous opposition in the state of Utah. In a poll conducted in May of 2016, only 17 percent of Utahans favored the President designating Bears Ears as a National Monument.[39] No members of the Utah Congressional delegation or the Governor supported the unilateral designation and were not meaningfully consulted on a national monument proposal prior to the designation. The administration did not offer any concrete plans or details about the designation to members of the Congressional delegation, despite repeated requests on the record to discuss the future of the area. In a 2016 Subcommittee on Oversight and Investigations hearing, Council on Environmental Quality (CEQ) Chair Christy Goldfuss refused to discuss the Administration's plans for Bears Ears:

> "CHAIRMAN BISHOP: Is CEQ actively working on a national monument proposal for Bears Ears in San Juan County in my State?
> MS. GOLDFUSS. I cannot talk about any specific proposals that we are working on out of CEQ or out of the Administration with regard to national monuments."[40]

At a Committee on Natural Resources oversight hearing on March 1, 2016, Secretary Jewell indicated that the President had no prior intentions of designating any national monuments:

> "DR. GOSAR: How many more new national monuments does this Administration plan to designate this year? What are the names and geographic locations of potential monuments being considered?
> SECRETARY JEWELL: That is entirely up to the President of the United States. There are many people that come through the doors saying, "We would like you to look at monuments." There are, you know, assessments that happen from across the country of interest. They go directly to the White House.
> DR. GOSAR: So let me stop you there. *So the President hasn't given you any detailed leanings, one way or the other?*
> SECRETARY JEWELL: *The President has not.*
> DR. GOSAR: *Absolutely zippo?*
> SECRETARY JEWELL: *Absolutely zippo."*[41]
> (emphasis added)

Furthermore, in written comments to the Senate Energy and Natural Resources Committee, Tim Murphy, the former Acting Assistant Director of the National Landscape Conservation System and Community Partnerships for BLM, denied any knowledge of plans to designate national monuments such as Bears Ears:

Question (Flake) *(written)* - Please provide a list of any National Monuments that are presently under consideration for designation by the President under the Antiquities Act.
Answer (Murph) *(written)* - I am not aware of any list of proposed National Monuments under consideration by the President.[42]

Given the Administration's use of the Antiquities Act, this "midnight monument" designation did not come as a surprise to many local residents.[43] However, these transcripts point to a clear lack of coordination and consultation between the Administration and members of the delegation on the National Monument and demonstrate the total lack of transparency in the designation process.

Local tribes and residents in San Juan County also voiced overwhelming opposition to a National Monument designation under the Antiquities Act. In May 2016, the Blue Mountain Dine" Community unanimously passed a resolution against the proposed National Monument and stated that they disagreed "that the creation of an Inter-Tribal National Monument will be in the best interests and welfare of not only local Navajo people, but of all locals who love the land of their heritage."[44] The Aneth Chapter of the Navajo Nation, based in San Juan County, also passed a resolution opposing the unilateral National Monument designation.[45] One hundred San Juan County residents signed a petition endorsing a National Conservation Area over a National Monument in part because it offered "the greatest recognition/protection of our sacred sites and cultural resources that are existing in the proposed designated area."[46] In a letter to DOI Secretary Zinke after the designation, Stewards of San Juan County, a community organization based in the County, stated, "The majority of Navajo and Ute residents in San Juan County overwhelmingly oppose the monument designation, in contrast to out-of-county/state tribes who know very little of this area and will simply not be affected by this monument. It is appalling that non-local voices have drowned out those who treasure this land the most." The group later continued, "This monument was designated in order to appease outside special interest groups. It was done WITHOUT a robust consultation with the stakeholders who actually live in San Juan County. Voices of life-long residents and tribal members have been, and continue to be, blatantly ignored."[47] After the designation, Suzette Morris, a Ute Mountain Ute member and Vice President of Stewards of San Juan County, stated, "We have cemeteries up there and I don't want our ancestors to be put in museums" and "We all have a fight and we all are going to continue to fight for this to be rescinded."[48]

According to previous statements on the record, the National Monument designation likely fell short of expectations of even the most vocal National Monument supporters. A major point of contention during the debate over a National Monument versus a National Conservation Area revolved around the ability to allow the tribes to co-manage the land. Since its establishment, some supporters of the National Monument falsely claim the designation allowed the first ever tribal co-management of a National Monument. However, the tribes do not currently co-manage the land and the words "co-management" do not appear anywhere in the

text of the proclamation.[49] Instead, the proclamation creates the Bears Ears Commission, a standard advisory committee created using authority under the Federal Advisory Committee Act, not the Antiquities Act.[50] The proclamation states that the Commission will "provide guidance and recommendations" on the management of the National Monument, but stops short of actually allowing the tribes to partner with the BLM and FS to manage Bears Ears.[51] After the release of a Secretarial Order promoting the role of tribes in the management of lands, Willie Grayeyes, Chairman of Utah Dine Bik'yah, stated that, "I would have to read [the Secretarial Order], but *if it is less than co-management, I think it would fall short of our goal.*"[52] (emphasis added) Additionally, in testimony before the Committee on Natural Resources, Regina Lopez-Whiteskunk, the Co-Chair of the Bears Ears Inter-Tribal Coalition, stated that a key reason the BEITC supported unilateral executive action over the Public Lands Initiative process was the acreage size for the National Monument. In her written testimony, she stated that BEITC's "call to protect 1.9 million acres is already a conservation request. *Anything less is tantamount to destruction of sacred sites that the identities of native people are affixed to.*"[53] (emphasis added) Despite the administration failing to follow through on these core aspects of their proposal, BEITC and Utah Dine Bik'yah supported the National Monument after its creation.

Prior to the unilateral designation of the National Monument, Chairmen Bishop and Chaffetz proposed two alternative National Conservation Areas to protect the Bears Ears area in H.R. 5780, *"Utah Public Lands Initiative Act."* The process to craft the solution, which lasted over three years and involved over 1,200 meetings with stakeholders, drew widespread support from locals in San Juan County. This solution offered the only permanent protection for the Bears Ears area and the only legal mechanism to allow the tribes to co-manage the land. The Bears Ears National Conservation Area language focused on creating the necessary footprint to preserve the archeological resources and objects of antiquity within Bears Ears, while also allowing the tribes access to sacred sites and preserving traditional tribal uses of the land. The Indian Creek National Conservation Area focused on allowing outdoor recreation and preserving traditional uses of the land, such as grazing. On September 22, 2016, the Committee on Natural Resources successfully reported H.R. 5780 out of Committee by a vote of 21-13. During the markup, an amendment offered by Ranking Member Grijalva striking the section of the bill related to Bears Ears failed on a bipartisan vote of 11-19.[54]

Like in the case of Grand Staircase-Escalante 20 years prior, the National Monument designation locked up 109,000 acres of Utah School and Institutional Trust Land Administration (SITLA) land, which benefits public schoolchildren in the State of Utah.[55] Scattered across Utah in a checkerboard pattern, SITLA land derives revenues from activities such as energy and mineral resource development, grazing, and timber production. The funds from these revenues go into the State School Fund, "a permanent income-producing endowment created by Congress in the Utah Enabling Act for the support of the state's K-12 public education system."[56] In the past 20 years, revenue from SITLA's lands generated over $1.7 billion in revenue for Utah's public schoolchildren.[57] According to Dave Ure, SITLA's Director, "Approximately 64 percent of our state is federal public land, while only six percent is trust land."[58] This means that any

designation that stunts the growth in revenue from SITLA lands will have far-reaching consequences for public schoolchildren across the state. Resolving this situation and freeing up the SITLA land will require identification of possible exchange lands, negotiations, appraisals, adherence to the National Environmental Policy Act (NEPA), and approval by the Utah Legislature and likely the U.S. Congress.[59] Previous exchanges took up to nine years to complete.[60]

While proponents of the National Monument claim this will bring new economic opportunities to San Juan County, the probability of an economic boom seems unlikely. San Juan County already holds 1 National Park, 1 National Forest, 1 National Recreation Area, and 3 National Monuments.[61] Despite this seemingly expansive tourism economy, San Juan County is still the poorest county in Utah, with 28.5 of its population living in poverty, more than double the state average.[62] In order to truly prosper, San Juan County needs to diversify its economy and attract full-time, high-paying jobs. Furthermore, since the designation, groups have already attempted to limit outdoor recreational access, which would bring additional revenue to the area. For example, a coalition of environmental groups initiated litigation blocking previously approved recreation access to the National Monument. In March, a judge halted the creation of a 6.4 mile ATV trail the County worked on for over a decade.[63] The State of Utah, San Juan County, and the BLM are fighting the decision.

After the signing of President Trump s Executive Order on the Antiquities Act, DOI Secretary Zinke announced his intention to offer a recommendation on maintaining, modifying, or rescinding Bears Ears National Monument to the White House within 45 days.[64] During the signing ceremony, President Trump specifically mentioned Bears Ears, stating, In December of last year alone, the federal government asserted this power [of the Antiquities Act] over 1.35 million acres of land in Utah, known as Bears Ears -- I ve heard a lot about Bears Ears, and I hear it s beautiful -- over the profound objections of the citizens of Utah. The Antiquities Act does not give the federal government unlimited power to lock up millions of acres of land and water, and it s time we ended this abusive practice. I ve spoken with many state and local leaders -- a number of them here today -- who care very much about preserving our land, and who are gravely concerned about this massive federal land grab. And it s gotten worse and worse and worse, and now we're going to free it up, which is what should have happened in the first place. This should never have happened.[65] After the signing of the executive order, DOI Secretary Zinke said, For years, the people of Utah and other rural communities have voiced concern and opposition to some monument designations. But too often in recent history, exiting presidents make designations despite those concerns. And the acreage is increasing. In a poll released the day before the executive order, a majority of Utahans supported a reduction or rescission in the size of Bears Ears, with a plurality of Utahans responding they definitely supported the action.[66]

On September 18, 1996, during the waning months of his first term, President Clinton designated 1.7 million acres in Utah as the Grand Staircase-Escalante National Monument during a ceremony on the South Rim of the Grand Canyon. After generally consolidating national monuments under the National Park Service, Grand Staircase-Escalante represented the first BLM-managed national monument.[67]

The designation immediately kicked off a massive controversy in the State of Utah. The Governor, members of the Congressional delegation, and residents of Utah all expressed outrage at the lack of prior consultation or warning of the designation. Utahans previously worked on proposals to protect the land and were stunned when the designation happened and uprooted those plans. For Utahans, their unhappiness was not a result of not wanting to preserve the environment; "on the contrary, they [understood] that their state is worthy of preservation and [took] measures to assure that proper regions of their state have necessary protection. However, President Clinton's unilateral designation of Grand Staircase as a national monument severely conflicted with many of the uses that national, state, and local governments had planned for the land."[68] The Governor at the time, Mike Leavitt, testified before Congress that:

> "At two o'clock eastern time, the President stood at the north rim of the Grand Canyon to announce the creation of the Grand Staircase-Escalante National Monument and its 1.7 million acre expanse of Utah's Garfield and Kane Counties. As has been mentioned, no Member of Congress, no local official, or had the Governor ever been consulted, nor had the public. As the Governor, I had not seen a map. I had not read the proclamation, or, for that matter, was I even invited. This isn't about courtesy, it is about process. It is about public trust. A major land decision, perhaps the biggest land decision that has been made or will be made in the next two decades, had occurred. Obviously, this is not the way public land decisions should or were ever intended to be made."[69]

According to Senator Orrin Hatch, the Administration assured him "in a meeting just a week prior to the President's announcement that the leaks concerning a designation of a monument in Utah were not true, and that no such action was contemplated. If it were, we were told, the Utah Delegation would be fully apprised and consulted."[70] Prior to the designation, the administration held no town halls, public meetings, or public comment sessions in Utah and did not receive any input from local stakeholders or land managers in the area. Perhaps most egregiously, the Administration only kept the designation a secret from members of *Utah's* Congressional delegation. CEQ reached out to former Senator Harry Reid (D-NV), Governor Roy Romer (D-CO), Rep. Bill Richardson (D-NM), and Governor Bob Miller (D-NV) to get feedback on the proposal and even questioned if "there [were] Democratic candidates [they] should alert" about the designation.[71] Over a week before the designation, CEQ staff notified reporters at the Washington Post about the designation while simultaneously assuring the Utah delegation that no decision had been made yet.[72]

The Clinton administration clearly established the National Monument for political, not archeological, purposes. According to correspondence obtained by the Committee, CEQ Chair, Katie McGinty, expressed hesitation about the designation and said, "I'm [sic] increasingly of the view that we should just drop these utah [sic] ideas. we [sic] do not really know how the

enviros will react and I do think there is a danger of "abuse" of the withdraw/antiquities authorities especially because these lands are not really endangered."[73] She also wrote to the President that the action "would help overcome the negative views toward the Administration created by the timber rider. Designation of the new monument would create a compelling reason for persons who are now disaffected to come around and enthusiastically support the Administration."[74]

The designation of the National Monument resulted in devastating consequences for the surrounding communities. In a study conducted by Utah State University, researchers found that the reduction in grazing alone resulted in a loss of 81 jobs and $9,101,801 in economic input yearly in Garfield and Kane Counties.[75] However, the largest losses in economic output and jobs came from the reduced potential for energy and minerals development. According to a study from the Utah Geological Survey, the value of potential energy mineral resources in Grand Staircase-Escalante totals between $223 billion and $330 billion, including $221-321 billion of coal, $2-17.5 billion of coal-bed gas, $20 million-$1.1 billion of petroleum, and at least $4.5 million of other minerals.[76] This amounts to an estimated 62 billion tons of coal, 2.6-10.5 trillion cubic feet of methane, and 270 million barrels of oil.[77] At the time of the designation, companies including Andalex, PacifiCorp, and Conoco Oil, had 89 oil and gas leases covering 137,700 acres and 22 coal leases covering 59,100 acres.[78] The National Monument directly prevented the creation of a planned coal mine, costing the area 1,100 jobs.[79] The lost royalties impacted every level of government, with Conoco estimating that the development of a 150 million barrel oil field would have resulted in $864 million in royalties, including $313 million for the state, $33 million for SITLA, and $94 million for the counties.[80]

One of the most controversial aspects of the designation involved the inclusion of roughly 176,000 acres of SITLA land in the exterior boundaries of the National Monument. The White House was not aware of the existence of SITLA land "or their importance" and needed an explanation of their benefits to schoolchildren the day before the National Monument's designation.[81] According to the Utah Geological Survey, "the value of the recoverable coal on School Trust lands [was] at least $17 billion but could [have been] $25 billion or more" with potential royalties worth $1.4-2 billion.[82] Years later, in order to compensate the State of Utah, SITLA received 145,000 acres of land outside of the National Monument and a $50 million cash equalization payment.[83]

Over 20 years after the designation, the National Monument still creates serious problems for the local communities. On June 22, 2015, Garfield County Commissioners declared a state of emergency due to declining enrollment in the County's schools.[84] Since the designation, enrollment in the Garfield School District dropped by 300 students and the student body in Escalante High School declined by two-thirds.[85] In the resolution declaring the state of

emergency, Garfield County cited the National Monument and federal land management policies as the reason for "virtually eliminat[ing] historic social and economic stability in Garfield County's communities and families."[86] Management of the National Monument also continues to present challenges to BLM and local communities. A 2014 Manager's Report highlighted the management difficulties at the National Monument by stating, "Increased backcountry visitor impacts include increased graffiti, human waste issues, water quality concerns and parking congestion."[87] According to BLM, over a 10 year period, Grand Staircase-Escalante experienced 78 separate incidents of vandalism, theft, or damage and destruction of archeological and natural resources.[88] In 2015 alone, rangers removed more than 1,234 square feet of graffiti.[89] In comparison, before its designation as a National Monument, Bears Ears only experienced 1 incident of vandalism over 5 years.[90] On February 17, 2017, Governor Herbert signed H.C.R. 12, a bipartisan state law urging a federal reduction in the size of Grand Staircase-Escalante.[91]

Cascade-Siskiyou National Monument

On June 9, 2000, President Clinton designated Cascade-Siskiyou National Monument in southwestern Oregon. President Obama expanded the National Monument by 47,624 acres, including 5,275 acres in California, as one of his last uses of the Antiquities Act on January 12, 2017. A major concern with the designation involved the massive amount of private land included in the boundaries of the National Monument. President Obama's expansion added 32,977 acres of private land to the National Monument, in addition to the approximately 19,000 of private land already within the National Monument's original footprint.[92]

Currently, Murphy Company, a forest products company, and the Association of O&C Counties are suing over the designation, arguing the expansion illegally overlaps with Oregon and California Railroad lands (O&C Lands). According to a 1940 opinion from DOI Solicitor General Nathan R. Margold, the President does not possess the authority to designate a National Monument on O& C Lands, stating:

> "There can be no doubt that the administration of the lands for national monument purposes would be inconsistent with the utilization of the O. and C. lands as directed by Congress. It is well settled that where Congress has set aside lands for a specific purpose the President is without authority to reserve lands for another purpose inconsistent with that specified by Congress."[93]

Roughly 40,000 acres of the 48,000 acre expansion overlap O&C Lands that are meant for the sustained yield of timber production.[94] Congress passed the O&C Lands Act in 1937 for "permanent forest production" and stated "the timber thereon shall be sold, cut, and removed in conformity with the principal of sustained yield for the purpose of providing a permanent source of timber supply, protecting watersheds, regulating stream flow, and contributing to the economic stability of local communities and industries, and providing recreational facilities."[95] 50 percent of the revenues from O&C Lands go directly to the Counties, which pay for "essential

public services of all kinds, from public safety such as sheriff patrols and jails to public health programs and libraries.[96] When these lands are taken out of multiple-use, the Counties face extreme budget shortfalls that negatively impact residents in the surrounding rural communities.

The restrictions from the National Monument expansion will not only harm the local forest products industry, but also make science-based management of the forest a near impossibility. Active management is critical to resilient forest health and preventing catastrophic wildfires in the face of drought, insects, and disease. The National Monument designation will not only prevent commercial timber harvesting, but also essential forest management activities such as thinning.[97] In a scientific study conducted in 2014, researchers categorized most of the lands in the National Monument footprint as having moderate (25-45) to high (45-65) active restoration needs.[98] Potentially exacerbating these conditions are the restrictions on transportation within the National Monument and reduced funds to maintain and repair infrastructure, which could severely limit access for firefighters in the event of a catastrophic wildfire.[99] According to testimony provided by the American Forest Resource Council, Because these are dynamic ecosystems and the boundaries of the monument are not catastrophic fire is not a matter of if. It is a matter of when.[100]

Grazing presents another challenge with the National Monument s expansion. President Clinton s original designation of Cascade-Siskiyou specifically targeted grazing and ordered BLM to study grazing s impact on biological diversity in the National Monument.[101] After the original designation, the permitted AUMs fell from 2,714 to 101, covering 47,281 acres.[102] Many ranchers reluctantly agreed to receive buyouts because the regulations impacting their grazing operations became too burdensome and were threatening their profitability.[103] In testimony provided to the Committee, Jackson County, Oregon, reported that one rancher loses nearly $170,000 per year because restrictions on transportation in the National Monument prevent him from reaching his 360 acres of lands leased for grazing.[104] After the expansion of the National Monument, many ranchers faced renewed concerns that the designation would prevent ranchers from properly maintain[ing] fences, water structures and other range improvements, diminishing the land s suitability for grazing.[105]

Several groups and individuals in Oregon and California opposed the expansion including Chairmen Greg Walden (R-OR-02), Tom McClintock (R-CA-04), and Doug LaMalfa (R-CA-01), Oregon State Senators Herman Baertschiger Jr. and Doug Whitsett, Oregon State Representatives Mike McLane, Carl Wilson, Gail Whitsett, Sal Esquivel, and Duane Stark, Jackson County, Oregon, Siskiyou County, California, Klamath County, Oregon, the Association of O C Counties, local forestry companies, including the Murphy Company, Medford/Jackson Chamber of Commerce, the Oregon Farm Bureau, the Oregon Cattlemen s Association, Oregon Snowmobilers, Jefferson State 4x4, and the Jackson County Chamber of Commerce.[106] The designation also lacked adequate public input, as the BLM Medford Office never provided accurate maps and data to enable the public to learn more about how the expansion would affect the local community.[107]

United States Senate

WASHINGTON, DC 20510

May 10, 2017

The Honorable Ryan Zinke
Secretary
Department of Interior
1849 C Street NW
Washington, DC 20240-0002

Dear Secretary Zinke:

In the course of reviewing and taking comment on the "Waste Management Production Subject to Royalties, and Resource Conservation" (Methane Waste Prevention Rule), released by the Bureau of Land Management (BLM) on November 15, 2016, we have determined that sufficient concerns exist with the final regulation and request that you take the necessary steps to promulgate a revised or new rule. Put simply, we believe the BLM erred in its development of the rule and failed to adequately consider credible concerns raised by industry stakeholders and tribes with active oil and gas production on federal and Indian lands.

The BLM stated the rule was intended to update "30-year old regulations governing venting, flaring, and leaks of natural gas, and [to] help curb waste of public resources, reduce harmful methane emissions, and provide a fair return on public resources for federal taxpayers, tribes and states." [1] Unfortunately, in issuing the rule, we believe the BLM overreached and created some areas of duplication – and in the case of Indian lands, the BLM improperly included lands that are not federal lands without proper consultation. Therefore, significant modifications to the rule must be pursued.

On March 28, 2017, President Trump issued Executive Order 13783 on "Promoting Energy Independence and Economic Growth" that, among other things, directs the Department of the Interior (DOI) to review this rule and determine if it should be revoked or revised. We agree with the Administration's call to review this rule – and ask that in reviewing the rule the Administration meet with affected industry stakeholders, tribes, and state regulators on making the necessary revisions. And, while we agree that this rule contains significant flaws, as elected officials, we have a responsibility to our constituents to ensure that taxpayer-owned resources are not unnecessarily wasted. These resources belong to the American taxpayer and various Indian tribes, and it is the responsibility of the BLM to manage these valuable resources in a manner that delivers the best return for the taxpayer and tribes.

The independent and non-partisan Government Accountability Office (GAO) has stated on at least two separate occasions that the Department of the Interior's regulations were not sufficient to protect against waste and ensure the best return for the American taxpayer. GAO found in a 2013 report that, "Interior changed certain offshore lease terms — including raising royalty rates twice in response to changing market conditions. For onshore resources, which are subject to many of the same market conditions, Interior has considered but not made changes to royalty rates … Interior officials are currently unable to make timely adjustments to onshore royalty rates. Current regulations generally provide for a fixed onshore royalty rate that limits Interior's flexibility to make timely adjustments."[2] In a July 2016 report, GAO found that while Interior had made efforts on the collection and reporting of data related to royalty-bearing oil and gas production, there had been limited guidance on how operators should address emissions.[3] The report stated "[a]s a result of these limitations, Interior may not have a consistent accounting of natural gas emissions from onshore federal leases, and does not have the information it needs to reasonably ensure it is minimizing waste on these leases."[4]

BLM developed this rule in response to GAO findings about wasted public resources. These findings are further substantiated by the fact that, between 2009 and 2015, oil and gas wells on federally-owned lands vented or flared

[2] "Oil and Gas Resources: Actions Needed for Interior to Better Ensure a Fair Return." GAO, Report to the Chairman, Committee on Energy and Natural Resources, U.S. Senate. December 2013.
[3] King, Pamela. "Dumping Interior rules means tossing waste safeguards." Energywire, 27 February 2017
[4] "Oil and Gas Resources: Interior Could Do More to Account for and Manage Natural Gas Emissions." GAO, Report to Congressional Requesters, July 2016.

approximately 462 billion cubic feet of natural gas into the atmosphere, a substantial loss of royalties to the American taxpayer. Given these findings of waste, there is a clear and corresponding need to improve the methods used to ensure a better return for taxpayers. Therefore, we urge you to modify the Methane Waste Prevention Rule in a manner that ensures an adequate return of royalties to the Treasury, while also preventing an unnecessary decline in oil and gas production on public lands. It is our understanding that you have several tools at your disposal to pursue a thoughtful and effective regulation that can achieve these goals. Those tools include: (a) requesting that the District Court of Wyoming, the court currently consider this rule in a pending lawsuit, actually remand the rule back to BLM to reconsider the issues raised by the lawsuit[5]; (b) begin the process of revising the rule by issuing both a rule suspending enforcement and a replacement rule to correct the inherent flaws in the current rule; or (c) use your enforcement discretion to issue guidance indicating that the BLM does not intend to enforce certain portions of the rule until the rule is fully reconsidered.

We appreciate your willingness to review and address this rule, and we look forward to working with you to fix the current rule – making it more responsive and efficient for industry and state regulators while preventing waste and ensuring the maximum return for the American taxpayer.

Sincerely,

Heidi Heitkamp
United States Senator

Farrell-Cooper Mining company (FCMC) request to meet with Interior Department regarding the unlawful attack by the Obama administration against Farrell Cooper Mining Company and the State of Oklahoma.

Subject: Department of Interior Federal Violations NOV N11-030-370-001 (Liberty #5), NOV N12-030-246-001 (Liberty #6) and NOV N13-030-370-001 (Rock Island).

Background: In 2010 the Office of Surface Mining unilaterally changed its longstanding interpretation of the "Approximate Original Contour" section of the Surface Mining Control and Reclamation Act of 1977. Without following the requirements of the APA, the agency then applied the new interpretation of this law retroactively on 3 permits in the State of Oklahoma and issued Notices of Violations to the mining company which required the company to redo existing reclamation at a cost estimate of $25,000,000.

FCMC challenged the Notices of Violations at the administrative court level. FCMC was successful in asserting its claims at Liberty #5 and Liberty #6 that the NOVs were unlawfully issued and the NOVs were vacated. The NOV issued at Rock Island was upheld. All of the cases are currently on appeal as discussed below.

SMCRA was intended to confer primary, if not completely exclusive, jurisdiction to administer surface coal mining programs to the primacy States. Although OSM retains considerable oversight authority, Congress and the Secretary have clarified that OSM should defer to the State regulatory authority when there is conflict over interpretation of a SMCRA requirement – unless the State's position is arbitrary, capricious, or an abuse of discretion.

-Judge Pearlstein Decision, NOV N11-030-370-001 (Liberty #5). p. 27

ODM took the position that FCMC was not in violation of state law and applicable regulations and Judge Pearlstein determined in both Liberty #5 and Liberty #6 that ODM's position was not arbitrary, capricious or an abuse of discretion.

The Office of Surface Mining has appealed the Liberty #5 and Liberty #6 decisions to the Interior Board of Land Appeals (IBLA) and the appeals are currently pending. Recent correspondence in the Liberty #5 and Liberty #6 cases indicates that a decision by the IBLA may be issued soon in each of those appeals. The Rock Island case* was initially appealed to the IBLA and then subsequently to the U. S. District Court in Oklahoma after the IBLA denied FCMC's request for a stay. An appeal on the issue of jurisdiction was recently heard at the 10th Circuit in Denver, Colorado.

Request: FCMC, the National Mining Association, Senator Jim Inhofe, and Representative Markwayne Mullin request that the Secretary of Interior withdraw the appeals of the Liberty #5 and Liberty #6 NOVs and let the decisions of Judge Pearlstein stand.

Authority: Executive Order signed by the President on March 28, 2017 and entitled, "Promoting Energy Independence and Economic Growth." The Secretarial Order 3349. Resolution of disapproval (H.J. Res. 38) under the Congressional Review Act voiding the Stream Protection Rule.

*-We would like to discuss the Rock Island case and find a solution that complies with the Executive Order and Secretarial Order 3349.
