Yes, I agree.

Thanks. Another problem that will be avoided by not scanning post cards any more.

Stu,

It appears that some batches of postcards have been scanned **twice** (or at least entered twice in the dataset). An example is:

document id: DOI-2017-0002-133208

document id: DOI-2017-0002-130161

Both records contain the same 7 scanned postcards. Both PDF files are the same size (3,172 KB). The handwriting is identical in both PDF files, and the postmark dates and "Received Date" timestamps are identical.

Best regards,
John

The system is ready for everyone to begin coding.

A couple of things to keep in mind - 1, while I have removed the overwhelming majority of the nearly-identical letters by the group coding approach I used for the last round, you will still see some nearly identical letters. That is because many of the comments are variations on a common theme. It does not mean you are coding the same comment twice. The system will automatically deliver to you the next available uncoded item, and when all items are coded, it will say something like no more items to code.

You will not get an item already coded.

To start, log on, hit :coding", "code a dataset", and the first comment should appear.

Good luck, and contact me with anything unusual, if possible copying the heading or unusual item and pasting it into an email.
