I ran a couple of searches, and it appears to be returning correct data... however I did notice that it's not always highlighting the terms in the results list, but this is due to there being a dash in the text (e.g. "awe-inspiring monuments" vs "awe inspiring monuments") -- the full text search does however recognize both as the same phrase

I started searching in the new list. I used the term "awe inspiring monuments", in quotes as shown here. However, the first two items on the list, [DOI-2017-0002-167038.html](https://www.doi.gov/DOI-2017-0002-167038.html) and 167039, did not have that term in the comment.

Do the use of quotation marks not limit the search to the exact term within the marks? If not, how do I search for exact terms?
