My apologies. Will do it now. Our consultant is on a working vacation, so it may be a few hours before you get anything back from the next email.

I could not find you in the system, which means I likely forgot to pass your information along to the company. Have you received an email from DiscoverText giving you a place to log in and establish a password?

Randy

I couldn't find an email saying how to get into the system.

After an unexpected delay, the next round of comments are ready for coding. There was a high percentage of form letters this time, so there are less than 4,000 comments to be coded, with the same coding choices as last time.

We have made arrangements to address multiple postcards and/or comments attached to one entry apart from the regular coding, so if you encounter either in this round, mark them as "uncodable".

And as a reminder - you will still see some nearly identical letters. That is because many of the comments are variations on a common theme. It does not mean you are coding the same comment twice. The system will automatically deliver to you the next available uncoded item, and when all items are coded, it will say something like no more items to code.

You will not get an item already coded.

To start, log on, hit "coding", then "code a dataset", and the first comment should appear.

Good luck, and contact me with anything unusual, if possible copying the heading or unusual item and pasting it into an email.
